STATEMENT OF LIMITATIONS AND PROFESSIONAL CERTIFICATION

Information provided in this report is intended exclusively for the California Department of Transportation (Caltrans) for the evaluation of soil and/or groundwater contamination as it pertains to the subject site. Professional Service Industries, Inc., (PSI) is responsible for the facts and accuracy of the data presented herein. The contents do not necessarily reflect the official view or policies of the State of California or the Federal Highway Administration. This report does not constitute a standard, specification, or regulation. The professional services provided have been performed in accordance with practices generally accepted by other geologists, hydrologists, hydrogeologists, engineers, and environmental scientists practicing in this field. No other warranty, either expressed or implied, is made. As with all subsurface investigations, there is no guarantee that the work conducted will identify any and all sources or locations of contamination.

This report is issued with the understanding that Caltrans is responsible for ensuring that the information contained in this report is brought to the attention of the appropriate regulatory agency. This report has been reviewed by a geologist who is registered in the State of California and whose signature and license number appears below.

EXECUTIVE SUMMARY

Professional Service Industries, Inc. (PSI) was retained by the California Department of Transportation (Caltrans), to assess current soil and groundwater conditions at two sites. The West Approach site is along Highway 80 from Fifth Street to the San Francisco/Oakland Bay Bridge Anchorage. The Transbay Terminal Loop site is located from Folsom Street to Hunt Street underneath the western loop of the Transbay Terminal and Fremont Street (adjacent to the Transbay Terminal) to 1st Street underneath the eastern loop of the Transbay Terminal.

The objective of the project was to characterize the concentrations of selected potentially hazardous constituents in soil and groundwater. Analytical results from the soil and water investigation were examined with respect to regulatory requirements and landfill guidelines. The information was used to develop a strategy for handling excavated soil during construction.

Between May, 1998 and February 1999, PSI completed borings for six sets of drilling programs associated with the West Approach: temporary and permanent columns; demolition; seismic retrofit columns; landscaping; retaining walls; and additional borings requested by Caltrans. PSI completed two drilling programs for the Transbay Terminal Loop: temporary and permanent columns, and demolition.

As part of the investigation protocol, soil samples were collected using hollow-stem auger, Geoprobe, and hand-auger drilling techniques. Soil and groundwater samples were collected and transported to State of California Department of Health Services certified hazardous materials testing laboratories.

The results of the analyses of the soil and groundwater samples indicated that although several contaminants were occasionally detected in soil samples, the primary constituents of concern are lead, total petroleum hydrocarbon speciation (SPH-S), polychlorinated biphenyls PCB, and semi-volatile organic compounds (SVOC). The following conclusions could be reached based on the laboratory analyses.

- Based on their total or soluble concentrations being greater than the total or soluble threshold limit concentrations (TTLC or TSTLC) for lead, approximately 30 percent of the soil samples collected would be classified as hazardous by the State of California.

- Lead impacted soil was generally confined to the upper 3.0 meters (10 feet) of soil, and there was no other correlation between lead concentration, depth, or location.

- PSI recommends that during excavation activities, the soil be segregated based on whether it is lead, TPH-S/SVOC, or non-impacted soil to the extent practicable.

- Although several contaminants were detected in soluble groundwater samples (filtered), none of the groundwater samples had concentrations exceeding the San Francisco Department of Public Works (SFDPW) requirements.

- Due to elevated concentrations of lead and other contaminants measured at the site, the construction contractor should be aware of the health and safety concerns, regulatory requirements, and possible landfill restrictions in disposal of contaminated soil.

1.0 INTRODUCTION

Professional Service Industries, Inc. (PSI) has been retained by the California Department of Transportation (Caltrans), under Task Order Number 04-133331-DC, EA Number 133331 and Contract Number 43Y097, to assess current soil and groundwater conditions at two sites. The West Approach site is along Highway 80 from Fifth Street to the San Francisco/Oakland Bay Bridge Anchorage. The Transbay Terminal Loop site is located from Folsom Street to Hunt Street underneath the western loop of the Transbay Terminal and Fremont Street (adjacent to the Transbay Terminal) to 1st Street underneath the eastern loop of the Transbay Terminal. Both sites are located in San Francisco, California (project area; Figure 1). The work is being performed preliminary to Caltrans construction activities. The scope of work for this investigation includes:

- Geophysical Survey;
- Site investigation to characterize soil and groundwater contamination, if present;
- Final Report detailing the results of the investigation.

1.1 PROJECT BACKGROUND

The project site associated with the west approach is located along the Highway 80 right-of-way from Fifth Street to the Bay Bridge Anchorage. The Transbay Terminal Loop is located from Folsom Street to Hunt Street underneath the western loop of the Transbay Terminal and Fremont Street (adjacent to the Transbay Terminal) to 1st Street underneath the eastern loop of the Transbay Terminal.

The work is being performed preliminary to Caltrans construction activities. Previous sampling events have reported elevated concentrations of lead, petroleum hydrocarbons, and semi-volatile organic compounds. Additional work, described in this report, was performed to better characterize the site conditions prior to initiating construction activities.

1.2 PROJECT OBJECTIVE

The objective of the project was to characterize the concentrations of selected potentially hazardous constituents in soil and groundwater, and to evaluate their potential impact on construction activities. Analytical results from the soil and water investigation were examined with respect to regulatory requirements and landfill guidelines. The information was used to development of a strategy for handling excavated soil during construction.

2.0 SUBSURFACE INVESTIGATION

Samples were collected along the project corridor to provide information on existing soil and groundwater quality. The goal of the sampling program was to investigate soil and groundwater conditions to the depth of anticipated construction excavation. By reviewing the data, construction contractors can forecast the final disposal options prior to initiating excavation or drilling activities.

In addition, this section describes the methodology implemented to collect soil and groundwater samples for laboratory analyses. The objectives of these procedures were to investigate the potential presence of subsurface contaminants, while minimizing the potential for cross-contamination during sampling operations. Prior to initiation of field activities, Underground Service Alert (USA) was contacted to locate buried utilities in the vicinities of the soil borings. A geophysical investigation identified utility lines in some areas and the boring locations were adjusted accordingly. No utilities were damaged in this investigation.

Between May, 1998 and February 1999, PSI completed borings for six sets of drilling programs associated with the West Approach: temporary and permanent columns; demolition; seismic retrofit columns; landscaping; retaining walls; and additional borings requested by Caltrans. PSI completed two drilling programs for the Transbay Terminal Loop: temporary and permanent columns, and demolition.

2.1 GEOPHYSICAL SURVEY

Because the area of investigation contains numerous underground utilities, utility location was performed. Prior to commencement of drilling activities, a geophysical survey was performed at each of the boring locations. Norcal Geophysics of Petaluma, California investigated the presence of utilities.

A combination of ground penetrating radar, electromagnetic induction, a magnetic gradiometer, and utility locator with line tracing capabilities was applied to the search. Multiple methods were utilized because each instrument senses different material properties of the ground and buried objects. At any given site, the situation may be such that one or two of the instruments may record excessive "noise", as the ground may not provide sufficient contrast or there may be overlapping anomalies. Generally, however, the interpretation is based on the best reconciliation of several data sets. No utilities were damaged in this investigation.

2.2 SOIL SAMPLING AND DRILLING

Soil sampling was accomplished using a hollow-stem auger drilling rig, a direct push Geoprobe rig, and hand auguring. Drilling services for borings drilled deeper than 9 meters (30 feet) below ground surface (bgs) were provided by V & W Drilling of Rio Vista, California. These borings were drilled using a truck mounted drill rig with 0.2 meter (eight-inch) outside diameter, hollow-stem augers. Drilling services for borings drilled shallower than 9 meters (30 feet) bgs were provided by Fisch Environmental of Valley Springs, California. The borings were advanced by the Geoprobe direct push drilling technique. Shallow borings (0.9 meters (3 feet) in depth) were drilled using a hand-auger. Additionally, several borings in areas that were inaccessible to a drill rig were drilled using a hand auger. The locations of the borings can be found in Figures 2 (Plans BL-1 through BL-4) and 3 (Plans TTL-1 through TTL-6).

The filed work for drilling and soil sampling activities were conducted in accordance with the field procedures outlined in Appendix A. Upon completion of drilling, borings drilled using the hollow-stem auger were grouted with neat cement, borings drilled with a Geoprobe or hand auger were grouted with hydrated bentonite.

Soil samples were collected by a PSI geologist working under the supervision of a State of California Registered Geologist. When using the hollow-stem auger drill rig, the samples were collected in a split-spoon sampler, lined with 0.15 meter (6-inch) stainless-steel tubes. Upon retrieval of the sampler, a minimum of one stainless steel tube was preserved for chemical analyses. When using the Geoprobe drill rig, the soil samples were collected in acetate liners, which filled the Geoprobe sampling probe. The soil samples were collected by cutting the interval for chemical analyses out of acetate liners. All samples were prepared for shipping by capping the ends with Teflon sheeting, plastic end caps, and duct tape. All soil samples were labeled using a permanent marking pen identifying the sampler, boring name, sample collection depth, time, and date. Collected samples were placed in a cooler containing ice and maintained under chain-of-custody protocol.

The soil samples were logged on chain-of-custody records and transported to Pace Analytical (Pace) of Long Beach, California or Centrum Analytical Laboratories (Centrum) of Redlands, California, following chain-of-custody protocol. Both laboratories are California Department of Health Services-certified hazardous materials testing laboratories.

Soil was described by a PSI geologist and recorded on a field-boring log for each boring drilled (Appendix B). The data recorded on the logs was based on examination of soil samples retrieved and drilling conditions observed in the field. Boring logs include the location of the boring, type of sampler used, and geologic descriptions of materials encountered. Soils were classified according to the Unified Soil Classification System (USCS). Other information recorded on the logs includes: indications of potential contaminants and the occurrence of, and depth to water. Organic Vapor Analyzer (OVA) measurements for soil samples were recorded on the field boring logs.

2.3 GROUNDWATER SAMPLING

Upon reaching the total depth at selected borings, grab groundwater samples were collected using disposable polyethylene tubing equipped with a check valve lowered through the drill stem to collect groundwater samples. Grab groundwater samples were collected at West Approach in borings T1-4, TNF3-1, TNF6-2, TNF7-4, TNF8-2, T10-1, T3-2, and T5-4 and at Transbay Terminal in borings TTB2-2-2, TTBX-2, TTBO-1, TTB69-1, TTB69-4, and TTB64-1. Field work for groundwater sampling was performed in accordance with the procedures described in Appendix A. Samples were stored in a cooler containing ice and maintained under chain-of-custody protocol. Upon collection of the groundwater samples, the borings were grouted with hydrated bentonite.

2.4 GEOLOGIC CONDITIONS

San Francisco is located on a peninsula between the Pacific Ocean and the San Francisco Bay. San Francisco is the type area for the Franciscan Formation. The Franciscan Formation consists of sandstone, shale, and volcanic rock with minor amounts of chert, conglomerate, limestone, and metamorphic rocks. Franciscan rocks are encountered in topographic uplands and in borings that extend to a sufficient depth. The topographic lowlands are generally underlain by unconsolidated sediments, whereas the uplands are of indurated Franciscan rocks. Much of the area south of Mission Street has received fill to raise the surface level (USGS, 1966).

Sea level elevations have varied as much as 90 to 120 meters (300 to 400 feet) below the present elevation. During cooler climatic conditions when water was frozen in glaciers, San Francisco Bay did not exist and the ocean shoreline was located near the Farallon Islands. During warmer climatic conditions (such as during present conditions) sea level was close to its present position due to partial melting of glaciers. During

each of these major sea-level highstands, estuarine sediment was deposited in the bay (Helly, et al., 1979).

Unconsolidated sediments typically occur as low permeability fine grained materials with lenses of higher permeability sand and gravel deposits. The unconsolidated materials were deposited during major changes in sea level caused by worldwide climatic fluctuations over the past million years (Helly, et al., 1979). Groundwater occurs in fractures of the Franciscan rocks and in the unconsolidated sediments in the lowland areas.

2.4.1 Project Site Geology-West Approach: New Bents 25 through 28

At the eastern portion of the project, at the anchorage of the Bay Bridge, Franciscan rocks are exposed at the surface. Sandstone and clay/siltstone can be observed at the surface. Between New Bents 25 and 28, artificial fill has been placed to level the area for the anchorage construction. Fill materials consisted of gravel, sand, clay and silt mixtures with brick, concrete, metal debris, and some wood. Bedrock was encountered in the borings as shown on the boring logs included in Appendix B. Bedrock consisted of sandstone and clay/siltstone. The hollow stem auger drilling rig was able to penetrate the upper portions of the clay/siltstone but not the sandstone. The Geoprobe drilling rig was not able to penetrate either the clay/siltstone or the sandstone.

Groundwater was not encountered in any of the soil borings located between New Bents 25 and 28.

2.4.2 Project Site Geology-West Approach: New Bents 17 through 25

At the eastern/central portion of the project, located in the topographic upland west of the Bay Bridge anchorage, Franciscan rocks are exposed at the surface. Sandstone and clay/siltstone were observed at the surface. Between New Bents 17 and 25, minimal fill was encountered. Bedrock was encountered in the borings as shown on the boring logs included in Appendix B. Bedrock consisted of sandstone and clay/siltstone. The hollow stem auger drilling rig was able to penetrate the upper portions of the clay/siltstone but not the sandstone. Neither the Geoprobe drilling rig nor hand auger were able to penetrate either the clay/siltstone or the sandstone.

Groundwater was not encountered in any of the soil borings located between New Bents 17 and 25.

2.4.3 Project Site Geology-West Approach: New Bents Fifth through 17

At the western portion of the project, between New Bents Fifth 1 through Fifth 7 and New Bents 1 through 17, bedrock was not exposed at the surface. Between New Bents Fifth and 17, artificial fill has been placed to level the area for the highway construction and raise the area. The western portion of the area had undergone some subsidence. Fill materials consisted of gravel, sand, clay and silt mixtures with brick, concrete, metal debris, and some wood. Bedrock was encountered in the borings as shown on the boring logs included in Appendix B.

Groundwater was encountered in soil borings located between 0.9 and 4.5 meters (3 and 15) feet blow ground surface (bgs). Groundwater was detected on the western portion of the project (New Bents Fifth through 17) and not in the middle or eastern portions of the project, as the areas in the middle and eastern portion of the site have been built up with fill material for the building of the West Approach. Groundwater is not typically found in this fill material.

2.4.4 Project Site Geology-Transbay Terminal Loop

During drilling and sampling activities, artificial fill was observed. The fill was identified based on the presence of debris, such as brick, wood, and metal debris. The fill was likely placed to level the area for the highway construction and to raise the area elevation.

Groundwater was encountered in soil borings located between 0.9 and 4.5 meters (3 and 15) feet bgs.

2.5 DRILLING PROGRAM-WEST APPROACH: LANDSCAPING BORINGS

A total of fifteen landscape borings were drilled at the site using hand-auger equipment (Figure 2). Landscape borings were designated with the letter L before the boring number. The borings were drilled in three areas: one east of the intersection of Fifth Street and the Bay Bridge; one north of the intersection of Delancy Street and Bryant Street; and one south of the Transbay Terminal Loop between First Street and Fremont. Landscaping borings were generally drilled to 0.9 meters (3 feet) bgs. However, due to encountering bedrock in some locations, the borings could not be advanced past 0.6 meters (2 feet) bgs. If borings could not be advanced, a soil sample was collected from the bottom of the borehole.

2.6 DRILLING PROGRAM-WEST APPROACH: RETAINING WALLS BORINGS

A total of fourteen retaining wall borings were drilled at the site using hand-auger equipment (Figure 2). Retaining wall borings were designated with the letter B before the boring number. The borings were drilled in six areas: one north of the intersection of Delancy Street and Bryant Street; one east of the First Street on-ramp to the Bay Bridge; one west of Essex Street just north of Harrison Street; one on Rincon north of Bryant, one south of the Transbay Terminal Loop between First Street and Fremont; and one north of the Transbay Terminal Loop between First Street and Fremont. Landscaping borings were scheduled to be drilled to 1.8 meters (6 feet) bgs. However, due to encountering bedrock in most locations, most borings could not be advanced to 1.8 meters (6 feet) bgs. If borings could not be advanced, a soil sample was collected from the bottom of the borehole.

2.7 DRILLING PROGRAM-WEST APPROACH: SEISMIC RETROFIT BORINGS

A total of nine seismic retrofit borings were drilled at the site using hollow-stem and Geoprobe equipment (Figure 2). Seismic retrofit borings were designated with the letter R before the boring number. The borings were drilled in the area beneath the Bay Bridge just east of the intersection of the Bay Bridge and the Harrison off-ramp. Seismic retrofit borings were scheduled to be drilled until two soil samples were collected from native material, based on a lack of observable fill debris. Depths of seismic retrofit borings ranged from 3 to 16.5 meters (10 to 55 feet).

2.8 DRILLING PROGRAM-WEST APPROACH: DEMOLITION BORINGS

A total of seventy-four demolition borings were drilled at the site using hand-auger and Geoprobe equipment (Figure 2). Demolition borings were designated with the letter D before the boring number. The borings were drilled in all areas of the subject site. Demolition borings were generally drilled to 0.9 meters (3 feet) bgs. However, due to encountering bedrock, old pavement, and building debris in some locations, the borings could not be advanced to 0.6 meters (2 feet) bgs. If borings could not be advanced, a soil sample was collected from the bottom of the borehole.

2.9 DRILLING PROGRAM-WEST APPROACH: PERMENANT AND TEMPORARY COLUMN BORINGS

A total of 113 permanent and temporary column borings were drilled at the site using hollow-stem auger, hand-auger and Geoprobe equipment (Figure 2). Permanent and temporary column borings were designated with the letter T before the boring number with borings drilled near Fifth Street designated TNF, borings drilled beneath the Harrison off-ramp TH, and borings drilled along the Fremont off-ramp designated TF. The borings were drilled in areas across the project area. Borings were scheduled to be drilled until two soil samples were collected from native material. Depths of permanent and temporary column borings ranged from ground surface to 18 meters (60 feet). However, due to encountering bedrock, old pavement, and building debris, the borings could not be advanced to the depth desired in some borings. If borings could not be advanced, a soil sample was collected from the bottom of the borehole.

2.10 DRILLING PROGRAM-WEST APPROACH: ADDITIONAL BORINGS

A total of 18 additional borings were drilled at the site using Geoprobe equipment (Figure 2). Additional borings were designated with the letter A before the boring number. The borings were drilled in areas across the project area. Additional borings were scheduled to be drilled until two soil samples were collected from native material. Depths of the additional borings ranged from 1.5 to 6 meters (5 to 20 feet). However, due to encountering bedrock, old pavement, and building debris, the borings could not be advanced to the depth desired in some borings. If borings could not be advanced, a soil sample was collected from the bottom of the borehole.

2.11 DRILLING PROGRAM-TRANSBAY TERMINAL LOOP: DEMOLITION BORINGS

A total of 52 demolition borings were drilled at the site using hand-auger and Geoprobe equipment (Figure 3). Demotion borings were designated with the letter "DTB" before the boring number. The borings were drilled in all areas of the subject site. Demolition borings were generally drilled to 0.9 meters (3 feet) bgs. However, due to encountering bedrock, old pavement, and building debris in some locations drilling refusal was encountered. If borings could not be advanced, a soil sample was collected from the bottom of the borehole.

2.12 DRILLING PROGRAM-TRANSBAY TERMINAL LOOP: PERMENANT AND TEMPORARY COLUMN BORINGS

A total of 85 permanent and temporary column borings were drilled at the site using hand-auger and Geoprobe equipment (Figure 3). Permanent and temporary column borings were designated with the letter TTB before the boring number. The borings were drilled in areas across the project area. Seismic retrofit borings were scheduled to be drilled to a depth sufficient to collect two soil samples from native material. Depths of seismic retrofit borings ranged from ground surface to 4.5 meters (15 feet).

3.0 ANALYTICAL LABORATORY PROGRAM

The soil samples were submitted to Pace and Centrum, State of California Department of Health Services-certified hazardous waste laboratories. The sampling schedule for each of the borings and programs can be found in the PSI Workplan for this project. A summary of the types of analyses and analytical methods is presented below:

- California Code of Regulations Metals (17 Metals) in accordance with EPA Method 6010;
- Total Petroleum Hydrocarbon Speciation (TPH-S) in accordance with a modified Environmental Protection Agency (EPA) Method 8015 and includes Total Petroleum Hydrocarbons as Gasoline (TPH-G); Total Petroleum Hydrocarbons as Diesel (TPH-D); and Total Petroleum Hydrocarbons as Motor Oil (TPH-MO);
- Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX) and Methyl Tertiary Butyl Ether (MTBE) in accordance with EPA Method 8020;
- Polychlorinated Biphenyls (PCBs) in accordance with EPA Method 8080;
- Volatile Organic Compounds (VOC) in accordance with EPA Method 8260; and
- Semi-Volatile Organic Compounds (SVOC) in accordance with EPA Method 8270.

The State of California has set up regulatory criteria for metals in soil based on their total and soluble concentrations. The limit set for total concentrations is the Total Threshold Limit Concentration (TTLC), and if a metal's total concentration exceeds this value, the sample is considered to be hazardous. The limit set for soluble concentrations is the Soluble Threshold Limit Concentration (STLC), and if a metal's total concentration exceeds ten times this value, a Waste Extraction Test (WET) is performed. The resulting soluble concentration is compared to the metal's WET and if it is above, the sample is considered to be hazardous by the State of California. To determine if the sample is a Resource, Conservation and Recovery Act (RCRA) hazardous waste, an additional soluble test must be performed. This test is the Toxicity Characteristic Leaching Procedure (TCLP).

If soil samples had total metal concentrations exceeding ten times their respective STLC and were below their respective TTLC, a WET was performed. If total metal concentrations exceeded the TTLC or soluble metal concentration exceeded the STLC, a TCLP was performed.

Due to poor sample recovery in a number of the borings, WET and TCLP could not always be performed due to a lack of available soil.

4.0 ANALYTICAL LABORATORY RESULTS

The results of the sampling program are summarized in Tables 1 through 34. The analytical reports and chain-of-custody documentation are presented in Appendix C.

4.1 LABORATORY RESULTS LANDSCAPE BORINGS-WEST APPROACH: METALS

Soil samples analyzed for CCR metals detected concentrations of antimony, arsenic, barium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, vanadium, and zinc (Table 1). Twenty-nine soil samples were analyzed for CCR metals content. None of the metals had concentrations greater than the TTLC for their respective metals.

Of the 29 soil samples analyzed, five soil samples had chromium concentrations equal to or greater than ten times the chromium STLC, nineteen soil samples had lead concentrations equal to or greater than ten times the lead STLC, and one soil sample had a mercury concentration greater than ten times the mercury STLC. At the direction of Caltrans, a WET was performed on these samples. None of the chromium or mercury soil samples had soluble concentrations greater than their respective STLC. However, thirteen soil samples had soluble lead concentrations greater than its STLC. The material represented by these samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. None of the lead samples had soluble concentrations greater than 5 mg/l, therefore the soil would be classified as a State of California designated waste and not a Resource, Conservation, and Recovery Act (RCRA) waste material.

4.2 LABORATORY RESULTS LANDSCAPE BORINGS-WEST APPROACH: ORGANICS

No measurable TPH-S or VOC concentrations were detected in any of the soil samples analyzed (Tables 2 and 3) with the exception of L15 at 0.6 meters (2 feet) with a toluene concentration of 0.001 milligrams per kilogram (mg/kg) using EPA method 8260. The results of the analyses for SVOCs indicated detectable concentrations in eight soil samples (Table 4). The results of the soil analyses were compared to US EPA Region IX Preliminary Remediation Goals (PRGs) promulgated for contaminants in industrial soil.

Two of the soil samples (L15-1 and L15-2) had SVOC concentrations above the PRG for benzo(a)pyrene. The results of the analyses for PCBs indicated detectable concentrations in four soil samples. The results of the soil analyses were compared to California Code of Regulations Title 22 List of Inorganic Persistent and Bioaccumulative Toxic Substances and their TTLC Values (Title 22). None of the samples had PCB concentrations above the TTLC value for PCB (50 milligrams per kilogram (mg/kg)).

4.3 LABORATORY RESULTS RETAINING WALL BORINGS-WEST APPROACH: METALS

Soil samples analyzed for CCR metals detected concentrations of arsenic, barium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, thallium, vanadium, and zinc (Table 5). Twenty-seven soil samples were analyzed for CCR metals content. One soil sample had a concentration greater than the TTLC for lead. This sample could be classified as hazardous by the State of California upon excavation and classification as a waste material.

Of the 27 soil samples analyzed, 19 of the samples had lead concentrations equal to or greater than ten times the lead STLC, and 2 soil samples had a mercury concentration greater than 10 times the mercury STLC. At the direction of Caltrans, a WET was performed on these samples. The mercury soil samples did not have a soluble concentration greater than its respective STLC. However, 11 soil samples had soluble lead concentrations greater than the STLC for lead. These samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. None of the lead samples had soluble concentrations greater than 5 mg/l, therefore the soil would be classified as a State of California designated waste and not a RCRA waste material.

4.4 LABORATORY RESULTS RETAINING WALL BORINGS-WEST APPROACH: ORGANICS

No measurable VOC concentration were detected in any of the soil samples analyzed with the exception of trace concentrations of BTEX in soil samples collected at 0.3 and 0.9 meters (1 and 3 feet) bgs in boring B-14 (Table 6 and 7). The results of the analyses for TPH-S indicated detectable concentrations in 9 soil samples with concentrations ranging from 14 to 110 mg/kg. The majority of these samples had a hydrocarbon range

equivalent to waste oil or higher. The results of the analyses for SVOC indicated detectable concentrations in 4 soil samples (Table 8). The results of the soil analyses were compared to their PRGs. One of the soil samples had a SVOC concentration above its respective PRG for benzo(b)fluoranthene. The results of the analyses for PCB indicated detectable concentrations in two soil samples. The results of the soil analyses were compared to Title 22. None of the samples had PCB concentrations above the TTLC value for PCB (50 mg/kg).

4.5 LABORATORY RESULTS SEISMIC RETROFIT BORINGS-WEST APPROACH: METALS

Soil samples analyzed for CCR metals detected concentrations of arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, thallium, vanadium, and zinc (Table 9). Sixty-five soil samples were analyzed for CCR metals content. None of the metals had concentrations greater than the TTLC for their respective metals.

Of the 74 soil samples analyzed, 2 soil samples had chromium concentrations equal to or greater than 10 times the chromium STLC, 26 soil samples had lead concentrations equal to or greater than 10 times the lead STLC, and 1 soil sample had a mercury concentration greater than 10 times the mercury STLC. At the direction of Caltrans, a WET was performed on these samples. The chromium and mercury soil samples did not have soluble concentrations greater than their respective STLC. However, 19 soil samples had soluble lead concentrations greater than the STLC for lead. The materials represented by these samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. None of the lead samples had soluble concentrations greater than 5 mg/l, therefore the soil would be classified as a State of California designated waste and not a RCRA waste material.

4.6 LABORATORY RESULTS SEISMIC RETROFIT BORINGS-WEST APPROACH: ORGANICS

No measurable VOC or SVOC concentrations were detected in any of the soil samples analyzed (Table 10). The results of the analyses for TPH-S indicated detectable concentrations in 4 soil samples with concentrations ranging from 40-600 mg/kg. The majority of these samples had a hydrocarbon range equivalent to waste oil or higher. The results of the analyses for PCB indicated detectable concentrations in four soil samples. The results of the soil analyses were compared to Title 22. None of the samples had PCB concentrations above the TTLC value for PCB (50 mg/kg).

4.7 LABORATORY RESULTS DEMOLITION BORINGS-WEST APPROACH: METALS

Soil samples analyzed for CCR metals detected concentrations of antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, thallium, vanadium, and zinc (Table 11). A total of 136 soil samples were analyzed for CCR metals content. Seven soil samples had a concentration greater than the TTLC for lead. The materials represented by these samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

Of the 138 soil samples analyzed, 12 soil samples had chromium concentrations equal to or greater than 10 times the chromium STLC and 54 soil samples had lead concentrations equal to or greater than 10 times the lead STLC. At the direction of Caltrans, a WET was performed on these samples. The chromium soil samples did not have soluble concentrations greater than its respective STLC. However, 28 soil samples had soluble lead concentrations greater than the STLC for lead. Those samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. Four of the lead samples had soluble concentrations greater than 5 mg/l, therefore the soil would be classified as a RCRA waste material in the vicinity of these samples. All of the samples found to be RCRA material were surface soil samples.

At the direction of Caltrans, a WET was performed on these samples. The chromium, mercury, and nickel soil samples did not have soluble concentrations greater than their respective STLC. However, 1 soil sample had soluble copper concentration greater than the STLC and 77 soil samples had soluble lead concentrations greater than the STLC for lead. The materials represented by these samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. Two of the lead samples had soluble concentrations greater than 5 mg/l, therefore the soil would be classified as a RCRA waste material in the vicinity of these samples. The soil samples found to be a RCRA material were surface soil samples. As only 2 of the 377 soil samples had a soluble concentration greater than the federal criteria of 5 mg/l after a TCLP, this result is not consistent with other samples and could represent an anomaly or outlier.

4.10 LABORATORY RESULTS PERMANENT AND TEMPORARY COLUMNS-WEST APPROACH: ORGANICS

The results of the analyses for TPH-S indicated detectable concentrations in 33 soil samples with concentrations ranging from 20 to 910 mg/kg (Table 16). The majority of these samples had a hydrocarbon range equivalent to waste oil or higher. The results of the analyses for VOC indicated detectable concentrations in 10 soil samples (Table 17). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. None of the VOC compounds were above their respective PRG. The results of the analyses for SVOC indicated detectable concentrations in 15 soil samples (Table 18). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. Two of the SVOC compounds were above their respective PRG. The results of the analyses for PCB indicated detectable concentrations in 12 soil samples. The results of the soil analyses were compared to Title 22. Three of the samples had PCB concentrations above the TTLC value for PCB (50 mg/kg). The materials represented by these samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

4.11 LABORATORY RESULTS ADDITIONAL BORINGS-WEST APPROACH: METALS

Soil samples analyzed for CCR metals detected concentrations of arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, thallium, vanadium, and zinc (Table 19). Eighty-four soil samples were analyzed for CCR metals content. None of the metals had concentrations greater than the TTLC for their respective metals.

Of the 84 soil samples analyzed, 22 soil samples had lead concentrations equal to or greater than 10 times the lead STLC, and 8 soil samples had mercury concentrations greater than 10 times the mercury STLC. At the direction of Caltrans, a WET was performed on these samples. The mercury soil samples did not have soluble concentrations greater than their respective STLC. However, 9 soil samples had soluble lead concentrations greater than the STLC for lead. These samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. None of the lead samples had soluble concentrations greater than 5 mg/l, therefore the soil would be classified as a State of California designated waste and not a RCRA waste material.

4.12 LABORATORY RESULTS ADDITIONAL BORINGS-WEST APPROACH: ORGANICS

The results of the analyses for TPH-S indicated detectable concentrations in 29 soil samples with concentrations ranging from 10 to 160 mg/kg (Table 20). The majority of these samples had a hydrocarbon range equivalent to waste oil or higher. The results of the analyses for VOC indicated detectable concentrations in one soil sample (Table 21). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. None of the VOC compounds were above their respective PRG. The results of the analyses for SVOC indicated detectable concentrations in 11 soil samples (Table 22). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. Two of the SVOC compounds were above their respective PRG for benzo(a)pyrene. The results of the analyses for PCB indicated non-detectable concentrations in all soil samples.

4.13 LABORATORY RESULTS GROUNDWATER-WEST APPROACH - METALS

Eight groundwater samples were collected and analyzed. The analyzed groundwater samples had detectable concentrations of arsenic and mercury (Table 23). The concentrations were compared to the City and County of San Francisco Department of Public Work (SFDPW) Requirements for Batch Wastewater Discharges. The arsenic and mercury concentrations detected were below the SFDPW requirements for batch wastewater discharges.

4.14 LABORATORY RESULTS GROUNDWATER-WEST APPROACH: ORGANIC COMPOUNDS

None of the groundwater samples had detectable concentrations of the following constituents: TPH-S, SVOC, and PCB (Table 24). Benzene was detected in 2 of the groundwater samples at concentrations of 24 and 110 micrograms per liter (ug/l). MTBE was detected in 3 of the groundwater samples with concentrations ranging from 6.1 to 95 ug/l. No other VOC compounds were detected. The benzene concentrations are above the State of California Primary Drinking Water Standard for benzene (1.0 ug/l). However, the concentration detected is below the SFDPW discharge requirement of 500 ug/l.

4.15 LABORATORY RESULTS DEMOLITION BORINGS-TRANSBAY TERMINAL LOOP: METALS

Soil samples analyzed for CCR metals detected concentrations of antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, nickel, silver, thallium, vanadium, and zinc (Table 25). A total of 103 soil samples were analyzed for CCR metals content. Ten soil samples had a concentration greater than the TTLC for mercury, lead and/or copper. The materials represented by these samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

Of the 103 soil samples analyzed, 12 soil samples had copper concentrations equal to or greater than 10 times the chromium STLC, 67 soil samples had lead concentrations equal to or greater than 10 times the lead STLC, 18 soil samples had mercury concentrations equal to or greater than 10 times the mercury STLC, and two soil samples had zinc concentrations equal to or greater than 10 times the zinc STLC. At the direction of Caltrans, a WET was performed on these samples. Five soil samples had soluble copper concentrations, 46 soil samples had soluble lead concentrations, and one soil sample had

a zinc concentration greater than their respective STLCs. These samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. Seven of the lead samples had soluble concentrations greater than 5 mg/l. The materials represented by these samples would be classified as a RCRA waste material in the vicinity of these samples.

4.16 LABORATORY RESULTS DEMOLITION BORINGS-TRANSBAY TERMINAL LOOP: ORGANICS

The results of the analyses for TPH-S indicated detectable concentrations in 62 soil samples with concentrations ranging from 10 to 1,900 mg/kg (Table 26). The majority of these samples had a hydrocarbon range equivalent to waste oil or higher. The results of the analyses for VOC indicated detectable concentrations in 13 soil samples (Table 27). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. None of the VOC compounds were above their respective PRG.

The results of the analyses for SVOC indicated detectable concentrations in 15 soil samples (Table 28). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. Nine of the soil samples had SVOC concentrations above their respective PRG.

The results of the analyses for PCBs indicated detectable concentrations in one soil sample. The results of the soil analyses were compared to CCR Title 22 criterion; PCB concentration was below the TTLC value for PCB (50 mg/kg).

4.17 LABORATORY RESULTS PERMENANT AND TEMPORARY COLUMNS-TRANSBAY TERMINAL LOOP: METALS

Soil samples analyzed for CCR metals detected concentrations of antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, thallium, vanadium, selenium, silver, and zinc (Table 29). A total of 353 soil samples were analyzed for CCR metals content or lead. Fourteen soil samples had a concentration greater than the TTLC for cadmium, lead, and/or zinc. These samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

Of the 353 soil samples analyzed, the following number of samples exceeded their respective STLC:

- 3 soil samples for arsenic
- 3 soil samples for barium
- 4 soil samples for cadmium
- 12 soil samples for chromium
- 9 soil samples for copper
- 180 soil samples for lead
- 12 soil samples for mercury
- 3 soil samples for zinc

At the direction of Caltrans, a WET was performed on these samples. The arsenic, barium, and cadmium soil samples did not have soluble concentrations greater than their respective STLC. However, 1 soil sample had soluble chromium concentration greater than the STLC for chromium, 2 soil samples had soluble copper concentration greater than the STLC for copper, 119 soil samples had soluble lead concentration greater than the STLC for lead, 1 soil sample had soluble mercury concentration greater than the STLC for mercury, and 3 soil samples had soluble zinc concentrations greater than the STLC for zinc. These samples could be classified as hazardous by the State of California upon excavation and classification as a waste material.

The soil samples with soluble lead concentrations greater than the STLC were also analyzed according to the TCLP for lead. Five of the lead samples had soluble concentrations greater than 5 mg/l. The materials represented by these samples would be classified as a RCRA waste material in the vicinity of this sample.

4.18 LABORATORY RESULTS PERMANENT AND TEMPORARY COLUMNS-TRANSBAY TERMINAL LOOP: ORGANICS

The results of the analyses for TPH-S indicated detectable concentrations in 61 soil samples with concentrations ranging from 10 to 780 mg/kg (Table 30). The majority of these samples had a hydrocarbon range equivalent to waste oil or higher.

The results of the analyses for VOC indicated detectable concentrations in 43 soil samples (Table 31). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. None of the VOC compounds were above their respective PRG.

The results of the analyses for SVOC indicated detectable concentrations in 35 soil samples (Table 32). The results of the soil analyses were compared to US EPA Region IX PRGs promulgated for contaminants in industrial soil. Six of the SVOC compounds were above their respective PRG.

The results of the analyses for PCBs indicated detectable concentrations in three soil samples. The results of the soil analyses were compared to Title 22. The results of the soil analyses were compared to CCR Title 22 criterion; the PCB concentration was below the TTLC value for PCB (50 mg/kg).

4.19 LABORATORY RESULTS GROUNDWATER-TRANSBAY TERMINAL LOOP: METALS

Six groundwater samples were collected and analyzed. The samples were filtered prior to analysis. The analyzed groundwater samples had detectable concentrations of arsenic, mercury, and nickel (Table 33). The concentrations were compared to the City and County of San Francisco Department of Public Work (SFDPW) Requirements for Batch Wastewater Discharges. The arsenic, mercury, and nickel concentrations were below the SFDPW requirements for batch wastewater discharges.

4.20 LABORATORY RESULTS GROUNDWATER-TRANSBAY TERMINAL LOOP: ORGANIC COMPOUNDS

None of the groundwater samples had detectable concentrations of the following constituents: TPH-S, benzene, toluene, ethylbenzene, MTBE, or PCBs (Table 34). Total xylenes were detected in 1 of the groundwater samples at a concentration of 1.6 micrograms per liter (ug/l). The following chlorinated solvents were detected in the groundwater sample collected from boring WTTB64-1: 1,1 dichloroethane (1,1-DCA) at 6.1 ug/l; 1,1 dichloroethene (1,1-DCE) at 12 ug/l, and 1,1,1 trichloroethane (1,1,1-TCA) at 53 ug/l. None of the SVOC compounds were detected with the exception of acenaphthene, which was detected in groundwater samples collected from borings TTB69-1 and TTB69-4 at 13 and 16 ug/l, respectively.

The 1,1-DCA and 1,1-DCE concentrations are above the State of California Primary Drinking Water Standard for these compounds. The SFDPW does not have a discharge requirement for these compounds. However, the concentration detected is below the SFDPW discharge requirement for other chlorinated solvents that have the same drinking water standard as 1,1-DCA and 1,1-DCE.

5.0 DISCUSSION

5.1 SOIL

The results of the soil analyses were compared to US EPA Region IX Preliminary Remediation Goals (PRGs) promulgated for contaminants in residential soil, as well as the California Code of Regulations Title 22 List of Inorganic, Persistent, and Bioaccumulative Toxic Substances and their STLC and TTLC Values. Soil that is impacted by SVOC compounds and TPH-S concentrations can be disposed at a Class II disposal facility provided that metal and PCB concentrations do not exceed State of California criteria. It is emphasized that each landfill has developed a facility specific criteria for accepting contaminated soil materials.

Materials represented by soil samples that exceed the TTLC for metals and PCBs, as well as the STLC after performing a WET, could be classified as hazardous by the State of California upon excavation and classification. Only 18 soil samples had soluble lead concentrations greater than the lead TCLP. The materials represented by these samples could be classified as RCRA designated landfill. The soil samples that were designated a RCRA hazardous waste were collected primarily at ground surface.

Disposal of lead-impacted soil, which is classified as a hazardous waste would need to be disposed at a Class I landfill, if on-site treatment is not completed. Additionally, Class II and III landfills may impose concentration limits that can be more stringent than the State of California Hazardous Waste Criteria. On-site treatment of the lead-impacted soil would require regulatory approval and possible permitting restrictions.

Due to the elevated concentrations of lead, PCB, and SVOCs measured at the site, construction contractors should be aware of health and safety concerns, regulatory requirements, and possible landfill restrictions when preparing soil excavation and management plans.

5.1.1 Landscaping Program-West Approach

The results indicate that the materials represented by the soil samples collected in the area of Borings L1 through L7 is a California hazardous waste to the depth explored 0.6 meters (2 feet). The soil was not above regulatory criteria for PCBs and SVOCs. The results indicate that the materials represented by the surface soil samples collected in the area of Borings L8 through L14 is a California designated waste. The samples collected at 0.6 meters (2 feet) were below regulatory criteria for lead, PCBs and

SVOCs. The results indicate that the materials represented by the soil samples collected in the area of Boring L15 is not a California designated waste. The samples collected were below regulatory criteria for VOCs and SVOCs.

To minimize disposal costs, PSI recommends that the soil be segregated during excavation in the area of borings L8 through L14.

5.1.2 Retaining Wall Program-West Approach

The results indicate that the soil samples collected in the area of Borings B6, B7, & B8; B9 & B10; and B11 is a California designated waste to the maximum depth explored.

The results indicate that the materials represented by the surface soil samples collected in the area of Borings B1 & B2; B3 through B5, and B13 through B15 is a California hazardous waste. The samples collected at 0.9 and 1.8 meters (3 and 6 feet) were below regulatory criteria for lead, PCBs and SVOCs.

To minimize disposal costs, PSI recommends that the soil be segregated during excavation in the area of B1 & B2; B3 through B5, and B13 through B15.

5.1.3 Seismic Retrofit Program-West Approach

Each of the areas have materials that are represented by soil samples that would be considered a California hazardous waste based on lead concentrations. The depth in which the soil would be considered below regulatory criteria varies in each of these areas. The materials represented by the soil samples were not above regulatory criteria for PCBs and SVOCs. To minimize disposal costs, PSI recommends that the soil be segregated during excavation in this area.

5.1.4 Demolition Program-West Approach

The majority of the areas tested have soil samples that would be considered a California hazardous waste, based on lead concentrations. The depth in which the soil would be considered below regulatory criteria varies in each of these areas. Additionally, numerous soil samples were above regulatory or landfill criteria for PCBs and SVOCs. To minimize disposal costs, PSI recommends that the soil be segregated during excavation in this area.

5.1.5 Permanent and Temporary Column Program-West Approach

The majority of the areas tested have materials represented by soil samples that would be considered a California hazardous waste based on lead concentrations. The depth in which the soil would be considered below regulatory criteria varies in each of these areas.

Additionally, numerous soil samples were above regulatory or landfill criteria for PCBs and SVOCs. To minimize disposal costs, PSI recommends that the soil be segregated during excavation in this area.

5.1.6 Additional Borings Program-West Approach

The majority of the areas tested have materials represented by soil samples that would be considered a California hazardous waste based on lead concentrations. The depth in which the soil would be considered below regulatory criteria varies in each of these areas.

Additionally, numerous soil samples were above regulatory or landfill criteria for SVOCs. To minimize disposal costs, PSI recommends that the soil be segregated during excavation in this area.

5.1.7 Demolition Program-Transbay Terminal Loop

The majority of the areas tested have materials represented by soil samples that would be considered a California hazardous waste, based on lead concentrations. The depth in which the soil would be considered below regulatory criteria varies in each of these areas. However, the most contaminated soil was artificial fill materials.

Numerous soil samples were above regulatory or landfill criteria for PCBs and SVOCs. To minimize disposal costs, PSI recommends that the soil be segregated during excavation in this area.

5.1.8 Permanent and Temporary Column Program-Transbay Terminal Loop

The majority of the areas tested have materials represented by soil samples that would be considered a California hazardous waste based on lead concentrations. The depth in which the soil would be considered below regulatory criteria varies in each of these areas. However, the most contaminated soil was artificial fill materials.

Numerous soil samples were above regulatory or landfill criteria for PCBs and SVOCs. To minimize disposal costs, PSI recommends that the soil be segregated during excavation in this area.

5.2 GROUNDWATER- WEST APPROACH

Benzene, MTBE, arsenic and mercury were detected in all but two of the groundwater samples analyzed. The concentrations were compared to SFDPW requirements for batch wastewater discharges. None of the constituents were above the SFDPW requirements.

As the groundwater samples were filtered prior to analyses, the groundwater results represent a soluble concentration. Due to the potential for contaminants to be adsorbed to soil particles, groundwater pumped as part of de-watering activities should be treated to remove sediment prior to discharge to the San Francisco Bay.

5.3 GROUNDWATER-TRANSBAY TERMINAL LOOP

Benzene, acenaphthene, 1,1-DCA, 1,1-DCE, 1,1,1-TCA, arsenic, mercury, and nickel were detected in a few of the groundwater samples analyzed. The concentrations were compared to SFDPW requirements for batch wastewater discharges. None of the constituents were above the SFDPW requirements.

As the groundwater samples were filtered prior to analyses, the groundwater results represent a soluble concentration. Due to the potential for contaminants to be adsorbed to soil particles, SFDPW discharge requirements should be reviewed to determine the need for treatment prior to discharge.

6.0 CONCLUSIONS

Based on the information presented in this report, the following conclusions have been reached:

- Although several contaminants were occasionally detected in soil samples, the primary constituents of concern are lead, TPH-S, PCB, and SVOC.

- At the West Approach, lead concentrations indicated that approximately 20 percent of the soil samples collected would be classified as hazardous by the State of California upon excavation and classification as a waste material.

- At the Transbay Terminal Loop, lead concentrations indicated that approximately 45 percent of the material represented by soil samples collected would be classified as hazardous by the State of California upon excavation and classification as a waste material.

- At the West Approach, lead impacted soil was generally confined to the upper 1.5 meters (5 feet) of soil, and there were no other correlation between lead concentration, depth, or location.

- Selected soil samples collected from demolition boring at the West Approach and the Transbay Terminal Loop had soluble lead concentrations about the RCRA criteria after the completion of a TCLP. The materials represented by these soil samples would be considered a RCRA hazardous waste.

- At the Transbay Terminal Loop, lead impacted soil was generally confined to the upper 3 meters (10 feet) of soil, and there were no other correlation between lead concentration, depth, or location.

- PSI recommends that during excavation activities, the soil be segregated based on whether it is lead, TPH-S/SVOC, or non-impacted soil to the extent practicable.

- Although several contaminants were detected in soluble groundwater samples (filtered), none of the groundwater samples had concentrations exceeding the SFDPW requirements.

- Due to elevated concentrations of lead and other contaminants measured at the site, the construction contractor should be aware of the health and safety concerns, regulatory requirements, and possible landfill restrictions in disposal of contaminated soil.

STLC		15	5	100	0.75	1	5	80	25	5	0.2	350	20	1	5	7	24	250

Notes:
D = sample depth.
Sample depth in feet below surface grade.
S = Surface.
<0.01 = not detected at or above the laboratory detection limits
Metals are designated by their symbol on the periodic table of elements.
All samples are reported as total concentration in milligrams per kilogram (mg/kg), unless indicated.
(3.3) = Soluable concentration after a WET, presented in milligrams per liter (mg/l)
(3.3) = Soluble concentration after a TCLP, presented in mg/l.
(NS) = Not sufficient sample to analyze
TTLC = total threshold limit concentration
STLC = soluable threshold limit concentration

TABLE 3

SUMMARY OF ANALYTICAL RESULTS: VOC COMPOUNDS
SEISMIC RETROFIT OF THE WEST APPROACH
SAN FRANCISCO - OAKLAND BAY BRIDGE

Landscaping

Boring	Depth	n-Butylbenzene	cis-1,2-Dichloroethene	Chlorobenzene	Carbon disulfide	Isopropylbenzene	p-Isopropyltoluene	Naphthalene	n-Propylbenzene	Tetrachloroethene	Toluene	1,2,4-Trichlorobenzene	1,1,1-Trichloroethane	Trichloroethene	Xylenes, total	Vinyl chloride	Total VOCs
L15	2	ND	ND	ND	ND	ND	ND	ND	ND	ND	1	ND	ND	ND	ND	1	

Notes:

Depth is in feet below ground surface

S= Surface

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported in micrograms per kilogram (ug/kg).

Notes:

Depth is in feet below ground surface

PRG=Preliminary Remedial Goal as stated for Industrial Soil (US EPA Region IX).

All detected SVOC compounds with a published PRG are presented in this table. Total SVOCs includes compounds that do not have a published PRG.

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported as total concentration in micrograms per kilogram (ug/kg).

Results in bold type are above their respective PRG for that compound.

S = Surface.

	3	ND	ND	ND	ND
	6	ND	ND	ND	ND

Notes:
All concentrations are presented in milligrams per kilogram unless noted
Sample depth is in feet below ground surface
ND = Not Detected
-- = Not Analyzed
TPH-S = Total Petroleum Hydrocarbon Speciation
VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)
VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants
SVOC = Total of Semi-Volatile Organic Compounds Detected (presented in micrograms per kilogram)
SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants
PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parentheses)

Notes:

All concentrations are presented in milligrams per kilogram unless noted

All measurements are presented in feet

ND = Not Detected

— = Not Analyzed

TPH-S = Total Petroleum Hydrocarbon Speciation

VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)

VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants

SVOC = Total of Semi Volatile Organic Compounds Detected (presented in micrograms per kilogram)

SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants

PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parentheses)

Notes:

Depth in feet below ground surface

<0.01 = not detected at or above the laboratory detection limits

Metals are designated by their symbol on the periodic table of elements.

All samples are reported as total concentration in milligrams per kilogram (mg/kg), unless indicated.

(3.3) = Soluable concentration after a WET, presented in milligrams per liter (mg/l)

(3.3) = Soluble concentration after a TCLP, presented in mg/l.

NS = Not sufficient sample to analyze

TTLC = total threshold limit concentration

STLC = soluable threshold limit concentration.

* = Soil sample resampled and reanalyzed

Notes:

All concentrations are presented in milligrams per kilogram unless noted

Sample depth is presented in feet below ground surface

ND = Not Detected

— = Not Analyzed

TPH-S = Total Petroleum Hydocarbon Speciation

VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)

VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants.

SVOC = Total of Semi-Volatile Organic Compounds Detected (presented in micrograms per kilogram)

SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants.

PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parantheses)

Notes:

PRG=Preliminary Remedial Goal as stated for Industrial Soil (US EPA Region IX).

All detected SVOC compounds with a published PRG are presented in this table. Total SVOCs includes compounds that do not have a published PRG.

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported as total concentration in micrograms per kilogram (ug/kg).

Results in bold type are above their respective PRG for that compound.

Depth in presented in feet below ground surface

Notes:

Depth is in feet below ground surface

<0.01 = not detected at or above the laboratory detection limits

Metals are designated by their symbol on the periodic table of elements.

All samples are reported as total concentration in milligrams per kilogram (mg/kg), unless indicated.

(3.3) = Soluable concentration after a WET, presented in milligrams per liter (mg/l)

(3.3) = Soluble concentration after a TCLP, presented in mg/l.

NS = Not Sufficient Sample to Analyze

TTLC = total threshold limit concentration

STLC = soluable threshold limit concentration.

* = Soil sample resampled and reanalyzed

Notes:
All concentrations are presented in milligrams per kilogram unless noted
Sample depth is presented in feet below ground surface
ND = Not Detected
--- = Not Analyzed
TPH-S = Total Petroleum Hydrocarbon Speciation
VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)
VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants.
SVOC = Total of Semi-Volatile Organic Compounds Detected (presented in micrograms per kilogram)
SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants.
PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parentheses)

Notes:

PRG=Preliminary Remedial Goal as stated for Industrial Soil (US EPA Region IX).

Depth is presented in feet below ground surface

All detected SVOC compounds with a published PRG are presented in this table. Total SVOCs includes compounds that do not have a published PRG.

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported as total concentration in micrograms per kilogram (ug/kg).

Results in bold type are above their respective PRG for that compound.

Notes

<0.01 = not detected at or above the laboratory detection limits

Metals are designated by the r symbol on the periodic table of elements

All samples are reported as total concentration in milligrams per kilogram (mg/kg), unless indicated

(3.5) Soluable concentration after a WET, presented in milligrams per liter (mg/l)

(3.3) Soluable concentration after a TCLP, presented in mg/l

NS = Not sufficient sample to analyze

TTLC = total threshold limit concentration

STLC = soluable threshold limit concentration

ND = Not detected

Depth is presented in feet below ground surface

* = Soil sample resampled and reanalyzed

Notes:

All concentrations are presented in milligrams per kilogram unless noted

Sample depth is presented in feet below ground surface

ND = Not Detected

— = Not Analyzed

TPH-S = Total Petroleum Hydrocarbon Speciation

VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)

VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants

SVOC = Total of Semi-Volatile Organic Compounds Detected (presented in micrograms per kilogram)

SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants or phenol which can be naturally occuring

PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parentheses)

Notes:

Depth is presented in feet below ground surface

PRG=Preliminary Remedial Goal as stated for Industrial Soil (US EPA Region IX).

All detected SVOC compounds with a published PRG are presented in this table. Total SVOCs includes compounds that do not have a published PRG.

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported as total concentration in micrograms per kilogram (ug/kg).

Results in bold type are above their respective PRG for that compound.

Notes:

<0.01 = not detected at or above the laboratory detection limits

Metals are designated by their symbol on the periodic table of elements.

All samples are reported as total concentration in milligrams per kilogram (mg/kg), unless indicated.

(3.3) = Soluable concentration after a WET, presented in milligrams per liter (mg/l)

(3.3) – Soluble concentration after a TCLP, presented in mg/l.

TTLC = total threshold limit concentration

STLC = soluable threshold limit concentration.

S = Surface.

Depth in feet below ground surface

* = Soil sample resampled and reanalyzed

DTB59-2-3	<10	ND	ND	ND	ND	ND	—	6,630

Notes:
All concentrations are presented in milligrams per kilogram unless noted
ND = Not Detected
--- = Not Analyzed
TPH-S = Total Petroleum Hydrocarbon Speciation
VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)
VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants.
SVOC = Total of Semi-Volatile Organic Compounds Detected (presented in micrograms per kilogram)
SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants.
PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parentheses)
S = Surface.
DTB53-2-1 = Sample Identification-Boring Number-Sample depth in feet below surface grade.

Notes:

Depth is in feet below ground surface

S= Surface

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported in micrograms per kilogram (ug/kg).

Notes:

PRG=Preliminary Remedial Goal as stated for Industrial Soil (US EPA Region IX).

All detected SVOC compounds with a published PRG are presented in this table. Total SVOCs includes compounds that do not have a published PRG.

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported as total concentration in micrograms per kilogram (ug/kg).

Results in bold type are above their respective PRG for that compound.

Depth is presented in feet below ground surface

Notes

<0.01 = not detected at or above the laboratory detection limits

Metals are designated by their symbol on the periodic table of elements

All samples are reported as total concentration in milligrams per kilogram (mg/kg), unless indicated.

(3.3) = Soluable concentration after a WET, presented in milligrams per liter (mg/l)

(3.3) = Soluble concentration after a TCLP, presented in mg/l

TTLC = total threshold limit concentration

STLC = soluable threshold limit concentration.

Sample depth in feet below surface grade.

ND = Not Detected

NS = Not sufficient sample to analyze.

* = Soil sample resampled and reanalyzed

Notes:

All concentrations are presented in milligrams per kilogram unless noted

Sample depth is presented in feet below ground surface

ND = Not Detected

— = Not Analyzed

TPH-S = Total Petroleum Hydrocarbon Speciation

VOC = Total of Volatile Organic Compounds Detected (presented in micrograms per kilogram)

VOC concentrations do not include acetone and methylene chloride, as these are common laboratory contaminants.

SVOC = Total of Semi-Volatile Organic Compounds Detected (presented in micrograms per kilogram)

SVOC concentrations do not include phthalate compounds, as these are common laboratory contaminants.

PCB = Total of Polychlorinated Biphenyls compounds detected (type of PCB in parentheses)

Notes:

PRG=Preliminary Remedial Goal as stated for Industrial Soil (US EPA Region IX).

Depth is presented in feet below ground surface

All detected SVOC compounds with a published PRG are presented in this table. Total SVOCs includes compounds that do not have a published PRG.

ND = Not detected at or above the laboratory detection limits stated in laboratory reports.

All samples are reported as total concentration in micrograms per kilogram (ug/kg).

Results in bold type are above their respective PRG for that compound.

APPENDIX A

FIELD PROCEDURES

APPENDIX A
FIELD PROCEDURES

I. DRILLING OF SOIL BORINGS AND COLLECTION OF SOIL SAMPLES

The following procedures were used for the drilling and sampling of the soil borings drilled at the site:

1. Drilling was conducted by V&W Drilling under the supervision of PSI. Augers were pressure washed at the beginning of the day and between soil borings.

2. Prior to the commencement of drilling activities at the site, Underground Service Alert (USA) was contacted to identify underground utilities in the areas that the borings were located.

3. Boring logs for the soil borings drilled at the site were prepared under the supervision of a State of California Registered Geologist. The soil cuttings observed during drilling were described in accordance with the Unified Soil Classification System.

4. A split-sample barrel was used for the collection of soil samples. Soil samples were collected by driving the sampler approximately 0.3 meters (1.5-feet) into the bottom of the soil boring through the center of the drilling bit. Three stainless steel rings were placed in the split-sample barrel prior to sample collection.

5. The ends of the sample tubes were covered with Teflon sheets and capped with polyvinyl chloride (PVC) end caps. The sample were labeled and placed in a zip-lock bag in a chilled cooler pending delivery to the laboratory for analysis.

6. Soil samples were assigned identification numbers such as B77-1-5, where B77 indicates the pier number, the 1 indicated the number of the boring at that pier, and -5 indicates that the sample was collected at 5 feet bgs. The samples were labeled with the sampling designation, depth, date, client name, and project number.

7. Soil samplers were washed between sampling intervals with Alconox soap followed by two deionized-water rinses.

8. Chain-of-custody procedures using chain-of-custody forms were used to document sample handling and transportation.

9. A Century 128 organic vapor analyzer (OVA) was used to monitor volatile organic compounds (VOCs) in the ambient air during drilling at the site in accordance with the site health and safety plan. VOC concentrations in the soil were measured and

recorded on the borings logs for depths that soil samples were collected. VOCs in the soil were measured at the sampling depths by partially filling a zip-loc bag with soil. The components of the soil were allowed to volatilize and fill the headspace in the tube for approximately 30 minutes prior to inserting the OVA probe through one of the end caps and recording the measurements.

10. Soil cuttings and steam wash water generated during drilling activities at the site were contained in Department of Transportation (DOT) approved 55-gallon drums. The drums were labeled with the contents, date, well or boring number, client name, and project number.

II FIELD DOCUMENTATION OF SAMPLING PROCEDURES

The following outline describes the procedures adhered by PSI for proper sampling documentation.

1. Sampling procedures were documented in a field notebook that will contain:

    1. Sample collection procedures
    2. Date and time of collection
    3. Date of shipping
    4. Sample collection location
    5. Sample identification number(s)
    6. Intended analysis
    7. Quality control samples
    8. Sample preservation
    9. Name of sampler
    10. Any pertinent observations

2. Samples were labeled with the following information:

    1. Sample number
    2. Well number
    3. Date and time sample was collected
    4. Sampler's name
    5. Sample preservatives (if required)

3. The following is the sample designation system for the site:

   For Borings and Hand-Auger Borings the samples will be labeled (Project Type) (Bent Number) (Boring Number) (Depth)

   Project types are T = Permanent or Temporary Column; D = Demolition Column; R = Retrofit Columns, L = Landscaping, B = Retaining Wall. An H will be added to the T for borings along Harrison Street, and an F will be added to the T for borings along the Fremont off-ramp

   (I.e., a sample collected for the permanent or temporary columns from boring 1 at Bent 5 at 5 feet bgs would be T5-1-5)

   For groundwater samples (W) (Column Number)-(Boring Number) (i.e. W5-1)

4. Handling of the samples were recorded on a chain of custody form which shall include:

   1. Site name
   2. Signature of Collector
   3. Date and time of collection
   4. Sample identification number
   5. Number of containers in sample set
   6. Description of sample and container
   7. Name and signature of persons, and the companies or agencies they represent, who are involved in the chain of possession
   8. Inclusive dates and times of possession
   9. Analyses to be completed

III SOIL SAMPLING USING A DRIVE SAMPLER

The following outline describes the procedures utilized by PSI for soil sampling utilizing a hand auger.

1. The clean sampler was lined with one clean, stainless steel tube and advanced to a specified depth where a soil sample was obtained by driving the sampler into the soil with the drive hammer.

2. The tube was removed from the sampler. The ends of the sample tubes were covered with Teflon sheets and capped with polyvinyl chloride (PVC) end caps. The sample were labeled and placed in a zip-lock bag, recorded on a Chain-of-Custody record and placed in a chilled cooler prior to delivery to the laboratory for analysis.

IV. GROUND-WATER SAMPLING

The following procedures were used for ground water sampling:

1. All equipment was washed prior to sampling with an Alconox solution, followed by two tap water rinses and a deionized water rinse.

2. Water samples were collected with a polyethylene disposable bailer. The water collected were immediately decanted into laboratory-supplied vials and bottles. The containers were overfilled, capped, labeled, and placed in a chilled cooler, prior to delivery to the laboratory for analysis.

3. Chain-of-custody procedures, including chain-of-custody forms, were used to document water sample handling and transport from collection to delivery to the laboratory for analysis.

4. Ground-water samples were delivered to a State-certified hazardous waste laboratory within approximately 24 hours of collection.

V BACKFILL OF SOIL BORINGS

The following procedures were used to backfill the soil borings at the site:

1. Soil borings were backfilled to grade with Portland cement slurry.

Report To: FRANK POSS

Project Name: CALTRANS
Site Location:

PACE ANALYTICAL Project #: 980508-09
PACE ANALYTICAL WO #: 13164A
Client ID #: BG001 SFW

Date: 6/3/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/06/98 and received on 05/06/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt.
In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
BTEX (Soil)	2-3
TPH-Speciation (Soil)	4-7
CCR Metals (Soil)	8-16
List of Abbreviations and Definitions	17

In addition the analyses for 8080, 8260, 8270 & Mercury were subcontracted to an outside laboratory with results issued in a separate report.

Reviewed by.
Richard Villalania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225

Pace Analytical

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

This report shall not be reproduced, except in full

ATTN: Mr. Richard Villafana

Client's Project: 980508-09
Lab No.: 26189-001/022

Gentlemen:

Enclosed are the results for sample(s) received by Advanced Technology Laboratories and tested for the parameters indicated in the enclosed chain of custody.

Thank you for the opportunity to service the needs of your company. Please feel free to call me at (562) 989 - 4045 if I can be of further assistance to your company.

Sincerely,

Edgar P. Caballero
Laboratory Director
EPC/ms

RE: Pace Project Number: 107323
Client Project ID: 980508-09

Dear Mr. Villafania:

Enclosed are the results of analyses for samples received on May 11, 1998. This report includes a sum total of Volatile and Semivolatile detections. If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Carolynne Trout
Project Manager

RE: Pace Project Number: 6021569
Client Project ID: 980508-09

Dear :

Enclosed are the results of analyses for sample(s) received on May 11, 1998. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

DeWayne McAllister
Project Manager

PARAMETER FOOTNOTES

ND	Not Detected
NC	Not Calculable
PRL	Pace Reporting Limit
(S)	Surrogate
[U]	Undetected
[1]	The Surrogate recovery value exceeded the established laboratory control limit value(117%).
[2]	The Surrogate recovery value is below the established laboratory control limit value. The sample was re-analyzed with the same results.
[3]	Low surrogate recovery due to matrix. The sample was analyzed twice.
[4]	Surrogate recovery outlier below lower control limit.
[5]	Detected but below the PRL; therefore, result is an estimated concentration (CLP J-Flag).
[6]	Surrogate recovery outlier below lower control limit for two analyses.

Date: 6/5/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/06/98 and received on 05/08/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt.
In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
TPH-Speciation (Soil)	2-3
CCR Metals (Soil)	4-12
List of Abbreviations and Definitions	13

Reviewed by,
Richard Villafania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225.

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

RE: Pace Project Number: 6021596
Client Project ID: 980508-507

Dear :

Enclosed are the results of analyses for sample(s) received on May 12, 1998. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

DeWayne McAllister
Project Manager

RE: Pace Project Number: 107312
Client Project ID: 980508-07

Dear Mr. Villafania:

Enclosed are the results of analyses for samples received on May 11, 1998. This report includes a sum total of Volatile and Semivolatile detections. If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Carolynne Trout

Carolynne Trout
Project Manager

Date: 6/5/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/07/98 and received on 05/08/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt. In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
BTEX (Soil)	2-3
CCR Metals (Soil)	4-9
TPH-Speciation (Soil)	10-13
List of Abbreviations and Definitions	14

In addition the analyses for 8260, 8270 & 8080 were subcontracted to an outside laboratory with results issued in a separate report.

Reviewed by,
Richard Villafania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

RE: Pace Project Number: 107322
Client Project ID: 980508-08

Dear Mr. Villafania:

Enclosed are the results of analyses for samples received on May 11, 1998. This report includes a sum total of Volatile and Semivolatile detections. If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Carolynne Trout

Carolynne Trout

PARAMETER FOOTNOTES

ND	Not Detected
NC	Not Calculable
PRL	Pace Reporting Limit
(S)	Surrogate
[U]	Undetected
[1]	The detection limits for all compounds for this analysis are elevated due to limited sample.
[2]	Detected but below the PRL; therefore, result is an estimated concentration (CLP J-Flag).

* Indicates MDL not available, a surrogate compound, or for Arochlors 1221, 1232, 1242, 1248, 1254 similar response factors to 1016 and 1260 are recognized and applied.

RE: Pace Project Number: 107314
Client Project ID: 980508-08

Dear Mr. Villafania:

Enclosed are the results of analyses for samples received on May 11, 1998. This report includes a sum total of Volatile and Semivolatile detections. If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Carolynne Trout

PARAMETER FOOTNOTES

ND	Not Detected
NC	Not Calculable
PRL	Pace Reporting Limit
(S)	Surrogate
[U]	Undetected
[1]	Surrogate recovery outliers below lower control limits for all surrogates. Insufficient sample volume to reanalyze the sample.
[2]	Matrix (MS) and or surrogate spike recovery (S) was affected by the sample matrix. Refer to the batch QC recoveries (Blank and LCS)
[3]	Analyte is found in the associated blank as well as in the sample (CLP B-Flag).
[4]	The Surrogate recovery value is below the established laboratory control limit value(80%). Not enough sample for re-analysis.
[5]	The Surrogate recovery value exceeded the established laboratory control limit value(117%).
[6]	The Surrogate recovery value exceeded the established laboratory control limit value(121%). No target analytes detected.

PACE ANALYTICAL Project #: 980509-12
PACE ANALYTICAL WO #: 13188a
Client ID #: 8G001 SFW

Date: 6/5/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/08/98 and received on 05/09/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt. In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
CCR Metals (Soil)	2-6
TPH-Speciation (Soil)	7-8
List of Abbreviations and Definitions	9

In addition the analysis for 8260 was subcontracted to an outside laboratory with results issued in a separate report.

Reviewed by,
Richard Villafania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225.

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

Report To: FRANK POSS

Project Name: CALTRANS SFW
Site Location:

PACE ANALYTICAL Project #: 980511-02
PACE ANALYTICAL WO #: 13194A
Client ID #:8G001

Date: 6/9/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/08/98 and received on 05/11/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt.
In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
TPH-Speciation (Soil)	2-3
CAM Metals (Soil)	4-6
List of Abbreviations and Definitions	7

In addition, the analyses for 8260, 8270, 8080 and Mercury were subcontracted to outside laboratories and reported under separate cover.

Reviewed by,
Richard Villafana, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

Advanced Technology Laboratories

May 19, 1998 ELAP No.: 1838

Pace Analytical
3970 E. Gilman St.
Long Beach, CA 90815

ATTN: Mr. Richard Villafania

Client's Project: 13194A/980511-02
Lab No.: 25856-001/010

Gentlemen

Enclosed are the results for sample(s) received by Advanced Technology Laboratories and tested for the parameters indicated in the enclosed chain of custody.

Thank you for the opportunity to service the needs of your company. Please feel free to call me at (562) 989 - 4045 if I can be of further assistance to your company.

Sincerely,

Edgar P. Caballero
Laboratory Director
EPC/ms

Enclosures

This cover letter is an integral part of this analytical report.

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. This report is submitted for the exclusive use of the client to whom it is addressed. Any reproduction of this report or use of this Laboratory's name for advertising or publicity purpose without authorization is prohibited.

Site Location:

PACE ANALYTICAL Project #: 980509-13
PACE ANALYTICAL WO #: 13189A
Client ID #:

Date: 6/22/98

PACE ANALYTICAL , INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/08/98 and received on 05/08/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt.
In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
CCR Metals (Soil)	2-12
TPH-Speciation (Soil)	13-14
List of Abbreviations and Definitions	15

In addition the analysis for 8080, 8260 & 8270 were subcontracted to an outside laboratory with results issued in a separate report.

Reviewed by:
Richard Villafania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

EPA Method 8260 (Oxygenated Compounds)

Lab No.:		25856-010	
Client Sample I.D.:		D7-SUR	
Date Sampled:		05/08/98	
QC Batch #:		P98VOCS085	
Date Analyzed:		05/14/98	
Analyst Initials:		EM	
Dilution Factor:		1	
ANALYTE	**MDL**		
Ethanol	2000	2000	ND
Tert-Butanol	100	100	ND
Methyl tert-Butyl Ether	5	5	ND
Di-isopropyl Ether	5	5	ND
Ethyl tert-Butyl Ether	5	5	ND
Tert-Amyl methyl Ether	5	5	ND

MDL = Method Detection Limit
ND = Not Detected (Below DLR).
DLR = MDL X Dilution Factor
NA = Not Analyzed

Reviewed/Approved By: _____ Date 5/18/98

RE: Pace Project Number: 107310
Client Project ID: 980509-1A

Dear Mr. Villafania:

Enclosed are the results of analyses for sample(s) received on May 12, 1998. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout
Project Manager

ATTN: Mr. Richard Villafania

Client's Project: Archive 980522-03
Lab No.: 26188-001/008

Gentlemen:

Enclosed are the results for sample(s) received by Advanced Technology Laboratories and tested for the parameters indicated in the enclosed chain of custody.

Thank you for the opportunity to service the needs of your company. Please feel free to call me at (562) 989 - 4045 if I can be of further assistance to your company.

Sincerely,

Edgar P. Caballero
Laboratory Director
EPC/ms

Enclosures

This cover letter is an integral part of this analytical report.

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. This report is submitted for the exclusive use of the client to whom it is addressed. Report To: FRANK POSS

Project Name: WEST APPROACH
Site Location:

PACE ANALYTICAL Project #: 980512-03
PACE ANALYTICAL WO #: 13202A
Client ID #: 575-8G001

Date: 6/10/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/11/98 and received on 05/12/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt. In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
BTEX (Soil)	2-3
CCR Metals (Soil)	4-9
TPH-Speciation (Soil)	10-11
List of Abbreviations and Definitions	12

In addition the analyses for 8260, 8270 & 8080 were subcontracted to an outside laboratory with results issued in a separate report.

Reviewed by,
Richard Villafania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1225

Pace Analytical

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg	=	micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

RE: Pace Project Number: 6021648
Client Project ID: 980512-03

Dear :

Enclosed are the results of analyses for sample(s) received on May 13, 1998. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

DeWayne McAllister
Project Manager

RE: Pace Project Number: 107350
Client Project ID: 980512-03

Dear Mr. Villafania:

Enclosed are the results of analyses for sample(s) received on May 13, 1998. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout
Project Manager

RE: Pace Project Number: 107352
Client Project ID: 980512-03

Dear Mr. Villafania:

Enclosed are the results of analyses for sample(s) received on May 13, 1998. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carolynne Trout
Project Manager

Site Location:

PACE ANALYTICAL Project #: 980512-02
PACE ANALYTICAL WO #: 13201A
Client ID #: 8G001 SFW

Date: 6/9/98

PACE ANALYTICAL, INC. is pleased to provide you with analytical data for your above referenced project. Samples were collected on 05/11/98 and received on 05/12/98. Please refer to the chain of custody included at the end of this report for conditions of the samples upon receipt.
In accordance with the chain of custody, the samples were analyzed for the following analytical parameters:

ANALYTICAL TEST	PAGE
BTEX (Soil)	2-3
CCR Metals (Soil)	4-8
TPH-Speciation (Soil)	9-10
List of Abbreviations and Definitions	11

In addition the analyses for 8260, 8270 & 8080 were subcontracted to an outside laboratory with results issued in a separate report.

Reviewed by,
Richard Villafania, Project Manager

This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from those protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1235

List of Abbreviations and Definitions

SM	=	Standard Methods for the examination of water and waste water
EPA	=	EPA approved methodology, 40 CFR Part 136
SW	=	EPA SW 846, Test Methods for Evaluating Solid Wastes
TCLP	=	Toxicity Characteristic Leaching Procedure
STLC	=	Soluble Threshold Limit Concentration
mg/L	=	milligrams per liter, parts per million (ppm), unit of measurement for a liquid
mg/Kg	=	milligrams per kilogram, parts per million (ppm), unit of measurement for a solid
µg/L	=	micrograms per liter, parts per billion (ppb), unit of measurement for a liquid
µg/Kg		micrograms per kilogram, parts per billion (ppb), unit of measurement for a solid
MDL	=	Laboratory Method Detection Limit, minimum level of detection derived from actual laboratory data
DF	=	Dilution Factor, the magnitude in which a sample must be diluted to eliminate matrix interference and/or to bring the sample concentration within the linear calibration range
RPD	=	Relative Percent Difference, measure of precision
% REC	=	Percent Recovery, measure of accuracy
<	=	less than, analyte of interest below stated numerical value
NA	=	Not Applicable
LCS	=	Laboratory Control Sample
DOHS	=	Department of Health Services
ELAP	=	Environmental Laboratory Accreditation Program
CCS	=	Calibration Check Standard
ICV	=	Initial Calibration Verification
PRL	=	Pace Reporting Limit

Lab No.: 26190-001/008

Gentlemen:

Enclosed are the results for sample(s) received by Advanced Technology Laboratories and tested for the parameters indicated in the enclosed chain of custody.

Thank you for the opportunity to service the needs of your company. Please feel free to call me at (562) 989 - 4045 if I can be of further assistance to your company.

Sincerely,

Edgar P. Caballero
Laboratory Director
EPC/ms
