This report pertains only to the samples investigated and does not necessarily apply to other apparently identical or similar materials. All samples are analyzed on an as received (wet weight) basis. Sampling, handling and analytical methods must be in accordance with EPA established protocols. Deviations from these protocols may compromise analytical results. All method numbers referenced are EPA method numbers except where otherwise noted. This report is submitted for the exclusive use of the client to whom it is addressed and is only valid in its entirety. ELAP certification #1233.

QUALITY CONTROL DATA PARAMETER FOOTNOTES

Consistent with EPA guidelines unrounded concentrations are displayed and have been used to calculate % Rec and RPD values.

ND	Not Detected
)	Not Calculable
PL	Pace Reporting Limit
RPD	Relative Percent Difference
S)	Surrogate
J]	Detected but below the PRL; therefore, result is an estimated concentration (CLP J Flag).
[C]	Common laboratory contaminant.
	The spike recovery was outside acceptance limits for the MS and /or MSD due to matrix interference. The LCS and/or
	LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.

CL Common Laboratory Contaminant.
B Analyte is found in the associated blank as well as in the sample (CLP B Flag).
E The continuing calibration for this compound was outside the method control limits. The result for this compound should be considered an estimate.
[4] The following compounds were analyzed with a one point calibration: Ethyl-tert butyl ether, Isopropyl ether, tert Amylmethyl ether, 2-Methyl 2 propanol and Ethanol
X Compound concentration exceeds the calibration range of the instrument (CLP E Flag).
The internal standard response was below criteria due to the matrix of the soil matrix. Results may be biased high.
[8] Internal Standard do not present due to matrix interferences. Results reported reported from 1 10x dilution.
[9] The surrogate recovery was outside QC acceptance limits due to matrix interference
N Spiked sample recovery is not within control limits.
[1] Analysis conducted 1 day in excess of EPA recommended hold time. Sample was originally analyzed in hold but looked on the purge and trap.
[12] Analysis conducted 1 day in excess of recommended EPA hold time. The sample was originally analyzed in hold but looked on the purge and trap.

CASE NARRATIVE

The following information applies to samples which were received on 02/05/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

CASE NARRATIVE

The following information applies to samples which were received on 02/11/99 :

The samples were received at the laboratory chilled and sample containers were intact.

Unless otherwise noted below, the Quality Control acceptance criteria were met for all samples for every analysis requested.

7471: The result for mercury in some samples exceeded the calibration range. Due to a deficiency in EPA Method 7471, re-analysis at a dilution is not possible; mercury was reported from the initial run as an estimated value.

8270: Some samples were run at a dilution due to high levels of hydrocarbons in the sample; consequently, detection limits were raised.
