CASE NARRATIVE

The following information applies to samples which were received on 02/05/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

Report approved by:

Robert R. Clark, Ph.D.
Laboratory Director

ELAP # 1184

DL - Detection Limit -- The lowest level at which the compound can reliably be detected under normal laboratory conditions
ND - Not Detected -- The compound was analyzed for but was not found to be present at or above the detection limit.
N/A - Not Analyzed -- Per client request, this analyte was not on the list of compounds to be analyzed for

PARAMETER FOOTNOTES

Not Detected
Not Calculable
Pace Reporting Limit
(S) Surrogate

Common laboratory contaminant.
Analyte is found in the associated blank as well as in the sample (CLP B-Flag).
Detected but below the PRL; therefore, result is an estimated concentration (CLP J Flag).
The surrogate recovery was outside QC acceptance limits due to matrix interference.

LITY CONTROL DATA PARAMETER FOOTNOTES

nsistent with EPA guidelines unrounded concentrations are displayed and have been used to calculate % Rec and RPD values.
Not Detected
Not Calculable
Pace Reporting Limit
RPD Relative Percent Difference
Surrogate
Compound concentration exceeds the calibration range of the instrument (CLP E-Flag).
Spiked sample recovery is not within control limits.
Detected but below the PRL; therefore, result is an estimated concentration (CLP J-Flag).
Outside of control limits of 30 1%%.
Outside of control limits of 42 1%%.
Common laboratory contaminant.
The spike recovery was outside acceptance limits for the MS and /or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.

QUALITY CONTROL DATA PARAMETER FOOTNOTES

Consistent with EPA guidelines unrounded concentrations are displayed and have been used to calculate % Rec and RPD values.

N Not Detected
NC Not Calculable
PQL Pace Reporting Limit
RPD Relative Percent Difference
S Surrogate
J Detected but below the PQL; therefore, result is an estimated concentration (CLP J-Flag)
B Common laboratory contaminant.
M1 The spike recovery was outside acceptance limits for the MS and /or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
C1 The continuing calibration for this compound was outside the method control limits. The result for this compound should be considered an estimate.

istent with EPA guidelines unrounded concentrations are displayed and have been used to calculate % Rec and RPD values.

Not Detected
Not Calculable
Pace Reporting Limit
Relative Percent Difference
Surrogate
Compound concentration exceeds the calibration range of the instrument (CLP E-Flag).
Spiked sample recovery is not within control limits.
Detected but below the PRL; therefore, result is an estimated concentration (CLP J-Flag).
Outtside of control limits of 30-154%.
Outside of control limits of 42-146%.
Common laboratory contaminant.
The continuing calibration for this compound was outside the method control limits. The result for this compound should be considered an estimate.

1] Analyte is found in the associated blank as well as in the sample (CLP B-Flag).
2] Detected but below the PRL; therefore, result is an estimated concentration (CLP J-Flag).
Common laboratory contaminant.
Spiked sample recovery is not within control limits.
5] Recovery does not meet QC limits of 43-148%.
Recovery does not meet QC limits of 48-187%.
This sample was reanalyzed out of holding with no detection of this analyte.
This sample was reanlyzed out of holding with no detection of this analyte.
9] The surrogate and/or spike recovery was outside acceptance limits.
The internal standard response was below criteria due to the purging efficiency of the soil matrix. Results may be biased high.

CASE NARRATIVE

The following information applies to samples which were received on 02/05/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

CASE NARRATIVE

The following information applies to samples which were received on 02/11/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

8270: Some samples were run at a dilution due to high levels of hydrocarbons in the sample; consequently, detection limits were raised.

CASE NARRATIVE

The following information applies to samples which were received on 02/05/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

Report approved by:

CASE NARRATIVE

The following information applies to samples which were received on 02/05/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

Report approved by:

Robert R. Clark, Ph.D.
Laboratory Director

ELAP # 1184

DL - Detection Limit -- The lowest level at which the compound can reliably be detected under normal laboratory conditions
ND - Not Detected -- The compound was analyzed for but was not found to be present at or above the detection limit
NA - Not Analyzed -- Per client request, this analyte was not on the list of compounds to be analyzed for
