1. Any single bar may be shifted to within a bar diameter of an adjacent bar so long as the resulting gap between any two adjacent bars does not exceed 12".

2. Any group of bars may be uniformly shifted to within a bar diameter of an adjacent bar so long as the resulting gap between any two adjacent bars does not exceed 12".

3. Any single bar may be removed from a module so long as it is replaced midway between adjacent modules and the resulting gap between any two adjacent bars does not exceed 12". An equivalent shift of two bars resulting in the same configuration is also allowed.

4. Lap splices may be offset up to 6" provided that the resulting gap between any two adjacent bars does not exceed 12".

T-1212 **BGP - Goethermal Manifold Sleeve Supports** **Closed** **03/04/2014** **03/14/2014** **03/07/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Per discussions with EOR(WSP), please confirm geothermal contractor is to install temporary supports (see attached sketch) to facilitate the installation of the geothermal pipe sleeves(36" long) at the face of finish concrete(which is not in the current concrete package-TG06).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Temporary Supports are the means and methods of the contractor.

T-1213	**SSS - Transfer Girder End Bracing at 9.9 & 10.1**	**Closed**	**03/05/2014**	**03/15/2014**	**03/17/2014**	**Potentially**	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 324 SK1 & SK2 for items 1 & 2:
1) Supply dimensions to locate the braces considering that the braces cannot be connected to the stiffener plates due to rebars.
2) Transfer Girders at other locations also have rebars passing thru the stiffener plates as shown here. Please provide a typical connection detail when this occurs.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Provide braces per Detail 12/S1-3703. Braces are to be connected to the stiffener plates closest to Grid C. Some rebars might interfere with the braces, but they can be adjusted in field slightly.

2). See response to #1.

T-1214	**SSS - Transfer Girder End Bracing at 9.9 & 10.1**	**Closed**	**03/05/2014**	**03/15/2014**	**03/17/2014**	**Potentially**	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For the Transfer Girder end bracing at GL 9.9 & 10.1 as indicated on SK1 please confirm the following:
1)
The outer braces are to be modeled as per detail 12/S1-3703.
2)
The inner braces between 9.9 & 10.1 are to be modeled as per detail 81/S1-5015.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The outer braces are to be modeled as per detail 12/S1-3703.

2). The inner braces between Grid 9.9 & 10.1 are also to be modeled as per detail 12/S1-3703.

T-1221	BGP - 36" Pile Sleeve Joint	Closed	03/06/2014	03/16/2014	03/14/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Scott Bunnell

REQUEST:

Please reference attached sketch, photo, and Contract Drawings Sl-3003 and Sl-2025. SCCI welded the 36" pile sleeve (see S 1-2025) vertical CJP as depicted in the attached sketch due to a shop fabrication error (see attached photo). Per AWS DI .1, the pre-qualified joint designation B-U2a-GF for FCAW allows a 65 degree groove angle with detail and fit up tolerances. The welded joint is approximately 15 degrees out of tolerance and is on one side of the sleeve only (2 joints per sleeve).
Due to the member considered as non-structural, SCCI requests this joint to be acceptable as welded at this location only. SCCI will adhere to Spec Section 05 50 10 - 2.5.C.2 - "Weld mat foundation sleeve components continuously and test their water tightness by filling with water. Monitor water level for 48 hours minimum. Dry and correct faulty welds and re-test until proven watertight." Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed method and testing described in this RFI is acceptable at this location only.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1222	SSS - Filler plate weld access at CP2 connection	Closed	03/07/2014	03/17/2014	03/17/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please reference Details 4 and 7 on sheet S1-8001.

Detail 7 specifies a 1" thick filler plate between the beam web and the 2 1/2" thick backing plate. Detail 4 Section E notes 1" typical from the edge of the fill plate to the adjoining stiffener or beam web. 1" opening does not allow for adequate access to perform the welding.

Oregon Iron Works(OIW) is requesting that all filler plates for CP2 connections have a minimum clearance of 1 1/2" from any adjoining edges. Additionally, OIW is requesting that this minimum clearance be applied to any similar areas that exhibit this limited access for welding.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Welding of the vertical stiffener should be done prior to installing the filler plate, hence there should be no weld access issue.
The proposal to increase the 1" gap to 1 1/2" gap is acceptable.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At SE401 see attached CD RFI # 317 SK1 to SK5 for items 1 to 7:
1) It is not clear what is meant by the noted slope designation.
Confirm the roof slab slopes and the top of pad slab is EL 56'-11 per A1-2894 (SK3).
2) Confirm the noted dimension is 1'-2 3/4 per 8/S1-5004 (SK4).
3) This note is pointing to the edge of slab and giving a top of steel elevation. Work with SK5 and clarify.
4) Confirm the noted dimensions should read 1'-9 & 9'-2 per 1/S1-7113 & RFI T-0965 (SK251, CD 200). If not, clarify.
5) The noted HSS members are not shown on S1-2504 (SK1) or 3/S1-7113 (SK2) but this detail is referenced on both plans noted above.
a) Please confirm the HSS members are required.
b) If yes, supply the size.
c) Supply the horizontal locations on plan
d) Supply the elevation
e) Supply connection details
f) NOTE: the elevator post connections per 1/S1-7600 may foul the HSS members (work with SK5)
6) Confirm the slab edge plate terminates below the 10" raised slab as shown.
7) Confirm detail 1/S1-7600 with the full depth stiffener and kicker brace applies in the noted cases with no elevator post on top of the beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The roof slab does not slope. T/Slab of the elevator shaft roof slab is 56' - 11" as noted on A1-2894.
2) Confirmed.
3) The note is pointing to the horizontal steel beams shown on 8/S1-5004 and notes the T/steel of these members.
4) No. The 10'- 3" and 1'-3" dimensions noted on A1-2894 are correct. The edge of slab for SE 401 at the top of the elevator shaft size increases at the top of the elevator shaft. Also see revised dimensions in the attached sketch SKS-0333.
5a) Yes, beams are required at these locations. These members shall be W18x50 beams. Refer to attached sketch SKS-0333. Note that there are four beams ,one on each side of the shaft.
5b) See response to 5a).
5c) Centerlines of the W18 beams shall be 3 ¾¿ from the edge of the elevator shaft opening (see note on sketch SKS-0333) .
5d) Elevation is 54' - 5" as noted on 3/S1-7113 (see note on sketch SKS-0333). Also see response to 3).
5e) Connection at the elevator machine support beams is shown in the attached sketch SKS-0333.
5f) See response to 7.
6) Confirmed.
7) The elevator rail posts shall be connected to the depressed W18x50 beams per 1/S1-7600. See detail in attached sketch SKS-0333.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up RFI to RFI T-1223 (SK 426, CD 317)
See attached CD RFI # 317.1 SK1 & SK2 for items 1 & 2:
1) Confirm the beam locations from the edge of slab as shown are acceptable.
2) The L5x5 angles will foul the shear plate for the W30 to the column connection if we use the double angle connection per 1/S1-5010 to connect the W16 to the W30. Confirm it is acceptable to connect the W16 to the W30

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed.

using a shear plate per 1/S1-5011.

T-1224 **BGP - Concourse Top Bars at Column Embedded Plates** **Closed** **03/10/2014** **03/20/2014** **03/18/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Reference: SKS-0324 and SKS-0325
Per SKS-0324 and SKS-0325, where the top bars for the concourse slab intersect type 1 B and 1 C embedded base plates, the bars are to be trimmed and supplemented with a matching slab dowel in MF beam layer 1. The typical deck top reinforcing consists of a continuous run of #9 bars @ 12" and alternates with a #9 x 28'-0" long bars@ 12". See attached sketch for details. To avoid trimming a 28'-0" bar and splicing it with a 17'-0" bar, please confirm if it is acceptable to relocate the #9 x 28'-0" top bars@ 12" to the MF beam layer 1. The continuous #9 bars@ 12" will remain at 3/4" from the top of concrete and trimmed according to SKS-0324 and SKS-0325.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to relocate the discontinuous T2 bars to the lower layer with the typical continuous T1 bars remaining in the top layer. We note that the RFI mentions the matching dowel length as being 17'-0". For RCS1, this would be a #9 bar with a splice length of 122" for Top Bar, Category II. Given a 42" base plate and either a 3" or 6" oversized block-out, the minimum length of the dowel would be 292" (24'-4") or 298" (24'-10"). The appropriate splice category and block-out size shall be considered when determining the length of the matching dowel.

Alternatively, the Contractor may place the T2 bars that conflict with the base plate in the lower layer.

T-1225	**BGP - Level C Bracing Removal Sequence West Side of Zone 1**	**Closed**	**03/10/2014**	**03/20/2014**		**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author:

REQUEST:

Following response and discussing with TJPA and Arup to RFI T-1077 and to submittal TG0300-535.5 WOJV is proposing the following sequence for bracing removal level C GL 1 - 7.5
See sketch SK -1 attached.
Sequence is as follows:
1. install re-bracing struts RB-01,02 & 03 within this green clouded area (GL-06 to GL-7.5) area to East already completed.
2. install re-bracing rackers RB-01 to 09 within this pink clouded area
3. Remove level C struts numbers 77-81 and walers from south west corner once the walls have reached required strength and RB re-bracing rackers are installed per Note 2
4. install re-bracing rackers RB-10 to 20 within this red clouded area
5. Remove level C struts STC-01 to 12, 78 & 79 and corresponding walers from the walls once the RB re-bracing is completely installed within this area and the walls have reached the required design strength, the sequence for
de-stressing the struts should be all diagonals completed prior to the de-stressing of the 3 cross lot struts (10,11 & 12)

Please confirm if this sequence would be acceptable for Level C bracing removal.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 334 SK1:
Per detail 1A/S1-5017 confirm it is acceptable to maintain the existing cut on the beam considering the additional 1/4" machining at the cast nodes. The actual gap is now 1" plus 1/4" for machining.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1227 **BGP - SFPUC Transformer Pad Grounding** **Closed** **03/10/2014** **03/20/2014** **03/24/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference sheets E1-2202, E1-2203, E1-2205 and transformer rooms B1223, B1323, B1562.

Each room requires embedded steel plates for which the future transformers are to be welded to. Are all of the embedded plates tied to the same building ground system as shown for the vault room itself? If so, does SFPUC have a specific requirement for plate grounding?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Yes, SFPUC is requiring steel plates within the transformer vaults to be bonded to the same ground as the 3/0 copper pigtails that are being brought to the vault. There are no other special requirements.

T-1227.1 **BGP - SFPUC Plate Grounding** **Closed** **04/21/2014** **05/01/2014** **05/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

See attached Sketch corresponding to sheet E1-2203

Does the attached sketch clarify the intent of requiring grounding for each SFPUC Transformer mounting plate? If so, is the intent to extend the same grounding conductor type/size from the already contracted embedded conductor? If not, please provide requirement assembly details.

Additionally, will SFPUC require any testing prior to conductor embedment at the concourse level?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed connections meet the grounding requirements provided to the WSP from the SFPUC: however, the specific detailing of the grounding electrode system connections within the vaults must be reviewed and approved by the SFPUC representative. Inspection of the grounding installation shall be provided by the SFPUC representative. Refer to note B on sheets E1-3208, E1-3209 and E1-3210.

T-1228 **BGP - Geothermal Riser Location for Field 12** **Closed** **03/12/2014** **03/22/2014** **Potentially** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc. Ryan Brekke

REQUEST:

Per field conversation with ARUP, SCCI was directed to locate the riser for Geothermal Field 12 between Soldier Piles 317 and 318 because of a leak in the CDSM wall between piles 316 and 317.

Please confirm this location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Location is acceptable to WSP.

T-1229 **BGP - As-Built Location of Sump Pit Near GL 14/G** **Closed** **03/12/2014** **03/22/2014** **03/14/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference attached sketch that show as-built location of sump pit near GL 14/G.

Please confirm this as-built location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The RFI and as-built sketch refers to a sump pit at west of Gridline 14-G. However, on comparing with the slab edge and reviewed matt slab submittal drawings, the location reference for the subject sump pit should be west of Gridline 16-G.

The sump pit is to serve an escalator which will be installed in Phase 2. The as-built location is not acceptable as the sump pit will not be accessible under the landing for clean-out once the escalator is installed.

Please provide a solution to revise the sump location to its correct position.

T-1230	SSS - Machined Cap Plate Surface Finish	Closed	03/12/2014	03/22/2014	03/14/2014	Potentially	☐

From: Webcor Construction LP — Stephanie Azzolino
To: Turner Construction Company — Phil Militello
Answered By: Adamson Associates, Inc. — George Metzger
Co-Author: Skanska USA Civil West California Dis — Ryan Clayton

REQUEST:

Please confirm it is acceptable to provide the machined surface of the train box column cap plates with a prime coat finish in lieu of the rust inhibiting coating. The surface prep will be SSPC-SP6 commercial blast cleaning with International Interzinc 315B primer (attached).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The specified product (Interzinc 315) calls out for a zinc load in the dried film of 83%, where as the proposed product (Interzinc 315B) has only 80%.

The Design Team does not object to this substitution as long as the application meets the performance requirements; it meets the SSPC Paint 20 standard for organic zinc rich primers; it is acceptable to the manufacturer and the entire work receives the specified warranty.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1230.1	SSS - Machined Cap Plate Surface Finish	Closed	03/24/2014	04/03/2014	04/04/2014	Potentially	☐

From: Webcor Construction LP — Gregory Kemerer
To: Turner Construction Company — Phil Militello
Answered By: Adamson Associates, Inc. — George Metzger
Co-Author: Skanska USA Civil West California Dis — Ryan Clayton

REQUEST:

To clarify, the specifications section 05 10 00 - 3.2.P.2 requires finished bearing surfaces to be protected with a rust-inhibiting coating (which is typically a petroleum/grease or wax based product) which is to be removed immediately prior to erection. The Train Box Column Cap Plate is a finished bearing surface.

The Interzinc 315 product referenced in the response to RFI T-1230 is specific to the IFRM Coating System. Skanska/TMF proposed an organic zinc rich primer (Interzinc 315B) as the rust inhibiting coating, which would not need to be removed prior to placement of the TG atop the cap plate. The proposed product meets or exceeds the primer specified in the 05 10 00 - 2.2.A spec section as noted in the attached manufacturer's letter.
Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to use the Interzinc 315B coating at the cap plate bearing surface in lieu of a temporary rust-inhibiting coating.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

There are multiple discrepancies between Zone 2 Lower Concourse Drawings, recently issued in ASI #112 and ASI #113. See attached drawings. The discrepancies have been highlighted in yellow.

Al-2842 (Lower Concourse Slab Edge Plan) generally does not show openings at these highlighted areas, while Al-2222 (Lower Concourse Wall Plan) do show openings. Please clarify whether the highlighted areas are openings or plumbing penetration. If they are plumbing penetrations, please provide sizes and sleeve sizes

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the updated slab edge plans, please refer to the Architectural Sketches (SKAs) attached to the response for RFI T-1156.1 BGP.

T-1232 **BGP - CDSM Wall Movement in Area 3 and Area 1 - West Wall** **Closed** **03/13/2014** **03/23/2014** **03/24/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

SCCI performed a survey of the CDSM Soldier Piles approximately March 2013 for the North of Area 3 and West of Area 3 and Area 1. SCCI re-surveyed the soldier piles again this year (March 2014) and have found that the Soldier Piles in the area have displaced into the structure by
approximately 1.5" at both the North Wall and the West wall. Please find attached survey information and the changes noticed in the past year.

I. Please confirm that the additional encroachment and future potential movement of wall into the structure will not cause conflict with current and future rebar installation.

2. Please confirm and demonstrate that the future potential movement will not cause additional stress to the Wall Lift 1, which will be poured in the next week.

3. Please confirm that future potential CDSM movement in this area will not impact any of SCCI's future permanent work.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is requested this RFI be withdrawn as discussed with Turner.

WOJV - 4/23/14
In addition to this WOJV request more information and request that each CDSM wall pile is resurveyed after the level C bracing is removed prior to waterproofing . Two points per pile one at top elevation (similar elevation of the previous surveys) and the other at an elevation of approximately -16'. This survey information should then be then sent to both WOJV and the design team highlighting any additional encroachment which has not been already taken in to account with the current RFI for the relevant area.

REQUEST:

See attached CD RFI # 329 SK1 & SK2:

The connection for the W36 beams will foul the connection for the W21 to the W40.

Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Adjust the work point for W21 slightly north to clear the W36 connection.

T-1241 **SSS - Ground Level Perimeter Framing Clarification at GL 19.1** **Closed** **03/17/2014** **03/27/2014** **03/31/2014** **Potentially** ☐

REQUEST:
Please provide exact required elevations for the geothermal riser manifold stub outs for Fields 12, 13 and 14. Please include the exact elevation for the temperature probe in Geo Field 14.

Note this information is HOT due to the recovery schedule in Fields 12, 13 and 14.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐
Manifold stub outs bottom of lower pipe to be 8'-0" minimum above lower concourse level. Temperature probe bottom of pipe to be 8'-0" above lower concourse level.

REQUEST:

Reference atached contract drawings.

Latest CDs S1-2203. S1-2210, and S1-2211 have added curved CB16 and CB&B7 downturned beams which appear to be concerntric to South spandrel beam B65. However, no dimensions have been provided, i.e. redius, offset etc.
Furthermore, CD s1-2211 shows tat CB16 and CB&B7 do not follow the same radius. There appears to be an offset between the CB16 and CB/B7 at the MFB at GL 6, and the offset dimensions are not shown.
If architectural drawings are used to find the missing radius (reference SKA-3017 and SKA-3026), one can find that the future partition walls at the South corridor have R=647' - 7 1/2" on both East and West side of MFB at GL6. This implies that the partition walls in this area would

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, there is an offset between CB16 Curved beam and CB7 Curved beam. Please see the attached SKA-3105~SKA-3111 for clouded dimensions.

CB16 Curved beam between gridline 5 and 6 to follow radius of curved beam CB16/partition to the west.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

off center (non-concentric), and the South corridor would taper (or narrow) Down towards East. SCCI. believes that this was not designer's intent.

Please provide accurate and consistent dimensions and offsets for the LCC beams and future partition walls.

T-1258	SSS - Stair and Elevator SFRM Clarification	Closed	03/18/2014	03/28/2014	03/27/2014	Potentially	☐

From: Webcor Construction LP — Gregory Kemerer
To: Turner Construction Company — Phil Militello
Answered By: Adamson Associates, Inc. — George Metzger
Co-Author: Skanska USA Civil West California Dis — Ryan Clayton

REQUEST:

Reference is made to the Fire Proofing Schedule on A1-8662 where Note 2 indicates that all elevator and stair structures are to use SFRM. It appears that architectural drawings, issued for reference, indicate various HSS posts are to receive alternate coating systems or finishes. For example:

- Detail 3 on A1-7576 indicates two HSS "Divider Beams" to be painted to match shaft walls
- Detail 1 on A1-7870 indicates HSS outriggers are to be galvanized

Please confirm that all stair and elevator members are to

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not all stair and elevator steel members are to receive SFRM, it is only when a steel member interrupts a rated wall assembly that a fire resistance rating is required for the steel. The various HSS members referenced are not part of the building structural frame nor do they interrupt a rated wall assembly, therefore no fire resistance rating is required at these locations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

receive SFRM. This is inclusive of framing which extends above the Roof Level and west of Grid 1.

T-1266	SSS - ST304 Framing Details	Closed	03/20/2014	03/30/2014	03/31/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 364 SK1 to SK3 for items 1 to 4:

1) Confirm the (4) W10x22 beams are located on the center of the supporting posts. If not, supply the location dimensions.
2) Supply the clouded dimensions (4 total).
3a) Confirm the stair stringers do not connect to the W12x14.
3b) If yes, supply a connection detail as 1 or 3/S1-7601 will not work with the 5" offset dimension.
3c) If yes, please supply east/west location dimensions for the stair stringers.
4) Confirm it is acceptable to prep the flanges of the WT5x15 for the 1/4" PJP weld in lieu of the beam flange as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The stair framing is a design/build item and comes under the stair contractor's scope (W/O to verify). The W10 x 22 is to be provided by stair supplier.

2) See response to 1).

3a) Stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to W12x14.

3b) See response to 1).

3c) See response to 1).

4) Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1266.1	SSS - ST304 Framing Details	Closed	04/04/2014	04/14/2014	04/16/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Webcor Construction LP Jeff Galoyan

REQUEST:

Reference RFI T-1266 (attached) and the associated SK1 & SK2 for the following:

1) The (4) W10x22 beams are in Skanska's scope. Only the stringers are design built and provided by the stair supplier. Please confirm these beams are located on the center of the supporting posts or supply the location dimensions.
2) The (6) W10x22 beams in question are also in Skanska's scope. Please supply the requested dimensions (4 total).
3a) W/O agrees that the stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to the W12x14. Typically the stringer is connected to the bent plate that is part of the W12x14. This member would also include web stiffeners. If a typical detail is not available, please provide stiffener details and leave the stringer connection to be designed by the stair supplier.
3b) See above, the offset dimension for bent plate should work with 3a.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) The east-west dimensions to locate the posts have been noted on 1/S1-7008. The outer north-south W10x22 beams at the landings shall be 8" 7/8" from the centerline of the posts typically. The intermediate moment connected W10x22 beam shall be aligned with the stringer coming from above at the landing per 10/S1-7601.

3a) Stiffener plates are not required at the W12x14 beam.

3b) The W12x14 beam centerline to the edge of slab distance shall be 4". We anticipate that the stringer will be connected to the bent plate.

3c) Refer to Architectural drawings A1-7007, A1-7501, A1-7502, & A1-7503 for stair 304 stringer locations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3c) Please provide location of stringers as requested.

T-1266.2 **SSS - ST304 Framing Details** **Closed** **04/30/2014** **05/10/2014** **05/06/2014** **Potentially** ☐

T-1268	SSS - Escalator framing details at gridline 11	Closed	03/21/2014	03/31/2014	03/31/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 344 SK1 to SK3 for items 1 to 5:
1) RFI T-1111 (SK 327, CD 254) confirmed the edge plate to match the thickness of the slab but the approval comment of CS2 drawing 4714 requests a bent plate as shown in SK3. Which is correct?
2) The detail on SK3 is per approval mark-ups on CS2 drawings 4766 & 4767 (noted with an arrow) with references to detail 2/S1-7661 but the approval comments do not occur on the other beams at the yellow walls. Confirm the detail on SK3 applies at all (8) beams next to the concrete walls noted in yellow.
3) Confirm the wall terminates at the lower slab.
4) This detail is per approval mark-ups on CS2 drawings 4766 & 4767 with references to detail 2/S1-7661. Detail 2/S-7661 is not referenced on S1-2403 or 2/S1-7302. Confirm the detail as shown is acceptable.
5) Confirm edge plate per 8/S1-5000 is not required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide edge closure plate per typical detail 8/S1-5000 as noted in response to RFI T-1111. The tall bent plate and 3/8" stiffener plate per comment and markups on CS2 shop drawings are not required.

2) Response in 1) also applies at the 8 beams highlighted in yellow on SK1.

3) Confirmed.

4) See responses to 1) and 2).

5) Confirmed.

The edge closure plate is required per typical detail 8/S1-5000, hence, there should be no cost and schedule increase.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 346 SK1 to SK3 for items 1, 2 & 3:

1) The noted dimension should be 4'-7 1/2 per A1-2904 (SK2) but 4'-6 is shown in the Revit model which appears to be supported by 1/S1-7010 (SK1) which shows this beam off center from the wall. Confirm 4'-6 is acceptable.
2) The noted beam should be 9" from Grid D per A1-2904 (SK2) but it will foul the W44x290 on Grid D. Confirm the location of the W27x84 is acceptable as shown.
3) The noted W44x290 is to be located 3'-10 1/2 north of Grid D per A1-2904 as shown. However, the shear plate connection fouls the web stiffener plates per 2/S1-5016 on TPG2. Confirm it is acceptable to locate the W44x290 4'-0 1/2 from Grid D to avoid the fouling.

NOTE: Items 1, 2 & 3 are symmetrical about Grid E and also occur at Grid F.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The noted dimension shall be 4' - 7 1/2" so that the beam is centered on the wall.

2) Confirmed.

3) Confirmed. Note that per contract document the W44x290 should have a double angle connection. However, to avoid conflict at the tapered girder drag connection plate, it is acceptable to provide a shear plate connection. Provide 3 equally spaced bottom flange braces per 8/S1-5015 at the W44x290 beam from the north side (south side for W44 beam near GL F).

Webcor/Obayashi Joint Venture

PROJECT MANAGEMENT - REQUEST AND ANSWERS LOG

30100 - Transbay Transit Center Project

T-1269.1	SSS - GL 15 Dimension Clarifications	Closed	04/09/2014	04/19/2014	04/21/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up RFI to RFI T-1269 (SK 461, CD 346)
See attached CD RFI # 346.1 SK1 & SK2:
It is not possible to supply 3 equally spaced bottom flange braces per 8/S1-5015 as requested in the above noted RFI item 3 due to the existing framing. Confirm it is acceptable to supply a brace per 4/S1-5015 at each W27x84 and 1 brace per 8/S1-5015 as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide 3 equally spaced bottom flange braces per response to RFI T-1269. When there is a conflict with the parallel W16 as shown in SK2, provide brace from the other side of the W44 beam.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1270	SSS - ST401 Geometry Clarification	Closed	03/21/2014	03/31/2014	04/01/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 347 SK1 to SK3 for items 1 & 2:
1) Shown are two versions of the slope geometry for ST401 with the variations noted. Please clarify which geometry is to be used.
2) Confirm a bent deck support plate per 9/S1-5012 will not be required on top of the W12x14 with the beams aligned as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide the geometry shown on the top half of SK1. Note that the starting point of slope at the top of the slab which is noted to be 2-7/16" on SK1 has been revised to 5-1/8" in the TG 7.02 IFB Addendum #1 (See A1-2904). Consequently, the slope angle changed to 32.552 degrees with the end of the slope at the bottom terminating at GL D.4. With the new geometry, the S4 slab does not foul the beam flange at GL D.

2) We confirm that bent plate is not required per 9/S1-5012 at the top of W12x14 on GL D.4.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1271	SSS - ST401 Dimension and Connection Clarifications	Closed	03/21/2014	03/31/2014	04/08/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 348 SK1 to SK3 for items 1 to 8:
1) Supply location of sloping W16 beams from face of concrete wall.
2) Confirm location of W44x335's is acceptable as shown or supply the location.
3) Confirm HSS8x8x5/8 post locations are acceptable or supply the locations.
4) Clarify/supply edge plate requirements for the 'S4' slab

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Locate the sloping W16x26 beams as close to the center of the concrete walls as possible without conflicting with the W27x84 beams above at the roof level.

2) The noted dimension shall be 1' - 1". Note that the 8x8x5/8 posts are to be connected to the top of the W44x335 per 10C/S1-7630, except that the 8x8x5/8

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

at EL. 74'-10 as well as the sloping 'S4' slab.
5) Confirm dimension is acceptable or supply dimension.
6) Confirm dimensions per A1-2904.
7) The connection for the W40 to the HSS8x8 per 6/S1-7661 will not work at the corner. Supply an alternate connection.
8) It appears this detail will not work with the elevations noted. Please supply an alternate detail.

posts will be partially welded to the flange due to offset between the posts and the W44 beam centerline. Provide bottom flange bracing for the W44x335 girder per 4/S1-5015 at the W14x61 beams (total 4 locations).

3) Confirmed.

4) Provide edge plate per typical edge of slab details on S1-5000. Also refer to response to RFI T-1279.

5) Confirmed.

6) Confirmed.

7) Connection at the W40 framing into the HSS post shall be similar to 8/S1-5012.

8) Provide a full depth shear plate connection per 1/S1-5013 at the two W10 beams except, 1) cope only one side of beam flange at top and bottom and 2) Provide 4 bolts at the connection (2 vertical rows of 2 bolts each) with a 3" horizontal spacing between the bolts. Bottom flange brace per 2/S1-7604 is not required at these connections.

T-1271.1 **SSS - ST401 Dimension and Connection Clarifications** **Closed** **05/13/2014** **05/23/2014** **05/27/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc. Filip Filipic

REQUEST:

See attached CD's

There is a dimensional discrepancy between current structural and architectural drawings, at the concourse oppening around GL C13.

Oppening called out on A1-2844 (ASI 113) is larger than clear space between deck beams B9 and B10.

Please Clarify

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:
Slab opening dimensions for future ST-402 reflected on A1-2844 are correct - 26'-3" x 9'-1 ¼". Beams are aligned with clear opening. See attached SKA-3116 for updated A1-2224 showing updated slab opening. Refer also to A1-2204 and A1-2844 of 100% Main Package Issued for Construction dated April 1, 2014

TT Response:
Structural drawings are not intended to show the EOS dimensions per sheet note 5 on S1-2202. Scaling from drawings is not permitted per GR-12 on S-0005.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 366 SK1 to SK5 for items 1 to 6:

1) Supply the missing clouded dimensions at (5) locations shown.

2) The connection for the W10x22 to the HSS post per 3/S1-5012 will interfere with the W10x22 to W10x22 beam

connection as well as the WT5x15 per 6/S1-7601 at (6) locations noted. This is a typical condition on all landings in ST403.
Please provide a solution.

3) Depending on the noted missing dimension, the beam to HSS6x6 post connection per 3/S1-5012 may not work. Please supply an alternate connection as necessary.

4) Supply the missing clouded dimensions at (5) locations

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT's response:
1. See requested dimensions on SKS-0338.

2. Shear plate connection at the W10x22 beam is acceptable at the 6 locations as shown on SK2. It is acceptable to shift the location of the WT10x15 by 1" max to accommodate detail 6/S1-7601.

3. See sketch SKS-0338.

4. See sketch SKS-0338.

5. See sketch SKS-0338.

6. See sketch SKS-0338.

Adamson's response:
For stringer location refer to detail 4/A1-7502 to be 1"

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

shown.

5) Supply the missing clouded dimensions at (5) locations shown.

6) Supply the missing clouded dimensions at (5) locations shown.

min from face of wall.

T-1280.1 **SSS - ST403 Missing Dimensions and Connections** **Closed** **06/30/2014** **07/10/2014** **07/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1) The WT5x15 interferes with the connection for the W10x22 to the HSS12x6x5/8 post. Please supply a solution.

2) Confirm the connection for the W10x22 to the HSS6x6 post is acceptable as shown or supply a new detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) We assume that the "interference" noted in item 1 refers to the accessibility issue for bolt tightening. If the WT5x15 restricts the accessibility for bolt installation, the nuts may be tack welded to the beam web and bolts may inserted from the other side and tightened once the beam is in place. Or, bolts may be tack welded to the beam web on the WT side and nuts may tightened from the other side once the beam is in place.

2) Acceptable, except, provide a 1/4" fillet weld on three sides

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

This is a follow-up RFI to RFI T-1281 (SK 467, CD 350)

See attached CD RFI # 350.1 SK1 & SK2 for items 1 & 2:

1) It is not clear where the posts per 1/S1-8006 are to be located. Work with SK2 and clarify where the posts are located on Grid 16.9 relative to the east-west beams west of Grid 16.9.

2) Confirm it is the intent to have the noted dimensions as shown or should they be the same?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide HSS posts per 1/S1-8006 centered at WP41, WP46 and at midpoints between WP42 & WP43 and WP44 & WP45. Concrete fins are also to be provided at these locations as shown in detail 1/S1-8006. Adjust the W21x50 beam locations west of GL 16.9 to align with the post and fin wall locations.

2) The dimensions shown in SK1 and SK2 per S1-6043 are incorrect. Revised dimensions were provided on Sheets S1-6040 (detail 6) and S1-6043 (detail 1), issued in package TG08.10 DB IFB Addenda #11 on 5/16/2014. Revise the dimensions to match the current drawings.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 350.3 SK1 & SK2:
S1-6030 does not show the noted dimensions as shown on SK2. Please supply the dimensions to locate the beam/post on center of the curb above.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please refer to enclosed markup of sheet A1-2905 for general explanation of dimensioning. Refer to sheet S1-6032 for W-8 shear key dimensions.

Refer to SKS-0422 for W-12 Ring Beam and curb wall shear key location and details.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1281.4	SSS - W8, W12 Connection Clarifications	Closed	11/24/2014	12/04/2014	12/12/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to sketches SK1, SK2, SK3, and SKS-0422, and attached drawings provided in response to RFI T-1281.3

1) S1-6030 does not show the noted dimensions as shown on SK2. Please supply the dimensions to locate the beam/post on center of the curb above. Supply the requested dimensions or confirm that posts are not required between 22-23.
2) The model and the drawings match the clouded dimensions on drawings A1-2905 included with the response in RFI T-1281.3. Clarify the reason why this drawing was included in the response.
3) "Refer to sheet S1-6032 for W-8 shear key dimensions" on the cover sheet of RFI T-1281.3 is confusing. Confirm W8should read W-12 as S1-6032 shows only W-12 details.
4) Confirm the revisions to 4/S1-8016 on SK-0422 apply only to Grid 23. Note that 4/S1-8016 is not shown on the current S1-2605.
5) 4/S1-8016 does not reflect what is occurring on Grid 23. Please review and clarify the discrepancy.
6) 4/S1-8016 on SK-0422 shows insufficient information to provide shop drawings:
a) How is the solid 12' x 12" bar welded to the base beam?
b) Does the solid 12" x 12" bar extend the full height of the HSS14x14?
c) Supply dimensions to locate the rebar holes in the HSS14x14.
d) Supply the size of the rebar holes.
7) Currently the HSS10x10 posts per 1 & 3/S1-8016 have been located on the center of the 1'-6 thick curb per RFI T1281 (SK467, CD 350) item 5. Note that the revised dimensions were not marked on the CS10, ES1, or ES2 returned approval submittals. Confirm the posts locations must be revised as noted in RFI T-1281.3.
8) Supply the post locations in 1/S1-8008. Refer to SK3

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed, no post required between GL 22-23, as per S1-6030 workpoints. [SBP] The W30X90 beam should align with the concrete counterfort wall above, which can be located by Architectural Slab Edge Plan A1-2905. See the attached sketch SKA-4328. [AAI]

2) SK1 in RFI T-1281.3 highlighted all posts between GL 19.1 to GL 24. The contractor appeared to be asking for these dimensions, the drawing was included to indicate them. [AAI]

3) Confirmed. W-8 is a typo, as S1-6032 applies to W-12 details only. [AAI]

4) Revisions to 4/S1-8016 apply at three locations; two along GL 23 and one at GL 24/E. Detail 4/S1-8016 is called out near GL 24/E on S1-2605. Detail callouts at the two locations along GL 23 will be added in ASI 128. [TT]

5) Intent of 4/S1-8016 is to show details in the concrete wall and curbs. Rebar details in the concrete wall and curbs are the same at the 3 locations noted in 4). [TT]

6a) The HSS post is welded to the base beam not the solid bar shear key. [TT] The solid 12" x 12" shear key is welded to the 2" base plate, as shown in details 2 and 4 on S1-6025 (to be issued in ASI 128), which is part of the W-4 & W-12 design-build glazing systems. [SBP]

6b) No, the solid bar does not extend the full height of the HSS14x14. Solid bar shear key embedment depth = 8 inches. [SBP]

6c) Horizontal rebar in the wall is spaced at 12¿ OC. Place first horizontal bar 1¿ above the construction joint in the wall. Holes in the HSS wall can be located accordingly. Coordinate location of construction joint in the wall with Shimmick. [TT]

6d) Holes in the HSS shall be d + 1/4¿ in diameter where, d is the rebar diameter. [TT]

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

7) Revisions were only made to detail 4/S1-8016 which applies at three locations noted in 4). Details 1 and 3/S1-8016 are unaffected. Changes per RFI T-1281.3 do not apply to HSS posts shown on CS10, ES1 and ES2 submittals. [TT]

8) For clarification of workpoint locations, please see attached sketch. [SBP]

T-1282 **BGP - Lower Concourse - Latest Drawing Request** **Closed** **03/25/2014** **04/04/2014** **03/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Per the meeting between TCCO, WOJV, SCCI, and AAI on Monday 3/24/14, it was made clear that AAI believes that all documents have been issued to WOJV in order for construction of the lower concourse deck. WOJV stated that there are currently drawings out to bidders (for TG 07.2 /TG10 MEPS Series) and in Pre-Construction, but that WOJV has not been provided direction by TJPA/TCCO to proceed with construction in the field, nor to utilize the most current drawing sets. Prior to this meeting, WOJV requested that all IFB drawings be issued as an ASI's in order to coordinate with current and continuing construction. ASI's 112 and 113 drawings were issued, however they are not complete per our initial request. AAI has responded to RFI's and submittals referring to sheets that have yet to be issued for construction. This has caused confusion and frustration for all parties. Therefore, in lieu of continuing to request ASI's to address this specific issue at the lower concourse, WOJV/Turner have agreed to utilize the RFI process to construct the lower concourse deck.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See the "Issued for Construction" drawings dated April 1, 2014 for the most current drawings.

RESPONSE:
Judy Long 3/28/14
The drawings, some issued with ASI 115, forthcoming CR-104, are attached for your use and coordination with construction.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

For the list of series of drawings below, please note and/or provide the latest drawings or ASI(s) that should be used to construct the lower concourse deck. We understand that there are drawings issued for pre-construction, that will not be issued for construction for multiple bid packages. For those cases, TJPA/TCCO needs to inform and provide WOJV with the set of the most current and coordinated drawings to be used for construction of the lower concourse, including (but not limited to) blockouts, deck penetrations (such as MEPS), beams, dowel/formsaver locations, and electrical conduit locations.

Architectural Drawings : A1-2200 Series
Architectural Drawings : A1-2800 Series
Architectural Drawings : All sheets providing complete wall dimensions whether floor plan/wall plan/ or enlarged details
Structural Drawings : S1-2200 Series
Plumbing Drawings : P1-2200 Series
Electrical Drawings : E1-2200 Series and E1-3200 Series
TE Drawings : TE-2200 Series

T-1283 **SSS - Drag Beam Double Connection** **Closed** **03/25/2014** **04/04/2014** **04/04/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 354 SK1 to SK3 for items 1 & 2:

1) Confirm the double angle connection per 5v/S1-5026 (SK2) occurs at all locations noted with an arrow on SK1 (16 total).

2) The double angle connection per 5v/S1-5026 & 6/S1-5026 does not allow access to install the threaded rod nuts (4-3/4" long x 4-1/2" wide) and washers in the field. Please confirm it is acceptable to provide two elongated hand holes (6" wide x 10" long) in each full height shear plate either side of the beam. Due to the restricted access,

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Providing a hole in the stiffener plates for access to threaded rod nuts is acceptable in concept. Hole shall not be located near the top of the stiffener plate. Final review of the hole location to be done with review of shop drawings. Cloud the hole locations on shop drawings to call the attention of the reviewer. Post tensioning from the top of the rod is acceptable at these locations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the post
tensioning operation will need to be done from the top of the rod, contrary to the response to RFI T-0970.1. This will require the 6x6" oversized washer to be installed at the bottom and the standard flat washer to be installed at the top. Please confirm this is acceptable

T-1284 **SSS - Erection of Drag Beam at Double Connection** **Closed** **03/25/2014** **04/04/2014** **04/04/2014** **Potentially** ☐

T-1285	**BGP - Anchor Bolt Placement Tolerance**	**Closed**	**03/26/2014**	**04/05/2014**	**03/26/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Shimmick Construction Comp Sylvia Hartanto **Answered By:** Webcor/Obayashi Joint V Spencer Sayles

Co-Author:

REQUEST:

Under the Below Grade Concrete TG-06 Contract, SCCI is bound by concrete standard for Anchor Bolt placement. Concrete industry standard, ASI 117-90, Section 2.3 allows a tolerance of vertical, lateral and level alignment of+- l ".

Per Anchor Bolt DFOW meeting on 112912014, SCCI proposed to use ASCC (American Society of Concrete Contractors) "Anchor Bolt Tolerances" Position Statement #14 (attached) with the following tolerance for each bolt location:
-3/4 and 7/8 diameter bolts : +-1/4in
- 1-, 1-1/4, and 1-1/2in diameter bolts: +-3/8in ; and
- 1-3/4, 2-, and 2-1/2-in diameter bolts: +-1/2in

Please confirm that the proposed anchor bolt placement tolerance as prescribed by ASCC "Anchor Bolt Tolerances" Position Statement #14 is acceptable. Please note that this tolerance is more stringent than ACI Concrete Standard ACil 17-90, Section 2.3.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Under TG06 contract SCCI is required to place all light column and steel column anchor bolts supplied by TG07.1 in accordance with the contract documents.

- 03 20 00 Concrete Reinforcement and Embedded Assemblies - Section 3.2 A. 1 States: "Set and secure embedments, including embedded plates, bearing plates, and anchor bolts per approved setting drawings and in such a manner to prevent movement during placement of concrete and to allow removal of formwork without damage."
- 03 10 00 Concrete Formwork - Section 3.1 B. 1. a. States: "Use setting drawings, diagrams, instructions and directions by suppliers of items to be attached."
- Structural Drawing Sheet S-0005, GR-2 lists both ACI and AISC reference standards for this project. At the bottom of GR-2 it states: "THE MORE STRINGENT REQUIREMENT IN THE CODES LISTED ABOVE GOVERNS".
- 01 10 90 References - ASCC reference standard discussed in SCCI RFI 452 is not listed in project standards.
- ACI 117-10
  - 1.1.2 States: "Tolerances in this specification are for typical concrete construction and construction procedures and are applicable to exposed concrete and to architectural concrete. Materials that interface with or connect to concrete elements may have tolerance requirements that are not compatible with those contained in this document." - AISC requirements for anchor bolts are more stringent and govern.
  - 1.1.3 States: "A series of preconstruction tolerance coordination meetings shall be scheduled and held prior to the commencement of the work. The Contractor, subcontractors, material suppliers, and other key parties shall attend. All parties shall be given the opportunity to identify any tolerance questions and conflicts that are applicable to the work with materials, prefabricated elements, and Work assembled/installed in the field by the contractor."

At the 3.5.2014 meeting Skanska stated that the ASCC Position Paper would not be acceptable for the installation of their structural elements over the anchor

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

bolts. AISC needs to be followed. See attached letter 027 for additional info from Skanska.

T-1286 **SSS - Bus Level Beam Splice at GL 18** **Closed** **03/26/2014** **04/05/2014** **04/16/2014** **Potentially** ☐

REQUEST:

At the Bus deck level see attached CD RFI # 368 SK1 & SK2:
With the limitations of the B.U. Beam and the dimensions per 2/S1-5026 (SK1), we cannot fit 28 bolts in 4 rows per beam. Confirm 24 bolts per side are acceptable or supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1287 **BGP - Mat Slab - Train Platform Future Wall Discrepancies** **Closed** **03/26/2014** **04/05/2014** **03/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

See attached CDs. It appears that all of the future platforms walls along GL E are encroaching into the columns along GL D.8 by 1 1/2".

Please confirm that the designers' intent was for the walls to cope around the "bull nose" column along GL D.8. If so, please provide further details for this column/wall interface.

Otherwise, please provide new offset dimensions, so that the walls clear columns.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. It is intended that the identified walls cope at the "bull nose" columns. In all cases, these are walls which will be constructed in Phase 2 and are all escalator pits below the future train platform. The escalators will be above the platform and are designed to clear within the paired columns.

No further details are required.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1288	BGP - Lower Concourse Testing and Curing Conflict	Closed	03/26/2014	04/05/2014	04/02/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference Specification Section 03 30 20 - Cast-In-Place Concrete.

Spec Section 03 30 20 - 3.6.A.3 states "For shored floor construction: Floor flatness/floor levelness tolerance compliance testing is to be performed prior to the removal of shores and forms but not later than 72 hours of concrete placement by the TJP A Representative." SCCI intends on providing a moist cure on the concourse slab per Spec Section 03 30 20 - 3.7.A.5.b.3 - cover concrete surface with
specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. The absorptive cover is to remain for 10 days for type II cement (Mix #1558218) per Spec Section 03 30 20 - 3. 7 .A.2 and is to be installed as soon as free water has disappeared from concrete surface and finishing has been completed. The FF/FL 72 hour testing requirement is in conflict with the immediate installation of the moist cure cover requirement.

SCCI requests either of the following:

1. Waiving the FF /FL requirement on the lower concourse slab due to the later installation of the 5" topping slab it will receive. SCCI will maintain its adherence to dimensional tolerances per ACI 117 and flatness variance per ACI 318 and provide a stiff broom finish per Spec Section 03 30 20 -3.6.B.1.c. (similar to mat slab).

2. Extending the FF/FL 72 hour requirement out past the 10 day cure time requirement. SCCI does not want to compromise the immediate moist cure cover installation due to the sensitivity for potential shrinkage cracking in the slab.

Are either of these requests acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Neither request is acceptable. FF/FL testing within the 72 hour time limit and curing are not mutually exclusive.

T-1289	SSS - ST401 Missing Dimensions and Connections	Closed	03/26/2014	04/05/2014	04/16/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 367 SK1 to SK6 for items 1 to 13:
1) Review all the east/west post location dimensions on SK1 to SK6 and confirm they are correct as RFI T-1189 (SK419, CD 313) does not show the dimensions at all Levels.
2) The 18'-6 dimension to the edge of slab minus the 6" set-back dimension per S1-2304 locates the beam 18'-0 from Grid 15. This does not match the 18'-8 supplied in RFI T-1189 (SK 419, CD 313). Please clarify the discrepancy in beam and edge of slab location.
3) Confirm the noted section reference is correct.
4) The actual condition does not reflect what is requested in detail 3/S1-7601. Please clarify what is required.
5) Supply the missing clouded dimensions at (4) locations shown.
6) The detail shows the minimum offset dimension from the center of posts to the W10x22's in order to make the requested connections. Please review this with the actual dimensions and supply revised connection details as necessary.
7) Supply the missing clouded dimensions at (8) locations shown.
8) Supply the missing clouded dimensions at (8) locations shown.
9) Supply the missing clouded dimensions at (8) locations shown.
10) Connection section references are missing. Confirm they are correct as shown.
11) Supply the missing clouded dimensions at (8) locations shown.
12) Connection section references are missing. Confirm they are correct as shown.
13) Supply the missing clouded dimensions at (8) locations shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) All East/West post location dimensions are correct as noted on SK1 through SK4. On SK5 and SK6, the dimensions noted as 2' - 1" and 8' - 7 1/8" shall be 1' - 10" and 8' - 10 1/8", respectively.
2) The 18' - 8" dimension was specified in response to RFI T-1189 for the HSS 12x6x5/8 posts and the W12x14 and W14x22 beams only. The W12x26 beam shall be 18' - 2 3/4" from GL 15 so that the flange edge aligns with the edge of slab at the opening.
3) The detail reference shall be 11/S1-7601.
4) See response to 2). Detail 3/S1-7601 will reflect the actual condition at the location.
5) See attached sketch SKS-0341 for dimensions. Refer to Architectural drawings A1-7011, A1-7012, & A1-7013 for locations of all stair stringers.
6) Shear plate connections may be provided at the W10 beams and at similar locations at this stair if the double angle connection cannot fit within the available distance.
7) See attached sketch SKS-0341 for dimensions.
8) See attached sketch SKS-0342 for dimensions.
9) See attached sketch SKS-0342 for dimensions.
10) Confirmed.
11) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions.
12) Confirmed.
13) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions

---

This is a follow-up RFI to RFI T-1289 (SK 487, CD 367)

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1/CD RFI 367.1 SK1: The dimensions noted on this detail are not correct, see the original SSK-0341

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

See attached CD RFI # 367.1 SK1 to SK3:
The indicated dimensions between the stair stringers supplied in above noted RFI SSK-0341 & SSK-0342 (see SK1 & SK2) will not work. The width of the flange on the C12x20.7 = 3" and therefore the stringers will foul with the 2 3/4" dimensions supplied. See SK3 and clarify the dimensions between the stringers.

issued in response to T-1289.0 where the dimensions from gridline to stringer face of web is noted as 4 ¼". Architectural detail 8/A1-7503 notes the stringer clear spacing as 2 ½". The Stringer having a 3" width, the total dimension from face of web to face of web equals 8 ½". See response 4 below for clarification on the 7" dimension.
2/CD RFI 367.1 SK1: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response 1.
3/CD RFI 367.1 SK2: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response 1.
4/CD RFI 367.1 SK2: The 2 ¾" dimensions are noting the location (center line) of the W10x22, not the stringer web face. To locate stringers refer to response 1.
CD RFI 367.1 SK3: (the added sketch information is not correct. (Refer also to 8/A1-7503) The 7" highlighted dimension locates the outside face of the guardrail, not the web face of the stringer. Total dimension from stringer face of web to stringer face of web is 8 ½".

T-1290 **SSS - Mean Temperature in Service** **Closed** **03/26/2014** **04/05/2014** **04/01/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The contract specifications state that steel fabrication and erection are to:
"Compensate for the difference between the temperature at the time of fabrication and the mean temperature in service." - Spec 05 10 00 - 3.2.B.1
"Compensate for the difference between the temperature at the time of erection and the mean temperature in service." - Spec. 05 10 00 - 3.3.A

Mean service temperature is referenced, but not defined. So that we are coordinated in our efforts, please identify

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the work in the referenced specification section 05 10 00, assume Mean Service Temperature equal to 60 deg F.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the "Mean Service Temperature."

T-1291 **SSS - Engineer's Comments on 643AC & 645AC** **Closed** **03/26/2014** **04/05/2014** **04/04/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 372 SK1 & SK2 for items 1 & 2: Drawings 643AC and 645AC from TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 are attached for your reference

1) The noted approval comment does not help as the plate will foul the rebar holes when located 11" down. See SK2 and confirm the 8 7/8" dimension is acceptable or supply a workable solution.

2) The weld is not missing. It is shown in Detail 1 on drawing 643AC as WD1Q, which is correct per 6/S1-4350 as the
weld is non-DCW.
NOTE: The same applies to drawing 645AC.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Agree the 8 7/8" dimension as detail is okay to clear the holes.

2). Noted. WD1Q is okay, but we still think that it is more appropriate to show the weld on sheet 643AC, not in Detail 1.

T-1292 **BGP - Lower Concourse Electrical Room Layout** **Closed** **03/26/2014** **04/05/2014** **03/31/2014** **Potentially** ☐

T-1295	SSS - Extent of IFRM-1 Finishes	Closed	03/27/2014	04/06/2014	04/09/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 359 SK1 to SK5 for items 1 to 7:
1) Confirm that only steel visible inside the slab opening between the slab edges is IFRM-1 and the unexposed portion of these members is SFRM. If not, supply specific information for the extent of IFRM-1 including the beam end connection per 5/S1-5017.
2) Supply specific information for the extent of IFRM-1, including the beam end connection per 8/S1-5025.
3) Supply specific information for the extent of IFRM-1, including the beam end connection per 9/S1-5025.
4) Supply specific information for the extent of IFRM-1, including the beam end connection per 7/S1-5012.
5) Per S1-2606 & A/S1-4114, this beam is cantilevered over columns on each end. Supply specific information for the extent of IFRM-1 on each end of the cantilevered portion of the beam (Ref: A/S1-4114).
6) Confirm that only steel visible inside the slab opening between the slab edges is IFRM-1 and the unexposed portion of these members is SFRM. If not, supply specific information for the extent of IFRM-1 including the beam end connection per 4/S1-5012.
7) Detail 4/A1-8663 indicates that four MF Beams at the W-12 glass floor are to receive IFRM-1 coating. The MF beam along GL 19.1 is not indicated to receive IFRM coating, but spans a similar opening adjacent to the W-12

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Refer to 4/A1-8178 & 4/A1-8180.

3) Refer to 4/A1-8178 & 4/A1-8180.

4) Extent of IFRM-1 occurs only at exposed steel in visible areas between edges of slab.

5) Extent of IFRM-1 occurs only at exposed steel in visible areas between edges of slab, including cantilevered portions of the beam up to the slab edge. Columns are SFRM, full height to the bottom of the beam.

6) Confirmed - Reference Architectural details 2, 3 & 4/A1-8615 (IFC submission - 03/31/2014). See A1-8614 for detail Elevations.

7) Beams at 19.1, 19.9, 20.1, 21, & 22 have IFRM-1. See A/A1-6005; 1 & 2/A1-8614; and 2, 3 & 4/A1-8615.

Note: Second Level beams with exposed surfaces

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

system. Please confirm that the beam indicated on SK4 along GL 19.1 is to receive SFRM and not IFRM-1.

shall receive IFRM-1 - Reference S1-2402 W40x297 at gridline 3 (two locations): refer to 2 & A/A1-7310, 1/A1-8152, and 2/A1-8176. Reference S1-2406 MF at gridline 28: refer to 1/A1-7306, A/A1-7307 and 4/A1-7836.

T-1296 **BGP - Concrete Plant Recertification Test Batch** **Closed** **03/31/2014** **04/10/2014** **04/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The 4th review comment to SUBM TG0600-095 (document enclosed as reference) states after plant recertification a "test batch" will be prepared and tested for accuracy. Attached is SCCI's concrete supplier (CEMEX) responses to the submittal review comments.

Regarding the test batch, is it acceptable to either:

1) Have an Owner's representative perform a plant visit during production operations to observe batching tolerance during normal business hours?

or

2) Neither perform the test barch nor plant visit?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

After further discussion with Bob Foley of CEMEX, we are satisfied with the corrective actions CEMEX has already taken. The proposed plant visit and batch constituent verification are not required.

T-1297 **SSS - EoS Bent Plate at Knock-out Slab GL11-12** **Closed** **03/31/2014** **04/10/2014** **04/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 378 SK1 & SK2:
The knock-
out slab extends 1 1/4" onto the flange as shown. Confirm that is acceptable or provide alternate direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Move the East-West direction W21x50 beams to GLs D.8 and E.2 so that the slab will overhang the beam flange.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1298	SSS - Lift Eyes on Ground Cast Nodes	Closed	03/31/2014	04/10/2014	04/09/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The contract drawings indicate that lift eyes will be provided for shop handling:

"Provide picking eye(s) as required for the handling of the cast node in the foundry AND the shop of the steel fabricator. Picking eye(s) to be located withing the interior of the casting's nozzle(s)"

The lift eyes that were cast into the back side of the ground level cast nodes have now been machined off by Bradken, leaving only the lift eyes inside the nozzles. In order to safely handle these castings, new lift features need to be added to the back side to replace those that were machined off.

OIW notes that if the castings are picked using only the lift eyes inside the nozzle, the center of gravity causes the castings to rotate into an unworkable position. Some other manner of rigging must be employed in order to manipulate the castings into positions required for shop fabrication work. CastConnex noted exactly the same issue in their Release 1 Pre Shipping Inspection Summary, even noting that the improvised and awkard handling was causing damage to the castings:

"The lifting lugs are located inside the nozzle-end on these parts making the machined nodes difficult to manipulate. Often the parts have to be lifted using straps thru the pin hole causing some broken edges on the radius of the pin hole."

To facilitate handling the cast nodes in the shop in a way that is safe and that avoids damaging the castings, OIW proposes that drilled and tapped holes be added. The attached sketches (2773-SK-401 and 2773-SK-402) show a proposed arrangment of these holes. Note that the proposed locations are in areas that will not be visable in the final product, and also are in areas of minimal stress. OIW requests that the engineer of record

review the attached drawings and determine if the proposed modifications to the cast node are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger
4/9/2014

Taping holes at the back side of the cast node for erection is a means and methods issue.

Stacy Wilson
4/9/2014

To note, the referenced Cast Connex report was in regards to the roof nodes, not the ground floor nodes. In addition, the contract drawings never called for eyes on the backside of the ground floor nodes, therefore at the contractor's option, the addition of drilled and tapped holes shall come at no cost to the TJPA.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1299	SSS - Off-Set Beam Connection Modification at PE 403/404	Closed	04/02/2014	04/12/2014	04/11/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 377 SK1 & SK2 for items 1 & 2:

1) Confirm the connections as shown are acceptable at the noted off-set beam locations. If not, supply an alternate
connection detail.

2) Confirm the details shown on SK2 may be applied typically at future similar cases. If not, supply the missing detail
for off-set beam connections with double angles per 1/S1-5010.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed.

T-1300	SSS - Carboline AESS Primer	Closed	04/02/2014	04/12/2014	04/04/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification section 05 10 00-2.2.B.2.b indicates that Carboline Carbozinc 621 is to be used for non-galvanized steel
to receive high performance coating. Reference is made to the letter provided by Carboline attached, which publishes that this (nearly obsolete) product has a recoat window of only 2-3 hours, which cannot be achieved on the Transbay

project since subsequent overcoats will be installed in the field by others.

Carboline has provided information and validation for use of the Carbozinc 859 Organic Zinc Rich Epoxy as a replacement for Carbozinc 621, which provides protection and performance equal to or greater than Carbozinc 621. The Carbozinc 859 product provides an unlimited recoat window, allowing for intermediate and top coats to be applied by others in the field, in accordance with the project's schedule and contractual requirements.

Please confirm the Carbozinc 859 product is acceptable for use as the AESS primer.

Note: Specification section 09 97 16-2.2.A states that the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

RFI is rejected per Specification Section 01 10 40 1.6 C 2 a. "RFIs shall not be used for the following; the TJPA will not reply and will reject the RFI: Product or material Substitution".

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

listed manufacturers are acceptable subject to conformance
to requirements of Drawings, Schedules and Specifications. For this reason, Carbozinc 859 is proposed as the
recommended product by the basis of design manufacturer, Carboline, rather than a product substitution.

T-1301 **SSS - Erection Aid at Roof Spandrel Beams** **Closed** **04/02/2014** **04/12/2014** **04/07/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference SK-4.7 attached, which details the erection aid for the perimeter roof beams. The connection plate shown in A/SK-4.7 and B/SK-4.7 will also serve as the back-up bar for the CJP weld at the beam web.

Our intent is to leave the connection plate/back-up bar in place after welding. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable. Please note Detail 1/S1-5014 requires a double bevel weld.

T-1302 **SSS - CP5 Connection Points** **Closed** **04/02/2014** **04/12/2014** **04/16/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Detail 1/S1-8003 shows a corner to corner joint between the 2.5" mounting plate and the two supporting vertical stiffeners and the single horizontal stiffener on top.

Please confirm the two vertical stiffeners can be repositioned 1/4" in towards the center of the connection as well as lowering the horizontal stiffener. These adjustments will provide a land for the specified fillet weld and minimize melt through and weld splatter at the corners of each plate. Backside stiffeners will be repositioned to match as required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1303	Wall Rebar in conflict with raker base plate 13 (GL1.5,D.8)	Closed	04/03/2014	04/03/2014	04/08/2014	Potentially	☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Due to a conflict between the rebar dowels and the raker base plate 13.
WOJV is proposing to cut the existing rebar dowels flush with the mat slab and drill and epoxy in a new same sized bar beside the existing one once the re-bracing raker is removed.

Please confirm if this would be acceptable

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed for this location.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1304	SSS - Follow-up to CS3 Approval Comments	Closed	04/04/2014	04/14/2014	04/21/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please review and confirm the items below regarding the TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 approval comments:

1) Drawing 2669 ~ the noted beam is not sloping per S1-4004. Confirm the drawing is correct as submitted and no action is required.

2) Drawing 2707 ~ the noted beam is not sloping per S1-4015 (S1-4004 is not the correct drawing reference). Confirm the drawing is correct as submitted and no action is required.

3) Drawings 2706, 2710, 2713AB ~ the 3 1/16" dimensions are necessary as the beam webs vary in thickness. The 3" dimension on the angles has been used at the thickest beam web. Confirm the drawings are correct as submitted and no action is required.

4) Drawings 3792, 3793 & 3794, 4933, 4935, 4994, 4995, 4998 ~ The top cope on the right end is correct as shown. The Approver's reference to a 2" flange is incorrect as the TPG1 on Grid 13 has a 3 1/2" thick flange per S1-4200. We have limited the clearance at the top to 1/4" be able to fit the number of bolts per S1-5010. Confirm the drawings are correct as submitted and no action is required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.
2) Confirmed.
3) Confirmed. Note that there is another comment on sheet 2706 for which the sheet needs to resubmitted for record.
4) Confirmed.
5) Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5) Drawings 4832 & 4924 ~ RFI T-0857 (SK 117, CD 089) asked for permission to cope the beam as shown on the submitted drawings on SK2 item 1 and the cope was approved in the response. Cutting one side of the flange is not sufficient to clear the brace. Confirm the drawings are correct as submitted and no action is required.

T-1306 **BGP - Geothermal Field 11 Mud Slab Rebar** **Closed** **04/07/2014** **04/17/2014** **04/13/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Please confirm it is acceptable to remove rebar in the mud slab of geothermal field 11 via contractors discretion.
Please note rebar will be placed where micropiles are to be tested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

ARUP Response:

Arup does not require any rebar to be placed in the mudslab. We recommend that rebar is placed in the mudslab for locations where the micropiles will be tested on the mudslab.

T-1307 **SSS - Ground Level Connection GL 8** **Closed** **04/07/2014** **04/17/2014** **04/16/2014** **Potentially** ☐

T-1309	**SSS - Missing Stair ST202 information (GL 1.4-2)**	**Closed**	**04/08/2014**	**04/18/2014**	**04/25/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 387 SK1 to SK6 for items 1 to 15:
1) Supply all clouded dimensions on SK1 thru SK6.
2) [Issue has been resolved, no further action necessary]
3) Supply the top of concrete elevation for the (4) posts.
4) This detail shows horizontal HSS beam but the beam is not shown here or on S1-2202.
Please clarify.
5) This detail does not allow for any horizontal adjustment for concrete +/- location variances.
Please review and advise.
6) [This item is to be resolved by Skanska]
7) Confirm these posts are continuous from 1/S1-7400 (SK1) to here.
8) Clarify the noted landing steel and supply the member sizes, elevations & dimensions.
9) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S15012
and 1/S1-5010. Supply alternate connection details if the dimension is less.
This is a typical occurrence on all stairs.
10) Confirm all stair landing beams are centered on the posts or supply offset dimensions.
11) Supply a connection detail.
12) The noted 2 braces per 1/S1-7600 will span across the slab opening. Confirm that is acceptable or give direction.
13) Do the posts starting above the Lower Concourse Level in detail 2/S1-7400 (SK2) extend to the underside of the
HSS beams? Please clarify.
14) Clarify what supports the noted steel.
15) Supply a corner connection detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to attached sketch SKS-0347 for missing dimensions.

3) Refer to 1/A1-7004 for top of concrete elevations.

4) Detail 4/S1-7600 does not apply and is incorrectly called out at the highlighted location.

5) The statement "this detail does not allow any adjustment for concrete +/- location variances" is not entirely clear. Up to a 1" gap is allowed between the end of steel beam and concrete wall therefore there should be enough tolerance for placing steel as long as concrete walls are constructed within tolerances. If the intent of the question was different, please clarify, or alternatively add this item to the next structural coordination meeting agenda for further discussion.

7) Confirmed. The guide rail posts are continuous in between floor levels.

8) Detail 3/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.

9) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically for such instances.

10) Confirmed. Refer to latest architectural issued A1-7XXX series sheets for correct post locations.

11) Provide connection detail per 3/S1-7600 except, The W10 beam connects to the HSS post per 3/S1-5012.

12) Provide full depth stiffeners on both sides of the beam web in lieu of the braces per detail 1/S1-7600.

13) Yes. See attached sketch SKS-0347 that shows the HSS posts.

14) Detail 6/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

15) See attached sketch SKS-0347 that shows connection detail callouts.

T-1310 **SSS - CS3 Review Clarifications for Spandrel Beams** **Closed** **04/09/2014** **04/19/2014** **04/22/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 374 SK1 & SK2 for items 2 to 4, as a follow up to the review comments provided in Submittal Package TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13:

1) [Item 1 has been responded to internally by Skanska. No further action is required]
2a) The approver's reference to T-0923 has been superseded by follow-up RFI T-0923.1. This RFI confirmed 2'-0 1/4 to match the W-1 Rhino model. Please confirm the RFI response to T-0923.1 remains valid.
2b) Not all CP6 connections are located 2'-0 1/4 below the top of steel on the Bus Deck Level. The dimensions shown on this drawing match the W-1 Rhino model. Please confirm that the dimensions provided in the Rhino model are to be followed and that no further action is required.
3) Refer to RFI T-0738, which confirmed modifications to the plate thicknesses. Confirm no further action is required.
4) The requested cope dimensions are shown. Confirm no further action is required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

2a) We confirm that the RFI response to T-0923.1 remains valid..

2b) We confirm that the dimensions provided in the Rhino model are to be followed.

3) Confirmed no further action required.

4) The requested cope dimensions as shown cannot be confirmed by the Design Team. Please provide a 3D model of the entire connections, so that the Design Team can coordinate with the Rhino 3D model. Specifically, we would like to have the beam flange coping and cast node perimeter beam drag connection tabs with all other connection elements, so that we may confirm it fits with the W-18 and W-9 cladding Rhino model.

4007 (SK2) references B/S1-4018 (SK5) for the grout holes. Confirm that the typical grout holes per S1-4003 are to be applied at the noted column on the north elevation or clarify.
7) The noted column is shown concrete filled per A-S1-4017 (SK4) and grout filled per A/S1-4018 (SK5). Please clarify.
8) Confirm the vertical column indicated shall have type 2 holes (per S1-4003, Note 2) with a pattern similar to that shown in detail B/S1-4018 for vertical columns filled with concrete. Reference SK4 & SK5.
9) The same column on the south elevation shown on S1-4002 (SK1) references B/S1-4018 (SK5) for the grout holes. Confirm that the typical grout holes per S1-4003 are to be applied at the noted column on the north elevation or clarify.
10) Supply vertical dimensions to locate the grout holes in the upper columns.

T-1315 **BGP - Concourse Transformer Vaults - Curb and Pad Dowels** **Closed** **04/09/2014** **04/19/2014** **04/15/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference Transformer Vaults detail drawings A1-3001 & A1-9235 (for vaults on A1-2222); A1-3002 & A1-9236 (for vaults on A1-2223); A1-3003 & A1-9237 (for vaults on A1-2225), and pad details S-3002 of the IFC 3.31.2014 drawing set.

The IFC set curb & pad details 4, 5 & 6/S1-3002 appear to require #4 rebar dowels to be cast into the Concourse slab. Please confirm if this is the designer's intent or if details similar to 2&3/S1-3002 can be applied at the Contractor's option for the concourse level transformer pads and curbs, i.e. couplers or drilled & bonded dowels.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to provide mechanical couplers or drilled and bonded dowels for detail 4, 5 and 6 on S1-3002 at contractor's option. Contractor to ensure that the drilling does not expose or damage the existing rebars in the slab.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 388 SK1 to SK6 for items 1 to 6:
1) Supply all clouded dimensions on SK1 thru SK6.
2) Confirm all landings have 1/4" checker plate.
3) Please clarify which stringers go up and which stringers go down and add stair to landing connection references as was done on S1-7004.
4) How are the (3) W10x22's supported/connected?
5) How are the noted (2) W10x22's supported/connected?
6) The noted 6" dimension does not work with detail 3/S1-7601 which shows the stringer attaching at the toe of the beam flange. Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to attached sketches SKS-346 and SKS-349 for missing dimensions. SKS-349 shows how the stair landing beams that are perpendicular to the stringers can be located based on architectural drawings.

2) Refer to Specification "Steel Stairs and Railings 05 51 00" under 2.2 Materials -B Checker Plate Treads and Landings.

3) See attached sketch SKS-0346 for clarification of stringer direction. Also refer to architectural drawings A1-7005 and A1-7104.

4) The W10 beams frame into CMU walls and are shown on S1-7005 that was updated in IFC Main Package dated 3/31/2013. See attached sketch SKS-0346.

5) See response to 4).

6) Move the W16 beam closer to the edge of slab for detail 3/S1-7601 to work at the location.

T-1317 **SSS - Second Level Connection clarifications GL 1.4 - 2** **Closed** **04/11/2014** **04/21/2014** **04/22/2014** **Potentially** ☐

REQUEST:

See attached CD RFI # 386 SK1:

The gusset plate per 6 & 9/S1-4206 fouls the WT/pretensioned rod connection per 3/S1-5050 & S1-5052.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

There is no fouling. 24" dimension between the bottom of Steel Beam and the top of WT section per Detail 3/S1-5050 does not apply at BRB frame connections, see note 2 in detail 3/S1-5050. Where BRB gussets are present, the distance between the bottom of gusset plate and the WT section is 12" as indicated in Details 4 & 8/S1-4206.

REQUEST:

See attached CD RFI # 381 SK1 & SK2 for items 1 & 2:
1) The noted brace connection occurs within the "Protected Zone" per 1/S1-4201. Confirm that is acceptable or supply an alternate solution.
2) The gusset plate per 8/S1-5015 will foul the top bolts in the double angle connection per 1/S1-5010. Confirm it is acceptable to use a shear plate connection per 1/S1-5011 at this location or supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide the brace connection to the moment frame column using a bent plate as shown in the attached sketch SKS-0345.

2) It is acceptable to move the gusset plate and the brace per 8/S1-5015 slightly to clear the bolts.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 383 SK1 to SK3 for items 1 to 3:
Drawings A1-2502 (SK1), A1-2892 (SK2), A1-2951 (SK4), and 1/A1-2951 (SK5) show a valley. A valley is not shown on S1-2502 and S1-2602 and it is not clear what the intent is for the structural framing:
1) In order to keep the diagonal brace framing along Grid H in one plane (shown in blue), it is necessary to introduce a valley as indicated by the red line. If not, twisting will be introduced into the framing and connection details 3/S15025 at Grid 1.4 and 1/S1-5018 at Grid 2. Per Note 6 on S1-2602 the beams are canted to match the slope of TPG1 on Grid 2 but the BU-40 on Grid 1 is horizontal. This will result in the beams having to twist. To avoid this a valley as shown on the architectural drawings is required. Please confirm a valley as indicated by the red line is required or clarify/supply the top of steel elevations between grids 1-2.
2) If a valley is introduced, all beams crossing the red valley line will need to be broken-back/bent beams. Please supply a detail showing the splice at the bend lines.
3) If the valley is to occur, please clarify the location of the valley as drawings A1-2502 (SK1) and A1-2892 (SK2) show conflicting information. The same condition shown here also occurs between Grids 1-2/B-D, 32.4-33.5/B-D & 32.433.5/F-H. The same condition except opposite shown here occurs between Grids 1-2/F-H on the roof park level.
4) It is not clear on S1-2606/S1-2607 where the east-west slopes start east of Grid 31.7. Please clarify the framing.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) A valley is not required. See specific comments for Bus Deck and Roof Park Levels below:

At Bus Deck Level, an additional top of steel elevation is provided within the deck zone bounded by Gridlines 1&2 and E.6&H. Top of Steel at Gridline 2/G can be calculated as 55' 10 3/8" by linear interpolation using the top of steel information provided at Gridlines 2/E.6 (at column face) and 2/H. At GL 1.4/G top of steel can be assumed the same as 2/G therefore the diaphragm truss is in single plane. Metal deck will need to be slightly warped at other parts of this zone, where two way slopes are present. Ultimately, thickness of the structural topping slab can be adjusted locally to achieve the slab slopes per architectural drawings.

At the Roof Level, following info is provided for the deck zone bounded by Gridlines 1&2 and E.6&H. East-west running beams are to be set perpendicular to TPG1. These beams will land on the Gridline 1 slightly rotated however rotation is small resulting in an approximately +/- 1/8" vertical deviation at the tips of the east west running beams' flanges with respect to the GL 1 beam. Metal deck will be slightly warped at this zone. Per our estimations, metal deck steel beam gap/clash is in +/- 1/16" range which can be addressed by small amount of warping in the metal deck.

2.) See response to (1).

3.) A valley is not required. Information provided in item 1 is applicable to the locations noted in this question at the Bus Deck and Roof Levels.

4.) In Sheet S1-2607, East-West slope starts at GL 32.4 as indicated Sheet S1-2607 (between gridlines 32.4/D4 & 32.4/E.6). As indicated in item 1, metal deck will be slightly warped in this area where two way slopes are present.

From: Webcor Construction LP Gregory Kemerer

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 383.1 SK1 to SK6 for items 1 to 10:
The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces.

This means that the noted W40x149 & W36x231 will not align with the top of the W40x297 on Grid 1.
1) Please advise how to make the moment weld for the for the W40x149 to the W40x297 with the flanges not aligned.

2) Please supply a detail showing how the deck will be supported at the (2) lowered beams.
3) Due to the beams not being aligned, confirm it is acceptable to connect these beams with shear plates per 1/S1-5011
4) Confirm it is typically acceptable to lower the beams to align the corner of the flange with the top of the supporting beams as some connections are moment connections.
5) Review all items on SK2 and confirm they meet the design intent.
6) The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces. This means that the (4) noted beams will not align with the top of the W40x297 on Grid 33.5. Please supply a detail showing how the deck will be supported at the (4) lowered beams.
7) Confirm the T/Steel elevation at this location is EL. 55'-8 9/16 based on the north/south slope to keep the diagonal bracing in the same plane.
8) Confirm the noted (2) beams will be canted to match the other beams based on the slope on TPG1 on Grid 2.
9) Review all items on SK5 and confirm they meet the design intent.
10) This is to confirm the response in RFI SK515 item 4: All beams within the blue boundaries on SK6 will slope as needed the have the top of beams flush with the top of the supporting beams per the noted T/Steel elevations. The east/west beams between Grids 32.4-33.2 will be canted to match the canted beams west of Grid 32.4.The east/west beams between Grids 33.2-33.5 will be canted to match the slope of the beams on Grid 33.2. Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The W40x149 (0.83" thick flange) may be lowered so that the complete penetration weld can be made for the top flange because W40 x 297 has a 1.65" thick flange. For the bottom flange weld, a plate might need to be added in order to achieve the complete penetration weld.

2). The T/STL for W40 x 149 is not necessarily controlled by the diagonal brace, as the type G drag connection detail (1C/S1-5018) has called for shim plates as required.

W 36 does not need to support the metal deck.

3). Yes, the E/W beams between Grids 1 & 2 may be changed to a single shear plate connection as shown on 1/S1-5011 with the following 2 conditions:

a) Type X bolts should be used for W21 and W24 beams.

b). One row of bottom flange bracing should be provided for the W21 and W24 beams between Grid 1.4 & 2 per detail 8/S1-5015.

4). Confirmed

5). Confirmed.

6). See responses #1 & 2

7). Confirmed

8). Confirmed

9). Confirmed, Also see response to items 1 & 2.

10). Confirmed.

T-1323	SSS - Bus Deck Level Slab Clarification	Closed	04/14/2014	04/24/2014	04/22/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Bus Deck Level drawings S1-2502 thru S1-2507 indicate an S8 type slab, as per metal deck schedule 2/S1-5000, S8 is a 10" structural slab with 4" second pour topping slab. Sheet note #6 on S1-2502 indicates "shear studs are to extend a minimum of 2" into the second pour UON. See detail 9/S1-9004 for perimeter EoS conditions" (S1-9004 has not been provided).

Drawings A1-2892 thru 2987 show a 1" topping slab typically between 10' north of GL D and 10' south of GL F. The slab outside of that region is typically shown as structural slab only.

Confirm that decking drawings will be modeled as per the information provided on the structural contract drawings unless otherwise directed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Note that the 4" second pour topping slab is part of the structural slab and studs are to be extended 2" into this 4" topping slab as shown on 4/S1-5003. Studs do not extend into the architectural topping slab. Also, the correct detail reference for perimeter EOS condition is 9/S1-5004.

T-1324	SSS - BRB Clevis Plate Detail	Closed	04/14/2014	04/24/2014	04/24/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska is the process of incorporating the AAN BRB Shop Drawings from Star Seismic into the Tekla model.

During the integration process we have identified a deviation from certain dimensions shown in the contract documents. Specifically, the 2" dimension shown from edge of clevis to top of concrete at the ground level connection and the 5" dimension shown from edge of clevis to the bottom flange of W section above.

Below, is a table showing the "As Detailed" dimensions at each BRB.

Please confirm that the 2" & 5" dimensions shown on S1-4206 are not controlling dimensions and the lengths of the BRB's from WP-WP as designed, detailed and approved, control.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provided dimensional deviations from contract documents are acceptable at all locations except for BRBs at GL 4-5/F; 28-29/D.4, 29-30/D4 and 30-31/D.4.

At GL 4-5/F, provide bottom clearance between 2" and 3" (2" ideal) and a top clearance between 5" and 6" (5" ideal).

At East Building BRBs (28-29/D.4, 29-30/D4 and 30-31/D.4), it is not clear from the RFI that the contractor understood the design intent at the bottom clevis plates. At the bottom, 2" clearance to the clevis plate applies from the top of the finished floor (not the top of structural concrete slab) since these braces are exposed. See BRB elevations (S1-4150) and the corresponding detail (1/S1-4206) for this info. Note that the finished floor at this location slopes down to East and this information shall be coordinated per

civil/landscape drawings as applicable. For these BRBs, top clearances indicated in the RFI are acceptable in current form.

T-1324.1 **SSS - BRB Clevis Plate Detail** **Closed** **05/08/2014** **05/18/2014** **05/21/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska has incorporated the response to RFI T-1324 into the drawings and made the necessary adjustments, while maintaining the required stiffness factor, at gridlines 28-29/D.4, 29-30/D4 and 30-31/D.4. These adjustments have been submitted under submittal package TG0701-415.4.

However, after discussions with Star Seismic, at GL 4-5/F the stiffness factor plays a limiting role into modifying the length of the brace. Please see the attached stiffness and over strength analysis, provided by Star Seismic, and confirm that the brace lengths may stay the same as previously approved in TG0701-415.2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

GL 4-5/F dimensions shall be as indicated in RFI T-1324. It is acceptable to have a stiffness ratio of 11% as shown in the calculation submitted by the Contractor. We also note that there may also be other ways to achieve the required pin-to-pin dimension and the required stiffness multiplier called out on the contract drawings. Also, it is not clear why the yield zone length is reduced by 16" whereas the pin-to-pin dimension is reduced by 6" in the calculation. With a longer yield zone length a lower stiffness multiplier can be achieved.

T-1325 **BGP - Partition Wall Details From ASI 110** **Accepted** **04/15/2014** **04/25/2014** **04/15/2014** **Potentially** ☐

C.7. Beam centerline to be located 10'-4 north of Grid D.
7. Beam between Grids 13 and 14 near Grid B.5 will frame escalator opening and be marked B12. Beam will be located at edge of opening shown on A1-2844. To minimize potential congestion at overlapping beams, beam between Grids 12 and 13 near Grid B.6 marked B9 will be located such that the north face of beam aligns with the south face of adjacent beam B12.
8. B15 is required between Grids 14 and 15, 5'-10" south of Grid B.
9. B53 is required between Grids 20.1 and 21 near Grid C.4 at the north face of the escalator pit. A B53 is also required at the south face of escalator pit. B4A is required at the west face of escalator pit between B53's. Companion B54's between Grids 21 and 22 will align with B53's. Beams will be located per pit dimensions given on A1-2845.
10. CB8 is required between Grids 33.2 and 34. Beam centerline will be located 6'-4" south of Grid G.

Beam locations will be submitted for review with the comprehensive layouts.

T-1328 **BGP - Vehicle Ramp End Support Embeds** **Closed** **04/16/2014** **04/26/2014** **04/21/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference Sl-2251 rev 6, Sl-3401 rev 7and S1-3411 rev 3.

1. Clouded area of attached Sl-2251 shows beam types: B125, B132, B141 and B142. B125 is a 24" wide beam, B132 is a 22" wide beam, B141 is a 48" wide beam and B142 is a 30" wide beam. Sl-3411 DI & DI0 depict the beam support embed. These two (2) details are for a 24" wide beam and a 48" wide beam only. Please provide details for 22" and 30" wide beams.

2. See attached Sl-3411 DI & DI0. Embed details call out 1-1/4" threaded rod Fl554 GR55 w/ 2-1/2" x 2-1/2" x 1/2"

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. End support for beam B132 (22" wide beam) to follow detail 1/S1-3411 as shown on plan 1/S1-2251; corbel width to be 2'-0". For end support of beam B142, see SKS-0344 attached.

2. Rods to be provided with matching nuts as required Specification 03 20 00, Section 2.3.F. Welding of plate washer to L8x8 is not required.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

PL washer. Please clarify how the plate washer will be attached to the threaded rod and/or embed? Will the designer require any type of nut or weld that is not depicted?

T-1330	**BGP - Glass Guardrail Embeds at B1 Beams**	**Closed**	**04/17/2014**	**04/27/2014**	**04/24/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference RFI #T-0440 and #T-0440.1 responses and the attached Contract Drawings S1-3410, Sl -2203, and Sl-2204.

The detail for the glass guardrail embed depicted in 7/Sl-3410 calls for a 3/8"x7" embed with an 8" minimum coverage for the top embed and a 6 1/2" minimum coverage for the bottom embed. The guardrail embeds located at B1 beams on the east side of openings between GL 11/12 and D.8/E.2 (Sl-2203) and GL 18/19 and B/C (Sl-2204) will not have minimum sufficient coverage due to the 18" beam depth of Bl beams (see attached photo).

Please provide a detail for glass gaurdrail embeds at the B1 beams. Please note, these specific embeds have been fabricated and are onsite

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Bottom embed plate at B1 members not required. Additional supporting member to be included as part of Phase 2 scope. Top embed plate at B1 to be placed with 8" min coverage and align with top embed at supporting concrete girders.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 389 SK1 to SK7 for items 1 to 12:
1) The noted W16x26 beams are centered below the concrete wall on S1-2303. Confirm the lower beam may be moved below the stair post or supply an alternate solution.
2) The noted W16x26 beam is centered below the concrete wall on S1-2303. Confirm it may be moved below the stair post or supply an alternate solution.
3) Supply all clouded dimensions on SK2 thru SK7.
4) Confirm equal spacing.
5) It appears the noted stair stringer connects to the HSS post. Please supply the missing connection detail.
6) The plan shows a moment connection but detail 3/S1-5012 does not. Please clarify the intent for the beam to post connections at (8) locations.
7) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 7" from beam center.
8) This dimension is 7" per S1-2403. Confirm 7" is correct.
9) Confirm the "CB" notation should be removed.
10) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S1-5012 and 1/S1-5010. Supply alternate connection details if the dimension is less.
This is a typical occurrence on all stairs.
11) The red dimensions match the dimensions shown in detail 3/S1-7006 (SK3). Please clarify the discrepancy in dimensions.
12) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 6" from beam center.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Not acceptable. Provide a W16x26 beam centered on the two HSS posts as shown in the attached sketch SKS-0350. Provide shear plate connections per 1/S1-5011 at the ends of this beam. The W16x26 beam will be added on the structural drawings in the next ASI.

2) See response to 1).

3) Refer to architectural drawings A1-7006, A1-7501, A1-7502 and 3/A1-7506 for the stringer and landing beam locations.

4) Align the intermediate W10 beams to the stringers.

5) Correct detail reference at the 8 locations should be 6/S1-5012.

7) Detail at the highlighted location is similar to 3/S1-7601 except the stringer shall be welded to the bent plate at the edge of slab and not the WT.

8) Confirmed.

9) Confirmed.

10) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically at such locations where double angle connection is not possible.

11) Refer to architectural drawing A1-7006 for correct post locations.

12) See response to 7).

T-1336	SSS - API 5L X65 Pipe to A216 WCC Casting (Field Weld) PQR	Closed	04/17/2014	04/27/2014	04/29/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Skanska is currently procuring weld test plates for qualifying field welds to API-5L Grade X65 pipe. For this, we
propose to use API 2W plate. Whereas API 5L is strictly a pipe specification, API 2W is a plate specification but is commonly rolled and welded to create API 5L pipe. Below is a direct comparison between API 5L Gr. X65 allowable chemical and mechanical properties with our proposed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor's request is not acceptable in current form. Please provide additional information. Is this request for welding qualifications only? Which grade of API 2W is to be used? Provide API 2W corresponding specification with the RFI or mill report that shows that the material qualifies for API 5L X65 use. Verify if the material that is being proposed to be used for welding qualifications is subject to Buy America clause or not.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

API-2W plate material. Values for the plate are taken directly
from the MTR for the plate we propose to use (attached and highlighted). All values for the API 2W plate we propose
to use meet the requirements of the API 5L Grade X65 specification. Please confirm it is acceptable to use the API 2W
plate for our PQRs.

If it is, please verify it complies with it.

T-1337 **SSS - Train Box Column Cap Plate at GL18** **Closed** **04/17/2014** **04/27/2014** **04/29/2014** **Potentially** ☐

T-1339	SSS - Deck Support Steel at Step in Slab GL 12-14	Closed	04/17/2014	04/27/2014	04/30/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to SK-1 thru SK-3 for 3 locations at step in slab between GL 12 - 14:
1) At section A-A on SK-2 an extended WT will expose the flange through the conc rete. Confirm a bent plate as per SK-3 is acceptable.
2) At section B-B on SK-2 support is required at the extended upper deck over the W12x14 (A4987). Confirm a WT can be added per section B-B.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed. Provide a 3/8"x3" full depth stiffener at the W24 beam (same side as the bent plate). Provide 1/4" double sided fillet welds for the stiffener (3 sides - web, flanges). The stiffener shall be located at the middle of the bent plate span.

2) WT is not required. Provide an 18 gauge Z-shaped closure plate to close between the upper and lower decks.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1339.1	SSS - Deck Support Steel at Step in Slab	Closed	05/23/2014	06/02/2014	06/13/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

RFI SK534 (T-1339) addressed steps in the ground floor slab which occu rred between grid lines 12-14. This condition also occurs between the following grids:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide a WT per 4 or 5/S1-5002 at locations where the distance between supporting beams is greater than 3'. At other locations where the distance between beam is less than 3', a Z closure plate is sufficient,

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2-3, 3-4, 8-9 & 9-9.9 (16 locations).

Item #1 added a 3/8" bent plate to support the upper level deck and can be applied at two locations between grid 2-3 as indicated on SK1. At the other 14 locations the step is similar to item #2 of T-1339 which added an 18 gauge Z closure. At grid 12-14 the perpendicular support beam is located within 1'-9" of the step, at the 14 locations listed above the support beam varies from 2'-0" to 6'-0" and at two locations at grid 2-3 no support beam is provided. Refer to SK3 for clarification.

Please confirm the 18 gauge Z is sufficient to carry the load of the deck at the 14 locations or provide an alternative detail.

however, the Z closure plate is not correctly shown on SK3. See attached sketch SKS-0357 for correct extents of the Z closure plate.

T-1339.2 **SSS - Deck Support Steel at Step in Slab** **Closed** **06/18/2014** **06/28/2014** **07/09/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The response to RFI T-1399.1 indicated the zee closure was incorrectly shown on SK-3 and shall be supported on the lower beam, not on top of the deck. We agree the closure would be best supported on the lower beam, however the closure was placed on top of the deck so that the lower deck could bear 3" on the beam as is required for a type 3 deck as per 2/S1-5000.

SSK-0355 revises the closure so that the bottom leg is underneath the lower deck and the top leg is above the upper deck. This creates several problems for installation. The most significant being that the closure now needs to be installed before the deck. Typically closures are installed after the deck so that the deck can be used as a working platform. SSK-0355 would require the installation of the closure on open iron, which while possible is not a safe working practice.

Option 1: As a proposed solution to the issues indicated

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Option 1 is not acceptable.

Option 2 is acceptable. The 3" minimum bearing requirement may be waived and a bearing of 1-3/4" is acceptable at locations where detail B on SK-1 is applicable.

above, we propose to increase the beam size at the step from a W12x14 to W12x26 which has a 6-1/2" wide flange. We would also revise the zee shaped closure to a cee shaped closure with the top leg placed underneath the upper deck (see detail A SK-1). Also at locations where a WT will be added, a W12x14 will only be left with about 1-3/4" of exposed beam flange for bearing, instead of the required 3", increasing this to W14x26 will provide the required bearing (see detail B SK-1).

Option 2: As an alternative, at locations where the top deck spans less than 3' the top deck load will be primarily supported by the upper WF beam. As detailed in SK-2 the zee plate will only act as a closure with minimal deck support and can be installed after the deck if allowed to bear on top of the lower deck. Note: this alternative does not provide a solution of the 1-3/4" bearing issue on detail B SK-1.

Please confirm if option 1 or 2 is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1340	BGP - Mechanical Room B2228 Pier/Wall Location	Closed	04/18/2014	04/28/2014	04/30/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please see attached drawing showing the location of the west wall in the IDF Room B2228 located in the Area 3 mechanical rooms. Typical pier width dimensions for the mechanical rooms are 24" and are not typically dimensioned out in the plans. Based on scaling, the pier in the northwest comer of Room B2228 is 16"x28". However, this pier was labeled as a 16"x24" pier in the rebar shop drawings (see Submittal TG0600-301.2) and as a result the dowels for the west wall were placed 4" to the west to align with the pier edge.

Please confirm that this new location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The west wall of IDF Room B2228 at the B2 level cannot be moved 4" to the west to align with the 16x24 pier due to Building Code Accessibility and Egress requirements for the adjoining room at Phase 2 build-out.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1341	BGP - Plumbing Opening in Mechanical Room B2203	Closed	04/18/2014	04/28/2014	04/28/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please see attached drawing for clarification regarding dimension of the plumbing opening above the door in Room B2203. In Al-9215, the door opening and distance between piers is scaled to be 3' -5" and was submitted as a 3 '-5" opening per approved submittal TG0600-102. However in A1-9217 a plumbing opening with a dimensioned width of 3' -11" is shown to span the distance between the piers. If the 3 '-11 " opening dimension is correct as shown, the blockout would cut into the piers. Please confirm the dimension of the plumbing opening and whether or not it is intended to cut into the piers. Please note that the pier dowels have already been installed with the 3'-5" span per approved submittal TG0600-102.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 3'-5" width dimension for the door opening in between piers, described in this RFI, is correct. For updated plumbing opening above the door at Stair 203 (Room B2203), refer to the attached SKA-3142 and SKA-3143.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1342	BGP - Partition Wall Thickness Above Door Openings	Closed	04/21/2014	05/01/2014	05/01/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Both the Architectural and Structural Drawings of the partition walls show the plan view at the base of the wall and do not indicate the thickness of the wall above the door openings. Please clarify wall thickness above door openings in partition walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For door openings in Reinforced Concrete and CMU partition walls, the wall above the doorway is the same thickness as the adjacent run of wall. To clarify, for example, where the wall is 10" thick CMU and there are 1'-4" thick piers on both sides of the doorway, the wall above the doorway will be 10" thick CMU.

T-1343.1	BGP - Lower Concourse Slab Edge and Penetrations	Closed	04/23/2014	04/23/2014	04/29/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

See attached sketches.

Architectural sketches SKA 3132-3137 incorporate updates made to slab edge dimensions and penetrations through the lower concourse as a result of the TG0600-121 submittal review comment and 3.31.2014 IFC drawing set coordination meetings held between AAI, WSP, TT, MDS, SCCI, WOJV and TCCO. Please confirm these sheets are to be incorporated into the Transit Center construction scope.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Architectural Sketches SKA 3132-3137 have received updates based on the workshops mentioned in the RFI.

For information to be incorporated into the Transit Center Scope, please refer to the attached updated SKAs listed below:

- SKA-3132_R2
- SKA-3133_R2
- SKA-3134_R2
- SKA-3135_R1
- SKA-3136_R1
- SKA-3137_R1

Modifications from the original documents have been identified with colored clouds as follows:

Magenta - items previously shown on the SKAs for the workshop sessions Blue - items updated subsequent to the workshop sessions.

T-1345	SSS - Dimension Confirmation for Locating Bolts at GL 16	Closed	04/22/2014	05/02/2014	04/28/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 336 SK1 & SK2:
Confirm it is acceptable to increase the 2" dimension to 3" in order to locate the bolts at the locations provided in RFI SK 193C.*

*RFI SK 193C was answered internally by Skanska. The relevant sketch is attached below.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1346	BGP - Column Jackets at Lower Concourse, Vehicle and Bike Ramp	Closed	04/23/2014	05/03/2014	05/06/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference AI-2842 rev 5, AI-2847 rev 4, AI-2850 rev 5, AI-2853 rev 6, AI-9213 rev 0 and SI-3503 rev 2.

1. See AI-2842, AI-2847 and AI-2850. Please confirm these are the locations of columns to receive column jackets on the concourse level.

2. See AI-9213 details 5 through 8 and AI-2853. These details show 1/2" thick ring with 8" long welded studs (to be used for the installation of column jackets) at the base of columns on the concourse, bike ramp and vehicle ramp levels. AI-2853 does not depict any column jackets at the bike or vehicle ramp levels. Please provide a detail that depicts which columns are to recieve jackets at the bike and vehicle ramp levels.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WOJV received revised response 5/8/2014

1. Confirmed. These columns receive column jackets. We do not show detail references for column jackets at Slab Edge Plans - Refer to the following Lower Concourse Level Zone Plans and Enlarged Plans issued with the MEP Add #3/ASI-116 showing detail references for column jacket details: A1-2202, A1-2207, A1-2210, A1-3005, A1-3006, A1-3007.

2. For columns that receive jackets at the ramp area, refer to SKA-3236 (Updated A1-2250 - Enlarged Ramp Plan). Refer also to A1-9208 (Column Detail Plans, Section References, and Notes) and SKA-3237 for updated A1-9213 (Column Section Details).

T-1347	BGP - Column Jacket 1/2" thick x 4" wide Base Plate at Concourse	Closed	04/23/2014	05/03/2014	05/05/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference S 1-3503 rev 2, detail 6, AI-9208 rev 0 and AI-2842 rev 5.

1. Please see clouded areas of AI-2842. Please confirm

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 1/2" thk x 4" wide ring plate around columns are coped at walls. For updated A1-2842, refer to attached SKA-3140.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1/2" thick x 4" wide ring base plate is to be continuous around the entire column per details on Al-9208. Please confirm the designer does not want 1/2" ring to be coped where it intersects walls.

2. If coping is required, please provide details or direction on coping the 1/2" thick column jacket base plate.

For the pilasters (i.e. columns within the ramp walls) we need continuity between the pilaster element and the wall. The ring plate and steel jacket will need to be coped at the walls.

T-1348 **BGP - SFPUC Electric Room Copper Mesh** **Closed** **04/23/2014** **05/03/2014** **04/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The response to RFI 1220.1 included E1-3212 which details the embedded grounding required for the SFPUC Electric Rooms. Note 5 indicates that a #6 copper mesh is to be installed.

Please provide the following information:
1) Type of mesh (Pure Copper or Copper Coated Steel)
2) Required spacing for grid of mesh

In addition, please provide a drawing with the dimensions to the location of the #2/0 copper pigtails which stub up into the future switchgear enclosures.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

REVISED RESPONSE

1) Mesh shall be copper. Copper coated steel is not acceptable. Erico or equal.

2) Required spacing shall be 8" x 8"

The copper pigtails may be stubbed up anywhere within the switchgear footprint/elevated pad area.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1348.1	BGP - SFPUC Electric Room Copper Mesh	Closed	05/29/2014	06/08/2014	06/04/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference plan sheet El-3212.

1) Note 4 on plan sheet El-3212 states, "Cadweld main #4/0 grid to #6 mesh with #1 stranded Cu conductor (typical). Refer to Detail 1/El-3212." Detail 1/El-3212 does not show a #1 copper conductor connecting the grid to the mesh. Please confirm the 4/0 grounding grid is to be connected directly to the grounding mesh.

2) Please see the attached Detail 5/El-3212. Please identify which part of the grounding grid system the highlighted portion belongs to and provide the proper wire size.

3) Detail 5/El/3212 designates the embedded conductors going to the battery rack as #2. Please confirm this means #2 AWG copper conductors. In addition, no designation is provided on Detail 4/El-3212 at the pigtail which appears to be for the battery rack in B1289. Please confirm this is pigtail is to be #2 A WG conductor as well.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The #6 mesh is to be interconnected to the grounding grid in several locations. Where the #4/0 grid crosses or contacts the mesh, it could be directly connected. Additional connections to the #4/0 grid are required from remote parts of the mesh. These interconnections shall be made with #1 bare CU connections.

2) The Detail 5/ E1-3212 did not convey a numbered note for this connection. Similar to the response to question 1, this connection refers to additional bond points (using #1 bare CU conductors) between the #4/0 ground grid and the grounding mesh.

3) Yes, the callout refers to using #2 AWG bare CU to the battery racks. The pigtail in Detail 4/E1-3212 is also required to be #2 AWG bare CU to the battery rack.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1348.2	BGP - SFPUC Electric Room Copper Mesh	Closed	06/09/2014	06/09/2014	06/17/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Turner Construction Comp Judith Long

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The response to RFI T-1348.1 stated the #6 mesh shown on El-3212/Detail 1 is to be interconnected to the grounding grid at "several locations" and that the #4/0 grid could be "directly connected" where it crosses or contacts the mesh. This response also stated that all other connections are to be #1bare CU connections.

I) Please provide the exact quantity of connections which are required from the #4/0 grid to the #6 mesh.

2) Please provide the interval distance between required direct connections from the #4/0 grid to the #6 mesh.

3) Plan sheet shows six (6) total #1 "remote connections" in each room. Please confirm this is the proper quantity required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger: 6/13/14
Per TJPA(Guy HOllins) direction, this RFI shall be redirected to the TJPA to forward to SFPUC for response.

Matt Ho 6/17/14:
1) RESPONSE: Referring to Details 4 and 5 on Sheet E1-3212 for the West and East Switchgear Rooms, we count 16 locations in the West room and 17 locations in the East room that offer an opportunity to connect the #6 mesh to the #4/0 grid. These locations include all interconnections of the #4/0 grid to ground riser conductors, grid cross connections, grid to pigtails (for equipment grounds), and grid to ground test bar connections.

2) RESPONSE: As noted above, the recommended connections to the mesh do not need to be evenly spaced. The connections can be made by including the mesh in the various connections to the #4/0 grid.

3) RESPONSE: The quantity noted should be adequate.

Response by: Matt Ho, SFPUC dated 6/17/14

T-1349	BGP - Beam B52 Trestle Pile Conflict	Closed	04/23/2014	05/03/2014	04/23/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

See attached CD S 1-2202 and sketches.

Trestle pile No. 88 at GL F5 encroaches into the B52 beam by approximateley 6". In liue of creating the blockout in this beam SCCI proposes to shift the beam 8" to the North. Whith the approval of the beam moving concept, following items will be taken into consideration:

1. Adjacent beam B51 , to the West, has long bars and short bars. these will be placed in to layers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Ethan Heinrich 4/24/14
Response to RFI comes at no cost to TJPA.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. Southmost B51 bars (one long and one short) will miss B52, but continue into the slab. These will not be contained in B52 tie set.

3. Add (1) # 10 long bar on the left of B52 with a hook to the far side of the MFB. Place in the corner of the B52 tie set.

Please confirm if this is acceptable.

T-1350 **BGP - Proposed Revised Location of the Reinforcement Lap Splices at the Lower (Open** **04/24/2014** **04/24/2014** **04/28/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Similar to RFI T-1181:

Please confirm that it will be acceptable to move the horizontal reinforcement lap splices of the concourse deck beams to be located anywhere within the middle 1/3rd span between the moment frame beams. The specific locations of the splices will be per submitted reinforcing drawings.

Please confirm that this would be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to locate Lower Concourse Beam's (long) top and side Bar lap splice location within the middle 1/3 span provided adjusted location does not overlap with (short) top bars and create unplanned congestion.

T-1351 **BGP - Room B2230 Plumbing Opening Conflict** **Closed** **04/24/2014** **05/04/2014** **05/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

See attached drawings that show a B48 beam in direct conflict wih the plumbing opening on the South wall of room B2230.
Please confirm the location of the plumbing opening.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the updated plumbing opening at concrete wall elevations D/A1-9217 and E/A1-9217, refer to SKA-3143.

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

See attached submittal sheet D2.28 and sheet E1-2204. Response comment to Submittal Package TG0600-121.1 on sheet D2.28 between gridlines 12-13 B-C, calls out "conduits are now embedded in the lower concourse slab". Per the TG0600-121.1 submittal review comment meeting held on 4/30/14, please confirm that embedded conduits FE045,FE051,FE052,FE058 incorporated on sheet E1-2204 dated 03/31/14 will continue to be surface mounted and blockout will be left in place for penetrating the slab.

Please confirm attached sketch SKA-3148 showing the coupler setting out dimensions for the future corridor wall at B1 level, GL 10, B-C as reviewed with AAI in our slab edge workshop held April 30, 2014

Please confirm rebar for Lower Concourse Floor drains marked "Future" are to be trimmed as detailed on 1/S1-3501 but not blocked out.

For door openings not dimensioned on architectural slab, floor or wall plans, please confirm it is acceptable to size door rough openings in the lower concourse partition walls to be 4.5" larger than doors scheduled on sheets A1-9700, A1-9701, A1-9702. If not please provide a door jamb detail for these openings.

Please confirm that Lower Concourse telecom penetrations shown on slab edge plans A1-2841 through A1-2851 to be 4" x 90 GRS elbows with a factory 30" radius as shown on 6/TE1-8014.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Embedded conduits:

WSP Response: WSP does not object to the proposal of surface mounting conduits and retaining the slab blockout in these specific referenced zones. For other areas where embedded conduits are indicated, WSP recommends the embedment in this phase.

2. SKA-3148 showing coupler setting out dimensions for future corridor walls at B1 Level, GL10/B-C:

AAI Response: Confirmed.

3. Future Floor Drains:

WSP/MDS Response: It is confirmed that the lower concourse floor drains marked "Future" will be trimmed as detailed on 1/S1-3501 but not blocked out.

TT Response: The reinforcement for the Lower Concourse slab at Floor Drains marked as "Future" are to follow detail 1/S1-3501. It is acceptable to trim bars.

4. Door Rough Opening:

AAI Response: As stated in workshop meeting April 30th, 2014, AAI cannot provide rough opening dimensions, as the rough openings may vary between manufacturers. It was agreed that WO will check on specified door manufacturers for the appropriate door rough opening requirements and provide this information to sub-contractor.

5. B1 Level Telcom Conduit Penetrations on slab edge plans:

SMW response: 4"x 90 GRS Elbow with factory 36" min - 42" desired radius cast into concrete beam as shown on 6/TE1-8014.

RESPONSE
WOJV 5/13/14

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

4. Door Rough Opening

For door openings not dimensioned on architectural slab, floor, or wall plans, size door rough openings in the lower concourse partition walls to be 4.5" larger than doors scheduled on sheets A1-9700, A1-9701, A1-9702.

T-1362.1 **BGP - Telecom Cast-In Elbow Radius - Lower Concourse** **Closed** **05/14/2014** **05/24/2014** **05/15/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

See attached RFI T-1362 Response.

The response to RFI T-1362 states that 4"x90 elbows with factory 36" min - 42" radius are to be cast into concrete beam as shown on 6/TE1-8014. This contradicts with the 30" radius called out on sheet 6/TE1-8014 and 30" radius confirmed in the comprehensive layout drawings, TG0600-121.1. Please confirm if the 30" radius elbows currently installed per TG0600-121.1 will need to be swapped out for 4"x90 GRS ELBOW with Factory 36" min - 42", as stated in the response to RFI T-1362.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

WOJV received 5/19/14

SM&W Response: NO, 30" bend radius is not confirmed or approved, the minimum bend radius shall be 10 times conduit trade size (internal diameter), this means SM&W will accept commercially available factory bends of minimum 36", with 42" preferred.

See attached updated detail TSK-0040, which supersedes TE1-8014

T-1363 **BGP - Vehicle Ramp Beam Support Embeds - Threaded Rod, PL Washer and Nut** **Closed** **05/05/2014** **05/15/2014** **05/08/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Filip Filipic

REQUEST:

Please reference detail 1 and detail 10 on S1-3411. Please also reference RFI T-1326 and attached sketch BES-001.

RFI T-1326 provides angles at which vehicle support beams intersect the foundation walls. As shown on attached sketch BES-001 the built up 8x8 angle will be

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide tapered washers or add tapered steel plates that develop full bearing between the nut and the built up angle.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

adjusted to match the angle at which the applicable beam intersects the wall. S1-3411 detail 1 and 10 call out for a 1-1/4" diameter threaded rod with plate washers and nuts running through slotted holes in the 8x8 angle. These rods, washers, and nuts will not be perpendicular to the 8x8 angle due to the angles at which the beams intersect the walls.

Please confirm no wedge, spacer, or shim will be required between the 8x8 built up angle and the plate washers to evenly distribute the load.

T-1364 **BSE - Geothermal Field 12 Subgrade Acceptance** **Closed** **05/05/2014** **05/15/2014** **05/07/2014** **Potentially** ☐

T-1365	SSS - Train Box Column Cap Plate Hole	Closed	05/06/2014	05/16/2014	05/16/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to the Train Box Column cap plate, our machine shop has drilled (1) non-standard hole in (1) p395 cap plate due to a broken tool. See attached inspection report and photos.
The hole is dimensionally in the correct position but has an internal spiral cut. The minimum diameter is 1-9/16" (1.563) and the max diameter is 1-49/64" (1.770).

Please confirm if one of the following is acceptable:
Option 1 - Proceed with the as-built condition, no further action required.
Option 2 - Reem out the hole to 1-13/16 and use a 1-1/2" bolt. AISC Table J3.3 page 16.1-121 allows oversize hole in slip critical connections, a hardened washer will be installed over the oversized hole. (see attached)
Option 3 - Drill the hole to 1-13/16 and use a 1-3/4" diameter bolt.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Both option 2 and option 3 are acceptable. This approval does not set a precedent, evaluation will be made case by case for similar issues in future.

T-1366	SSS - Slab Opening Clarifications	Closed	05/06/2014	05/16/2014	05/27/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Adamson Associates, Inc. Paul MacPhail **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 410 SK1 for items 1 & 2:
1) The Architectural Slab Edge Drawings indicate round sl ab openings greater than 8".
Confirm structural perimeter steel is not required at all rou nd openings or supply a detail.
2) It is not clear what is meant by large openings. Does d etail 12/S1-5003 apply to all rectangular/square slab openings shown on the Architectural Slab Edge Drawings?

Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) For openings greater than 8" and up to 2' provide rebar as shown in the attached sketch SKS-0354.

2) The large opening detail applies for openings that are greater than 2' but limited to the dimensions specified on 12/S1-5003.

T-1366.1	SSS - Slab Opening Clarifications	Closed	06/02/2014	06/12/2014	06/10/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Refer to attached CD RFI 410.1 SK1:

1) The response in RFI T-1366 (SK 551, CD 410) does not address rectangular slab openings where one side is less than 2'-0 and the other side is over 2'-0. See the example slab openings and clarify the perimeter steel requirement for all rectangular slab openings where one side is over 2'-0 and the other side is less than 2'-0.
2) The noted slab openings along with other slab openings shown on the Architectural Slab Edge Plans are NOT shown on S1-2302 and other structural plans. Confirm the slab openings on the Architectural Slab Edge Plans supersede the structural plans with updated structural drawings to follow.

1) The 2' dimension limit stated in the response to RFI T-1366 is the larger of the dimensions of the rectangular openings. So for a rectangular opening where one side is over 2' and the other side is less than 2', detail 12/S1-5003 shall apply.

2) Confirmed.

T-1366.2 **SSS - Slab Opening Clarifications** **Closed** **07/01/2014** **07/11/2014** **07/14/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Following up on RFIs T-1366 and T-1366.1, please find attached table and exhibits of small slab openings with at least one side that is 2'-0" long.

For each of the minor slab openings included in the following table, please confirm that the direction provided in the aforementioned RFI response is to install framing channels per 12/S1-5003. In some cases, the slab openings are only between 8"-12" wide. Otherwise, please indicate that it is acceptable to provide rebar as shown in SKS-0354 per RFI T1366 instead.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide perimeter steel per response to RFI 1366.1 around openings where the side of the opening that is perpendicular to the deck span is greater than 2'.

For openings highlighted in green, the perimeter steel per detail 12/S1-5003 is not shown on floor plans because 12/S1-5003 is a typical detail. We disagree with the claim that the perimeter steel for these openings constitutes a change order.

Some of the openings highlighted in red are shown on both architectural and structural drawings. These openings are noted in the schedule shown on attached sketch SKS-0369. Other openings that are missing from the structural drawings will be added in a future ASI.

T-1367	SSS - IFRM Prime Coat Requirement	Closed	05/06/2014	05/16/2014	05/12/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Turner Construction Comp Stacy Wilson

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification section 07 81 23 (Intumescent Fire Resistive Materials), issued with Field Order 00027, lists three acceptable basis of design manufacturers for IFRM systems. Additionally, specification section 07 81 23, 1.7.C.2 states that the intumescent fire protection system is to be from a single source, indicating that the prime coat Skanska shop applies must be from the same manufacturer as the subsequent coats that are field applied.

Per the monthly schedule delivered to TJPA, the IFRM contractor is not to be selected until 10/16/14.

Skanska requires direction as to which of the three approved basis of design manufacturers will be used on subsequent coats in order to obtain a recommendation from that intumescent coating manufacturer as to the appropriate primer to be utilized.

Alternatively, priming of IFRM steel can be removed from Skanska's scope and added to the scope of the IFRM contractor. This will result in a cost increase.

Please provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TJPA has rejected this RFI per 01 10 40 1.6 C 2 c.

T-1369	**SSS - Weld Electrode Subcomponents**	**Closed**	**05/07/2014**	**05/17/2014**	**05/21/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Turner Construction Comp Jack Adams

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

During a Quality Control review, performed by Thompson Metal Fab for compliance with the "Buy America" clause of the Contract, a question was noted regarding the proposed use of ESAB Spoolarc F9A4-ENi4 Submerged Arc Welding (SAW) Electrode for the welding of the HPS70W steel in the Train Box Columns. The attached letter from ESAB, dated April 22, 2014, describes the process that ESAB employs in the manufacture of the referenced product. It notes the fact that the tensile and yield properties of the specific filler metal alloy required to meet the Contract specifications
of 90XX are not offered or produced by any mills within the United States. The alloy is provided as a "Greenrod" and is acquired outside of the States. The cold drawing, proprietary processing and packaging of the product is done, by ESAB, wholly within the United States and uses, other than the alloy itself, domestically produced and acquired materials. The Certificate of Conformance from ESAB states that the product is manufactured in the United States (attached).

An inquiry was made, by Skanska, to Lincoln Electric regarding a similar product classification that met the Contract requirement (F9A4-ENi5). Lincoln Electric advised Skanska that they also receive "Greenrod" and strip from sources outside of the United States for this product.

A subsequent Quality Control review by The Herrick Corporation revealed a similar condition for the use of the Lincoln Electric product Outershield XLH-70, AWS classification E70T-1C-H8, FCAW process weld electrode. Once again, Lincoln has indicated that "Greenrod" for weld electrode products may not be domestically available and may be sourced from throughout the world. However, the manufacturing process, like ESAB, is done wholly within the United States. The Certificate of Conformance from Lincoln also states that the product is manufactured in the United States (see attached certificate and letter dated 04/28/2014).

The CFR Part 661.5 of the Clause gives the following definitions:
c) The steel and iron requirements apply to all construction materials made primarily of steel or iron and used in

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Contract Documents are clear, and ¿Buy America¿ requirements can reasonably be derived from a review of the Contract Documents. RFI are not an appropriate request to the TJPA for interpretation if products meet ¿Buy America Certification¿

The Contractor shall submit the ¿Buy America Certification¿ and the Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.

REF: SECTION 00 08 13 ¿ SPECIFIC PROJECT REQUIREMENTS

SECTION 00 08 13 - USDOT REQUIREMENTS FOR AGREEMENTS WITH THE TJPA

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

infrastructure projects such as transit or maintenance facilities, rail lines and bridges. These items include, but are not limited to, structural steel or iron beams and columns, running rail and contact rail. These requirements do not apply to steel or iron used as components or subcomponents of other manufactured products or rolling stock, or to bimetallic power rail incorporating steel or iron components.
d) For a manufactured product to be considered produced in the United States:
(1) All of the manufacturing process for the product must take place in the United States; and
(2) All of the components of the product must be of U.S. origin. A component is considered of U.S. origin if it is manufactured in the United States, regardless of the origin of its subcomponents.

Skanska has interpreted this clause to indicate that both ESAB and Lincoln supply welding electrodes for this Project that are wholly manufactured within the United States and that they satisfy the requirement of the "Buy America" clause.

Please confirm that the use of manufactured weld electrodes on the Project for which the manufacturer is providing a Certificate of Conformance indicating that the entire manufacturing process is performed in the United States, but may contain alloy material produced elsewhere, meet the intent of the Contract "Buy America" clause.

T-1370 **SSS - Roof Level Stiffener Plate GL 16** **Closed** **05/07/2014** **05/17/2014** **05/13/2014** **Potentially** ☐

T-1378	BGP - SFPUC Electrical Room Grounding	Closed	05/09/2014	05/19/2014	05/09/2014	Potentially	☐

From: Shimmick Construction Company, Inc. Sylvia Hartanto **To:** Webcor/Obayashi Joint Ventu Spencer Sayles **Answered By:** Webcor/Obayashi Joint V Spencer Sayles

Co-Author:

REQUEST:

Please reference RFI T-1227.1 - SFPUC Plate Grounding.

Please confirm the SFPUC Transformer mounting plate is to be installed by a future contractor and SCCI is only to stub the grounding conductor into each corner of the Electrical Room(see Note 1 on Plate Sheet El-2203).

If SCCI is to install this SFPUC Transformer mounting plate, provide the specifications, including but not limited to material type, size and thickness.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is confirmed that SFPUC Transformer mounting plate in transformer vault room elevated slabs will be supplied and installed by future contractors. However, SCCI BGP base bid scope needs to be increased from the corner of the three electrical rooms originally bid in BGP. This increase shall be priced and coordinated as described in RFI 1227.1 sketch in order for grounding conductors to be embedded in the structural Concourse slab. Grounding conductors must be extended from the corner of each Electrical Room to each future pad location and stubbed up so that transformer mounting plates can be connected by future electrical contractor. Please provide a sketch and product detail of how BGP electrical intends to implement this grounding extension so that SFPUC review can proceed as described on new sheets E1-3208, E1-3209 and E1-3210

IFC drawings (dated 3.31.2014) issued in Field Order 27 contain updated electrical drawings. BGP contractor should review these drawings for any modifications to Electrical scope bid during TG06. This is to include Grounding and embedded conduit for F-15 EJB conduit. New electrical scope other than that described above is not currently requested at this time.

T-1379	BGP - Pit and Pile Discrepancy at GL 27/E	Closed	05/12/2014	05/22/2014	05/14/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference attached contract drawings sheet S1-2026.

The mat slab pit located at Gridline 27 and E has a width of 2'-6". The pile located within this specific pit (see marked up S1-2026 is a 36" pile as detailed. Please provide new dimensions for the pit incorporating the 36" pile.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Accommodation of temporary conditions such as trestle piles and bridge piers is the responsibility of the contractor. For the trestle pile at Grid 26.7, the contractor is free to propose to the Design Team that the pit be temporarily widened to minimize the complexity of a blockout. Contractor shall include means and detailing of restoring the pit to its planned dimension.

T-1379.1	BGP - Pit and Pile Discrepancy at GL 27-E	Void	05/21/2014	05/31/2014		Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

SCCI is in receipt of RFI T-1379. SCCI disagrees with the response provided in the aforementioned RFI.

S1-2026 illustrates a 30" wide pile in a 30" wide pit at gridline 27/E. However, Submittal #TG0300- 284.4, which was reviewed and approved by the design team, shows the previously mentioned trestle pile as a 36" wide pile. It has also been confirmed in the field this pile is 36" wide pile.

Please provide applicable details (similar to D4 on Sl-3009 & D2 on Sl-3007) for permanent elements in the mat slab construction, including but not limited to galvanized sleeves and structural steel reinforcing, for the pit at GL 27/E which contains a 36" wide pile, not 30" as shown on the design drawing S 1-2026.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-1380 **SSS - Field Weld Access at Deck Support Angles** **Closed** **05/12/2014** **05/22/2014** **05/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Refer to 1/S1-
3701 for deck support angle welded to Transfer Girder we
b detail.
Due to restricted access the decker cannot make the requi
red field welds when the top of deck to underside of
Transfer Girder flange is less than 12". See attached SK1
for clarification.
1)
Confirm a 3/8" bent plate can be welded to the toe of the t
op flange.
2) Confirm the weld indicated on SK1 is acceptable.
3)
Confirm the deformed anchor rods can be welded to the b
ent plate.

Where deck to underside of girder exceeds 12" the deck s
upport angle will be detailed as per 1/S1-3701.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Welding of the deck to the support angle may be performed from the underside, using 1/8" fillet weld, 3" long at 12" on center

2) See response #1

3) See response #1.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1380.1	**SSS - Field Weld Access at Deck Support Angles**	**Closed**	**06/10/2014**	**06/20/2014**	**06/24/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

After reviewing the response to T-
1380 there are several items of concern:
A.
Access from the underside will not always be possible. At
certain locations the perimeter wall bracing and
rebracing that will remain in place during the deck installati
on operation at Ground Level is in close proximity
to the transfer girder and will restrict the mobility of a sciss
or lift required for a welder to reach the work
point from the lower concourse slab, approximately 30' bel
ow.
B.
To provide an effective weld from the underside, the deck l
ower flute is required to overhang the toe of the
angle. In order to achieve this, shifting the deck may result
in the loss of bearing at other locations. If the deck
can't be shifted a 12ga minimum flashing plate will be requ
ired, see details 3 & 4 on SK1.
C.
Effective concrete placement will be an issue if adequate c
learance from the top of deck flute to bottom of
girder flange is not established.

To move forward we propose the following:
1.
Where d<7" we will use stock angle sizes up to 8x4x1/2" (
LLV) welded to the toe of the flange, see detail 1.
2.
Where d>7" but <15" we will use an overhead 1/8" fillet fro
m the underside as per the response to T-1380
(where accessible), see detail 2. This will allow a minimum
of 4" clearance from top of deck flute to underside
of flange for placement of concrete.
Where the bottom flute does not overhang the toe of the a
ngle and shifting the deck creates a loss of bearing
at another location, a 12ga min flashing will be welded to t
he angle and deck bottom flute, see detail 3 & 4.

Please confirm items 1 & 2 are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed.

2. Confirmed.

T-1381	**SSS - CVN Testing For Secondary Material**	**Closed**	**05/12/2014**	**05/22/2014**	**05/23/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

The response to RFI T-1034 indicates that secondary steel components (stiffeners, connection plates, continuity plates, etc.) are to be CVN tested in accordance with their respective ASTM specification. In the CS05 (TG0701-077) and CS07 (TG0701-079) submittal packages, Skanska¡¦s detailer inadvertently tagged the spandrel shear plates and web reinforcement plates at the Bus Deck level to receive CVN, Frequency P testing. These same components were not tagged for CVN testing in the CS1, CS2, CS3, CS4, and CS6 packages and the drawings were approved with no comment on the CVN requirements.

For the subject material, the governing ASTM 572 specification indicates that supplementary CVN, Frequency P testing is not required unless specifically indicated in the contract documents. In accordance with the response to RFI T-1034, Skanska has proceeded without CVN-P testing for the following secondary components: (Note that the material listed has been ordered without Frequency P testing.)
Bus Deck Spandrel Plates
Bus Deck Web Reinforcement Plates
Bus Deck Drag Connection Plates
Roof Level Fabricated Nodes (as per submittal package TG0701-097.1)
Other secondary materials (stiffeners, connection plates, continuity plates, etc.)

In preparation for the resubmittal of CS05 and CS07 drawing packages, Skanska will remove the CVN remarks for these components to conform to the RFI T-1034 response, the ASTM specifications, and the previously approved packages.

Please confirm concurrence.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1387 **SSS - Erection Plan Temporary Lugs** **Closed** **05/12/2014** **05/22/2014** **05/23/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. Specifically, Skanska flagged a comment that indicated our temporary erection aids at the exterior moment frame columns needed to be located 36" below the moment frame beam to column connection at the bus deck level and also 36" away from the weld joint between the column and cast node/transfer girder at ground level. See attached drawings for ease of reference.

As discussed during the meeting, please confirm that this is not mandatory; and, if Skanska opts to leave the lugs as shown on the attached documents, it is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1389	SSS - Stud Comment Clarification on Decking Drawings	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to the Linden Steel decking drawings the reviewer's comment references general note DK-5 - Distribute steel studs uniformly over beam span unless otherwise noted on drawings. Maximum spacing of ¾ inch headed studs shall not exceed 24" on center (one stud every 2 feet) unless otherwise noted.

As per note 1 on 1/S1-5000 - "See general notes for headed stud size and maximum spacing. Number of studs is indicated on the framing plan." Linden has modeled their drawings as per note 1, referring to the general notes for size and spacing requirements and the framing plans for stud quantities indicated on each member as per the Steel Beam Legend on S1-2302.

If a stud quantity is not indicated on a beam member, no studs are provided. Please confirm this interpretation is correct. If additional studs are required on members that are not currently identified please provide revised drawings identifying beams and quantities required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

While the maximum stud spacing requirement of 24" noted in General Note DK-5 is the design intent, we understand that the Note 1 on 1/S1-5000 is somewhat conflicting. We agree to handle the 24' spacing requirement on a case by case basis, by marking on the shop drawings where this requirement is to be enforced to minimize the impact. We will re-submit the metal deck shop drawings for clarification.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1389.1	SSS - Stud Comment Clarification on Decking Drawings	Closed	06/10/2014	06/20/2014	06/26/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

According to Note 1 on 1/S1-5000, the number of headed studs is indicated on the framing plans. As per the steel beam legend on the framing plans, the number of studs is indicated in (*) following the beam designation (see SK1). It has come to our attention that the design team requires studs on certain members that currently do not show a stud quantity.

Please provide a document that shows which members, not identified as requiring studs on the framing plans, shall have studs installed so that we may incorporate into our decking shop drawing submittal packages.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to attached sketches SKS-0361 through SKS-0367 that show updated plans with additional shear studs (clouded) on beams.

REQUEST:

See attached CD RFI # 422 SK1 & SK2 for items 1 & 8:
1) Supply missing dimensions.
2) Supply hole size for the W-13 bolts.
3) The beam will not be erectable with a shear plate on each side of the web and the bottom flange CJP welded. Please supply an alternate detail.
4) Supply missing dimensions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to attached sketch sbp-SKS-200 for distance between the bolts.

2) Bolt holes shall be 1 9/16" in diameter.

3) Provide a single 2" thick shear plate on one side of the beam web for the beam to be erectable. Provide

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5) Supply the dimensions to locate the holes for the W-13 bolts.
6) Confirm the 2" vertical stiffeners may be located radially to avoid bevel cutting the edges.

double sided 1/2" fillet welds similar to the other 2" stiffener plates.

4) Refer to attached sketch sbp-SKS-200 for missing dimensions. Note that the frame is symmetric about the center leg meaning the two highlighted dimensions are equal.

5) Bolts shall have a horizontal spacing of 4"and shall be placed symmetrically about the beam web .

6) Confirmed.

7) Confirmed.

8) Confirmed.

T-1396.1 **SSS - ConnectionErection Clarifications at W-13 System** **Closed** **09/10/2014** **09/20/2014** **09/26/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 422.2 SK1 & SK2 for items 1 to 3:
1) Detail 3/S1-5028 shows 8 pairs of bolts and RFI T-1396 shows 6 pairs. Confirm 6 pairs is correct.
2) RFI T-1396 gave the 4" horizontal spacing without being specific on the bolt locations. As shown, the 4" spacing will not work because the 2" shear plate with 1/2" fillet welds will foul the 1 1/2" bolts. Please clarify the bolt spacing.
3) The connections foul each other with the revised beam spacing as shown on SK1. Confirm it is acceptable to connect the beams parallel to Grid E.2 with a single shear plate per 1/S1-5011 or supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) & 2) Details 1 and 2 on S1-6020 as issued on 7/11/2014 do describe the intended design of the bolted connection of the W-13 system to the building framing.

3) Not acceptable. See response to RFI T-1671.

We disagree with the reasons for RFI request associated with it. We categorize this as no cost clarification.

REQUEST:

See attached CD RFI # 423 SK1 to SK3 for items 1 to 8:
1) Confirm the HSS6x6x5/8 posts are aligned with the HSS12x6x5/8 posts in the north-south direction as supplied in
RFI T-1090.
2) Supply the dimension to the center of the (2) HSS6x6x5/8 posts.
3) Confirm the correct reference is 1/S1-7600.
4) Supply a connection detail for the bottom of these posts at the corner of the slab opening.
5) It appears here and in detail B/S1-7132 (SK3) that the east-west HSS12x6 beam connects to the concrete wall but
the north-south HSS12x6 beams are continuous. Please clarify the steel framing.
6) Supply missing dimensions.
7) Supply missing elevations.
8) Supply a connection detail for HSS beams to concrete wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The two HSS 6x6x5/8 posts are not required and may be removed.
2) See response to 1).
3) Confirmed.
4) See response to 1).
5) The HSS 12x6 beams are not required and shall be removed.
6) See response to 1).
7) The HSS 6x6 beams shall be equally spaced between elevation 103' - 5" and centerline of the HSS12x6 beam that is just below the roof park level.
8) Provide connection per 4/S1-7602 at ends of the HSS 6x6x5/8 beams.

T-1403	BGP - Partition Wall Construction Joints	Closed	05/15/2014	05/25/2014	05/23/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please confirm the following items are acceptable regarding partition wall construction joints.

1. To provide the 3/8" gap for the vertical CJ's, SCCI intends to place felt board in the joint with a 3/4" chamfer (see attached drawing). Once the walls on either side of the CJ have been poured, the felt board will be trimmed down to the end of the chamfer and the edges of the joint will be caulked. Please confirm this is acceptable.

2. With the exception of the tank walls, SCCI intends to pour the Train Level Partition Walls that go all the way to the Lower Concourse (~28'-11" tall) in two lifts with one horizontal CJ. SCCI proposes prepping the joint by roughening it with 1/4" amplitude. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:

1. 3/4" chamfer for min 3/8" partition wall vertical CJ is confirmed. For joint filler and caulking of fire rated walls: refer to Spec Sec 07 84 13.

TT Response:

2. Confirmed. Additionally contractor to confirm construction joint is clean of foreign materials.

T-1404	SCS - Transfer Girder Clarification	Closed	05/15/2014	05/25/2014	05/29/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Please clarify the designer's intent:

Sheet Sl-2303 indicates that the south end of Transfer Girder TR9 extends beyond the B87 and B88 beams southern edge and partially into the intersecting MFBl beam which is angular to the B87 beam. Section 8/S1-3701 indicates that there are welded rebar couplers at the top flange of the TR9 girder to match the B78 beam reinforcing, but the B78 beam ends at the B87/B88 intersection prior to the southern end of the TR9 girder.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The note" BARS TO MATCH BM78 BARS WITH LENTON COUPLER" has a typo. It should read as " BARS TO MATCH MB1 BARS WITH LENTON COUPLER". The bottom bars for BM78 shall go through the holes in the web of TR9 as shown in Detail 8/S1-3701.

WOJV Received: 6/2/14

T-1407	SSS - Stud Quantity on W16x26 at Ground Level	Closed	05/16/2014	05/26/2014	06/03/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please reference S1-2305 grid 23/H.7 (Sk1 attached). Two W16x26 beams are indicated with 16 shear studs each. We believe the 16 studs to be a typo and should be 6 studs. Note the mirror image location at grid 23/C.3 indicates 6 studs. All 4 of these beams only have 3 low flutes crossing over the beam. 6 studs would allow 2 studs per flute but 16 studs would require 5/6 studs per flute which is not feasible.

Please confirm it is acceptable to provide 6 studs on the 2 W16x26 beams at grid 23/H.7.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1408	SCS - TR19.9, 20.1 Transfer Girder	Closed	05/16/2014	05/26/2014	05/29/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Please clarify the designer's intent:

Sheet S1-2305 indicates the upper Slab elevation as 17.71' and the top of the Lower Slab as 16.07' in elevation at Girders TR19.9 and TR20.1. The connecting MFB1 30"(W) X 48" (W) X 48"(H) beam top is indicated at the 16.07' elevation per details on Sheet S1-3600. The referenced Section 9/S1-3702 at the south ends of TR19.9 and TR20.1 doesn't correlate with the slab elevation in relation to the top of structural steel.

Please clarify the detail for the welded couplers at the south end of TR19.9 and TR20.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Elevation 19.07 is the elevation below the concrete pad. The concrete pad is at El.17.71. See the attached response to RFI SSS-T-1097.1 for additional information.

WOJV Received: 6/2/14

T-1409	TR1.4 Transfer Girder 72" X 40" CBM Welded Couplers/Bars	Closed	05/19/2014	05/29/2014	05/19/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Please clarify the designer's intent:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As noted on the plan, the slab west of Grid 1.4 has a step at Grid E.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Sheet S1-2302 indicates that the 2 northerm 72"x40" CBM beams east of Grid 1.4 are sloping and references Section 1/S1-3700 which indicates that the CBM beams are level. The 2 southern 72 "x40" CBM beams east of Grid 1.4 are not indicated as sloping and reference Section 1 /S1- 5023 that indicates that the beams are sloping. Please clarify the details for the welded couplers and #11 bars for the 72"x40" CBM beams at east side of TR1 .4. Section 2/S1-7605 indicates 17-#11 bars top and bottom, one added set of 17-#11 bars 3" below the top bars, and 4-#11 side bars.The details shown in Sections 1/Sl-5023 and 9/Sl-3700 indicate that the top and bottom 17-# 11 bars are connected to the transfer girder by welded couplers or bars. Please verify that only the top and bottom #11 bars connect to the transfer girder by welded couplers or bars.

As noted on the plan, along Grid 1.4 , top of slab is at 20.23 north of Grid E and at 21.21 south of Grid E.
As noted on the plan, along Grid 1 (top of concrete wall), top of slab is at 20.03 north of Grid E and 21.00 south of Grid E.
The 72x40 concrete beams are to have a slope per elevation noted on plan.

T-1412	SSS - Pipe Wall Thickness Tolerance	Closed	05/23/2014	06/02/2014	05/28/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per conversation during "Transbay structural issues review" meeting on 5-20-2014, the wall thickness tolerance of spec 05 15 22 was discussed. Per design team, this tolerance is intended to apply to the ends where the pipe would be welded, and a less restrictive tolerance would be acceptable throughout the length of the pipe, provided that the wall thickness is greater than nominal, not less.

The manufacturer of the spun-cast pipe has produced all product to date with dimensions that meet the 05 15 22 spec for 12" at each end. Throughout the remainder of the pipe, the wall thickness is greater than nominal (typically by about 0.090"), and in all cases falling within the tolerance of API-5L.

See attached depiction ofthe pipe tolerances.

Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

See attached CD RFI # 296.1 SK1 to SK7 for items 1 to 1 8:
1) 2/S1-9101 shows the framing at 14'-
2 C/C UON but no start location for the steel is supplied. Please supply location dimensions for the vertical HSS4x4 hangers per 2/S1-9101.
2) Supply missing clouded dimensions (10) locations.
3) Supply elevation to top of 3/8" galvanized.
4) Supply missing clouded dimensions (12) locations.
5) Supply elevation to top of 3/8" galvanized plate.
6) Clarify how detail 2/S1-
9101 applies at the noted location. Should the reference b e to detail 3/S1-9101?
7) Supply (5) clouded dimensions.
8) Supply a connection detail.
9) Confirm the brace connection is as shown in detail 3/S1 -9101 (SK5).
10) Supply a detail for the bottom of the HSS4x4 posts.
11) Supply a connection detail for the HSS4x4 posts to hor izontal HSS4x4.
12) Supply elevation to underside of posts.
13) Supply the weld for PL3/8" to HSS4x4.
14) Supply this dimension for each HSS4x4 post.
15) This detail will not work as it is not known at the detaili ng stage where the deck flutes will be. The detail also doe s not work when the deck spans parallel with the brace. Pl ease confirm it is acceptable to proceed per the informatio n in RFI T-1067.2 (SK 230.2, CD 181.2).
16) Supply the thickness and welding for the stiffeners.
17) Supply elevation to establish stiffener locations.
18) Supply a connection for the HSS4x4 to the PL3/8".

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). See the response noted on the attached sketch RFI 296.1 SK1

2). See the response noted on the attached sketch RFI 296.1 SK2

3). See the response noted on the attached sketch RFI 296.1 SK2

4). See the response noted on the attached sketch RFI 296.1 SK3

5). See the response noted on the attached sketch RFI 296.1 SK3

6). Yes, the reference shall be to Detail 3/S1-9101. (TT)

7). See the response noted on the attached sketch RFI 296.1 SK4

8). See A/SKS-356 attached (TT)

9). Confirmed, also see the comment on RFI 296.1 SK5

10). See detail 3 on A1-8551 (AAI)

11). See B/SKS-356 attached (TT)

12). See the response noted on the attached RFI296.1 SK4

13). ¼¿ fillet weld both sides (TT)

14). See the response noted on the attached sketch RFI 296.1 SK5

15). The detail works as shown. It is a means and methods issue, it just means that the connection cannot be shop fabricated as the work require contractor¿s coordinate during construction. If the deck span parallel to the brace angle, field weld the brace angle to the L4x4. (TT)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

16). Stiffener plates are to be 3/8¿ thick with ¼¿ double fillet weld to column. (TT)

17). See the response noted on the attached sketch RFI 296.1 SK6

18). See the response noted on the attached RFI 296.1 SK7 (TT)

T-1417.1	SSS - Missing OCS Switch Information	Closed	06/27/2014	07/07/2014	07/11/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The responses to the following items were not sufficient for Candraft to proceed.
7) The response notes one of the requested dimensions as "VARIES". Please provide criteria for this varying dimension.
12) Detail 3/A1-8551 does not provide the bottom of the HSS post elevations. Please supply the elevation at each post.
13) Per the structural details only the 1/2" plate is to be galvanized. Confirm this is correct and supply weld required for PL3/8" to HSS4x4.
14) Supply the requested missing dimension as shown at each post.
17) Please supply the elevations for the stiffeners in the columns.
18b) Please provide the size, radius, hole location and dimension on the 1/2" x 8" plate. Note: See response sketches SK1 through SK7

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please see OCS configuration in 1/A1-8550. Notice the OCS path relative to the beam (16'-4 1/2" from GL C.3 in CD RFI 296.1 SK4) is not a constant offset in plan and changes locations traveling east to west. From this, the HSS structure supporting the OCS assembly from above will also have an offset dimension from the beam that is not constant and will vary.

12) The bottom of HSS post elevation will vary because the bottom elevation is dependent upon the elevation of the OCS Universal Spacer Bar which is dependent upon the ultimate constructed sloping grade below (concrete). The OCS Universal Spacer Bar shall be 18'-0" above the built finish grade and the dimension between the bottom elevation of the supporting post and the Universal Spacer Bar is given on detail 3/A1-8151.

13) All should be hot dip galvanized as noted in the CDs. The weld shall be 1/4" double sided fillet weld. Please note that the connection plate shall be centered to the work point of the diagonal angles.

14) Same response as in item #12.

17) CL of plate is determined by SFMTA OVS. See response to item #14 on attached CD RFI 296.1 SK5.

18b) Plate size, thickness and hole location are provided in 6/S1-9101. SFMTA must provide size of plate hole, as the cable tensioner components are provided by SFMTA. TJPA shall assist with the SFMTA contact if required.

The Design Team suggests that the OCS connectors be field installed to accommodate the final coordination with the SFMTA

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up to RFI T-1417.1 (SK 399.3A, CD 296.3)

Skanska: The responses to items 7, 12, 14 & 17 require further clarification. Please review the items below.
Item 7 ~ the response and reference to A1-8550 does not provide the requested dimensions. Please provide the dimensions to locate the posts.
Item 12 ~ the response tells us that the Universal Spacer Bar is to be 18'-0 above the ultimate constructed sloping grade with the bottom of the post being +/- 4" above that per 3/A1-8151. Several unknowns remain:
a) What does "ultimate constructed sloping grade" mean?
b) The top of slab information on drawings S1-2306, A1-2306 & A1-2866 is not clear
c) What does the +/- 4" in detail 3/A1-8151 mean?
Item 14 ~ same as item 12
Item 17 ~ same as item 12

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item 7 - information has been provided. Skanska should review with WOJV and TJPA.

Item 12 -

a) It means field dimension must be determined from the constructed grading by the CM/GC and coordinated between trade subcontractors and the SFMTA (the transportation agency). The design team cannot provide the as-built field dimensions that are required for this item.

b) The reviewer should be using civil (grading) information - not structural information. Refer to sheets L1-3306, L1-3307, C1-4007 and C1-4009.

c) This dimension is incorrect - It is 1'-0" +/-4". This will be corrected in VE Round #4 submission.

Item 14 - This question is the same as in Item 12, so the response is the same.

Item 17 - This question is the same as in Item 12, so the response is the same.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

AAI recommends that WOJV schedule a coordination meeting with SKANSKA, TJPA, SFMTA the Design Team to review This RFI and the previous sub-number.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Following the OCS RFI coordination meeting held 8/28/2014, please provide the following information as discussed:

Item 7 - the response and reference to A1-8550 does not provide the requested dimensions. Please see SK1 and provide the dimensions to locate each post.
Item 12 - the response tells us that the Universal Spacer Bar is to be 18'-0 above the ultimate constructed sloping grade with the bottom of the post being +/- 4" above that per 3/A1-8151. Please provide the elevations for the bottom of each support post.
Item 17 - please supply the elevations for the stiffeners in the columns.
Item 18b - please provide the size, radius, hole diameter and hole location on the ½" x8" plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item #7. For dimensions of vertical OCS supports see attached sketches SKA-4084 and SKA-4085.

Item #12. For elevations (heights) of vertical supports see attached sketches SKA-4082 and SKA-4083.

Item #17. The elevation of the center line of the lower plate is 31'-4", the elevation of top of the upper stiffener plate is 36'-7".

Item #18b. Per Chris David's (SFMTA) sketch SK7, the hole size is 0.69".

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 296.8 SK1 to SK2 for items 1 to 8:

1) Confirm if 1/2" thick Galv plate is required and provide d imensions & elevation.
2) Confirm items 65 & 66 are typical 2/S1-9101 hangers.
3) Confirm if 1/2" thick Galv plate is required and provide d imensions & elevation.
4) Confirm items 67 & 68 are typical 2/S1-9101 hangers.
5) S1-2407 shows a reference to 6/S1-9101 between grids 31.7-32. Please supply the location & elevation of the plate/han gers if required.
6) Confirm items 71 & 72 are typical 2/S1-9101 hangers.
7) Confirm if 1/2" thick Galv plate is required and provide d imensions & elevation.
8) Confirm if reference to 6/S1-9101 between grids 31.7-32 is required. Please supply the location & elevation of th e plate/hangers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Not Required, as location of switch is unknown. Plate may be required/installed in future work after phase I.

2. Confirmed, typical to details 2 and 3/S1-9101.

3. Not Required, as location of switch is unknown. may be required/installed in future work after phase I.

4. Not exactly typical to 2/S1-9101, but similar to the upper plate connection on 2/A1-8550. Refer to the attached sketch SKA-4293.

5. Required location is on 1/A1-8550 and SKA-4085 which was a part of the response to RFI T-1417.4 SSS. Hanger elevations over OCS Shield have been revised to 34'-5" as shown on attached sketch SKA-4082 R1.

6. Confirmed. However, these supports are at the South OCS location; the final elevation of work will not be implemented until after phase I. For phase I, all South OCS hanger support elevations will be 34'-5" which is also indicated on attached sketch SKA-4082 R1. This attached sketch is a revision to the South OCS elevations for phase I work.

7. Not Required, as location of switch is unknown. Plate may be required/installed in future work after phase I.

8. Same Response as provided in #5.

T-1422	SSS - Bolt to Edge Dimension Clarification GL 16	Closed	05/27/2014	06/06/2014	06/10/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 432 SK1:
Confirm the 1 7/16" edge distance for the 1 1/2" dia. bolts per 1/S1-8000 is acceptable or supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It appears from the sketch SK1 provided in the RFI that the detailer spaced the middle two bolts at (tw + 3 3/4") per detail 1/S1-8000. At this location with tight edge clearance, revise the spacing between the middle two bolts to 4". The resulting bolt edge distance is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1423	SSS - Girder Flashing Max Gap Dimension	Closed	05/27/2014	06/06/2014	06/04/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to details 6, 7 & 9/S1-5000, a 9" max dimension is shown from the edge of the girder flashing to the edge of the deck with a 1-1/2" minimum bearing onto the girder, indicating the flashing gauge is to match the gauge of the deck. Based on the preceding, most locations would require 18 gauge flashing with the max gap between beam and deck being 7-1/2".

Please confirm it is acceptable to increase the max gap to 9" as the deck flutes are at 12" centers and at some locations this gap will exceed 7-1/2". To accommodate the increased gap, the decker is proposing to use 16 gauge flashing at all locations, connecting the flashing to the beam with ¾" diameter puddle welds at 12" OC and connecting the side lap with button punches at 12" OC or top seam welds at 24" OC.

See attached SK1 for clarifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the gap may be increased from 7 1/2" to 9" where 16 gauge closure sheet is used.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1425	SSS - Edge of Slab Angle at Seismic Joint GL10 & 20	Closed	05/29/2014	06/08/2014	06/10/2014	Potentially	☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Section 3/S1-3282 details the typical concrete wall at expansion joint on the Roof Deck Level. Please confirm an edge of slab bent plate and deck support as per 9/S1-

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Typical Detail 9/S1-5000 is applicable at the expansion joint, as the slab edge overhung is within the range (2' - 4') noted for this detail.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5000 is not required. See SK1 & SK2 for reference.

T-1425.1 **SSS - Edge of Slab Angle at Seismic Joint GL10 & 20** **Closed** **06/30/2014** **07/10/2014** **07/09/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 433.1 SK1 & SK2 for items 1 & 2:
1) Confirm the outline of top of slab/edge plate at grids B & H at the expansion joints.
2) Confirm the edge plate support detail at the 1/1/4" connection plate is acceptable as shown or supply an alternate detail.
3) The 10" on SK2 indicates top of roof floor slab. Confirm the bent plate will stop at top of slab OR is an additional 8" required to the concrete key location.
4) For detail 9/S1-5000 now required at the Seismic joints, verify the 8'-0 Max spacing for the angles can be increased to 8'-6 in order to line up with the back span beam spacing per design.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed. However, the requirement for the closure plate and other misc. steel per Detail 9/S1-5000 noted in TT's previous responses to RFI 1425.0 may be waived to negate SKANSKA's claim of added scope. If the closure plate is not provided by SKANSKA, the concrete contractor shall provide proper forming/shoring for supporting wet weight of the concrete while pouring slab concrete. How to support the wet weight of the concrete when placing the slab is the contractor's means and methods.

2). Confirmed, also see the response to comment #1.

3). It is W/O's option to stop the vertical leg of the closure plate at the top of slab (additional forming is required to retain the concrete while placing the slab), or stop the vertical leg of the closure plate at the concrete key location (additional forming not required).

4). Confirmed that the outrigger spacing may be increased to 8'-6" to be in line with the back span beam spacing.

6/S1-5002. No for E/W beams, where Typical Detail 11/S1-5002 shall be used for deck support.

2) Add a short W12x14 placed at -1'-0"below typical T/Steel EL. Refer to Typical Detail 11/S1-5002 for deck support.

T-1428 **SSS - High Slab Support at Ground Level GL4F** **Closed** **05/29/2014** **06/08/2014** **06/09/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 442 SK1 for items 1 & 2:
1) Confirm the BU-WT's at these locations should be extended as shown.
2) Confirm BU-WT's are required at the noted locations to support the hig h slab.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed.

T-1429 **SSS - Framing Interference at GL 5D Ground Level** **Closed** **05/29/2014** **06/08/2014** **06/10/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 441 SK1:
1) The double angle connection is not possible as it will fo ul the stiffener plate. Confirm it is acceptable to connect the W16 beam with a full depth shear plate with b olts, plate thickness and welding per 1/S1-5011.
2) Confirm the connection above may be applied at other s imilar locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Changes to shear plate connections at similar locations will be considered on a case by case basis. Submit an RFI highlighting all similar locations or mark such instances on the shop drawings for approval.

T-1430	BGP - Lower Concourse E/W Bottom Deck Bar at GL 9 MFB	Closed	05/30/2014	06/09/2014	06/04/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please confirm per field conversation between structural EOR and Gerdau that it is acceptable to install the concourse slab bottom East-West reinforcing at GL 9 per the attached sketch.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposal is acceptable provided:

1. Tail of slab bottom bar is fully developed within the confined joint

2. Tail of slab bottom bar runs over the top of the lowest MFB longitudinal bar and is no longer located below it

3. Field bends conform to ACI minimum radii limitations

4. Within the joint, bottom MFB bars are brought to their lowest possible position above (and in contact with) the MFB exterior hoop bottom legs

5. All hooks of MFB vertical ties shall be made to fully engage the MFB longitudinal reinforcing outside the joint and at the sides of the joint

6. Proposal is implemented at all Grid 9 columns where the overpour results in slab bottom reinforcing being out of tolerance (3/4 clear plus 1/2" tolerance)

It is also acceptable to cut the bottom slab bars at the face of the MFB-column joint and splice in an equivalent z-bar.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The reviewer's comment on Linden Shop drawing D3 detail 49, requests the contractor to coordinate the change of steel deck height with RFI T-0803.1 and with W2 roof assembly components (see SK1).

After further review of the available information, detail 1/A1-8171 provides conflicting information to what is indicated on 1/S1-5032, the W-2 retail façade roofing assembly build-up indicates a 1-1/2" metal deck (see SK1).

Please confirm the steel framing and 1-1/2" metal deck as currently detailed is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This item was already confirmed by RFI T-1413.

T-1437 **BGP - Shear Wall Column Vertical Splice at 3rd Lift** **Open** **06/03/2014** **06/13/2014** **06/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Reference: RFI T-0620
For constructability purposes, the shearwalls require horizontal construction joints at the same elevations as the foundation wall construction joints. All vertical reinforcing has been detailed with HRC mechanical couplers with the exception of the 3rd lift of the shear wall column located adjacent to the knockout wall. Please confirm that it is acceptable to splice the verticals in the shear wall column with a Dayton Superior Barlock D250SCA coupler

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable provided that the coupler is a Type II coupler, such as Dayton Superior Barlock L-Series. The coupler proposed in the RFI does not qualify. The contractor shall plan for the installation of the coupler by taking into account the length of the coupler, the length of the reinforcing stub to be spliced, and the available clearance. The coupler may need to be preinstalled with the stub or a blockout created depending on the proximity of the obstruction to the planned construction joint. The detailer shall account for the increase in effective bar diameter at the mechanical coupler with respect to ties and clear cover.

T-1439	SSS - Oversized Holes in Cruciform Column Base Plate	Closed	06/04/2014	06/14/2014	06/12/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Due to the thickness of the cruciform column base plate and the transfer girder top flange connection (7-1/2" to 9-1/2" thick). Please confirm it is acceptable to provide oversized holes in the base plate only at the slip critical connection as per AISC (see SK1). This will allow additional tolerance for threading the 2-1/2" diameter post tensioned rods varying from 14' to 38' long through the 7-1/2" to 9-1/2" thick steel.
Note: The transfer girder top flange will remain a standard size hole (d+1/16").

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Using oversized holes in the SFRS bolted connection indicated in the RFI is not acceptable. It is acceptable to achieve additional tolerance for the post-tensioned rods by using oversized holes for these rods within the base plate.

T-1443	Re-Install Dewatering Well Pump #34 per Field Coordination	Closed	06/06/2014	06/16/2014	06/12/2014	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

On Thursday, May 22, 2014, there was slurry intrusion through dewatering well #34, from the Transbay Tower Project. After the Transbay Tower Project placed a lean mix to plug the slurry intrusion, only water has come out of the well at a pressurized rate, not yet experienced on this project prior to the event.

The water in this well has been confirmed acceptable by the SFPUC to discharge into the City's combined sewer system, on 6/5/14. A plug has been placed in this well in order to keep the jobsite from flooding due to the volume of water pushing through the well. We want to replace the dewatering pump in this well, but are concerned that we may end up dewatering the Transbay Tower Project and possibly draw the water table on their project outside of the requirements of our specification.

1) Please confirm that it is acceptable to re-install the dewatering pump in well #34.
2) Please let us know if there are certain steps or durations that you want us to pump in an effort for ARUP to monitor the water table on Transbay Tower's Project and/or other adjacent properties.
3) Please confirm that in performing this activity, we are not held to the requirement of Spec Section 31 56 13-13.F.1. in regards to "The performance of the shoring wall shall be such that the groundwater levels around the excavation are maintained within 3 feet from the pre-excavation levels" since there is the potential of us drawing their groundwater through our well.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. It is acceptable to reinstall the dewatering pump in well #34.
2. Access has been provided to the global analyzer. Please watch carefully the affects from dewatering in wells P-03DS and P-6MS. These have currently not shown any change in the piezometric elevation since May 22.
3. The specification will not be relaxed at this time.

T-1444	SSS - Location of Grout & Vent Holes	Closed	06/09/2014	06/19/2014	06/17/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As a follow-up to the review comment on drawing 1202 within Submittal Package TG0701-73.1, the elevation of the grout/vent holes on the pipe basket columns is called out to be 6'-0" above finished floor per S1-4003 (SK1). Skanska's modeler has taken the finished floor to be the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm the grout/vent hole elevation of 63'-6" at the Bus Deck Level is acceptable for shop drawing packages CS1 through CS7.

The elevation of the finish floor at Bus Deck Level is

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

top of steel dimension provided in the structural drawings (EL 56'-4") plus the slab thickness provided on S1-5000 (SK2). Based on this, the model currently reflects the grout/vent holes at EL 63'-6", 6'-0" above the structural slab high point. (TOS EL 56'-4" + 1'-2" [S8 slab] + 6'-0" = EL 63'-6") (SK3).

Please confirm a grout/vent hole elevation of 63'-6" at the Bust Deck Level is acceptable. Note that shop drawings packages CS1 through CS7 have been released for fabrication based on the current model.

57'-11 1/4", thus for all the remaining CS- shop drawing packages, the grout/vent hole elevation shall be 57'-11 1/4" + 6'-0" = 63'-11 1/4".

T-1445 **BGP - Foundation Wall Mix Placed in Partition Walls** **Closed** **06/10/2014** **06/20/2014** **06/12/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference drawing S1-2304 at grid line 16G, section detail 9/S1-3702 indicates 7 rows of 6 studs on the top flange of the transfer girder. At this location and at 5 other typical locations along grid line G the transfer girder top flange is

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 42 (3/4" headed) studs shown on the top of beam flange may be deleted.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

covered by the column base plate. See SK1 for clarification.

Please provide a layout detail for the 42 shear studs if they are to be welded to the column base plate.

T-1449 **SSS - North Exit Mezzanine Hanger Detail** **Closed** **06/10/2014** **06/20/2014** **06/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached sketches CD RFI # 456 SK1 to SK3 which re ference the hanger and brace location that clashes with th e lower concourse column at grid C/21.
The hanger and brace per 1/S1-
2252 are directly in line with the cap plate bolts at grid C/2 1.
Please provide an alternative connection detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The hanger shall be connected to the cap plate similar to the detail at the bottom of the hanger as shown in detail 9/S1-5028. The 2" distance between the ends of the gusset plate and angle may be increased to clear the bolts at the cap plate. The V-shaped angle braces at the location highlighted in the RFI may be deleted.

T-1449.1 **SSS - North Exit Mezzanine Hanger Detail** **Closed** **08/14/2014** **08/24/2014** **08/27/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 456.1 SK1:
The response to T-
1449 does not work. The hanger connection per 9/S1-
5028 fouls the column cap plate connection.
Please supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Change the orientation of the hangers and the gusset plates at the top and bottom so that the gusset plates are parallel to the transfer girder. Provide 3/8" thick full depth stiffeners at the W12x40 beam on each side of the beam web and aligned to the bottom gusset plate. Stiffeners shall have double-sided 1/4" fillet welds on 3 sides.

T-1450	SSS - HSS Brace Gusset Plate Connection	Closed	06/11/2014	06/21/2014	06/26/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 455 SK1:

Details 4, 5 & 7/S1-7632 (7/S1-7632 shown) show the 1/2" x 3" stiffener PL above the beam to be parallel with the offset line opposed to the brace connections below the beam where the stiffener PL is not parallel to the offset line. Please confirm it is acceptable to locate the 1/2" x 3" stiffener PL based on the horizontal and vertical weld length for the gusset plate to the beam/column as shown in the example from the model.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable. As shown for the bottom connections, the details do not require the offset lines and the stiffeners to be parallel.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1451	SSS - SE401 Missing Post Locations	Closed	06/11/2014	06/21/2014	06/25/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 459 SK1:

The elevator post locations are not shown on the structural drawings. They are currently located in the model per the dimensions shown. Confirm the dimensions are acceptable or supply alternate dimensions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Final elevator guiderail support post location shall be provided by the elevator manufacturer/contractor.

T-1453	SSS - ASI 108 - Limits of Light Column Grout Port	Closed	06/12/2014	06/22/2014	06/17/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

ASI 108 S1-6005 / Detail A specifies grout port holes drilled at one of four light column pipes at train platform level and grout port holes drilled at one of eight light column pipes above lower concourse level. Please confirm design intent is to drill holes in light column pipes at all four pipes at train box (2Ea x 4 pipes) and all eight pipes above concourse level (2Ea x 8 pipes).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm that the grout port holes need to be drilled at all four pipes at train box and all eight pipes at concourse level.

T-1454	BGP - Lower Concourse Temporary Manlift	Closed	06/13/2014	06/23/2014	06/20/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

In order to provide access to the first area of steel which is going to be erected on GL 10.1. it is necessary to install a temporary manlift on the concourse moment frame beam at GL-9.9 & D for approximately 2 months, please find attached a layout plan, section and some typical manlift manufactures information.
If it is acceptable to have the manlift footprint on the moment frame beam at Gl 9.9 -10.1, Webcor will prepare a formal submittal for the design team to review.

Please confirm if this location would be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The location is acceptable provided the proposed submittal, and methods contained therein, comply with the General Conditions and Structural Notes GR-4,5,and 18.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1455	BGP - Top of Shear Wall Lift 2, Beam Block-Out Pour Back	Closed	06/16/2014	06/26/2014	06/18/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference attached comprehensive lift drawing for walls Area 1 to 7 2nd lift (Drawings: W290A.1, W290A.2, W290B.1, W290B.2 W290C.1, W290C.2, W290D.1, W290D.2, W290E.1, W290E.2), and Gerdau wall rebar shop drawings SW-1, SW-2, and SW-3.

Please reference clouded section on all drawings above. Due to constructability of formwork to build this portion of

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to extend the blockout from the bottom face of MFB horizontally east to the edge of the shear wall as proposed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the block-out clouded on the attached comprehensive drawings, SCCI propose to pour this section back with the concourse. The difficulty arises due to forming through the embedded column steel at these locations in the shear walls.

Please confirm this is acceptable.

T-1456 **BSE - Concourse Deck Loading** **Closed** **06/16/2014** **06/26/2014** **06/17/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche
To: Turner Construction Company Phil Militello
Answered By: Adamson Associates, Inc. George Metzger
Co-Author: Balfour Beatty Infrastructure, Inc. Kelly Phariss

REQUEST:

See attached axle loadings for Hyundai forklift model 70DS-7E. The forklift is intended to be used on the concourse deck for removal of bracing and installation of rebracing.

Please confirm if it is acceptable to use the noted forklift on top of the concourse slab.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Verifying the adequacy of the structure for construction loads as well as the design of any required shoring is the responsibility of the contractor. See also General Requirement note GR-18 on S-0005.

T-1457	SSS - PE403 & PE404 Framing Clarifications	Closed	06/16/2014	06/26/2014	06/30/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 457 SK1 & SK2 for items 1 to 7:
1) Confirm edge plate per 8/S1-5000 is required at 4 sides of the S7 slab shown in yellow.
2) Supply dimension.
3) T/Wall (shown in green) is at EL 86'-9 per A,B/S1-7134 & A/S1-7135. Please confirm.
4) Confirm the top of S7 slab shown in yellow is at EL 86'-10 3/4 based on the T/STEEL 86'-6 + 4 3/4" slab thickness.
5) Supply dimension.
6) Supply dimension.
7) Confirm edge plate per 8/S1-5000 is required at 4 sides for the 4 3/4" S7 slab and the curbs per A1-2965 will be a separate pour.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Noted dimension is 3'-3". See attached sketch SKA-3673.

3) T/Wall elevation is 87'-5" per A1-2904. Structural drawings will be updated in a future ASI to match architectural drawings.

4) T/steel and T/slab elevations are 85' -10 ½" and 86'- 3 ¼", respectively. Structural drawings will be updated in a future ASI.

5) Noted dimension is 3'-1" per 2/A1-2965.

6) Noted dimension is equal to 0". The W12 beams are to be centered on the HSS columns.

7) Confirmed.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

---

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please confirm the paint limits indicated on SK1 are accep table for the coating required on the machined surface of t he cap plates as per RFI T-1230.1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed paint limits shown on the bearing surfaces of the base / cap plates are acceptable.

T-1460 **BGP - Telecom Sweep Conflict** **Closed** **06/16/2014** **06/26/2014** **06/19/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

At Gridline 8.9/A one of the 4" 90 degree telecom sweeps conflicts with an existing internal bracing strut (See attached photo). This sweep was changed from an original 30" radius sweep to a 36" radius sweep.

Please confirm which option SCCI is to proceed with:
I)The first telecom sweep could be installed 7'-1" West of GL 9 (instead of 5'-7" shown in comprehensive layout drawing) and the remaining 2 installed with the specified I' -6" offset.

2)The 36" radius telecom sweep could be replaced with the original 30" radius telecom sweep at this location only.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please proceed with option 1: The first telecom sweep could be installed 7'-1" West of GL-9 (instead of 5'-7" shown in comprehensive drawing) and the remaining two installed with the specified 1'-6" offset.

T-1461 **BGP - CMU Pier Sizing** **Closed** **06/17/2014** **06/27/2014** **06/25/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Detail 9 on plan sheet S1-9000 shows the CMU pier sizing based on wall height and door opening width. The height of the CMU wall significantly affects the CMU pier sizing. The AI-9240 drawings which were provided in the response to RFI T-1410 are the only drawings which show possible CMU wall heights, however those heights are only based on scale dimensions. Please provide the heights of the CMU walls or confirm SCCI is to assume the maximum CMU wall height of 26'-8" for all CMU walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

CMU wall limiting height varies according to the Masonry Partition Schedule shown on A-0022 issued with the Main Package IFC dated March 31, 2014. CMU wall heights can be established using information provided on Structural and Architectural drawings (slab thickness, beam depths, TOC floor elevations).

T-1462	SSS - TR5 Vertical Shear Studs at GL5C	Closed	06/17/2014	06/27/2014	06/24/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please reference S1-2302, grid 5/C. At this location and similar conditions, section 2/S1-3707 is shown. Through this detail section 6/S1-3702 is cut. This detail calls for 6 rows of 6 studs @ 6" placed on the top flange of the transfer girder. At conditions where the end of the transfer girder is 4'-8" from the grid line there is not enough room to install the studs as indicated. See attached SK-1.

Note: This condition also occurred at GL9/C and detail 5/S1-3707 was provided with field order 027 to show 4 rows of 4 studs. Confirm this detail is also acceptable at 2/S1-3707.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1463	SSS - Shear Studs and Rebar Holes at TR4 GL4G	Closed	06/17/2014	06/27/2014	06/24/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 460 SK1 & SK2 for items 1 & 2:
1) It is not clear how many studs are required. See SK2 a nd confirm the location and number of studs.
2) It is not clear how many 2" diameter holes are required. See SK2 and confirm the location and number of holes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed the studs shown on SK2 are acceptable.

2). Confirmed the holes shown on SK2 are acceptable

T-1464	BRP - Copper Drain Pipe Details	Closed	06/18/2014	06/28/2014	07/08/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference the attached drawings, A1-2817 and A1-8881. Please provide further details regarding the added 2" diameter copper overflow drain pipe clouded in the attached drawings. ·

1. Please specify the type of valve needed for the copper drain pipe.
2. Is the copper pipe insulated? If so, please provide specific details on insulation.
3. What type of install method should be used such as, is

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Valve needed for the Copper Drain Pipe: Soldered Ball Valve

2. Insulation for Copper Pipe: No Insulation, however pipe wrap required, refer to Spec 22 11 11 for underground pipe wrap.

3. Type of installation method: Soldered Joints

4. Details on how the copper drain pipes terminate at

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the connection brazed, soldered, butt welded, mechanical, etc?
4. Please provide further details on how the pipe terminates at the SJ joint.
5. Please clarify how the 2" diameter hose adapters connect to the 2" diameter copper drain pipes and how they are sealed to flex flashing and SJ assembly.

the SJ joint. For lower and upper copper drain pipes, provide with PVC flange secured to cast in galvanized steel frame and stud assembly, refer to attached SKA-3737.

5. 2" dia hose adapters connect to 2" dia copper drain pipe - Copper fitting (2") soldered end to threaded end cap.

6. For sealing of copper pipe to flexible flashing: For lower copper drain pipe, provide prefabricated boot flashing c/w SS draw band, refer to attached SKA-3737.

T-1465 **SSS - Seal Weld at Edge of Backing Bar** **Closed** **06/18/2014** **06/28/2014** **06/25/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Reference attached RFI OIW 033. The same configuration of weld joint and backing bar used on the fabricated roof nodes is also used on the bus-deck nodes for each pair of shear plates. It is our intent to provide a continuous seal weld at the end of the backing plate and the shear plates.

Please confirm that the noted seal weld is acceptable for all shear plate connections to bus-deck nodes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The RFI question and information are not complete.

- It refers to RFI OIW 033. We can't find RFIs through sub-contractor numbers. W/O should refer to W/O RFI numbers.

- On page 7, the question in RFI OIW 033 was included. However, it is referring to a shop drawing which is not included in the RFI. It is also referring to a photograph that was not attached.

- There are drawings attached with no markups (pages 4 and 5), so it is not entirely clear what they are for.

REQUEST:

Based on the construction joints shown on Sheet Sl-3201,

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is construction means and methods issue. We do

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the fourth lift and the ground level slab is to be poured monolithically. Pouring the fourth lift monolithically with the ground slab causes problems with access, staging space and formwork. SCCI proposes to add a construction joint on the fourth lift as shown in the attached marked up reference drawings to remediate these issues.

Please confirm this is acceptable.

not take an exception to the new construction joint proposed by the contractor at the location indicated in the RFI.

T-1468 **SCS - WPS Qualification - Lenton Weldable Couplers** **Closed** **06/23/2014** **07/03/2014** **07/03/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

The Lenton welding information provides guidance for qualification of processes; however there are inconsistencies when trying to fulfill AWS D1.1 (2010) requirements. The materials used for manufacturing weldable couplers size #9-11 are Grade 1030/1035. These grades of material are not listed in AWS D1.1 (2010) Table 3. 1, although Grade 1030 is listed in AWS B 2.1 Table D.1 as a Group 2 material (table attached). In order to move forward with welding the Lenton weldable couplers to the Transfer Girders, TMF proposes that FCA W Grade 70 filler material to be used manufacturer ESAB 7100 Ultra, Classification E71 T-9, AWS Specification AWS 5.20"D". One mockup of the actual coupler welded to a Group 2 plate and macro etched would be provided as a supplement.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable.

T-1470	BGP - Steel Jacket at Column GL1.4/D.4	Closed	06/24/2014	07/04/2014	06/25/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference attached drawings.
The column at Gridlines 1.4/D.4 requires steel jacketing as called out in AAI comment in Submittal Package TG0600-141 sheet G101.0. During the TG0600-141 coordination meeting held on 6/18/14 it was confirmed that the typical sleeve detail as shown on 3/A1-9208 will apply. Sheet A1-2102 implies a one-sided sleeve on the south face of column, sheet A1-9214 implies a two piece sleeve, and sheet 3/A1-9208 shows the typical detail with no modifications. Please confirm a detail specific to this location showing how the jacket is to be wrapped and interfaced with adjacent partition walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The column at gridlines 1.4/D.4 requires 6'-0" high steel jacket all around the column with ring plate base, post-installed studs at the Mat Slab. The concrete wall located at 2 sides of column terminates 3/8" before the steel jacket face, 3/8" before and above the ring plate base, and 3/8" before the concrete column face (above steel jacket). Please refer to dwg sheets 3/A1-9208 for detail plan and 2/A1-9213 for section.

T-1471	BGP - Seismic Joint Bottom Embed Plate at Pits	Closed	06/24/2014	07/04/2014	07/07/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference attached Contract Drawings and photos.

The east face of the north pit along GL 35 is scaled at 6'-8" from face of CDSM wall (S1-2027 attached). The as-built dimension ranges from 5'-0" to 5'-11" (S1-2027). Also, the center pit is scaled at 5'-8" to face of CDSM wall while the as-built is 5'-3" (S1-2027).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The embed plate for the center pit at GL 35/E: It is acceptable to reduce the plate to 5'-7" minimum length to accommodate the edge of pit and clamping detail. Provide grout for vertical transition of WPM.

The embed plate for the north pit at GL 35/B-C.3: The vertical surface of the mud slab should be adjusted to reflect what is depicted on engineering drawings

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Detail 4 on S1-3010 includes a scaled dimension of 5'-0" from face of CDSM wall to the inside face of the west half of the seismic embed (See S1-3010 attached). Therefore, the bottom embed plate will need to extend 2'-6" beyond the 5' dimension per Detail 7 of Al -8881 (attached).

Since the as-built dimensions of the edge of pits range from 5'-0" to 5'-11" from face of CDSM wall, the bottom embed plate will overhang the pit depression 2'-6" to 1'-7". The plate could be reduced up to 1-11" (2'-6" minus the 8" for clamping detail) to accommodate the edge of pits and allow for waterproofing clamping detail. Is this acceptable?

Please provide further details at locations where encroaching pits do not allow for sufficient room for bottom embed plate and clamping assembly.

(7/S1-3010) and read in combination with architectural drawings (A1-8881). The contractor may reinforce and anchor additional concrete to the side of the pit. Alternatively, they may opt to remove the existing mud slab concrete locally leaving exposed reinforcing to lap splice or mechanically splice to and pour concrete on area removed. The plate at this location shall be reduced to 5'-7" minimum horizontal length to accommodate the clamping detail.

T-1471.1 **BGP - Seismic Joint Bottom Embed Plate at Pits** **Closed** **07/28/2014** **08/07/2014** **08/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Further to the response to 1471 please find attached embed plate layout with cross-sections at the pit locations. It will be necessary at the pit locations to also infill and adjust the mud slab vertical/sloped face in order to accommodate the embed plate and clamping detail of the SJ embed.

Please confirm if this is acceptable.

Note: all infill material used is to be approved by the WPM manufacturer

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response:
The dimensions provided in SK-1, SK-2, and SK-3 for the SJ bottom embed plate are confirmed. The high strength grout or concrete infill should be compatible with the WPM and should be approved by the WPM manufacturer.

TT Response:
The proposed dowels are sufficient to keep in place the 2" minimum high strength grout or concrete infill during construction.

WOJV 8/1/14: Confirmed, proceed with work.

T-1473	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	06/25/2014	07/05/2014	07/02/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. The west wall (GL 1) was offset 3 1/8" to the east while the southwest wall (GL Xl-1) was offset 1 7/8" to the northeast. Currently there are no dimensions explicitly shown in the contract drawings for the width of the service corridor that runs along the very western edge of the Lower Concourse in Area 1 and 3. However there is a dimension shown on A1-3006 & A1-7004 that shows the eastern face of the service corridor at 5' to the west of GL 1.4 which translates into a service corridor width of 9' -8 7 /8". Is it the designers intent to offset the service corridor walls similar to the foundation walls to maintain the 10' corridor width, or is it the designers intent to shrink the width of the service corridor and keep the interior walls in place? Please provide dimensions for the service corridor width.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The location of interior walls of rooms along the west and southwest service corridors shall be maintained. The service corridor widths shall be reduced by 3 1/8" on the west and 1 7/8" on the southwest.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1473.1	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	07/07/2014	07/17/2014	07/15/2014	Potentially	☐

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

With the response from RFI T-1473 and the contract drawings, SCCI has enough dimensions to model the service corridor running north-south in Area 3. However

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the alignment of the service corridor that runs along the west side of the Lower Concourse, as requested in this RFI, please refer to the work points

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

there is not enough information to model the alignment of the service corridor running northwest-southeast. Please provide a work point with dimensions somewhere along the east face of the service corridor (preferably at the southernmost point of the service corridor at Shear Wall 390A) or provide an angle at which the service corridor changes direction above Gridline K.

and dimensions in the attached SKA-3865.

T-1474 **BGP - Seismic Joint Fire and Smoke Barrier** **Closed** **06/26/2014** **07/06/2014** **06/26/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Webcor/Obayashi Joint Ve Spencer Sayles

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference the attached drawing, Al-8881. Per ASI-107, a fire and smoke barrier is added at the top of Gridline 35 on 3/Al-8881. Please confirm: -

1. The fire and smoke barrier is not to be incorporated in TG06 Contract.

2. There will be no embeds associated with the fire and smoke barrier that will need to be installed in TG06 Contract.

3. Please verify who will be supplying the flexible drain to be installed in the top wall poured in TG06 Contract.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Fire smoke barrier and seismic cover to be supplied and installed by others.

2. No specification exists for the referenced seismic joint. Currently there are no known embeds. TG06 scope delineation on this sheet remains. SCCI to incorporate any ASI modifications to its originally contracted work.

3. The drain pipe design through the wall appears to be not fully developed at this point in time. WOJV is requesting structural sleeving details via RFI.

T-1476	SCS - Concrete Form Support Using CDSM Piles	Closed	06/30/2014	07/10/2014	07/09/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Shimmick is planning to use a similar form system for the fourth lift of the foundation wall to that used on the second wall lift. However, the second wall lift form system is a cantilever system and is supported by 1 row of anchors, excerpting significant force on the wall lift below. Shimmick proposes to add a tie to the top of the forms and connect to the CDSM soldier piles in addition to using the third lift anchor to provide better support. The soldier piles extend above the ground level and this added tie would not affect the waterproofing (installed by others). See the attached marked up drawings for reference

Please confirm it is acceptable for the fourth lift form system to tie to the CDSM soldier piles.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable. We recommend that the shoring designer be notified and given a chance to comment on this approach.

T-1478	SSS - Paint Boundaries at Roof Level Beams	Closed	06/30/2014	07/10/2014	07/11/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1. At the Roof Level EBF Link beams, the AESS fabricated roof nodes weld to the underside of the built-up beam protected zone as indicated in the sketch attached. Based the thickness of the SFRM coating and the profile of the node-to-flange weld, the coating boundary line between the protected zone paint and AESS primer is proposed at an elevation 3" below the bottom flange. This will allow for a clear delineation between the two coatings by avoiding the weld area, as well as allow for compatibility between the SFRM coating and prime coat. Please confirm this is acceptable.

2. The same elevation for the AESS to SFRM boundary is proposed at the Roof Level Brace beams; however, rather than the protected zone paint, the area above the AESS primer will be bare steel to receive SFRM by others. Please confirm it is acceptable to terminate the AESS paint 3" below the bottom flange of the Roof Level Brace beams.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. This question is a means and methods coordination between trades which the CM/GC shall coordinate. We take no exception to the suggested method. However the ultimate approach selected shall meet the approval by the AHJ.

2. Same response as above.

T-1483	BGP - Dimension to Door on North Vehicle Ramp Wall	Closed	07/01/2014	07/11/2014	07/07/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The door in question is at the east end of the north Vehicle Ramp Wall. There is a dimension on AI-2853, dimensioned at 7'-5 7/4" from GL 6 to the end of the wall and it is shown without a door attached. On all other drawings a door is shown at the east end of the wall, but there are no other dimensions indicating the east-west location of the door. Please confirm if it is the designer's intent to have the door placed on the end of the wall shown in AI-2853 so the east face of the door is 6'-5 1/4" off of GL 6 or if the door is to be placed per scale at 6'-3" off of GL 6.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For door location with updated dimension at the east end of the north and south Vehicle Ramp walls, refer to SKA-3747 & SKA 3748.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm that grout hole "5" as shown on the attached sketch, SK1, is required on the west side only on grid 1 and on the east side only on grid 33.5. If not please clarify locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Hole "5" (3 in dia port in steel pipe) is used not only at East and West ends of the buildings as indicated in Sheet S1-4018 and at other locations as indicated in Sheet S1-4003.

At East and West ends of the Buildings:

In detail B/S1-4018 at GL H, a 3" hole (indicated as hole 5 in the RFI) is to be provided above the Bus Deck Level. On detail B/S1-4018 at GLs F.7 and E.6, a 3" grout hole above the Bus Deck Level is not needed since Bus Deck castings (casting 37 per S1-5120) include 3" holes to allow concrete flow through. Per symmetry and as called out, all pipe columns at D4., C.3 and B require the same hole configuration as those of H, F.7 and E.6.

Hole requirements for pipe columns between the ground level and the roof level in detail A/S1-4018 are identical to those of Detail B/S1-4018.

T-1485.1	**SSS - East and West End Hole Dimension Clarification**	**Closed**	**07/25/2014**	**08/04/2014**	**08/05/2014**	**Potentially**	☐

T-1487	SSS - Shear Plate Weld Connection Clarification	Closed	07/02/2014	07/12/2014	07/14/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For roof level shear plate connection details at GL11D & GL11F, S1-2603 refers to 3/S1-5013. This detail calls for a 3sided PJP weld at the shear plates, with a t-1/8 bevel (t=shear plate thickness). The shear plate located at the center of the web has a thickness of 2 ½", which results in a 2 3/8" bevel. The column web at this location has a thickness of 1 ¼"; the stiffener plates top and bottom have a thickness of ½". A 2 3/8" PJP weld will greatly distort the ½" stiffener plates. The weld size should not exceed the thickness of the thinnest member. Also, Detail 3/S1-5013 refers to Connection Detail 4/S1-5013 which in turn refers to Shear Connection Detail 3/S1-5013. Since both sides of the shear plate are accessible (note 1), is a ½" fillet both sides as shown in 3/S1-5011 acceptable for this location?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Double sided 1/2" fillet welds are acceptable at the top and bottom stiffener plates as indicated in the RFI. Also, reduce the weld size at the column web from 2-3/8" PJP welding to double sided 1/2" fillet welds.

pins for the basket columns, a Type 2(M) drag connection, are to be galvanized to class A or Class B-1 per ASTM A153. After reading this note, and looking through all of the applicable details, Skanska interpreted all of the remaining drag connection pins to be provided as bare steel. In the response to the submittal package TG0701-60.1 SSS - PIN Drawings (Central Zone), drawing A9312, a Type 2 (N2) drag connection at GL 11, was marked to receive a galvanized coating. Similar pin connections occur at GL 21 & GL 22 (Type 2-P) and GL 28 (Type 2-N2). Does the design team want these pins galvanized too? If so, please provide the standard required.

protection/finish of remaining pins (other than the Basket column pins) is not correct. AESS elements documented to receive IFRM should receive IFRM in all instances (pins are included), both as fire protection method and as a corrosion prevention measure.

The Design Team as the TJPA Representative will offer this as Contractor's Option; to hot dip galvanize ALL the remaining pins (other than the Basket column pins), or apply the intumescent coating system over non-galvanized steel, in either option, the tolerances required for installation of pins is a means and methods solution the responsibility of the contractor

T-1490 **BGP - IDF Room B1545 on Concourse Level** **Closed** **07/03/2014** **07/13/2014** **07/08/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

On concourse wall and floor plans (SKA-3332 and SKA-3336) the southern wall of IDF room B1545 is shown as RCW. However, on detail 3 of sheet A1-3009 it is shown as 0.10CMU. Please clarify the type of wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The southern wall of IDF room B1545 is RCW; refer to A1-3009 issued with ASI 119.

T-1491 **BGP - Extent of Ramp Wall Reinforcement Embedded in Lower Concourse** **Closed** **07/03/2014** **07/13/2014** **07/11/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please confirm the western extent of the north vehicle ramp wall that is to embed into the Lower Concourse. The five main contract drawings pertaining to this issue show five different layouts for the end of the wall embedded into the Lower Concourse. Please provide details or confirm which drawing shows the correct layout for the extent of the north Vehicle Ramp Wall that is to have reinforcement embedded into the Lower Concourse.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please refer to the attached SKA-3751, SKA-3771, SKA-3772, SKA-3773 and SKA-3774 for updated plans and section showing updated extent of concrete wall and CMU wall infill below the ramp.

T-1492	BGP - Gridline W Ramp Wall Pier Dimensions	Closed	07/03/2014	07/13/2014	07/18/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please provide dimensions for 3 of the piers located along the wall south of Gridline L and west of Gridline W. A1-2230 refers to A1-2850 for wall dimensions, but none are shown for the piers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to the attached SKA-3878, for location of piers at ramp wall, requested in this RFI.

T-1493	BGP - Two Future Plumbing Penetrations West of GL15	Closed	07/03/2014	07/13/2014	07/10/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

On Plan Sheet SKA-3361_R1, two(2) future plumbing penetrations are shown 2'-5 1/2" West of Gridline 15. The Moment Frame Beam at this location is 6' wide. This places both plumbing penetrations in the MFB.

Please provide details on how SCCI is to provide plumbing penetrations through MFB on GL 15 or provide new offsets for these plumbing penetrations which are outside the MFB.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the updated locations of 2 future plumbing penetration west of GL 15 referred to in the RFI, please see the attached SKA-3740 and SKA-3741.

T-1495	BGP - CMU Wall and B9/B11 Beam Dimensions D204 at GL4-J	Closed	07/03/2014	07/13/2014	07/08/2014	Potentially	☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please provide dimension or confirmation for the CMU wall as well as the B9 and B 11 beam just north of GL Jin between GL X and 5. Al-2202 gives a dimension to the east-west alignment of the wall, but no north-south dimension. The wall is not in any of the Al-3000 detail drawings and no dimension is shown on Al-2222. In Sl-2202 the wall appears to be centered on a B9 beam, which appears to be aligned with the Bl 1 beam to the east. There is a 1 ' -5 3/8" dimension that appears to be for the location of the C37 beam, but the beam is also adjacent to the circular opening. Please confirm whether the B11 (and therefore the B9 beam) are to be dimensioned off of the circular opening, the dimension near the C37 column, or another dimension not provided. Also please confirm whether the CMU wall above the B9 column is to be dimensioned off of the location of the B9 beam, or another dimension not provided.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI Response: The location of the CMU wall is centered on B9 beam.

TT Response: Centerline of B9 and B11 is 1'-5 4/8" north from GL J as shown on S1-2202. This is also the centerline of the column C37.

T-1496 **SSS - Exposed Flange at Second Level Slab GL 15** **Closed** **07/07/2014** **07/17/2014** **07/14/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 477 SK1:
The noted dimension is shown as 15'-5 1/2 on A1-2864 but the flange of the W16x26 will extend 1/2" inside the slab opening. Confirm the slab opening may be located 15'-6 east of grid 15 as shown.
If not, supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The slab opening shall be located 15'-8" east of GL 15 as shown on the attached sketch SKA-3862. The opening will clear the steel flange by min 2". Drawing A1-2864 will be issued as part of an upcoming ASI.

T-1502	SSS - Decking Around Bus Deck Level Crash Rails	Void	07/09/2014	07/19/2014		Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

With reference to the Bus Deck Level crash rail post detail 1/S1-8000, the post base plate is 18"x30" and spans or overhangs the width of the supporting beam allowing no bearing for the deck. As a result along grid lines B & H where the deck runs parallel to the support beam, our decker is required to provide a gauge support angle and flashing where required around the base plate, see details 1 & 2 on SK1. At grid lines 1.1 & 33.5 where the deck runs perpendicular to the support beam, a beam flange extension is required to achieve the 3" end bearing requirements for the S8 slab, see detail 3 on SK1.

Please confirm these details are acceptable or provide an alternative detail for the deck support around the crash rail base plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

4) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

5) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

6) Refer to SFPUC response.

7) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

8) WSP has no exceptions to this proposal, subject to

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

- Please confirm that cadweld or use listed irreversible compression connections to cross-grid and ground mat at 8' on center minimum is acceptable.

- Please confirm ground potential rise study at each switch gear room is not required.

- Please confirm which specification governs, IEEE142 per Transbay Transit Center contract documents or per PUC referenced specification IEEE80, which will require "Ground Grid Test". (See attached email).

- Please confirm the layout of grid does not extend past the walls in South Electrical room B1441.

- Please confirm that exothermic or irreversible compression connections listed for concrete encasement are required for all pigtails main grid connections, (outside edge to cross members, corners, and main cross connectors), and connections to building ground wires (shown with "G" on plan).

- Please confirm that SFPUC and DBI will be the only entities inspecting the grounding grid.

SFPUC acceptance.

9) WSP has no exceptions to this proposal, subject to SFPUC acceptance. SFPUC to confirm if inspection by other parties is required.

T-1504 **BGP - Lower Concourse Future Wall FS Conflicts** **Closed** **07/09/2014** **07/19/2014** **07/09/2014** **Potentially** ☐

From: Shimmick Construction Company, Inc. Sylvia Hartanto **To:** Webcor/Obayashi Joint Ventu Spencer Sayles **Answered By:** Webcor Construction LP Claude Titche

Co-Author:

REQUEST:

Per attached correspondence, WOJV has directed SCCI to install future wall formsavers according to the details attached that clarify the Contract Drawings. However, due to congestion created by the increased amount of reinforcing within the beam components, ample space to install the future wall formsaver bars at the design spacing does not always exist. See attached pictures.

Because the CMU contract has not been solicited or awarded, please confirm that it is acceptable to offset the bars out of alignment+/- 4" in attempts to maintain proper

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

spacing, and/or increase or decrease the specified spacing +/- 6" such that the future wall formsaver bars can be installed and the correct number of dowels is maintained. The same flexibility is also requested for the "ends, intersection and corner" detail per the attached document.

T-1505 **SSS - Stiffener Plate Location at TR13** **Closed** **07/09/2014** **07/09/2014** **07/18/2014** **Potentially** ☐

T-1507	BGP - Seismic Joint Removable Corbel Connection Variance	Closed	07/11/2014	07/21/2014	07/23/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Per contract drawing S1-3205, the removable W14x61 steel corbel and WT8X28.5 angles it connects with are to be fabricated with a 2" vertical slotted hole.

In order to eliminate the lead time of field measured fabrication of the corbels after concrete formwork removal from the SJ assembly, the contractor is proposing either or preferably both of the following modifications:

1. Change the slotted hole from vertical to horizontal (east to west) direction on the angles and or the steel corbels
2. Change the finish of the removable W14X61 steel corbel only from galvanized to primed steel (all other embedded metals would remain galvanized per the contract drawing).

Please confirm if either of these proposals would be acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) Not acceptable.

2.) The beam portion of the corbel may be coated for corrosion protection rather than galvanized. Refer to specification section 09 97 13, part 3.6, item E for acceptable coating types.

T-1512	BGP - Mechanical Pump Room B2761 Electrical Sump Feeds	Closed	07/15/2014	07/25/2014	07/28/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Plan Sheet El-2027 shows two(2) sump controllers in Mechanical Pump Room B2761, one for SE-B2- D-1,2 and the other for SPG-B2-D-l,2. There will be 2" conduits from these controllers to two of the three sump pits in the mechanical room for the pump leads. Plan Sheet El-2027 indicates the two(2) eastern-most pits get the pump lead conduits(see attached), however Detail 4 on Plan Sheet Pl-3006 identifies the western-most pit as "SPG" and the middle pit as "SE"(see attached).

Please confirm:
1) Detail 4 on plan sheet P1-3006 is correct.
2) The pump lead conduits from SE-B2-D-1,2 will lead to the pit identified as "SE" on plan sheet P1-3006.
3) The pump lead conduits from SPG-B2-D-1,2 will lead to the pit identified as "SPG" on plan sheet P1-3006.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Detail 4 on plan sheet P1-3006 is correct.
2. This is correct.
3. This is correct.

T-1514	SSS - Bus Deck Level Stiffener Conflict at CP8 Near GL 1.4	Closed	07/15/2014	07/25/2014	07/28/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 484 SK1. The 1 1/2" stiffener on the far side will cover the hole in the bottom flange for CP8. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 1-1/2" stiffener requirement per 4/S1-8003 may be waived at the location highlighted in the RFI. Provide two 2L3x3x3/8 braces per 4/S1-8003, one each at the 1"x 9" stiffener plates adjacent to the CP6 connection work point. Note that stiffener plates per

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

6/S1-8003 are 1" thick and not 1/2" thick as called out in the RFI.

T-1514.1 **SSS - Bus Deck Level Stiffener Conflict at CP8 Near GL 1.4** **Closed** **07/31/2014** **08/10/2014** **08/13/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 484.1 SK1:
Providing two 2-L3x3x3/8 braces per T-1514 does not work as the brace close to the W36x231 will foul the beam.
Confirm it is acceptable to supply one 2-L3x3x3/8 as shown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable. The brace in conflict with the W36x231 beam may be moved to the adjacent 1"x9" stiffener.

T-1515 **SSS - Connection Clarifications for Stiffeners and Plate at BU Beam at GL 1.4-2 & I** **Closed** **07/15/2014** **07/25/2014** **07/24/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 485 SK1 & SK2 for items 1 to 3:
1) The 1/2" x 9" stiffeners foul the built-up beam as shown. Please provide a solution.
2) The 1/2" x 9" stiffeners foul the connection per detail 2/S1804 as shown. Please provide a solution.
3) The hole locations in detail 6E/S1-8003 are not known and have been requested in RFI CD 476 but it appears the

PL 2" will obstruct the flange holes. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide stiffeners as shown in attached sketch SKS-0374 at the location highlighted in the RFI. Note that stiffeners per 6/S1-8003 are 1" thick, not 1/2" as noted in the RFI.

2) See response to 1).

3) Bolt holes may be shifted towards the edge of the flange edge to avoid interference with the 2" plate. Refer to response for RFI CD 476 for additional information on bolt hole locations.

REQUEST:

Please confirm the attached weld detail is acceptable for fi eld welding the 3/8" architectural cylindrical plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1518	**BGP - Partition Wall Pilaster Ties**	**Closed**	**07/15/2014**	**07/25/2014**	**07/21/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

As discussed onsite with the SEOR, please confirm the following for partition walls:

1. All isolated pilasters have ties over their entire height

2. All pilasters thicker than the adjacent integral wall have ties over their entire height- Please note that this is added scope to TG06 Contract

3. Pilaster that are the same thickness as the adjacent integral wall require ties only for the lengths defined in Note 3 of Detail 9/SI-9050

4. Where ties are present at a pilaster base, the ties are not required to penetrate the supporting slab or foundation.

5. Ties may be built up from stirrups and hairpins containing 135 hooks.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, noting disagreement that ties are added scope.

T-1519 **BGP - Formsavers for Ramp Walls Embedded in Lower Concourse** **Closed** **07/17/2014** **07/27/2014** **07/21/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please confirm that it is acceptable to use formsavers for the Ramp Walls that are to be embedded in the Lower Concourse in lieu of dowels shown in A/S1-3203 or 3/S1-3502. This is done to improve construction access.

Locations for the proposed formsavers are per attached documents- highlighted in red.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Use of formsavers is acceptable, provided the following:

- please adjust placement of dowel to accommodate formsaver cap and provide vertical wall clear cover per drawings.

- formsaver dowels to be straight bars where dowel full embedment length into beam at lower concourse is provided. Otherwise formasvers to be provided with standard hook at end.

- please provide proposed formsaver for use of dowels with terminator. Formsaver must have equal or greater capacity of dowel with terminator to be acceptable.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 504 SK1 & SK2 for items 1 & 2:

1) The bolts will not be erectable if left inside the profile of

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) The W14 column extends up to the bottom of the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the column as shown in detail 4/S1-5033. Confirm it is acceptable to locate the bolts as shown.

2) Confirm it is acceptable to locate the cap plate per 11/S1-7605 as shown and weld the L4x4x1/4 per 4/S1-5033 as shown.

S7 slab (T/slab elevation = 86' -9"). So the T/cap plate elevation is 86' - 4 1/4". The L4x4x1/4 per 4/S1-5033 can be welded to the W14 column web without any interference with the cap plate.

T-1532 **SSS - Deck Support Angle at Column Base Plate** **Closed** **07/19/2014** **07/29/2014** **07/24/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per detail 1/S1-5052 when the column base plate and the transfer girder flange is the same width, there is no deck support for the length of the column base plate when the deck sits at the same level as the girder.

Please confirm it is acceptable to provide a gage angle to support the deck around the column base plate. The gauge angle will be welded after the column to girder connection is made to avoid the angle and weld interfering with the connection. See attached SK1 & 2 for clarification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Using gage angle for connection to the metal deck around the base plate is acceptable, however, the gage angle is to be welded to the transfer girder flange, not the base plate. Extend the vertical leg of the gage angle down as needed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1532.1	SSS - Deck Support Angle at Column Base Plate	Closed	07/31/2014	08/10/2014	08/18/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up to the response of RFI T-1532.

As per the response, restricting welding to only the girder flange creates several issues:
1. See detail 17 on SK1 - an additional 4" would be required on the vertical leg of the angle to allow welding to the girder flange. This creates a 12" vertical leg, welded at the bottom toe to the girder and supporting a 13" concrete slab. Our decker does not believe this is adequate support. This occurs at 9 locations.

2. See detail 5 & 17 on SK1 - overhead welding will be required from the underside to weld to the girder flange. Detail 5 occurs at 67 locations and 17 occurs at 9 locations. Our decker will incur additional labor and equipment costs for this work.

If welding to the base plate is prohibited, an alternative solution which will have lower additional cost impact is to use Hilti pins to attach the gauge angle to base plate or girder flange. See attached product data and application details. See attached SK2 for clarification.

Please confirm if welding to the column base plate is prohibited, Skanska can use Hilti pins as per SK2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Welding the deck support angle to the base plate is acceptable if the welding is made only in the zones marked on attached sketch SKS-0396. The gage angle welded to the base plate will provide adequate deck support. Using Hilti pins to attach the angle to the base plate is not acceptable. We disagree with the claim that overhead welding at the deck support angle constitutes a "cost increase". Detail 8/S1-3705 which shows deck support angle detail at the transfer girder flanges was part of bid documents. The only exception to this detail at the column base plates is that the angle is being welded to the base plate and not the transfer girder flange. Also, refer to details on A1-9317 for slab edge detail at the column base plates.

T-1532.2	SSS - Deck Support Angle at Column Base Plate	Closed	08/25/2014	09/04/2014	09/15/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up to the response of RFI T-1532.1

As per the response to the above RFI, direction to drawing A1-
9317 (which was provided as part of FO 27) indicates a deck closure/support angle separated 1" from the column base plate, with no structural information provided. As a d etail for deck support around the column base plate is not provided in the structural drawings and Skanska's proposa ls have been rejected in previous RFI responses, this rem ains an open issue. We require a detail in order to proceed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) We believe that deck support during construction is a means and methods issue, however in our opinion, the simplest solution is running angles parallel to the transfer girder, from one perpendicular beam to another, around the column base plates. This will also help to provide the 1" separation needed from the column base plate in detail A1-9317.

2.) As indicated in the design drawings there are no elements around the base plate that require welding to the base plate. Any accidental welding in the field to

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

with the detailing of shop drawings. Please note this condi tion occurs at CS1 and throughout the central zone and is currently holding up the resubmittal of the metal deck shop drawings for the central zone.

Additionally, the RFI response identified a "no weld zone" t hat was not shown on the design documents. As this was not called out on the contract drawings, this zone is not bei ng identified with paint strips as per the protected zone req uirements. This may lead to trade workers accidently weldi ng in the field. Please provide direction for the identificatio n requirements for the base plate "no weld zone".

the base plate will likely require proper corrective actions to be submitted to the SER for review.

T-1532.3 **SSS - Deck Support Angle at Column Base Plate** **Closed** **10/07/2014** **10/17/2014** **10/17/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please provide a structural detail indicating the designer's requirements for the deck support/closure angle around th e column base plate to top of transfer girder connection on all sides of the base plate.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Our response to RFI 1532.2 stands. This RFI is written in a misleading manner. In the 10/02/2014 meeting, we have reiterated that temporary shoring of slab is a means and methods issue. This RFI does not include any new information over the .2 version therefore refer to .2 version which already provided a direction as part of question 1. What was stated in the 10/02/2014 meeting was SER agrees to look at the proposal of the contractor to help resolve the issue however the RFI question is identical to the first question in RFI 1532.2 therefore no further action taken.

T-1533	BGP - Additional Reinforcing at MS 113	Closed	07/21/2014	07/31/2014	07/23/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Due to sagging of the top mat reinforcing at Mat Slab MS 113, there would be excessive concrete cover.

Per field conversation with SEOR, please confirm it is acceptable to install #5 reinforcing at 8" OC(either on dobies or other reinforcing) at locations where this sagging occurs to decrease the upper cover to within the allowable limits.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Acceptable at MS 113 for the pit below the trestle.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Find attached Harris RFI dated July 17, 2014 and SK2 and SK3 from response to RFI #T-1408 with added blue markups/comments.

SK3 with the response to RFI #T-1408 shows the elevation of the top of steel to be above the elevation of the top of concrete.

1. Please confirm the top of steel is intended to come out of the top of concrete and provide a revised 9/Sl-3702 detail.

a. Please clarify the detail for the welded couplers at the top flange.

For TR19.9 and 20.1, a plate for the bottom welded couplers are not shown on Sl-4304.

2. Please clarify the location of the lower set of couplers. Does the lower set of couplers weld to the bottom flange?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The top of steel shown is correct.

2. Please see the attached sketch SSK-0384

For TR19.9 and 201.1

2. See response to item 2 above.

REQUEST:

See attached CD RFI # 505 SK1 for items 1 to 6:
1) Supply the elevation of the (4) HSS12x6x1/4.
2a) Supply a connection detail.
3) Supply a connection detail.
4) Supply missing dimension.
6) The noted slab edge detail is referenced but no slab information is shown. Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) T/steel of the four HSS12x6 beams is 101'-5".

2a) HSS8x6x1/4 beams noted in SK1 in the RFI are not required and shall be removed. See attached sketch SKS-0387 for updated framing layout. Note that HSS outriggers have been moved from detail 3/S1-7003 to 4/S1-7003 as shown in the attached sketch. A HSS 8x6x1/4 beam has also been added at the west edge of PE201 in detail 4/S1-7003.

3) See response to 2a).

4) Refer to details 4/A1-7861, 2/7862 and 4/A1-7864 to determine the extents of the HSS8x6 outrigger beam.

6) The slab edge detail is incorrectly called out. Detail 9/S1-5000 does not apply at the highlighted location.

T-1536	SCS - Concrete Cover & Tolerance on Foundation Wall Terminator Rebar	Closed	07/24/2014	08/03/2014	08/04/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Drawing SI-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall.

To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift:
1. Shimmick proposes to change the concrete cover from 2" to 5" and increase the tolerance to 2.5". Please confirm this is acceptable.
2. If the proposal is not acceptable, please provide a concrete cover and tolerance that is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Standard ACI tolerance shall apply on concrete cover, increasing the cover and deviation of the tolerance is not acceptable. These proposed modifications to the cover and tolerances would be acceptable only if contractor provides additional U bars over the moment frame beam top rebar with size and spacing matching the size and spacing of stirrups in Zone 1 of Detail 6/S1-3600 at no cost to the owner. The U bars would span between the top corner bars of the moment frame beam have vertical legs that are equal to embedment length per 1/S1-3001. No additional U bars is required between the beams.

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

---

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please reference Detail 2, Sheet S 1-3205.

Please clarify the following deformed bar questions:

1. 1" diameter deformed bar is a non-standard diameter for deformed bar. This will require the bar to be specially manufactured which could take up to 4 weeks to procure. 3/4" diameter deformed bar is the largest standard size readily available. Is it acceptable to use 3/4" diameter in lieu of 1" diameter deformed bar?

2. The detail depicts a head on the end of the deformed bar. Headed deformed bar is also non-standard (see attached Nelson Stud Deformed Bar Product Data) and currently found to be unattainable. Is it the intent of the engineer to include a headed deformed bar anchor? Is it acceptable to use a standard A 108 bar per ASTM A496 as detailed in the attached product data?

3. If the 3/4" diameter deformed bar is unacceptable, is it acceptable to use 1" (#8) welded rebar in lieu of the 1" deformed bar? Furthermore, will the rebar require headed reinforcement?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). See response to #3

2). The detail was drawn graphically incorrect, see response to #3

3). Using 1" (#8) welded rebars is acceptable as long as ASTM A706 bars are used. Submit weld detail with the seismic joint shop drawings for review.

T-1548 **BGP - Protection Slab at Seismic Joint** **Closed** **07/25/2014** **08/04/2014** **07/29/2014** **Potentially** ☐

Answered By: Adamson Associates, Inc. George Metzger

REQUEST:

Please reference Detail 3 of A1-8881, S1-2027, and the attached Drawings.

Please confirm the protection slab is to stop 5" east of GL 35 as scaled on attached Detail 3 of Sheet Al - 8881.

Please confirm it is acceptable to eliminate the 12" section of protection slab against the east CDSM wall.

Please reference attached drawing S1-2027. If the protection slab is required to end 5" east of GL 35, the slab will be poured halfway up the slope on the center and

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed, the protection slab may stop 5" east of GL 35. Protection of the membrane is a means and methods issue and is the contractor's responsibility and does not require our comment.

2. It is acceptable to eliminate the 11" protection slab against the east CDSM wall. Protection of the membrane is a means and methods issue and is the contractor's responsibility and does not require our comment.

3. For the North and Center pits along GL 35, where

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

north pits as depicted in S1-2027. Is it the engineer's intent to end the slab halfway up the pit? If not, please provide details of protection slab location at the seismic joint at the center and north pits.

the embed plates are shortened in accordance with RFI-1471, the protection slab will terminate at the vertical face of mud slab.

T-1549 **BGP - 3rd Wall Lift Vertical Unistrut Spacing Tolerance** **Closed** **07/25/2014** **08/04/2014** **07/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Vertical Unistrut embedded in the 3rd wall lift is spaced at 10' O.C. per plan drawing Al -6231. Due to locations of wall bulkheads, form work panel ribs, and other embedded items, the contractor requests a tolerance of plus/minus 4" off the 10' O.C. spacing. Please confirm if this is acceptable and if not, please provide an acceptable lateral tolerance.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. It is acceptable to have +/- 4" off the 10'-0" spacing of the vertical Unistrut at the Lower Concourse foundation walls.

REQUEST:

See attached CD RFI # 516 SK1 to SK3:
The L8x4x1/2 is insufficient for the HSS10x10 posts in SE201 & SE202. Please supply an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The detail is applicable as is. The base plate to match the size of the post as indicated in the detail, and the L8 embed angle is large enough to weld the pipe section onto (pipe to embed angle weld).

T-1552	BGP - Pit Rebar in South Pit at GL 35	Closed	07/25/2014	08/04/2014	07/29/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference Contract Drawings SI-2027, SI-3010, SI-3004, and the attached drawings.

Sheet S1-2027 depicts the east edge of the south pit 2'-5" west of GL 35. As-built location of east edge of south pit is 1 '-0" west of GL 35. The south pit at GL 35 has typical pit rebar per Detail 4, S1-3004. Typically, the pit rebar extends 4' beyond the edge of pit and 4' in height (see attached drawing SI- 3010). At the as-built location of the pit, pit rebar will extend into the seismic joint gap by approximately 14" as depicted in the attached drawing. Please provide alternate pit rebar detail for the south pit at GL 35.

Please note, pit rebar for all pits in Area 16 have been fabricated.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The condition is analogous to the pits shown to the north, detailed in Sections 7/S1-3010 and 1/S1-3007. Contract documents instruct the contractor to verify field dimensions, coordinate the drawings, and apply similar detailing. It is acceptable to apply the aforementioned details or for the contractor to provide an alternative equivalent detail for acceptance through the RFI process.

It is possible that pit has been placed too far east. Contractor to verify plan location of pit and the ability to comply with contract documents for the 5'-0" minimum clearance requirement between the bottom edge of sump and nearest face of waterproofing.

T-1553	SSS - SE201 & SE202 Roof Level Framing Clarifications	Closed	07/25/2014	08/04/2014	08/07/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 524 SK1 for items 1 to 4:
1) These (2) beams have been located on center of the HSS10x10 posts above per 1/S1-7102. This results in the beams being 1'-0 from the edge of wall as shown but 8/S1-7631 indicates 10". Confirm 1'-0 is acceptable.
2) Detail 11/S1-7631 does not indicate that slab edge plate per 8/S1-5000 is required. Confirm that is the intent.
3) 6/S1-7631 is shown at the west side of the slab openings but it is not clear if slab edge plate per 8/S1-5000 is required. Clarify the slab edge requirement on the east and west sides of the openings.
4) Depending on the response to item 3, supply a connection detail for the HSS beam.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Framing plan shown on SK1 in the RFI is not current. See sketch SKS-0383 submitted with response to RFI T-1544 for current framing layout. The two noted beams are centered on the WF columns. Dimensions to locate WF columns are shown on attached sketch SKA-3923.

2) Confirmed. Edge plate per 8/S1-5000 is not required at the highlighted locations as there is no slab on either side of the concrete walls as shown in 11/S1-7631.

3) See attached sketch SKS-0388 showing updated details 6/S1-7631 and 10/S1-7631. Details 6/S1-7631 and 10/S1-7631 apply at the west and east edges of the opening, respectively. As shown in the details slab edge plate per 8/S1-5000 is required.

4) The HSS beam connects to a WF column. See attached sketch SKS-0389 HSS beam to WF column connection detail.

Note that all the sketches attached with this RFI were already issued by the design team as part of the Roof Restaurant IFC package (5/31/2014). W/O to coordinate issuance of drawings to the sub-contractors

---

T-1553.1	SSS - SE201 & SE202 Stud Length Requirement and Dimension Clarification	Closed	08/25/2014	09/04/2014	09/08/2014	Potentially	☐

T-1553.2	SSS - SE201 & SE202 Roof Level Framing Clarifications	Closed	09/22/2014	10/02/2014	10/01/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 524.2 SK1 for items 1 to 3:
1) This dimension is 11" per 10/A1-2969. Please confirm that is correct or supply the dimensions at the (2) hi-lited clouds to locate the slab opening.
2) It is not clear where the noted beam is located. This dimension is not shown anywhere except RFI T-1544 (SK 712, CD 522) SKS-0411, which shows the beam off-set 1'-5 3/4 from the edge of the opening but this detail appears to place the beam below the wall whose thickness is not known. Please supply the location for the beam.
3) The wall is shown as 1'-6 thick in detail 10/A1-2969. If that is the case the 6" long studs will extend outside the concrete. Please clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Refer to revised A1-2969 issued in ASI No.0127 dated 09/12/14 for revised information.

2) The beam shall be located 1' - 9 3/4" from the edge of slab as shown on S1-2602 submitted with Roof Park Restaurant IFC package on 5/31/2014. CMU knee wall thickness is 8" and is called on S1-2701 submitted with Roof Park Restaurant IFC package on 5/31/2014. Detail 10/S1-7631 does not apply at this CMU wall. Refer to typical detail 11/S1-5003 that shows detail for beam supporting CMU wall.

3) Refer to revised A1-2969 issued in ASI No.0127 dated 09/12/14 for revised information.

We agree with the reason for RFI request "Verification", disagree with others. We categorize this as called out on contract documents.

T-1553.3	SSS - SE201 & SE202 Roof Level Framing Clarifications	Closed	10/13/2014	10/23/2014	10/28/2014	Potentially	☐

REQUEST:

Detail 6 on S1-5013 calls for HSS 5 X .500 posts at the Second Level Shaw Alley Bridge. This size is not available domestically. Please advise.

SUGGESTION:

HSS 5.563 x .500 is available domestically.

ANSWER: **Accept Suggestion:** ☐

HSS 5.563 x .500 is acceptable - also Contractor shall coordinate this work with Steel Shop Drawings already reviewed.

T-1558 **BGP - Bracing removal sequence on the East end of Zone 4** **Pending** **07/25/2014** **08/04/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author:

REQUEST:

Bracing removal sequence on the East end of Zone 4
WOJV is proposing the following sequence for the bracing removal for the east side of Zone 4.
See sketch SK1, attached.

Sequence
1. Remove level D struts and walers from within the green clouded area up to GL- 32.2 once the mat slab beneath has reached adequate strength.
2. Remove level D struts within the Blue clouded area STD-65 to 74, 82 & 83 and all corresponding walers once the mat slab beneath has reached adequate strength, the sequence for de-stressing will be the diagonals struts should be all de-stressing prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).

For the remaining levels A, B and C WOJV is proposing to follow a similar removal sequence as Level D

Please confirm if this sequence would be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 1 1/2" stiffener with 1" fillet welds per 5/S1-4205 will not fit between the bolts.
Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to RFI response T-1559.

T-1562	SSS - Protected Zone Signage	Closed	07/28/2014	08/07/2014	07/30/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Detail 10/S1-4202 shows the protected zone signage attached directly to both sides of the beam. The response to submittal package TG0701-37A includes a note directing the contractor to remove the signage before SFRM application, and then reattaching it after the SFRM is applied (See SK1). Please confirm this note is to be ignored.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contract documents indicate paint and signage for protected zone. It has been previously established that the paint may be applied directly to the beam before the application of SFRM. This should serve to designate the protected zone during erection and over the life of the building. The signage is intended to be an exterior alert, over the life of the building, and must be visible from the exterior. Therefore, the signage must be outside of the SFRM. The contract documents do not specifically indicate that the signage be present before the application of SFRM as the contract documents generally show the final condition. It would, however, behoove the contractor to have the signage present at all stages of construction, before and after application of SFRM, in order to mitigate the risk of accidental damage to the part, which would be very expensive to replace.

T-1563	SSS - Erection Access Confirmation at TPG1	Closed	07/29/2014	08/08/2014	08/18/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

There is a 3 7/16" gap between the flanges of the TPG1 and W40x264. The north end of the W40x264 is connected to
the W40x297 per 1/S1-5010 and the south end is connected to the BU-40x28 per 1/S1-8001 including a field moment
weld at the top and bottom flange of the W40x264.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is not acceptable to move W-1 awning connection CP1D from its current location. However, it is acceptable to move the W40x264 beam 6" away from TPG1 to allow access for field erection.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please review and supply any changes that are required for erection access.

Alternatively, please confirm that it is acceptable to move CP1D (shown on S1-4002) 6-inches away from TPG01.

T-1564 **SSS - Bus Ramp Support Connection Clarifications** **Closed** **07/29/2014** **08/08/2014** **08/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a follow-up RFI to RFI T-1566.1 (SK 715.1, CD 525.1)
1) As an alternative to response #1 and #3, is it acceptable to provide a one-piece continuity plate (one each side of MF column web), and slot the WT22x167.5 to clear the one-piece continuity plate?
2) If yes to #1 above, is a weld required at the slotted WT/one-piece continuity plate joint?
3) If yes to #2 above, is a minimum sized fillet acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Not acceptable. Alternatively, continuity plates between the WT and the column flange on the no beam side can be omitted. Also, do not weld the remaining continuity plates to the WT section therefore welding would be required on two sides, namely, to the column flange on the beam side and column web between the beam flange and the WT. Extend the continuity plates as close to the WT as possible.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*

T-1567 **BGP - Substitute Fly-Ash Product - Salt River** **Closed** **07/29/2014** **08/08/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference attached product data sheet for the Salt River brand Fly-ash, product data sheet for Headwaters brand Fly-ash and product comparison spreadsheet.

If needed, due to a shortage in supply of the Headwaters brand fly-ash, please confirm it is acceptable to substitute Salt River brand fly-ash for use in all TG06.0 cast-in-place mix designs.

If Salt River Fly-ash is acceptable, will the design team require trial batches?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-1567.1	BGP - Substitue Fly-Ash Product - Salt River - Attached Cemex Letter	Closed	08/11/2014	08/21/2014	08/11/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference attached CEMEX Letter and product data sheet for the Salt River brand Fly-ash, product data sheet for Headwaters brand Fly-ash and product comparison spreadsheet.

If needed, due to a shortage in supply of the Headwaters brand fly-ash, please confirm it is acceptable to substitute Salt
River brand fly-ash for use in all TG06.0 cast-in-place mix designs.

If Salt River Fly-ash is acceptable, will the design team require trial batches?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Based on the assertion contained within the Cemex letter, that the proposed substitution will result in equivalent performance to the previously approved mix designs, the design team does not object to the proposed substitution or require additional trial batches. Should the proposed substitution be placed in elements whose strength is evaluated on predictive methods, the performance of the mix shall be tracked separately.

T-1568	BGP - Pile Location Discrepancy at GL E/34.5 - Zone 4	Closed	07/29/2014	08/08/2014	08/12/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

SCCI is in receipt of RFI response T-0741. RFI response T-0741 references RFI response T-0264.3, which states: " ... Note that a pile in this location will require the pile to be cut off at a lower elevation than the typical detail, which will involve a larger block-out..."

1. Please provide an elevation, referenced in the above mentioned RPI response, which the pile will be cut.

RFI response T-0264.3 also states: " ... the mat shall be re-braced at the block-out by TG03 ... "

2. Please provide a detailed description of this required re-brace and how it will effect TG06 formwork, rebar, etc.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Per the RFI attachments, the bridge pier appears to be completely contained between the shallow eastern sump and the deeper sump immediately west. As such, the cutoff elevation for the bridge pier may be the same as for blockouts at the typical top of mat slab elevation. Detail 4/S1-3009 will apply to the blockout in the north-south direction except that diagonal trim bars are not required. For the east-west direction, Detail 4 would not apply but may be modified such that the #5 at 8" infill cap bars lap with the pit wall reinforcing on the west side and lap with embedded dowels of same size and spacing on the east side. The resultant depth of blockout will be approximately 30". The (6) additional #11 bars shown on 1/S1-2065 may be relocated adjacent to the pier below the shallow east sump. Additional reinforcing beyond the (6) #11's mentioned is not required above the bottom of the mat. Additional reinforcing per Detail 7/S1-3009 is required at the bottom of the pit.

Temporary blockouts are the responsibility of the contractor and the suggestion above is but one acceptable way to accommodate the change in pier

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

location. The contractor is requested to provide a sketch of the final proposed configuration and reinforcing for confirmation through the RFI process.

2) The comment regarding re-bracing may be ignored.

T-1568.1 **BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4** **Closed** **08/28/2014** **09/07/2014** **09/02/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference RPI response T-1568, attached photo of bridge pier/sleeve at Grid Lines 34.5/E and attached sketch.

SCCI is in receipt of RFI response T-1568. The bridge pier in question is not fully contained within the sumps pits referenced in RPI response T-1568 (see photo attached). The galvanized pile sleeve encroaches into the Eastern most sump pit approximately 5/8".

In order to facilitate the installation of this sump pit the provided contract details will need to be modified. The pile will need to be cut off at a lower elevation than the typical detail, which will require a larger block-out. The typical contract rebar details will need to be altered, as well as the typical waterproofing details.

1. Please confirm the attached sketch showing revised rebar and formwork details is acceptable.
2. In order to install a deeper blockout, the galvanized sleeve will be cut down to 4" above bottom Of blockout. This cut will remove the sleeve flange. Please confirm this is acceptable.

All waterproofing detail revisions will be performed per Grace's recommendation and referenced mat slab "Ready-to-Pour" sign-off document for Mat Slab 16

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Item 1 is confirmed.

Item 2 is not acceptable. Submit a proposal for providing a flange on the sleeve, field repair of galvanizing, and any waterproofing details that are proposed to be modified.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1568.2	BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4	Closed	09/15/2014	09/25/2014	09/25/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

SCCI is in receipt of RFI response T-1568.1. Please see attached sketch for reference.

SCCI offers this response for Item #2.

1. Galvanizing will be removed from surface of the installed sleeve in order to weld a new identical flange centered 19" down from the top of sleeve. Weld will be a ¼" fillet weld, both top and bottom of flange all the way around the sleeve. The sleeve will then be repaired with approved cold galv spray.

2. All waterproofing details will remain typical.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to 1/A1-2964 for location and size of opening.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1) Supply location and size for slab opening.
2) Supply missing dimensions.
3) Confirm the C8x11.5's per 12/S1-5003 connect to the HSS beams per 6/S1-5011.
4) The davit base plate per 12/S1-7600 will foul the top plate in detail 6/S1-7604.
5) Detail 9/S1-5000 shows the slab support connecting to WF beams. Please supply a detail showing how to connect the braces at the HSS beams.

Missing dimensions are supplied per attached RFI T-1570_Sketch.
Provide shear plate connections per 1/S1-5011 with two bolts at the C8x11.5 channels.
See attached sketch SKS-0392 for connection at base of the davit pedestal. Provide a cap plate in lieu of the top flange plate per 6/S1-7604 as shown in the sketch.
Braces per 9/5000 may be waived at the HSS beams on this level.

T-1571 **SSS - PE302 Angle Brace Connection Clarification** **Closed** **07/31/2014** **08/10/2014** **08/13/2014** **Potentially** ☐

REQUEST:

See attached CD RFI # 537.1 SK1:
It is not clear where the row of beams west of Grid 19.1 & east of Grid 24.9 are located. Per B/S1-050 they are located 3'-8 off the noted Grids. S1-305 appears to show the beams centered under the 1'-3 wide thick portion of the slab and detail 9/S1-5022 does not provide a dimension. Confirm the beams are located 3'-8 off the noted Grids.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The W12x14 beams east of GL 19.1 and west of GL24.9 shall be centered on the 1'-3" slab step shown on 9/S1-5022. The W14x68 beams with * symbols that are graphically shown in the same row as the W12 beams shall be centered on the W-3 system supports located on S1-6050. Note that the 3¿-8¿ dimension on S1-6050 locates the W-3 outside cable centerline at the corner condition, not the centerline of the W-3 supports. Refer to base plate detail PL3 on S1-8005 for centerlines of the W-3 system supports at the corner condition. Refer to the Architectural Slab

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Edge Plan A1-2865 for the location of the slab step and concrete curb.

T-1573.2 **SSS - Dimension Clarifications for W-3** **Closed** **09/22/2014** **10/02/2014** **10/01/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 537.2 SK1 for items 1 to 3:
1) The reference to S1-8005 in RFI T-1573.1 (SK 732.1, CD 537.1) is not helpful in locating the W14x68* as dimensions are not provided. Supply the locations for the W14x68* beams from Grids 19.1 & 24.9.
2) S1-2305 locates the W12x14 beams 4'-3 from Grid 19.1 & 24.9. Confirm we are to proceed to revise the beam locations to center them under the 1'-3 slab step per RFI T-1573.1 (SK 732.1, CD 537.1).
3) Depending on the amount of off-set between the W12x14's and the W14x68, confirm it is acceptable to connect the W12x14 per 1/S1-5011 at one end.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The Architectural Slab Edge Plan A1-2865 locates the exterior face of the curb 3'-3" from Gridlines 19.1 and 24.9, respectively. Per 4/S1-8005, the dimension to the centerline of the plate is 11-7/8". The resulting dimension for locating the W14x68 beams parallel to Gridlines 19.1 and 24.9 is 4'-2 7/8".
2) Confirmed. The 4'-3" dimension will be removed from S1-2305 in the next ASI.
3) Confirmed.
We agree with the reason for RFI request "Verification", disagree with "Insufficient Information". We categorize this as no cost clarification and change to be issued in future bulletin.

T-1574 **SSS - Dimension Discrepancies at W-3 Support Beams on Bus Deck Level** **Closed** **07/31/2014** **08/10/2014** **08/11/2014** **Potentially** ☐

T-1579	BGP - Seismic Joint Stepped Embed Clarifications	Closed	08/01/2014	08/11/2014	08/19/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please reference Contract Drawing S1-3010 and Submittal TG0600-051 .1.

Please clarify the following:

1. Sheet 8.01 of Submittal TG0600-05 l.1 calls for a M30x4-1/2" stud welded to the embed. Due to the unavailability ofM30x4-1/2" studs, please confirm it is acceptable to fillet welding M30x4-1/2" long cut pieces of fully threaded rod.

2. Submittal TG0600-051.1 requested design to determine bar lengths for the hooked #6 welded rebar. Please provide missing lengths for the hooked welded #6 rebar.

3. Please clarify the (. 11 7) at the double flare bevel weld on the hooked #6 rebar and the deformed #6 bar. It is SCCI's understanding the 3/8" is the weld size and the 5 is the weld length. What is the (.117) referring to?

4. See attached SI-3010. The east embed top vertical leg appears to be welded to the horizontal leg with a square bevel and convex weld with a fillet on the other side. Typically, a square bevel has a given dimension that depicts the gap between plates. As no dimension is given and the other side is a fillet weld, it appears to be a flat fillet laid down on the joint, with no gap. Please confirm this is the design intent.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The headed studs, their weld attachment forming a part of clamping assembly are a part of assembly designed by seismic joint supplier. Changing of the clamping assembly shall be approved by the supplier.

2). The hook #6 shall be 36" long (length without hook) same length as the 3/4" deformed bar anchors.

3). The double flare weld is 3/8" with 0.117" effective throat.

4). Gap of the square groove weld shall be per AWS prequalified weld joint detail. The gap size depending on the weld process used.

REQUEST:

See attached CD RFI # 474 SK1 to SK6 for item 1 to 10:
1-
8) Several of the shop and field welds required at the grou nd level corner cast nodes are inaccessible once the cast node is set in position. Please see items 1 through 8 on S K1 through SK8 for clarification and provide direction.
9) Supply the welding for the north flange plates of the BU column to the node.
10) The welds required at this external corner create an un weldable condition, See SK5 & SK6 for clarification. Pleas e
provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column.

2). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.

3). The double bevel weld may be changed to single bevel weld from the east side.

4). The CP weld noted may be achieved by weld a backup bar prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.

5). See response #4

6). See response #4

7). Backup bar may be installed prior to fitting the transfer girder to the cast node. The back-gouge and 5/16" reinforcing fillet may be deleted.

8). Cannot see when the weld cannot be made. The vertical stiffener may be installed after the 2" PP weld is completed.

9). The weld info is called out as CP weld with back gouge and 5/16 reinforcement weld, which is questioned in item 4 above.

10). Weld access hole per AWS D1.1.

T-1584	SCS - Wall Construction Joint - Moment Frame Beam Conflict	Closed	08/04/2014	08/14/2014	08/18/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

See attached diagram of a wall lift construction joint overlay on the ground floor plan. Per Specification Section 03 30 02 - 3.2, Foundation wall and ground floor construction joints shall align with the location of joint below in TG06 and will not impair the strength of the structure. A conflict occurs at the noted areas of the attached diagram, where the wall joint placed according to specification, will intersect at a moment frame beam. SCCI proposes to move wall construction joints in order to avoid conflicting with the moment frame beams.

Please confirm shifting construction joints to not align with the construction joints below is acceptable and provide permissible parameters to assign new construction joints for SCCI to reflect upon and modify the construction joint layout. A conceptual sketch is attached reflecting the proposed shift in vertical construction joint.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The foundation wall construction joints cannot run through Ground Level MFB's. The best option to avoid this situation is to jog Foundation Wall construction joints around the MFB's as proposed. The recommended location for the offset is the horizontal Foundation Wall construction joint immediately below the MFB's. The Design Team will evaluate contractor proposed construction joints during submittal review of the Ground Level construction joint layout that shall include any modifications to the previously reviewed and approved Foundation Wall construction joint layouts.

T-1591	SCS - Pendulum Bearing Test Results	Closed	08/05/2014	08/15/2014	08/15/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per Specification Section 03 20 02-1.4-A-7, "test results for [pendulum] bearings with similar size" are to be submitted for approval. Per Mageba, they have test data on pendulum bearings (isolators) with similar sizes which they believe have been tested under more severe conditions than the ones required for this project. See attached email correspondence with Mageba for further explanation and more
specific details in regards to their test and how the results apply to satisfy the requirements in the specifications. The referenced Annex documents in the email are also attached. Only a sample of the data has been included for preliminary approval; full test data will be submitted once this data is confirmed acceptable.

Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the requirements in the specifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Reports from past test data can serve as a basis to waive the testing requirement. However, the information provided with this RFI is not sufficient to waive the testing requirement. The test data provided in the RFI seems to belong to a bearing of similar size but it does not seem to meet vertical load carrying requirements outlined in the specifications. It is also not clear whether it meets the horizontal force requirements (friction coefficient) outlined in the specifications or not.

To waive the testing requirement:

- Provide specifications for the product that is intended to be used in this project that meets the design requirements outlined in the contract documents.

- Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1591.1	SCS - Pendulum Bearing Test Results	Closed	09/10/2014	09/20/2014	09/25/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

RFI T-1591 response noted two requirements to waive the testing requirements.

1. Provide specifications for the product that is intended to be used in the project that meets the design requirements outlined in the contract documents.
See attached preliminary Pendulum Bearing product information and drawing.

2. Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements.
Please see attached additional performance test results from other bearings of comparable size and performance. Also reference T-1591 for previously submitted test results.

Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the testing requirements in the specifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the information provided can be considered sufficient to fulfill testing requirement. Note that per Section 3.2.D of specification 03 20 02: "Pendulum bearing dimensions shall fit within the columns they are installed at. Anchors for the bearings shall not interfere with the column reinforcement." In current design, PM8.89 does not seem to satisfy this requirement for the 34 in diameter columns at Gridline 34.8. Verify this requirement is satisfied for all pendulum bearings.

T-1602.1	SCS - Gas Line Lateral Pipe Size at GL 7.3/A	Closed	09/02/2014	09/12/2014	09/10/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

See attached RFI T-1602.

Per response to RFI T-1602 please confirm the following.

1.) Please confirm PG&E has approved both the gas meter room and the use of a 4" sleeve and routing/elbow to pull plastic tubing as reflected in this project design.
2.) Confirm the sleeve through the perimeter structural and shoring wall is an 8" (or larger) sleeve.
3.) What are the required structural and architectural details for suspending a concrete encased gas main from the structural lid/deck for the entire run between perimeter wall and gas meter room?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. PG&E has reviewed three options proposed by the design team for routing the incoming gas service into the gas meter room. There are two options that locate the gas piping above the trainbox lid and under the sidewalk that are being coordinated to determine the final design solution which will then be submitted to PG&E for approval. The third option to penetrate the foundation wall and steel beam will not be pursued further.
2. Based on the options reviewed with PG&E no sleeve will be required through the foundation wall. The gas piping will be installed above the trainbox lid under the sidewalk. Coordinated details will be provided in a future drawing issue.
3. A suspended concrete encased gas main will not be required for the two preferred options described above.

T-1603	SSS - Transfer Girder Flange Shop Splices	Closed	08/12/2014	08/22/2014	08/27/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

It has been understood that, due to the availability of mill r un plate size and length, it would be necessary to splice s ome of the top and bottom flange components of several o f the Transfer Girders in order to achieve the overall length required. The Contract provisions and AWS D1.1 Structu ral Code require that all splices made by welding are to be shown on the shop drawings. However, the location of the shop splice(s) was not shown on the shop drawings that were issued for fabrication to Thompson Metal Fab. TMF has fabricated flanges that have been spliced by full penet ration welds. The welds have been inspected and have be en accepted in accordance with the provisions of the AWS D1.1 Structural Code for static load criteria. The locations of the splices in the transfer girder components and the af fected flanges are shown in the attached documentation.

Girder A626 - top and bottom flange

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the as-built shop splices shown in Appendix B and proposed splice locations in Appendix C are acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Girder A627 - bottom flange only
Girder A630 - top and bottom flange
Girder A631 - bottom flange only
Girder A643 - top and bottom flange
Girder A645 - top and bottom flange

Please confirm it is acceptable to proceed as fabricated. A
ll shop drawings will be revised to indicate all shop weld lo
cations.
In addition TMF propose to shop weld flanges not currently
indicated on shop drawings, please review appendix C an
d confirm the splice locations are acceptable.
See Appendix A for shop drawing girder segments referen
ced on Contract Drawings.

T-1604 **SSS - Light Tower Cast Node Detail LC-702 Clarifications** **Closed** **08/12/2014** **08/22/2014** **08/26/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 559 SK1 for items 1 to 3:

1) Provide welding detail for the contact plate to lug plates.

2) Verify dimensions.
3) Confirm the dimensions in item 2 can be used at similar conditions e.g. 3&5/S1-6005, 4&6/S1-6006.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) 1/8 inch fillet weld all around the contact plate.
2) Dimensions confirmed.
3) Confirmed.

T-1606	SSS - Type Drag Connection Geometry at Bus Level Cast Node 29A-01 and 29B-01	Closed	08/12/2014	08/22/2014	08/19/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to attached SK RFI 744 SK01.
The shear plates at drag connection type 1-A at cast node 29B-01 and 29A-01 land on the edge of the welding pad. This condition does not make allowance for as-cast tolerances on the welding pad edge and may impact our ability to
achieve effective weld size. Please advise.

Skanska acknowledges the response to SK RFI 004.1 (T-0738) and 004.2 (T-0738.1). Following these RFIs, Skanska
increased shear plate spacing to give a 1/8" gap on the inside of each shear plate for erection clearance. Even had this
gap not been added, Skanska would still flag this issue for designers review as 1/8" still does not allow for as-cast tolerances at these locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The information provided in the RFI is not sufficient to provide a single solution at this time. Consider following solutions, which depend on the actual size of the pad:

1-) If the as cast dimensions of the pad allow the shear plate to land on the pad, no action needed. Since the contractor has opted to machine the pads, the rounded edges of the pads will likely be removed to create a wider weldable pad surface.

2-) Once the as cast dimensions of the pad are determined and if the plates do not fit in the pad, the ends of the plates can be tapered 0.25" with 1:2.5 ratio (e.g., 0.25"x 0.625" taper) at the outside faces of the plates.

Lastly, the contractor plans to use 1/8" gap on each side of the shear plate per the RFI. Considering that these are slip critical connections, a smaller gap might be considered by the contractor which can decrease the out to out connection width. To achieve slip critical, shim plates are needed if there is a 1/8" gap between the connection plate and beam web.

T-1610 **SSS - W14 Connection at Perimeter Framing GL20.1** **Closed** **08/14/2014** **08/24/2014** **09/04/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 567 SK1 & SK2 for items 1, 2 & 3:

1) Work with RFI T-1573 and supply the clouded dimensions.
2) The connection per 1/S1-5028 does not work for the W14x68. The seat angles do not work due to the 8" MIN. criteria and there is insufficient room to fit the angles with (2) bolts. Please advise.
3) Confirm a W14x68 beam is required at the step in slab or provide a deck support detail.

Note: the same condition occurs on the north side at Grid 'C'

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The W14x68 and W24x62 beams are centered on the W-3 system HSS posts shown on Sheet 1/A1-8215D issued with ASI 120 on 7/11/2014. The W14 beam is centered on the smaller HSS (8' -3 3/4" from GL 20.1) and the W24 beam is centered on the bigger HSS (8' -10 3/4" from GL 20.1). Note that with these dimensions, flanges of the two beams are going to foul each other. The W14 and W24 beam flanges may be coped 1" each to avoid this conflict.

2) Provide shear plate connections per 1/S1-5011 at the W14x68 beam with 2 bolts and a vertical bolt edge distance of 1 1/4".

3) No new beam is needed. The lower deck shall be extended and supported by an angle welded to the web of W14 x68 similar to the typical metal deck detail 10/S1-5002.

TT disagrees that there is a cost increase for this RFI (no new beam is needed per #3).

T-1613	SSS - Deck Support at TR3 Grid C & G	Closed	08/15/2014	08/25/2014	08/27/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

At grid C3 the BU perimeter beam butts into the transfer gi rder TR3. The deck support angle in the web of the BU beam stops back 4' 9-
5/16" from the center of the girder. This results in a region of about 4'-4" without deck support
at an end bearing.

Design drawings do not provide a specific detail for this co ndition. Deck support at column detail 1/S1-5001 should not be used as this detail typically only supports one or tw o flutes of deck. The condition described above has 4 ½ unsupported flutes in an end bearing condition with 10" of

SUGGESTION:

A 4x4x3/8" steel angle can be field welded from the perimeter beam deck angle to the transfer girder deck angle to span the unsupported deck or provide an alternative detail. See SK1 for clarification. This condition also applies at line G.

ANSWER: **Accept Suggestion:** ☐

Deck support is a "means and methods issue" and we disagree with the cost increase claim. Deck support angles proposed in the RFI and as shown on SK1 in the RFI are acceptable at the two locations on GL 3.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

nominal weight concrete. This is too much for a 12 gauge angle. Please advise.

T-1622	BGP - Top of Vertical Wall Interface with Ground Level MFB	Closed	08/18/2014	08/28/2014	08/22/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The current design indicates the top of the # 11 vertical wall reinforcing terminating with a terminator maintaining 2" concrete clear cover above the bar as seen in Section 1 on S-3201 .

A # 11 555 t-head is 11/ 16" thick and a #11 Lenton Terminator is 11/16" thick. The Ground Moment Frame Beams appear in Section 5 of S1-3600. The concrete clear cover indicated over the stirrup is 2 3/4".

Due to the designed concrete clear cover called for, the thicknesses of the different terminator products and the allowable tolerance in fabrication and placement per ACI a conflict with the two interfacing componets is expected to occur at the top bars of the MFB.

Please confirm if the tenninator on the vertical bar can terminate below the ground level MFB top bars to avoid the expected conflict similiar to that allowed between the column and concourse MFB as indicated within RFI T-0917.

Should this proposed solution not be acceptable please provide direction how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, provided that the resulting clear cover to the Foundation Wall Vertical Reinforcing Terminator is within the parameters of the RFI T-1622 response including the supplemental U-bars. We disagree that a potential clash is anything other than insufficient means and methods.

Please provide dimensions for CMU walls near Gridline 20-H. See attached marked-up contract drawings for the dimensions needed.

For dimensions to CMU wall/pier adjacent to Door B1560B, refer to SKA-4032.

For dimension to the CMU wall at the south of the Main Switchgear Room B1560, it is confirmed that south face of CMU wall is aligned with Gridline H.

T-1625 **SCS - Embedded Column Inner Vertical Bars at Foundation Walls** **Closed** **08/19/2014** **08/29/2014** **08/22/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

See attached marked up contract drawings.

The TG0600 rebar subcontractor is using HRC 420 friction welded standard couplers at the top end of the 3rd lift foundation walls and embedded columns C21, C33, C34 vertical bars. The inner set of embedded column vertical bars are indicated in sections as having a 90 degree SH tail at the top of bar. It isn't possible to install the bar with the 90 tail into the 3rd lift HRC 420 standard coupler as the tail of the bar needs to spin circular to engage the threads into the coupler with the final tail orientation dictated by torquing of the bar into the coupler. A possible solution to this issue is to utilize the HRC 555 Forged head in lieu of the 90 degree tail. The top of the inner vertical bar 555 head could be held 4" below the top of the outer vertical bar 555 head for concrete encapsulation.

Please confirm that the proposed solution is acceptable for the typical embedded column in foundation walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed solution is acceptable for Embedded Columns C21, C33, C34 and C23. Coordinate head elevation with requirements of framing coming into the joint. Indicate target head elevations on submittals for review.

REVISED RESPONSE:

Proposed solution is not acceptable, hooks shall be provided as shown in construction drawings. This is a means and methods issue. The work between the two sub-contractors shall be coordinated by the general contractor.

T-1626	**BGP - Column 101E and 101F Concrete Elevation**	**Closed**	**08/20/2014**	**08/30/2014**	**08/27/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Adib Sassine

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Column 101E and 101F was poured 1 ft below shoring elevation.

Is it acceptable to use concourse slab concrete mix 1558218 to pour back the remaining top foot concurrently with concourse deck D201?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed using concourse slab mix to pour back both columns is unacceptable.
Pour the remaining 1 ft of concrete at both columns 101E and 101F the same mix as the concrete columns with the following options as discussed with Sean McNeil:

Option 1: Pour both columns separately under separate IR.
Option 2: Or pour both columns at the same time as the concrete deck D201 provided you allow 2 hours for the concrete to set and then you pour the deck with the scheduled concrete mix. This will require a separate IR to track this condition at both columns. Include special instruction in the IR to ensure consolidation of both columns are inspected separately as well as paying close attention not to disturb the concrete of poured column sections when consolidating. Prep the top of concrete column surface to achieve the required amplitude as required per previous column pour cold joint condition.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1627	SCS - Bridge Blockout CIDH Piles	Closed	08/21/2014	08/31/2014	09/05/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Please provide details for blockout(s) at the concrete roadway section as shown in the attached sketch.
A Blockout will be necessary to allow the CIDH pier(s) to be removed from the ground level, pulled up through the deck, after the concrete bridge(s) section has reached design strength.
Once the CIDH piers have been removed the circular section will need to have rebar installed, concrete poured back, and waterproofing repaired prior to receiving infill pursuant to contract documents; 10 sets of CIDH piers, per temporary structure, will require Blockouts at First, Fremont, and Beal street.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Reference RFI T-0470 and RFI T-0807. Temporary blockouts are the contractor's responsibility. Refer to General Notes GR-4, GR-5, and GR-9.

2. Refer to attached conceptual detail representing an acceptable method of restoring a temporary opening to contract final condition at the roadway slabs. It does not relieve the contractor from the obligation of verifying the suitability of the detail to actual field conditions and construction loading.

3. Should the contractor elect not to shore the temporary condition, the contractor shall submit a statement or supporting calculations justifying the unshored condition under construction loads signed by a licensed professional engineer. Should the contractor elect to use conceptually different detailing, the detailing and any required supporting calculations shall be submitted for review.

4. The final choice of detailing shall be explicitly indicated on the deck reinforcing submittals for each unique blockout case for coordination with surrounding reinforcing.

T-1628	SSS - Weld Columns to TG-33.2	Closed	08/25/2014	09/04/2014	09/24/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See SK-1 attached
1) Ref.; 3/S1-4357 Confirm no weld at 1-inch plate to web as shown
2) Ref.: 3/S1-4357 Confirm no weld at 2-inch plate to TG-33.2 inside of pipe column as shown
3) Ref.; 3/S1-4357 Cannot back gouge weld as shown - access is not provided please resolve
4) Ref.; 4/S1-4357 Clarify 5/16 fillet weld shown - provide complete extents for all-around weld. No weld show for WF flange to TG-33.2 shown please confirm
5) Ref. S1-4357 Suggest use of base plate to resolve

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to attached sketch SKS-0415, which provides a simplified connection at the locations indicated the RFI.

We disagree with the reason for RFI request "Engineering Conflict". We categorize this as "clarification for issuses on means and methods" and "change to be issued in a future bulletin".

weld issues

T-1629 **SSS - Shop Prime Coat Thickness for Carbozinc 859** **Closed** **08/25/2014** **09/04/2014** **09/08/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Specification 05 10 00 3.2.P.1.b.1 requires a primer of DFT 2.5 to 3.4 mils. The product data sheet for the approved Carbozinc 859 specifies a DFT of 3-5 mils. OIW coating instruction CI-2770-14-04 notes the 3-5 mils as recommended by the coating manufacturer.

Please confirm that a prime coat of 3-5 mils of Carbozinc 859 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. Prime coat of 3-5 mils of Carbozinc 859 is acceptable. Specification Section 05 10 00 3.2.P.1.b.1 is changed to: Apply primer to a DFT between 3 and 5 mils.

T-1630 **SSS - ST201 Weld Details for Access at W14x311** **Closed** **08/25/2014** **09/04/2014** **09/08/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

For erectability and weld access, the following is proposed: stiffener plates will be shop welded while the HSS will be
field welded (as far back as allowable with only a 2-5/16" gap). Please confirm sketch is acceptable; otherwise, provide
alternative.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide connection detail per attached sketch SKS-0409 where detail 10/S1-7605 is called out on plans except at two locations on 2/S1-7003. At these two locations, provide detail as shown on SK1 in the RFI.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*
T-1631	**SCS - Elevation at Transformer Vaults Room**	**Closed**	**08/25/2014**	**09/04/2014**	**08/27/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

On Sheet Al-2203, on the slab around the transformer vaults room, grid lines 12-C, the elevation is indicated as TOFF -7'-9". On Plan 1/A1-3002, there is an elevation point corresponding to the same slab at grid lines 12.1-B.5 that indicates an elevation of TOC -7'-9". On the detail A/Al-9236 same point has an TOC elevation of -8'-2". Please confirm that elevation -7-9" on Detail 1/A1-3002 corresponds to TOFF instead of TOC.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The elevation -7'-9" on Detail 1/A1-3002 corresponds to TOFF instead of TOC. Refer to SKA-4049 which reflects updated elevation tag.

T-1632	**SSS - Ground Level Kicker Brace Detail Clarification at GL 20**	**Closed**	**08/25/2014**	**09/04/2014**	**09/08/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 562 SK1:
The kicker braces will extend thru the lower deck but still remain within the slab as shown. Confirm that is acceptable or supply a detail showing the design intent.
Note: the condition is the same at Grid 'C'.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The kicker braces shall frame into the underside of the lower slab at the W16x26 beam. The upper gusset plates for the kicker braces shall be welded to legs of the L4x4 deck support angle.

T-1633	**SSS - Shear Plate Connection Clarification at GL 20.1**	**Closed**	**08/25/2014**	**09/04/2014**	**09/08/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 574 SK1:
Confirm it is acceptable to connect the W12x14 to the W16x26 with a shear plate per 1/S1-5011 as the double angle connection will extend past the edge of slab 4" north of the W12.
The same condition occurs on the symmetrical framing at Grid D.4.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

T-1634	**SSS - Crash Rail Post Hole Clarification GL 21-22**	**Closed**	**08/25/2014**	**09/04/2014**	**09/16/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

---

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 576 SK1:
This hole for the crash rail post per S1-8000 cannot be supplied as indicated. Confirm it may be omitted or supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The bolt holes for crash rail post per S1-8000 are no longer needed, as the design for the crash rail has been changed to a concrete crash rail system.

T-1635 **SSS - Exit Mezzanine Framing and Connection Clarifications at South Exit** **Closed** **08/25/2014** **09/04/2014** **09/08/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 554 SK1 to SK3 for items 1 to 14:
1) Supply missing dimensions.
2) Confirm dimensions.
3) Supply location for the MC4.
4) Confirm the vertical hanger is interrupted at the upper beam. Please clarify.
5) Clarify where the MC4x13.8 is located and supply a connection to the W12 & CMU wall.
6) Supply missing dimension.
7) Connection per 9/S1-5028 will not work at the noted location. Supply an alternate detail.
8) Confirm off-center connection per 9/S1-5028 is acceptable or supply an alternate detail.
9) Supply the elevation for the W12x40 at the landing and depending on the elevation, supply a connection detail at each end.
10) Supply missing dimension.
11) Supply length of weld.
12) Supply a connection detail for brace to hanger/beam.
13) Confirm dimension for plate orientation.
14) Confirm detail 9/S1-5028 also applies to the top of the hangers.
15) Confirm a 2-sided fillet is acceptable as the welding access of the end of the brace is not sufficient.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. For updated slab edge drawing confirming and showing missing dimensions, refer to SKA-4081.

2. See updates on SKS-0403. Braces to be placed at equal spacing.

3. The MC4x13.8 channel may be waived at the highlighted location. In lieu of the MC4x13.8, provide a W12x40 beam as shown in sketch SKS-403 and SKS-0405.

4. See SKS-0403 and SKS-0405 for hanger locations.

5. See response to question 3. Connection of W12 to CMU wall per 12/S1-9001. Connection of W12 to W12 per 1/S1-5011.

6. For wall dimension to GL F.7, refer to A1-7009 issued with ASI-123.

7. See SKS- 0403.

8. Align W12x40 with centerline of W40x230 above, as specified on 2/S1-2252. See SKS-0403.

9. See SKS-0405.

10. S1 slab to attach to top of W12x40 bottom flange, as shown on 4/S1-5032. Requested dimension approx. 3-7/8¿.

11. Provide 6¿ min weld length at double angle brace

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

to gusset plate.

12. Connection of brace and hanger to beam above per 6/S1-5028 sim.

13. Confirmed.

14. Confirmed.

15. Confirmed.

T-1635.1 **SSS - Exit Mezzanine Framing and Connection Clarifications at South Exit** **Closed** **09/26/2014** **10/06/2014** **10/09/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 554.1 SK1:
The W12x40 is currently not supported on the right end.
Supply a connection for the hanger at the Ground Level or supply a connection detail to the 2-L6x6x1/2 hanger.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For both North and Sound Exit Mezzanine, adjust the location of north-south spanning W24x62 at ground level (S1-2305) to support 2L-6x6x1/2 hanger at upper landings. These W24X62s were shown in SKS-404 submitted in response to RFI T-1635 (also included in ASI 127). East face/toe of 2L-6x6x1/2 hanger at upper landing to be placed 10" from face of step (Ref: Detail 1/S1-5034). Connection of 2L-6x6x1/2 to W24x62 per 9/S1-5028.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*
T-1636	**SSS - Exit Mezzanine Framing and Connection Clarifications at North Exit**	**Closed**	**08/25/2014**	**09/04/2014**	**09/08/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 555 SK1 for items 1 to 9:
1) Supply/confirm all clouded dimensions (9 clouds total).
2) Verify dimension.
3) Connection per 9/S1-5028 will not work at the noted location. Supply an alternate detail.
4) Confirm off-center connection per 9/S1-5028 is acceptable or supply an alternate detail.
5) Confirm the noted dimensions may vary to match the W-3 supporting beam locations above.
6) Confirm the orientation for the MC4.
7) Confirm the vertical hanger is interrupted at the upper beam. Please clarify.
8) Clarify where the MC4x13.8 is located and supply a connection to the W12 & CMU wall.
9) Supply the elevation for the W12x40 at the landing and depending on the elevation, supply a connection detail at each end.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. See attached sketch SKS-0406 for requested dimensions and for updated slab edge drawing, refer to SKA-4081 and 6/A1-7011 issued with ASI-118.

2. Confirmed.

3. Move the W12x40 beam northwards so that the 2L6x6 clears the W33x118 flange by 1". The EOS of the mezzanine floor will also move with W12x40.

4. Move the W12x40 beam so that it aligns with the W44x230 beam above. The EOS of the mezzanine floor will also move with W12x40.

5. Confirmed.

6. Confirmed.

7. Provide 1 hanger on each side of the slab step on both sides of the slab as shown in attached sketches SKS-0404 and SKS-0405.

8. The MC4x13.8 channel may be waived at the highlighted location. In lieu of the MC4x13.8, provide a W12x40 beam as shown in sketch SKS-0405

9. Provide a W6x25 beam in lieu of the W12x40 beam at the upper slab as shown in sketch SKS-0405.

T-1637	**SSS - North Exit Mezzanine Clarifications**	**Closed**	**08/25/2014**	**09/04/2014**	**09/11/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 561 SK1 to SK4 for items 1 to 20:
1) Confirm all dimensions shown in a green rectangle box.
2) The noted W12x40 appears to be shown as one continuous beam from west of Grid 22 to east of grid 24. Supply splice locations and a splice detail.
3) Confirm the CMU wall aligns with the west edge of the slab opening or supply more information.
4) Confirm it is acceptable to locate the MC4's 1" from edge of slab openings.
5) It is not clear where the MC4 is located. Is it backed against the CMU wall? Please provide more information and connection details.
6) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct.
7) Confirm connection is per 9/S1-5028.
8) Supply a connection detail.
9) Supply a connection detail for MC4 to MC4.
10) Confirm all W12x40's and all MC4x13.8's are located vertically per 4/S1-5032 (SK3). If not, supply more information.
11) The location of the hangers are not correct at the locations noted as a red rectangle box based on the concrete beam locations per RFI T-1010 (SK 287, CD 230). Confirm the updated dimensions are correct.
12) Confirm the CMU wall aligns with the east edge of the slab opening or supply more information.
13) Confirm dimension to edge of slab.
14) Confirm MC4 is located 1" west from the edge of slab or supply more information.
15) Confirm the underside of the slab is typically at the top of the bottom flange of the W12x40's or supply more information.
16) Supply a connection detail for the MC4 to the W12x40.

17) Supply a connection detail for the MC4 to the CMU wall.
18) Please supply dimensions for hooked deformed bars.
19) Confirm stud spacing to avoid the bending radius.
20) Confirm 1 1/4" I/S cold bending radius.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. For confirmation of dimensions highlighted in green on CD RFI 561 SK1, A1-2854 should be read in conjunction with A1-3020, A1-7010 and structural details.

a. 12'-0" is confirmed

b. 2'-8 5/8" - should be 2'-0 5/8", refer to A1-2854 issued with ASI-118.

c. 11'-6" - should be 11'-2", refer to A1-2854 issued with ASI 118.

d. 11 5/8" is confirmed.

e. 19'5 ¾" - is acceptable

2. Refer to response to RFI T-1073 for clarification on W12 beam splice locations and detail.

3. Wall below is 3" offset from EOS. Refer to Detail 5/A-0024.

4. MC4s shall be 2" (clear) away from the slab openings.

5. The MC4 channel may be waived at the highlighted locations.

6. Confirmed.

7. Confirmed.

8. Move the W12x40 and 2L6x6 hanger northwards so that the W12x40 beam is 1" offset from the W40 beam at the ground level.

9. Refer to response to RFI T-1073 for MC4 to MC4 connection detail clarification.

10. Confirmed.

11. See attached sketch SKS-0414 for correct hanger locations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

12. Wall below is 3" offset from EOS. Refer to Detail 5/A-0024.

13. Dimension of EOS to GL 24.9 is 6'-2 1/8" as shown on A1-2854 issued with ASI-118.

14. The edge of the MC4 shall be aligned to the edge of slab. The MC4 shall span between the W12x40 beam on the south to the first perpendicular CMU wall and not the entire width of the slab.

15. Confirmed.

16. Refer to response to RFI T-1073 for MC4 to W12x40 connection detail clarification.

17. Refer to detail 12/S1-9001 for MC4 to W12x40 connection detail. Detail 12/S1-9001 is called out on 4/S1-5032.

18. Develop the deformed bar anchors 24¿ into the MFB beam. Refer to detail 4/S1-3001 for hook lengths.

19. Confirmed.

20. Confirmed.

T-1638 **SSS - Framing Beam Location at GL20.1G & C** **Closed** **08/25/2014** **09/04/2014** **09/08/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 577 SK1 for items 1 & 2:
1) Supply location for W14x68.
2) Supply welding information for L4x4x3/8 deck support a ngle flush with the top of the plate on the Transfer Girder.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The W14x68 beam is 2' - 1 3/4" away from GL 20.1 and is centered on the W-3 system door HSS post shown on Sheet 1/A1-8215D issued with ASI 120 on 7/11/2014.

2) Provide horizontal fillet welds per detail 10/S1-5002 at the bottom of the transfer girder flange and 5/16" vertical fillet welds at each end of the angle.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

See attached CD RFI # 587 SK1:
Please supply a connection for the W16x36 to avoid fouling the connection per 9/S1-5032 on the opposite side.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide a shear plate connection per 1/S1-5011 at the W16 beam at the location highlighted in the RFI. Note that S1-2602 has been updated and issued with Roof Park Restaurant IFC package on 5/31/2014. Refer to sketch SKS-0383 submitted with response to RFI T-1544 that shows updated framing in the area highlighted on SK1. As shown in the sketch, the W16 beam aligns with the W40x503 beam.

REQUEST:

See attached CD RFI # 588 SK1:
The bottom flange moment weld per 8/S1-5013 is not possible as the flange of the W44x230 only partially contacts the sloping flange of the TPG1. Please supply a detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide moment connection at bottom flange of W44x230 as shown in attached sketch SKS-0412.

T-1647 **SCS - 12" Thick Partition Walls over 24' height** **Closed** **08/25/2014** **09/04/2014** **08/27/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Partition walls taller than 24'-0", as indicated in Section 3/S1-9050, have vertical reinforcing of #7 bars @12" centers. Section 4/S -9051 indicates that the vertical bars will have a 90 degree tail at the top end of the bar. The standard tail length for #7 bars is 14" and will not fit within the 12" thick walls. Rotating the #7 bar tails to clear the concrete face by 1 1/2" clash with one another. Harris Rebar requests permission to utilize #7 straight vertical bars with a #5 'U' shaped cap with 30" lap@ 6" centers at the top of walls. Is this acceptable?

In order to minimize multiple varying lengths of the #7 vertical wall bars, the #7 threaded vertical dowel bar length will be increased from 49" to 56". The #7 wall vertical bar will be held up to the top of wall elevation, less clear cover, and maintain a minimum 49" lap splice at the Concourse Level. Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, it is acceptable to use #5 "u" bars with splice length of 30" at 6" OC in lieu of standard hooks for #7 vertical partition wall reinforcement. At contractor's option it is also acceptable to provide a reduced-dimension hook length at wall ends for the #7 vertical partition wall reinforcement. A hook length of 9" is acceptable.

Confirmed, 49" lap splice for #7 vertical wall reinforcement is acceptable.

T-1650	SCS - Requesting Approval for Precast Panels in Lieu of Cast-In-Place	Closed	08/27/2014	09/06/2014	09/15/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

See attached Exhibits A through D as a possible means of precast installation method. Using a precast yard facility in lieu of concrete cast in place will reduce the construction duration for the scallop, perimeter, and sky light eliptical wall operations since production can start prior to the construction start date. Precasting concrete elements also results in a better final product. Quality advantages of using a precast yard facility over cast in place methods are improved formwork design, curing procedures, temperature control, and form striping methods since work

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In concept, the proposed P/C scheme will work structurally. However, we would point out that the support of the panel on the steel beam shall be detailed to allow for in/out and up/down adjustments. The detail shall also accommodate the nature camber in the steel beam. Structural calculations and shop drawings shall be submitted for review. The calculations and shop drawings shall be stamped and sealed by a California Structural Engineer.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

space, formwork weight, formwork relocation and reassembly, and hoisting equipment restrictions are greatly reduced if not eliminated.

shimmick requests approval from the engineer to allow precast manufactured panels in lieu of the cast in place walls shown on S1-2752 & S1-3282 scallop walls, S1-2602 stair well, S1-2603 eliptical skylight, S1-2604 light column opening, S1-2606 stair shaft, and S1-2607 elevator shaft.

Please confirm that the concept drawing is acceptable as well.

In concept, the proposed P/C scheme will work visually for the architectural team. However, without an existing precast concrete specification and drawings that outline visual and quality control issues there may be some details that require a joint agreement on what is to be provided between the Contractor, TJPA, and the TJPA Representatives. Submit a draft design package including specification, confirmation on waterproofing details, and more developed design drawings to the TJPA Representative for review prior to final agreement on this substitution.

T-1651 **SCS - Concrete Anchor Inserts at Temp Bridges** **Closed** **08/27/2014** **09/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Balfour Beatty Infrastructure, I Danny Walsh **Answered By:**

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

See attached photo and concept sketch.

A unique support system is necessary for the foundation wall under the temporary bridges (First, Fremont, and Beale). A top tie is required to avoid the significant forces caused by a cantilever system supported by 1 row of anchors. In the attached photo, a concrete ledge can be seen along the CDSM wall under the temporary bridges. SCCI proposes to utilize these concrete ledges to install anchors for tie points.

Please confirm it is acceptable to install anchors into the concrete ledges underneath the temporary bridges and provide rebar layout and concrete strength information for the concrete.

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

On sheet A1-2203 and A1-3002, at the Transformer Vaults Room located about GL 11, Section detail A/A1-9236, regarding the elevation of the top of the partition walls.

1. Is the gap between the top of the wall and the Ground Level slab constant along the wall? This would mean that the top of wall would slope with the ground level. Please confirm.
2. Please clarify how to obtain the elevation of the top of the partition walls. Note: The elevations obtained through those two methods below conflict.
a.Should be obtained using the ground slab elevation points on plan S1-2303 and a constant slope between two consecutive elevation points? -OR-.
b.Scale the elevation from the section detail in Al Al-9236?
3. Please confirm if the above answers are applicable to all similar partition walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed. The Top of the wall slopes with the ground level structural slab and the joint gap is constant.

2. The elevations of the top of the partition walls (which extend to U/S ground floor slab) is determined from the elevations on the slab edge drawings together with structural slab design, framing design and details on the structural drawings. Scaling the elevations from section details is not acceptable.

3. The above answers are applicable to similar partition walls.

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

ASI 121 issued new wall CJ locations. Reference sheet Al-2203, Detail l/Al-3008 and B/Al-9240.

A. On the south wall of the room at GL 13-B.2 there is a construction joint (see plan attached indicated as location "A") running through one of the MEP blocks outs. That creates a cantilever section below the beams cutout and above the MEP block out. Is that acceptable? If not, where should the CJ be relocated?

B. On the same wall there is a construction joint (see plan attached indicated as location "B"), the distance between the MEP block and the construction joint is 5' 5/8", which is not enough to place diagonal trim bars on the comers of the MEP block out that are closer to the construction joint. Please provide detail for this location.

C. In the same wall, the construction joints are not shown in the area cover by the spall plate, do the CJ's start at the top of the wall plates? Please confirm intent and provide further direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A. Omit wall CJ running through Mech opening.

B. Wall CJ to be moved 1'-0" west of Electrical opening.

C. Wall CJs are continuous behind steel plates and are shown as hidden lines.

For updated A1-9240, refer to SKA-4094.

T-1660	SCS - ST201 Thickened foundation wall	Closed	09/04/2014	09/14/2014	09/12/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

The contract drawings do not provide a section view for the foundation wall at Stair Tower 201. S1-2302 calls out the foundation wall as a uniform 3' thickness. S1-3201 provides a typical foundation wall section, shown with uniform thickness. Shimmick has been provided with updated sketches that call out a thickened foundation wall of 4' 3 1/2" at Stair Tower 201 as opposed to the uniform 3' thickness.

1) Please confirm that, at Stair Tower 201 between Grid Line D and E.6, the foundation wall will be thickened to 4' 3 1/2" per the sketches provided.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per Section 2/SKS-0401 the very top of the foundation wall is integral with a haunch that supports the stair floor slab and HSS stair column. Below the South Wx column, a rectangular pilaster of the same thickness as the corbel extends down to the top of the grade beam as shown in Sections 3/SKS-400. Below the north Wx column, the bottom of corbel is below the grade beam resulting in a short similar pilaster. The extent of the corbel, the required elevations, and the south Wx pilaster are shown in Section 1/SKS-401. The western face of the pilaster is located at 3'-3-1/2" west of Grid 1 as shown on SKS-0398.

Please see attached marked up drawings noting atypical set of conduit penetrations. A1-2862 provides a lateral distance relative to a grid line to set of conduits; however 3/E1-3208 details the set of conduits as not aligned. On top of this, the referenced drawings do not provide an elevation for the conduit penetrations. SCCO requires the locations of these penetrations to proceed with foundation wall rebar detailing.

Please provide information on the location of the electrical conduit foundation wall penetrations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached drawings for electrical conduit penetration locations.

T-1668	SSS - Weld Access Hole at Transfer Girder	Closed	09/08/2014	09/18/2014	09/15/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please confirm it is acceptable to provide weld access hol es as indicated on 628BC per AWS D1.1 to adequately ter minate the CJP weld to cast node. For plates not fabricate d, confirm it is acceptable to omit the hole closest to the pr oposed access hole to maintain AISC min edge distance. This typically occurs at all cast node to girder connections.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed that weld access holes shown on P77 attached is acceptable. The hole above the transfer girder flange should have rounded corner similar to the one below the flange. The bolt nearest to the hole shall still be installed.

2). Confirmed that for the plates that still yet to be fabricated, the hole nearest to the access hole may be omitted to maintain minimum edge distance.

T-1669	SSS - Insufficient Cope for Erection Clearance	Closed	09/09/2014	09/19/2014	09/15/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to beams highlighted in S1-2503 (attached) and work with this RFI.

The 7" cope shown in 2/S1-5017 is not sufficient for erection clearance. The connections on the other end of these beams dictate that the beams cannot be dropped vertically into position during erection (Please refer to attached SK RFI 813 SK1 and SK RFI 813 SK2). Beams have either a gravity moment connection (per 1/S1-8003) at odd gridlines or a shear plate connection (per 1/S1-8000) at even gridlines. These beams connect into the bus deck perimeter beams which must be installed first in our erection sequence due to the constraints of knife/pin connections at either end at the bus deck level cast nodes.

Please advise.

SUGGESTION:

We propose increasing the 7" bottom flange cope to 9.5" for both scenarios. We have modelled both cases and can erect the beams with a cope of this size.

ANSWER: **Accept Suggestion:** ☐

Suggestion acceptable.

REQUEST:

Reference metal decking shop drawings submittal

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

package TG0701-92D & SK1

1) On sheet 24, reviewer's comment requires studs on transfer girder. Note at TR3 the concrete cover on top of girder flange is 3". T/slab=21.344, T/steel=21.19) The shortest available stud is 3" after welding, resulting in insufficient concrete coverage. Please confirm shear studs are not required at TR3.

2) On sheet D16, detail 4, reviewer's comment requires 3" of bearing at S3 slabs per 2/S1-5000. Note, detail 4 depicts a deck flute parallel condition, note 2 on 2/S1-5000 indicates 2" bearing (3" bearing where noted) at supporting members perpendicular to deck span and 1-1/2" at members parallel. As this is a parallel condition the minimum bearing required is 1-1/2". Confirm detail is acceptable as is.

2) Confirmed.
TT: RFI Reason for Request is appropriate.

T-1671 **SSS - Kicker Interference at Ground Level GL 22-24** **Closed** **09/09/2014** **09/19/2014** **09/19/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 578 SK1 for items 1 & 2:
The kicker brace connections to the girder will foul the 2-1/2" stiffeners at two locations on each grid line. Confirm if option 1 or 2 is acceptable.
1) Option 1: Confirm it is acceptable to remove the fouling 2-1/2" thick stiffener plate and model the full height 1" shear plate as shown.
2) Option 2: Confirm it is acceptable to move the W30x90 as shown and connect to a 2 1/2" thick full height stiffener plate extended to the top as shown. Note option 2 has additional cost implications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Options 1 and 2 are not needed. Move the W30 beams by few inches towards GL E so that the kicker braces clear the 2 1/2" stiffener plates.

TT: We disagree with the reason for RFI request. We categorize this as no cost clarification.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*
T-1672	**SSS - Stiffener Interference at Ground Level GL 24**	**Closed**	**09/09/2014**	**09/19/2014**	**09/22/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 595 SK1:
Confirm the beam location dimensions per S1-6050 & RFI T-1573 shown in red may be adjusted as shown in blue in order to connect the noted W44x230's to the 2" stiffener plate below the column flange. If not, supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Moving the beams as shown on SK1 in the RFI to utilize transfer girder stiffeners by omitting the shear plates is acceptable with the following condition: Provide (5)- 1 1/2" diameter A490-X bolts (single vertical row) at the connection on the west ends of the two W44x230 beams. Minimum bolt edge distances Leh and Lev shall be 3" and 4" respectively and bolt spacing shall be 4 1/2". Note that only the WF beams are allowed to be moved. Steel above the WF beam supporting the W-3 system shall be located per locations on S1-6050 and details on S1-8004.

TT: We agree with the reason for RFI request "Alternate Proposal", disagree with "Engineering Conflict". We categorize this RFI as request for substitution and no cost clarification considering the omitted shear plates.

T-1673	SSS - Structural Steel Additional Seismic Requirements	Closed	09/09/2014	09/19/2014	09/22/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per Project Specification 'Structural Steel-Additional Seismic Requirements' 05-12-10-7, Section 2.3 - Source Quality Assurance, Part C - Non-Destructive Testing of Welded Joints, #1 states 'Non-destructive testing shall be conducted at locations required by AWS D1.8 and AISC 341 Appendix Q5.2. Frequency of testing shall be as required by AISC 341 Appendix Q5.2 and Table 2-1 (please see attached).

AISC 341 Appendix Q5.2, Part g - 'Reduction of Percentage of Ultrasonic Testing and Part h - 'Reduction of Percentage of Magnetic Particle Testing specifies a formula for reduction of percentage of weld testing UT and MT (please see attached).

XKT has welded each type of weld joint we will see for the 130 Moment Columns. XKT's repair percentages have been well below the required limit of 5%, to demonstrate the quality of our welders.

Per this section of specifications, the amount of UT and MT testing is permitted to be reduced if approved by the engineer of record.

To facilitate production and project schedule, XKT is requesting the engineer of record to implement this reduction to be performed by ISI QA Inspection Services.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT's recommendations are listed below. The final decision rests with TJPA/Turner.

. No reduction in Ultrasonic Testing is permitted for DCW (AISC 341, Section J6.2g)

. No reduction is permitted for Magnetic Particle Testing or Liquid Penetrant Testing of Extra Smooth surface or weld access holes.

. No reduction in CJP weld splice of steel plates

. No reduction in Ultrasonic Testing of the plate material in the designated region of the link beam

. For non-DCW, the reduction of rate of Ultrasonic Testing may follow AISC 360, N5.5e, based on Risk Categories IV.

. For non-DCW, the reduction of rate of Magnetic Particle Testing may follow AISC 341, Section J6.2h.

The reason for the RFI should be revised to Request for substitution (TT category vii).

Jack Adams
9/19/2014
RESPONSE:
XKT welding (by Trade Subcontractor fab shop XKT) of Moment Columns and weld repair percentages may be below the required limit of 5%, to demonstrate the quality of our welders. However; the amount of NDE (UT and MT testing) will not be permitted to be reduced at this time as this is a contractual decision of the Owner, not EOR.

Number	Subject	Status	Date Created	Date Required		Cost Impact	Proceed
T-1673.1	SSS - Structural Steel Additional Seismic Requirements	Open	12/18/2014	12/28/2014		Potentially	☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Per the response to SK RFI 812 (T-1673), the EOR made

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

recommendations that allowed for certain reductions in NDT. The final decision rested with TJPA/Turner and at that time they decided to not permit the reduction of any NDT testing.

However, as per the meeting held at XKT Engineering on 11/14/14, it was discussed that TJPA/Turner would revisit the NDT reduction request from XKT Engineering. XKT has continued to demonstrate the quality of their welders, keeping repair percentages at 2%, well below the required limit of 5% as per AISC. At this time, XKT has completed 16 moment frame columns with another 20 columns currently in fabrication (see attached status report). This experience has allowed them to substantiate their repair percentages and the overall quality of their work.

Please confirm that the EOR's recommendation to SK RFI 812 (T-1673) is acceptable and the NDT reduction may occur at the XKT Engineering facility.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 604 SK1 & SK2 for items 1 & 2:
1) Condition at Transfer Girders with 4" thick flange:
It is not possible to fit in the number of bolts as requested in 1/S1-5010 with the 4" thick Transfer Girder flange even with minimizing the end distance on the angles to 1 1/4" as shown. This condition occurs at W40x183, W36x135, W33x118, W30x108, W30x90 & W21x44 on S1-2606 & S1-2607. Confirm it is acceptable to reduce the number of bolts by one or supply an alternate connection.
2) Condition at Transfer Girders with 3" thick flange:
It is not possible to fit in the number of bolts as requested in 1/S1-5010 with the 3" thick Transfer Girder flange unless we minimize the end distance on the angles to 1 1/4" as shown. This condition occurs at W40x183, W36x135, W33x118, W30x108, W30x90 & W21x44 on S1-2606 & S1-2607. Confirm this is acceptable or supply an alternate connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Double angle connection detail at gravity beams framing into transfer girders is per 12/S1-5010 which calls out N-1 bolts, where N is the number of bolts per schedule on 1/S1-5010. Connection detail as shown on SK2 in the RFI is incorrect. Also note that the reference to S1-2606 and S1-2607 in item 1 is incorrect as transfer girders are at ground level.

2) See response to 1).

We disagree with the reasons for RFI request " Engineering Conflict", "Alternate Proposal" and "Verification". We categorize this as " Called out in contract documents".

T-1687	SSS - Light Column Pipe Ring Bending Radius at EL 12ft	Closed	09/10/2014	09/20/2014	09/18/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The light column ring at EL. 12'-0" is specified as 6'-11 3/4" diameter (measured from center of pipe), from 14" diameter pipe with a wall thickness of 1.97". Refer to section C on S1-6006.

The minimum achievable bending radius for a pipe this size and wall thickness is 42". This exceeds the actual designed radius by 1/8". We are requesting permission to change the diameter of this ring to 7' which will allow the minimum bending radius to be achieved. The difference in ring member size will be accommodated in the connection plates which join the ring to the cast nodes.

Please confirm acceptance for this proposal

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm that changing the ring diameter from 6'-11 3/4" to 7' in order to accommodate the minimum achievable bending radius is acceptable. When accommodating the difference in the connection plates, ensure minimum distances (ie edge of bolt hole to edge of plate) are adhered to.

We agree with the reason for the request, stating that it is a substitution request.

T-1692	SSS - PE201 Missing Connection Details	Closed	09/12/2014	09/22/2014	09/24/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 493 SK1 & SK2 for items 1 & 2:

1) Detail 12/S1-7604 cannot be applied at this corner because the column size is HSS6x6x1/4. See attached SK2 and supply a detail showing how to connect the members at this intersection. The same condition occurs in details 1,2,3/S1-7002 & 1,2,3/S1-7003.

2) Supply a slab edge detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Detail 12/S1-7604 shall not apply at the location highlighted in the RFI. The HSS 6x6x1/4 column shall be continuous and typical detail 8/S1-7604 shall apply at the HSS beams framing into the column. The only exception to this is in details 2 & 3/S1-7003, where the HSS10x8x1/2 beam parallel to the GL E.6 shall be moment connected to the HSS 6x6 column per detail 6/S1-7604.

2) Slab edge detail shall be similar to 8/S1-5000, except, provide a closure plate tack welded to the HSS 10x8 beam in lieu of the edge bent plate. The deformed bar anchor per 8/S1-5000 shall be waived for the slab edge condition highlighted in the RFI.

TT: We disagree with the reason for RFI request "Engineering Conflict", agree with "Insufficient Information". We categorize this as no cost clarification.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

See attached CD RFI # 493.1 SK1 & SK2 for items 1 to 3:
1) The response in RFI T-1692 (SK 681, CD 493) is a revision to the contract documents as it is clearly stated in the details on S1-7001, S1-7002 & S1-7003 that detail 12/S1-7604 is to be applied at 4 corners of PE201. The response will require revisions to the model and the material order.
Please supply a splice location and a splice detail for the HSS6x6x1/4 column that is now to be continuous.
2) Detail 8/S1-7604 cannot be applied as shown. Confirm it is acceptable to clip the corners as shown or supply a new detail.
3) Details 6 & 8/S1-7604 cannot be applied as shown. Confirm it is acceptable to cope the corners as shown or supply a new detail.

1) To avoid revisions to the model and material order, the columns shall remain discontinuous. Provide connection similar to typical detail 8/S1-7604 at the HSS 10x8x1/2 and HSS 8x8x3/8 beams framing into the HSS 6x6x1/4 column. At the HSS 10x8x1/2 beams, weld the top L6x6 angle per 8/S1-7604 to the HSS 8x8x5/8 beam. The vertical leg of the L6x6 angle may be cut as needed so that angle may be welded to the HSS 8x8x5/8 beam. For connection at the HSS8x8x3/8 beam, provide a cap plate at the end of the HSS 8x8x5/8 beam and weld the upper L6x6 angle per 8/S1-7604 to the cap plate. Provide a 5/16" all around fillet weld to connect the cap plate to HSS 8x8x5/8. The only exception to this is in details 2 & 3/S1-7003, where the HSS10x8x1/2 beam parallel to the GL E.6 shall be moment connected to the HSS 6x6 column per detail 6/S1-7604.

2) Confirmed.

3) Confirmed.

TT: We disagree with the reason for request: Engineering Conflict. We categorize this RFI as no cost clarification.

T-1692.2	**SSS - PE201 Missing Connection Details**	**Closed**	**11/14/2014**	**11/24/2014**	**11/24/2014**	**Potentially**	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 493.2 SK1:
The response to item 1 in RFI T-1692 (SK 681, CD 493) requested the connection for the east west beams to be connected per 6/S1-7604. This has been done as shown here but connecting the HSS8x8 on the north side becomes a problem. Confirm the connection as shown with a 2" thick fill plate tack welded to the bottom plate is acceptable or supply an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable. Provide a double angle connection similar to 8/S1-7630 at the north HSS8x8 beam with the angles welded to the HSS10x8x1/2 beam.

TT: We disagree with the reason for request: Engineering Conflict, agree with Verification. We categorize this RFI as no cost clarification.

T-1695	SCS - Foundation Wall Conduit Penetration Location	Closed	09/12/2014	09/22/2014	09/26/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

See attached exhibits.

See Exhibit A mark-ups. A minimum depth criteria is provided but the actual elevations or a finite depth for the 2" PVC conduits are not given. The dimensions for the typical support bracket are not given either.

1. Please provide either an elevation or a finite depth for the conduits.
2. Please provide the spacing between the 2" RG conduits and 6" RG conduits.

The section detail A/ES-2107 provides elevations and dimensions between the 6" PVC to 2" PVC but the numbers do not add up nor does the dimension convert correctly.

3. Please clarify which value to use in detail A/ES-2107 and correct the remaining values.

See Exhibit B. There is a spacing discrepancy between A1-2862, E1-3208 and ES-2108 for the 2" PVC sleeves. The architectural slab edge plan A1-2862 shows a typical dimension 1'-9" centers between pairs of electrical sleeves. Detail 3/E1-3208 shows a 3' clear spacing between conduits. ED-2108 showing the vertical centerline matching the below 6" sleeve.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI, WSP, and SFPUC Consolidated Response:

1. For invert elevations of the 2" and 6" RG conduits, refer to ES-2017 REV C EDIT attached. Invert elevations for 2" RG conduits is 1.79' TYP at the foundation wall from invert elevation of the 6" RG conduits.

SFPUC Note: In general, the depth of the 2" conduits is not critical at the trenches and was not identified in order to allow flexible choice by the Contractor of conduit supports spacers between the 2" and 6" conduits. Maintain minimum of 3" separation between the 2" and 6" conduits at the trenches.

2. For spacing between 2" and 6" RG conduits, refer to architectural slab edge plans for horizontal dimensions, SFPUC drawings for vertical dimensions or invert elevations. Typical vertical spacing between 2" and 6" RG conduits is 1.79', refer to ES-2017 REV C EDIT attached.

3. For the updated and coordinated sheets between architectural, electrical, and SFPUC drawings, refer to architectural slab edge plans issued with ASI-127, for updated electrical plans, refer SKE-RFI-T-1695-1 to 4 and for updated SFPUC ES-2107, refer to ES-2107

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

4. Please clarify whether to use the detail from the architectural slab plan or E1 or ES drawings for 2' RG conduit lateral spacing.
5. Please clarify whether to use the detail form the architectural slab plan or E1 or ES drawings for 6" RG Conduit lateral spacing.
6. The variation in width between conduits in E1 and ES suggest a transition from one spacing to the other. Please confirm that the PVC pipes transition from the spacing shown in ES to E1 drawings before reaching the foundation wall.

REV C EDIT attached.

SFPUC Note: ES electrical drawing sheet dimensions are approximate. As noted on the sheets, the dimensions shall match wall penetrations. For information, refer to revised Detail A, Drawing ES-2107 REV C EDIT attached. For wall sleeve sizes refer to electrical (E1) plans.

4. For 2" RG conduit lateral spacing, refer to architectural slab edge plans for horizontal dimensions issued with ASI-121 and 127

5. For 6" RG conduit lateral spacing, refer to architectural slab edge plans for horizontal dimensions issued with ASI-121 and 127.

6. For transition of conduits, refer to note #11 on SFPUC ES-2107. Both vertical and horizontal spacing changes from the ES drawing trench sections as the conduits enter the wall penetrations.

T-1696 **SCS - Scallop and Fin Wall Rebar Connection** **Closed** **09/15/2014** **09/25/2014** **09/25/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per S1-3282 detail 7 and section B sows continuous horizontal bars 3-#4 rebar each face and 2-#10 rebar in the fin wall with tails embedded into the scallop wall.

Shimmick requests approval to have the option of a lap splice for the scallop wall to fin wall connection and or the use of Dayton Form Savers at the location. See attachment A.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The top bars (2-#10s) are already shown as lapping with hooked #5s at the scallop wall therefore they are not shown continuous and do not require any change. Use of lap splice or for savers for the skin (#4s) and bottom bars (#5s) are acceptable at the Contractor's option.

T-1697 **SCS - Request To Use Snap Ties for Roof Top** **Closed** **09/15/2014** **09/25/2014** **10/01/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per specification section 03 10 01 Part 2 - Products 7. H. Snap-Off Ties: Use for concrete walls below grade and walls which will not remain exposed to view and are not scheduled for architectural finishes.

Drawing A 1-8608 shows the scallop and perimeter walls and A 1-8402 shows the skylight walls not being visible from the sides because of the fascia details and the earth backfill. These walls are not called out as architectural walls on the architectural drawings.

Please confirm that typical snap ties are acceptable at perimeter wall, scallop wall, and sky light wall locations.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Design Team does not object to the use of Snap-Off ties only at skylight wall locations. At Roof Park level perimeter parapet wall including Scallop walls, removable form ties may be used, provided they comply with 03 10 01 2.2 B.7.g - "Removable Ties". Perimeter wall and scallop concrete walls shall be prepared TO receive elastomeric coating finish.

T-1698 **SCS - Wall Opening Detail Conflicts for Horizontal and Diagonal Bars** **Closed** **09/15/2014** **09/25/2014** **09/18/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention.

One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar.

1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar.

Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per General Note GR-11, the contractor shall apply contract details to similar conditions. It is acceptable for review of contractor's adaption of details to similar conditions to occur in submittal review or through the RFI process. Note that this RFI does not make reference to any specific condition where the typical detail cannot be similarly applied. Neither, does it contain suggestions for application of the detail to the conditions the contractor may have in mind.

Responding to the RFI in a general sense, the first issue raised is the potential for diagonal trim bars to conflict with MFB reinforcing. As with openings near the tops of walls, typically trim reinforcing is bent parallel with the top of the wall or trim reinforcing on either side of the top of the opening is combined in one piece of reinforcing. Either approach is acceptable when necessary to avoid the MFB's or tops of walls.

The second issue raised is the potential for horizontal

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.

additional reinforcing to interfere with the MFB's. The horizontal reinforcing is a smaller diameter than the MFB longitudinal reinforcing and the conflict is not obvious to us. If the contractor encounters a conflict, the spacing requirements of Detail 4/S1-3207 may waived in favor of providing the number of required bars over the specified spacing. It is also permissible for added horizontal bars to be placed in interior layers where the previous method is not achievable.

The third issue raised is that additional horizontal bars may extend past Foundation Wall CJ's. This is no different than typical wall horizontal reinforcing. The contractor shall either build their forms around the required added reinforcing, as with typical horizontal wall bars or they may request the use the Type 2 couplers. Where additional horizontal reinforcing bars would extend past a corner, the bar may be terminated with a standard hook at the far face of the corner.

Lastly, the RFI requests that RFI T-1666 response be applied. RFI T-1666 and T-1698 are to be applied separately to the respective bars they address.

Reason for request is "Other" - agreed.

T-1699 **SSS - Drag Beam Web Stiffener Plate Connection Clarification** **Closed** **09/15/2014** **09/25/2014** **09/26/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 533 SK1 for item 2:

2) Confirm the 3/8" bent plate (50 ksi) terminates on top of the "S1" slab on the Second Level and it does not extend to the top of the side plates in detail 5/S1-5004.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, terminate the S2 slab 3/8" bent plate in detail 5/S1-5013 at the top of the adjacent S1 slab.

Note: there was no item #1 submitted with this RFI.

TT: RFI Reason for Request appears appropriate.

T-1701 **SSS - Insufficient Cope for Erection Clearance** **Closed** **09/15/2014** **09/25/2014** **09/22/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to beams highlighted in S1-2503 (SK1) and work with this RFI.

The 1' 11 ½" cope is not sufficient for erection clearance as shown on A4644, A4645 (SK2, SK3). The Type 4 (V) drag connection on the other end of the beam limits the position in which the beam can be erected (See SK4, SK5). The beam needs to be erected from below and positioned through the shear plate on the moment frame column. As you slowly lift the back side that is currently coped, a ¼" clash transpires between the top flange of W40x327 and the shear plates on the bus deck casting.

Please advise.

SUGGESTION:

We propose increasing the 1' 11 ½" top flange cope to 2' 0 ½", please confirm this is acceptable.

ANSWER: **Accept Suggestion:** ☐

Increased cope dimension proposed in the RFI is acceptable.

TT: We disagree with the reason for RFI request, erection is a means and methods issue. We categorize this RFI as clarification for Issues on means and methods.

T-1702	SSS - Weld Terminations on Moment Frame Column Shafts	Closed	09/15/2014	09/25/2014	09/26/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please see Section 5.17.1- Figure 5.2 from the AWS D1.1 Structural Welding Code (See SK1). In the sketch, proper terminations are shown for both a CJP weld and fillet weld as they approach an access hole.

The moment frame column shafts have been designed with a varying thickness of web. These web splice locations require an access hole to account for the different weld details between the web and flange, with generally a CJP weld being performed on one side and a fillet on the other (See SK2).

The shaft drawings that have been detailed show an access hole that conforms to 5.17.1 - Figure 5.2. Note, however the shaft drawings do not show the weld termination detail. It is industry standard for the modeler to exclude these details as it is up to the fabricator/inspector to understand that welds should always be terminated as per the section of the AWS code they fall under, unless the design engineer specifies otherwise.

Currently, the TJPA shop inspection staff has directed our fabricator to terminate both the CJP & fillet welds similarly - as shown for a fillet weld (See SK3). Please confirm that this is acceptable as currently shown.

Please also confirm that the weld terminations should be completed as per AWS D1.1 - Section 5.17.1- Figure 5.2 for all columns fabricated in the future. Terminating CJP welds, as currently directed by the inspection staff to be flush with the end of the access hole will result in additional costs to our fabricator.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1.) First question is not entirely clear since CJP and fillet welds are not terminated similarly per AWS D1.1. Per Figure 5.17 of AWS D1.1, fillet welds are not returned whereas CJP welds are terminated smoothly within the weld access hole envelope and shall not create any stress risers.

2.) For weld access holes in the SFRS, refer to specification 05 12 10, section 2.2.C.c, which requires compliance with ANSI/AISC 360 as a minimum, which is compatible with AWS D1.1, Section 5.17.

TT: We disagree with the reason for RFI request "Engineering Conflict". We categorize this RFI as called out in contract documents.

Jack Adams
9/26/2014
RESPONSE:
Contrary to the RFI question, the TJPA shop inspection staff does not direct fabricators . These NDE Inspectors either accept or reject welds based on AWS Code. In this case the EOR has provided the answer that weld terminations should be completed as per AWS D1.1 - for all columns fabricated. Terminating CJP welds, as per AWS Code to be flush with the end of the access hole if there are any ¿additional costs¿ are solely the responsibility of the Contractor, not TJPA.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1702.1	SSS - Weld Terminations on Moment Frame Column Shafts	Closed	10/01/2014	10/11/2014	10/17/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As a follow-up to SK RFI 821 (T-1702.1), please note the following:

It is unclear on how to exactly fix the weld terminations

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No further action needed at the locations indicated where the holes are used for weld transitions. The holes as dimensioned in the shaft drawings are acceptable. However, AWS D1.1 Section 5.17.1-

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

that currently do not conform with Section 5.17.1- Figure 5.2
from the AWS D1.1 Structural Welding Code.

Skanska proposes two options that would allow the transitions to be permissible as per AWS code.
Option 1: Remove material from the web/CJP that would allow for a proper transition down to the flange. See SK1.
Option 2: Add additional weld metal to the CJP that would allow for a proper transition down to the flange. See SK2.

Please confirm that both options are acceptable & it is at the fabricators discretion to choose which method.

Figure 5.2 will strictly apply where the column flanges are welded to other framing (e.g., to base plates, cast nodes, and similar).

T-1703 **SSS - Fouling Issues for CP8** **Closed** **09/15/2014** **09/25/2014** **10/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer
To: Turner Construction Company Phil Militello
Answered By: Adamson Associates, Inc. George Metzger
Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 611 SK1 to SK4 for items 1 to 4:
1) This hole at the bottom flange for CP8 fouls the full depth gusset plate for the CP6 brace per 4/S1-8003. Please provide a solution.
2) The noted hole at the bottom flange for CP8 fouls the full depth gusset plate for the W40x277 beam on Grid 1.4. Please provide a solution.
3) The noted 4 holes will not be accessible as they are within the plate closure for CP5 per 1/S1-8003. Please provide a solution.
4) The noted holes are too close to the 2" thick stiffeners for the CP5 connection per 1/S1-8003. Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) See response to RFIs T-1514 and T-1514.1.

2) Move the shear plate for the W40 beam connection towards the other side of the beam web. Move the two bolt holes along GL 1.4 to the east of GL 1.4 by few inches so that the bolts clear the shear plate.

3) For bolt installation at the 4 holes, tack weld the bolt heads to the top of bottom flange and tighten the nuts from below. Alternatively, 5" diameter access holes may be provided in the 1" stiffener plates similar to detail 11/S1-8001.

4) Move the two bolt holes by few inches so that the bolts clear the 2" stiffener plates.

TT: We disagree with the reason for RFI request. We categorize this RFI as clarification for issues on means and methods and previously answered RFI.

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Spec section 03 30 20-16-3.2 states that the maximum spacing for interior walls and ramp slab is 60 feet. In the response to the Area 1-4 and Area 5 Comprehensive Drawings, TT indicated that no movement joints were required in the Vehicle and Bicycle Ramps below the ramp.

To facilitate construction, please confirm:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. TT takes no exception to use of lost formwork at underside of ramp.

2. Confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1) The bicycle ramp and associated ramp walls can be poured monolithically from the start of the walls to the wall perpendicular to the ramp walls under the slab(See attached). Due to access issues, SCCI has to use lost formwork (styrofoam) for the underside of ramp formwork. SCCI will use this same form work for the inside of wall form.

2) The maximum joint spacing for the Ramp and Ramp Walls can be increased to 90 feet as no movement joints are required below the vehicle or bike ramps.

T-1710	SCS - Roof Scallop Wall Construction Joint Relocation	Closed	09/19/2014	09/29/2014	09/26/2014	Potentially	☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per drawing Sl-3282 detail 4 and 5 the base of the scallop wall requires a chamfered starter wall that transitions from a 1 to 1 angle, 3 to 2 angle, and a 4 to 1 angle throughout the geometry of the scallops.Shimmick requests approval to relocate the construction joint from the wall to the deck and pour the full height of the wall including the deck beneath. See attachment "A" for clarification. This change would only occur at the scallops and detail 2 "Typical walls at the roof north & south edges" would not change.

Please confirm the joint location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor's proposal is acceptable in concept however moving the construction joint to the slab will result in long rebar dowels which will likely require splicing via laps or form saver couplers. The contractor should consider those detailing issues and submit the modified rebar detailing via shop drawings for review.

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per S1-3282 detail 9 "SHEAR KEY AT ROOF" calls for vertical #4 rebar dowels to be cast with the structural deck. Per S1-3281 detail 7 "SIGNAGE PYLON FOOTING DETAIL" calls for vertical #5 rebar dowels to be cast with structural deck. For constructability reasons it is essential that Shimmick's operations maintain open access for roof top small cranes and man lifts for all trades. Per specification section 03 20 02 Part 2.3 F. 3. Adhesive for dowels in existing concrete b. HIT-RE 500_SD injectable adhesive by HIL TI, Inc., is an approved method. The minimum embedment depth requirement for #4 rebar is 2.75 inches and the concrete thickness requirement is 4 inches at the shear keys. The minimum embedment depth requirement for #5 rebar is 3.125 inches and the concrete thickness requirement is 4.375 inches for the signage pylon. The roof deck is 7" with 3" tall flutes leaving a clear space of 4 inches. Shimmick's solution for the 4.375 inch concrete thickness requirement is to pour an additional .5 inches of concrete at the concrete deck where the pylons will be installed. See drawing attachment "A" and product data attachment "B" on page 4 for rebar drill and epoxy requirements.

Shimmick requests approval for the shear keys and the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Request not acceptable, follow the details provided in the construction drawings. Alternatively, contractor may consider using form saver couplers at no cost to the owner.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

pylons be drill and epoxy rebar doweled connections after the roof top deck has been poured and larger operations have been completed.

T-1712 **BGP - Bike Ramp Blockout for Steel Column at GL 5-G.7** **Closed** **09/19/2014** **09/29/2014** **10/01/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The structural details for the blackout in the Bike Ramp for the steel column at GL 5-G.7 is called out in S1-2202. The drawing calls out for the ramp walls to be blocked out 2'-0" to the east and west of Gridline 5.

The architectural details for the blockout in the Bike Ramp for the steel column at GL 5-G.7 is called out in A 1-2202 and A 1-9209. The drawings on A 1-9209 show a plan view detail at 3 different levels with no supplementary elevation views. Detail 4-A 1-9209 appears to call out for the ramp walls to be blocked out 2 '-1 " to the east and west of Gridline 5 at the base of the column. Detail 5-A 1-9209 appears to call out for the ramp walls and slab at the ramp slab level to be blocked out 1 ' -1 1/2" to the east and west and 1' -2" to the south of the center of the column and perpendicular to the ramp wall.

Please provide an elevation detail for the column-ramp interface at GL 5-G.7 that clarifies the discrepancy between S 1-2202 and Al -9209 as well as clarifies the elevation at which the wall blackout changes from Detail 4-A1-9209 to Detail 5-A1-9209 (if A1-9209 is correct).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to attached Structural Sketch SKS-0420 and Architectural Sketches SKA-4171 and SKA-4172 for clarification of column and ramp interface as requested in RFI.

T-1714	**SCS - Roof Seismic Joint Gap 22" or 24"**	**Closed**	**09/22/2014**	**10/02/2014**	**09/22/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Claude Titche

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

The roof top seismic joint shown on sheets Al-2603, Al-8897 detail 2 and Al-8898 detail 1 section elevation shows the gap between the cast in place walls at line 10 and at line 20 to be 24 inches. A1- 8613 detail 1 is a section view of the seismic joint for the exterior wall for line 10 & 20 shows the gap between the cast in place wall at line 10 and at line 20 to be 22 inches.

Please clarify if the gap between the cast in place walls at the seismic joints needs to be 24 inches or 22 inches.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached SKA-3963 and SKA-3818, to be issued in forthcoming ASI-124.

T-1715	**SCS - Foundation Wall Mix Design**	**Closed**	**09/22/2014**	**10/02/2014**	**09/23/2014**	**Potentially**	☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

The answer to QBD 18 for the TG07.2 Trade Package, which asked ifthe "slab and beam mix can be used for the fourth wall lift", was "Confirmed. The slab and beam mix can be used for the fourth wall lift." Submittal TG0702-118 submitted the slab and beam mix and included the foundation wall as one of the usage locations. The review comment stated "Mix design for Foundations Walls shall be as approved in Submittal TG0600-203.l. Omission of SRA is not acceptable" which is the Foundation Wall mix.

Please confirm if the Submittal Response to use the Foundation Wall Mix is superseding the answer to QBD 18 which confirmed the use of the Slab and Beam Mix design on the fourth lift foundation wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The number of Foundation Wall lifts changes with the contractor's means and methods. See RFI T-1467, issued after QBD 18, which increases the number of Foundation Wall lifts by one. In as far as QBD 18 confirms that it is acceptable to pour the Ground Floor slab and beams with the topmost Foundation Wall lift using the approved slab and beam mix, the QBD 18 response remains accurate.

Similarly, it remains unchanged that the approved Foundation Wall mix design shall continue to be used below the topmost wall construction joint.

Regarding reviewer comments on Submittal TG0600-203.1: Submittal makes no reference to lift numbers and simply states "Foundation Wall", for which an approved submittal already exists and for which the present submittal could not replace and meet Specification.

T-1716 **SSS - Field Weld Shear Plate Detail** **Closed** **09/22/2014** **10/02/2014** **10/03/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Detail 3/S1-7632 requires a field fillet weld for the shear plate to beam connection. Positioning an electrode or gooseneck to achieve the 7/16" weld on the back side will not be possible in the field due to the limited gap between the weld and vertical HSS member.

Please confirm it is acceptable to weld the shear plate to beam web on three sides on the near side and omit the far side weld. See attached SK1 for clarification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is not clear to us why this weld cannot be made. We understand the access is relatively limited but the same detail was used successfully in many other projects. If the concern is formation of unequal weld legs, that is acceptable as long as minimum weld size is satisfied and approved by the inspector.

TT: The reason for RFI is listed as "Alternate proposal". We categorize this RFI as request for substitution.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1716.1	SSS - Field Weld Shear Plate Detail	Closed	10/03/2014	10/13/2014	10/16/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Following further review of this detail it was found the varyi ng web thickness of the framing beams are significantly le ss than the 7/16" fillet required as per 3/S1-7632:
Typical framing beams are as follows:
- W12x44 - tw 3/16"(max 3/16" fillet as per D1.1 Fig 2.1)
- W16x26 - tw 1/4" (max 3/16" fillet as per D1.1 Fig 2.1)
- W18x65 - tw 7/16" (max 3/8" fillet as per D1.1 Fig 2.1)
- W21x44 - tw 3/8" (max 5/16" fillet as per D1.1 Fig 2.1)

Confirm these weld sizes are acceptable or alternatively if welding the shear tab on 3 sides (7/16" fillet) as originally r equested is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Maximum fillet weld sizes per AWS D1.1 Figure 2.1 are acceptable.

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 620 SK1:
The dimension between the edge of slab and center of beam on drawing 3490 Section A-A & B-B and drawing 4151 Section A-A in Package Number: TG0701-079.1 has been changed from 7" to 5". This does not agree with the latest issued drawings as shown on attached SK1, which shows the edge of slab to center of beam as 7" on the north, east and south sides. Note that drawings 3486, 3492, 3493, 4095, 9044 & 9083 in the same area have not been marked at approval.

Please confirm that the drawings are correct as submitted and no further action is required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Edge of slab revised to coordinate with steel submittal, refer to SKA-4183.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1723	SSS - SE502 & SE503 Fouling Connections at Bus Deck Level	Closed	09/22/2014	10/02/2014	10/06/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 622 SK1:
The connection for the horizontal HSS elevator beam per 1/S1-7630 and the connection for the elevator posts per 1/S1-7600 foul each other at the 2 noted locations.
Please supply an alternate detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

At locations highlighted in the RFI, provide welded connection at the top of the 5/8" plate per 1/S1-7630, not a bolted connection as shown on CD RFI 622 SK1, with the following modifications: Reduce the width of the 5/8" plate per 1/S1-7630 at the top to clear the connection angles per 1/S1-7600 by 1". Increase the plate thickness from 5/8" to 3/4". Increase PJP weld size from 3/8 to 5/8".

We disagree with the reason for RFI request. We categorize the RFI as change to be issued in future bulletin.

show the details for these items and whether or not they require a rebar or embedded anchor connection to the roof top structural deck.

Please provide details and whether or not they require a cast in place connection to the roof top deck.

For moisture sensor, refer to 32 84 00.

For Skylight One Trench Drain, refer to A1-8404.

For Hosebibs, refer to plumbing drawings and schedules.

T-1728 **SCS - Roof Top Pylon Rebar Connection** **Closed** **09/22/2014** **10/02/2014** **09/30/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

S1-3281 detail 4 shows the roof top security pole with a bolted connection to the structural deck. Yet all security and lighting references on A1-2602 to A1-2607 and E1-2602 to E1-2607 are shown as pylons which is consistent with detail 7 that was added per addendum 5 issue for construction.

Please identify where detail 4 is used on the A1-2602 to A1-2607 roof park level plan sheets.

For constructability reasons it is essential that access remains open for roof top operations with small cranes and man lifts for all trades.Shimmick requests approval to use drill and epoxy rebar connections after the roof top deck has been poured for the detail 7 pylon.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

) Both details 4/S1-3281 and 7/S1-3281 are used at the Roof Park Level. For the purposes of these details, the terms "pylon" and "pole" are synonymous. Detail 4/S1-3281 is correctly titled: "Roof Park Security Pole and Mast Light Foundation" and detail 7/S1-3281 is correctly titled "Signage Pylon Footing Detail". The locations of Security/Mast-Light pylons and Signage pylons are called out on the Architectural Plans A1-2602 thru A1-2607 and Landscape Drawings L1-2602 thru L1-2607 (note that Landscape also references coordinated details on L1-7644). For dimensioned graphic representations of footings for both Security/Mast-Light pylons and Signage pylons, see Roof Park Slab Edge Plans on A1-2902 thru A1-2907.

2) Refer to RFI T-1711 response.

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please see attached marked up drawings.

Drawing PI-2503 notes a hose bibb type HB-4 which leads directly to a3/4" CW pipe through the bus deck level. However, this sleeve is not displayed in drawing Al-2893, the corresponding drawing for embed location dimensions. Drawing Al-2883 notes a similar sleeve within the same column cover through the second floor level with location dimensions.

Please confirm that the noted Al-2883 sleeve dimensions may be used for the noted bus deck sleeve with missing dimensions. If not, please provide the dimensions for the noted bus deck sleeve with missing dimensions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For Hose Bibb HB-4, a 3/4" CW connection with a sleeve size of 3" is noted. Refer to P1-0051 rev 4 'Pipe Sleeve Schedule'. Only 4" or larger sleeves are called out and located on the slab edge drawings. On A1-2883, the sleeve on the second level is not the same sleeve and should not be used for any bus deck related information.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1733.1	SCS - Bus Deck Embeds: Hose Bibb HB-4 at GL 10-13	Closed	10/06/2014	10/16/2014	10/13/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Claude Titche

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference RFI T-1733 and also attached marked up drawings.

Drawing PI-2503 notes a hose bibb type HB-4 which leads directly to a 3/4" CW pipe through the bus deck level. However as this is a 3", this sleeve is not displayed in drawing AI-2893 which does not locate sleeves smaller than 4".

Please provide the dimensions for locating the noted bus deck sleeve.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger 10/10/2014:

Bus deck sleeve for HB-4 at GL 11 F can be located within the column cover at 1'-6" west of GL 11 and 1'-3" south of GL F. Note that this information will not be reflected on the slab edge drawing as only 4" diameter sleeves or larger are located in the slab edge drawings.

A1-8645 shows horizontal and vertical lines between

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The assumption stated in the RFI that only vertical

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

plywood sheets bolder than what is created by plywood alone. Specification Section 03 33 00 - 2.2 B Chamfer Strips: calls for 3/4" chamfer to be "used for horizontal joints between pours" Shimmick is assuming that the vertical lines are chamfer strips as well. Vertical chamfer strips would provide a weakened plane and help confine any vertical shrinkage cracks to the chamfer location.

1. Please confirm only vertical 3/4" chamfer strips at the plywood joints is being depicted by the wall elevations on A1-8645.
2. Please provide additional direction if anything is required at the vertical and horizontal joints.

joints are shown in detail 1/A1-8645 is incorrect. The cast-in-place architectural concrete wall layout shown in detail 1 on A1-8645 clearly shows both horizontal and vertical joints. Typical formwork details are indicated in 1/A1-8645, which is detail 5/A1-8648 showing the panel joints, reveal and tie hole concept.

Use drawing chamfer strips dimension in lieu of sizes in Specification Section 03 33 00 2.2 B.

T-1736 **SCS - Roof Architectural Stair 301 Construction Joint Spacing** **Closed** **09/24/2014** **10/04/2014** **10/13/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Claude Titche

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Specification Section 03 33 00 - 3.4 A. "Install joints..., at locations indicated on Drawings or as approved by TJPA Representative." Construction joints are not called out on A1-2603, A1-8645, or S1-2603.

Please confirm there is no restriction for the maximum construction joint spacing for architectural wall, otherwise provide a maximum allowable length for architectural wall pours.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger 10/10/2014:

In general, maintain a maximum concrete construction joint spacing of 60 feet. Per specification 03 33 00 3.4 and drawings, construction joints should occur at wall reveal design pattern layout only. Please see enclosed SKA-3795-R1.

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference specification section 03 30 02 3.2.A.3, RFI #T-1104, and rejected submittal number TG0702-503.0, in reference to Ground Level CJ layout.

The specification calls out 60' maximum CJ spacing in the ground floor concrete slab. RFI #T-1104 permitted TG 06.0 to use a maximum CJ spacing of96'. The rejected submittal includes comments suggesting to reduce the number of pours in Comment #2 on Sheet CJ-000, specifically in the metal deck section. Further comments would require a 97' 6" span at First and Fremont Streets and a potential 120' span between GL 19 and Wall 421. In order to match both suggestions, TG 07.2 would need to also increase CJ spacing beyond the specified 60', similar to TG 06.0.

1) Please confirm the ground floor 60' CJ spacing requirement only applies to the formed MFB/slab section and not the metal deck section.
2) Shimmick requests permission to increase CJ spacing in the formed MFB/slab sections beyond the specified 60' to 120' to allow for CJs per the submittal's comments. If this proposed limit is unacceptable, please provide a maximum for use at Ground Level.
3) Please confirm there is no maximum construction joint spacing for slabs on metal deck.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed

2) Confirmed to allow submittal comments

3) Confirmed

T-1741 **SCS - Upgrading Ground Level Mix Designs** **Closed** **09/24/2014** **10/04/2014** **10/07/2014** **Potentially** ☐

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please reference Sheets S1-2302 through S1-2307, Spec Section 03 30 02 2.1.

Between any single set of grid lines, the ground level features multiple mix designs. The ground level pandecking slabs S1, S3, and S10 have a 4,000 psi mix design. Between grid lines 16-17, 24-25, and 27-29, the pandecking slabs S11 and S12 have a 8,000 psi mix. Formed MFB/slab decks RCS 2 and RCS 16 have a 5,000 psi mix design. Currently each mix design would require separation by CJs. Shimmick plans to pour a continuous deck from north foundation wall to south foundation wall.

1) Typical: Shimmick suggests to replace all the 4,000 psi pandecking mix on the ground level with the 5000 psi RCS mix to match the formed MFB/slab deck. Please confirm this is acceptable.
2) Shimmick suggests to replace the 5,000 psi RCS mix on the ground level formed MFB/slab deck between GL 16-17, 24-25, and 27-29 with the 8,000 psi S11/S12 mix to match the pandeck. Please confirm this is acceptable.

An attachment demonstrates the change in the mix layout on ground level. Final CJ location is pending submittal approval.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Contractor proposed increase in concrete strength acceptable at the locations indicated.

2) Contractor proposed increase in concrete strength acceptable at the locations indicated.

Incorporate changes to corresponding CJ submittal.

T-1742 **SCS - ST201 Slope of Grade Beams** **Closed** **09/25/2014** **10/05/2014** **10/07/2014** **Potentially** ☐

From: Webcor Construction LP Stephanie Azzolino **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please see attached SKA-4052 (per RFI #T-1661), SKS-0398 & SKS-0400 (confirmed in RFI #T-1661and 1658), and Markup A1-2960A (per email from TT on 8/8). SKS-0400 visually shows the grade beams sloping but does not provide the exact percent of slope. Cross referencing the available sheets provides conflicting slopes for each beam.

The grade beams GBI and GB2 (see SKS-0398 for naming) are indicated on Mark up A1-2960A as "Constant

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Slopes of GB1 and GB2 are the same as that of the RCS3 slab which is 1.2%. GB3 and GB4 shall have a slope of 28%.

2) T/beam at the west ends for GB1 and GB2 shall be 19'-2". T/beam for GB2 on 1/S1-7001 will be updated in a future ASI.

3) Grade break for GB3 and GB4 occurs at the east face of the foundation wall.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Slope: Projection of Ground Level Slab". SKA-4052 calls out a single west-east slab slope of 1.2%. However, SKS-0398 provides two unique end of beam top elevations for GB1 and GB2, suggesting that the beams have two different slopes. The grade beams GB3 and GB4 (see SKS-0398 for naming) are indicated on Mark up A1-2960A as "Slope to Foundation Wall", where the grade break occurs at the west face of the foundation wall at EL + 15' 7". 3/SKS-0400 visually indicates the grade break at the east face of the foundation wall. No elevation on the east end of GB3 or GB4 is provided. The top of slab is provided, but 1/S1-5023 does not show a difference between top of slab and top of beam.

1) What are the slopes for GBI, GB2, GB3, and GB4?
2) What creates a difference in top elevation between GB 1 and GB2?
3) Where does the grade break for GB3 and GB4 occur?
4) What is the top elevation of GB3 and GB4 at the east face of the foundation wall?
5) What is the top elevation of GB3 and GB4 at GL 1.4, per 1/S 1-5023?

4) Top elevation of GB3 and GB4 at east face of the foundation wall is 15'-7".

5) Top elevation of GB3 and GB4 at GL 1.4 can be determined from information provided in 1) and 4).

Note that markup A1-2960 has been superseded by drawings submitted with ASI 127 on 9/12/2014.

REQUEST:

See attached CD RFI # 627.1 SK1:
The horizontal connection angle for the HSS18x6x5/8 per SKS-0418 is inside the elevator opening, typical 4 locations. Confirm that is the intent or supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The connection angle encroach into the opening shall be prevented as follows: Connect the HSS18x6 posts to the W16x26 beams per original design intent and as shown on SK1 in RFI T-1743. Cope bottom flange of the W30x90 beam partially at the HSS18x6 posts so that there is 1/2" clearance around the posts. Cut the horizontal leg of the L8x4 angle so that it clears the W30x90 beam web by 1/2". Weld the horizontal leg of the L8x4 angle to bottom flange of the W16 beam from top.

TT: We disagree with the reason for request: Engineering Conflict, agree with Verification. We categorize this RFI as no cost clarification.

T-1744 **SSS - Approval Comment Clarification at Cruciform Column GL 5** **Closed** **09/25/2014** **10/05/2014** **10/01/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 628 SK1:
Columns A1777 & A1778 occur on Grid 5 and according to Note 3 in detail 4/S1-5011, the connection as shown and submitted is correct. Confirm it is the intent of the approval comment on drawings 1777 & 1778 to revise the connection at columns A1777 & A1778.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Shop drawing review comments are correct, shop drawings do not show the correct connection detail. Typically, detail 4/S1-5011 applies where "H" is greater than or equal to "D", where, "H" and "D" are as shown in the detail. Detail 5/S1-5011 applies where "H" is less than "D". At the two locations in the submittal where the comments were made, "H" is less than "D" therefore detail 5/S1-5011 shall apply at these locations. In addition, as indicated in Note 3 in detail 4/S1-5011, there are locations where detail 5/S1-5011 replaces detail 4/S1-5011 regardless of the relative values of H and D.

T-1745	BGP - Elevator Sill Support Angle Conflict	Closed	09/25/2014	10/05/2014	10/05/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please find attached drawings and picture. During the installation of Elevator Sill Support Angle at GL4.2/D.4, it was noticed there is a portion of L6x4x3/8 embed per detail 4/Al -7576 that will not be able to be installed due to the conflict with horizontal bracing member (see picture).

Please confirm that it will be acceptable to discontinue the Elevator Sill Support Angle at the conflict location. The embed will be discontinuous within 6" proximity of the bracing member.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Omission of the conflicting section of angle is not acceptable for the final condition. It is within the contractor's means and methods to propose alternate detailing for review, if an alternate detail is required to accommodate their temporary works. Any alternate detailing shall be suitably equivalent for the purpose indicated in the contract drawings.

T-1746	BGP - Bar Layering Issues at Beam Intersection	Closed	09/26/2014	10/06/2014	10/01/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please verify that per detail 1/S1-3600, the call out for 1 ½" - 2" clear between top and 2nd layer bars is a minimum distance between bars.

As demonstrated in the attached picture, at the intersection of GL-3, GL-G, and GL-X, the 1 ½" - 2" clear cover is not attainable due to layering issues with intersection beams.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Grid 3 and Grid X MFB layering is per Elevations 1/S1-3603 and 2/S1-3653, respectively. The plan geometry of the intersection is per Detail 4/S1-3307. The specified bar clearance referenced in the RFI as 1-1/2 to 2" clear is incorrect as is the detail referenced. The specified bar clearance for MFB-3 is 2-1/2" and is not a minimum. Design intent for the MFB-X splice bars passing through the joint is for these bars to pass below ALL of the MFB-3 top bars, including MFB-3 add bars. Field observation indicates that the splice bars only pass beneath the MFB-3 topmost bars, above the MFB-3 add bars. The field layering configuration will only increase the specified 2-1/2" clearance marginally (within placement tolerance) and will be acceptable when all MFB top bars are brought to their highest elevation by crane or other means and subsequently secured.

REQUEST:

See attached CD RFI # 632 SK1:
The comment conflicts with the instructions issued with RFI T-1427 (SK 605 , CD 433) item 2, which requested a new beam to support the unsupported deck.
Which instruction is correct?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Instruction for adding a new beam per response to RFI T-1427 is correct. However, the W12x14 beam (A12285 in the submittal) shall be moment connected to the W16x26 beam (A11323). Member A12286 should also be moment connected to the A11323. There will be no connection between A12285 and the moment frame beam. Stop beam A12285 1" away from the moment frame flange edge. So essentially the high slab is supported by a cantilevered W12x14 beam.

T-1750	SSS - Added Splice Due to Crane Capacity	Closed	09/26/2014	10/06/2014	10/06/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Information Requested: Please verify it is acceptable to add an additional shop splice to the Built Up Members as shown in the attached sketches due to crane capacity.

THC crane capacity is 40 Ton. By adding the additional splice we can build the members in two pieces allowing the Subarc welding to be completed inside along with all secondary fit up. When this is complete THC will move them outside and splice the two pieces together.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

New splices requested by the contractor at the locations indicated in the RFI are acceptable.

TT: We agree with the reason for RFI request "Verification".

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1751	SSS - Upper Basket Column Pipes at Gridline 1	Closed	09/26/2014	10/06/2014	10/08/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Upper basket column pipes located at gridline 1/G and 1/C are shown to be concrete filled to top of pipe in S1-4018 Rev 4. Details shown in B/S1-4018 require a 2" diameter vent hole in the roof level cast nodes. Roof level cast nodes
at these locations are 72-36 and 72-37 and according to machining drawing CN-0127 Rev 4 (issued 12/19/13), neither
of these cast nodes have vent or grout holes.

Currently, pipes are detailed with (2) - 5/8" vent holes approx. 7" from the top of the pipe so the pipes could be filled
to this point. Please confirm currently detailed pipe vent holes can remain as is or provide new vent hole details for

the pipe and/or cast nodes.

Please note cast nodes 72-36 and 72-37 have already been released to Oregon Iron Works by Bradken.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Bus Deck Level Basket Column pipes at Gridlines G/1, C/1, F.7/33.5 and C.3/33.5 do not require concrete infill or vent holes for fire protection nor structural purposes.

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

1) May it be assumed that the missing stiffeners are the ones hi-lited in yellow in detail 7/S1-8002?
If yes, please supply the missing information for thickness, location and welding for the stiffeners.

2) May it be assumed that the missing stiffeners are the ones hi-lited in yellow in detail 11/S1-8002?
If yes, please supply the missing information for thickness, location and welding for the stiffeners.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1-) Detail 7/S1-8002 shows a pair of vertical stiffeners, but refers to 1/S1-8001, which does not have the vertical stiffeners. It is confirmed that the vertical stiffeners are not required. The comment "missing stiffeners" on the shop drawings may be ignored.

2-) Detail 11/S1-8002 shows a pair of vertical stiffeners, but refers to 1/S1-8001, which does not have the vertical stiffeners. It is confirmed that the vertical stiffener are not required. The comment "missing stiffeners" on the shop drawings may be ignored.

T-1753 **SSS - Stiffener Fouling Box Beam at GL 2-3** **Closed** **09/26/2014** **10/06/2014** **10/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer
To: Turner Construction Company Phil Militello
Answered By: Adamson Associates, Inc. George Metzger
Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 631 SK1:
The full depth stiffeners per 8/S1-8003 foul the Box beam as shown.
Please supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We assume that the reference to detail 8/S1-8003 in the RFI is incorrect and intended reference was to detail 6/S1-8003. At the location indicated in the RFI, run the stiffeners from the bottom flange of the WF beam to the underside of the box beam. Weld stiffeners per detail 6/S1-8003 except provide welding on two sides only, no welding required between the stiffener and the box beam.

TT: We disagree with the reason for RFI request. We categorize this RFI as no cost clarification.

T-1754	SSS - ST202 Approval Comment Clarifications at Second Level	Closed	09/29/2014	10/09/2014	10/21/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 629 SK1
The model has been built per the dimensions in 3 & 5/S1-7004. This approval comment directs us to confirm locations per A1-7004 in AS1-121 and introduces conflicting dimensions as A1-7004 shows different post locations than S1-7004. Per the American Institute of Steel Construction Code of Standard Practice Section 3. Design Drawings and Specifications, subsection 3.1, the structural drawings are the document Skanska used to locate the stair posts.
Please clarify the conflicting information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Architectural Details locate stair support posts according to typical structural stair details (sheet S1-7601). Actual stair layout and tread locations are determined by Architectural Drawings. At this location it is acceptable to have the landing and stair support beams not aligned to the center of the post.

T-1755	SCS - Electrical Conduit in Foundation Wall	Closed	09/29/2014	10/09/2014	10/19/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference: ES-2107(Dated: 04/24/14) , A1-3010(Dated: 07/18/14)

Detail A & B on ES-2107 provides the section view for PG&E 12 KV Main Service coming into North Electrical Room (B1289) but A1-3010 doesn't refer to an Elevation view identifying these sleeves in the walls. Please confirm the section views and the elevation of the bottom of the conduits in Detail A&B/ES-2107 are correct.

Reference : A1-9244(Dated: 07/18/14), ES-2107 to ES-2111(Dated: 04/24/14)

Detail D/A1-9244 specifies center to center vertical spacing between 2" and 6" electrical conduits as 1'-5"(See attached). Please confirm this spacing is applicable to all the section details in ES-2107 to ES-2111 entering the building, if not please provide the center to center vertical spacing between 2' and 6" conduits called out in ES-2107 to ES-2111.

Reference: ES-2107 to ES-2111(Dated: 04/24/14)

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The section views and elevations of the bottom of the conduits on details A & B on ES-2107 are confirmed. Refer to response to RFI T-1695 which includes updated ES-2107.

2. Center to center vertical spacing between 2" and 6" electrical conduits is confirmed. Refer to response to RFI T-1695.

SFPUC Note: Detail A on ES-2107 issued with RFI T-1695 has a dimension between the bottom of the 6" conduit and the top of the 2" conduit. When the assumed ODs of the PVC 40 conduits are considered, the conduit centerline dimension becomes 1'-5".

3. Section views showing elevations of electrical conduits entering the building (penetrating the foundation wall) on ES-2107 (refer to RFI T-1695 which includes updated ES-2107) to ES-2111 are confirmed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The section view on ES-2107 to ES-2111 calls out the bottom of the conduit elevations for 2" and 6" conduits. Please confirm these elevations are accurate for all the ES drawings.

T-1756 **BGP - Area 3 Concourse Rebar- Displacement of Top Added Bar Due to Congestio** **Closed** **09/29/2014** **10/09/2014** **10/01/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Per the attached picture, please verify that is acceptable that a 2nd layer was created for top added bars due to congestion at beam and column intersection. This occurs between GL-3 & GL- 4 at GL-K.3.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable for the (3) beam bars indicated to be placed in a second layer. The layering, however, shall not interfere with the specified 1-1/2" clearance between MFB top bar layers. To this end, beam top second layers shall be introduced below the level of MFB add reinforcing as they typically have been. In the photograph attached to the RFI it appears that both beam layers have been placed between the MFB layers. This is not acceptable as it results in the depression of the MFB add layer beyond the specified 1-1/2".

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

1)The perimeter Bus Level slab tapers from a 14" slab to 10" at the edge of slab, with the perimeter beam requiring 9" studs as per 9/S1-5004. Please confirm it is acceptable to provide two 9" studs on the framing steel to account for the sloping slab, see attached SK1 & 2 for clarification.
2)At the Bus Deck level node the slab tapers from a 14" slab to 6" at the edge of slab. Please confirm it is acceptable to provide 6" studs on the framing steel to account for the sloping slab, see attached SK1 for clarification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1-) The first pour for the perimeter slab will be 9 inches thick at the outer edge (see detail 1/S1-8000) therefore the stud length shall be accordingly. It is acceptable to have two studs at the tapering slab that are the same length as the ones at the spandrel beams.

2-) Acceptable to locally provide 6" studs. Indicate these studs clearly in the shop drawings.

T-1766	SSS - DCW Backing Bar on Moment Frame Columns	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Section 05.12.10 Structural Steel - Additional Seismic Requirements, 2.2 Fabrication Section C.2.A.1 (See SK1) states, "connections in which backing is not removed: backing shall be attached to the member or plate that does not have its surface prepared for the groove weld. Attachment shall be by either a 5/16" fillet weld or 3/16" groove weld along the complete bar length on the side of the bar opposite the groove weld"

On shop drawing A1723 (See SK 2, SK3), section cut B & C show two continuity plates that are with-in approx. 2 1/2" of each other with a CJP DCW marked as the weld detail. In these conditions there is insufficient access to provide a continuous weld along the backside of the backing bar.

Please confirm that in situations where there is insufficient access between the two continuity plates, the backing bar can be tac welded within the weld zone and left in place on one of the plates. The other plate will have the backing bar attached as per the aforementioned specification.

However, on CS1 columns A1723, A1731, A1759 and A1760 the backing bar was tact welded within the weld zone in cases where the continuity plates were in close proximity. Please confirm these columns are acceptable. *Note - the typical continuity plates that are spaced properly have a double bevel prep and therefore will not be affected.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The moment frame beam continuity plates are per detail 5/S1-4202. At the contractor's request, a double sided CJP welded was accepted (see RFI T-0959) in lieu of the welding shown in this detail. Therefore, the continuity plate that lines up with the moment frame beam flange shall follow this detail, with or without a nearby second continuity plate. Where there is a second continuity plate nearby and there is insufficient access to it, it is acceptable to weld the its backing bar using tac welding and leave it in place as proposed in the RFI. Note that the spec section referred in the RFI is triggered when backing bar is not removed and does not apply to the seismic moment frame condition since the standard detail require backgouging and reinforcing fillet weld, or alternatively, double sided CJP welding.

Provide additional information for the CS1 columns listed in the RFI. It is not clear if a) backing bars for both continuity plates were tac welded, or b) one was tac welded and the other one was fabricated per Specification Section 2.2.C.2.A.1, or c) one was tac welded and the other was fabricated with double sided CJP.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1767	SSS - Weld Clearance Hole Size at Moment Frame Column Cruciform	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Gregory Kemerer

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Several Moment Frame Columns have cruciform sections that weld over column web splice joints. The splice joint provides a transition from thick web to thin web. In a majority of these cases, the cruciform web as detailed has a 1" radius cutout to clear the column web splice joint. The 1" radius cutout is insufficient to adequately clear the tapered double bevel splice joint and provide space for runoff tabs necessary for the CJP weld.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm it is acceptable to provide a weld clearance hole in the cruciform section wide enough to clear the bevels of the column web splice joint plus 1" on each side of the bevel for weld runoff tabs. See attached sketch. If confirmed, this information needs to be shown on detail drawings.

T-1768 **SSS - SLRS Bracing Connection Confirmations GL 22-24** **Closed** **10/01/2014** **10/11/2014** **10/17/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 618 SK1:

The following is a summary of consequences for the varying slopes on Grids 22, 23 & 24 as the diagonal bracing will no longer be in the same plane similar to the issues in RFI's T-1322, T-1322.2 & T-1513 (SK 515, 515.1 & 515.2, CD 382, 382.1 & 382.2.):

1) The two ends of the W40x297's will not be flush with the connection ends due to varying slope between Grid 22 to the slope on Grid 23. Please provide a detail to address this issue.

2) The 1 3/4" gusset plates per 1A/S1-5018 will have two beams coming in at compound angles. Please provide a solution.

3) A shim plate will be required on top of the W40x277 & W40x297's to lift the 1 3/4" gusset above the flange of the W40x362's.

4) Shims beveled in both directions, varying in thickness at each corner will be required on top and bottom of the W40x362's as the flanges are not parallel to the flanges of the W40x277 & W40x297's.

5) The holes for the 1 1/2" A490-X-SC bolts will require oversize holes as the surfaces of the flanges and the 1 3/4" gusset plate are not parallel.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Detail 1/S1-5018 calls for shim plates as required. We believe that shim plates with beveled in both direction will address the questions raised in this RFI. However, it is acceptable to both TT and AAI to slope the Grid 23 the same way as Grids 22 and 24 to avoid slope in two directions if it is no additional cost to TJPA.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Confirm this is the design intent.

T-1768.1 **SSS - SLRS Bracing Connection Confirmations GL 22-24** **Closed** **12/09/2014** **12/19/2014** **12/22/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Contract Doc Ref: S1-2505
Location: Zone 4, Bus Deck
Grid Line: A & 23, H & 23
Add'l Doc Ref's: SK1, SK2, SK3, RFI T-1768 Response

The response to RFI T-1768 confirmed that detail 1/S1-5018 calls for shim plates as required. The response also indicated that it is acceptable to slope Grid 23 to match Grids 22 and 24 - in order to avoid slope in two directions.

Skanska has indicated that the second option is preferable, as the complex shims (as detailed in SK1 and SK1) would likely cause erection problems.

Please confirm the top of steel elevations as shown in SK3, which would result from sloping Grid 23 to match Grids 22 and 24.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that the T/steel elevations shown on SK3 are correct. Note that providing shims that are beveled in both directions to fill the gaps while maintaining erection tolerances is a means and method issue. Therefore we disagree with the cost and time increase claims associated with this RFI if Skanska wants to go with the other option (modifying slope at GL23).

Reason for RFI (TT): Disagree with the reason noted in RFI: Engineering conflict, agree with other: verification. TT categorizes this as Shown in Contract Documents and Request for Substitution.

T-1769 **SCS - Foundation Wall Embeds: Plumbing at GL 6-10** **Closed** **10/01/2014** **10/11/2014** **10/01/2014** **Potentially** ☐

T-1770	BGP - C30 Column at GL 4/J	Closed	10/02/2014	10/12/2014	10/06/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The C30 Column at GL 4/J was installed 4" West of the planned location along the correct Bicycle Ramp Alignment (See attached As-Built comparison)

Please confirm this as-built location is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The column moving 4-7/8" to the west is acceptable. Note that the RCW wall will have to extend to the adjusted column (no joint below the ramp as noted on submittal TG-600-129.1). CMU wall (type 10) will have to be adjusted 1" to the south to align the north face of the wall to the corner of the column.

Agreed, there are no structural concerns with the slight adjustment of the column. Note, there is a beam framing into the column at the vehicle/bike ramp level. The contractor should coordinate the increase in beam length (and subsequent reinforcement updates) per the adjustment

---

Please see the attached clouded drawings, S1-9050, S1-9002, and S1-9001. Note 5 on detail 9/S1-9050 refers to detail 1/S1-9002 for the typical top of pier bracing details. Detail 3/S1-9001 depicts the bracing of an interior CMU/Concrete Pier below a metal deck. There are no other details shown on the contract drawings that depict bracing of interior CMU/Concrete pier below concrete concourse deck. Please confirm it is acceptable to omit the 3/8" thick plate on Detail 3/S1-9001 for bracing below concrete concourse deck. Otherwise, please provide a detail for bracing the top of an interior concrete pier to the concrete deck.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-1773 **SSS - AB Analysis - TB Column Base Plates** **Closed** **10/02/2014** **10/12/2014** **10/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

As-built survey of Anchor Bolts (see transmittal 140-11479 on Constructware) identified 39 AB groups out of AISC tolerance between grid lines 7 - 18. There are three typical conditions that should be corrected in the shop prior to start of erection as follows:

1. AB rod clashes with the base plate hole. Proposed solution: enlarge hole as indicated in the attached sketches.
2. Due to out of position anchor rods the plate washer clashes with the fillet weld. Proposed solution: reduce size of the washer to avoid conflict with the fillet weld.
3. For larger rod diameters the nut underneath the base plate clashes with the fillet weld. Note: nuts in these locations do not come with a plate washer per design. Proposed solution: Add ¼" washers (shims) underneath the nut to clear the fillet weld.

Attached sketches provide locations and details for the above. Please confirm the above corrections are acceptable.

This RFI has been re-written by W/O for clarification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). For the case that anchor rod clashes with base plate hole, enlarging the hole as proposed is acceptable.

2). For the case that plate washer clashes with the fillet welds, clarify where the clash occurs as there is no washer above the base plate and below the 2" horizontal bearing plate. Washers are only used at the top of the horizontal bearing plate.

3). For the caste that nut underneath the base plate clashes with the fillet welds, clarify the location of the fillet welds as there is no fillet weld at the bottom of the base plate. The only weld at the bottom of the base plate is the complete penetration weld of the shear key.

The reason for the RFI is noted as Field Conflict. We categorize this as Request for corrective field work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please see Skanska's original RFI which is attached.

T-1773.1 **SSS - AB Analysis - TB Column Base Plates** **Closed** **10/20/2014** **10/20/2014** **10/22/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This is a confirming RFI following our October 9, 2014 structural coordination meeting. The following items / actions were discussed:

1. For anchor bolts that do not clash with the column base plates but are out of AISC tolerance thus limiting the ability to adjust for structural steel fabrication and erection tolerances, the EOR takes no exception to modifying the base plate holes in the shop or field to suit the as-built anchor bolt position.

2. The EOR takes no exception to reducing the size of the plate washers above and below the horizontal stiffener/anchor plate in the column. This will be done to clear the fillet weld for the vertical stiffener below the horizontal anchor plate and to allow for consistent plate washer sizes. The plate washers will be larger than the major diameter of the anchor nuts. The attached spreadsheet details the sizes we will use at each location.

3. The EOR takes no exception to adding a spacer plate below the horizontal anchor plate and above the nut at the 2-1/2" anchor rod locations where necessary. This is necessary to accommodate out of tolerance anchor bolts so that the nut can clear the fillet weld between the horizontal anchor plate and the vertical stiffener below.

Please confirm the above items.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Confirmed.
2). Confirmed.
3). Confirmed.
Reason for RFI: We agree with the reason "Field Conflict" noted in the RFI, but disagree with probably cost increase and time increase noted. TT categorize this as "request for corrective field work".

T-1774 **BGP - Vehicle Ramp Corbel** **Closed** **10/03/2014** **10/13/2014** **10/21/2014** **Potentially** ☐

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Refer to sheets A1-7401 and C1-5007.

Based on workpoint elevations shown in Sheet A1-7401 the horizontal bearing edge of the vehicle and bicycle ramps appear to slope down gradually from West to East: 22.0' to 19.66' for the vehicle ramp and 17.96' to 15.66 for the bicycle ramp.

However, the ramp section on Civil detail 7/C1-5007 shows one elevation of 19.00' for the section cut through the vehicle ramp and no cut through the bicycle ramp.

Please confirm if the foundation wall corbels elevations are as shown on A1-7401 or if they are to be level as appears to be detailed in Civil drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Arup's response:

The foundation wall corbels which support the vehicle and bicycle ramps shall be level. Please see attached SK-C-0003, SK-C-0004, SK-C-0005, SK-C-0006 and SK-C-0007 for elevations and extent of corbels.

TT's response:

Corbel elevations and extent along foundation wall per updated civil and architectural drawings.

Concrete Beam below ramp slab as called out on S1/S1-2251, to be updated to 36"x58". Provide reinforcement as called out on 1/S1-2251 (7-#10 top and bottom).

AAI's response:

Refer to attached SKA-4271 for updated information related to the concrete corbel elevation for the Vehicle and Bicycle Ramp.

T-1775 **BGP - Concourse Deck D211 Pilasters** **Closed** **10/03/2014** **10/03/2014** **10/16/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

During installation of Formsavers at LC Deck D211 and D212, SCCI was directed by Carl Keim to remove two(2) pilasters at GL 11 between GL Band C as they were not required. (See attached photo).

Please confirm this as built condition is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Omission of the pilaster immediately south of the north door opening on Grid 11 was not directed by design team field representatives. Such direction was given for a second pilaster located further south along the same wall, as shown in RFI attachment A1-2203 Delta 0. The pilaster located further south is not required because there is no door for which one would be required, as shown in RFI attachment A1-2203 Delta 3. It is not acceptable for the northern pilaster to be omitted; however, the thickness of the pilaster is acceptable at 12". The pilaster shall be reinforced as a 1'-4"x12" pilaster per Detail 9/S1-9050.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

A similar condition exists for the vault between Grids 2 and 4. On the north side of the door at Grid 3, the pilaster is acceptable at 12" thickness. Considering the inclusion of the required 1" movement joint against the foundation wall, the resulting 11"x12" pilaster shall be reinforced with a minimum of (4) #7 corner bars enclosed with ties similar to Detail 9/S1-9050.

Please coordinate this RFI response with TG07.02.

T-1776 **SCS - Bus Deck Level Composite Slab Concrete Placement Sequence** **Closed** **10/06/2014** **10/16/2014** **10/08/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference 4/S1-5003

Please confirm the following sequence regarding the Bus Level Composite Slab.
- Place 10" structural slab. (first pour)
- Provide raked concrete finish, to achieve required amplitude.
- Apply curing compound day of first pour.

Please specify the cure time required for the 10" structural slab before the 4" structural topping slab can be placed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed sequence is acceptable. Blast clean the curing compound before the second pour for achieving bonding between two pours. Alternatively, water cure with wet burlap may be use for the first pour.

Curing time shall be in accordance to the specification. 2nd pour may be placed after the concrete for the first pour reaches 3000 psi mini.

Co-Author:

REQUEST:

Reference attached sketch.

Steel erection begins in Area C01, which is between gridlines 10-11.

1) The construction Joints in the trainbox walls do not line up with gridlines. Is it acceptable to align the fourth lift foundation wall construction joints with gridlines? Note that ground level slabs will also follow this layout as shown in the attached sketch.

2) WOJV believes that the formed and metal deck concrete at ground level GL 10-11 needs to be placed before pouring any other metal decks above this level. Please confirm this is correct. If required to place more east/west concrete at ground level prior to placing decks above, please provide requirements.

3) Please provide the required cure time of ground floor concrete before the placing of concrete in metal decks above ground level can be poured.

4) Once the ground level concrete reaches required strength is it acceptable to pour the 2nd level, bus deck

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

George Metzger: 10/10/2014

1). Foundation walls below the topmost horizontal construction joint that are cast with the approved foundation wall mix in accordance with RFI T-1715 response shall have aligned vertical joints. The foundation wall within the projection of, and poured with, the Ground Floor slab and beams above this joint utilizing the slab and beam mix design need not have joints aligning with the foundation wall below. Note that many formed Ground Floor concrete construction joints cannot be located on the Gridlines due to MFB's. In the West Throat, construction joint location will be governed by where it would fall across intersecting formed framing members. Also refer to RFI-T-1740, T-1584, and Submittal TG0702-503 comments.

2). It is recommended that the entire ground floor slab for each wing be casted before pouring the above grade floor slab. It is to ensure that the ground floor slab can act as a floor diaphragm to distribute the seismic force induced from the upper floors (transmitted thru the longitudinal BRB frames and

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

level (1st 10" thick slab only), and roof level consecutively with no cure time requirement between deck pours?

basket column frames) to the train box walls.

3). It depends on how soon the floor is poured and how much risk (for seismic event) is tolerable. Each wing works as an independent structure (because they are separated by seismic joints) and its longitudinal seismic force will need to be transferred to the train box wall at the ground level. Without a complete load path, structural failure might occur in an earthquake event. It is recommended that the construction team to discuss this with TJPA and propose a construction sequence for us to review.

4). See response to item 3).

REQUEST:

See attached CD RFI # 641 SK1:
Confirm the noted beams require IRFM-1 per D & E/A1-8663 and supply dimensions on plan to show the extent of the paint as A1-8663 & A1-9230 do not supply this information.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed, the beams noted require IRFM-1.

Dimension are not required as the IRFM-1 is applied to the entire length of the W33x118 (47) c=1 ¼ beams between GL 20.1 and 21 at C.3 and between GL 20.1 and 21 at F.7. To clarify: as there are no approved tested assemblies for alternating fire protection types on a single member, the entire length of beam requires a single type of fireproofing, in this case IRFM-1, from support to support.

T-1781	SSS - W21 and W24 Connection Clarification GL 27.1	Closed	10/06/2014	10/16/2014	11/11/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 636 SK1:
The W21x48 north of Grid D.4 and the W24x76 south of Grid E.6 can't be connected with double angles per 1/S1-5010 as the angles will foul the web stiffener plates per 2/S1-5016. Please supply a new detail.

SUGGESTION:

Confirm it is acceptable to connect the beams per 1/S1-5011 except the W21 will have 4 bolts as shown and the W24 will have 5 bolts due to the limited space.

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1782	SSS - Stair Elevator Weld Clarification from WS4 Package	Void	10/06/2014	10/16/2014		Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

The noted weld symbol has been interpreted as a weld only across the toe of the angles based on the single fillet shown and "BOTH SIDES" referring to both angles. This was marked the first time by TT in the WS4 approval submittal, requesting a double fillet weld. All previous sequences have been shop issued with a single fillet weld. Confirm that one single fillet per angle is correct.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please see the attached clouded drawings, S1-9050, S1-9002, and S1-9001. Note 5 on detail 9/S1-9050 refers to detail 1/S1-9002 for the typical top of pier bracing details. Detail 3/S1-9001 depicts the bracing of an interior CMU/Concrete Pier below a metal deck. There are no other details shown on the contract drawings that depict bracing of interior CMU/Concrete pier below concrete concourse deck. Please confirm it is acceptable to omit the 3/8" thick plate on Detail 3/S 1-9001 for bracing below concrete concourse deck. Otherwise, please provide a detail for bracing the top of an interior concrete pier to the concrete deck.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

3/8 inch plate should not be omitted. Detailing for top of pier bracing as shown on typical detail 3/S1-9001 applies for both concrete deck and composite deck conditions. Where composite deck is present, note (1) applies.

T-1788	BGP - Drawing Discrepancy With Wall Above Bike and Vehicle Ramp Slab	Closed	10/06/2014	10/16/2014	10/14/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The Architectural Drawings including AI-7404, AI-7405, and AI-7407, shows TG0600 having no Vehicle or Bike Ramp walls above the ramp slabs. However, SI-2251 calls out Detail 5 on SI-3210, which shows a partition wall below the TG0600 scope line going from the top of the Vehicle Ramp slab to the bottom of the beams on the Ground Level. Please confirm which drawing set shows the correct scope line.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT takes no exception to the concrete partition wall as shown on detail 5/S1-3210 to be included in TG07 Package. Partition dowels to be placed with vehicle ramp slab and TG06 Package.

WOJV response: TG06 to incorporate rebar dowel/couplers for delineation as detailed in 5/S1-3210. TG07.2 to incorporate rebar and CIP concrete for vertical work above horizontal surface of vehicle structural ramp.

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

XKT Engineering requests that the weld clearance holes located at column flange to web, weld transition points (full penetration to fillet welds), be eliminated (see attached drawing P1022).

There is no code requirement for these holes. Welds would be detailed and welded in accordance with AWS D1.1, Section 2.8.2.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Not acceptable at joints where three welds join. AWS section referred in the RFI does not address this condition. Where three welds join, access holes shall be used for proper weld termination.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*

Please confirm this is acceptable.

T-1790.1 **SSS - Weld Clearance Holes** **Closed** **11/04/2014** **11/14/2014** **11/12/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

This RFI addresses the information requested and the response given to SK RFI 867 (T-1790). To clarify the applicability of the reference code, Skanska's fabricator has provided details on the fabrication of the column assemblies:
· The web welds (splices) are welded first and NDT is performed- no access holes needed at ends of welds.
· Web plates are fit/assembled to flanges.
· Flange to web welds are made - again, no access holes are required.
· There is no welding being performed through access holes for these conditions.
There is no code or project requirement to install weld access holes given the order of operations. AWS D1.1, Section 2.8.2 addresses weld transition from full penetration to fillet welds as required on these flange to web welds.

Given that the three welds are not done concurrently, please confirm that it is acceptable to eliminate unnecessary access holes.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to omit the weld access holes indicated in the RFI (at web transitions). Comply with AWS D1.1 for CJP to fillet weld transitions.

TT: We agree with the reason for request: Alternate Proposal. We categorize this RFI as clarification on means and methods.

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

RFI # T-1697 requested confirmation for the use of snap ties for perimeter wall, scallop wall, and sky light wall locations. TJPA answer: "The Design Team does not object to the use of Snap-off ties only at skylight wall locations." Spec 031001 - 2.2 B. 7. h. allows the use of snap ties for walls that will not be exposed. Architectural drawings Al-5002 and Al-8604 -through 8613 shows the roof level perimeter walls and seismic walls as not being exposed due to the GFRC fascia prior to ASI 0124. Questions:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The Roof Park Level concrete perimeter wall and scallops will have exposed face and as such, it is different that concealed concrete walls.

2. The Roof Park Level concrete perimeter wall not need to meet requirements for cast-in-place architectural concrete specification, however, the Design Team hereby request a dedicated meeting with the contractor to review the constructability and technical issues of this work. Final determination of

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1. Please confirm that per ASI 0124 the concrete roof perimeter walls/scallops will now be required to meet the specification requirements for exposed concrete walls.

2. Please confirm that the concrete roof perimeter walls/scallops will not need to meet requirements for cast-in-place architectural concrete.

the appearance and finish of the wall should result from the meeting's agreement.

T-1796	SCS - Sky Light Embed Layout Dimensions	Closed	10/07/2014	10/17/2014	10/07/2014	Potentially	☐

From: Shimmick Construction Company, Inc. Henry Chiang **To:** Webcor/Obayashi Joint Ventu Spencer Sayles **Answered By:** Webcor Construction LP Claude Titche

Co-Author:

REQUEST:

After searching through sky light drawings Al-8401 through Al-8479 and Sl-8000 through Sl-8020 Shimmick was not able find information providing the sky light attachment to top of wall embed sizes, anchor bolt length, and spacing of embeds. For the central sky light from grid line 19.1 to 22 on page A 1-8451 which shows the structural truss frames for the sky light, which determines the embed layout, the truss frames are called out as equally spaced between each grid line. This does not give you the complete perimeter and requires too many assumptions. Also on Al-8401Note2. Dimensional control sub part A. "Dimensional control shall be derived from the three dimensional (3D) computer model and the two dimensional (2d) drawings." Sub part B. "See sheet Al-0009 for an index of 3D models". The 3D models referenced on Al-0009 are models that Shimmick TG07 Superstructure currently does not have access to. Shimmick would prefer to have the embed information on a drawing sheet equivalent to what is provided for the roof park railing details on sheets Al-8680 to Al-8685.

Shimmick is requesting the engineer to provide sky light attachment to top of wall embed sizes, anchor bolt lengths, and spacing of embeds for the top of concrete skylight support walls?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The information requested cannot be provided at this time. The sky light is a design build element and no subcontractor has been awarded a contract. Information will be provided as it becomes available. February 2015 is the anticipated award date of this subcontract.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Portions of the East Wall have CDSM encroachments -per RFI T-1372 and approved submittals require 6" spacing of vertical reinforcing.

The original call out was for 17 Verts each face between GL C & C.3 and between GL G & G.2 (at 6" OC). We installed 13 each face in both sections (at 8" OC)- see attached drawing. Please confirm it is acceptable for the 8" spacing to remain and there is no further action needed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1803 **SCS - Roof Edge of Deck Bent Plate** **Closed** **10/09/2014** **10/19/2014** **10/15/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

S1-5000 detail 8 & 9 shows a bent plate as the typical edge of deck detail. The bent plate is also shown on Sl-8008 for the sky light opening. Sl-3282 details do not show a bent plate for the rooftop seismic detail 3, perimeter detail 2, and scallop wall detail 4 & 5.

1. Please confirm that the roof top seismic, perimeter, and scallop walls will have a bent plate per detail 8&9/S1-5000.

2. Please provide detail on what the scallop bent plate will look like (4&5/S1-3282).

3. Please confirm that it is acceptable for Shimmick to place a 1 inch hole in the bent plate to install a removable tie for overhang brackets. Holes for overhang brackets will be roughly 6' O.C.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1). Per details on sheet S1-3282, no bent plate will be needed. The slab beyond the supporting steel beam will be formed and casted.

2). See response to #1.

3). See response to #1.

	RFI #T-1710 Shimmick requested approval to relocate the construction joint from the wall to the deck and pour the chamfer with the scallop wall. Shimmick requests confirmation that this is acceptable for the entire perimeter and not just the scallop locations. Refer to perimeter wall detail 2 on S1-3282.						
T-1808	**SCS - Bottom Bars Per 4/S1-5022**	**Closed**	**10/13/2014**	**10/23/2014**	**10/14/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Refer to 4/S1-5022 for welded bars at the bottom flange of steel beam. Detail 'A' requires the "rebars to match the number and size of beam top bars". Detail 'B' requires the "rebars to match the number and size of beam bottom bars". Per S1-3600, moment frame beams can have two sets of bottom reinforcement, B 1 and B2. 4/S1-5022 does not reference whether B1, B2, or both sets of bars are required.

Per conference call with Thornton Tomasetti on 10/9/14, for both details, bars on the top to match the top bar and bars on the beam's bottom flange are to match the quantity of Bl bottom bars only. No B2 bars need be welded to the flange.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1809	SCS - Top Bar Clearance Per 4A/S1-5022	Closed	10/13/2014	10/23/2014	10/14/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please refer to 4/Sl-5022 and Detail 5/Sl-3600 for top rebar cover on ground level moment frame beams. Detail 'A' calls for 2" clear for the top bars but detail 5/S1-3600 calls for 2.75" clear to the stirrup.

Per conference call with Thornton Tomasetti on 10/9/14, the clearance for the top bars would need to be 2.75"(CLR) + .50"(#4 STIRRUP) + l .50"(#11 REBAR-MAX SIZE) = 4.75". 4.75" top rebar clearance can be applied as a typical for the top bar in 4/S 1-5022.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.

T-1810	SSS - Grouting Train Box Column Base Plates	Closed	10/13/2014	10/13/2014	10/16/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Structural Steel specification part 3.3E, requires the colum n base plates to be grouted immediately after plumbing th e
first tier of columns.

Skanska's erection plans prepared by our structural engin eer indicate that the grouting of the columns shall be done after erecting the EBF columns and tie-
in steel at the bus deck and prior to setting the ancillary bu s deck fill-in steel.
See EP3.0 and EP3.1 attached for reference. This is don e to allow for flexibility when plumbing and aligning the EB F
steel.

Please confirm that Skanska has the option to follow the E P3.0 notes for the timing of the column grouting operation.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is a "means and method" issue. The proposal by the contractor to delay the grouting is acceptable, as long as it will not cause any safety issue.

Reason for RFI: Clarification of issue of means and methods

REQUEST:

Contract Doc Ref: S1-2506
Location: Zone 4, Bus Deck
Grid Line: C & 27.1
Add'l Doc Ref's: CD RFI # 653.2 SK1

Drawing S1-2506 shows W40 members connecting near grid lines C and 27.1.

Connection information is missing for the tie plate to gusset plates as indicated below.

1) Supply details for the field weld between the 1 3/4" tie plate to the 1 3/4" gusset plate.
2) Supply details for the field weld between the 2 1/4" tie plate to the 1 3/4" gusset plate. Note that the plates do not align due to the varying beam depth.
NOTE: this RFI applies to all similar connections between Grid 27.1 - 33.5 on the Bus Deck Level.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) It is unclear what weld details are being requested. We believe our response in RFI T-1815 to provide CJP welds is sufficient.

2) Provide welds as shown in attached sketch SKS-0443, where the "tie" and "gusset" plates do not align.

Reason for RFI (TT): We disagree with reason for request: Engineering Conflict and insufficient information. We categorize this RFI as Previously answered for 1) and no cost clarification for 2).

near Gridline 21-C.5, but not at the escalator pit near Gridline 21-F.5. Per discussion with TT please confirm that the escalator pit near Gridline 21-F.5 will require the addition of a B5A beam per attached layout, similar to the escalator pit at Gridline 21 -C.5.

T-1822 **BGP - Seismic Joint Vertical Wall Reinforcing** **Closed** **10/15/2014** **10/25/2014** **10/29/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

The configuration of welded reinforcing on the train box side of the seismic joint is installed as if there were an adjacent horizontal trough similar to the horizontal leg of the joint at the mat slab. There is no such trough on the walls. To accommodate the existing vertical west embed please see the following:

1. An additional #7 hook will be added to the foundation wall that will engage the welded angled bar and the welded deformed anchor - See Sketch #1

2. As necessary to provide 2" clear to the waterproofing or as is required to place foundation wall reinforcing, the welded angled hook may be field bent. Bending will be controlled as to not stress the bar end weld and bend radius will not be less than ACI minimum. See Sketch #1

3. Termination of north and south foundation wall horizontal reinforcing shall be hooked. Hooks shall be oriented per the attached sketch. See Sketch # 1.

4. The interior leg of 5/8" plate terminating at Grid A may be omitted and replaced with a formed edge-See Sketch # 1, reference Al-8881 detail 5.

5. Please confirm that the South East Termination Bars can be installed per attached Sketch #2 .

6. Please confirm that the North East Comer of the East Wall: Within the projection of the seismic joint toward the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Items 1-6 and sketches are confirmed.

Subsequent segments of the trainbox side of the seismic joint shall have welded reinforcing that mirrors that of the east side, except it will be permitted to have 48" long straight welded bars in lieu of hooks per Sketch #1.

The contractor has omitted the last leg of joint plate terminating at Grid A on the western edge of the joint in the first vertical segment. This is acceptable. The contractor may include this plate in subsequent segments or omit and form at their discretion.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

eastern CDSM wall, the interior foundation wall cross ties were not installed. Please confirm that this field condition is acceptable and that a uniformly detailed east foundation wall will resume in the second lift per the attached sketch #3.

S1-3010 does not depict detail of terminated horizontal bars along North and South wall and Seismic Joint embed. Please approve the following sketches.

T-1823 **BGP - Upturned Beam Conflict at GL 21** **Closed** **10/16/2014** **10/26/2014** **10/17/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference: various attached drawings.

Sheet S1-2205 shows an upturned beam at GL 21. Due to a conflict with the internal bracing system please confirm it is acceptable to pour the upturned beam portion separately following the D221 pour with a horizontal cold joint between D221 and the upturned beam.

Skanska's Anchor Bolt Layout Plan TG0702-070.4 sheet AB14 detail 18 shows the upturned beam column anchor bolts embedded 4'-0 1/2" into concrete. Detail 5 on S1-3621 shows the height of a typical upturned beam at 3'-3" above top of Lower Concourse concrete. This results in the anchor bolts being embedded through the upturned beam and the Lower Concourse. Please confirm it is acceptable to utilize couplers as seen in attached SKA to facilitate anchor bolt installation in this specified location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that it is acceptable to pour the upturned beam portion separately.

2) Confirmed that it is acceptable to use couplers to facilitate anchor bolt installation in this specific location.

T-1824 **SSS - Column Base Plate Grout Pads** **Closed** **10/16/2014** **10/16/2014** **10/17/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

---

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Skanska and their construction engineer, Hassett have evaluated several options for setting and securing the train box columns in position until the grouting operation has been complete. Based on Hassett's calculations the only feasible option to adequately stabilize the column is to utilize shim packs at each corner of the base plate.

Due to the congestion of rebar at the base plate block-out, there is currently insufficient room to set shim packs on a flat surface, therefore Skanska propose to pour 10"x10" grout pads at each corner to achieve the required uniformed surface for shim packs, see attached SK-5.0 for clarification.

Skanska propose to use TG07.2's Dayton Superior grout, previously approved in submittal TG0702-500.

Please confirm this is acceptable.

SUGGESTION:

Webcor expects Skanska to have these pads poured by early next week to allow the grout to be cured and achieve 8,000 PSI at 7 day break.

ANSWER: **Accept Suggestion:** ☐

The proposed procedure is acceptable in concept. Contractor and Sub-contractor, WOJV, Skanska and their construction engineer, shall confirm the grout pad is adequate for supporting the construction loads imposed and confirm that this meets all safety regulations.

Reasons for RFI: Verification for issues on means and methods.

T-1825 **SSS - Connection Clarifications at Roof Level GL 27** **Closed** **10/17/2014** **10/17/2014** **10/30/2014** **Potentially** ☐

3) The web stiffener plates per 2/S1-5016 with revised length per ASI-127 will extend into the noted beam connections per 1/S1-5010. Please supply a new detail.
4) The web stiffener plates per 2/S1-5016 with revised length per ASI-127 will extend into the noted beam connections per 1/S1-5010. Please supply a new detail.
5) The web stiffener plates per 2/S1-5016 with revised length per ASI-127 will extend into the noted beam connections per 1/S1-5010. Please supply a new detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The double angle connections per 1/S1-5010 shall be made through the web stiffener plate at the beams noted in the RFI. Increase the height of the stiffener plates as required to match height of the connection angles.

2) See response to 1).

3) See response to 1).

4) See response to 1).

5) See response to 1).

TT: We disagree with the reason for request: Engineering Conflict. We categorize this RFI as no cost clarification.

T-1826.1	SSS - Fouling Stiffeners at East Zone Roof Level	Open	12/15/2014	12/25/2014		Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Contract Doc Ref: S1-2606
Location: Zone 4, Roof
Grid Line: E.6 & 31, Similar condition at GL 24.9
Add'l Doc Ref's: SK1, RFI T-1826 Response

Drawing S1-2606 shows a tapered girder (TPG1) connection near GL E.6 and 31.

The web stiffeners at this location will foul additional beams as shown in SK1.

Confirm the web stiffeners may be reduced by 2" as indicated by the dotted line to avoid fouling additional beams.
This will also apply to Grid 24.9.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

T-1826.2	SSS - Fouling Stiffeners at East Zone Roof Level	Closed	12/19/2014	12/29/2014	12/27/2014	Potentially	☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Contract Doc Ref: S1-2606
Location: Zone 4, Roof
Grid Line: F & 31
Add'l Doc Ref's: CD RFI # 659.1 SK1, RFI T-1826 Response, Response to Skanska Internal RFI 888.1A

The response to RFI T-1826 provided clarification for web stiffener plates. This response reduced the clearance between the top and bottom edges of the deeper web stiffener
plates and the flange to web welds of the Tapered Roof Girders.

Per this response, the original 7/16" fillet weld will not work due to lack of clearance between the edge of the deeper stiffener plates and the flange to web weld of the tapered roof girder.

Please advise.

SUGGESTION:

In order to fit this weld, a 15 degree bevel would be required, effectively changing this weld to a PJP. Please see attached Weld Procedures.

ANSWER: **Accept Suggestion:** ☐

Confirmed that the weld bevel and PJP weld in lieu of the 7/16" fillet weld is acceptable at the top and bottom edges of the web stiffener plate at the location highlighted in the RFI.

Reason for RFI (TT): We agree with reason for request: Verification. We categorize this RFI as Other.

T-1827 **SSS - Missing Connection Detail at Bus Level Protected Zone GL 2** **Closed** **10/20/2014** **10/30/2014** **10/31/2014** **Potentially** ☐

T-1835	BGP - Removal Sequence of Internal Bracing System Within Zone 4	Closed	10/21/2014	10/31/2014	10/23/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Further to last Monday's (10/13/14) meeting with TJPA, Arup, Turner and WOJV where the removal sequence of the internal bracing system within the Zone 4 East end Diaphragm was discussed, please confirm the following is acceptable:

Remove the walers which are connected together in a sequence referred to as the observation method where one waler on the north and one on the south as well as the two cross lot struts attached to the walers would be de-stressed and removed at any one time. Once the first pair of cross lot struts have been de-stressed and removed and little or no movement has been recorded on the WOJV installed survey points or the Arup inclinometer's over the following 24 hours after de-stressing, the contractor can then proceed and begin de-stressing and removing the next pair of wailers and struts to the east. This removal method would then be repeated until only four cross lot struts at that particular level remain; which are numbers ST-65 to 68.

If acceptable, please specify 1) the movement tolerance for a given waler removed, 2) the observation period for analyzing movement, and 3) the acceptable means for monitoring for movement (survey, inclinometer, or both).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT's response:

The contractor shall submit necessary structural calculations in a Submittal to justify the proposed re-shoring procedure will not overload the train box structure, e.g., eliminating walers might cause the punching shear failure of the wall at the strut locations; it might also cause overstressing (in bending) of the train box wall.

In addition, if any stress induced to a train box structure element as a permanent stress (e.g., vertical bending of the wall) that is additive to the stresses that the train box will experience during its service life (including effects of earthquakes), this stress shall be kept minimum (say not more than 10% of the capacity of the train box structure element).

Reason for RFI: Clarifications on means and methods issue.

Arup Response:

We take no exceptions.

The movement tolerances are those in the

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

specifications.

We take no exceptions to the proposed monitoring duration.

Arup can produce manual inclinometer readings after each waler segment is distressed. Installation of targets on the inside face of the shoring wall and monitoring these targets during this activity is recommended.

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author:

REQUEST:

Further to last Monday's (10/13/14) meeting with TJPA, Arup, Turner and WOJV where the removal sequence of the internal bracing system within the Zone 4 East end Diaphragm was discussed, please confirm the following is acceptable:

Sequence:
1) Remove level C, B and A struts and walers from within the green clouded area up to GL- 32.2 once the the associated concrete slab or wall section has reached adequate strength and been rebraced.
2) Remove level C, B and A struts and walers within the Blue clouded area STD-65 to 74, 82 & 83 once the the associated concrete slab or wall section has reached adequate strength and been rebraced.
3) The sequence for de-stressing will be the diagonals struts should be all de-stressed prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).

Monitoring:
Remove the walers sections (continuous waler is actually friction connected together) in a sequence referred to as the observation method where one waler on the north and one on the south as well as the two integral cross lot struts attached to the walers would be de-stressed and removed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

at any one time.
Once the first pair of cross lot struts have been de-stressed and removed, the WOJV installed survey points (targets) on the inside face of the soldier beams of the CDSM shoring wall, the Global Analyzer and Arup inclinometers would measure internal bracing performance over the following 24 hours after de-stressing. If little or no movement has been recorded, the contractor can then proceed and begin de-stressing and removing the next pair of wailers and struts to the east. This removal method would then be repeated until only four cross lot struts at that particular level remain; which are numbers ST-65 to 68.
Contract Specification 31-09-13 would be followed in case of movement, and the work would stop and the MRP Movement Review Panel would be convened.

Please note the following:
1) The east end rebracing sequence indicated in this RFI is the same rebracing sequence that has previously been implemented in Zone 4 for Level D bracing removal as described in RFI T 1558.
2) The east end rebracing sequence is also the sequence performed successfully in west end of the transit center excavation Zone 1.
3) The east end rebracing will have raker bracing similar to the west end, the east end does again have additional reinforcing bar in structural concrete walls where rebracing rakers are supported per details on sheet SH-5301 in Submittal TG0300-553.
4) The east end rebracing cross-lot or perpendicular sections are in accordance with submittal TG0300-553 and as has previously and successfully re-braced in zones 1, 2, and 3.

If acceptable, please specify 1) the movement tolerance for a given waler removed, 2) the observation period for analyzing movement, and 3) the acceptable means for monitoring for movement (survey, inclinometer, or both).

T-1837.2	SSS - Cast Node Repair LAST Temperature	Closed	10/31/2014	11/10/2014	11/04/2014	Potentially	☐

Bradken has made repairs to the ground node castings utilizing Hobart Brothers weld electrode in one, or both, types,
of TM-771 and FabCO RXR (data and test reports attached). The weld repair(s) were not considered DCW welds,
and were made in accordance with an approved repair procedure in conformance to the contract specifications.

The attachment of the Ground Node to the Transfer Girder is specified in the drawing at the girder flange/web to casting interface to be a DCW. The required weld will intersect with this previously repaired weld metal. The Fabricator has qualified a welding procedure for the specified base metal combination (ASTM A572-50 to ASTM
A216WCC). It is the understanding of the Code that this additional weld filler metal of the casting repair to be included
in the final girder to casting weld must comply with the AWS D1.8 Seismic requirements in order to be in conformance
to the Code provisions.

The manufacturer has lot tested three (3) individual lots for each respective type in accordance with the AWS D1.8 requirements. (documents attached). However, the testing temperature was 70 degrees F, not at the Contract required L.A.S.T. of 25 degrees F plus 20 degrees F (45 degrees F).

Please confirm that the three (3) ASW D1.8 Lot Tests for the TM-771 and the FabCO RXR weld electrode performed
at a L.A.S.T. temperature of 70 degrees F, in lieu of the required 45 degree F, for the weld repair are acceptable:
1) Specifically to Ground Cast Node 5-02
And
2) To any future repairs in the DCW weld zone of the ground cast nodes

Section A3.3 of AISC 341 stipulates a minimum CVN of 20 ft-lb at 70 °F for base metals of heavy sections of structural steel in the SFRS. Note that the casting specification for the Transbay project requires the castings to exhibit a minimum CVN toughness of 25 ft-lb conducted at 70 °F, which exceeds the aforementioned requirements of the code.

AISC 341 also stipulates CVN requirements for weld filler metals.

The code requirements for the CVN of base metals is less stringent than the code requirements for weld filler metals. This is due to the fact that weld metal is less ductile than rolled (or cast) steel base metal and because welds have significant residual stresses locked into them during welding.

In contrast, cast steel is an isotropic, highly ductile material. Also, castings are stress relieved following repair welding, which relieves the majority of residual stresses in the repair welds and brings the mechanical properties of the repair weld to within the requirements of those of the base metal. As such, castings are effectively homogenous from a mechanical properties perspective, and weld repaired areas of the casting are effectively part of the casting base metal.

We are therefore of the opinion that it not necessary to apply the CVN requirements for welds (demand critical or otherwise) to casting weld repairs, the latter of which would more appropriately be regarded and treated in the same way as base metal.

It is noteworthy, however, that while the mechanical properties of the stress relieved weld repaired areas of the castings match or exceed those of the virgin cast steel base metal, the chemistry of the casting local to the weld repair will be slightly outside of the ASTM standard for the cast steel base metal.

Co-Author:

REQUEST:

The AWS D1.8 Structural Welding Code - Seismic Supplement, and the Contract specifications, require that either:
1) Each lot of weld electrodes (filler metals) used to make demand critical welds (DCW) must be tested in accordance with AWS D1.8 Annex A
2) Filler metals may be exempt from individual lot testing, provided the electrode manufacturer perform three (3) separate lot tests in accordance with Section 6.3.8.1 Additionally, the testing specified shall be not more than the Lowest Anticipated Service Temperature (L.A.S.T.) plus 20 degrees F (AWS D1.8 Section 6.3.6).

Bradken has made repairs to the ground node casting 5-02 utilizing Hobart Brothers weld electrode in TM-771 (data and test reports attached). The weld repair(s) were not considered DCW welds, and were made in accordance with an approved repair procedure in conformance to the contract specifications.

The attachment of the Ground Node to the Transfer Girder is specified in the drawing at the girder flange/web to casting interface to be a DCW. The required weld will intersect with this previously repaired weld metal. The Fabricator has qualified a welding procedure for the specified base metal combination (ASTM A572-50 to ASTM A216WCC). It is the understanding of the Code that this additional weld filler metal of the casting repair to be included in the final girder to casting weld must comply with the AWS D1.8 Seismic requirements in order to be in conformance to the Code provisions.

The manufacturer has lot tested three (3) individual lots of TM-771 in accordance with the AWS D1.8 requirements. (documents attached). In addition to the test results provided at 70 degrees F, Hobart has provided additional test data from three (3) lots at 0 degrees F. These additonal test results exceed the contract required L.A.S.T. of 25 degrees F plus 20 degrees F (45 degrees F).

Please confirm that the three (3) ASW D1.8 Lot Tests for the TM-771 weld electrode performed at a L.A.S.T. temperature of 0 degrees F for the weld repair are acceptable:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that AWS D1.8 lot tests for TM-771 weld electrode performed for Cast Node 5-02 is acceptable.

2). TM-711 weld electrode is acceptable to any future repairs; but complying to AWS D1.8 CVN requirements is not required for cast node repair.

Reason for RFI: Shown in contract documents.

Note: Additional test results for Fabco RXR weld electrodes will be provided when they are available.

T-1838 **SCS - 4th Lift Foundation Wall - Moment Frame Beam Alignment** **Closed** **10/22/2014** **11/01/2014** **10/31/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

See attached sketch. This RFI is related to RFI T-1467.

Ground level moment frame beams tie into the foundation wall. Due to level shoring towers, the moment frame beams will be step in elevation. The level moment frame beams will be interfacing with the sloped 4th lift foundation wall causing issues in alignment and constructability in the remaining foundation wall. SCCI proposes to have the top of 4th lift be 3'-11" below top of slab. This method will clear the alignment issues, provide a starter wall edge and will result in a l "±1/4" encroachment of 4th lift wall into the moment frame beam.

Please confirm it is acceptable for the 4th lift encroach into the moment frame beam by l "± ¼"

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposed encroachment is acceptable provided that:

1. The specified placement elevation of intersecting reinforcing is not affected.

2. In the event of a wall overpour, all wall concrete interfering with the specified placement of intersecting reinforcing will be removed.

3. In order to meet the intent of contract specified clear cover (to intersecting reinforcing), the encroaching wall lip within the projection of intersecting framing shall have a roughened chamfer bushed down to the soffit of the intersecting framing.

T-1840	BGP - Area 11-16 HRC 555 T-Head Lieu of Standard Hooks In EW Beams	Closed	10/22/2014	11/01/2014	10/29/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please confirm it is acceptable to substitute HRC-555 T-Heads in lieu of standard hooks at 4-ft deep East-West Beams where they frame into Moment Frame Beams in Areas 11-16. Please reference the attached drawing for example.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. HRC 555 T-Heads may be used for beam long bottom bar end conditions in lieu of hooks where beam long bottom bars are placed above the bottom bars of the supporting member.

2. HRC 555 T-Heads shall be staggered.

3. HRC 555 T-Head bars may be spliced to beam long bottom bars where the detailer has verified, on a case by case basis, that the resulting clear spacing does violate ACI clear spacing requirements and does not hinder concrete placement and consolidation. In this determination, consideration shall be given to the presence of beam short bottom bars. As a reduction in clear spacing will occur with the introduction of splices, the detailer will verify the clear spacing and determine the appropriate splice category per Detail 1/S3001.

4. Splices, when used, shall begin at the face of the supporting member.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

5. Splices, when used, shall be alternated in single spans.

6. Splices shall not be used in continuous spans.

7. Splices shall not be used that overlap bundled bars.

8. RFI response may be used in beams other than 48" deep beams.

9. Contractor is responsible for evaluation and the selective implementation of the proposal for conformance with ACI and contract document clear spacing and lap requirements.

T-1841 **SST - Stair 304 Clarifications** **Closed** **10/28/2014** **10/28/2014** **11/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

Q1: At the second level final landing, the stair stringers are to be supported per connection 3/S1-7601. There is no supporting beam on plan. Please clarify missing information for beam size.

Q2: There is a stair landing elevation discrepency: A/7007, 1/A1-7506 show the stair landing elevation at 39'-9. This will put the missing beam noted in Q1 at elevation EL. 39'-8 3/4"for the required 1/4" landing plate shown in the detail. 3/S1-7006 shows the stair landing at top of slab 39'-4 1/2" and a landing support 7 1/2" below at EL. 38'-9. Please clarify missing beam elevation.

Q3: The architectural detail 1/A1-7506 and structural detail 3/S1-7601 show completely different support details. Please clarify which of the architectural or structural stair support details should take precedence -typical for all stairs.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The stair stringers shall be bent stringers and shall be welded to the bent plate at the south edge of the opening on 2nd floor level. Stair landing shall be supported on the flat portion of the bent stringers with connection between plate and stringers similar to detail 4/S1-7601. At the east stringer, the flat portion of the stringer shall be a C10x30 channel as shown in the attached sketch SKS-0427. Also, see responses to RFIs T-1266, T-1266.1 and T-1266.2.

2) Stair support beam is not missing. See response to 1).

3) Detail 3/S1-7601 governs over 1/A1-7506 at ST304 with the exception that the 1/2" plate at the end of the stringer shall be welded to the bent plate. Typically architectural drawings refer to structural drawings for stringer support details and in such cases structural details shall govern. The Architectural detail has been revised to match structural detail sketch SKS-0427,

T-1842 **SST - Stair Stringer to Landing Beam Conn at the Offset WT** **Closed** **10/28/2014** **11/07/2014** **11/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

(comments are revised in blue on attached sketch)

Channel end plates are usually flush with the back and the tow of the channel. Olson has projected the end plate 1/2" past on both sides for welding to the supporting WT. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI's Response:

The plate cannot project into the stair tread clearance because it would cause a tripping hazard. There is no issue with the plate projecting outward at the Toe of the Channel.

TT's Response:

Welding the end plate to the WT from back side as shown on SK-RFI2 in the RFI is acceptable.

T-1843	SST - Edge of Slab for Stair Opening at Stair 403	Closed	10/28/2014	11/07/2014	11/03/2014	Potentially	☐

From: Webcor Construction LP — Gregory Kemerer
To: Turner Construction Company — Phil Militello
Answered By: Adamson Associates, Inc. — George Metzger
Co-Author: Olson and Co. Steel — Avel Solomon

REQUEST:

Q1: Stair 403 design is setup for 5'-6 stair clearances at ascending and descending flights and a 9 1/2" guardrail clearance. This creates a total wall to wall clearance of 11'-9 1/2". The slab opening at the concourse level in the north to south direction is currently at 12'-0 1/2". But the opening must be 12'-1 1/2" for the required clearances. See attached sketches for layout information. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See detail 1 & 5 on A1-7011 and stair section c/A1-7111 . Detail 1 shows the plan layout for stair 403 rising from Train platform level to Lower concourse level. It notes a 5'-6" stair flight width with a 7" guardrail clearance, totaling 11'-7" wall clearance. This 11'-7" wall clearance is carried through the Lower Concourse slab. The south flight face of wall dimension from Grid line E is 6'-0", the south edge of slab opening at the lower concourse level is 6'-1" from gridline E. The North Stair flight only shifts to the north 2-1/2" above the Lower concourse level slab. In summary, the central guardrail clearance from train Platform Level to Lower Concourse Level is 7" and from Lower Concourse Level to Ground is 9-1/2". There is no conflict with the Architectural Documents and revision to the slab edge opening is not required.

Co-Author: Olson and Co. Steel — Avel Solomon

REQUEST:

Q1: Per the stair layout dimensions provided on 2/A1-7012, stair 401 nosing location at landing elevation 39'-9 will go 7" past the supporting column and beam per 3/S1-

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI's Response:

A sacrificial gage plate should not be required at this

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

7009. As a result, the designed conneciton called out 10/S1-7601 will not work. The cantilevered beam has no purpose in this scenario. Please see included sketch and advise.

location, if the stair stringer extend to the back of landing kick plate return.

TT's Response:

The cantilevered portion of the W10x22 beam shall be waived. The slip connection at the base of the stringer per 10/S1-7601 shall be provided at the W10 beam perpendicular to the stringer with the 3/4" dia. bolt attached to beam flange.

TT: We categorize this RFI as no cost clarification.

T-1846 **SST - Cantilevered Support Beam Length at Stair 403** **Closed** **10/28/2014** **10/28/2014** **11/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

Q1: PER STAIR SETUP DIMENSION ON 5/A1-7011, THERE IS A 2'-4 OFFSET BETWEEN LANDING SUPPORT BEAM AND FIRST TREAD. THIS CREATES THE NEED FOR A 2'-10½ CANTILEVERED BEAM. 10/S1-7601 SPECIFIES 2'-0 MAX . PLEASE ADVISE SEE INCLUDED LAYOUT FOR MORE INFORMATION.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 2' max length requirement of the cantilevered W10x22 beam may be waived at the location highlighted in the RFI. A 2'-10 1/2" long W10x22 cantilevered beam is acceptable.

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

1) There does not appear to be any specific detailing that allows for transverse drift to occur, without inducing loads in the stairs themselves. Is there an expectation that the stairs can handle this displacement-induced load demand?
2) We would like to modify the base detail of the typical stairs in order to add a second base plate with a horizontal slot in the transverse direction, in order to accommodate transverse drift without inducing load on the stairs. Do you have any issues or concerns with that?
3) We would like to ensure that there are adequate seismic gaps at the perimeter of the stair framing, in order to avoid inducing any horizontal seismic loading on the building framing members at the stair perimeter. In the process of accomplishing this, we may need to reduce slightly the overall widths or lengths of the stairs themselves ¿ possibly by one or several inches. Are there any specific reasons that this could not be done? Would this be acceptable to the design team?
4) We will list the vertical and horizontal stair reactions at the perimeter of the stair framing. Do you have any specific format that we should attempt to use for this effort?
5) We understand that the review of the stair drawings and calculations will not proceed through the City and County of San Francisco, but instead has been delegated to the design team. Is this correct? Please elaborate.
6) Please let us know the best persons to coordinate our efforts with, both at Thornton Tomasetti and at Pelli Clarke Pelli Architects.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The subcontractor shall design and detail the stair framing in accordance with the seismic design criteria specified in the General Note CD-6.

2. See the response #1.

3. Widths and lengths of the stairs cannot be reduced because their egress capacity is fixed to the given dimensions.

4. The reactions shall be tabulated in sufficient clarity that can be understood by the EOR without further back and forth clarification. Each load case and load combination shall be clearly identified.

5. Your statement is not correct. The Contractor shall obtain all approvals required by the Authorities Having Jurisdiction for the work designed and engineered by the Contractor. Contractor should contact TJPA and Authority Having Jurisdiction to determine what is required related to approvals by the Authorities Having Jurisdiction (Permitting Authorities). See Contract Document specifications for shop drawing submittal requirements. Design Team will NOT be performing a Peer Review or replacing the responsibilities of the Authorities Having Jurisdiction.

6. If W/O agrees, the Design Team - TJPA Representatives may participate in the coordination sessions. However, the communication between Subcontractor and the Design Team - TJPA Representatives must be through General Contractor.

confirm it is acceptable the walls remain unfinished (not sacked & patched after stripping).

T-1857 **SCS - Roof Top Perimeter Wall Finish Requirements** **Closed** **10/29/2014** **11/08/2014** **11/06/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per the meeting with WOJV and Designers on 10/15/14 regarding changes to the roof perimeter wall in ASI 124 and RFI T-1793 response, Shimmick was to receive the new finish requirements for the exterior face of the wall and a delineation line for the new finish requirements. Shimmick has not received this information yet. Please provide.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Roof Park perimeter concrete wall shall be finished per revised specification Section 03 30 02 paragraph 3.6 H (enclosed). Additionally, the wall will receive an elastomeric coating specified in Division 09. Refer to enclosed SKA-4265R for extent of concrete finish specified on Section 03 30 02 3.6 H and extent of concrete coating.

T-1858	**SCS - Opening blockouts through Ground Level**	**Closed**	**10/30/2014**	**11/09/2014**	**11/12/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Due to the North to South shoring along the Lower Concourse Level, the concrete partition walls cannot be built until the Ground Level is poured and struts have been removed.
Since the Ground Level will be completed before the partition walls are built, SCCI proposes installing blockouts in the Ground Level above the walls in order to complete the concrete pours and vibrate for the partition walls in GL 10 to GL 13.
The blockouts will be 8" diameter circle, the rebar detail will be the one shown at 9/S1-5003. The blockouts will not be farther than 5' O.C. or closer than 2' 6" O.C. See the attached drawing for blockouts layout.
Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

TT response:

In concept, blockouts in formed concrete and fill-on-metal-deck are acceptable for the purpose of pouring partition walls. Please provide specific details for each case for design team to review. The referenced Detail 9/S1-5003 is not applicable to formed concrete and does not meet requirements stated below.

Structural Requirements for Formed Concrete:

1. Blockouts shall only be made in concrete slabs and not in beams.

2. The pourback shall be secured to the blockout.

3. Pourback shall not impinge on 1¿ minimum clear gap between soffit and top of partition.

4. Blockout shall not be larger than reinforcing spacing.

5. Reinforcing shall not be cut.

Structural Requirements or Fill on Metal Deck:

1. Blockouts shall permit patching of metal deck prior to pourback with same gage sheet metal or matching metal deck.

2. Reinforcing shall not be relocated or cut.

Details shall address waterproofing of cold joint in penetrations located outside of building envelope.

AAI response:

Further to TT¿s response, WOJV have indicated that the slab penetrations will be poured back before the slab is waterproofed.

Contractor to clarify and describe how 1¿ minimum clear gap between soffit and top of partition will be maintained during pour and firestopped after.

T-1859 **SCS - Vertical Trim Bar Termination** **Closed** **10/30/2014** **11/09/2014** **11/05/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference drawing 4/S1-3207, RFI T-1666, RFI T-1698 and see attached spreadsheet listing out the length of trim bar to be embedded into poured spans of 3rd lift for relevant openings.

The foundation wall penetration detail 4/S1-3207 requires vertical trim bar of LTS + W above and below the opening. RFI T-1666 and RFI T-1695 responses have noted that a hook or head may be used to terminate trim bars where bar length exceeds height of wall. However the third lift will require embedded trim bars for all foundation wall openings where this detail is applied. seer proposes to terminate trim bars with hooks at the bottom of the 4th lift, similar to RFI T- 1666's response for the top of wall.

Please confirm if terminating trim bars with hooks at the bottom of the 4th lift is acceptable or provide parameters for cases where this would be acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The proposal is not acceptable. The contractor shall coordinate between packages and provide trim reinforcing in the third lift where it is required. For locations where the contract reinforcing was not provided in the poured third lift (various locations between Grids 6 and 18 as stated in the RFI attachment), resolution will occur through the NCR process.

T-1863	SSS - E510, E511, & E512 Missing Slab Information	Closed	10/31/2014	11/10/2014	12/01/2014	Potentially	☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 673 SK1 for items 1 to 4:
1) The model and drawings match the elevation shown on S1-2305 which shows T/SLAB 12.73'. Confirm the TOC 12.58' shown on A1-2865 is correct and the model/drawings are to be revised.
2) Confirm the loose 1/4" bent plate over the beams is an acceptable edge between the knock-out and permanent slab since a structural detail is not provided.
3) Detail 6/S1-5004 noted on S1-2305 does not address the knock-out slab condition at a dropped slab condition as occurs here. Provide a detail showing the edge of slab requirements at both the top and bottom slabs.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Acceptable, except tack weld the ¼" bent plate to the two W16 beams. Also, the edge bent plate (A8525 in the submittal) shall be welded to the W36x160 beam (north of member A6674) and not to the W16 beam (A7949). This also applies to the bent plate at the south side of the escalator pit. Welding the edge bent plate to the W16 beam will make it difficult to remove the W16 beam for a future opening.

3) Provide slab edge details per typical detail 8/S1-

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

4) Supply a detail showing the edge of slab requirement for the low slab.

5000 at the high and low slabs. For escalator pit at E510, E511, & E512, the north and south pit walls will be constructed with a bent metal plate. Refer to SKA-4294 & SKA-4295 and RFI TG7.3-065 response.

4) See response to 3).

T-1864 **SSS - Missing Kicker Brace Information at Ground Level GL 21-22** **Closed** **10/31/2014** **11/09/2014** **11/18/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 674 SK1:
The reference to detail 1/S1-7661 is not shown on S1-2305 and the kicker locations are not shown as is on S1-2403 at ST307 between Grids 11-12.
Please supply the necessary information if these beams are to be revised prior to fabrication.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per discussion with TJPA, the originating comment in the shop drawing does not apply to Phase 1 work. All Phase 2 "future" escalator support and bracing are not part of TG07.1 scope.

WOJV to confirm scope of work to be provided under this contract with TJPA.

T-1865 **SSS - Incorrect Weld Size at HSS Connections** **Closed** **10/31/2014** **11/10/2014** **11/07/2014** **Potentially** ☐

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please see attached SK1 for questions 1 & 2:

1. Grout hole diameter is not specified on the design drawings. Verify use of 1" diameter grout holes is acceptable.

2. Verify 1'-7" dimension from center of column to center of grout hole. Typical at 3 places.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Size and location of grout holes is part of means-and-methods of contractor.

Reason for RFI: We classify this as a no cost clarification.

T-1867 **SSS - Flange Cut Flush Requirement** **Closed** **10/31/2014** **11/09/2014** **11/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Shop drawings have been detailed with a note to "cut flange flush with web." Where there are web doubler plates (web stiffener plates) installed, the thickness of the web plus doubler plates controls erection clearances. Please confirm that there is no need for the flange to be ground flush with the web in these locations, and that flange metal can sit proud of the web but not thicker than the thickness of the web plus doubler plates.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed.
TT: We agree with the reason for request verification. We categorize this RFI as clarification for issues on means and methods.

T-1868 **SSS - Clarification of Moment Frame Column Designation** **Closed** **10/31/2014** **11/10/2014** **11/06/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Are the 130 Moment Frame Columns (GL1.4 through GL33.2, Ground Level to Roof Park Level) designated as SFRS (Seismic Force Resisting System)? If yes, please clarify where they are identified as such.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to Sheet notes S1-2302, S1-2402, S1-2502 and S1-2602 which states superstructure transverse seismic frame elevations are in Sheets S1-4101 through S1-4116. See also response to RFI T-0787 where same point was clarified to the contractor.

TT: We disagree with the reason for request: Insufficient information. We categorize this RFI as called out in contract documents and previously answered.

T-1870	SCS - Horizontal CJ for Upturned Beams at GL 18, 26, 34, and 35	Open	10/31/2014	11/10/2014		Potentially	☐

From: Webcor Construction LP — Claude Titche
To: Turner Construction Company — Phil Militello
Answered By:
Co-Author: Shimmick Construction Company, Inc. — Henry Chiang

REQUEST:

Please reference S1-3660 through 3663, and TG03 Balfour Beatty Bridge submittal TG0300-201.
Some challenges to pouring the upturn beam monolithic with the slab pour are:

(1) Worker access is less than 5' from top of slab to underside of roadway and less than 3' to the underside of the steel framing.
(2) The slab and beam must be finished per spec 033002 3 .6.C to receive waterproofing in A1-8717.
(3) There is minimal to no access at the upturn beam and under the temporary duct bank.
(4) Large quantity of concrete to pour with difficult access.
(5) The available road closure time for 1st/Fremont/Beale may not provide enough time to perform all the above.
Given these restrictions, Shimmick requests approval to pour the upturned beam separate from the slab:

Option 1: by placing a horizontal construction joint along the length of the upturned beam with top of keyway flush with top of slab.

Option 2: by placing 2 vertical construction joints on either

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

side of the upturn beam. (preferred)
Please confirm if either of these CJ proposals are acceptable. (WOJV: this option will not work due to internal bracing removal sequencing, refer to option 1)

T-1871	SCS - Rebar Detail for Upturned Beams at GL 18, 26, 34, and 35	Closed	11/03/2014	11/13/2014	11/13/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference S1-3660 through 3663, and TG03 Balfour Beatty Bridge submittal TG0300-201.

Shimmick is proposing a rebar detail change at the ground level roadway upturned beams to facilitate rebar placement. Per BBII's detail 6/SH-5101 , the upturned beam's vertical clearance is 7"-12" to the W18 steel, and the horizontal beam clearance to the cap beam is 19 .5".

Details S1-3660 to 3663 show the ground level upturned beam rebar detail with closed stirrups at every beam. In lieu of the closed stirrup, Shimmick proposes to use an open stirrup and a cap (similar to Detail 2/S1-3600), with the opening and cap placed on the side of the beam.

Please confirm that the proposed open stirrup and cap in lieu of the closed stirrup is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed reinforcing detail is acceptable with one modification: provide 135 hooks at both ends of the cap tie.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1872	SCS - Roof Top Skylight Construction Joint Relocation	Closed	11/03/2014	11/13/2014	11/13/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per drawing S1-8008 detail 4 the deck at the sky light overhangs the beams on a bent plate and the distance of the overhang varies. Please see attached drawing for further explanation.

Shimmick requests approval for the following:
1. To relocate the construction joint from above the bent plate to the top of the slab elevation.
2. To cut a 1" diameter hole roughly 2 feet on center through the bent plate to allow the use of embedded wall form supports to support the inside wall panel after the deck pour.
3. Please confirm that the skylight over hang bent plate will support the wet concrete deck weight.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Relocating the construction joint to the top of slab elevation is acceptable.

2) Cutting holes through the bent plate is acceptable in concept. Final review will be performed when more detailed information is submitted with formwork shop drawings.

3) Confirmed that the bent plate shown is to support the wet concrete weight (for the deck only). Verify location and dimensions of the bent plate with steel shop drawings.

T-1881	SCS - Roof Top Added Deck Construction Joint at Seismic Wall	Closed	11/04/2014	11/14/2014	11/14/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Per drawing S1-3282 detail 3 the roof top concrete deck overhangs the 10.1 beam line by 2 feet.
Delaying the installation of placing the overhang portion of the concrete deck would allow Shimmick to place the roof top concrete deck sooner. This construction joint would be in addition to the current construction joint in the seismic wall per RFI T-1738.
Please see attached drawing for further explanation.
Shimmick requests approval to add a construction joint in the deck on the 10.1 beam line.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor proposed construction joint at the location indicated in the RFI is acceptable.

T-1882	**SCS - Geothermal Manifold Conflict at Field 7, 8, and 11**	**Closed**	**11/04/2014**	**11/14/2014**	**11/12/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please Reference RFI's T-1042 and T-1179

As shown in the attached mark up, the geothermal manifolds penetrate the 4th lift walls. RFI's T-1042 & T-1179 confirmed elevations for the geothermal manifolds at GL 17.5 (Field 7 & 8) and GL 26.5 (Field 11).

Per the confirmed manifold elevations, the upper sleeves at both locations enter the 32" roadway slab.

Please provide the designers' intent for these manifolds to enter the roadway slab at only these locations.
Please provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The configuration shown in RFI T-1882 does not comply with the Design Team response for RFI T-1042.

Response to RFI T-1042 stated: "Riser penetrations into the building must occur within the beam space of the ceiling of the lower concourse level. The elevations shown on the sketches fall below the beam pockets and conflict with future emergency ventilation ducts within the building. Elevations shall be modified and resubmitted to verify that the pipes enter the building within the beam space. Risers 7 & 8 may be greater than 14'-0" below finished grade and should be reviewed by ARUP for confirmation."

RFI T-1179, it¿s related sketches and the mentioned discussions, were entirely regarding the piping installation passing underneath future ductwork. It was not related to the sleeve heights which had already been dealt with in RFI T-1042.

There is no design intention, nor any confirmation, for the geothermal piping to enter the roadway slab at these locations.

The geothermal manifold pipe penetrations are to be lowered to avoid interference with the roadways slabs. Please submit modified pipe elevations, avoiding interference, as requested previously in RFI T-1042, together with a corrective action plan for review by the Design Team.

T-1889	SCS - Roof Skylight Shear Key Clarification for RFI T-1281.3	Closed	11/05/2014	11/05/2014	11/08/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

The detail provided in RFI T-1281.3 on SKS-0422 only shows the geometry for central shear key pocket locations that are square to the skylight ellipse.

Please provide a detail for the grid line 11 and 28 shear key pockets that do not sit square to the ellipse as seen on detail 3 of S1-8008. Please see attached drawing for further explanation.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The details documented in SKS-0422 included with the RFI T-1281.3 response do NOT apply to the W-10 skylights. The sketch SKS-0422 only applies to the W-12 locations near Gridline 23, which are indicated on the plan view of SKS-0422 with the detail tag 4/S1-8016. Refer to the note on SKS-0422: "Note: information not shown or noted is per 4/S1-8016. Details on this sketch are modifications/additions to detail 4/S1-8016". Detail 3/S1-8008 is unchanged by the response to RFI T-1281.3 and SKS-0422. The shear key detail for the W-10 skylights at Gridlines 11 and 28 can be found on S1-6011.

REQUEST:

See attached marked up drawings.

Noted 8" SAN and 8" F plumbing pipes do not have a corresponding sleeve size on the plumbing sleeve schedule. SCCI requires the sleeve sizes for wall penetrations to adjust rebar layout accordingly.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sleeves are 12" in diameter.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please provide corresponding sleeve sizes for the noted
8" SAN and 8" F plumbing pipes.

T-1892 **SCS - CDSM follow up question in response to RFI#T-1655 answer** **Closed** **11/06/2014** **11/16/2014** **11/06/2014** **Potentially** ☐

From: Shimmick Construction Company, Inc. Henry Chiang **To:** Webcor Construction LP Spencer Sayles **Answered By:** Webcor Construction LP Claude Titche

Co-Author:

REQUEST:

RFI T-1655 SCS -0013 Response provided the following:
A. Confirmed notching depths with an updated sketch.
B. Referenced ASI 123 roadway at curb (low point) elevations to be used to calculate notching elevation.
Shimmick was the able to determine cut elevations for Minna Street from grid line 1 to grid line 18. Cl-2001 shows extent of below grade train box and shoring wall at STA: 2+30.85. Using the same reference point on Cl-4001 to determine the North West comer of the shoring wall in relation to roadway stationing Shimmick was then able to follow the south flow line proposed grade profile as the bottom of curb elevation for the south side of Minna Street elevations.
I. Please confirm that GL 1 correlates with STA: 2+32.85.
2. There isn't an equivalent elevation for Natoma Street (south shoring wall), Shimmick requests that reference point with stationing be provided and added to the C 1-4004 drawing.
Some areas lack a Cl Flow Line Profile. Shimmick requests that a different reference point, such as top of ground level deck, be provided for
3. the west shoring wall from grid line A to X,
4. the south shoring wall from grid line X to start ofCI-4004 which is the first drawing sheet for Natoma Street, and
5. First street to Fremont for the south shoring wall.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See attached sketch for notching elevations.

T-1893 **SCS - Rebar Details at GL9.9 and B88** **Closed** **11/07/2014** **11/17/2014** **11/19/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please see attached references: S1-3701, SSS 051000 0561.1Sheet 674AC, and S1-3400.
Detail 11/S1-3701 shows B88 framing into MFB 6 near GL G/9.9. TR9.9 has 3" diameter holes placed to allow for B88's bottom bars to pass through the web and terminate inside the concrete MFB.

The locations of the holes per steel shop drawings are too low to permit the noted lap splice based on the clear requirements set by S1-3400. The holes effectively align with the bottom of B88.

Shimmick proposes that (1) B88's elevation be adjusted to match TR9.9's rebar penetration to tie the concrete into the steel, or (2) new holes be placed on TR 9.9 to facilitate rebar penetration in S1-3701.

Please approve one of the above changes to facilitate rebar placement at TR 9.9, or provide an alternate detail to resolve the conflict.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The contractor mis-read the drawing. The top of slab shall be @19.62, while 19.96 is the top of concrete pad over beam. However, the existing holes are still slightly too low (say around 2.5"). Shimmick shall increase the B22 depth slightly to allow proper cover for the 5-#10. Do not adjust the top of B88 elevation.

T-1894 **SCS - Embedded Column at Foundation Wall - Position Splice** **Closed** **11/07/2014** **11/17/2014** **11/13/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche
To: Turner Construction Company Phil Militello
Answered By: Adamson Associates, Inc. George Metzger
Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference RFI T-1625 regarding column vertical bar constructability.

See attached Bartec splicing system product data.

In the revised response to RFI T-1625, it is stated that hooks shall be provided as shown in construction drawings. This detail is not constructible with to the HRC 420 couplers at the top of the 3rd lift. SCCI proposes to utilize a position splice coupler from Bartec in lieu of the HRC 400 series on the rebar with hook. The Bartec coupler complies with Specification Section 03 20 02 - 2.3 - B.3 for type 2 couplers.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For the purpose of splicing foundation wall embedded column hooked vertical reinforcing, the proposal is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm if Bartec couplers are acceptable to be used at embedded columns to allow hook installation.

REQUEST:

See attached CD RFI # 686 SK1 & SK2 for items 1 to 6:
The design intent in this revised connection for the W40 beams east of Grid 26 is not clear as it contradict various other details as listed below. The noted beams are currently connected to the perimeter beams per S1-8003. Please review and confirm for items 1 to 5:
1) Indicates W40 beam supported by perimeter beam and W30 at the opposite end.
a) Confirm the connection to the perimeter beam is per 1/S1-8003 at the CP5 location.
b) Confirm the other end of the W40 may be connected to the W30 per 1/S1-5011 except with a full depth shear plate and 7 bolts as there is insufficient room for a double angle connection per S1-5010. See enlarged typical detail on SK1
2) Confirm the connection for the W40 to the perimeter beam is per 1 & 1B/S1-8003 at the CP5 location.

3) Indicates W40 beam supported by perimeter beam and BU-40 at the opposite end.
a) Confirm the connection to the perimeter beam is per 1/S1-8003 at the CP5 location.
b) Confirm the other end of the W40 may be connected to the BU-40 per 1/S1-5011 except with a full depth shear plate and 11 bolts.

4) Indicates W40 beam supported by perimeter beam and W24 at the opposite end.
a) Confirm the connection to the perimeter beam is per 1/S1-8003 at the CP5 location.
b) Confirm the other end of the W40 may be connected to the W24 per 1/S1-5011 except with a full depth shear plate and 6 bolts.

5) Indicates W40 beam supported by perimeter beam and W40 at the opposite end.
a) Confirm the connection to the perimeter beam is per 2/S1-8003 at the CP6 location with the brace omitted and the W40 connected to the 1 1/2" thick plate with 11 bolts per 1/S1-5011.
b) Confirm the other end of the W40 may be connected to the W40 per 1/S1-5011 except with a full depth shear plate and 11 bolts.

6) If the noted connections are to be revised to suit S1-

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1a) Confirmed.

1b) Confirmed.

2) Connection at the noted beams is per 1 and 1B/S1-8003, except, that the number of bolts, bolt sizes, bolt spacing and edge distances shall be 1/S1-8000.

3a) Confirmed.

3b) Confirmed.

4a) Confirmed.

4b) Confirmed.

5a) Confirmed.

5b) Confirmed.

6) The intent of the revision to detail 1/S1-8000 was to revise connections (bolt size and configuration) for beams along moment frame lines only (shorter beams in between not affected). Detail 1/S1-8000 will be updated to clarify this intent. LEV may be changed to 4" to fit the bolts within the available connection length.

TT: We disagree with the reasons for request: Engineering Conflict and Insufficient Information, agree with Verification . We categorize this RFI as no cost clarification.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

8000, please note that the connections are not possible with the "LEV" & "S" values as shown. Confirm these values may be adjusted as necessary to fit in the required bolts.

T-1898 **SSS - Light Column - Holes for Electric Lighting System** **Closed** **11/08/2014** **11/18/2014** **11/11/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please provide hole locations and orientations required for the lighting system cabling on the top ring of the light column (EL 98'- 9"). No detail is provided in A1-4650.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

GC to coordinate conduit routing locations and submit for Architect's review.

T-1899 **SST - Terrazzo SS Riser Clarification** **Closed** **11/08/2014** **11/18/2014** **11/12/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

Attached are drawings A1-7511 and A1-7512 regarding the details for the stainless steel risers at the terrazzo stair treads (affected stairs are 205, 307, 308 and 309). Need clarification on the following items:

Stair 307 specifies etched risers, while stairs 205, 308 and 309 are to be perforated. Please clarify the desired "etch". Do the risers on stair 307 have the same hole-pattern as stairs 205, 308 and 309? Is the etch an alternate finish? Please clarify design intent.

With regard to the hole pattern, there is not enough information for the desired stagger or border (if required). Please clarify design intent.

Olson Steel priced all of the risers as grade 304 stainless steel. Please confirm this is the desired grade versus grade 304L, 316,316L etc.

Olson Steel priced all of the risers with a mill finish.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed, the etch-pattern for stair 307 is the same as hole-pattern for stair 205,308, & 309. The etch is not an alternate finish. Refer to SKA-4301

2. The etch-pattern and perforated-pattern are to use 3/4"Ø circle. The pattern is to start at the center on the plate and have a minimum of 1" side border. Refer to SKA-4302 for updated information.

3. Provide 316 or 316L Stainless Steel are preferred.

4. Confirmed, #4 brush

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm the risers do not receive any alternate finish (#4 brush, etc.).

T-1900 **SST - Middle Handrail Location Clarification** **Closed** **11/08/2014** **11/18/2014** **11/12/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

Please see attached for a handrail location question. Olson has located the center stringers so that the handrail clearances are equal-equal. This creates uneven stringer to stringer clearances. Olson has done middle stringer centered between stringers and centered between handrail and it seems both meet code. Please note the architectural drawings have not located them correctly. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The center stringers will be located Equal distance between the stair handrail typically as shown in attached sketch with originating RFI T-1900.

T-1901 **SST - Stair 304 Base Support** **Closed** **11/08/2014** **11/18/2014** **11/21/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

As per the edge of slab setup dimensions on A1-2863, the stair base support expansion anchor called out in detail 11/S1-7601 will be 1" from the edge of the slab. With a 3/4" DIA bolt and a 1/4" edge plate, that makes for only 3/8" total clearance of bolt and slab edge. This is not enough room for the expansion anchor to work as designed. Please advise on a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Move the curb and edge of slab as shown in attached sketch SKA-4314 so that the expansion anchor is centered on the curb per detail 11/S1-7601. Provide kicker braces at the W16 stair support beam as shown in the attached sketch SKS-0430.

T-1902	SST - Terrazzo Tread Clarification	Closed	11/08/2014	11/18/2014	12/11/2014	Potentially	☐

From: Webcor Construction LP — Gregory Kemerer
To: Adamson Associates, Inc. — Paul MacPhail
Answered By: Adamson Associates, Inc. George Metzger
Co-Author: Olson and Co. Steel — Avel Solomon

REQUEST:

One of the specified terrazzo tread suppliers, Wausau, has indicated that using only marble chips in the aggregate mix for the terrazzo stair treads is "unusual" as per Spec Section 09 66 14, section 2.4.C. Olson Steel priced the terrazzo stair treads from Wausau per this spec. Please confirm the design intent does not include any glass/mirror into the aggregate mix.

Under Spec section 09 66 23 Epoxy Terrazzo Flooring, section 2.3.B.5 the terrazzo stair landings are specified to use an aggregate mix of 50% recycled glass/mirror and 50% natural marble/stone. The aggregate mix for the landings differs from the tread; please confirm this was the design intent.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Confirmed, terrazzo treads aggregate mix does not include glass/mirror.

2. The aggregate mix for the landings TERR-2, same as for the landings. Refer to the attached sections 09 66 23 and 09 66 14.

T-1903	SST - Stair 401 Structural Framing Clarification	Closed	11/08/2014	11/18/2014	11/20/2014	Potentially	☐

From: Webcor Construction LP — Gregory Kemerer
To: Turner Construction Company — Phil Militello
Answered By: Adamson Associates, Inc. George Metzger
Co-Author: Olson and Co. Steel — Avel Solomon

REQUEST:

Q1. From the General Structural Notes note CD-13 on sheet S-0006, it is our understanding that the stair structure should not impose torsion on the superstructure members. However, for Stair 401 sheet A1-7111 shows the stair columns located eccentrically from the centerlines of the superstructure beams. In addition, Structural sheet S1-2404 calls out detail 9/S1-5027 which shows the superstructure beam supporting the stair column eccentrically. Is it acceptable to detail this connection as shown in 9/S1-5027 even though it applies torsion to the beam?

Q2. Should the 3/8" side plate shown in detail 9/S1-5027 be installed for the full length of the beam?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Structural beam shown in detail 9/S1-5027 is designed considering the torsion induced by the eccentric stair post. Similarly, in detail 1/S1-7600 kicker braces have been provided at the structural beam to take torsion induced due to eccentric posts. General Note CD-13 applies where structural details do not show any kicker braces, stiffeners or side plates at the support beam or in cases where the eccentricity per contractor's design exceeds those shown in the structural details. Another example where General Note CD-13 would be applicable is elevator machine beams. Per detail 8/S1-5004 elevator machine equipment needs to provide bearing over full width of the beam flange to prevent torsion in the machine support beams.

2) Length of side plate to match length of opening per note 2 in detail 9/S1-5027.

TT: We categorize this RFI as no cost clarification.

T-1904	BGP - Partition Wall Top Brace Layout	Closed	11/11/2014	11/21/2014	11/21/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

See attached for SCCI' s interpretation of the layout of the top braces for the Train Level Partition Walls in Area 3 and 4 based on the structural details in the S1-9000' s. Please confirm that the locations and spacing of the braces shown in the layout drawing are acceptable. Also please confirm or provide direction on several instances that are noted on the layout where SCCI was either unsure of the layout or had to space the braces beyond the specified maximum per the structural details.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Layout review of partition wall bracing shall occur through the submittal process. To assist the contractor with preparation of the submittal (and answer questions posed in the RFI attachment) the following general rules shall apply:

- For connections to concrete slab, the 3/8" thick plate in Detail 3/S1-9001 is not required and the post-installed anchors may be installed directly to the L6x6.

- The L6x6's in Detail 3/S1-9001 are not required to be directly opposite each other in the case of a corner pilaster. In the corner case, one should be centered on the pilaster opposite the return and the other as near to the reentrant corner as possible.

- The L6x6's in Detail 3/S1-9001 are not required to be directly opposite each other in the case of a pilaster T-intersection. In this case, one should be centered on the pilaster opposite the intersection and the other as space permits. In the latter case, the length of L6x6 may be reduced to suit provided that a minimum of two anchors is provided. Small overhangs will be permitted.

- Deviations in spacing of angle brackets in Details 7/S1-9052 and 4/S1-9051 will likely be acceptable. Acceptance will occur during the submittal review process.

- It is not necessary that opposite angle brackets in Detail 4/S1-9051 be aligned.

- Angle brackets at wall intersections that clash shall have the more restrictive wall face govern. Pilasters will generally take precedence over wall brackets.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

The revised roof perimeter wall drawings provided in ASI-0124 and RFI T-1739 and T-1857 are architectural only and do not show how the change in height affects the rebar design.

Please provide updated rebar details 2, 4 and 5 of S1-3282.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to attached sketch SKS-0437 that shows rebar details at the top of revised roof perimeter walls.

T-1906 **SCS - RCS 2 Splice Layout Requirements** **Closed** **11/13/2014** **11/23/2014** **11/21/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

See attached markup of S1-3500 including detail 1/S1-3001 showing the rebar splice schedule.
S1-3500 has been marked up with dimensions showing typical MFB span (6 eq spans in between 42' 6" grids). CJs will be placed in the span west of each grid. The requirements for rebar splices and CJ placement are shown. Two conflicts are noted below, involving the RCS 2 slab's #5 top layer of rebar.

1) Midspan LCS of 1' 7" is greater than the available 1/3rd span (per spec) for CJs of 1' 6 1/4". Please confirm it is acceptable for the splice length to exceed the central third of the slab's span.

2)Reference CAD mock up combining CJ spec requirements and S1-3500 splice requirements. Splice length of 1'7" conflicts with required 0.3LN spacing intended to center the splice. Please confirm it is acceptable for the LCS to extend into the 0.3LN span.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

There is no requirement for the slab top reinforcing compression lap splice to be contained completely within the central third of the span only that the splice be located at midspan. At short RCS-2 spans, where a centrally located splice would overlap a construction joint placed at the third span, the compression splice may be moved away from the construction joint or the construction joint may be moved into the non-central third span. SEOR will not object to small movements. Approval of final locations of splices and construction joints will occur in submittal review. The detailers are asked to cloud such deviations to facilitate review.

T-1907	SCS - Moment Frame Beam spacing South of GL G and west of GL 10	Closed	11/13/2014	11/23/2014	11/21/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference sheets S 1-2302 through 2311 for the ground level moment frame beams located South of GL G and west of GL 10. The locations of the moment frames referenced above require further information for detailing purposes and cannot be determined using General Notes GR 12 to 16. Reference the legend and callouts on each attached sheet to locate requested clarification, which match the below (6) requests.

Please confirm or provide the following dimensions.
1 .Beams southwest of GL X: 8' 11" on center, except 9' 0" o/c at radius opening
2.Beams running east-west, located east of GL X: 9' 8 5/8" o/c
3.3 Radius Openings: Please provide North-South dimension from GL K or L to center of opening.
4.North concrete stringers connecting radius MFBs: Please confirm that beams are not curved. Please confirm the angles noted on Sheet 3.
5.South edge of Radius MFBs: Please confirm Sheet 3 correctly indicates sets of equally spaced beams. Please clarify whether the noted equal spacing occurs along the radius foundation wall or along the straight North concrete stringers. Please provide the distance between the equal sets, noted with ? on Sheet 3.
6.Please confirm that GL X and the noted set of equally spaced MFBs on Sheet 3 intersect, in order to provide a base point for future dimensioning.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Confirmed.

3) The centerlines of the two openings are 11' from GL L and are noted on A1-2870 submitted with ASI 127 on 9/12/2014.

4) Confirmed that the beams are straight and the angles noted on Sheet 3 in the RFI are correct.

5) The equal spacing between MFB beams shall be along the north concrete beams. The distances corresponding to '?' as noted on Sheet 3 are acceptable.

6) Confirmed.

T-1910	BGP - As-Built Condition of Rebar Dowels for Shear Walls W390B and W390D	Closed	11/14/2014	11/24/2014	11/17/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

SCCI recently performed an as-built survey of the western-most Shear Wall rebar dowels for the 3rd Lift that were cast into the 2nd Lift Shear Walls and Lower Concourse. These dowels dictate the western face of the 3rd Lift Shear Walls as well as a couple of columns on the West Throat Slab and a B130/B131 Beam alignment. Out of the walls that were surveyed, two of the walls had rebar dowels that were several inches to the west of where they should have been. Based on the results shown in the attached drawings, please confirm that the resulting as-built conditions are acceptable for construction:

I. Encroachment of the western faces ofW390B and W390D into the adjacent corridor.
2. New location of C19 Column above W390B (roughly 8" to the southwest in alignment with the western face ofW390B below).
3. New alignment of B130/B131 Beam below the Vehicle Ramp as a result of the new C19 Column location above W390B

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The minor encroachment of shear walls into South West service corridor, location of C19 column above the shear wall and beam alignment below the vehicle ramp, resulting from the as-built location of the rebars, as described in this RFI, are acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1911	BGP - Foundation Wall/Corbel Below Vehicle and Bike Ramp	Closed	11/14/2014	11/24/2014	11/24/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please confirm the following items related to the Foundation Wall/Corbel below the Vehicle and Bike Ramp and the response to RFI T-1850:

1. The corbel supporting the slab for the Communication Vault Room between the Vehicle and Bike Ramp is level and the top of the corbel remains at EL+ 14.0' per Detail 5 on Al-7413 even though it is not indicated on SKA-4289 (A1-7401).

2. The corbels below the Vehicle and Bike Ramps extend to the outside faces of the walls for each ramp and the corbel supporting the slab for the Communication Vault Room spans the entire distance between the corbels under the Vehicle and Bike Ramp.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AA Response to questions 1 and 2 follows:

1) Refer to attached sketches SKA-4308 to 4312 for updated architectural drawings related to foundation wall/corbels. There is no concrete corbel spanning the foundation wall directly below the Communications Vault Room. Refer to SKA-4309 (based on A1-7413) for updated Detail 5.

2) Refer to SKA-4308 (based on A1-7401) showing the extent of Vehicle Ramp Corbel and Bicycle Ramp Corbel and Top of corbel elevations. Refer also to ARUP and TT drawings.

Arup Response to questions 1 and 2 follows:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3. S1-2251 shows the extent of the 4th Lift Foundation Walls that is included in TG06's scope in order to support the Vehicle and Bike Ramp. The western extent of the 4th Lift Foundation Wall is shown where the inside face of the foundation wall intersects with the outside face of the Vehicle Ramp Wall. The eastern extent of the 4th Lift Foundation Wall is shown to extend roughly 9 feet past the outside face of the Bike Ramp Wall to Gridline W. Additionally, the only elevation information for the portion of TG06's 4th Lift Foundation Wall is "TG0600 Foundation Wall=3/4" Below Bike Ramp (Varies)." Please confirm the eastern extent of the 4th Lift Foundation Wall as described above (per S1-2251) is correct. If it is correct, please provide a top elevation for the foundation wall that extends out past the Bike Ramp to Gridline W.

4. SCCI intends to pour the section of TG06's 4th Lift Foundation Wall in 3 different pours (see attached markup of S1-2251 for SCCI's proposed construction joint layout). Please note that these construction joints do not match up with the construction joints below in the 3rd Lift Foundation Walls. However, SCCI assumes that a similar condition to the 3 rd Lift Foundation Walls above the Knockout Walls (see RFI T-1569) exists due to the West Throat Slab separating the 3rd and 4th Lift Foundation Walls below the ramp.

1) There is no corbel at the Communication Vault Room between the Vehicle and Bike Ramp.

2) Refer to SK-C-0003 and SK-C-0004 issued in response to RFI T-1774 for extent and length of corbels and slide bearing plate locations.

TT responses to questions 3 and 4 follows:

3) The information provided on Sheets S1-2310 in conjunction with A1-2870 include correct information regarding top of wall elevation change at the ground level. Refer to attached sketch SKS-433 for updated Detail 1/S1-2251, which will be issued as part of ASI 128, showing concrete corbel configuration.

4) TT does not take exception to the construction joints shown in item 4 of this RFI.

T-1912 **SST - Stair 403 Clarifications** **Closed** **11/14/2014** **11/24/2014** **11/24/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

This question impacts stair 403 between concourse and ground level.

1. Per the attached comments onSK-RFI-12A, the stair is currently setup to agree with 5/A1A7011and the structural steel locations noted by ASI-027. The new dimensions noted in ASI-127 will revise the edge of slab, thus revising the width of the stair well and the widths of the stairs inside it. Please furnish a revised detail.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) The revised edge of slab on structural drawing in ASI0127 was to match the edge of slab shown in the Architectural Drawings. The architectural edge of slab has been designed and dimensioned to match stair design on A1-7011 and did not change in the architectural drawings issued in ASI0127. The stair widths have not changed.

2) The proposed stair widths are not needed, these

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

2. Per the attached comments on SK-RFI 12B,new stair width dimensions have been determined to be5'-4 and 5'-6 ½". Please verify these dimensions are correct. These new dimensions create uneven ascending and descending stair widths. Does the stair need to be re-centered to 5'-5 ¼" equal widths on each side or is it allowed to be uneven?

3. Per the attached comments on SK-RFI-12C. the stair support columns would need to shift with the stairs and this creates a problem near the grid D.8 adjustment. The 2" shift south puts it too far off the edge of the concete beam below and 11/S1-7600 will no longer work. Please advise on a revised detail.
*Please furnish revised details 2, 4, 5/A1-7011 to reflect changes on ASI-127 and furnish revised column edge detail to replace 11/S1-7600

dimension are incorrect. Refer to 1) response.

3) No Change is needed. Refer to 1) response.

T-1913 **SST - Checker Plate Mid Landings at Detail 10S1-7601** **Closed** **11/14/2014** **11/24/2014** **12/10/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Olson and Co. Steel Avel Solomon

REQUEST:

This question impacts all checkered plate mid-landings at detail 10/S1-7601

Q1: At detail 10/S1-7601 there will be a checkred kicker plate butting up against the end of the stringer at the soudside stringer connections. The long slot and bolted connection that allows the stringer to float will not be able to float in the direction of the kicker plate that stops it. This is typical at midlandings. Please see included sketches and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide a 3" gap between stair stringer and landing bent plate. Attach a Painted Galvanized steel bent closure plate to stair stringer so that the bent plate can slip past the landing bent plate. Refer to SKA-4330 for detail.

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached CD RFI # 493.3 SK1 & SK2:
The response to RFI T-1692 (SK 681, CD 493) re the HSS6x6 to be continuous was implemented in the model and the Mill Order has been revised to maintain current submittal schedules as sis shown on attached SK2. The response in RFI T 1692.1 (SK 681.1, CD 493.1) confused this direction.
At this time, for Skanska to move forward, they require a splice location and splice weld for the continuous HSS6x6x1/4 column. Confirm the proposed splice location and weld as shown on SK2 are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In response to RFI T-1692, TT requested the contractor to make the HSS6x6 column at the north-east corner of PE201 continuous. That said, the beam to connection issue highlighted in the RFI could have been resolved even with the column remaining discontinuous. The top angle per typical detail 8/S1-7604 would be connected to the HSS 8x8x5/8 and the bottom angle would be connected to the HSS6x6 column. Although making the column continuous can be considered a minor change, the intent was to facilitate easier detailing and erection. Then we received RFI T-1692.1 stating that the change requires revisions to the model and material order. Our position in response to that RFI was that if the contractor is planning to send a bill to the owner for something of this nature, we'd prefer going back to the contract drawings, i.e., a discontinuous column per 12/S1-7604 at that location. The current RFI (RFI T-1914) states that the change was already made in the model and mill order has already been revised to maintain current submittal schedules. We note that the shop drawings for this area has not been submitted yet and it is not clear how the mill order would be affected from a minor modification such as this one. We suggest that this item to be added to next weekly meetings agenda for further discussion and final resolution.

TT: We disagree with reason for request "insufficient information". We categorize this RFI as "other".

T-1925 **SSS - Design Changes to TPG in CS3 ASI 127** **Closed** **11/14/2014** **11/24/2014** **11/24/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please refer to the changes to the dimensions of web stiffener plates at the TPG at GL 13 (CS3) in the revised S1-5016 drawing that was provided with ASI 127.
These tapered roof girders have already been fabricated, and are currently in the shipping yard at the fabricator.

(1) Please verify that the 48" length of the web stiffeners is required per ASI 127.
(2) If so, please provide a field weld detail (see sketch SK1) for the additional 31" length stiffeners plates that will be field attached.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that web stiffeners are required to be 48" long at GL 13 per ASI 127.

2) The 31" long stiffener plates shall be CJP welded to the existing 17" stiffener plates.

TT: We agree with the reasons for request: Verification. We categorize this RFI as no cost clarification.

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

In order to locate the connections to the stair posts/vertical bracing, please provide the following information:

See attached CD RFI # 684 SK1 to SK2 for items 1 to 10:
1) Dimensions hi-lited in yellow match 2/A1-7020 and the current model. Dimensions hi-lited in purple do not match 2/A1-7020 and the current model. Note that the structural drawings do not locate the posts supporting the stair landings closer to Grid 31at all. Please clarify the discrepancy. (The posts not located on the structural drawings are currently located to suit the Revit model)
3) Clarify the (3) braces indicated in blue and supply more information if they are required.
4) Braces are indicated on plan (green lines) but sizes and connection details are missing. Supply sizes and connection details for each end of every brace.
5) These dimensions do not match 2/A1-7509 (SK3). Please clarify where the steel is located.
7) Supply connection details for the HSS12x6 & HSS6x6 hangers to the underside of beams.
8) These posts are shown as single posts on S1-7012. Please clarify the discrepancy.
9) These dimensions do not match 3/S1-7012 (SK1). Please clarify where the steel is located.
10) 3/S1-7012 shows (4) vertical posts. Clarify why this detail shows (6) posts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Dimensions shown on SKA-4323 to locate posts supporting stair 601 shall govern. Dimensions to locate posts that support stair landings are typically shown on architectural drawings.

2) No question provided.

3) Highlighted braces are part of braced frames. Elevations and connection details for these braces are shown on S1-4150 and S1-4206, respectively.

4) Braces highlighted in green on SK1 in the RFI are HSS6x6x1/4 similar to the braces at the other landing (T/landing = 29'-10 7/8") in detail 3/S1-7012. Per section 1.5C of specification 05 51 00 STEEL STAIRS AND RAILINGS, connection details for brace and hangers at the stair shall be designed by the contractor¿s engineer.

5) Detail 2/A1-7509 has been revised. Refer to attached SKA-4324.

6) No Question Provided.

7) See response to 4).

8) Post numbers have been revised as per S1-7012. Dimensions shown on SKA-4323 to locate posts supporting stair 601 shall govern.

9) The two W18x119 beams shown on 4/S1-7012 shall be centered on the HSS 6x6 hangers that support the landing with T/landing elevation 29¿ - 10

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

7/8¿. Refer to SKA-4323 & SKA-4324 for HSS hanger locations.

10) The 2 central Post shown on 2/A1-7509 are not posts. They represent the HSS braces shown on 3/S1-7012.

T-1930 **SSS - Stud Spacing Detail** **Closed** **11/18/2014** **11/28/2014** **12/01/2014** **Potentially** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Please reference detail 1/S1-5000, Typical Headed Stud Spacing Detail. Note #4 indicates the maximum number of studs permitted per individual metal deck rib is 3. Also provided in this detail is a plan view titled "Beams Perpendicular to Deck" where the plan shows a three stud per rib condition. Skanska note the three studs are spaced 2-5/8" in one direction and 3" in the other which nets a diagonal spacing of 3". Skanska is running into conditions where the number of studs versus the number of available ribs will exceed 3 studs per rib, particularly at the bus deck level. See below for 2 examples:

1. Sheet S1-2507, near the south east corner a W30x99 beam with 68 studs. The bay width is 16' wide and when you subtract the width of the support girders and the ribs lost by the drag plates we only have 11 available ribs. This results in 6 to 7 studs per rib.

2. In the same general area are diagonal beams with 10 studs noted. Again due to the relatively short length of beam and long drag plates we may only have one full rib and a partial rib in which to fit 10 studs. Net result is 6 to 7 studs per flute.

Please confirm the following is acceptable: Where the beam is wide enough, allow up to 6 studs per rib maintaining a repeating pattern of the aforementioned 2-5/8"x3" pattern. Where the quantity of studs would exceed 6 or is limited by the width of the beam to 4 or 5, eliminate the excess studs. See SK1 for clarification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Number of studs in the W30x99 beam may be reduced to 33 from 68 so that there are 3 studs per rib.

2. For the short diagonal W40 beams with Type 3 flange plate connections, provide number of studs as indicated on contract documents. Stud placement shall be as follows:

a) Provide studs at a maximum spacing of 1 stud per foot for entire length of the beam top flange.

b) If more studs that can be fit by (a) is specified on the drawings, place remaining studs at the same spacing as (a) starting from the beam ends.

c) At locations where there is no rib over the beam due to flange plates, studs shall be welded to the flange plate and centered on the beam web.

d) If there are 2 studs at a location, spacing between the two studs shall be 3" with the studs aligned in a direction perpendicular (parallel) to the flange plates (ribs).

This applies to all short W40 diagonal beams east of GL 26.

Stud placement per sketch SK1 in the RFI is not acceptable. Conditions where there are more than 3

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*

studs per rib on a beam will be evaluated on a case by case basis.

TT: We agree with the reason for request: Verification. We categorize this RFI as no cost clarification.

REQUEST:

Contract Doc Ref: 1/S1-5000
Location: Bus Deck
Grid Line: Throughout
Add'l Doc Ref's:

The response to RFI T-1930 item 2(C) indicated that if studs are required where there is no rib over the beam due to flange plates, studs should be welded to the flange plates and centered on the beam.

On the gusset plate on the SLRS framing at the bus level, the 12" studs indicated will project through the topping slab. The decker can provide 10" studs at no additional cost but these will only project 1-3/4" into the topping slab and not meet the 2" min requirement. If a custom stud length is required the decker will have additional material and labor costs as the stud welding equipment will need to be modified to shoot the custom length stud.

Please confirm it is acceptable to use 10" studs at the flange plates.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed that 10" long studs are acceptable at the flange plates.

Reason for RFI (TT): We agree with reason for request: Verification. We categorize this RFI as no cost clarification.

REQUEST:

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

ASME A17.1-2004 Safety Code for Elevators & Escalators Section 6.1.3.2.2 states:

"The handrail shall be a minimum of 100 mm (4 in.) horizontally and 25 mm (1 in.) vertically away from adjacent surfaces, except that round fillets or beveled sides of the handrail stand are permitted to reduce the 25 mm (1 in.) clearance between the handrail and the point where the handrail stand is connected to the balustrade."

Detail 3/A1-7550 shows a 3" clearance between the escalator handrail and the glass rail. This detail only references Escalators E409/E410, but may affect the other escalators on the project. Please confirm that the design will be adjusted to meet code for all the escalators on the job.

Guardrail clearance revised, refer to SKA-4316.

T-1934 **SCS - Basket Column Fill** **Closed** **11/19/2014** **11/29/2014** **12/24/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche

To: Turner Construction Company Phil Militello

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

Answered By: Adamson Associates, Inc. George Metzger

REQUEST:

Please reference drawings S1-4000 through S1-4018 regarding filling basket columns.

Currently, basket columns are shown to be filled with both concrete and non-shrink grout. SCCI proposes to fill all basket columns to the elevations shown with self-consolidating concrete. Please see attached submittal TG0702-123.1 for approved mix design.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is acceptable to use self-consolidating concrete in all locations, as long as this does not create a constructability problem. GC confirm the diameter of the hole where non-shrink grout was previously expected, is workable for installation of self-consolidating concrete.

Arup's response:

The proposed concrete appears to be acceptable.

TT's response:

The grout port for non-shrink grout has 1" diameter, while the grout port for the concrete has a 3" diameter. Contractor to confirm if the existing grout port is adequate as they are.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Webcor Construction LP Claude Titche

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Contract Doc Ref: S1-4000 - S1-4018
Location: N/A
Grid Line: N/A
Add'l Doc Ref's: RFI T-1934

Per the response to RFI T-1934, it was requested that SCCI confirm the diameter of the hole where nonshrink grout was previously expected, is workable for installation of self-consolidated concrete.

SCCI intends to pump self-consolidating concrete through the 3" port in the basket column cast node.
The self-consolidating concrete will then be pumped from the bottom of the column to the final elevation in one lift.

Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contractor to verify whether the self-consolidating concrete can flow thru the hole in the bus deck cast node (most of them have a 1" diameter). Also, please note there is only one nozzle hole, so grouting thru the bus deck cast node is not possible.

T-1935	BGP - Grout Back Mat Slab Pile Block Outs	Closed	11/20/2014	11/30/2014	12/24/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

See attached SK1 & SK2 for items 1 to 4, and SK3 for item 5:
1) The connection for the W21 per 1/S1-5010 fouls the Type 4 drag connection. Please provide a solution.
2) The beam connection per 2/S1-5011 fouls the bolts for the column base plate. Please provide a solution.
3) The beam connection per 2/S1-5011 fouls the bolts for the column base plate. Please provide a solution.
4) The kicker connection is too close to the PL 2 1/2" stiffener. Confirm it is acceptable to omit the kicker braces or to move them north to the W40x149 on Grid D.4. If not, supply an alternate solution.
5) The connections for the W24x104 & W30x90 foul the connection for the BU-56 to the column per 3/S1-5011. Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide a shear plate connection at the W21 beam similar to that shown in SKS-0421 submitted with RFI T-1553.3. Number of bolts at the connection shall be per 1/S1-5011. Move the W21 beam away from the slab edge and center the shear plate in the horizontal spacing between the bolts.

2) Move the full depth shear plate (and the W30 beam) by a few inches so that it is centered in the spacing between the bolts at base plate.

3) See response to 2).

4) The 1 1/2" stiffener adjacent to the kicker brace may be waived at the two locations highlighted in the RFI. Note that the stiffener is incorrectly called out as 2 1/2" thick in item 4 of the RFI.

5) Provide shear plate connections at the W24 and W30 beams similar to 1).

Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict and Alternate proposal, agree with verification. We categorize this RFI as a no cost clarification.

T-1955	BGP - West Foundation Wall As-Built Location	Closed	12/02/2014	12/12/2014	12/04/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Due to CDSM Encroachment, the thickness of the West Foundation Walls in the North direction in Area 3 was increased by 3 118" per RFI T-0576. During the Lower Concourse Deck D201/202 as-built survey, SCCI discovered that the CDSM encroachment was inadvertently taken into account twice. The result is that the starter wall and the corresponding 3rd Wall Lift Foundation Wall Rebar is approximately 3" thicker than planned(see attached drawing).

Please confirm the as-built condition of the North West Foundation Wall is acceptable and the wall alignment may be offset into the structure. The proposed inside face of the West Wall for the 3rd Wall Lift ONLY on the North Side is 1'-6 1/4." East of GL 1.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AAI's response:

Architecturally there no objection to the slightly increased wall thickness at the one location described in this RFI. Please refer to TT's response.

TT's response:

Condition is structurally acceptable below grade. At grade, plain concrete (excessive cover) between outside face of foundation wall reinforcing and planned building line will not be allowed. Contractor shall propose method of providing reinforced concrete with specified cover at grade to make up any distance between offset wall and planned building line.

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference spec section 03 30 02-3.2.A.3 and the attached drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed for all three questions.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The specs call out a maximum construction joint spacing of 60ft for the foundation walls. The attached sketches illustrate a proposed CJ layout for the 4th wall lift foundation walls located in the Northwest comer of the project site.

Please confirm:
1. It is acceptable to exceed the maximum CJ spacing of 60ft for W482.
2. It is acceptable to not match CJs with the 3rd lift walls in this proposed location.
3. The proposed layout is acceptable for W482 and W401.

T-1957 **SCS - Foundation Wall 4th Lift Vertical Unistrut Spacing Tolerance** **Closed** **12/02/2014** **12/12/2014** **12/03/2014** **Potentially** ☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference T-1549 3rd Wall Lift Vertical Unistrut Spacing Tolerance.

Per RFI T-1549, the vertical unistrut tolerances of plus/minus 4" off the 10' O.C. spacing was allowed on all 3rd lift foundation walls.

Please confirm:
1. That the same tolerances apply to the foundation walls 4th lift.
2. That TG07.2 is to as-built unistrut layout in the field and install unistrut in the 4th lift to match.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Both items 1 and 2 of this RFI are confirmed acceptable.

T-1966	SSS - ST201A Inaccessible Weld Access at HSS	Closed	12/08/2014	12/18/2014	12/19/2014	Potentially	☐

From: Webcor Construction LP — Gregory Kemerer
To: Turner Construction Company — Phil Militello
Answered By: Adamson Associates, Inc. — George Metzger
Co-Author: Skanska USA Civil West California Dis — Ryan Clayton

REQUEST:

Contract Doc Ref: 2 & 3/S1-7003
Location: Zone 1, Roof
Grid Line: E.6 & 1
Add'l Doc Ref's: CD RFI # 692 SK1

Details 6 & 12/S1-7604 call out weld information for HSS members shown on 2 & 3/S1-7003.

Both of the noted welds in SK1 cannot be made for the locations in details 2 & 3/S1-7003, as there will be no access after one member is erected.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Weld the HSS10x8 beam on both sides per 6/S1-7604. It is acceptable to weld the HSS8x8 beam on the south side only due to restricted access on the north side. Note that the HSS8x8 beam shall be CJP welded at top and bottom per 12/S1-7604.

Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Confirm it is acceptable to weld the HSS8x8 on the south side only or supply an alternative solution.

T-1967 **SSS - Missing Connection Detail at Ground Level GL 34** **Closed** **12/08/2014** **12/18/2014** **12/19/2014** **Potentially** ☐

REQUEST:

Contract Doc Ref: S1-2307
Location: Zone 4, Ground Level
Grid Line: C.3 & 34
Add'l Doc Ref's: CD RFI # 708 SK1

Drawing S1-2307 provides information for W16 and W12 members near GL C.3 and 34.

Insufficient connection information is provided.

1) Confirm it is acceptable to connect to the W16 with a shear plate per 1/S1-5011 as there is insufficient room for a double angle connection.
2) Supply an embed detail for the W12 to the concrete.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed that the W12 beam may be connected to the W16 beam with a shear plate connection per 1/S1-5011.

2) Provide a double angle connection with embedded plate similar to 1/S1-3705, except, provide 8 studs with 2 vertical columns of 4 studs each. Embedded plate dimensions shall be adjusted based on the reduced number of studs and edge distances per 1/S1-3705.

Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.

T-1973	SCS - Foundation Wall Pipe Sleeve Thickness and Base Metal	Closed	12/04/2014	12/14/2014	12/12/2014	Potentially	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Please reference drawings 4/A1-8712 and specification section 22 05 29 2.3B.

Detail 4/A1-8712 calls out ¼" Thick Stainless Steel Pipe sleeve, specification section 22 05 29 2.3B states to "Provide standard weight galvanized steel pipe sleeves". Standard weight would govern the pipe thickness according to ANSI specifications derived from pipe diameter.

There is a discrepancy in base metals used and thickness between the drawing and specification.

Please confirm what document governs.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Architectural detail governs for sleeve material. Pipe thickness shall be per ANSI specifications standard weight class for each pipe size diameter.

REQUEST:

Contract Doc Ref: A1-2902, A1-2903,A1-2904, A1-2906, A1-2907
Location: Roof Park
Grid Line: N/A
Add'l Doc Ref's:

Several light and camera pole foundations are in conflict with shear key locations. See attached highlighted drawings for further explanation.

Please identify if the shear key of the pole foundation needs to be relocated or provide a detail for the current condition.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Shear keys and light & camera pole foundations have shifted per the attached sketches, SKA-4333 to SKA-4337, to avoid conflicting locations and allow for waterproofing around these elements.

T-1977	**SCS - Roof Ellipse Sky Light Brace Wall Layout Dimensions**	**Closed**	**12/08/2014**	**12/18/2014**	**12/10/2014**	**Potentially**	☐

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Contract Doc Ref: A1-2903, A1-2906
Location: Roof Park
Grid Line: 11, 28
Add'l Doc Ref's:

The ellipse sky lights at Grid Lines 11 and 28 have sloping brace walls around the perimeter as seen on sheet A1-2903, A1-2906, and S1-8008. The north, south, east, and west brace walls that fall directly on grid lines have layout dimensions but the remaining 4 walls do not. Please see attached for further clarification.

Please provide layout dimensions for the ellipse sky light sloping brace walls.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The location of concrete counterfort walls at the W-10 skylights shall align with the location of the W-10 workpoints provided in structural drawing S1-6011 and derived from the W-10 3d digital model. This information was provided in RFI T-1052 and coordinated with the Steel shop drawings TG0701-073.1 (CS1) and TG0701-074.1 (CS2). The W-10 skylight at GL-28 is similar.

Note: The 3d digital model is an essential part of the Contract Documents as defined on A-0007 and A-0008 as well as other areas in the Contract Documents. Information contained in the 3d digital model is not contained in any other location in the Contract Documents.

REQUEST:

Contract Doc Ref: SKA-3890, SKA-3049-R1
Location: Roof Park
Grid Line: N/A
Add'l Doc Ref's: RFI T-1905, RFI T-1739

SKA-389 (A1-8685) detail 2 shows dimensions for slope at top of wall and layout dimensions for notch at top of wall for roof park perimeter wall. ASI-124 SKA-3049-R1 (A1-8608) provided a dimension for identifying the 1'-6" increase in height with a deck and wall overhang. RFI T-1739 SKA-4265 then showed a notch in the bottom of the wall which replaced the overhang detail. RFI T-1905 drawing SKS-0437 provided clarification for the change to rebar.

Please provide a drawing that incorporates all intended elements with rebar details and the new dimension for the roof deck overhang into a final drawing revision.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please refer to the enclosed sketches of the revised Roof Park perimeter concrete wall. Sketches contain:

-Revised geometry of perimeter wall with required dimensions. It identifies the top of wall revised height referenced in previously submitted sheet with dimensions.

-Revised concrete wall overhang detail as reviewed and agreed to with TJPA and WOJV in 12/4/2014 meeting.

-Revised edge drip detail.

-Concrete reinforcement on straight wall and scallop wall.

REQUEST:

Contract Doc Ref: S1-2506
Location: Zone 4, Bus Deck
Grid Line: A & 31, J & 31
Add'l Doc Ref's: CD RFI # 730 SK1

Detail 1/S1-5018 calls for 10 bolts per row for the connections shown near grid lines A & 31, J & 31 on S1-2506.

1) Due to the width of the BU-40 flange width, it is not possible to get the 10 bolts per row. (Note: the same occurs on the south side)

Please provide a solution.

2) The bottom flange is coped as shown and it is not possible to get the 10 bolts per row. (Note: the same occurs on the south side)

Please provide a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Provide 8 bolts per row in the flange plate highlighted on SK1 in the RFI. This can be achieved by reducing number of bolts to 9 bolts per row in the adjacent flange plate on the same beam.

2) Provide 8 bolts in one row and 7 bolts in the second row at the bottom flange of the W40 beam.

Reason for RFI (TT): We disagree with reason for request: Engineering Conflict. We categorize this RFI as no cost clarification.

REQUEST:

Contract Doc Ref: S1-2701
Location: Zone 1, Roof
Grid Line: D & 4
Add'l Doc Ref's: CD RFI # 719 SK1

Drawing S1-2701 shows a W12x19 member connection to a W16x36 near grid line D & 4.

The post shown at this location appears to rest on the beam to beam connection.

Confirm the beam to beam connection is per 1/S1-5010. If yes, supply a connection detail for the post to clear the beam to beam connection.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. It is not clear what the conflict is from the sketch provided on SK1. If the beam stiffeners centered on the post and as shown on SKS-0434 submitted with RFI T-1923 are fouling the double angles, the stiffener plates may me moved slightly to clear the angles.

Reason for RFI (TT): We disagree with reason for request: Insufficient Information agree with Verification. We categorize this RFI as called out on contract documents.

T-1987 **SSS - PE704 & PE705 Connection Clarifications at Roof Level** **Closed** **12/09/2014** **12/19/2014** **12/19/2014** **Potentially** ☐

REQUEST:

Contract Doc Ref: S1-2606
Location: Zone 4, Roof Park Level
Grid Line: D & F/24.9
Add'l Doc Ref's: CD RFI # 736 SK1, Skanska Shop Drawings 2878 & 2910, TG0701-130

The TT comment on drawing 2878 in submittal package TG701-130 noted "provide connection per 9/S1-5032" (The same condition occurs on drawing 2910)

Revising the connection for A2878 & A2910 to 9/S1-5032 from 1/S1-5010 causes a connection conflict with the connection per 1/S1-5010 for the W40x294.

Confirm it is acceptable to connect the (2) W40x294's per 1/S1-5011 or supply an alternate solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

To resolve the connection conflict, provide connection per 9/S1-5032 in lieu of 1/S1-5010 at the W40x294 beam, except, the 3/8" web stiffener plates are not required at the W40x294 beam.

Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.

From: Webcor Construction LP Claude Titche **To:** Turner Construction Company Phil Militello **Answered By:**

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention.

One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar.

1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar.

Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.

2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

From: Webcor Construction LP Gregory Kemerer **To:** Turner Construction Company Phil Militello **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author: Skanska USA Civil West California Dis Ryan Clayton

REQUEST:

Contract Doc Ref: S1-2507
Location: Zone 4, Bus Deck
Grid Line: H & 33.5, B & 33.5
Add'l Doc Ref's: CD RFI # 738 SK1

Drawing S1-2507 shows CP6 connections at grid lines B/H and 33.5.

The connections as shown cause a dimension to change and also cause a potential conflict with CP6 colt hole connections.

1) With the 1 1/2" stiffener plate per 4/S1-8003 centered about the CP6 connection, the W40x149 will be located 5'-9 11/16 west of Grid 33.5. Confirm that is acceptable.

2) The edge of the web reinforcing plate per 1/S1-5017 is 1 1/2" clear of the bolt holes for the CP6 connection. Confirm that is acceptable or supply a solution.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Confirmed.

2) Not acceptable. Reduce the length of the web plate by 1" so that distance between the bolt centerline and the edge of the web plate increases to 2 1/2".

Reason for RFI (TT): We agree with reason for request: verification. We categorize this RFI as no cost clarification.

Co-Author: Crown Corr, Inc. Erik Bryant

REQUEST:

Contract Doc Ref: Specifcation 08 44 27 Section 2.2K
Location: Building Exterior

The upper capacity of the panels must be achieved under a uniformly distributed load of not more than 150 psf, acting perpendicular to the panel surface. The load acts on the net area of the perforated panel and needs to be considered in both directions (inward and outward).

It is Larson Engineering Inc (LEI's) interpretation that the panel shall not exceed 150 psf for its ultimate static capacity but can be less as long as the wind loads under ASD design provisions are obtained. Please confirm this interpretation is correct.

LEI intends to use a phi factor of 0.9 for the ultimate design capacity as a safety margin for the design of the panels and the panels' support structure. Please confirm this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm that this interpretation is correct.

We confirm that this phi factor is acceptable.

T-2006 **SCS - Roof Sky Light Overhang Bent Plate Brace** **Open** **12/10/2014** **12/20/2014** **12/10/2014** **Potentially** ☐

Co-Author:

REQUEST:

RFI #T-1872 Question 3. Please confirm that the skylight over hang bent plate will support the wet concrete deck weight. Answer 3. "Confirmed that the bent plate shown is to support the wet concrete weight (for the deck only). Verify location and dimensions of the bent plate with steel shop drawings."
In response to answer 3 please see attached Skanska submittal 051000-0563 .1 shop drawings. The shop drawings show the sky light bent plate exceeding 2' in length without being supported by an angle brace required by contract drawing Sl-5000 detail 9. Shimmick plans to pour the roof deck first and once the concrete has reached sufficient strength then pour the sky light wall on the concrete deck.

1. Please confirm that Skanska will be installing an angle brace per S1-5000 detail 9 for bent plate

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The bent plate at the skylight opening will be installed per detail 1/S1-8008, no angle brace included.

2. Bent plate will be installed continuously around skylight opening, as shown on S1-2603.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

over hang distances greater than 2 feet at the sky light opening.

2. Please confirm whether or not Skanska will fill in gaps between bent plates as shown in the attached photo.

REQUEST:

Contract Doc Ref: RWDI dated June 7, 2013
Location: Building Exterior

With regards to the treatment of the perforated metal panels, are the loads shown in figures 4 and 5 of the RWDI report to be applied to the solid area of the panel, or to the entire area of the panel (solid area and perforations?)

RWDI's response was - For the wind pressures on the W-1 awning panels, you can use the wind pressures presented in our June 7, 2013 report on the solid areas of the panel. This is based on the porosity of the W-1 panel being 35-40% open and the guidance given in Figure 6-22 for open signs and lattice framework from ASCE 7-05.

Please confirm that RWDI's response is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We confirm that RWDI's response is acceptable.

REQUEST: **SUGGESTION:** **ANSWER:** **Accept Suggestion:** ☐

Contract Doc Ref:
Specification Section 07 81 23
UL Design Listing X674

Location: N/A

Closest Column Line Intersection: N/A

Add'l Doc Ref's:
RFI P1-2013

Some Light Column Steel Members in the contract documents call for IFRM but are not listed on the UL designated for those members.

Per RFI T-2013 the IFRM thickness is to be determined by calculating the A/P value and using the UL table. The response also indicates the requirements are to comply with Specification Section 07 81 23 (1.5) E.

Specification Section 07 81 23 (1.5) E 1 requires submitting a certification that proposed fireproofing system is acceptable to Authorities having Jurisdiction.

Per discussions with the manufacturer, if the A/P value of the steel is greater than what is shown on UL table, the thickness as shown on the table is acceptable and if a

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

reduction of thickness from the UL table is desired, a third party review would be required.

Please confirm that it is acceptable to TJPA to use the IFRM thickness from the UL table as long as it meets the A/P requirements, or that a third party assessment will be required only if a reduction in thickness from the UL table is proposed by the subcontractor. (Note: This RFI is being submitted at the request of Ed Sum - See attached.)

T-2014 **SCS - Roof Architectural Wall Mix Design** **Closed** **12/12/2014** **12/22/2014** **12/15/2014** **Potentially** ☐

Add'l Doc Ref's: SK1

Spec Section 05 12 10-8, Table 2.1 outlines the nondestructive testing requirements.

Please review the following, and confirm:

1) The moment frame columns that are being fabricated are currently being subjected to 100% UT and 100% MT on all weld configurations. However, Table 2.1 shows that only the demand critical welds and butt joints in the column splices should receive the aforementioned testing and that in general, the welds on the moment frame columns should be subject to MT on 25% of the joints and UT on 100% of the joints. Further, testing on the moment frame columns can be reduced as per AISC 341, Appendix Q5.2. Please see attached SK1 that highlights the testing requirements, as understood by Skanska, for the moment frame columns and confirm this is correct.

If this is not accurate, please supply the NDT requirements for the Moment Frame Columns.

2) Please clarify the Table 2-1 remark under welds not described below, "MT 25% of joints, full length". It is our understanding that 1 out of every 4 joints will receive full length MT inspection and the next 3 joints will not receive MT. Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Regarding TT Field Report Item 073.3.3 referenced in the RFI:

The proposal is acceptable at the location of excess concrete cover. It is acceptable to use larger reinforcing bars in accordance with the availability of

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

073, sections 073.3.2 and 073.3.3, authored by Sean McNeill.

Due to a variance in concrete cover at foundation walls W379 and W380 SCCI proposesthe following solutions.

073.3.2: Where the 4 instances occur, SCCI proposes to excavate behind the vertical dowel approximately 6"down to allow for field bending of thee dowel in order to achieve specified cover. Vertical will be identified, concrete will be excavated and dowel will be field bent away from face of wall. (Please reference attached sketch referencing issue #073.3.2)
Please confirm this is acceptable.

073.3.3: Where condition occurs at wall W80, a 12"x 12"grid of #4 temperature steel will be added. This grid of temperature steel will be dobied off of existing contract bars in order to achieve specified cover. The approximate height of the grid will be 3'to 6'and approximately 15'to 20'in length. At the top of the wall clear cover will be set to specified amount. (Please reference attached sketch referencing issue #073.3.3)
Please confirm this is acceptable.

materials on site.

Regarding TT Field Report Item 073.3.2 referenced in the RFI:

Field walk with Charlie Marrow of SCCI and TT Field Representative, Sean McNeill, on 12/19/14 identified additional locations, over those mentioned in the RFI, of less than minimum required concrete cover both north and south of Wall 191. Definitive identification of all individual bars in violation was difficult due to inconsistencies in the profile of the wall starter lip just above the concourse and the fact that many of the wall starter bars (and coupler sockets) are slightly out of plumb.

An acceptable course of action is for the contactor to complete the installation of wall reinforcing and secure the top of reinforcing to the waler above at the contract plan location so that all verticals are in a straight line. The contractor shall establish the theoretical wall face at the base and measure the available cover to the nearest wall reinforcing, tie, or coupler with plum bob, level, or equivalent means. Where the cover measures less than 1" (specified cover minus ACI 117 tolerance), the contractor shall have the option of field bending the starter bars or offsetting the formwork to achieve the target cover. Should the contractor elect to offset the formwork, the amount of offset shall be no more than 1¿ (ACI 117 tolerance). The offset shall transition linearly from form to form so that there are no abrupt vertical discontinuities in the finish.

REQUEST:

Contract Doc Ref: A1-2864
Location: Ground Floor
Grid Line: 16.9
Add'l Doc Ref's: RFI T-1010.1

Please refer to RFI T-1010.1 question #5 response.

The response to question #5 locates MFB 1, 8'-0" west of GL 16.9 to the beam center line.

Drawing A1-2864 gives dimension of 7'-6", from GL 16.9 to a 1'-0" slab step. This would create the center line at 7.50' (LINE 16.9 to the 12" STEP) + 2.50'/2 (MFB1 divided by 2)=8.75'.

Please confirm the dimension from GL16.9 to beam center of MFB 1.

If the dimension is 8'-0", please provide a revised section of detail 2/S1-3703 reflecting the 12" slab step.

Add'l Doc Ref's: CWSD RFI #26

1. Drawing 2/S1-2252 calls for a W6x25 at the edge of the 7'4 landing.

The location of the beam is not clear per 1/S1-5034.

Please advise on where the beam should be located.

2. Per drawing 1/S1-5034, the W6x25 is to be located so that the bottom flange support the 7 ½" Slab, leaving a 1 5/8" slab over the W6x26.

Since the beam is not flush with the edge of slab, connections similar to 3/S1-7601 and 2/S1-7603 will not work.

Please advise.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon

REQUEST:

Reference Specification: 07 12 10 - 3.2.D

This section states "Install Protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces." Per the manufacturer's installation instructions, "the protection board will be installed length wise for easier handling during the fastening procedure." SCCI suggests installing the protection board length wise per the manufacturer's instructions. Is this acceptable?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Install the protection board as specified. It is not intended for protection, but to serve as a substrate for the waterproofing assembly.

Protection board is 4' x 8'. When installed vertically, the edges of the boards will be butted and fastened at each pile. This will provide a line of fasteners on the edge of each board and help accommodate the board to pile misalignment. When installed horizontally, the board will be fastened on the intermediate pile which will complicate the installation if the piles are twisted or misaligned.

The board should not be fastened to the CDSM. It should only be fastened to the steel soldier piles.

T0860.1	BGP - Rebar barlocks for interior Walls in Area 3	Closed	11/13/2013	11/23/2013	11/19/2013	Potentially	☐

From: Webcor Construction LP Michael Spillane **To:** Turner Construction Company Gary Krutsch **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Further to the response to RFI-860, Please find attached information (see exhibit A) on the proposed class 2 barlocks which are intended to be used at the noted partition walls in Area 3 as outlined in original RFI T-0860 see exhibit B.

Due to the overall diameter of these Type-2 bar locks, please confirm that it is acceptable to have reduced concrete clear cover to the barlocks which will be approximately ¾". This reduced clear cover will only be applicable for the length of the barlocks itself, which at worst case is approximately 12".

Please confirm that this is acceptable

Co-Author:

REQUEST:

Reference Exhibit A, 2.A & 4.F

A. Confirm $25,000 dollar policy is required. Conflicts w/ 16.4 (page 11) of the LONG FORM SUBCONTRACT document. However, 16.9 says more stringent of requirements apply.

B. Confirm duration of E & O insurance. EXB-A Section 4.F states insurance shall be maintained "...10 years beyond the Contract Final Completion Date..." Considering the internal bracing, trestle, and bridges are temporary shouldn't the policy only apply when the system is in use. Once removed (street level construction complete), the liability should shift to the permanent structure's design team as the station superstructure is erected. Taken literally, this could require the E & O maintained 17 years (7 years of construction + 10 years beyond).

Submitted by Charles M. Gardner
Kiewitt Infrastructure West Co.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A. The insurance requirements for this scope of work are as described in Exhibit A, Section VI. Insurance Requirements.

B. 4.F of Exhibit A, Section VI. Insurance Requirements was revised in Addendum 2 stating the professional liability insurance maintenance period will be for a period of 3 years beyond the Contract Final Completion.

Co-Author:

REQUEST:

Reference Exhibit A, IV.C.20 thru 6

A. Pin piles, micropiles, and other deep foundation systems are noted that they may remain in the permanent mat slab once the temporary structures are removed. What is the criteria for locating these items so they do not interfere with permanent foundatoin system by interrupting mat slab reinforcing, installation of column base plates or similar? Will deisgn team provide a "stay clear" or "no fly zone" type of instruction or plan related to proximity to permanent building columns, tie downs, permanent walls, and other special regions of the mat?

B. See also Page A3-3 of Exhibit A, last item.

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/03/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Pin piles (piles for supporting shoring wall struts) can bae placed at the locations determined by the contractor, but they shall not affect the future construction of the columns, walls, elevator pits, etc. The contract documents for other work to be issued in the distant future will include waterproofing details around the pin piles, where pin piles penetrate through the mat slab (this work is not a part of the scope for the BSE package).
2. Micropiles are to be located, in general, in accordance with the typical layout shown on Sheet S1-2024. Minor deviation in location will hvae only a small effect on the mat slab reinforcement, which the design team will address after receiving micropile layout shop drawings from te contractor. Per note C on S1-2024, the micropile contractor shall coordinate the locations of the micropiles with the shoring contractor.
3. Trestle piles: Trestle piles are to be located and detailed in the shop drawings and submitted for review. Trestle pile locations shall be coordinated with pin piles and micropiles by the contractor.

TG03.00-0015	TG03 Question 0015 - Night Noise Permit	Closed	08/10/2010	08/17/2010	08/18/2010	Potentially	☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Transbay Joint Powers Au Gerry MacClelland

Co-Author:

REQUEST:

Ref: 01 15 70 3.2.A.12

Question:
Specification section 01 15 70 3.2.A.12 states, " Work is restricted during the holiday moratorium (day after Thanksgiving to January 1. inclusive, 24 hours a day, seven days per week as set forth in the Blue Book by the SFMTA. Blue Book allows work at night within the restriction zone ,"...as long as the proper night noise permit is obtained." Please confirm that DPW issues the night noise permit, what are the parameters, and that it will be obtainable so that we may at least work night shifts during this period.

Submitted by: Charles Gardner
Kiewit Infrastructure West Co.
8/4/10

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

DPW issues authorization for work in the public right-of-way that generates night noise. TJPA is responsible for night noise authorization for work done on TJPA property.

Please note that there is no specific threshold or criteria that qualifies for or would guarantee DPW night noise authorization; issuance of this authorization is solely at the discretion of DPW. However, DPW is cognizant that there are times when compelling reasons make it in the public¿s interest to allow for night noise and DPW reasonably grants night noise authorization.

Generally, the application for night noise authorization

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

requires:

submission by a responsible party. In this case, the contractor would prepare the application form and provide it to TJPA to submit to DPW.
the following information is needed for the permit:
project description and address/location, including map and/or drawing
compelling reasons for work at night rather than during the day
description of night work to be accomplished
description of all equipment used for night work, including associated noise level
days/time of proposed night work
contractor doing the night work
contact phone for 24/7 response by both the contractor and project sponsor
demonstration that those within a 150¿ radius have been notified at least 5 days in advance of the night noise work

TG03.00-0016 **TG03 Question 0016 - Professional Liability Insurance** **Closed** **08/10/2010** **08/17/2010** **08/18/2010** **Potentially** ☐

REQUEST:

Reference Exhibit A, VI.2.B. and spec. 00 08 05, 1.3.B

Specification 08 05 1.3.B requires Professional Liability Insurance in the amount of $10,000,000 each claim with a deductable not to exceed $50,00 each claim. Exhibit A VI.2.b requires $25,000 with a deductable not to exceed $250,000.

Q. Can you clarify why the Trade Subcontractor would be held to an amount higher than the CM/GC?

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/04/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The Professional Liability and Commercial Liability requirements included in the TG03 BSE package are the same as those required during prequalification for this scope of work. All five prequalified Trade Subcontractors responded in the affirmative that they have ¿or can obtain a liability insurance policy issued by an insurance company licensed in the state of California¿ for these limits. These insurance requirements are higher than those required of the CM/GC under the prime contract due to the risk associated with the design-build aspects of the BSE work, and because the work will be performed by parties other than Webcor/Obayashi Joint Venture.

Reference specification 00 08 13/APA.17

Spec section 00 08 13/APA.17 Buy America Requirements provide ," **
** This provision applies only to the following types of Agreements: construction agreements of any value; agreements for the acquisition of goods valued at more than $100,000; and agreements for the acquisition of rolling stock valued at more than $100,000. This requirement does not apply to lower tier Subcontracts. 00 08 13/APA 17 (b) further states that, "The Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.

A) Please confirm "This requirement does not apply to lower tier Subcontracts"

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/05/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Specification 00 08 13/APA 17 incorrectly states that Buy America requirements do not apply to lower tier Subcontractors. The certification requirement does not apply to lower tier Subcontractors, e.g., lower tier Subcontractors do not have to each submit Buy America certifications. However, the Buy America requirement applies to the entire contract and the Prime Contractor is responsible for ensuring that lower tier Subcontractors are in compliance, and the CM/GC is requiring the certification from all Bidders (but not Bidders' subcontractors). A revised Specification will be issued in a forthcoming addendum.

REQUEST:

Reference: Exhibit A Section IV Scope Section D

Exhibit A Section IV Scope Section D SBE Program states that "Trade Subcontractor shall obtain a minimum SBE participation of 24% of the total value of Trade Subcontractors bid value". Volume 1 section 00 08 21 1.3B states that the SBE goal for this contrat is 17%. Please clarify what the SBE requirements are for the Trade Subcontractor for the BSE package. Also clarify how the % is calculated. Is the SBE participation % based on the total value of the Trade Subcontractors bid price or is it based on the amount of the bid that has been subcontracted to others?

Submitted by Kelly Turner
Granite / CJA / NCC Joint Venture

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

17% is the overall SBE goal for the entire CM/GC contract. The CM/GC will set varying percentage goals for each individual package. The goal for the BSE package is 24%. SBE percentages are calculated by determining the ratio of firms in the nine-county Bay Area for a particular NAICS code to the number of SBE firms in the same area for that same NAICS code. SBE participation is calculated based on the total value of the Trade Subcontractor's bid price. For example, if the total bid is $1,000,000, and the SBE goal is 24%, the Trade Subcontractor (if not an SBE itself) must make good faith efforts to subcontract out at least $240,000 to SBE subcontractors.

REQUEST:

Reference Exhibit A, Section VI

Part 2A indicates the Trade Subcontractor must utilize surveyors who can provide $25,000,000 of insurance. This will effcetively eliminate many survey engineers from being able to bid on this work. The resultant effect will be higher bid costs. Please consider this and confirm what the insurance requirements are for land surveyors.

Submitted by Kelly Turner
Granite / CJA / NCC Joint Venture
08/06/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The intent of Exhibit A, Section VI.2.A is to require $25,000,000 in professional liability insurance with respect to the design-build elements of the work, which can be obtained either by the Trade Subcontractor or its retained engineers. However, with respect to land surveyors only, the Trade Subcontractor or its retained engineers should only have to evidence $1,000,000 in professional liability insurance covering that scope of work, consistent with the standard requirements set forth in Article 16 of the Long Form Subcontract. This will be included in Addendum 3.

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Transbay Joint Powers Au Sara Gigliotti

Co-Author:

REQUEST:

Exhibit A, II, "Key Dates for Bidding Process" of the Project Bidding Manual establishes the Bid Due Date as Sept. 14, 2010, 6 weeks from the date of bid package issuance.

Six weeks is an insufficient amount of time to adequately prepare a $200M estimate and bid. We therefore request that the Bid Due Date be extended an additional 8 weeks for the following reasons

Design-Build
The SBE package includes major deisgn-build elements. The extent of the design work related to shoring, bracing, trestle, cross-street bridging and dewatering that the BSE Trade Subcontractor will be responsible for performing became fully apparent to the prequalified contractors only when the bid package was issued. Developing these required Trade Contractor designs far enough to allow accurate pricing to begin will take time.

Considering the magniute and location of the construction work, the risk accompanying the design is also extremely high. A memorandum of understanding that adequately addresses this risk must be negotiated with the Trade Subcontractor's Professional Engineer before design can even beign. This will take time.

Similarly, the Trade Subcontractor will likely enlist the services of an independent Professional Engineer to act as a peer reviewer to check the work of the Trade Subcontractor's principal engineer. Reconciliation of any differences identified during this review will take time.

Liquidated Damges
Liquidated damages associated with not meeting the CM/GC's schedule for Substantial Completion are extraordinarily high. It appears to us that the BSE Trade Subcontractor's time for substantial completion, i.e. 1,825 days following Notice to Proceed with pre-construction services, is highly interconnected with the work of other trade subcontractors and also contingent on their performance. If this is the case, it becomes very difficult to accurately assess risk of exposure to liquidated damages. The Joint Venture will need time to clarify with the CM/GC the relationship between the other trade

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please refer to the answer to question 47 for information on the SBE program.

Response by Gerry MacClelland 8/18/2010

A forthcoming Addendum will include a time extension of 4 weeks beyond the current bid date. The TJPA will continue to monitor contractor questions and the content of future addenda to be satisfied it allows a reasonable period to finalize contractor bids.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

subcontractors' work and the BSE Trade Subcontractor's substantial completion date. Then we can adequately assess the risk resulting from this relationship, include it in our pricing and secure surety commitment.

Small Business Program
The Trade Subcontractor is required to achieve a minimum small business enterprise participation of 24% of its' total bid. Given the magnitude of the principal scopes of work required in the BSE package - shoring/bracing, excavation, drilling - most small businesses will neither be interested in participating nor qualified to do so. Time will be needed to identify a sufficient amount of reasonable scopes of work for small busines sparticipation and to work with interested small businesses, as necessary, prior to bid day to help them with insurance, bonding, shceduling, and performance issues.

Given the cirumstances outline above, Shimmick / Skanska / Traylor strongly urges the Transbay Joint Powers Authority and Webcor / Obayashi to postpone the bid date for the TG03 BSE Package until Nov. 9, 2010.

Reference Exhibit A Section 5 last paragraph references Specification 00 05 20 for resposibilities for liquidated damages.

Q - The liquidated damages described in 00 05 20 are based on a requirement for the completion of Trade package No. 1 in 1,825 calendar days beginning with Notice to Proceed with Pre-Construction Services. 1) Please provide the Notice to Proceed date for Pre-Construction Services. 2) Please advise how liquidated damages will be assessed for late completion of Zone 1, Zone 2, Zone 3, and Zone 4. Since any of these zones could potentially be late, it is not clear how the CM/GC will assess potential LD's.

Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/11/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is anticipated that NTPs will be issued as described in the IFB. Liquidated damages as well as Contractor¿s costs and those of other Trade Subcontractor¿s may be assessed if the late completion of any zone impacts the critical path of the project or affects the work of follow on Trade Subcontractors.

Co-Author:

REQUEST:

Reference drawing sheet D-2230

Q - Note #2 states that, unless otherwise specified, all utilities to be removed have been cut and capped. The only remaining utilities shown to be cut and capped are the sewer systems at First, Fremont, and Beale. We interpret this note to mean that, except for the sewer systems discussed, there are no other active utilities in the work zone (including in First St, Fremont St, and Beale). 1) Please confirm there are no other active utilities that the Trade Subcontractor has to either cut/cap or maintain in place. 2) If there are other utilities that have to be cut and capped, please provide specific details. 3) If there are other utilities that have to be maintained in place, please provide specific details.

Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/11/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1) Protect in place active existing sanitary and combined sewers, manholes, catch basins and storm drain culverts as indicated on the plans. Protect in place NEW active sewers constructed as part of the Relocation of Utilities Project as shown on the plans. Coordinate with and protect in place NEW active utilities (PG&E and Verizon) constructed by the private utilities that will be supported by the temporary bridge. With the exception of the utilities indicated, all known active utilities will be demolished capped and/or plugged by the Relocation of Utilities Project at the demarcation line indicated in the plans. The Relocation of Utilities Project includes exploratory subsurface trench explorations in First, Fremont, Beale, Minna and Natoma streets at the demarcation line where the new CDSM wall crosses perpendicular to each street. Following subsurface investigations, all unknown (as well as known) active and inactive encountered utilities will be demolished capped and/or plugged at these locations by the Relocation of Utilities Project.

2) Demolish and plug existing sewers per City of San Francisco Standard Plans and Specifications.

3) See response to part 1.

Responded by David Fyfe (URS Corporation)

REQUEST:

Reference Exhibit A, Part IV and specification 00 08 21, paragraph B, item D and paragraph 1.3, item B.

Q - Exhibit A, Part IV., Scope of the Package and Bid Item Information, Paragraph B., General Work, Item D., SBE Program states "Trade Subcontractor shall obtain a minimum SBE participation of 24% of the total value of Trade Subcontractor's bid value." However, Section 00 08 21, Disadvantaged & Small Business Enterprise and Equal Employment Opportunity/Employment Nondiscrimination Requirements, Paragraph 1.3 Small Business Enterprise (SBE) Program Requirements, Item B. states "The TJPA has established an SBE Utilization Goal of 17% overall for this Contract."

Are we correct in assuming that the SBE participation is to be 24% of our bid value for this contract (Contract No. 08-04-CMGC-000), but that the SBE Goal for the entire Transit Center Project is 17%?

Submitted by Gerald Brown Tutor-Salib Corporation 08/12/20101

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

That assumption is correct. 17% is the overall SBE goal for the entire CM/GC contract. The CM/GC will set varying percentages for each individual package, and the goal for this package is 24%.

REQUEST:

Reference Transbay Terminal Center Bid Package TG03 Shoring, Buttress and Excavation (Cont.)

Q - We have started into our second week of intensive review of bid documents and drawings in which to grasp what is prescriptive work and what requires additional contractor design and scheduling in our bid proposal preparation. Having been involved in not only pre-bid contractor designed support-of-excavations but final design and construction of numerous deep supported excavations in urban environments in numerous cities in California, we look forward to working on this unique and challenging project. This project brings additional elements to be considered during design of support-of-excavation

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A forthcoming Addendum will include a time extension of 4 weeks beyond the current bid date. The TJPA will continue to monitor contractor questions and the content of future addenda to be satisfied it allows a reasonable period to finalize contractor bids.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and traffic supported trestles that would not normally be considered in below street level construction. One, the width of the supported excavation at approximately one hundred and eighty L.F., will require at least two intermediate vertical piles to support the horizontal bracing levels. Second, the need to incorporate both longitudinal and transverse traffic trestle decking whose vertical support locations will add to the constraints and interference with the location of the horizontal bracing levels. Third, the phasing of the shoring and excavation will require various locations of bracing levels of the CDSM cut-off walls. Fourth, the tie-down anchors will have to be designed to meet project specifications. Fifth, the volume of information including as-builts and the myriad of geotechnical information provided will consume considerable time which our designers can ill afford not to digest the pertinent information. And lastly, the tremendous coordination and evaluation of the various key subcontractors scopes and proposals will be itself a considerable effort since various proprietary information will be provided to them for pricing Tutor-Saliba's in-house designs. For these various reasons, we strongly urge a postponement of at least four weeks to the current scheduled bid date of September 14th in which we can properly develop the most complete and competitive design concepts and pricing proposal to Webcor/Obayashi. It is very important that you evaluate this request in a timely manner in which we can allocate the limited time available to our engineering and estimating forces. Your timely written response is appreciated.

TG03.00-0056 **TG03 Question 0056 - Access Trestle Permanent Structure** **Closed** **08/16/2010** **08/22/2010** **08/20/2010** **Potentially** ☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP Joanne Filipas

Co-Author:

REQUEST:

Reference Exhibit A, Attachment 3 A.

Q - We note that the access trestle is to be coordinated with permanent construction, not conflict with the permanent structure except for penetrations, and is to be at the same level of the temporary bridges at the connections. This would appear to require that the trestle deck be below the bottom of the ground floor permanent structure section, with built-up ramps to match the street bridges. We also note that the permanent ground level structure is lower at the street crossings than elsewhere. This would push the trestle deck further down, conflicting with the limits of placement of the top level bracing strut. No guidance is given regarding how the future Trade Subcontractor will want to use the trestle to construct the ground floor or the superstructure. Please clarify where the top of trestle deck is intended to be located, and whether it is acceptable to locate the trestle deck at ground floor level, such that it could be used for sequential construction of the ground floor and superstructure.Is there an upturned longitudinal beam down the middle of the street crossings? . Schedule A on S1-3201 only indicates a 30" slab.

Submitted by Charles M. Gardner Kiewit Infrastructure
West Co. 08/13/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A. Per Exhibit A, Attachment 3 "The level of the Access Trestle shall be the same as the level of the Temporary Bridges at the connections."

Co-Author:

REQUEST:

Reference drawing sheet GT-1111 Legend. A.

Q - Please help to clarify the strut and waler system stiffness requirements. Our initial interpretation and the associated analyses indicate that strut and waler sizes increase very significantly over what would be required by strength considerations alone. Please provide a sample calculation or procedure for determining stiffness for comparison with the values given in kip per foot, per foot of wall. B. Pre-loading will take out a portion of the axial shortening of the struts. We assume that it is appropriate to subtract out that deflection from the stiffness calculation. Please confirm.

Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 08/13/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The strut and waler system stiffnesses are governed by the need to control ground movements outside the excavation. Consequently the operational stresses in struts and walers implied by the specified stiffnesses will be lower than would be obtained by factoring ultimate stresses. See Attached SSK-RFI TG0300-058. Question B is not clear.

Project Bidding Manual states, "Contractor will provide temporary power to distribution points in the Site Logistics plan (see Exhibit A) for the project. Subcontractor shall be responsible for all temporary power needs to complete their work beyond the distribution points provided by Contractor. Contractor will not provide temporary power for welding." A.Will the Owner (TJPA) pay for temporary power consumption, or does the Trade Subcontractor put thisin our Bid? B. Will the distribution points require separate metering for welding?

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/17/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

A. Refer to TG0300-0035.

B. Refer to Project Bidding Manual, Section IV.17.

TG03.00-0067 **TG03 Question 0067 - Hazardous Waste** **Closed** **08/18/2010** **09/01/2010** **08/18/2010** **Potentially** ☐

REQUEST:

Reference specification 01 13 50, 1.5.I & 1.5.H.

Please confirm that "The TJPA is the "generator",...,of any hazardous waste,.." 01 13 50 1.5.I, and that, "The TJPA Representative only (and not the Contractor) will sign the manifestfor the generator of the waste."

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/17/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. As stated in 01 13 50 ¿ 1.5.I, TJPA is the ¿generator¿ of any hazardous waste encountered at the site, as exist, in the course of performance of the Work, but TJPA will not be responsible to any hazardous waste generated by the Contractor working at the Site, and the Contractor will be the generator of that material.
2. As per 01 13 50 ¿ 1.8.H, TJPA Representative will sign the manifest for the generator of hazardous waste, except the hazardous waste generated by the Contractor as stated above.

Reference specification 01 53 13, paragraph 1.3.A.1

Specification states "design shall include cross bridge travel¿ including typical semi truck traffic and a fully assembled Manitowoc 999 crane weighing 500,000 lbs traveling from trestle to trestle without a hook load." Please verify it is the intent of the specifications that the 999 crane only travels across the temp street while moving from trestle to trestle and that the temp street design does not have to include the Manitowoc 999 loading at any other area of the temporary street.

Submitted by Kelly Turner
Granite / CJA / NCC Joint Venture
8/18/2010

Manitowoc 999 crane loading applies to the entire length of the bridge.

Fyfe, David (URS Corporation)

TG03.00-0076 **TG03 Question 0076 - Access Trestle** **Closed** **08/19/2010** **08/25/2010** **08/19/2010** **Potentially** ☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP Joanne Filipas

Co-Author:

REQUEST:

Reference Exhibit A

Attachment 3, Access Trestle Criteria, states "The level of the access trestle shall be the same as the level of the Temporary Bridges at the connections." Attachment 3 also states "The layout for each member of the Access Trestle¿. shall not conflict with the permanent structure¿" Tying the trestle to the cross streets will cause the trestle structure (which is approx 7' deep) to conflict with the concrete roof of the follow on structure. It is our understanding that the CM/GC understands this and will coordinate the removal of the acess trestle and the temp streets such that the concrete roof can be constructed after these conflicting structures are removed. Pls confirm.

Submitted by Kelly Turner
Granite / CJA / NCC Joint Venture
08/18/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Coordination is the responsibility of the Trade Subcontractor. Temporary roadways/bridges must remain in place until the permanent structure can support the permanent roadway.

What is the intent of this detail, how does it work and at what stage of construction is it to be installed?

Submitted by Gerald W. Brown
Tutor-Saliba Corporation
08/19/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is a detail to illustrate the trestle pile design requirements.

Trestle pile is a contractor design/build item. Other than supporting the trestle, there are two issues that need to be addressed by the contractor:

1. Trestle Pile shall not restrict the mat slab from upward movement.

2. Trestle pile shall have two steel seep rings (as shown) with waterproofing/flashing integrated into the lower ring.

requires Trade Subcontractor to maintain professional liability coverage continuously throughout the the term of the Contract, and without lapse, for 10 years beyond the Contract Final Final Completion date. The maximum policy term commercially available is 10 years combined for the construction and extended reporting period. A more usualreporting period is 3 years. Please change the extended reporting period to 3 years, or revise the requirement to a total of 10 years. Carrying $25,000,000 professional liability insurance for 10 years will addsignificant cost to the Project without corresponding benefit as the majority of the design performed by Trade Subcontractor is for temporary work rather than the permanent structure.

REQUEST:

Reference Exhibit A, paragraph 1.B

Section 1.B requires the Trade Subcontractor to maintain $100,000,000 Commercial General Liability Insurance. Section 16.7 of the proposed subcontract between Webcor and the Trade Subcontractor requires that Sub-subcontractors carry the same amounts of coverage. Potential SBE sub-subcontractors will not be able to provide $100,000,000 CGL. As a result, Trade Subcontractors will not be able to reach the 24% SBE Goal. It is highly likely that all of the Trade Subcontractors will offer 0% SBE participation as a result of section 16.7. Please advise if Webcor intends to modify section 16.7 and if so, how will it specifically be changed?

Submitted by Kelly Turner
Granite / CJA / NCC Joint Venture

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

In an upcoming addendum, the following language will be added to 1.B of Exhibit A, VI. Insurance Requirement: ¿Notwithstanding Section 16.7 of the Long Form Subcontract, the requirement to maintain $100,000,000 in Commercial General Liability Insurance shall apply ONLY to the bidding Trade Subcontractor. Sub-subcontractors/Lower-Tier Subcontractors shall maintain the levels of Commercial General Liability Insurance set forth in Section 16 of the Long Form Subcontract agreement.¿

REQUEST:

Reference specification 39 09 13

The plans show geotechnical instrumentation including inclinometers, MPBXs, piezometers and settlement points. Specification Section 39 09 13 states that "... Geotechnical instrumentation consists of inclinometers, settlement casings, settlement monitoring points, survey reference points, piezometers and multiple point borehole extensometers." The plans state that the geotechnical instruments for monitoring the TBT excavation and shoring work are to be drilled and installed by the TJPA representative. However, the specifications call for "...furnishing, installing, monitoring, reading, recording, maintaining, protecting ..... geotechnical instrumentation." The specifications go on to state that "...where shown on the drawings, the Contractor will procure and install the specified instrumentation." We find no notes on the plans calling for the Contractor to procure and install the specified instrumentation nor notes as to who is responsible for monitoring the shoring performance. The plans appear to be inconsistent with local practice in that it is customary in Northern California for the Contractor to furnish, install and monitor appropriate geotechnical instrumentation when the Contractor is responsible for constructing works involving deep excavations and shoring. We recognize the Internal Bracing Specification requires a monitoring program for struts, but is silent on exterior monitoring.

1. What is the Owner's intent in this regard?

2. Will the TJPA be responsible for the exterior monitoring as implied, and the Contractor be responsible for monitoring the performance of the shoring systems in the Specifications which state "...furnishing, installing, monitoring, reading, recording, maintaining, protecting ..... geotechnical instrumentation." , Or will the TJPA representatives read and monitor for all the geotechnical instrumentation?

3. If the TJPA representatives read the geotechnical instrumentation, will the TBJPA representatives take the geotechnical instrumentation data readings on a daily basis? If the TJPA representatives are to be responsible for timely reading and reporting on the shoring systems

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. All instrumentation shown on the 7/30/10 geotechnical drawings will be procured, installed, and monitored by the TJPA's Representative. The specifications describe monitoring, which is the responsibility of the contractor, e.g., monitoring procedures to check internal bracing performance in Section 31 55 00, and monitoring wells for the dewatering system in Section 31 23 19.

2. The TJPA will monitor ground movements inside and outside the excavation using the instruments shown on GT-1301 and 1302. The Contractor will monitor the internal bracing system.

3. The TJPA is evaluating the implementation of an automated data collection and management system which uses a web-based portal to assemble data generated by contractor, the TJPA's Representative, and others for examination by relevant parties. In lieu of this, the TJPA's Representative will read the instruments at a frequency dictated by the stage of construction and by the magnitude of movements observed.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

performance, will the TJPA representatives set up the geotechnical instrumentation to be read via dataloggers with in-situ sensors and cellular modems in the case of the inclinometers and/or similarly in the case of the piezometers and MPBXs? Timely notification of all parties should be required.

REQUEST:

Reference specification 01 17 40.

1) Please confirm that the 2 year warranty for subsurface work applies to this Trade Subcontractor package

2) Request a copy of the Contractor's Builder's Risk insurance so we can review terms and conditions.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. The warranty requirements in Section 01 17 40 are for the project as a whole and are not specific to an individual package. The warranty items for the BSE package, if any, would be limited to those works in place when the contract is complete.

2. The Builder's Risk policy will be made available prior to the start of construction. Refer to Section 00

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3) Does the California Public Contract Code 7105 (Acts of God) statute apply in this Trade Subcontract?

4) Will a Contractors Protective Professional Indemnity policy in the amounts specified in Exhibit A section VI be sufficient evidence of coverage to the Owner? 5) Request the general liability requirements be amended to more customary rated A-VII or higher

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/25/2010

08 05, paragraph 1.3.A, in Addendum 2 for the Contractor¿s requirements.

3. The Public Contract Code 7105 allows public entities to require Builder's Risk insurance from public works contractors to cover damage to the construction site. The requirements of Section 00 08 05 are for the CM/GC. The insurance requirements for the Trade Subcontractors is defined in the Webcor/Obayashi long form subcontract.

4. Yes, a Contractor's Protective Professional Indemnity Policy (CPPI) is sufficient evidence of coverage.

5. See Addendum 2 for the revision to rating.

Co-Author:

REQUEST:

Reference drawing sheet GT-5102.

Section 9/GT-5102 Indicates CLSM Shoring wall placed abutting the existing 301 Mission Wall. 301 Mission Drawings Sheet SH-31 Wall D section indicates a grade beam which may extend south past the wall line. This may interfere with the CLSM Shoring wall installation. Please provide more detail to confirm the coordinates of the existing building at 301 mission and the interface with the new CLSM wall, and confirm that the CLSM wall is sufficient to act as one side of shoring for the existing pile removal program.

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
08/26/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 301 Mission drawings show the grade beam on the 301 Mission side of the property line and therefore should not interfere with installation of the Transbay Transit Center CDSM shoring wall. Regarding the adequacy of the existing 301 Mission shoring walls to act as one side of shoring for the existing pile removal program, no information regarding the as-built and as-remaining/buried condition of these walls has been provided. These walls should not be needed to retain earth on the 301 Mission side of the wall since the 301 Mission structure is deeper than the depth of excavation required to remove the timber piles. However, the integrity of the existing shoring wall to support itself is unknown.

TG03.00-0127	**TG03 Question 0127 - Temporary Power**	**Closed**	**08/27/2010**	**09/03/2010**	**08/30/2010**	**Potentially**	☐

Co-Author:

REQUEST:

Reference is made to the various forms that were revised per Addendum No. 2 (i.e. Acknowledgment of Receipt and Review - Project Bidding Manual; Bid Form and Schedule of Bid Prices; Bidding Checklist (BCL); Bid Bond Form; etc). All these form now have "FINAL FOR ADDENDUM" stamped across them. Is it your intent that we submit

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The bidder shall submit the most recent version of the forms, whether the forms are in the original bid documents or an Addendum.

these forms as is or are you going to be providing us with a separate Bid Package of these forms without this reference stamped across them?

TG03.00-0142 **TG03 Question 0142 - Schedule** **Closed** **09/01/2010** **09/08/2010** **09/08/2010** **Potentially** ☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP Joanne Filipas

Co-Author:

REQUEST:

Owner response to question TG0300-0080 is incomplete. The BSE concept schedule does not contain any information concerning the removal of the access trestle nor the temporary streets. Further, the concept schedule provided shows no work activities beyond the construction of the lower concourse walls. Please provide specific information regarding the expected dates for these NTP's so the bidders can estimate the total costs for performing this work.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to response TG0300-0150.

TG03.00-0143 **TG03 Question 0143 - Long Form Subcontract** **Closed** **09/01/2010** **09/08/2010** **09/08/2010** **Potentially** ☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP Joanne Filipas

Co-Author:

REQUEST:

Reference Exhibit B "Long Form Subcontract". Some of the terms and conditions that were provided in the Long Form Subcontract to be utilized as the written agreement between Webcor/Obayashi and the low bid Subcontractor are overly burdensome, unacceptable and potentially not in conformance with statues and regulations. Please confirm that mutually agreeable terms can be negotiated with Obayashi/Webcor prior to the bid date for the Project.

If the terms and conditions for the Subcontract are not negotiable, then we regret to inform you that we will not be able to supply a bid for this Project.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to response TG0300-0150.

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP Joanne Filipas

Co-Author:

REQUEST:

The CDSM wall requires no vertical interruptions in its drilling path, the utilities will have to wait until a portion of the CDSM wall is complete. Once a portion of CDSM wall is complete then relocation may happen and the utilities will have to be cored through the CDSM wall. Why is the owner relocating the utilities prior; and just not wait until a portion of CDSM is in before locating?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to the current utility drawings for sequence. Utility relocation is sequenced such that utility service will remain uninterrupted during shoring wall installation. Refer to Addendum 3 for these reference documents.

Co-Author:

REQUEST:

Reference 301 Mission St. Drawings, drawing sheet GT-5102.

The Temporary Shoring and Earth Retention Drawings for 301 Mission St. show a grade beam on K line in Section 1 Drwg. SH-32 under the screening wall that is to be relocated by others, it appears that this grade beam carries through the parking structure as shown in Section 2 Drwg. SH-31 and Section 9 Drwg. GT-5102 of these bid documents. Please confirm this grade beam will be demolished prior to CDSM Shoring wall obstruction removal and Geotechnical Monitoring Instrumentation.

In Transbay Demolition Plans, drawing # D1060, and D1076, show the backfill material fill to first floor elevation in the area adjacent to 301 Mission Building. In BSE Plans, drawing # GT5000 shows the backfill material fill to about basement slab elevation. Please confirm which one is correct?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The 301 Mission drawings show the grade beam on the 301 Mission side of the property line and therefore should not interfere with installation of the Transbay Transit Center CDSM shoring wall.

GT-5000 is consistent with D-5103 regarding the amount of crushed concrete backfill at the start of the contract.

TG03.00-0159	TG03 Question 0159 - Temporary Bridge	Closed	09/03/2010	09/10/2010	09/13/2010	Potentially	☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Schedule A on S1-3201 identifies top of structure elevations. When these elevations are cross referenced against the elevations of the cross streets the temporary bridges that tie into it will be several feet above grade, unless there is a provision for a concrete "leave out" Drawing A 5206 shows First Street Elevation at 14.94. The top of structure at this zone is from 12.79' to 13.47', this allows less than 2' for the temporary bridge installation. Depending on the final Temp. bridge design and clearance necessary to construct box structure below the bridge deck may be as much as 6' above the city street. Is it the owners intent to ramp up on the city street to the temp bridge elevation? If so what is the max grade allowed for the approach ramp?

Also, please comment on the intent for side sloping, access for business, support of fill, etc. This condition applies to Beale street as well.

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
09/02/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

S1-3201 shows general top of structural elevations at the Ground Floor Slab. The schedule is not intended to show all top of structual elevations.

Utility corridors are to be provided at the cross streets of Beale, Fremont, and First. Where required, the temporary bridges are provided over the area of the utility corridors, which are lower than the adjacent slabs. See architectural drawings A1-6000, A1-6118, and A1-6231 provided for reference.

Note that drawing A-5206 referred to in the information request was not included in the BSE package.

The temporary bridges will be set to tie into existing street grades without significant changes in elevation. This approach will avoid the need for side sloping, or other grading for access.

Spec Section 01 14 19 - Restriction to Use of Site Areas, lists the location of adjacent site areas and when they are available to the Trade/Subcontractor. This section does not address the area labeled in the drawings as the MUNI Hump or the area directly west of Zone 1. Is the trade/subcontractor to assume that both of these areas are not considered adjacent site areas, but areas acquired with the respective zones? Do these areas become available to the Trade/Subcontractor at NTP of Zones 1 and 3?

Submitted by Charles M. Gardner
Kiewit Infrastructure West Co.
09/02/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Section 01 14 19 identifies staging areas outside the construction zone. The "hump" will be made available to the CM/GC as needed for direct construction activities. Currently, it is available to the demolition contractor until spring 2011. After that it becomes available during shoring wall installation activities. Following, this area will be made available to the CM/GC for other ongoing construction activities until such time as development of this parcel is ready for construction. That date is not currently known, but it is not expected to occur before the late months of 2012. The property west of Zone 1 is considered part of the construction site and is currently available to the demolition contractor. It will become available to the CM/GC in spring 2011.

Co-Author:

REQUEST:

Information Requested
Reviewing Drawings GT-1110, GT-1111, GT-1112 and GT-5101, and our In-house Design, there seems to be a conflict in the TJPA Design of the CDSM wall. Drawings GT-1111 and GT-1112 note that the Max Cantilever to ground surface is 10' max (install) and 13' max (removal), but with the West, East, and Buttress Earth pressures from GT-1110 and Strut Elevation called out at + Elevation 11, + Elevation 6, and + Elevation 4 and the Top of Pile beams form GT-5101, produce cases where the install Cantilever exceed the 10' Max.

A/1-5 +22.0 -11 = 11' that exceeds 10'
1-1 +24.0-11 = 13' that exceeds 10'
X1-1 +25.0 -11 = 14' that exceeds 10'
X1-2 +24.0 -11 = 13' that exceeds 10'
J/13-19 +18.0 -6 = 12' that exceeds 10'
J/19-25 +17.0 -6 = 11' that exceeds 10'

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The elevation of the top strut shall be no lower than the following elevations (NAVD88): at Case West +11.00 (install) and +8.00 (removal); at Case East +6.00 (install) and +3.00 (removal); at 301 Mission Buttress Case and 301 Mission Podium Case +4.00 (install) and +1.00 (removal). This information will be included in an Addendum.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

J/25-27 +15.0 +4 =11' that exceeds 10'

Does the note on Stage 2 on Drawing GT-1111 infer that the Owners Design of the CDSM wall can take the "Over Cantilever" because we can dig to a specific Elevation of +8 west of Grid Line 17 and to Elevation + 7 east of Grid Line 17? Or does the Owners Design need to be Revised to add an additional Strut/Waler Level to the Owners Wall Design? Can we get a clarification on the 10' max shown on Drawing GT-1111 and the west end walls? Can we use 14', 13', 12', 11' cantilever to the first strut level elevation shown at +11, +6, and +4 vs the 10' max shown on GT-1111 Drawings?

TG03.00-0165 **TG03 Question 0165 - Excavation** **Closed** **09/07/2010** **09/13/2010** **09/08/2010** **Potentially** ☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Reference Earthwork 31.00.00, 3.19.B.2 which states "Protect newly excavated areas from traffic and erosion...Barricades shall be installed at the tops of the sloped embankments to prevent vehicles and storage loads within seven feet of the tops of the slopes."

a. Does this specification apply to the top edge of the vertical face main excavation? (i.e. perimeter shoring wall)

b. If seven foot distance is required (at the top edge of the main excavation), then can it be assumed to start at the inside face of CDSM wall and stop at the outside toe of barrier? If not, then please define start and stop of the seven foot distance.

c. CDSM wall and excavation occurring on Minna and Natoma streets exist in close proximity to numerous private garages, driveways, and pedestrian entryways. With a further 7 ft setback restriction, this will virtually take

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sentence, "Barricades shall be installed at the tops of the sloped embankments to prevent vehicles and storage loads within seven feet of the tops of the slopes" in Section 31 00 00, paragraph 3.19.B.2, will be replaced with, "Protection of sloped faces within the area being excavated is the responsibility of the Contractor." This change will be included in an upcoming addendum.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the remaing portion of Minna and Natoma street, relegating any traffic along these alleys to existing sidewalks. A specific example would be on Natoma between column lines 14 to 17. Is it the Owner's intent to maintain these setbacks and demolish the existing sidewalks and planter areas by pushing vehicular access closer to the buildings?

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

As noted in Question TG0300-0058, preloading the struts will increase the effective stiffness of the bracing system (particularly by pre-compressing the struts).

(1) Can this factor be considered when evaluating the ¿average stiffness tributary to a given strut¿ per the note in the lower right-hand corner of GT-1111?

(2) Can preload values higher than those specified in Tables 1 through 4 on GT-1110 be used to increase the effective stiffness of the bracing system?

Submitted by Rich Zito
Shimmick / Skanska / Traylor JV (SST)
09/07/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

We do not believe that preloading increases the effective stiffness of the struts. The struts will expand and contract due to temperature variations and this could be interpreted as changing the effective stiffness, but we do not believe it is feasible to control the temperature at the time of installation and pre-loading to account for this when selecting the member sizes.

REQUEST:

Reference Exhibit A, Section IV.C.14 (p. 10).

Exhibit A states: ¿Existing temporary shoring wall installed by Existing Terminal and Ramps Demolition Contractor at the eastside of Fremont Street shall be removed and disposed in accordance with the Contract Documents.¿

However, the Terminal Demolition Plans include notes stating that ¿. . . Contractor to furnish and install shoring and bracing as necessary to ensure no adverse impacts to adjacent roadways and building.¿ These notes seem to apply to the entire perimeter of the existing building and not just to the eastside of Fremont St.

Please clarify if the TG03 Contract includes removal of the previously installed shoring and bracing along the eastside of Fremont Street only, or also around the entire perimeter of the existing terminal structure.

Submitted by Rich Zito
Shimmick / Skanska / Traylor JV (SST)
09/07/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Note 10 on D-0001 (and similar notes on others drawing sheets) requires Contractor to provide means for temporary ground support as required and as necessary to protect adjacent ground when excavation demands such protection. One example of this requirement is the pre-trenching activities prior to installing CDSM wall as required per note 11 on GT 2101 (and similar notes on other sheets). The temporary shoring walls installed for excavation by this Work will need to be removed by this trade contract as part of underground structure demolition and clearing per the same note 10 on D-0001.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author:

REQUEST:

The response to previous question TG0300-0054 states that the rebracing loads can be determined based on the information provided on GT-1110. Please identify the specific information on GT-1110 that is to be used to determine these loads. We note that the computation of these loads will depend upon the assumed degree of CDSM wall fixity at the base slab, the assumed distribution of seismic loads, as well as, other inherent assumptions. The CDSM wall analysis and design computations (which we assume must have included an analysis of the bracing removal/rebracing stages) have not been made available to the bidders so it is not possible to ascertain the basic loading and support conditions assumed by the CDSM wall designer for the bracing removal/rebracing conditions. We recommend that the static and seismic components of the rebracing design loads be provided so that all bidders are designing the rebracing for bracing demands that are consistent with the CDSM wall designer¿s computations.

Submitted by Rich Zito
Shimmick / Skanska / Traylor JV (SST)
09/07/2010

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Our staged analysis of the build-out case indicates that the total compressive force due to soil pressure does not change from that obtained from our analysis of the excavation case. This is compatible with the need to control ground movements during the build-out stages. The soil loads on the temporary re-bracing struts and the permanent structural elements used for propping the shoring wall can be determined by tributary area using the pressure diagrams on GT-1110.

TG03.00-0176 **TG03 Question 0176 - Below Grade Structure** **Closed** **09/09/2010** **09/09/2010** **09/08/2010** **Potentially** ☐

REQUEST:

The traffic lane requirements as per the specification 01 15 70 says that contractor needs to maintain 3 lanes of 11' at all the times on the First Street from Mission to Folsom and also at the intersection of Fremont and Natoma.

With the above restrictions, safe operations for CDSM walls by using big equipment may not be obtained. Is it allowable for contractor to perform the work with half the street closed?

SUGGESTION:

Answered by Gerry MacClelland, 9/14/10
Base your bid on maintaining the requirement of 3 lanes of 11 feet each, per the specification.

ANSWER: **Accept Suggestion:** ☐

Base your bid on maintaining the requirement of 3 lanes of 11 feet each, per the specification.

REQUEST:

In specification section 00 08 21 - 1.3.D it states that DBE's currently certified by CUCP, CCSF HRC, & OSOD may participate in the TJPA's SBE Program. Specification section 00 08 21/AT1 states that DBE's currently certified in only CUCP may participate in the TJPA's DBE Availability Advisory Percentage. Please clarify which certification agencies will quality the DBEs & SBEs for the TJPA SBE Program. Also will LBEs certified by CCSF(.) HRC qualify as SBEs under the SBE Program?

SUGGESTION:

Answered by Sara Gigliotti, 9/10/10

As stated in 00 08 21, 1.3.D, DBEs currently certified in the CUCP, as well as SBEs certified by the City and County of San Francisco Human Rights Commission (HRC), and the California Department of General Services Office of Small Business and Disabled Veteran Business Enterprise Services (OSDS) may participate in the TJPA's SBE Program. HRC issues LBE certifications. OSDS issues SBE and DVBE certifications. These count toward participation in the TJPA's SBE Program.

00 08 21 also states that the Contractor is responsible for reviewing the policies outlined in the TJPA's SBE Program. The TJPA SBE Program is available on the TJPA website: http://www.transbaycenter.org > TJPA > Doing Business with the TJPA > Small Business Enterprise (SBE) Program.

Only DBEs (certified in the CUCP) may participate in the TJPA's DBE Program.

ANSWER: **Accept Suggestion:** ☐

REQUEST:

Reference Answers to Pre-Bid Meeting Questions.

The answer to Question 13 says that retention is withheld for the duration of each subcontractor's scope of work rather than the entire project. Most of the SBE Subcontractor's scope of work will be complete with the placing of the rat slabs. However, the contract will continue until the SBE Subcontractor's responsibility for shoring/bracing removal and trestle/bridge removal is complete. The schedule for this work is contingent on other Trade Subcontractors and the completion date for the entire scope of the SBE Trade Subcontract Package is unknown. Will Webcor/Obayashi release retention attributable to all work completed up until the placing of the rat slabs when the placing of the rat slabs is complete?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Answered by Gerry MacClelland, 9/14/10

Retention to the CM/GC shall be reduced as described in 00 70 00.9.04. Section 00 05 20.5.04D states "the CM/GC must proportionately reduce retainage for its Trade Subcontractors." The amount of retention released upon placement of the rat slab will be based on the amount to the Trade Contractor's contract billed at that time.

Reference Exhibit "B" Warranty, 2nd paragraph.

Does warranty period extend to after completion of the entire project or only after TG04.5.1 is completed? The warranty form says indicates after "Filing Notice of Completion on all improvements". See attached which can be more than 4 years.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Refer to Section 01 17 00.1.3C. Since it is the intention to put these relocated utilities into service once complete, this paragraph establishes the basis for an early Substantial Completion. Also see Section 00 07 00.3.19C. The period for the warranty is generally defined in Section 01 17 40 as well as in individual specification sections, as stated in 01 17 40.1.2B.

TG04.5.1-0009	**TG0451 Question 0009 - Length Of Warranty**	**Closed**	**08/31/2010**	**09/07/2010**	**09/08/2010**	**Potentially**	☐

From: Webcor/Obayashi Joint Venture Manuel Saldana **To:** Turner Construction Company Daphne Faulkner **Answered By:** Transbay Joint Powers Au Gerry MacClelland

Co-Author:

REQUEST:

Reference specification 01 17 40-2, paragraph 1.5.A.

Exhibit "B" is blank for period of warranty. 01-17-40-2 requires 2 years after substantial completion of TG04.5.1. Draft Subcontract agreement seams to indicate warranty after completion of the entire project. Please Clarify.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See response to TGO4.5.1-0008.

ANSWER: **Accept Suggestion:** ☐

Yes.

TG043-0002 **SBE Requirements** **Closed** **11/02/2010** **11/16/2010** **11/04/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Transbay Joint Powers Au Sara Gigliotti

Co-Author:

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*

REQUEST:

This project is indicated as to be 100% SBE. Please confirm that this means that all of our subcontractors (and sub tier subcontractors if any) and truckers must therefore be SBE companies. Please also confirm that not all suppliers must be SBE. It will be impossible to obtain quotations for asphalt, VCP, aggregate import materials etc. from SBE companies.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

All subcontractors, at any tier, including truckers, must be SBEs. Good faith efforts must be made to purchase materials and supplies from SBE manufacturers or dealers. If materials or supplies are purchased from an SBE manufacturer, 100 percent of the cost counts as SBE participation. If materials or supplies are purchased from an SBE dealer, count 60 percent of the cost of materials and supplies toward SBE participation.

There is no current, or planned OCIP for this project.

TG043-0007	**Bid Form Clarification**	**Closed**	**11/02/2010**	**11/16/2010**	**11/02/2010**	**Potentially**	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

The bid form is far too complex. We can possibly understand the need for the data indicated by the bid form from the subcontractor awarded the project, but we can see no need for each and every bidder to fill out every space in a ten page bid form. In addition the bid form requires us to fill in the quantities. As every subcontractor will have different quantities, this seems somewhat odd. A typical SF PUC style bid form, with quantities provided, would result in bids that could be confidently compared with each other- ¿Apples to Apples¿, not¿ Oranges to Apples¿. We request that such a bid form be provided. If the bid form is not simplified greatly, we will not be able to bid this project, since it will take more time to complete the form than actually estimate the project.

W/O to provide answer.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

See revised bid form in Addendum 3.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
TG043-0008	Bid Date Extension	Closed	11/02/2010	11/16/2010	11/02/2010	Potentially	☐

TG043-0009	Exhibit I Schedule and Exhibit A.V	Closed	11/02/2010	11/16/2010	11/04/2010	Potentially	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

Exhibit I, Schedule, appears to show the physical work occurring between 1/27/11 and 3/31/11, approximately 68 calendar days (CD). This is approximately 48 working days. In this amount of time we are to install the sewer, install the water, get SFWD to do the tie ins (which often takes 2 weeks) and then do all the demolition and restoration. Please confirm that this is your intent. Also note that Exhibit A.V appears to require (under milestones) that the water work be completed within 80 CD of NTP-thus it seems that the water will have to be completed prior to the sewer. Please confirm this is your intent.

W/O to provide answer.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

VOID

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
TG043-0010	Bid Package Drawing Clarification	Closed	11/02/2010	11/16/2010	11/02/2010	Potentially	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

Exhibit A.IV, Clarification of Bid Package. It states that ¿The ¿issued for construction¿ drawings and the Field Order revisions¿ are for construction of Bid Package TG04.5.1 ONLY¿. However the Delta 1- Field Order-revisions state that the ¿revisions (are) for TG04.3 and TG 04.4. So if they are for construction of Bid Package TG04.5.1 ONLY, why are they ¿revisions for TG04.3 and TG04.4¿? Are you trying to say-¿Use all the drawings as provided, and then when we give you a contract we will reissue the drawings, without changes, other than stating

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The list of drawings to be used in this bid package is found in section 00 01 15.1 of the specifications. Use all of the drawings provided. Upon completion of this bid process, a ¿for construction¿ conformed set of these documents for this trade package will be issued at a later date.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

that they are now issued for construction¿? Please clarify exactly what you mean.

W/O to provide answer.

TG043-0011 **Investigative Trench Drawing** **Closed** **11/02/2010** **11/16/2010** **11/02/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

Exhibit A.IV (page 9), Number 11 states to include two investigation trenches as shown on sheets U-1007 & U-1008 dated 8-27-10. This is not the date of the drawings provided. Please clarify.

W/O to provide answer.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Correction: Correct drawing is 9-29-10 "For Construction Drawings."

TG043-0012 **Demolition of Existing Electrical, Gas and Telecom** **Closed** **11/02/2010** **11/16/2010** **11/02/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

Sheet U1110 and all the other demo sheets. On sheet U1110 note 5 does not specifically state that the gas is to be demolished by PG&E, note 7 does not say duct bank to be removed by AT&T (other notes are similar), but the notes also do not specifically state that ¿Trade contractor is to demolish¿ or something similar. Exhibit A.IV.D.2 (page 7), third bullet, states: ¿Unless noted otherwise on the drawings, Electrical, Gas & Telecommunication lines will be abandon and all feeders removed by the respective utility owners prior to demolition by this contract.¿ Thus there is an ambiguity. Are we, or are we not to include demolition of the Electrical, Gas & Telecommunication lines? In either case, who removes the boxes, vaults etc.? Please clarify. Exactly what is required at all locations on the plans?

W/O to provide answer.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Demo as shown on the drawings.
Note 5 says ¿"DEMOLISH AS INDICATED EXISTING HP GAS"
Note 7 says ¿"DEMOLISH AS INDICATED EXISTING TELECOMMUNICATIONS DUCTBANKS/ MANHOLES"

In regard to Exhibit A.IV.D.2, demolish as shown in the drawings.

Co-Author:

REQUEST:

Exhibit A.IV.D.11 (page 9) discusses the two investigation trenches to be excavated (and backfilled) in this scope of work. For these trenches, do we open up end to end and plate? If so, how long will they be kept open, who will move and replace the plates etc.? Or, can we trench and backfill concurrently, with representatives observing and taking requested measurements, thus limiting the amount of open trench?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

VOID

TG043-0018 **Mark Up Clarification** **Closed** **11/02/2010** **11/16/2010** **11/04/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

Specs. 000700.6.06.C.2 states that markup on labor is direct cost plus Caltrans surcharge plus 15%, or is it direct cost including bonds and insurance plus 15%? As the current Caltrans surcharge is approximately 11% and our liability insurance and WC insurance total 16.21% and adding the approximately 6.20% FICA, 1.45% medicare, 1.5% SF payroll tax, 7.1% unemployment & training taxes equals approximately 32.5% which exceeds the sum of the 11% surcharge and 15% markup, this is a very important point. As currently written, we would do any extra work at a loss. Note that Caltrans uses the surcharge plus 33% for labor, which allows a profit. Please explain why we should bid a project that guarantees that all extra work would be performed at a loss, or change or clarify the specification.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is to confirm that 00 07 00 ¿ 6.06.C.2 allows, for Work performed by a Subcontractor, a markup that equals a maximum of 15% of its direct costs, as defined in 6.06.A., including Subcontractor bonds and insurance.

Specs. 011570.1.2.D requires that the contractor or subcontractor to have a C-31 license to do the traffic control. We have an A license. Does this mean we cannot do our own traffic control, but must instead hire a subcontractor? Or, are you providing traffic control including plans, signs etc.? If we are allowed to provide our own traffic control (or if we must hire a subcontractor) does the three man traffic control need to be dedicated solely to performing traffic control work?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Traffic control to be by trade subcontractor. Traffic control to be as required by specifications.

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Specs 331100.1.1.B & 331100.3.3.C&D.

There is ambiguity regarding fire hydrants. It appears SFFD installs fire hydrants. Do they supply the hydrants? If not, do we have to pay for the hydrants and valves etc.? If we have to pay, EXACTLY what must we obtain and EXACTLY what is the cost? If we are required to purchase something from one source only, we need to be provided with information regarding what we are buying and what it will cost.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

SFFD installs fire hydrants. Furnish all materials for Fire Hydrant Services per 33 11 00.3.3.C. Purchase materials from SFFD (through SFPUC) in accordance with 33 11 00.3.3.D. Contact the SFPUC City Distribution Division Material Coordinator at 1990 Newcomb Ave., San Francisco, CA.

What is the Agency's Definition of a Joint Venture and what agreements need to be in place if firms want to submit their proposal as a Joint Venture?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The CM/GC defines a joint venture as provided in California Business and Professions Code section 7029, et seq. Any respondent joint venture must be properly licensed as a single entity and must submit with its Qualification Statement a copy of the joint venture agreement. The agreement shall identify the responsibilities of each partner in the joint venture for the scope of work established by the RFP, demonstrate the relationship between partners, and provide for contractual relationships and authorities to bind each entity to the obligations of the joint venture. The joint venture respondent should submit experience and qualifications as an entity and should submit experience and qualifications for each joint venture partner.

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Kevin Chiu **Answered By:** Transbay PMPC Alfred Lau

Co-Author:

REQUEST:

In the Traffic Control Specification 01570-2F # 10 "TEMPORARY PAVEMENT" is Temporary Pavement in regards to traffic controls limited to the following:
A. Pothole Patching;
B. "Cutback or Coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs;
C. Misc Roadway Maintenance;
D. Does not include Roadway Grinding or Hot Asphalt Application.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Section 01 15 70, paragraph 1.2.F.10 defines ¿temporary pavement¿ as part of the scope for Traffic Routing Work. The requirement for ¿temporary pavement¿ is to accommodate construction traffic control and maintenance of public and construction safety throughout the complete construction duration. It is envisaged that the scope may include pothole patching; "cutback or coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs; and misc. roadway maintenance. Usually, roadway grinding and hot asphalt application, which are typically utilized for larger paving areas, and possibly permanent installations, will not be necessitated by ¿temporary pavement¿ work. However, without the opportunity to review the traffic control plan as stipulated in 1.2.A of the same section, we cannot preclude the need at this time.

TG05.2R-0001	**Bass Electric - Switch Board AIC Rating**	**Closed**	**03/29/2011**	**03/29/2011**	**03/29/2011**	**Potentially**	☐

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The October 15, 2010, Stage One Design-Build Glazing drawings and specifications refer to Curtain Wall systems noted as W1, W3, W4, W8, and W10. See the documents for a description of the systems.
Earlier designations used in prior in-progress drawing issues no longer apply.

TG08.1-A004 **Glass Specification** **Closed** **11/30/2010** **12/14/2010** **12/06/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Spec Section/Dwg Sheet: 08 44 26-25; 2.2-A-1

Please clarify the glass specification; According to spec 08 44 26-25, para 2.2-A-1, "heat strengthed"' according to spec 08 44 26-25, para 2.2-A-1-a, "full tempered float glass". Which should it be?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

"Heat strengthened" glass in accordance with Section 08 44 26/2.2-A-1 is required. References to full tempered float glass will be removed from the specification section in the documents issued for bid.

TG08.1-A005	Glass Spec - Frit	Closed	11/30/2010	12/14/2010	12/06/2010	Potentially	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Spec Section/Dwg Sheet: 08 44 26-25 / A-8021 & A1-8140

No frit is required according to spec 08 44 26-25, para 2.2-A-1-a Glass with frit is shown on dwgs. A-8021 / A1-8140. Should there be glass with frit or not?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Frit is required on the W-1 glass as shown on the drawings. Specification section 08 44 26 will be corrected to include a frit requirement when issued for bid.

TG08.1-A006	Corner Supported Glazing Assemb (W-1)	Closed	11/30/2010	12/14/2010	12/06/2010	Potentially	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Daphne Faulkner **Answered By:** Adamson Associates, Inc. George Metzger

Co-Author:

REQUEST:

Spec Section/Dwg Sheet: 08 44 26-2

3. Joints: Ventilation shall be provided through the awning through the 3/4" gaps between each of the glass panels, according to spec 08 44 26-2, para 1.2-A-5. [More]"¿designed using rainscreen system with 2 layers of defense with rainscreen seal and continuous air seal system." - spec 08 44 26-8, para 1.5-D. Interpret that the joints shall be opened, not sealed. If the joints will not be sealed, all items specifying the sealing system in spec 08 44 26, will not be applied to W-1? Please confirm the interpretation.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Two layers of defence with rainscreen seal are not required at W-1. Paragraph 1.5-D will be deleted from Section 08 44 26 when the section is issued for bid.

TG08.1-A007	Cable supported glazed curtain wall (W-3) - Steel	Closed	11/30/2010	12/14/2010	11/30/2010	Potentially	☐

C-2000 & C-5000
Plan view on sheet sht C-2000 calls for (4) new 9" x 12" concrete curbs. Detail B-C-5000 shows the curbs in section. Do these curbs get placed on top of the (E) pavers of do they go down on top of the 4" topping slab w/pavers around the (N) curb? Are there any rebar or epoxy anchorage requirements?

SUGGESTION:

Answered by David Fyfe, 10/15/10
New concrete curbs are to be placed on top of existing 4" topping slab. Remove and replace existing pavers as required to facilitate construction of new concrete curb. Height of curb shall be measured from top of pavers.

For vertical reinforcement, use four #3 bars (equally spaced with a minimum of 4" cover at each end); for anchorage, drill four 1" embeds per curb. For longitudinal reinforcement, use two #3 bars with minimum 3" cover.

ANSWER: **Accept Suggestion:** ☐

New concrete curbs are to be placed on top of existing 4" topping slab. Remove and replace existing pavers as required to facilitate construction of new concrete curb. Height of curb shall be measured from top of pavers.

For vertical reinforcement, use four #3 bars (equally spaced with a minimum of 4" cover at each end); for anchorage, drill four 1" embeds per curb. For longitudinal reinforcement, use two #3 bars with minimum 3" cover.

REQUEST:

Reference BOE Specifications Section 02723, Part 3

There was discussion at the Pre-Bid Meeting that an upcoming addendum may change the experience requirements to do the AWSS work, above the usual DPW requirements currently in the specifications. This has the potential to rule out perfectly competent bidders and reduce the pool of bidders. Shaw Pipeline hopes there will not be a change from the specifications in this regard

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

There will be no change to requirements currently carried in bid documents.

Co-Author:

REQUEST:

We need direction for the electrical installation inside the new concrete stem wall. We are planning on installing the formwork for the south-side of the wall starting Wednesday morning. As such, we need to install the electrical conduits
and boxes tomorrow, Tuesday, at the latest to meet our schedule.
Please provide detailed information on the entire conduit run and the elevation of the boxes.
It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated
in our contract documents.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The question stated "It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents." However there are no electrical drawings in the contract documents. This RFI was recieved at 4:28pm, the day before the wall was to be closed up, and requests an answer by tomorrow, which is not enough time to review. Due to the timing of this RFI, it was not submitted to the design team, but instead a meeting was held with URS in the field for direction. For record, see the attached inspection report and email for what is to be done.

REQUEST:

Reference: C/S-5000, B/A-6000, attached sketches, and referenced RFI's

Field verified measurements and layout for the location of the structural steel does not coordinate with the stucco inset locations as shown on detail C/S-5000. In addition framing around the perimeter of the wall (aluminum panel locations) had to be modified due to assembly and installation methods. (See attached pictures and sketches. This RFI addresses three framing issues. All issues have been discussed in the weekly 301 Mission Wall subcontractor meeting with URS, Turner, Transworld, TJPA and Webcor-Obayashi.

1.) In two of the four stucco slot locations, field conditions show that a portion of the base plate conflicts with the stucco slot. This base plate encroaches into the stucco panel per dimensions shown on the attached sketch. Please advise.

2.) The structural steel had been relocated to CL of the wall (per RFI T-0098) and therefore studs around the steel per B/A-6000 could not be set per plan. Transworld

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Can't find answer in Constructware.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

has installed hat channel metal framing to the face of the structural steel tube using fasteners into the structural steel as per RFI T-0106 as well as modified the boxed framing per attached sketches around the perimeter of the wall. Sizes of metal framing were used to align with adjacent framing per plan. This work is currently installed, please confirm framing modifications per attached marked up details are acceptable.

3.) Blocking a the top of the wall at the north side (between the framing and 8"x 8" tube steel) was not installed, as there was no room between the framing and steel. Framing was attached directly to the tube steel. See attached.

Please confirm that the framing modifications in item 2 and 3 are acceptable and provide direction at the base plate conflict per item 1.

TRANSWORLD 028 **Install the sleeves for light fixtures** **Closed** **04/14/2011** **04/24/2011** **04/14/2011** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Webcor Construction LP David Hungerford **Answered By:** Webcor Construction LP David Hungerford

Co-Author:

REQUEST:

This is to respond to submittal title TA1010.S-5000.A01 Rapid Set for Concrete Repair (TCI #31)
Please identify a product or a custom mix design that would meet these specifications. In our past practice we have
successfully used the suggested grout product as a concrete patch. In our investigations with suppliers and other
contractors, it seems that the general conclusion is that using a grout product (such as the one proposed) would be
the appropriate product for this application and condition. The proposed grout seems to offer greater strength and structural performance than the original concrete that has since been removed.
Is there another product that you could identify that would achieve these specifications? Since we are not the project designers, we can only suggest those products that would generally be used and accepted in our standard of practice It was based on this standard of practice that we submitted the RapidSet grout product.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The submittal response referenced in this RFI is incorrect. The suggested product was never submitted past Webcor-Obayashi's possession. Due to compliance with the direction given per response to RFI T-0130, a submittal was not required.

An email chain was generated from conversations between W/O and Turner, then a message sent between Turner and URS, which relayed the product type and an email chain starting from URS was recieved noting that the material is not acceptable. Upon further review of codes, the material is acceptable, which had been discussed in the weekly subcontractor meeting held on Monday June 6, 2011.

This RFI is no longer valid. Transworld is to submit products that will be used to repair this condition, per sub meeting.

Transworld is aware of this and is submitting product for review.

TRANSWORLD 039	**301 Mission Wall - New concrete curb detail**	**Closed**	**06/13/2011**	**06/30/2011**	**06/13/2011**	**Potentially**	☐

U-0017	JT Conflict with Basement @ Rickenbacker Rest.	Closed	11/09/2010	11/23/2010	01/12/2011	Potentially	☐

From: Webcor Construction LP Jeffrey Negley **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference sheet U-3407.
PG&E has been potholing on the south east corner of Minna @ 2nd St. for a new gas line over the past number of days. We have observed in their potholes that a basement structure for the Rickenbacker Restaurant (123 2nd St.) extends out beyond the property line and under the sidewalk, along both Minna and 2nd Street. The basement appears to extend almost up to the roadway curb on 2nd Street and to face of curb or beyond on Minna. The joint trench at its current alignment (on Plan Sheet U-3407) along the south east corner of 2nd & Minna will be in conflict with this basement structure.
Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

E. Zagol 1/11/11

See revised Joint Trench Plan and Elevation Phase I Plans titled "Revisions - Minna Street 12/27/10" for realignment of Joint Trench.

****

E. Zagol 12/17/10

The Joint Trench as currently shown in Sheet U-3407 is in conflict with the 123 Second Street sidewalk basement between Minna Street stations 0+75 and 0+90.

Separate from the conflict mentioned above, PG&E has requested TJPA to add additional conduits to the Joint Trench.

Revised drawings will be provided that address the following:

Realignment of Joint Trench west of station 2+00, realignment of the sewer west of station 2+25, and revisions to the water line (vertical and hydrant lateral) west of station 1+02 to address the conflict with 123 Second Street sidewalk basement.
Modifications to Joint Trench sections from First Street to Second Street to accommodate PG&E's additional conduits.
Modifications at the future Transit Center stubouts to accommodate PG&E's Joint Trench configuration revisions.
RFI-U0050.
****
****

E. Zagol 11/18/10

AECOM will attend the planned site visit to 123 Second Street on 11/19/10 to evaluate conflict. We are actively working with PG&E to identify options for the Joint Trench alignment west of STA 1+12 if 123 Second Street basement is confirmed in conflict.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

On 11/17/10 PG&E reported at TJPA's weekly PG&E coordination meeting that the preferred realignment option, north of the proposed sewer utilizing existing PG&E MH 1319, was electrically feasible. PG&E has scheduled field crews for the week of 11/29/10 to confirm that there is adequate space in their existing manholes to facilitate the preferred option.

Proceed with Joint Trench subsurface investigations and Joint Trench shop drawing preparation in accordance with plans and specifications for the Joint Trench east of STA 1+12 to STA 9+31.32 at First Street.

U-0020	**Street Lighting Relocation Plan for Minna**	**Closed**	**11/15/2010**	**11/29/2010**	**11/18/2010**	**Potentially**	☐

From: Webcor Construction LP Jeffrey Negley **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference: Plan/Drawing Reference: U-3201

We have been informally advised that the Design Engineer and BLHP are considering a revised installation plan for the street lights on Minna. This would include the installation of temporary overhead power lines to feed the relocated street light poles, until such time as the new lights are powered from underground by Trinet.

Here is a sequence as Trinet understands it. Trinet would install the new light pole foundations on the north side of Minna and then relocate the light poles from the south side, per plans. BLHP would then install overhead cable, extending from a pole on 2nd St., to provide power for the lights. During installation of the new foundations, Trinet would install underground conduit from the pole to an adjacent splice box, and then later extend the underground conduit from the splice box to the PG&E power source, as depicted on the plans.

Please clarify the street lighting relocation plan currently under consideration. Also, if the BLHP plan to feed the lights temporarily from overhead, will any changes be required to the foundation and light pole installation plan to accommodate an overhead power feed?

Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

11/18/2010, per Eric Zagol;
At the request of the TJPA, SFPUC BLHP provided temporary overhead power for four street lights on Minna St. The temporary overhead power is shown in the attached sketch RFI-U0020 SKU-01. The temporary overhead street light power allows PG&E to de-activate existing underground electric ductbanks in Minna St. while maintaining power to the existing street lights.

The temporary overhead power to existing street lights can remain active until the two street light relocations in Minna Street are constructed, new underground street light duct, bull boxes and cables are constructed, and new underground power connections have been coordinated with SFPUC BLHP and PG&E.

Since SFPUC BLHP provided temporary power to the existing street lights, the construction sequence of the new street lights with respect to the other works on Minna St. now has more flexibility and is not required prior to performing other works in Minna St.

Co-Author:

REQUEST:

Reference Plan/Drawing: U-3021

During potholing activities in 1st St. where Manhole #501 is to be installed Trinet has encountered a number of existing utilities which occupy the same intended space for Manhole #501. Please see the attached sketch for locations and clarifications of these utilities.

Some of these utilities, particularly UT Group #2 and UT Group #5 (reference sketch) are intended to be disconnected by PG&E by November 24th. Please confirm.

UT Group #1, which appears to be owned by ATT is noted on the drawings as to be disconnected and demolished. Please advise as to when this utility is scheduled to be disconnected.

UT Groups #3 and #4 are unidentified and were not included in the USA markings for this area. In order to construct M.H. #501 per the contract drawings these utilities must be removed or relocated. Please advise as to the ownership of these utilities and provide direction on how to proceed.

Note: due to construction, we are requesting that this RFI be answered by 11/22/10 if possible.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please provide a mark up of U-3021 indicating the horizontal location of the utilities discovered that correlate to the section sketch provided. Also, please clearly indicate those utilities that were not marked in the field in response to the USA ticket for this excavation work.

****

E. Zagol 11/24/10

In response to items listed above:

1. As of 11/17/10 PG&E has stated that the de-energization of Minna St. will be complete by 11/24/10. In accordance with Specification 024100 1.3 B and 024100 3.5 B obtain in writing a Utility Severance Certificate (or equal) that all connections have been disconnected and the utility is not active.

2. As of 11/17/10 AT&T has stated that contents in AT&T existing ducts along First St. have been terminated with the exception of the new duct from Howard St. to 400 Howard St. property. Confirm that the existing AT&T duct subject of discursion is the the exiting duct from TMH-1887 to Existing Transbay Terminal as shown to be demolished on U-1121. In accordance with Specification 024100 1.3 B and 024100 3.5 B obtain in writing a Utility Severance Certificate (or equal) that all connections have been disconnected and the utility is not active.

3. Groups #3 and #4 utilities are not shown on AECOM's existing utility plans and as noted in the RFI are not included in the USA markings. Pending direction from TJPA's representative in accordance with Specification Section 00 08 10 the suggested first course of action is to notify USA and request a "No Response Follow Up Message". Other suggested actions have been provided to TJPA PMPC for consideration and direction further direction provided by the TJPA's Representative.

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Kevin Chiu **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference: Sheet U-3109 (dated 2010-09-29)

During Trinet's potholing for the Joint trench along the North side of Minna St, a basemenet for building "100 First St." was revealed. The basement wall is located just behind the face of curb and extends to more than 8 feet below finish grade. The extent of the basement is unknown, but assumed to run the length of the "100 First St" property. The basement structure is in conflict with the proposed new fire hydrant installation at Station 9+10.

Please provide layout for the fire hydrant.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The wall encountered appears to be an abandoned side walk basement wall for the 4 story brick building that existed prior to the current 100 First St. building. Approximate width of wall is 2 feet and the outside face is approximately at the face of curb. Neatly cut and remove wall to form a trench. Required trench width and depth per Detail 7 on U-5101. Construct hydrant lateral, riser and hydrant as shown in Detail 2 on Sheet U-5101.

U-0035 **Installlation Depth of Storm Drain New Catch Basins** **Closed** **12/09/2010** **12/13/2010** **12/13/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Kevin Chiu **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference: Sheet U-3023, U-3033 (Detail B), Attached detail from Department of Public Works Buearu of Engineering

Trinet is concerned that the installation depth for many of the new catch basin does not comply with SFDPW Sewer Departent guidelines, specifically regarding access to the traps for the maintenance department. The DPW sewer maintenence crews need to have ready access to the p-trap during flooding emergencies. DPW crews need to be able
to reach the p-trap to, either remove the cleanout cap and release the flow to the culvert pipe (if the trap bottom is plugged), or rod the culvert line through the trap (if the culvert is plugged). To get some clarification of the installation
guidelines, Trinet had informally talked to one of the design engineers at the SF Bureau of Engineerring, Hydraulics
Department. He advised Trinet that new catch basins should be installed with center of trap and discharge piping grade located between 3 and 4 feet below the culvert runs to cross under existing utilities that are in conflict with a direct run to the discharge manhole. Bends should be 22

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AECOM has confirmed with SFDPW Hydraulics that limited vertical bends in the 10-inch culvert run are acceptable. SFDPW also confirmed that from a maintenance perspective the clean out on the cast iron trap is more accessible at a depth of 3 to 4 feet below ground surface.

Please submit subsurface utility investigation information including top, bottom and size of existing utilities along the 10-inch culvert alignment from catch basin to manhole such that the 10-inch culvert can be engineered and the catch basin depth can be determined to avoid existing and future utilities.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1/2 degrees where possible as required, and if 45 degree bends must be used we should limit the number to two (2).

Please provide the depth of CB#603 on Freemont Street. To expedite the work in the field, we require an answer by 12/13/10.

U-0035.1 **Fremont Street Storm Drain from CB#603 to (E) Manhole** **Closed** **12/23/2010** **01/02/2011** **12/28/2010** **Potentially** ☐

From: Webcor Construction LP Jason Dunne **To:** Turner Construction Company Kevin Chiu **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Refer to Sheet U-3023, U-3033 (detail B) and see RFI #U-0035

Per the response to RFI #U-0035, find attached for your review a drawing showing the proposed alignment for the catch basin (CB# 603) installation and storm drain run to the existing manhole on Fremont St.

Please confirm this proposed alignment is acceptable or provide another solution.

***Please confirm this alignment by 12/27/10 if possible.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Based on a site visit on 12/28/10 with Jason Dunne (W/O) and Victor (Trinet) to review exposed trench alignment for 10-inch culvert it was confirmed that the culvert alignment will clear the new temporary 8-inch water and existing 8-inch water main with adequate separation.

Alignment as shown in the attached drawing is acceptable.

Note, existing 3" HP Gas immediately west of the catch basin is to be abandoned by PG&E per Sheet U-1123 Demolition and Sequence item 2. Coordinate with PG&E to confirm 3" HP Gas is inactive and can be demolished and removed to facilitate construction of the catch basin and culvert, if required.

Answered by Eric Zagol

REQUEST:

Reference: Sheet U-1008, attached sketch of section from Trinet RFI 28 and documentation of notifications to USA North

See the attached section through the investigative trench at station 4+40 on Fremont St. Per note 4 on sheet U-1008, Trinet hereby requests that Webcor "notify TJPA" of the unidentified 6" steel pipe at 7'-9" from the east face of curb and 3'-4" to cover that Trinet encountered in their trenching which was not indicated on the contract plan. Per the same note, Trinet requests "direction on the demolition" of this line.

Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/16/10.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Unknown unforeseen existing utility condition.

In accordance with specification 00 08 10 section 1.3 EXISTING UTILITIES NOT INDICATED and specification 020630 section 4.1 POTHOLING AND TRENCHING OPERATIONS paragraph C, please proceed with the following in order to identify all interfering utilities that are unknown after all specified procedures or other non destructive methods proposed by the contractor have been exhausted:

Pipe: If conductive material, perform subsurface investigation via electromagnetic detection (or other nondestructive methods) to trace utility back to nearest vault, pull box, manhole or valve to identify owner and content. If nonconductive, excavate along pipe alignment to expose coating and a joint. Inspect and provide information on coating and joint type. If content is still unknown, tap each line in order to identify contents and operating status of utility (i.e. abandoned or operational.)

Conduit and duct bank: Determine if utility is a charged electric utility utilizing a contractor that performs NETA type work. Determine if telecommunication cables are operational.

Once the utility has been identified including owner and contents, and determined inactive or de-energized, cut and cap utility at the demolition demarcation line shown in the drawings.

Note, 6" steel pipe is in the same alignment as PG&E's excavated manhole 1675. Coordinate with PG&E to see if PG&E has demolished this line.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirm with PG&E that the 6" steel line identified is an abandoned PG&E 6" cast iron gas main. Demolish abaondoned 6" cast iron pipe and contents as required to construct the Joint Trench.

U-0043	**Fire Hydrant at St. 5+70 on Minna**	**Closed**	**12/13/2010**	**12/23/2010**	**12/14/2010**	**Potentially**	☐

From: Webcor Construction LP Mario Saldana Sr. **To:** Turner Construction Company Kevin Chiu **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

INFORMATION NEEDED
See the attached picture of the proposed fire hydrant location as indicated by drawings on Minna St. at Stn. 5+70. This location is in conflict with an existing driveway apron not shown on drawing #
U-2008. Eric Zagol from AECOM is aware and has seen this issue in the field. NOTE - Due to the 8" water line currently being installed, the location for the "T" section oinstall could be as early as Tuesday the 14th. Please provide direction by 12-14-10 if possible.

We propose to move the fire hydrant location 6¿ West to Stn. 5+64. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Due to the close proximity to the existing street light at the suggested location, please construct the hydrant east of the existing driveway at STA 5+87.5.

REQUEST:

Reference: Sheet U-1007, attached sketch of section from Trinet RFI 22 and documentation of notifications to USA North

See the attached section through the investigative trench at station 2 + 29.68 on Minna St. Per note 4 on sheet U-1007, Trinet hereby requests that Webcor "notify TJPA" of the unidentified 4' x 6.5' wall (bottom was not found) at 1' from north face of curb and 18" to cover that Trinet encountered in the east wall of the trench. Per the same note, Trinet requests "direction on the demolition" of this structure.

Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/16/10.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Demolish and remove structure as required to construct Joint Trench.

U-0045 **Unidentified Concrete Wall Encountered in Minna St. - in line with FOC** **Closed** **12/15/2010** **12/25/2010** **12/29/2010** **Potentially** ☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Kevin Chiu **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference: Sheet U-1007, attached sketch of section from Trinet RFI 23 and documentation of notifications to USA North

See the attached section through the investigative trench at station 2 + 29.68 on Minna St. Per note 4 on sheet U-1007, Trinet hereby requests that Webcor "notify TJPA" of the unidentified concrete wall (bottom was not found) in line with the north face of curb and 30" to cover that Trinet encountered in their trenching. Per the same note, Trinet requests "direction on the demolition" of this structure. Also, this wall may effect Trinet's ability to build the catchbasin at Station 2+13.

Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/16/10.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Two part question, responses are as follows:

1. In reference to the exposed concrete wall, TJPA Representative to confirm that the concrete wall exposed is an old sub sidewalk basement backfilled with concrete during construction of the 101 Second St. building.

2. In reference to "this wall may effect Trinet's ability to build the catchbasin at Station 2+13", pothole in accordance with the contract documents at catch basin location to identify any conflicts.

Unknown unforeseen existing utility condition.

In accordance with specification 00 08 10 section 1.3 EXISTING UTILITIES NOT INDICATED and specification 020630 section 4.1 POTHOLING AND TRENCHING OPERATIONS paragraph C, please proceed with the following in order to identify all interfering utilities that are unknown after all specified procedures or other non destructive methods proposed by the contractor have been exhausted:

Pipe: If conductive material, perform subsurface investigation via electromagnetic detection (or other nondestructive methods) to trace utility back to nearest vault, pull box, manhole or valve to identify owner and content. If nonconductive, excavate along pipe alignment to expose coating and a joint. Inspect and provide information on coating and joint type. If content is still unknown, tap each line in order to

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

identify contents and operating status of utility (i.e. abandoned or operational.)

Conduit and duct bank: Determine if utility is a charged electric utility utilizing a contractor that performs NETA type work. Determine if telecommunication cables are operational.

Once the utility has been identified including owner and contents, and determined inactive or de-energized, cut and cap utility at the demolition demarcation line shown in the drawings.

Co-Author:

REQUEST:

Reference: Sheets U-3007 & 3008, and Trinet RFI 41

Two of the active sewer service laterals potholed on Minna St.are lower than the new sewer main and will not drain. The details of each issue are as follows:
1. Station 5+05 - Service for #2 Shaw Alley
Top of pipe grade @ FOC for the 6" VCP sewer lateral is 11.37 . The invert elevation is approximately 10.8. The invert elevation of the new 24" sewer main @ Station 5+05 is approximately 11.4

2. Station 2+10 - Service for Anchor & Hope Restaurant
Top of pipe grade @ FOC for the 6" VCP sewer lateral is 13.51. The invert elevation is approximately 12.94. The invert of the new 18" VCP sewer main @ Station 2+10 is approximately 13.4.

Please review these issues and advise. An expedited response is requested by 12/16/10.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1/11/11

See revised Sewer Plan and Elevation Phase I Plans titled "Revisions - Minna Street 12/27/10" for revisions to sewer main elevations.

****

12/27/10

Adjust new sewer main in Minna Street to accommodate existing laterals as shown in the "Minna Street Revisions" sheet revision forthcoming addressing both this RFI and RFI U-0017.

REQUEST:

Reference: Sheet U-1008, attached sketch of section from Trinet RFI 38 and documentation of notifications to USA North

See the attached section through the investigative trench at station 4+40 on Fremont St. Per note 4 on sheet U-1008, Trinet hereby requests that Webcor "notify TJPA" of the unidentified 6" clay pipe at the west face of curb and 4'-7" to cover that Trinet encountered in their trenching which was not indicated on the contract plan. Per the same note, Trinet requests "direction on the demolition" of this line.

Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/16/10.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Possible existing Transbay Terminal sewer laterals. Coordinate with Existing Terminal & Ramps Demolition Plans Project (Demolition Project) through the TJPA Representative to confirm that the Demolition Project has abandoned sewer laterals. Sewer laterals should be abandoned per SFDPW Standards.

Once confirmed abandoned, cut and plug at the demarcation line shown in the Drawings.

Co-Author:

REQUEST:

Reference: Sheet U-3107 (dated 2010.09.29)

During excavation for the 8" water main along Minna Street, Trinet encountered a 1" Polyethylene service lateral at station 3+08, that extended into the vacant lot on the south side of the street. The service was broken during construction and Trinet has temporarily capped it. The utility was not shown on any utility plans. There is also no new service lateral, or reconnection of an existing, depicted on the new water main drawings at or adjacent to this location. Please advise on what should be done with the service. The repair is only temporary and a permanent reconnection will need to be performed by the SFWD if the service is to be maintained active. If the service is to be de-activated, then Trinet recommends that it be shut off at the connection to the old main.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Unknown service lateral to vacant lot. Coordinate with SFWD through TJPA Representative to shut off broken lateral.

U-0066	Minna St Station 2+09 - 4" Water Service Lateral Encountered	Closed	12/23/2010	01/02/2011	12/28/2010	Potentially	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Kevin Chiu **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Refer to Sheet U-3107

During the water installation on Minna St we encountered an existing 4" water service lateral at Sta 2+09. The 4" service extends from the old 8" water main to 83 Minna St (Anchor & Hope Restaurant). This is in addition to a 1" service lateral to the same building which we encountered at station 2+09. The contract drawings only show the 1" water lateral service connecting to the new main.

Please advise if the existing 4" service lateral is active and if it must be connected to the new water main. There was no material on site to install a tee in the line, and to avoid delaying the work, the new water main isntallation continued past the 4" service lateral. The recommendation is that if the 4" service line needs to be connected to the new main, work can be performed by SFWD as an additional tie-in.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Existing 4-inch service for 83 Minna Street is indicated in specification 331160 Appendix A. Service is an active fire service to 83 Minna Street and must be connected to the new 8-inch water main.

Furnish and install 8"x8"x4" tee with joint restraint in accordance with the specifications. Furnish and install service 4-inch DIP, fittings and valve. Set 4-inch service and valve elevation to match existing 4-inch service elevation.

Connection from new 4-inch service valve to existing 4-inch service by SFWD.

REQUEST:

Reference Sheet U-3107 and Trinet RFI 059.1

This is a follow up to the engineer's response to Trinet RFI #59 (RFI#U-0066). Upon further evaluation of the 4" fire service connection at 83 Minna by Tom Farhnam (SFWD Senior Inspector), the water department proposed the attached installation detail for an 8"x4" tee in the 8" main, to be performed by Trinet, and the connection detail to the existing 4" service, to be performed later by the SFWD crew. This change was proposed to avoid conflicting utilities running along the south side of teh new 8" main. AECOM's Design Engineer, Eric Zagol, was advised of the changed design plan proposed by SFWD in the field on 12/28/2010. Please confirm if the attached plan is acceptable and approved for construction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Construct water serive lateral in accordance with contractor's attached plan and note the following:

1. Provide full joint restraint in accordance with contract documents

2. Provide 4" DI pipe for the section labeled "9" DI NIPPLE"

REQUEST:

See attached drawings adn photos

During the water main installation on Minna St, Trinet encountered what appears to be an old abandoned sewer manhole in the trench line at station 1+15. the structure was not indicated on the drawings and was not discovered untill the pavement asphalt was removed. The sewer manhole is direclty in conflict with the alignment of the new water main. The installation of the watermin cannot proceed furhter untill the manhole is demolished and/ or abandoned.

Per a field walk with Eric Zagol on 12/23/10, the existing MH was confirmed abondoned. Please confirm/ advise the top of the MH will be demolished to allow the installation of the waterline, and the MH will be backfilled with CDF.

****Please provide direction by 12/28/10.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Remove and dispose of existing abandoned separated sanitary sewer system manhole to a depth of 1 foot below bottom of new water main.

2. Plug existing abandoned 8-inch sanitary sewer with concrete per 024100 3.6 A.

3. Backfill abandoned manhole with CDF to an elevation 1 foot below bottom of new water main.

4. Provide 6-inches of bedding material between CDF and bottom of trench bedding per Detail 7 on Sheet U-5101 such that the total depth
of trench bedding crossing the abandoned structure is 1 foot.

Co-Author:

REQUEST:

Reference Sheet U-2008 and Trinet RFI 63

During our potholing on Minna St. for the proposed AT&T vault in the sidewalk (Stn. 3+72), we encountered an existing subsurface foundation and slurry shoring wall. The top of the subsurface foundation is at a depth of approximately 4' from the top of the sidewalk and is in conflict with the installation of the proposed AT&T vault. Installation of the proposed AT&T vault in accordance with the plans will require partial demolition of the existing foundation wall encountered. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As determined during a site visit on 1/10/11 with W/O, Turner, AECOM and Tishman Speyer, the exposed wall is an abandoned sidewalk basement wall. Remove and dispose of existing abandoned sidewalk basement wall as required (approx. 1.5 feet in depth) to construct proposed AT&T vault.

U-0071	**Existing fittings at tie in location for Minna St. 8 in. Water Main (Stn. 9+30)**	**Closed**	**01/10/2011**	**01/20/2011**	**01/12/2011**	**Potentially**	☐

ANSWER: **Accept Suggestion:** ☐

J. Adams 01/18/2011

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Per contract, Trinet is required to remove and salvage the existing light pole indicated in the attached drawing. Through observation in the field, the existing light pole has a MUNI cable attached which runs to the intersection of Fremont St. and Mission St.. Based on these findings, should the light pole be removed as indicated? Mario Saldana from W/O was present when this item was observed and issue has been discussed with Eric Zagol from AECOM.

Please advise. An expedited response is requested by 01/12/2011.

These are MUNI OCS Poles not Lighting Poles. Both OCS poles along east side of Fremont near 301 Mission Tower are in use by MUNI OCS System. MUNI has designated each OCS pole to hold different guy wires at Fremont and Mission see Demolition drawing Sheet 105 of 137. The poles are to remain and be deleted from Webcor-Obayashi/Trinet scope.

NOTE: Evans Bros Subcontractor Reliance Electric are to correct OCS cables to both of these OCS Poles. Reference Demolition drawing plan sheet 105 of 137. A second cable will be installed at OCS Pole 4030 and the cable will be reinstalled at OCS Pole directly north of Pole 4030 per contract.

****

J. Adams 01/13/2011

The MUNI Overhead Contact System (OCS) Pole in question not light pole. This OCS pole was to have the guy wires relocated to nearby MUNI OCS Pole by the Demolition Contractor in July 2010 during mods to Transbay Terminal MUNI OCS system. Demo drawing plan sheet 105 of 137 shows the guy wires relocated to pole 4030 - this is in EBi scope.

Pole 4030 is shown to remain per Demo drawing above - But, Pole 4030 is shown to be removed per RUP U-3302 .

It should be noted that upon relocation of this OCS guywire the removal of the pole is Webcor-Obayashi scope per drawing U-3302.

****

E. Zagol 01/13/2011

Change in existing conditions. New MUNI guy wire was attached to existing pole at STA 5+45 as part of the Existing Terminal & Ramps Demolition Plans project.

From: Webcor Construction LP Mario Saldana **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3107 and attached photos

At the intersection of 2nd St and Minna St, there is an existing 2in gas line running directly on top and next to the existing 8in main to be tied into. SFWD cannot make the Tee connection due to the bells of the fittings with the 2in gas line so close.

The end of the new line installed by Trinet will need to be exposed about 2ft for SFWD to move the end of the line by 1ft east so that SFWD can make the connection without moving the gas line. This will require extra work for Trinet to expose the new line for SFWD. Eric Zangol from AECOM and Dan Helminiak from SFWD were present during the discussion of this issue.

Please provide direction as soon as possible as this will impact the chlorination and tie-in schedule.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide labor and equipment to excavate and shore trench for pipes, fittings, and valves as necessary for connections to the existing water mains by SFWD in accordance with U-3100 Note 4 and specification section 33 11 00 par. 3.5.

From: Webcor Construction LP Mario Saldana **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3107 and attached photos

At the intersection of 2nd St and Minna St, the new 8in water main is to be connected to an existing 6in water line. The new 8in line installed by Trinet is above and below existing utilities, and SFWD requires more demo/excavation to make the connection.

This will require extra work for Trinet to demo/excavate per SFWD. Inspector Dan Helminiak is scheduling the SFWD to come back and measure this afternoon (01/11/2011). Eric Zangol from AECOM was also present during the discussion of this issue.

Please provide direction as soon as possible as this will impact the chlorination and tie-in schedule.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Provide labor and equipment to excavate and shore trench for pipes, fittings, and valves as necessary for connections to the existing water mains by SFWD in accordance with U-3100 Note 4 and specification section 33 11 00 par. 3.5.

Webcor/Obayashi Joint Venture

U-0077	**Fire Hydrant Installation at Minna St Stn. 0+90**	**Closed**	**01/12/2011**	**01/22/2011**	**01/14/2011**	**Potentially**	☐

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3107

With reference to the fire hydrant at Minna St. Stn. 0+90, (northeast corner of Second St. and Minna St.) General Note #5 on sheet U-3107 directs Trinet to "replace in place existing fire hydrant."

Per on site field discussions with Eric Zagol from AECOM, Robert Friend from Trinet and Mario Saldana from W/O, it was determined that the existing hydrant would remain in place until after the new water main connections are performed by CDD crews. After which the existing hydrant will be removed and new hydrant and lateral piping will be installed and tested.

Please confirm if this is acceptable. An expedited response is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As discussed on site with Daniel Helminiak (SFPUC Inspector) and those mentioned above, the proposed construction sequencing of the fire hydrant at Minna St. STA 0+90 is acceptable.

Coordinate with Daniel Helminiak (or assigned SFPUC Inspector) and the SFWD to ensure the fire hydrant is properly decommissioned by SFWD and SFFD following main connections by SFWD and prior to abandonment of the existing main in Minna Street by SFWD prior to fire hydrant installation by Trinet. Coordinate with SFPUC inspector to ensure SFWD and SFFD installs a black hydrant "donut" on the existing fire hydrant and new fire hydrant prior to the new fire hydrant being placed in service. Coordinate the removal of the "donut" once new fire hydrant is in service.

From: Webcor Construction LP David Hungerford **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-2008

The existing 4" water service found at Stn. 5+37 has been confirmed abandoned by SFWD personnel through on site investigations. Since the service is determined to be inactive, Trinet intends to not provide service from the new main for this 4" service as discussed in the field, with Eric Zagol from AECOM, Mario Saldana from W/O, Dan Helminick from SFWD and Robert Friend from Trinet. In addition, Dan Helmnick from SFWD requested to have the service tee installed in the new 8" main which was to provide service for this 4" lateral removed and straight pipe installed. Please confirm if this is acceptable.

The 6" water service lateral found at Stn. 5+30 has been confirmed as an active fire service to 2 Shaw Alley by SFWD personnel through on site investigations. Trinet

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Existing 4" water service at STA 5+37. Subsurface utility investigations should have been performed and submitted prior to installation of water main to determine status of existing lateral in accordance with U-3108 General Note No. 3. It is acceptable to remove the 8"x8"x4" tee installed and replace with straight pipe per the request of SFPUC SFWD inspector.

Provide 6" water service later at STA 5+30 per contract documents.

AECOM suggests that there is no change in contract price to perform this work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

intends to provide service from the new water main for this 6" service as discussed in the field with Eric Zangol from AECOM, Mario Saldana from W/O, Dan Helminiak from SFWD and Robert Friend from Trinet.

An expedited response is requested.

U-0079 **Fremont St Temp Water Line Installed over AT&T Duct** **Closed** **01/17/2011** **01/27/2011** **01/19/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3123 and attached detail

During Trinet's installation of the temporary water line in Fremont St., Trinet encountered an existing AT&T duct that was in direct conflict with the temporary water line. Trinet was directed by Eugene Chu of SFWD/SFPUC to run the temporary water line over the existing AT&T duct using 45 degree bends. This resulted in less cover for the piping than what is required by the Water Department. Due to the lack of cover, Trinet was directed to install a 1/2in steel plate beneath the concrete base along the trench as depicted in the attached detail. The plate was approximately 2ft wide by 6ft long and extended to the limits of the installed 45 degree bends.
Please provide confirmation that this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is AECOM's understanding that Trinet encounter an existing PG&E electrical duct (4-4") crossing the water alignment feeding 301 Mission property and not an AT&T duct as referenced above. It is also AECOM's understanding that Trinet encountered an existing PG&E electrical duct (8-3") parallel to the water alignment which is ultimately to be abandoned by PG&E and demolished by Trinet. Both PG&E ducts are shown in the plans. Per sequencing shown on U-1123, the water line should be constructed after PG&E completes their work on Fremont Street.

Given the fact that the PG&E duct parallel (8-3") has not been abandoned by PG&E, and given the fact the option to go under the existing 4-4" PG&E duct per plans is not feasible because the existing 8-3" PG&E duct is not demolished, and given the fact that the new water main is a temporary condition, the above mentioned installation proposal is acceptable.

AECOM suggests no additional cost to contract price to perform this work.

REQUEST:

Reference Sheet U-2021 and attached drawings

Trinet proposes to change the design of sewer manhole #501 from a Modified Box Manhole (per SF Standard Plan #87,184) to a Precast Concrete Manhole (per SF Standard Plan #87,181 - see attached drawing). The proposal includes the installation of a temporary 24" PVC pipe stub, extending south from the manhole and connected to the brick sewer per SF Standard Plan #87,197.

The proposed manhole design will facilitate construction around the many utilities identified in the excavation - see RFI # U-0021 (Trinet RFI 04). It is also the preferred manhole design for 24in pipe per the SF Standard Drawings, especially since the brick sewer on the south side will later be abandoned and plugged (in the manhole) by the owner. This plan will also facilitate the later abandonment of the outlet to the south, as the owner will just have to plug the 24in outlet pipe and not a 3x5 brick sewer.

Please consider. An expedited response is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

CCSF DPW Standard Plan #87,181 referenced specifies a 4 ft diameter precast concrete manhole. Three (3) 24-inch pipes connecting to a 4 ft diameter manhole at invert elevation as proposed by contractor may yield an unstable structure and is not approved. A larger diameter precast concrete manhole may be acceptable however the alternative would need to be submitted as a substitution for CCSF SFDPW approval.

As per the response to RFI U-0021, please provide a mark up of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in the excavation for review.

U-0080.1	**Proposed Design Change for MH #501**	**Closed**	**02/09/2011**	**02/18/2011**	**02/22/2011**	**Potentially**	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** Turner Construction Comp Kevin Chiu

Co-Author:

REQUEST:

Reference Sheet U-2021, RFI #U-0080, and attached drawings

In response to the Engineer's concerns with the number and size of pipes in Trinet's original revised detail for MH 501 (RFI#U-0080), Trinet has changed their proposed installation drawing to include a 5' I.D. cast-in-place MH base. The lower precast section of the MH will be 5' I.D., with a precast reducer section transitioning from 60" to 48" I.D. placed above. Attached is the revised drawing for MH 501 and shop drawings for the precast MH sections. The design was discussed with Cliff Wong from the SF Bureau of Engineering, Hydraulics Department, and he did not have a problem with a 5' I.D. manhole.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

02/22/2011 - Kevin Chiu

A Change Request (CR) may be issued for the accepted substitution of the 5-foot diameter precast concrete manhole in lieu of the cast in place Modified Box Manhole.

02/18/2011 - Eric Zagol

The proposed design change for sewer manhole #501 from a Modified Box Manhole per SFDPW Standard

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Trinet requests an expedited response.

Plan #87,184 included in the contract documents to a 5-foot diameter precast concrete manhole with a temporary 24¿ PVC pipe connection to the existing 3¿x5¿ brick sewer per SFDPW Standard Plan #87,197 is acceptable.

Provide flexible pipe connections to the 5-foot diameter precast concrete manhole as shown in SFDPW Standard Plan #87,181.

As per the response to RFI U-0080 and U-0021, please provide a markup of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in conflict for review. This request is now 7 weeks outstanding.

AECOM suggests a cost credit for the substitution of the 5-foot diameter precast concrete manhole for the larger cast in place Modified Box Manhole per contract documents.

U-0081 **Water Main Alignment - Howard St STA18+72 and STA19+98** **Closed** **01/19/2011** **01/28/2011** **01/24/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3119 and attached drawing

Please confirm that it is acceptable for M Squared to install the new 12in water line in a straight line as sketched on the attachment. Contract Drawings show the pipe offsetting between Sta 18+72 and Sta 19+98.
Due to existing utilities discovered in potholes the 12in line will be installed 18ft from centerline.

Also, please confirm the elevations of the water line can be raised dependant on the depths of the existing utilities

Also, the referenced drawing has a discrepancy shown between the 12in water line bend station called out and the location shown in plan view. Please confirm that the first 45degree bend is located at 18+72, and not 18+27.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

1. Contract Drawings indicate an offset to avoid a bus island, as shown on the plans, that was to be constructed as part of the Transbay Temporary Terminal Project. AECOM received confirmation from Philip Sandri TJPA/PMPC that the bus island was deleted from the Transbay Terminal Project. It is acceptable to eliminate the offset and construct water main between STA 18+72 and STA 19+98 at 18ft from centerline.

2. Elevations of the water line can be raised dependant on the depth of the existing utilities. Minimum depth of cover shall be 18-inches below the bottom of the concrete base pavement section per DPW Order No. 176,707 or 28" which ever is greater.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

3. 45 degree at STA 18+72. 45 degree bend no longer required due to response provided in item 1 above.

REQUEST:

Reference Specifications Section 33 31 10, 1.4.E

Please clarify if TJPA or DPW is going to complete the inspection of the pipe as described in the referenced specification section.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

For general materials, please follow the specification requirements regarding delivered materials in 01 16 00 1.6D.

For materials falling under specification section 33 31 31, section 1.4C determines that all piping is SUBJECT to inspection by TJPA and/or DPW. This means that all piping is to be made available upon delivery if TJPA/DPW deems it is necessary to inspect the material. Contractor to inform TJPA of all deliveries and assure the storage facility is accessible. TJPA will inform contractor if material will be inspected prior to installation. When TJPA determines that additional labor is needed to move materials around for inspection, please reference 1.4E, which states that contractor is to furnish labor as needed to assist TJPA with this effort.

There is no ¿HOLD POINT¿ for TJPA or SFWD to inspect materials at manufacturer or upon delivery. TJPA/DPW intends to inspect the materials deliveries of each subcontractor until such time as a confidence level is built that subcontractor and W/O are ensuring the proper amount of quality control through their own material inspections.

Per specification Section 01 14 00 1.4, W/O shall verify all dimensions in the field and shall check all field conditions continuously during construction, including materials. Any inspection of materials by TJPA, DPW, or any other agency does not alleviate the subcontractor or W/O of the responsibility of

performing your own quality assurance measures, or constitute an acceptance of materials. Ultimately, it is the responsibility of the subcontractor and W/O to ensure the materials used for the project meet the contractual requirements set forth in the drawings and specifications.

Co-Author:

REQUEST:

Reference Sheet U-3118

Potholes on Beale Street at Sta 14+00, Sta 14+90 and Sta 16+25 reveal a 6in steel line that is unmarked and not shown on contract drawings. The line is 18ft south of the Howard St centerline. This is the proposed alignment for the new 12in water main. The pothole at Sta 14+00 also reveals a 3in steel conduit which is 16ft south of the Howard St centerline. Also there is a 6ft x 6ft wooden telecom duct bank that runs east to west on Howard Street at 15ft south of the Howard Street centerline. This location offers the closest window for the new 12in water line to the original alignment shown in the contract drawings.

This would require the removal of the wooden duct bank and the removal of the abandoned manhole shown on U-3118 (Sta 14+96 ¿ 15ft from Howard St centerline)

Please confirm the alignment of the new 12in water main.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Existing 6-inch steel pipe appears to be a 6-inch cast iron abandoned PG&E gas main. Confirm the "6ft x 6ft wooden telecom duct bank" is a 6-inch x 6-inch wooden duct bank and is abandoned.

Refer to RFI # U-0083.1

Reference Sheet U-3124

M Squared potholed at Sta 1+10 on Beale Street. We discovered that the 10in High pressure water line is 9ft-5in from the FOC. The existing 12in water line is 14ft-8in from the FOC. The 10in High Pressure line is closer to the FOC that shown on contract drawings. This now means that there is a larger window between the 10in high pressure

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Contract drawings show existing 10-inch HPW (AWSS) at 9ft-7in from FOC. Contract drawings show existing 12-inch water line at 13 ft-11in from FOC.

Please clarify if dimensions provided by Contractor are to centerline of pipe.

Please provide depth to centerline of the existing 10-

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

water and the existing 12in water main.

M Squared would like to install the new 12in water line at 12ft-3in from center line of the pipe to the FOC.
This would mean the new 12in water line would be outside the parking strip and the parking strip would stay in tact.
SFWD would also prefer it outside the parking strip for maintenance purposes.

Please confirm that it is acceptable to install the new 12in water line at 12ft-3in from FOC, going from Sta 0+60 to Sta 1+90.

inch HPW (AWSS) potholed.

Contractor's proposed location at 12ft-3in from FOC is in conflict with proposed Beale St. sewer main.

Following receipt of information requested, AECOM will evaluate if water line can be moved west of parking strip.

U-0084.1 **Water Main Alignment on Beale Street** **Closed** **02/18/2011** **02/28/2011** **02/24/2011** **Potentially** ☐

Co-Author:

REQUEST:

Reference Sheet U-3125 and attached sketch

The existing 4no. 4in AT&T lines on Beale Street at Sta 6+10 are not as shown on the contract drawings. See attached sketch.
Contract drawings show the conduit crossing M Squared's trench for 6 or 7 feet, however the duct bank is in the trench for 37 feet due to the alignment and width of the duct bank. The conduits are covered with a 2 foot wide concrete cap and appear in the trench for the new 12in water main at Sta 6+12 before leaving the trench at Sta 5+75. M Sqaured cannot lay the pipe on top of the concrete cap as the pipe will not have the required coverage.
Due to this M Squared is unable to install the new 12in water as shown. Juan with AT&T advised that M Squared remove the concrete cap from the conduits to allow for excavation of this portion of trench. With the cap removed it is more likely that the pipe will have the necessary minimum coverage.

Please confirm that this is how M Squared is to proceed. An expedited reponse is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please proceed as per AT&T's suggestion.

Please coordinate with AT&T's representative Huan Hunynh and field representative Dave Olson for an onsite inspection by AT&T of the affected AT&T conduits prior to backfill.

Confirm minimum cover of 30-inches or 18-inches below concrete pavement base which ever is greater, is maintained.

Provide distance between top of water main and bottom of AT&T conduits for review.

U-0086	**Concrete Slab & Rail Ties at Howard STA 13+60**	**Closed**	**01/24/2011**	**02/03/2011**	**01/25/2011**	**Potentially**	☐

REQUEST:

Reference Sheet U-3117 and attached sketch

M Squared potholed at Howard Sta 13+60. The pothole revealed a 15in thick concrete slab which is in conflict with the proposed alignment of the new 12in water line.
M Squared broke out a cross section of the slab and found nothing in it. There was also nothing underneath the slab for 5.5 feet. The southern edge of the slab is 4 feet north of the Howard Street center line. M Squared also discovered 6inch x 8inch x 4foot-6inch wooden rail ties.

If M Squared has to remove the concrete slab to install the water line at the alignment shown there is a danger that

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As discussed during a site visit on 1/25/11 with Noel (M Squared) and Mario S. (W/O) the Contractor's proposed alignment of 18-inches south of alignment per Plans is in conflict with the existing sewer (limited separation).

As discussed, pothole along Howard St. between Fremont St. and First St. to determine if 15-inch concrete slab is a local condition at the intersection of Howard and Fremont streets or if the slab extends to First St.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

the MFS (fiber optic) conduits will be damaged as these conduits sit on top of the slab.

Breaking off an 18in section of the concrete slab and also a section of the rail ties would allow M Squared to excavate and install the new water pipe, while keeping away from the MFS conduits and not damaging them. However this will be time consuming.

An alternative option is to move the trench for the new 12in water pipe 18in south and just remove the wooden rail ties (as shown in sketch).

Mario S. from W/O and Eric Z. from AECOM were present during the discussion of this issue with M Squared in the field.

Please direct M Squared on how to proceed with the water line installation. An expedited response is requested

Co-Author:

REQUEST:

As discussed at the meeting on Friday, 01/28/2011 between Noel (M2), Eric (AECOM) and Mario (Webcor) - due to existing utilities and the presence of the concrete slab and rail ties found in the additional potholing that was requested (Ref. Response to RFI U-0086), the new 12in water main is to be installed 5ft from the northern FOC on Howard Street Sta 12+60 to Sta 9+50.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Confirmed. See attached sketches SK-U-0003 and SK-U-0004 for the revised alignment.

U-0087 **Compact Sewer Backfill Sand by Jetting** **Closed** **01/27/2011** **02/06/2011** **02/03/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

Reference San Francisco Standard Specification Section 703.08, attached

Trinet requests authorization from the Engineer to compact the sewer trench backfill sand by jetting in accordance with the San Francisco Standard Specification Section 703.08.

The native material along Minna, which Trinet is re-using for trench backfill, is a clean well grade dune sand. Trinet believes jetting is an ideal method of compaction for this type of material. It is also an effective means of compacting the sand around the top and sides of the pipe without disturbing the pipe, and backfilling any voids left from removal of the shoring or that might have formed behind the shoring. This method of compaction is commonly utilized in San Francisco for sewer projects in similar ground conditions.

An expedited response is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jetting in accordance with CCSF DPW Standard Specification Section 703.08 of the backfill layers above the sand backfill (pipe zone) as specified in CCSF DPW Standard Specification Section 703.06 for sewer installations is acceptable.

Contractor shall determine that jetting will not result in damage to sewers, adjacent structures, or cause adjacent materials to be softened. Any resulting damage shall be repaired at the Contractors expense.

Meet compaction requirements for each horizontal lift. If compaction requirements are not met, discontinue the use of jetting.

Notify TJPA's geotechnical engineer through the TJPA representative in advance of jetting to coordinate on-site observation of jetting and compaction testing.

U-0088 **Minna St 18in Sewer Conflict with PG&E MH#1355 at STA 1+77** **Closed** **01/28/2011** **02/07/2011** **03/24/2011** **Potentially** ☐

Co-Author:

REQUEST:

Ref. response to RFI U-0082, specs 331100, 011600:

In response to RFI U-0082 stated "TJPA/DPW intends to inspect the material deliveries of each subcontractor..."

Does the TJPA/DPW or Turner have an established material inspection protocol in place to allow W/O and the trade subcontractors to verify and document that the materials have been inspected by TJPA/DPW or Turner per the above referenced specifications?

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Procedure for material inspections will be finalized as part of the QA/QC manual, to be issued by TJPA.

Co-Author:

REQUEST:

Reference Sheet U-3108 and attached sketch and photos

The original plan for connection of the 6in Fire Service Lateral @ 46 Minna St. was to leave the existing 6in gate valve (which is located at FOC) in place and connect the new 6in fire line to the downstream side of the old valve (See attached photo and sketch). This plan was proposed by SFWD inspectors, Tom Farhnam and Dan Helminiak, at a field meeting on 12/28/10. On Friday 1/28/11 the SFWD, plumbers when taking measurements for the tie-in, proposed a different plan. They want to extend the new 6in fire line beyond the curb and into the basement, and connect to the homeowners fire line inside the basement (under the sidewalk).

Note: This will require coordination with building owner to put a hole through their foundation. Layout and a detail would need to be provided for the wall penetration, as well a detail to plug the hole where the existing water line is entering the basement.

Please provide direction on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

VOID.

See RFI U-0093, 46 Minna 6in FS Water & 1in Copper Water Service Lateral at STA 5+17 Tie-In.

REQUEST:

Webcor/Obayashi has received Bid Addendum #1 for the TG04.2R bid. As part of this addendum, note number 8 under "General Notes" on sheet U-0008 is deleted. This note had previously placed a constraint on the AWSS construction schedule that the Mission Street work must be complete prior to cutting both the Beale Street and the 1st Street lines. It was acceptable to abandon one or the other prior to the Mission Street work but not both.

Based on the deletion of this note, it is our understanding that there is no schedule constraint on any of the AWSS system modifications other than the cutting & capping proceedures at 1st Street and Beale Street which are required for construction of the TTC Building. Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

02/11/2011 - Richard Buellesbach Email to Michelle Smith & Kevin Chiu - The received response to RFI U-0092 is not complete. We require a final resolution for the following language from the RFI response:
"TJPA is currently coordinating with SFPUC to determine when AWSS improvements, other than the improvements required to abandon existing AWSS mains on First and Beale streets, are required to be complete."
Please be sure that this RFI remains open in Constructware.

02/10/2011 - Eric Zagol - The construction sequence constraint has been removed per GENERAL NOTE 8 on U-0008 (rev. 2 01/31/11) and as detailed in SFDPW BOE AWSS drawings (rev. 1 01/31/11) MA-0, MA-5, MA-6, MA-8, MA-10, MA-11 and MA-19.

TJPA is currently coordinating with SFPUC to determine when AWSS improvements, other than the improvements required to abandon existing AWSS mains on First and Beale streets, are required to be complete.

REQUEST:

Reference Sheet U-3108, attached sketches, and material information sheets

At 11:30am on 2/2/2011, Michelle Smith (Turner), Eric Zagol (AECOM), Guy Hollins (TJPA), Rick Bowling (46 Minna Property Manager), Dan Helminiak (SFWD Inspector), SFWD water department crew, Robert Friend (Trinet), Jason Dunne (Webcor Obayashi), and Mario Saldana (Webcor Obayashi) met to discuss the 6in Fire Service Lateral and 1in Water Service Lateral for the 46 Minna building.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AECOM has coordinated with SFPUC Engineering (Chi Yu, Division Manager) and SFPUC inspector (Eugene Shu) and the direction agreed to is as follows:

6-inch Fire Service Renewal -

1. Coordinate with SFWD for the shutdown of the existing 6-inch fire water service. Shutdown by SFWD. SFWD to coordinate shutdown with SFFD.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

SFWD has proposed the new tie-in pipe configuration.
1. New 6in Fire Service Lateral Tie-in at 46 Minna St (See Attachment A)
- Old existing fire service lateral is to be cut out of the existing water main up to the gate valve as shown in the sketch, and replaced with straight pipe. A new 10in hole is to be core drilled into the existing basement wall 22in east of the existing service lateral to incorporate the new 6in fire service lateral. SFWD will run the new 6in fire service lateral through the hole and Trinet is to provide Link Seals (see attached material information sheets) to seal the space between the new pipe and wall hole.

2. New 1in Copper Service Lateral Tie-in at STA 5+17 (See Attachment B)
- Old existing 1in plastic poly pipe is to be cut and plugged with non shrink grout. A new 2in hole is to be core drilled 4in east of the existing 1in service, to incorporate the new 1in copper service lateral. The space between the new pipe and wall hole will be sealed with non-shrink grout.

Please advise if this is acceptable. An expedited response is requested.

2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.
3. SFWD to cut and remove existing pipe.
4. Remove excess fill material to create flat even surface for link seal type pipe sleeve.
5. SFWD to install and connect new service.
6. Restore wall per SK-U-0005 attached.

1-inch Water Service Renewal -

1. Coordinate with SFWD for the shutdown of the existing domestic water service. Shutdown by SFWD.

2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.
3. SFWD to cut and remove existing pipe.
4. SFWD to install and connect new service.
5. Fill void between pipe and exposed wall penetration with non-shrink grout.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** Turner Construction Comp Kevin Chiu

Co-Author:

REQUEST:

Reference Sheet U-3012 and attached drawing

On 02/07/2011, M Squared encountered what appeared to be a live PG&E duct bank during their sewer installation excavation on Natoma Street STA 9+50. Due to this conflict, M Squared was unable to continue excavating for the sewer (See attachment). On 02/09/2011, M Squared's Superintendant met with a PG&E Representative and PG&E Representative confirmed that the duct bank is live and is not due to be decommissioned for at least 3 months.

In order for M Squared to continue with the sewer installation, M Squared is proposing to:
- install MH #305 and begin installing pipe west of MH #305
- perform a temporary connection from MH#305 to the existing 3' x 5' brick sewer

M Squared can then perform the remainder of the work once PG&E has decommissioned the duct bank.

M Squared estimates that the additional cost to perform the temporary tie-in would be approximately $4,500.

Please confirm how you would like M Squared to proceed. M Squared requests an expedited response as they are currently stopped work and awaiting a response.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

02/14/2011 Kevin Chiu

See CR U-006 issued on 2/14/11

02/10/2011 Eric Zagol

Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E. Given the fact that PG&E has experienced construction delays associated with their structures on First Street, the proposed sequence for sewer construction is acceptable.

Submit a temporary connection detail for review.

Coordinate with PG&E to abandon the existing 2-inch HP Gas along Natoma per U-1112 and U-1120 prior to demolition.

Coordinate with Verizon to abandon existing conduit (labeled "U" on base plans) prior to demolition per U-1112 and U-1120.

Co-Author:

REQUEST:

Reference Sheet U-3012

Following on from M Squared's RFI #U-0096, M Squared has confirmed in the field that there is a grade conflict between the proposed sewer and the existing electrical duct bank on Natoma between STA 9+30 to 9+50. The conflict is between the bottom of the electrical duct bank and the top of the new 24'' sewer pipe.

The elevation of bottom of electrical duct bank is 11.5'
The top of the 24'' VCP sewer is 11.82'

M Squared has also confirmed with PG&E that 3 of the 4 concrete encased conduits are occupied, 2 being occupied by 12KV lines. The duct bank is to be abandoned in the future but PG&E was unable to provide a schedule for this work.

Please advise M Squared on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E.

Proceed per response to RFI U-0096.

Co-Author:

REQUEST:

Reference Sheet U-3009 and attached sketch and photo

During Trinet's excavation for replacement of CB#206 on the northwest corner of First St. and Minna St. (at STA 9+31), they encountered a concrete subsurface structure or concrete encased duct bank not indicated on the contract drawings. The existing catch basin is approximately 30in deep and is constructed on top of the existing concrete structure/duct bank (see attached drawing).

Trinet requests direction on the demolition of the existing catch basin and the installation of the new catch basin CB#206.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Pending approval by the TJPA, a deductive CR will be issued.

03/04/2011 - Eric Zagol

As determined during a site visit on 3/3/11 with Trinet, AECOM and W/O; existing unforeseen conditions including an abandoned sub-sidewalk basement wall along Minna Street, an active sub-sidewalk basement wall for the 100 First St. property, and an abandoned telecommunications concrete duct along First Street create a situation where the installation of a new catch basin would require an extensive amount of unforeseen demotion.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0102.1	Catch Basin #206 redesign	Closed	04/01/2011	04/11/2011	04/13/2011	Potentially	☐

In lieu of installing a new catch basin barrel to replace existing modify the existing catch basin as follows:

Clean interior walls and bottom.
Apply 1/2-inch think uniform layer of mortar on interior walls and bottom.
Install cast iron trap.
Install pipe culvert and connect to MH#207 as shown in Plans. New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.

From: Webcor Construction LP Colin Azevedo

To: Turner Construction Company Michelle Smith

Answered By: AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Please clarify the following items relating to the re-design of CB#206:

1) The only specification section addressing mortar coating is in 33 31 10 Paragraph 2.1.I, which specifies a "Wet Spray Mortar" application. This process would be cost prohibitive for coating only one catch basin. Trinet proposes the use of "SikaTop 123 Plus" mortar - product data sheets are attached. Please advise if this product is acceptable or specify an alternate material.

2) The RFI response directs Trinet to use ductile iron pipe for culvert runs with less that 3' of cover. If 22.5% DI bends are required to construct the culverts Trinet would prefer to use Mechanical Joint Fittings. Please advise if these are acceptable.

SUGGESTION:

Eric Zagol 4/12/2011: 1) SikaTop 123 Plus mortar is acceptable. 2) MJ DIP for 22.5 degree fittings is acceptable for culvert runs with less than 3 feet of cover.

ANSWER: **Accept Suggestion:** ☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0103	Natoma St. 4in Water Line Conflict with MH#306	Closed	02/24/2011	03/07/2011	02/24/2011	Potentially	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-1113 and U-3113

A 4-inch water line runs from east to west on the south side of Natoma from Sta 9+40 to Sta 10+95. At Sta 10+95, the 4-in water line 90degrees into the building at 400 Howard St. This building however, appears to be fed from the existing 8-inch line on 1st St between Howard and Natoma.

Is this 4-inch water lateral at Sta 10+95 on Natoma already abandoned? If not, can M Squared abandon it? It is currently in conflict with the proposed location of MH#306, and is also in conflict with the excavation and shoring for the new 30-inch sewer along Natoma (TG04.1).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

It is AECOM's understanding that the existing 4-inch lateral is "killed" (not supplying water) however the "killed" lateral may still be pressurized up to the lateral terminal point at the gate valves located on the south side of Natoma Street at Natoma Street STA 10+95.

Demolish 4-inch water as indicated on U-1112, U-1113 and U-1120.

Prior to demolition:

1. Coordinate with SFPUC inspector to confirm 4-inch lateral is "killed".
2. Coordinate with SFPUC inspector to confirm that the lateral is not pressurized and that the 4-inch gate valve at Natoma Street STA 9+40 (intersection with existing First Street 8-inch water main) is closed.
3. Coordinate with SFPUC inspector and install cap in First Street as shown on U-1120 at Natoma STA 9+55 +/-.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0104	Natoma St. Temporary Sewer Connections at Sta 9+25 and Sta 7+20	Closed	02/24/2011	03/06/2011	03/01/2011	Yes	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheets U-1112, U-1120, U-3012, and RFI#U-0096

In order for M Squared to install the new water main on Natoma Street between Sta 6+40 to Sta 10+00, the existing 3'x5' sewer must first be demolished. The 3'x5' sewer cannot be demolished until the new 24-inch VCP has been installed and connected to the existing sewer on First Street at Sta 9+59. Per sheets U-1112 and U-1120, the new 24-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work

Per RFI#U-0096 (M Squared RFI #009), as confirmed by

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Due to existing PG&E duct in conflict caused by PG&E's delay with First St. Phase I relocations, the two 12-inch temporary HDPE connections as proposed are acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.

Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

PG&E in the field on 02/09/2011, there is a live PG&E duct bank in conflict with MH#305 and the new 24-inch VCP between MH#305 and MH#306, and not due to be decommissioned for at least three months.

M Squared proposes to install a 12-inch HDPE pipe from Sta 9+25 to Sta 9+59, and perform a temporary connection to the existing 3'x5' sewer on First Street. Surveys carried out on the electric duct bank at Sta 9+30 on 02/08/11 shows that the bottom of the Duct Bank is approx. 10.8, meaning a 12-inch pipe will fit. In addition, M Squared proposes to perform a temporary connection (also 12-inch HDPE) at Sta 7+20 from the new MH#303 to the existing 3'x5' sewer. This would allow M Squared to demolish the 3'x5' sewer from Sta 7+02 to Sta 9+59, and allow M Squared to install the water from Sta 6+40 to Sta 10+00.

M Squared estimates the cost for both of these connections is $20,000.

An expedited response is required to avoid impact to the installation of the water line

U-0105	**Natoma St Duct Bank Conflict at Sta 12+92**	**Closed**	**02/24/2011**	**03/06/2011**	**03/01/2011**	**Yes**	☐

Co-Author:

REQUEST:

Reference Sheet U-1113, U-1122, U-3013 and attached drawing

A pothole on Natoma Street at Sta 12+92 confirmed that the duct bank shown on Sheet U-3013 is in conflict with the proposed 30-inch VCP sewer (see attached drawing).

Per sheets U-1122 and U-1113, the new 30-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work. Per PG&E's new schedule this work is not scheduled to be completed until 06/31/2011. This would

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Due to existing PG&E duct in conflict caused by PG&E's delay with Fremont St. Phase I relocations, the12-inch temporary HDPE connection as proposed is acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.

Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

mean M Squared's work cannot start until after this.

In order for M Squared to continue with their work, M Squared proposes the use of 12-inch HDPE pipe from Sta 12+80 to existing sewer at Sta 13+15 (proposed location of MH#602). Once PG&E has completed their cutovers and the duct bank is abandoned, M Squared will demo the duct bank per specifications and complete the installation of the 30-inch VCP sewer from Sta 12+80 to MH#602.

M Squared estimates the cost for this work is $15,000.

An expedited response is required to avoid impact to the installation of the sewer and water line

U-0106 **First St Sewer MH#502 Adjustment to Avoid Conflict w/ (E) PG&E Duct** **Closed** **02/25/2011** **03/07/2011** **02/28/2011** **Potentially** ☐

Co-Author:

REQUEST:

Reference Sheet U-3021 and attached sketch

In order for Trinet to avoid a conflict with the existing PG&E duct along the west wall of their excavation, Trinet adjusted the south end of the MH#502 structure by 7 inches to the east (as shown in attached sketch). MH#502 is still aligned to incorporate the connection to the existing brick sewer, and the alignment of the new 24-inch VCP run is unaffected by this change. Trinet will adjust rebar as required to maintain the required spacing and clearances.

Please confirm if the adjustment of MH#502 is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The sketch referenced above is based on CCSF DPW Standard #87,184 that shows the minimum reinforcing plan for the connection to the existing 3'x5' brick sewer. Provide reinforcing for connection to 3'x5' per CCSF DPW Standard.

Confirm that the manhole is being constructed per CCSF DPW Standard #87,182 as shown in Detail 10 on U-5001.

Provide width of west wall and location of reinforcing steel at 3'x5' brick sewer connection and 24-inch VCP sewer connection for review.

REQUEST:

Reference Sheet U-3021, U-3009, and attached sketch

This RFI confirms modification discussed in the field by Trinet and discussed with the Design Engineer, SFDPW, and W/O personnel. Trinet's field survey shows the existing 3'x5' brick sewer on First Street to be approximately 11-inches lower than the grade depicted on the drawings. Trinet also checked the elevation of the existing SSMH (10-feet north of MH#501) and confirmed

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Construct MH#502 at First St. STA 4+98 as shown on U-3021 to match the invert elevation of the existing 3'x5' brick sewer, elevation 6.77 as determined in the field by contractor.

Construct MH#501 at First St. STA 4+45 as shown on U-3021 with an invert elevation of 7.58 as determined by contractor.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

that it is approximately 11-inches lower than what is shown on the drawings. Trinet installed MH#502 with invert elevation at 6.77 to match the existing brick sewer at the connection point. The new 24-inch VCP is being installed 11-inches lower than what is shown on the drawings maintaining the design slope of 0.0062. MH#501 will be installed with the invert elevation of 7.58, as shown in the attached sketch.

Please confirm that this design is acceptable. Also, please provide a revised grade for the 24-inch VCP run from MH#207 (Minna St.) to MH#501.

Construct MH#207 per RFI-U100.

Construct the 24-inch VCP sewer from MH#207 (invert elevation 8.67 per RFI U-0100) at a continuous downward slope such that the invert elevation of the 24-inch VCP at MH#501 matches the invert elevation of MH#501 at elevation 7.58.

Based on discussions with Trinet in the field, Trinet reported 11-inches of sediment/sludge/dirt in the existing 3'x5' brick sewer. Please confirm that existing sewer in First Street was cleaned with high velocity hydro cleaning equipment per specification section 33 31 10 3.2 A prior to excavation.

U-0111	Minna St. Joint Trench Conflict with (E) 8" elbow and thrust block	Closed	03/04/2011	03/14/2011	03/09/2011	Potentially	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference drawing sheet U-3409 and attached sketch.

During our excavation for the joint trench on the east end of Minna St. (STA 9+29) Trinet encountered the (E) 8" water main in Trinet's trench line, approximately 1 foot from our termination point. The existing alignment is different from what is shown in the contract drawings. The drawings do not show the water line crossing the joint tranch. The alignment and grade of the water main changed in Trinet's excavation to avoid the adjacent catch basin. A 22.5 degree elbow is located in the center of the joint trench excavation. The elbow is rolled up to accommodate the grade change and there is a thrust block under the footing. Trinet does not believe that it would be safe to excavate under the water main for Trinet's duct bank without having the line shutoff. Extending the PG&E ducts to FOC will also place the connection point for PG&E's extension of the duct bank directly under the water main fittings and elbows. There is adequate clearance to install the 4" gas line above the water main and extend it out to FOC per contract. The top of the water main is 49" below FG at the south side of the joint trench, at the location of the ags line.

Trinet propses to terminate the concrete encased duct bank approximately 5 ft. back from FOC. This would allow adequate room for Trinet to mandrel the ducts after the joint trench is installed without undermining the water main. PG&E could then extend their duct bank under the water main to connect to Trinet's water main. Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Per request to Jason Dunne (W/O) via email on 3/4/11 please provide the following information for review:

Horizontal (from a known point i.e. FOC along First St.) and vertical location of "top of water main".
Horizontal (from a known point i.e. FOC along First St.) and vertical location of water line at "22.5 degree elbow".
Determine if the water main is mechanically restrained with tie rods at each bend in questions.
Approximate size of existing concrete thurst block a the "22.5 degree elbow".

U-0112 **Minna St. Joint Trench, AT&T Vault and Conduit Configuration** **Closed** **03/08/2011** **03/18/2011** **03/15/2011** **Potentially** ☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-3408

At the 02/03/2011 Joint Trench Pre-Construction meeting and field walk through, the AT&T inspector expressed concern with the configuration of the AT&T ducts connecting to the AT&T vault at Sta 3+71. The AT&T inspector was specifically concerned with the east side of the vault where all eight 4-inch ducts are shown entering the vault on the one side (north side) of the center line.

Trinet would like AT&T to review the duct configuration connection to the vault as depicted in the contract drawings and provide a revised drawing if they wish to make a change.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

AT&T has reviewed the information and has proposed revisions to the Joint Trench to accommodate the following:

1. Revised information from AT&T regarding 555 Mission St. service point of connection, and
2. AT&T preferred Minna St. AT&T vault conduit penetration locations

Attached SK-U-0009 is a markup of the AT&T Vault at STA 3+71 butterfly drawing indicating conduit penetrations and schematic diagram of conduit alignments. Revised Minna St. Joint Trench Plans are being prepared as part of ASI#3 to address these revisions as well as changes associated with RFI U-0088.

U-0114	PG&E Abandonment Schedule for Natoma St. at Second St.	Closed	03/09/2011	03/19/2011	05/07/2011	Potentially	☐

From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

Reference Sheet U-1110 and U-2010

On 03/04/2011, M Squared met with a PG&E representative on site at Natoma and 2nd Street. The PG&E representative confirmed that none of their utilities had been abandoned in the area, and that the PG&E representative would be unable to provide a schedule for this abandonment.

Per note 2 on sheet U-1110, the services for 77 Natoma and 83 Natoma were to be terminated by Feb 2011. To date, this work does not appear to be completed.
In PG&E's letter to the TJPA regarding their schedule, there is no reference to work on Natoma Street at 2nd St.

M Squared is unable to proceed with their sewer and water utility installation on Natoma St. west of shoring wall until PG&E has completed abandonment of their existing utilities.

Please provide M Squared with an updated schedule for all PG&E's termination/abandonment work at 2nd and Natoma St.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 3/18/2011 ***5/5/11 UPDATE***

77 Natoma and 83 Natoma services have been terminated, refer to USR Nos. 11 and 13 as executed by W/O, Turner and PG&E on 4/21/11.

As of 5/4/11, PG&E estimates that Natoma Street will be de-energized by 5/21/11. Coordinate USRs for the remaining electric ducts with Turner and PG&E.

3/18/11 RESPONSE

Per demolition and construction sequencing shown on sheet U-1110, water and sewer work shall commence after PG&E has completed their Phase I relocations in First St., Natoma St. and existing electric ducts are abandoned by PG&E.

PG&E services to 77 Natoma and 83 Natoma have been terminated as part of the Existing Terminal & Ramps Demolition Project. USRs for these services are currently being prepared by the TJPA's Representative (Turner). The USRs shall indicate the service conduits and cables that are abandoned subject to demolition as indicated in sheet U-1110.

To facilitate schedule, AECOM has requested PG&E to de-energize Natoma St. to the extent possible in an effort to re-sequence construction of the sewer. PG&E's response and schedule of abandonment is forthcoming.

As shown on U-3110 the water line could be constructed prior to PG&E abandoning their facilities. Pothole to confirm the water line can be constructed as shown on U-3110.

REQUEST:

1 - Current bid documents for Trade Group TG04.2R (AWSS system at Mission Street) call for capping of the AWSS system on Beale Street near the intersections with Howard Street and with Mission Street. Because of delays in the bid schedule for TG04.2R, the construction schedule dictates that these caps be completed well before the anticipated start of the TG04.2R field work. Please provide details so as to allow this capping work to be done in advance of the awarding of the TG04.2R scope of work.

2 - Please confirm whether the material required to do this work is available at the City of San Francisco.

3 - Please provide direction as to how this scope of work should proceed.

This capping is near critical path on the current construction schedule. An expedited response is requested.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Pothole the existing AWSS gate valve at the Beale at Mission street proposed cap location as shown on M-6 (Rev No. 1, 1/31/11) to determine if the existing gate valve has lugs. SFWD to inspect condition of gate valve once excavated, coordinate with SFWD inspector accordingly.

Details for the capping work at Beale and Mission, and Beale and Howard will be provided following gate valve inspection.

U-0121.1	AWSS Caps at Beale Street	Closed	05/02/2011	05/12/2011	05/05/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

The AWSS valve at Mission and Beale was potholed on 4/29/2011 per response to RFI#U-0121. It was confirmed that the existing valve does not have lugs.

Please provide details for capping the AWSS line on Beale.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/4/2011 From Michael Smith (SFDPW BOE);

Refer to attached DWG M-6 Rev 1 with changes made on 05/04/11. Cap is to be tied back to (E) pipe with cast lugs.

Eric Zagol 4/5/2011 ***4/19/11 UPDATE***

In response to the numbered items above:

1. Refer to the attached markups of TG04.2R documents from SFDPW BOE that define the AWSS

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

abandonment/capping scope for Beale Street; MA-6 for the work in Beale St. at Mission St., and MA-10 and MA-19 for the work in Beale St. at Howard St.

2. SFWD Inspector Daniel Helminiak has confirmed that the following materials are available at the SFFD Yard:

Beale at Mission Street

- 1 10-inch DI MJ spigot x GH spigot adapter

- 1 10-inch DI MJ flat cap

- 1 18-inch x 18-inch x 1-inch steel plate

Beale at Howard Street

- 4 10-inch DI stop collar

- 2 10-inch DI bell collar

- 1 10-inch DI flat cap

Coordinate with SFWD Inspector for materials provided by SFWD.

3. Proceed with this work per direction from TJPA Representative. Coordinate the shutdown of existing AWSS main in Beale St. with SFWD prior to commencing the work.

4. Submit pothole data for review per RFI response provided on 4/5/11 as stated below.

****

4/5/11 Response

Pothole the existing AWSS gate valve at the Beale at Mission street proposed cap location as shown on M-6 (Rev No. 1, 1/31/11) to determine if the existing gate valve has lugs. SFWD to inspect condition of gate valve once excavated, coordinate with SFWD

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

inspector accordingly.

Details for the capping work at Beale and Mission, and Beale and Howard will be provided following gate valve inspection.

U-0122 **M Squared Submittals for TG04 Bid Packages** **Closed** **04/01/2011** **04/11/2011** **04/11/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** Turner Construction Comp Michelle Smith

Co-Author:

REQUEST:

Please confirm the following:

Per previous discussions it has been agreed between the TJPA, AECOM, Turner Webcor/Obayashi and M Squared that material submittals approved for use by M Squared in individual bid packages will be considered acceptable for all bid packages M Squared is working on (TG04.1, TG04.3, TG04.4, & TG04.6).

These submittal include:

TG0434-002 - Excavation & Backfill Samples
TG0434-003 - Excavation & Backfill Test Reports
TG0434-004 - Excavation & Backfill Compaction & Warning Tape
TG0434-005 - Shoring Plan
TG0434-006 - Backfill Material
TG0434-007 - Water Utilities Distribution Piping & Valves
TG0434-010 - Asphalt Mix Design
TG0434-013 - Noise Mitigation Plan
TG0434-015 - CQC Plan
TG0434-016 - Health and Safety Plan and MSDS
TG0434-017 - SWPPP
TG0434-018 - Debris Management Plan
TG0434-025 - Cast in Place Concrete
TG0434-030 - Labor Rates
TG0404-001 - Sewer Package
TG0404-002 - Filter Fabric
TG0404-003 - Concrete Forming

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol, 4/4/2011: AECOM suggests that the Construction Manager Oversight (Turner) confirms this RFI.

Guy Hollins, 4/5/2011: Confirmed for all submittals listed with the understanding that no deviations from the previously-approved submittal are allowed without the submission and approval of a separate and new submittal request.

Michelle Smith, 4/11/2011: TJPA has no objection to subcontractors using submittals that were submitted by their OWN company and approved for a previous TG04 Utilities Relocation trade package, as long as the application is the same as the application in the previous trade package.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

TG0404-004 - Precast Concrete
TG0404-005 - Precast Concrete Catch Basin Base

U-0123 **Unknown Fire Service @ 85 Natoma** **Closed** **04/04/2011** **04/14/2011** **04/05/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

While Excavating to install the water line on Natoma from the shoring wall to 2nd Street M Squared encountered an existing fire service going to 85 Natoma. This service is not shown on the drawings and is not in the specifications as one of the connections to be made to the new line.
(See attached)
Please advise on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

SFPUC Customer Service Bureau data shows an active Domestic water, an active Fire water service, and 2 "killed" Domestic water services to 85 Natoma Street.

Coordinate with SFWD to confirm and locate the active Fire water line to 85 Natoma Street.

Provide information on location, size, and material for review.

U-0123.1 **Fire Service @ 85 Natoma** **Closed** **04/11/2011** **04/21/2011** **04/18/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** Webcor Construction LP Colin Azevedo

Co-Author:

REQUEST:

Please note that on RFI #U-0123 the location of the fire service was incorrectly drawn. The fire service is actually located around Sta 2+35.

M Squared potholed at Sta 2+35 and discovered a 4¿ ductile iron pipe which is believe to be the active fire service for 85 Natoma Street.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/15/2011: Per response to RFI U-0123, coordinate with SFWD Inspector to confirm the 4" DIP is the active fire water service to 85 Natoma Street.

Once confirmed, provide and install 8"x8"x4" tee and 4" gate valve.

Connection to existing 4" DIP fire service by SFWD. Excavate and shore for connection in accordance with the contract documents. Coordinate with SFWD Inspector for connection by SFWD.

U-0124	**Conflict Between New 24" Sewer and existing AWSS Line on Beale**	**Closed**	**04/07/2011**	**04/17/2011**	**04/28/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

M Squared has confirmed that the 14" AWSS Line shown on sheet U-3024 is in conflict with the proposed 24" VCP on Beale Street. The AWSS line is shown on the plan view but not on the elevation view on sheet U-3024.
M Squared also shot the elevation of the existing sewer manhole. The elevation is 4.60, and not 4.70 as shown on the plans. The invert of the 14" AWSS is 6.2. (See attached)
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/26/2011: Construct temporary 2-10" VCP and new SMH as shown on revised U-3024 (rev 2 4/26/11) and SK-U-0018. Construct SMH #701 to allow for future 24" VCP connection as indicated.

Relocate AWSS line in Howard St., not included in package. Design forthcoming potentially to be included in TG04.2R.

Following relocation of the AWSS line, construct 24" VCP sewer per contract documents.

U-0124.1	**Conflict Between 24" Sewer and AWSS Line on Beale**	**Closed**	**07/07/2011**	**07/17/2011**	**03/27/2012**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Per the response to RFI#U-0124 a design to relocate the AWSS line @ Howard and Beale is forthcoming. Please advise the status of this design.

SUGGESTION:

Eric Zagol 7/20/2011 Design is being performed by SFDPW BOE and will be tracked and issued via a forthcoming ASI. Schedule will be discussed with SFDPW BOE on 7/22/11. An update will be provided in the RUP OAC on 7/26/11.

ANSWER: **Accept Suggestion:** ☐

RFIs U-128.2 and U-124.1 were responded to in July of 2011 and provided temporary solutions to utility conflicts with a full resolution planned to come via future ASI. ASI 21, which addresses these issues, was uploaded to Constructware on 3/21/12 by Eric Zagol for design approval. A CR for this work will be issued in the near future.

U-0125	**Precast Catch Basin Bases**	**Closed**	**04/08/2011**	**04/18/2011**	**04/13/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

In lieu of a cast in place base per CCSF DPW Standards, M Squared would like to propose the use of a precast catch basin. The catch basin barrel is attached to the precast base and it comes as one single unit. Before installing the precast catch basin base with barrel, M Squared will place a minimum 6" compacted level layer of crushed rock as the sub base. The proposed material

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/12/2011 Precast catchbasin base is approved with conditions specified.
The 5 foot catchbasin barrel shall be attached to the base section to form a monolith structure with the same dimensions, compressive strength and reinforcement as the CCSF DPW Standard cast in place base.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

specifications are attached.
Please confirm if this method is acceptable.

Provide a minimum 6" level layer of uniform compacted crushed rock as the sub base.

U-0126 **Existing Brick Man Hole @ Second and Natoma In Conflict With Joint Trench** **Closed** **04/11/2011** **04/11/2011** **04/13/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

While potholing the Second St. Joint Trench crossing Trinet encountered an existing brick sewer man hole which is in conflict with the joint trench alignment. The manhole is not shown on the plans and had been paved over. The manhole also appears to have been previously abandoned. See the attached sketch and photograph detailing the location of the manhole.

Please advise on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/12/2011: Confirm existing abandoned sewer manhole is filled with slurry grout to 4 feet below rim elevation.
Demolish and remove existing abandoned sewer manhole as required to construct the Joint Trench to an elevation 1-foot below bottom of Joint Trench. Backfill and restore in accordance with contract documents.

U-0127	**Minna Street Sewer Manhole #201 in Crosswalk**	**Closed**	**04/11/2011**	**04/21/2011**	**04/13/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Plan Sheet U-3007 shows MH#201 to be installed in the center of the crosswalk @ Minna and Second Street. The City of San Francisco typically avoids locating manholes in crosswalks, whenever possible, for ADA considerations. Please advise if MH#201 should be installed outside of the crosswalk.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/13/2011: Sewer manhole location can not be adjusted due to an existing 8-inch Water and 4-inch HP Gas main. Construct manhole at the location per Plans.
In lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:
1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tinsel strength shall be considered the primary test for qualification.
2. FINISH- STANDARD FINISH SHALL BE RAW, AS CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS.
3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES.
4. Cover shall incorporate a "pic-hole" for lifting purposes.
5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN ½" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN ¼", IF THE RISE IS GREATER THAN ¼" THE RISE/RUN RATIO NEEDS TO BE 1;2 AND THE MAXIMUM HEIGHT SHALL BE 1/2".
6. Cover shall BE MADE TO FIT EXISTNG FRAMES OR be MACHINED to FIT EXITING FRAMES PER SFDPW STANDARD PLAN 87,190.
7. Cover should be MADE of quality EQUAL TO OR GREATER then THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

U-0131	Minna St PG&E Duct Bank Termination Points	Closed	04/19/2011	04/29/2011	04/22/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Michelle Smith **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

PG&E has confirmed Trinet is to terminate the PG&E duct back 3' outside the east and west walls of manhole 1319. Please confirm that the termination points of the PG&E duct bank as described will fulfill Trinet's scope of work and the future completion of the duct bank will be performed by PG&E.

Please note terminating the duct bank 3' outside the west wall of MH 1319 will leave the end of the ducts directly under the 24" high pressure water main. This may create an issue with future access for complete the duct bank by PG&E.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/21/201:1 Joint Trench termination points at EMH 1319 and 1318 are as follows:

1319 East wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.

1319 West wall; PG&E would like the conduit capped and left 6 feet short (or 1-foot clear of existing 24-inch water, whichever is greater) of the vault with concrete encasement 15 feet short of the vault.

1318 North wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.

The new termination points shall be considered as the limit of new conduit installation at EMH 1319 and 1318.

Co-Author:

REQUEST:

The SFDPW inspector Jason Chin has advised Trinet that he will be requesting a pressure test of the newly installed 18" and 24" VCP sewer main. The contract specification and drawings to do not specify any form of testing for the sewer mains.

Please advise if pressure testing of the sewer main will be required.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/26/2011: Test sewers in accordance with the contract documents. See specification sections:

034010 3.1 E

CCSF DPW Standard Section 319 Low Pressure Testing per 333110 1.2 A.

333110 1.4 C

333110 3.7

333110 3.8 B

333110 3.9

Provide TJPA Representative and SFDPW inspector 72 hours of advanced notice prior to testing.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0132.1	Sewer Main Pressure Test	Closed	05/07/2011	05/17/2011	05/11/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Trinet has been advised by Mission Clay (the VCP manufacture) that the hydrostatic test described in the SF Standard Specification Section 319.02 is primarily for cast iron or ductile iron pipe and is not recommended for clay pipe. The National Institute of Clay Pipe and Mission Clay recommend a low pressure air test in accordance with ASTM C 828. See attached copy of ASTM C 828. Trinet proposes using this low pressure air test in lieu of the 10psi hydrostatic test called for in the standard specifications. The low pressure air test will allow test on pipe runs with no service laterals ie: MH501-502, 206-207, 203-204, 202-201. Please advise if this is acceptable.

With regards to the three remaining pipe runs that have lateral connections, please provide direction of how to plug the laterals if required to test the main lines.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

=======UPDATE 5/23/2011========

Kevin Chiu 5/23/2011 Below are links to devices for testing newly installed sewer pipes, specifically for main lines with active lateral connections that have been suggested within conversations between SFDPW, SFPUC and AECOM

http://newsite.cherneind.com/pneumatic/Long_Test_Ball_MS2_Test_Ball/

http://www.munipipe.com/chemical_grouting.html

http://veoliaes-is.com/Services/Environmental-and-Waste-Management/Total-Sewer-Management/Chemical-Grouting

Whether or not the contractors decide to utilize these devices is still up to them, as these are suggestions, not specifically required devices to be used for testing. It is the contractor's responsibility to perform testing on newly installed main lines, laterals, and manholes with their own means and methods while still protecting new and existing utilities.

==========

Eric Zagol 5/10/2011 ASTM C828 air test is an acceptable method to test sewer pipe in lieu of hydrostatic testing.

REQUEST:

During the installation of the AT&T ducts between Sta 2+24 and 1+62 the AT&T inspector, Juan, instructed Trinet to remove two bends from the duct bank. AECOM was contacted and approved the layout in the field prior to Trinet proceeding. Attached is the revised AT&T duct routing required by the inspector.

Please confirm the revised joint trench alignment is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/21/2011 Please provide the referenced "attached...revised AT&T duct routing" for review.

U-0133.1	**Minna St Joint Trench Configuration and Alignment, Sta 2+24**	**Closed**	**04/26/2011**	**05/10/2011**	**05/02/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

During the installation of the AT&T ducts between Sta 2+24 and 1+62 the AT&T inspector, Juan, instructed Trinet to remove two bends from the duct bank. AECOM was contacted and approved the layout in the field prior to Trinet proceeding. Attached is the revised AT&T duct routing required by the inspector.

Please confirm the revised joint trench alignment is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/2/2011 Alignment of the AT&T ducts is acceptable as shown in the sketch provided.

U-0134	**Water Depatment Tie In Conflict at Howard and Beale**	**Closed**	**04/26/2011**	**05/06/2011**	**05/02/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

The SF Water Department has determined they are unable to perform the water tie in at the south west corner of Howard and Beale because of a conflict with the existing sewer sludge force main. M Squared has pothole the line and confirmed it is the existing 10" concrete encased sewer sludge force main.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 4/29/2011: Cut and remove a section of the existing 10-inch sludge line to allow SFWD to perform the water main connection. Coordinate with SFWD to determine the extent of the existing sludge line to be removed.

Plug the ends of the existing 10-inch sludge line with concrete per 02 41 00 3.6 A.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The existing sludge line to the north will be demolished per TG04.6.

The connection of the new sludge line to the existing sludge line (south) per TG04.6, shall be made south of the plug.

U-0135 **4" Water Service @ 1st and Natoma** **Closed** **04/27/2011** **05/07/2011** **05/05/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

While excavating for the 6" service connection to the new water line on First Street at Sta2+25 M Squared located an additional 4" ductile iron service that is connected to the existing water main. This 4" line is not shown in the contract documents.

SFWD records show this to be a live service and would like for this to be tied into the new main.

There is now no point of connection on the new water line to receive this 4" service.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/2/2011 Retap the existing 4" service to 500 Howard St. Coordinate service location with SFWD inspector. Submit piping plan showing the 4", 6" and 1" services for review.

Kevin Chiu 5/4/2011 Pending approval by the TJPA, a CR will be issued.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0135.1	4" Water Service at First and Natoma	Closed	05/09/2011	05/19/2011	05/10/2011	Potentially	☐

U-0136	Existing Water Bypass @ Howard and Fremont	Closed	05/03/2011	05/13/2011	05/05/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

While planning for the water tie in at Howard and Beale the Water Department discovered that there is an existing bypass line that will connect the existing water system (which is to be abandoned) to the new water system. This bypass is not shown on the plans. The Water department has requested that the existing bypass be excavated and plated so it can be cut and capped while they have the line shut down for the tie in on the new system at Howard and Beale the night of 05/04/2011.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/4/2011 RFI is not accruate and locations are incorrect.

Based on a field meeting with W/O ,SFWD Inspector and AECOM on 5/3/11, SFWD identified an unforeseen existing bypass pipe and gate valve that connects the existing 8-inch main in Fremont Street (to remain) to the existing 8-inch main in Howard Street (to be abandoned). The existing 8-inch main in Howard Street will be abandoned once the new 12-inch main is Howard is active.

Once the new 12-inch main in Howard Street is placed into service and the existing main is abandoned, the existing bypass and gate valve from the existing 8-inch active Fremont main will be connected to the abandoned Howard Street main. To mitigate the situation the SFWD proposes to cut and cap the existing bypass such that the existing Fremont main is not connected the abandoned main in Howard Street.

Coordinate with SFWD to locate existing bypass and define the limits of excavation required to cap the existing bypass.

Excavate to expose bypass. Shore and plate per specifications. Restore per specifications.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Cutting and capping of the existing bypass will be by SFWD.

Kevin Chiu 5/4/2011 Pending approval by the TJPA, a CR will be issued.

U-0137 **Verizon Ductbank conflict w/MH 701** **Closed** **05/03/2011** **05/13/2011** **05/10/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

M Squared's sewer potholing on Beale (Sta 0+30) has indicated a conflict between an existing Verizon duct bank and MH# 701 on Howard Street. See attached drawing.
The ductbank is approximately 18" wide x 18" deep. It is 2'4" to the top and it is slurry encased.
Verizon underground locators have confirmed that this is live and serves Charles Schwabb building south of Howard on Beale Street.
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/10/2011 Unforeseen condition, Verizon utility not shown in existing utility survey.

As suggested by Noel of (M Squared) during a site visit on 5/3/11 with W/O and AECOM, based on Noel's discussions with Mike Roybal (Verizon Field Engineer) and confirmed by AECOM based on follow up discussions with Mike Roybal (Verizon) and Pam Brown (Verizon), coordinate with Verizon and remove existing concrete encasement from existing duct to expose conduit in area of conflict. As directed in the field by Verizon, remove concrete encasement around duct from area in conflict to adjacent Verizon manhole. Move and support exposed Verizon conduit as required and directed by Verizon to construct manhole.

Coordinate with Mike Roybal (Verizon) at (415) 716-6736 such that a Verizon representative is present during the Verizon duct concrete encasement removal, moving and support install.

Restore Verizon duct to match existing concrete encasement following completion of sewer manhole.

U-0138	**Temporary Telecom Pole Layout in Lot N and N'**	**Closed**	**05/09/2011**	**05/19/2011**	**05/10/2011**	**Potentially**	☐

From: Webcor Construction LP Joanne Filipas **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Reference attached layout and submittal package#TG0406-014:

Due to the future use of lot N and N' prime, the temporary telecom poles must be relocated. The attached sketch indicates the proposed layout of these poles which has been coordinated with AECOM. Submittal Package#TG0406-014 has been submitted for formal approval of the pole locations.

Please confirm relocating the poles is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/10/2011 The pole alignment changes requested by CMGC along with additional requests from Telecommunications companies has required a pole and pole placement redesign. An ASI has been generated for the redesign with a CR forthcoming.

U-0139	**Existing Water Line on Beale in Conflict with New Sewer**	**Closed**	**05/09/2011**	**05/09/2011**	**05/10/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Today while trying to execute the USAR for the existing 12" water line on Beale Dan Helminiak with SFWD informed Webcor/Obayashi and M Squared that the existing water line will remain active until the water tie in at First and Natoma is completed and the existing 8" is capped at First and Howard as shown on sheet U-3116.

The water tie in and capping of the existing line on First Street is currently being delayed by separate issues and it is unclear when this work will be completed.

Dan Helminiak suggested that the existing 8" water line running down Howard could be capped by the water department at one of the existing tees which would allow the decommissioning of the existing line on Beale.

Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/10/2011 Please clarify the question(s).

Subject states "Existing Water Line on Beale in Conflict with New Sewer". Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main in Beale Street is abandoned. Please clarify where and what the conflict is.

Also, please confirm the following:

1. Is the new 12" main along Howard Street between First and Main streets active?
2. Is the new 12" main along Beale Street north of Howard Street active?
3. Is the new 12" main along Beale Street south of Mission Street active?

U-0139.1	**Cap (E) Water on Howard @ Beale**	**Closed**	**05/16/2011**	**05/26/2011**	**05/24/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

REQUEST:

-New 12" water main along Howard between First and Main is active.
-New 12" water main along Beale Street North of Howard is active.
-New 12" water main along Beale Street South of Mission is active.

Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main on Beale is abandoned.
- The old water line on Howard Streets and Beale Streets is currently not active because the valves on the line at First and Howard are currently shutdown. Dan from the water department has expressed his concern that anyone can just open these valves and fill the old line along Howard Street. He is also concerned that the valve is not 100% closed and that the SFWD cannot get a complete shutdown on the old line. This means when M Squared removes the old water line on Beale Street in order to install the new sewer, it is possible that there will be a constant flow of water in the old line.

The suggestion from Dan is to cap the old water line on Howard Street so that When M Squared removes the old line on Beale Street there will be no possibility of water flow. A cap on the line at Howard would also confirm for definite that the old line on Howard and Beale Street is "abandoned".

Please provide direction for capping the existing water line on Howard so the sewer installation on Beale can proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/23/2011 Coordinate construction of the cap on the old Howard St. main at the intersection of Main St. with SFWD as shown on U-3119.

Coordinate construction of the cap on the old Howard St. main at the intersection of First St. with SFWD as shown on U-3116 (latest rev per SK-U-0003 1/28/11).

Per discussions with SFWD inspector, the old Howard St. main has been capped at Main St, Beale St. (south of the cross) and at the Fremont St. by-pass connection by SFWD. Additionally, the two line gates at First and Fremont streets are closed and have been filled with concrete.

The caps at Main, Beale, Fremont in combination with the closed line gates at First St. will allow sewer installation on Beale St. to proceed.

U-0140	Proposed Changes by BLHP to S/L Conduit Run @ 2nd & Minna	Closed	05/11/2011	05/21/2011	05/20/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

During a field meeting on 5/10/2011 with Eric Zagol, AECOM and Robert Kawano, BLHP to discuss the alignment of the conduit run from 2nd St to the relocated S/L pole @ Stn 2+89, Robert Kawano asked that a splice

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/19/2011 Per BLHP's request, furnish and install a CCSF DPW precast pullbox, cover, and lid per CCSF DPW Standard Plans and Specifications between the PG&E supply point and the relocated

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

box be installed in the sidewalk downstream from the connection point to PG&E¿s manhole. The box would serve as the connection point for BLHP to PG&E¿s power supply from 2nd St for the street light. Because of an existing sidewalk basement, which is located along the north side of Minna, east of 2nd St., it was agreed in the field that the splice box should be placed in the sidewalk just west of the new fire hydrant located @ Stn 0+93. There is already a pocket constructed in the sidewalk basement to accommodate the fire hydrant and Trinet will locate the splice box within this pocket structure. A sketch is attached depicting the proposed alignment of the conduit run and the additional splice box as discussed in the field. Please confirm this is acceptable.

street light pullbox along Minna Street east of Second Street.

Location; confirm that a sidewalk pullbox will fit in the knock out space above the 121-123 Second St. sidewalk basement adjacent to the newly installed fire hydrant prior to construction.

Maintain minimum bends in conduit run per Specification 33 71 00.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0141	Street Light Connection Point at Second and Minna	Closed	05/16/2011	05/26/2011	05/20/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

In the response to our RFI # U-0016, Trinet was directed to connect the street lighting conduit on the west end of Minna into PG&E MH #1319 on 2nd St. At a field meeting on 5/10/1 with Eric Zagol and Robert Kawano, to discuss the alignment of the street lighting run for the relocated light on the west end of Minna, Eric advised that PG&E was contemplating a change in the connection point for this conduit run from MH 1319 to MH 1320. MH #1320 is located to the south of 1319 and further west towards the middle of 2nd St. Please confirm the connection point on 2nd St for the street lighting conduit.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

5/26/11 UPDATE

Supply point has been confirmed as PG&E EMH 1320. Coordinate connection location with PG&E Field Engineer.

Eric Zagol 5/19/2011 Related to Joint Trench changes and PG&E's de-energization of Minna Street after the response to RFI U-0016 was provided, PG&E has revised their electrical plans with respect to EMH 1319 and has indicated that the preferred location for new street light power would be EMH 1320.

In accordance with U-3201 Note 7, AECOM considers this RFI as the request to coordinate connections with BLHP and PG&E through the TJPA representative for new street light circuit connections. AECOM and the TJPA Representative are in the process of coordinating Street Light Service Orders with BLHP and PG&E. Once the Service Order is processed the final connection point will be provided.

U-0142	Concrete Specifications for Sidewalk Replacement @ 555 Mission	Closed	05/16/2011	05/26/2011	05/18/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Kevin Chiu

Co-Author:

REQUEST:

The sidewalk concrete @ 555 Mission (on Minna) is not the typical San Francisco sidewalk mix design. It is a colored concrete with what appears to be a sandblasted finish. Please provide the concrete specifications for repair and/or replacement of the sidewalk in this area.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Kevin Chiu 5/18/2011 Sidewalks shall be constructed of a dark gray, Hi-con @ 5 lbs. per cubic yard carbon black based concrete finish, with 25 to 30 lbs. per 100 square feet of silicon carbide sparkle grains. The surface of the concrete shall be washed and rinsed using a stiff brush, and if necessary shall be sandblasted to remove the concrete surrounding the aggregate to minimum depth of 1/8 inch.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0143	Demolition of PG&E Duct Bank Alongside (N) 18" Sewer Main on Minna	Closed	05/16/2011	05/26/2011	05/20/2011	Potentially	☐

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

During excavation and shoring for installation of the 18" Sewer main along Minna St., between the (E) electrical vault @ Stn 1+80 (demolished) and (N) manhole # 201, Trinet was unable to save the entire length of the existing PG&E duct bank (currently abandoned), which runs along the south side of the sewer trench. Between stations Stn 0+95 and 1+25 (approx.) the duct bank had veered into the sewer trench and had to be demolished - see attached sketch. Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/19/2011 U-1107 (rev 2 3/16/11) indicates that the existing 6-4" PG&E duct is to be protected in place.

2 of the 6 existing 4" conduits will be utilized by PG&E to provide temporary construction power to W/O Skids 1 and 2 along Minna Street.

Mandrel existing conduits east of STA 1+25 to STA 1+70 (where new conduit caps were to be installed per contract) to confirm that the existing conduits that were to be protected in place have no blockages.

Coordinate with PG&E as STA 0+95 is exposed to determine which 2 of existing 4" conduits will be utilized for temporary construction power.

Furnish and install 2-4" conduits concrete encased to replace those that were removed during sewer construction. Connect new conduits to existing that will remain to provide temporary construction power.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0143.1	(E) PG&E Duct Bank from EMH #1320 to Demolished EMH #1355	Closed	06/14/2011	06/24/2011	06/14/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

After further investigation of the existing PG&E duct bank between EMH #1320 and demolished EMH # 1355 (@ Anchor & Hope), Trinet found that there is only one unobstructed conduit between the two manholes. The unobstructed conduit is the one that already had a pull rope in place. Trinet had demolished a section of this conduit during excavation for sewer MH # 201 because it was in conflict with the shoring. Trinet replaced the damaged section (approx. 8 LF) on Saturday 6/1, and reconnected the pull rope in the conduit run. A sketch of the conduit run, depicting the section replaced, is attached. Please review and advise if one 4" conduit will be adequate from EMH #1320 to the west end of

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/14/2011 PG&E plans to use the existing conduit package to provide temp power to Skids 1 and 2. Mike Balmy of PG&E was notified and has confirmed that only 1-4" unobstructed conduit is required between EMH1320 and the cap at demolished EMH1355 for future temp power service.

demolished EMH #1355.

U-0144 **PGE Vault conflict with 24" VCP on Beale** **Closed** **05/17/2011** **05/27/2011** **05/20/2011** **Potentially** ☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

PG&E confirmed the location of the inside of the east wall of PG&E manhole 1702 at Howard and Beale Street. Allowing for a 12" thick wall, the vault will be in conflict with the proposed alignment of the future 24" VCP, even with moving the alignment 1' further east as directed in RFI U-0124. The conflict could be avoided by moving the alignment another 6" further east. However this will cause a conflict between manhole #701 and the existing 14" AWSS. Additionally the Verizon duct bank conflict increases(RFI#U-0137).
Please advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/19/2011 As discussed in the field on 5/18/11 with Jason Dunne (W/O) and Noel McCarthy (MSquared) the exact location of the existing PG&E MH outside wall and the existing AWSS is currently unknown.

Adjust locations of MH#701, MH#702, MH#704 and sewer alignment east as required (~6" as mentioned) for the 24" VCP installation (new and future) to avoid the existing PG&E MH however not in conflict in conflict with the existing 14" AWSS line.

Note, the existing AWSS line will be abandoned North of Beale Street STA 1+10.

Confirm alignment (2-10" VCP and future 24" VCP) will clear existing AWSS valve at STA 0+70.

U-0144.1 **PG&E Vault conflict with 24" VCP on Beale** **Closed** **06/30/2011** **07/10/2011** **07/01/2011** **Potentially** ☐

Attached, please find a sketch detailing Trinet's revised pavement reconstruction plan for Minna St., between 1St to 2nd Streets, which incorporates Balfour Beatty's request that Trinet stop the new pavement section 5' north of centerline of the CDSM shoring wall (2' north of demarcation line).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

*** 5/31/11 Revision ***

Restore entire width of Minna street using concrete road base and ACWS curb to curb in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 11.

5/27/11 Response:

Please provide BBIIs traffic control plan and construction logistics plan for Minna St. during pre-trenching and CDSM shoring wall construction.

AECOM's specific questions are as follows:

1. What portion of Minna St. will be maintained for vehicular traffic during pre-trenching and CDSM wall construction? Please provide dimensions from face of north curb along Minna St.
2. Is a traffic barrier (k-rail or other) planned to be installed along Minna St. during pre-trenching and CDSM wall construction? Provide location, dimension from face of north cur along Minna St.
3. If a traffic barrier is planned, what is the schedule for the installation?
4. Once pre-trenching is complete will any of the pretrenching trench area be restored and used for vehicular traffic?
5. Once the CDSM shoring wall is constructed will the traffic barrier move south and the vehicular area be widened? If so by how much? Please provide a dimension from the face of north curb along Minna St.

This information is critical in order to provide a responses to this RFI as well as RFI U-147 and U-148 in an effort to determine how RUP will restore Minna St.; crowned or sloped, and how the Minna St. restoration conforms to the future Transit Center Minna St. design.

U-0147	Existing Top-Of-Curb Grades @ Minna Driveways for 575 Mission Building	Closed	05/27/2011	06/06/2011	06/01/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Servic Eric Zagol

Co-Author:

REQUEST:

The existing driveways entering the 575 Mission St building, are depressed between 2 ½" to 3" below the adjacent top-of-curb and sidewalk grades - see attached drawing depicting the driveways. This condition seems to be a consequence of repeated overlaying of Minna street, which has resulted in a curb height in many areas far less than the City standard of 6 inches. The street grade along the north side of Minna along the 575 Mission building ranges from 3 ½ to 4 ½ inches below top-of-curb grade.

Trinet has been directed in the field by Jason Chin, and by the Engineer in RFI #U-0146, to construct the new roadway with finish grade at curb line 6" below top-of-curb grade. This is consistent with City standard plan # 87,169. The new roadway grades will result in 3" to 3 ½" of exposed curb height at the driveways to 575 Mission, which is considerably deeper than the 1" called for in the San Francisco standard plans for driveway construction (plan # 87,171). It will also not be possible to raise the street grade at the driveways without impeding road runoff drainage and causing ponding.

Please review and advise.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 5/31/2011 Restore pavement along existing curbs and driveways along the north side of Minna St. in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 12 to match existing flow line elevations at curbs and driveways shown on U-1001. 6-inch curb and driveways along Minna St. will be reconstructed at a later date as part of the Transit Center Project.

U-0148	Pavement Reconstruction Plan for West End of Minna Street - Stn 2+15 to 2nd St	Closed	05/27/2011	06/06/2011	06/07/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Please provide a pavement reconstruction drawing, or typical cross section detail, for the west end of Minna St from Stn 2+15 to 2nd St. Trinet had planned to reconstruct the street in this area from curb to curb. We find however, that there is a grade difference of approximately 6 inches between top-of-curb on the north side of the street and the south side, with the south side being at the higher grade. The construction detail approved in RFI #U-0146 (Trinet #094) cannot be utilized in this area, because the street already has a cross slope of approx. 2% from south to north.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/7/2011 See response to RFI 146.2

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0149	MH#701 Conflicts with existing utilities	Closed	05/27/2011	06/06/2011	06/09/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

The 14" AWSS line west of MH#701 was found to be constructed thru the roof of the existing 3x5 sewer. Several bends were used in the AWSS line construction and these bends included lugs and tie rods. As a result of the presence of these tie rods and fittings we can now not move MH#701 any further west.
To install the new 24" VCP in a straight line (perpendicular to MH wall), and in order to get by the existing PGE MH we will have to pour the pipe wall and 2" of the internal diameter of the pipe into the west wall of MH 701.
Please advise on how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/8/2011 Deflect VCP pipe joints in accordance with ASTM C425 (max 1.8 degrees per joint) to allow for 6" of deflection to avoid the existing PG&E MH and connect to MH#701 as shown in the attached SK-U-0019.

Confirm in the field that 6" deflection will allow the 24" VCP to be clear of the MH wall.

U-0151	Additional Sewer Lateral Connection for 100 1st Street	Closed	06/02/2011	06/12/2011	06/08/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Trinet has discovered an additional sewer lateral for the 100 1st Street building which was not connected to the new 24" sewer main - see attached sketch. The lateral is located at sta. 7+09 and services a single toilet and the rear of the building. This lateral was not shown on the plans and there was no vent in the sidewalk to indicate the existence of a lateral. Trient potholed the lateral in the sidewalk and a 4" cast iron lateral, a 4" cast iron trap and a 4" cast iron vent pipe capped 2' below grade. Please confirm Trinet is to tie the lateral into the new 24" sewer main on Minna. Also, please advise what is to be done with existing cast iron trap and vent pipe assembly which are not up to current DPW standards.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 6/8/2011 In accordance with U-3000 General Note 12, contractor was to verify that there are no active sewer lateral connections to the existing sewer prior to sewer demolition.

Please provide the elevation of the existing sewer lateral and the location of existing 4" cast iron vent pipe for review.

Renewal of this lateral will be discussed with TJPA and 100 First St. property owner, final direction forthcoming.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0151.1	Additional Sewer Lateral Connection	Closed	06/29/2011	07/09/2011	07/05/2011	Potentially	☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

This is a follow-up to the request by the Engineer in his response to W/O RFI #U-0151 (Trinet RFI #097) for additional information relating to the 2nd sewer lateral connection for the 100 1st St building. Trinet also clarifies the issue of the existing 4" trap on the line, which was raised in the original RFI.

The sewer lateral is located @ Stn. 7+09 and the invert elevation of the 4" cast iron sewer lateral pipe at face-of-curb is 14.6'. The elevation for the top of the new concrete encased ductbank @ Stn 7+09 is 13.85'. The sewer lateral was therefore not in conflict with the new joint trench utilities.

With regards to the existing 4" trap on the line, Trinet checked with the SF Plumbing department which adviced that a 4" cast iron trap was adequate for a 4" sewer lateral. The existing trap was therefore in compliance with the SF plumbing code. Trinet advised Jason Chin of this in the field and he agreed that the trap did not need to be replaced.

The 4" cast iron vent pipe for the trap did not extend to street level but was capped-off approximately 18" below grade. Per field discussions with Jason Chin, Trinet extended the trap vent piping to grade and installed a street vent frame & cover in the sidewalk.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/5/2011 In reference to RFI-151 and 151.1:

1. Reconnect existing lateral to new 24" Minna St. sewer in accordance with SFDPW Standard Plan 87,196.
2. Extend fresh air inlet and air inlet cover to existing sidewalk grade.

U-0157	**Pressure Testing for Sewer Manhole #'s 501 & 502 on 1st St.**	Closed	06/28/2011	07/08/2011	07/08/2011	Potentially	☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

This RFI is a follow-up to discussions in the field with AECOM and the SFDPW Inspector and Trinet, regarding Trinet's inability to perform a pressure test on sewer manholes 501 & 502 on 1st St. due to field conditions. MH #502 is constructed around the existing 3x5 brick sewer on one side (per SF Standard Plan #87,184) and Trinet has no means of plugging the brick sewer effectively to withstand a pressure test.

In the case of sewer MH #501, the original design was similar to MH #502 and a pressure test would not have been possible. The revised design (see attached drawing) includes a temporary 24" corrugated PVC pipe stub extending south from the manhole and connecting to the existing 3x5 brick sewer. The inside of the temporary 24" pipe stub is also corrugated, and therefore cannot be sealed with an inflatable pipe plug, as would be required to perform a pressure test of the manhole structure.

Please confirm that a pressure test will not be required for sewer manholes 501 & 502 on 1st St.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/8/2011 Confirmed. Pressure tests for sewer manholes #501 and #502 are not required due to the restrictive conditions.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0158	**MH #301 Location**	Closed	07/15/2011	07/25/2011	07/20/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

During our sewer work at 2nd and Natoma M Squared discovered that the Telecom Vault shown on the drawings is in fact significantly larger in the field than is shown on the plans. In order to be able to shore for MH#301 construction M Squared has had to move the location of MH four (4) feet east along Natoma. As a result the jack and bore alignment is now a few inches south of what is shown on the plans.

Please confirm that these adjustments are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/20/2011 Adjustments proposed are acceptable.

Since the adjustment pushes the MH and cover into the crosswalk path of travel, in lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:

1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tinsel strength shall be considered the primary test for qualification.
2. FINISH- STANDARD FINISH SHALL BE RAW, AS

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS.
3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES.
4. Cover shall incorporate a "pic-hole" for lifting purposes.
5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN ½" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN ¼", IF THE RISE IS GREATER THAN ¼" THE RISE/RUN RATIO NEEDS TO BE 1;2 AND THE MAXIMUM HEIGHT SHALL BE 1/2".
6. Cover shall BE MADE TO FIT EXISTNG FRAMES OR be MACHINED to FIT EXITING FRAMES PER SFDPW STANDARD PLAN 87,190.
7. Cover should be MADE of quality EQUAL TO OR GREATER then THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

U-0162	Manhole #602 Orientation	Closed	08/03/2011	08/13/2011	08/09/2011	Potentially	☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

The PG&E manhole at Station 2+55 is actually further south than is shown on the drawings. As a result of this the new water main on Natoma Street was installed in a different alignment than shown on the drawings. In order to excavate and shore for the new Manhole #602, without damaging the new water main M Squared will have to install the manhole at a different alignment than what is shown on the plans. M Squared will maintain the correct internal manhole dimensions per DPW standard drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/9/2011 Construct sewer MH #602 to avoid existing water main as shown in the sketch provided. Maintain internal manhole dimensions, wall thickness, and steel reinforcement per DPW Standard Plans #87,182.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Please confirm this is acceptable.

U-0163 **Utilities Demolition Plan** **Closed** **08/04/2011** **08/14/2011** **08/24/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

The submittal TG04.4 - UG1020-024100B01 Utilities Demolition Plan was returned to M Squared marked "Revise & Resubmit".
The review note was: Please provide demo and sequencing plan per specification 02 41 00 Part 1.3A.

M Squared is unable to acquire the necessary utility abandonment schedules from the utility companies concerned.
Please provide us with a schedule showing when each of the utilities is to be abandoned by the relevant agencies.
Once this has been provided M Squared will be able to provide the sequencing plan per the specifications.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The intent of the submittal comment was to reference specification section 024100 1.3A requiring the contractor to submit a utilities demolition and construction sequencing plan showing commencement, order, sequence and completion dates for approval prior to commencing with the demolition of existing utilities. The schedule submitted didn't include sequencing of the new work.

U-0164 **Beale Investigative Trench Limits** **Closed** **08/09/2011** **08/19/2011** **08/10/2011** **Potentially** ☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Company Gary Krutsch **Answered By:** Webcor Construction LP Jonathan Flaming

Co-Author:

REQUEST:

Sheet U-1008 shows the limits of the investigative trench on Beale Street (south of Mission St) to be 56' in total. 41.1' from center going west and 14.9' from center going east.
By going 14.9' from center with the eastern portion of the investigative trench M Squared will not encompass the existing water line and the existing AWSS line as they are outside the limits of the 14.9'.

Please direct M Squared how to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/9/2011 Excavate investigative trench in accordance with contract documents as shown on U-1008. Demolish, cap and plug existing 12-inch water and 10-inch HPW (AWSS) as shown on Sheet U-1125.

U-0165	**Sewer Lateral to 92 Natoma**	**Closed**	**08/09/2011**	**08/19/2011**	**08/10/2011**	**Potentially**	☐

From: Webcor Construction LP Jonathan Flaming **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

While installing the new sewer on Natoma Street from 2nd to the shoring wall M Squared noticed that the sewer lateral to 92 Natoma is a new VCP lateral and has been installed in the last 12 months.
The contract drawings show M Squared replacing all sewer laterals on Natoma from 2nd to the shoring wall, however this lateral appears like it does not require replacing.
Jason Chin (BCM) has been made aware of this issue.

Please confirm it is acceptable to leave this lateral in place and perform permanent connection to the new 24'' VCP main.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 8/10/2011 It is acceptable to protect existing lateral and provide a permanent connection to the new 24-inch VCP main in lieu of replacing the lateral as shown on Plans.

Notes
Please provide credit for contract work not completed.

U-0166	**Broken Culvert Pipe Encountered in Utility Demolition Trench on Fremont St.**	**Closed**	**08/19/2011**	**08/29/2011**	**08/24/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Gary Krutsch **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

During trenching for demolition of the electrical ductbank along the east side of Fremont St Trinet crossed a 10" culvert pipe (@ Stn 5+05) from the existing catch basin on the east side of the street at Stn 5+05. The section of clay pipe exposed is cracked in several places and half the bell of an exposed joint is missing. Please advise if the owner will need the broken pipe section replaced before the trench is backfilled.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Replace damaged pipe section per direction of SFPUC inspector prior to trench backfill.

U-0167	**Culvert Run to MH#306**	**Closed**	**08/22/2011**	**09/01/2011**	**08/24/2011**	**Potentially**	☐

U-0169.1	**CB#703 Location**	**Closed**	**11/15/2011**	**11/25/2011**	**11/23/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

- CB#703 was constructed in the location of the existing catch basin.
- See attached profile with culvert elevations. Culvert was installed deeper as several utilities were lower than shown on the drawings.
- Per M Squared¡¦s response to comments made in the RFI #U-0181, one of the duct banks shown on the drawings could not be located and was not as shown on the drawings. The alignment of the other duct bank is also different than what is shown on the drawings. (See attached) The depth of this duct bank at the point where M Squared capped it (3' south of the unknown concrete structure) was 6' 8" to the top. Its location/alignment beyond that point are unknown.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please provide the invert elevation of constructed 10" culvert at CB#703. Based on the sketch provided in the RFI169.1, the 10" culvert was reversed slope. A culvert with reversed slope is not acceptable.

U-0170	**Duct bank Demo on Natoma**	**Closed**	**09/15/2011**	**09/25/2011**	**09/23/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

M Squared has determined in the field that the duct bank highlighted which is to be demolished, is in fact underneath the curb and gutter. In order to demolish it per the plans M Squared will have to remove the curb and gutter and possibly a portion of sidewalk. See attached.

Please confirm whether you would like the duct bank removed and repour the curb and gutter after demo, or leave the duct bank in place and repair the portion of curb and gutter damaged while locating the duct bank.

SUGGESTION:

Eric Zagol 9/18/2011 U-1110 indicates removal of existing PG&E duct to facilitate construction of the 8-inch Water and Sewer MH #301 . If existing duct as highlighted is not in conflict with new utilities then the existing duct may be abandoned in place.

Cap existing duct at RUP/BSE demarcation line per ASI 15.

Provide photos showing location of duct, duct, and curb and gutter damaged at the area indicated for repair for review.

Jeff Thiel 9/19/2011 Pending approval by the TJPA, a CR will be issued.

ANSWER: **Accept Suggestion:** ☐

U-1110 indicates removal of existing PG&E duct to facilitate construction of the 8-inch Water and Sewer MH #301 . If existing duct as highlighted is not in conflict with new utilities then the existing duct may be abandoned in place.

Cap existing duct at RUP/BSE demarcation line per ASI 15.

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

M Squared's supplier, Control Systems West, have been coordinating with SFWD regarding which of the City's panels will be used for the TG04.2 project.
Tom Reid with SFWD has designated 3 panels to be used for this project.
These panels are to be picked up at SFWD, transported to Control Systems West for testing, programming etc and then returned to the job for use at 3 of the valve locations.
As the panels have been selected M Squared would like to begin the process of getting the panels to their supplier so they can begin the work.

Please provide the name and contact information for the person with whom M Squared can coordinate the pick up of the 3 units.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 9/26/2011 Contact Bill Gunn at (415) 706 0688 or WGunn@sfwater.org

Per Section 01 10 40, Coordination, Article 1.6 C, this RFI does not fall under the acceptable uses for an RFI as it is not being used for an interpretation of the Contract Documents.

RFIs used for questions regarding coordination will be rejected in the future.

U-0174	**AWSS Antenna location at Location 1**	**Closed**	**09/27/2011**	**10/07/2011**	**10/11/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

On drawing MA-20 regarding location 1 the antenna is shown to be mounted on a street light. However, on drawing MA-29 the same antenna is shown to be mounted on the enclosure.
Early conversations between Dick Borders (Control Systems West) and Kenny Chin (DPW) confirm that mounting the antenna on the enclosure is the preferred option.

Please confirm the antenna mounting location.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 10/11/2011 Michael Smith's (SFDPW) response:

"The antenna shall be mounted on the controller cabinet for location No. 1. Disregard any reference to the mounting of the antenna on the (E) light post as shown on drawing MA-20. Mounting of antenna on to the controller cabinet shall be performed by the controller cabinet manufacturer."

Dated and signed on 10/11/11 (see attached).

Co-Author:

REQUEST:

Per response to RFI#U-0176.1 M Squared performed additional potholing at Location 7.

Please see the attached pothole findings.

Please advise how you would like to proceed.

Note: The 4" Unknown Utility was confirmed to be an abandoned PG&E gas main. On 1/10/12 PG&E drilled the line and confirmed it to be abandoned.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/15/2012 Michael Smith's (SFDPW) Response.

"Furnish and install horizontal offset as shown on the attached drawing in order to locate the proposed concrete valve vault with minimum 6-inches clearance to the existing electrical duct bank running on the North side of Howard Street. Adjust nipple lengths as required between elbows and to connect into the ends of the existing cast iron pipes. Concrete valve vault and placement of motorized gate valve shall otherwise be shown on drawings MA-22 and MA-25.

Work for installation of new concrete valve vault and gate as show on Drawing MA-18 shall be deleted from the scope pending installation of the new valve vault as shown on the attached drawing."

Signed and dated 2/13/12.

Christina Young 2/15/2012 Pending TJPA approval, a CR will be issued.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0177	Ductbank Demo on Fremont St	Closed	10/04/2011	10/14/2011	10/10/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

See attached sketch.
The duct bank shown on Fremont Street to be demolished is in fact underneath the curb and gutter and portion of the sidewalk on Fremont St.
In order for M Squared to remove this duct bank it will require us to close the west sidewalk on Fremont St, demo and remove the sidewalk, remove the ductbank and then replace the sidewalk.
Currently the east sidewalk is closed also due to BBI activity.
Please advise how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 10/6/2011 Coordinate with PG&E to confirm the duct indicated in the M2 sketch is PG&E's 6-6" duct from PG&E's EMH 7605.

Demolish and remove the 6-6" duct segment between STA ~2+40 (at the gutter) and the demarcation line south of shoring wall. The intent is to remove the segment within Natoma Street. The segment south of STA 2+40 (STA 2+40 to STA 1+85) can be abandoned in place.

Provide cap at STA 2+40 instead of STA 1+85 shown in the plans.

PG&E will break in and connect to the existing 6-6" duct at STA 1+85 as part of PG&E's Phase II relocations.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0178	Sludge line layout on Mission between Beale and Main	Closed	10/04/2011	10/04/2011	11/08/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Continued potholing on Mission Street between Beale and Main has revealed additional grade conflicts on the proposed alignment for the new 12" steel sludge line. Some of the utilities are not as shown on the drawings nor marked in the field by USAN. See attached sketches.

Please advise if M Sqaured is to continue potholing on Mission Street as it may be necessary to excavate the entire length of the trench between Beale and Main to locate and map all conflicts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 11/7/2011 Modifications to the 12" Sludge FM are currently being evaluated under ASI-018. Revised plans and specifications forthcoming following redesign and execution of ASI-018.

Number	*Subject*	*Status*	*Date Created*	*Date Required*	*Date Answered*	*Cost Impact*	*Proceed*
U-0179	**AWSS Main line conflicts at Location 7**	**Closed**	**10/05/2011**	**10/15/2011**	**11/21/2011**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

Some of the existing utilities are not shown on the drawings and have been installed on top of the existing 12" AWSS line. Due to the proximity and volume of these utilities it is not possible to even hand excavate down to the existing AWSS line to verify its location and depth.
Please see attached pothole information.
Please adivse.

SUGGESTION:

the following response received 10-17-2011 does provide direction in this matter:
It shall be the contractor's responsibility per the Contract Documents to perform the required potholing in order to identify the existing AWSS facilitieis prior to actual excavation.
Background utility information was provided by TJPA/consultatns and shall be verified in the field by contacting Underground Service Alert (USA). Direct conflicts oted during potholing shall be directed to the utility owner(s) for relocation/removal as required to perform the contract work.
NOTE: email from Rick Buellesbach 10-18-2011 requests an answer to the question.

ANSWER: **Accept Suggestion:** ☐

UPDATED RESPONSE (11/18/11)
Michael Smith's (SFDPW) response,
Refer to comments on attached sheet. These comments supercede
response provided on 10/17/11.
SFDPW Response:
This conflict between the existing AWSS line and utilities are unforeseen field conditions due to incorrect information being furnished to the City.
There are no design alternates at this location due to the necessity of removing the existing cross that was capped on the First Street side outlet to accommodate the utility relocation work for the proposed transit center.
The engineer will contact the owners of the utilities in conflict with the AWSS facility for resolution." Dated 11/18/11 (see attached)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
U-0180	Conflict with CB 305	Closed	10/10/2011	10/20/2011	10/17/2011	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Webcor Construction LP Richard Buellesbach

Co-Author:

REQUEST:

While excavating to install CB305 M Squared encountered a large unknown concrete structure. The concrete structure is in conflict with CB305. CB305 cannot be installed as planned. See attached photo.

Tsu-Ling with AECOM and Alberto with SFDPW reviewed the situation in the field and agreed the solution was to salvage the existing CB where CB 305 was to be installed. This work was performed on 10/7/2011 under the inspection of SFDPW.

Please confirm.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

As determined during a site visit on 10/7/11 with M Squared, AECOM, SFDPW and W/O; the existing unforeseen condition, a large concrete structure, is in conflict with CB 305 and the installation of a new catch basin would require an extensive amount of unforeseen demotion.

In lieu of installing a new catch basin barrel to replace existing, modify the existing catch basin as follows:

1. Clean interior walls and bottom.
2. Apply 1/2" think uniform layer of mortar on interior walls and bottom.
3. Install cast iron trap.
4. Install pipe culvert and connect to MH#305 as shown in Plans.

New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.

U-0182.2	AWSS - Conflict with AT&T Vault at Location 2	Closed	07/31/2012	07/31/2012	08/14/2012	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per the response to U-0182.1, M Squared potholed the locations shown. See attached pothole data.
- The pothole 24' north of Mission appears to have a substructure underneath PGE duct banks.
- The pothole 12' north of Mission St had several utilities in them that have since been confirmed abandoned.

SUGGESTION:

Relocate the street light/ traffic signal conduits and shift the vault location 3 feet north away from the 12inch gas main. In doing so, this could potentially be the location for a cast in place concrete valve vault.

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

- Proceed as per Contractor's recommendation for locating motorized gate valve vault.

- Contractor shall field verify alignment of pipe North/South of proposed vault location for connection into (E) lines.

Signed and dated 8/9/12. (See attached)

Per discussions between TCCo/PMPC/SFDPW, Contractor to trench the Second Street AWSS alignment per the attached sketch. Upon completion of trenching advise TJPA if there will need to be a change in material/fittings required to complete the AWSS installation work.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per the response to RFI U-0182.2, M Squared has field verified a new alignment for the 16" AWSS at 2nd & Mission St. (See attached drawing).

Due to several PG&E conflicts this is the only available route capable of accepting a 16" pipe; M Squared is unable to locate an alignment per the sketch attached to the response to RFI U-0182.2. By proceeding with this alignment M Squared will again return the AWSS pipe through the structure of an AT&T vault and a PG&E Vault. It does not appear from our field work that there are other options for a workaround.

Based on information M Squared currently have attained from the trenching; restraining each joint, per the original contract will require the following:
- 4 additional 16-inch 45deg bends
- 2 additional 16-inch 90deg bends
- 1 additional 16-inch bell collar
- 15 additional stop collars
- 4 additional kickers/thrust blocks.

Please confirm the proposed route and additional fittings and restraints are acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/12/2013 Response per Michael Smith, (SFDPW)
"Proceed as stated above due to existing conflicting utilities impacting original vault location."
Signed and dated 2/8/13 (See Attached). Contractor to verify material quantities required for the revised alignment once the proposed route is fully exposed. Pending TJPA approval, a CR will be issued for this work.

U-0182.4 **AWSS - Final Design Route and Additional Fittings List at 2nd Street Intersection** **Closed** **03/14/2013** **03/24/2013** **03/21/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Webcor/Obayashi Joint Ve Jackson Tukuafu

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Refer to drawing MA-3 and MA-13

Please refer to previous RFI 182 series for history.

As M Squared must connect to an existing 16" line at 2nd & Mission Street, M Squared performed additional trenching which has now opened up the possibility of a different and more straight forward alignment for 2nd Street piping.

This new alignment shall replace the alignment sent in the previous RFI-0182.3.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) Response,

"The suggested pipe layout based on recent excavations is acceptable.

-Locate the 16" x 12" reducer North of the 16" tee and as close as possible to the tee."

Signed and Dated 3/18/13. (See Attached)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

1. Please confirm the new alignment shown in the attached M Squared sketch SK-008.3 is acceptable.
2. Please confirm where the 16" to 12" reducer is to be located. The location of this reducer will decide whether M Squared will need to purchase two (2) more 16" 45-deg elbows or 12" 45-deg elbows.

REQUEST:

While potholing for the new Hydrant and associated piping in the sidewalk on Mission Street (see attached), M Squared's crews damaged the roof of the basement to Portico Restaurant, 88 First Street (see attached photos).

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

-Repair of sidewalk at pothole location: Refer to attached directions from William Liang- SFPDW/EST

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

This basement structure was not noted on the plans and is a differing site condition.

The roof of the basement will now need to be repaired. Please provide direction and repair details for this work.

It is not possible to locate the fire hydrant in this area due to the presence of the basement. The existing hydrant has a column poured into the structure of the basement (see attached).

Please advise on how you would like to proceed.

for repair method.

-New Hydrant lateral shall be located in the (E) hydrant alignment. (E) Hydrant is located in an areaway. Refer to AWSS standard drawings for details. SFDPW will provide revised drawing for (N) lateral prior to construction.

Signed and Dated 01/18/12

Response for Concrete Repair per William Liang (SFDPW) .

Chip out concrete inside of saw-cut area; do not damage (E) rebars.
If (E) rebars are found to have been cut during the saw-cutting process, chip out enough concrete around the cut rebars for installation of Lenton Quick-Wedge Splicing system at both ends; splice new rebars with size to match (E). If (E) rebars are found to be intact, proceed to Step 3.
Install keyway around perimeter of opening (keyway shall be a minimum 1.5 (below top of slab), install swellable water stop (Greenstreak Hydrotite CJ -0725) in keyway.
Form and pour with Emaco S66 CI by BASF. Perform surface preparation and provide curing in accordance with manufacturers recommendations. Note: continuous special inspection shall be provided for the concrete pour."

REQUEST:

On 1/24/2012 M Squared began repairing the basement roof per the response to RFI U-0190. SFDPW engineer William Liang came out and review the progress that day

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

No alternate direction was given at 1/24/12 site visit by SFDPW engineer. SFDPW provided information and direction to supplement the direction given in response

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

and provided alternate direction in the field. Please provide this direction in writing so work may resume.

to RFI U-0190 based on his observations in the field. Existing rebar was found to be uncut but lacking sufficient concrete cover. Please see supplementary instruction below.

Per William Liang of SFDPW,

1. Chip out concrete inside of saw-cut area; do not damage (E) rebars,

2. (E) main rebars are found to be intact but have insufficient bottom concrete cover; (E) wire-mesh above the main rebars are found to have been cut during the sawcut process. Install 3-#4 dowels @ 12"o.c. max set in epoxy along three sides w/ 6" embedment into (E) concrete (see attached photo), maintain 6" max from corners, epoxy shall be SIMPSON SET-XP or HILTI HIT-RE500-SD.

3. Install swellable waterstop (Greenstreak Hydrotite CJ-0725) above installed dowels, provide min 1.5" concrete cover.

4. Form and pour w/ Emaco S66 CI by BASF (see attached cut sheets). Perform surface preparation and provide curing in accordance w/ manufacturer's recommendations. Note continuous special inspection shall be provided for the dowel installation and concrete pour.

ORIGINAL RFI U-0190 RESPONSE FOR REFERENCE

1. Chip out concrete inside of saw-cut area; do not damage (E) rebars.
2. If (E) rebars are found to have been cut during the saw-cutting process, chip out enough concrete around the cut rebars for installation of Lenton Quick-Wedge Splicing system at both ends; splice new rebars with

REQUEST:

Please refer to drawing MA-15 and response to RFI U-0190.

As a result of differing site conditions between Sta 8+50 and 9+00, the new location of the HP fire hydrant shown on drawing MA-15 is to remain in the existing location per response to RFI U-0190.

Please provide a detail drawing showing the new hydrant lateral with all SFDPW requirements for HP hydrants in an areaway.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 11/21/2012 Response per Michael Smith (SFDPW),

"Please find attached a sketch for changing the design for replacing the existing HP hydrant at the above location.

The existing hydrant is in an "areaway" since the property at this location has a basement that extends under the sidewalk.

The proposed new hydrant off the proposed 16" DI main will be replaced in this "areaway" structure. Please see attached sketch. The originally proposed hydrant lateral that bends 90-degrees as shown in the contract documents drawing MA-15 will be deleted from the work scope. There is no change in work for drawing MA-5. The attached drawing HPL-5142.1 is also shown on the AWSS standard drawings which are part of the contract work.

The contractor is cautioned to use extreme care in this area due to the basement below and to prevent issues with water leakage from the street/sidewalk."

See attached.

Co-Author:

REQUEST:

In order for the controller enclosures for the motorized gate valves at Location #1, #2 and #7 to be operational a power source will need to be provided at each enclosure location.

Please confirm that the owner has applied to PG&E for the power sources at these locations and advise on the status of these connections.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Revised Responce 2/27/2012

Jeff Thiel 2/23/2012 The TJPA has completed its application to SFPUC for power to AWSS facilities. The SFPUC has requested a minimum of four (4) weeks to make these connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior to start of work.

Below is the MOP for coordinating power source connection as confirmed by Mathew Ho of the SFPUC.

1. Contractor to schedule coordination meeting with PG&E, PUC (Mathew Ho or Michael Mack) and Turner. Contractor to provide a construction schedule and set up Pre-con with PG&E (Per SFPUC request to inform them when Contractor expects to trench for electrical service and have the power pedestals installed)
2. Contractor to schedule PG&E trench inspection which is needed after contractor installs conduit but before closing the trench so that PG&E can prove the conduit via mandrel test (30days notice needed, Call PG&E inspection # 415-695-7519 and provide PM# located on drawing and provide PG&E job owner contact as Matt Herron)
3. PG&E to pull cables
4. Schedule a DBI inspection of the meter pedestal (Dave Green DBI 415-558-6654, forward PG&E a copy of the DBI green tag)
5. Once green tag is applied, PG&E to set up meter and then energize.

==========

Origanal Response 1/26/2012

The TJPA has completed its application to SFPUC for power to AWSS facilities.
The SFPUC has requested a minimum of four (4) weeks to make these
connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior
to start of work.

U-0191.1	Power Source at Location #1, #2 & #7	Closed	03/21/2012	03/31/2012	05/01/2012	Potentially	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Transbay PMPC Cory Traylor

Co-Author:

REQUEST:

Recent meeting on the AWSS project resulted in the response to RFI#U-0191 being revised to include a procedure to be followed once the controller cabinets were ready to accept power. However, what was sent in the revised response was a new scope of work followed by the mentioned procedure.

The contract drawings show M Squared's work beginning at pull boxes and going to the controllers. M Squared's interpretation of the drawings sent in the revised response to RFI#U-0191 is the scope of work that goes from the pull boxes to PG&E manholes. This is unclear because the PG&E drawings are not comparable with the contract drawings.

Please clarify the intent and scope of the PG&E drawings. Please clarify how the PG&E drawings correlate with the contract drawings.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Cory Traylor 5/1/2012 In accordance with PG&E Greenbook standards and practices, power connections for motorized gate valve equipment shall be installed at the referenced locations per the attached PG&E sketches, directions and requested equipment requirements. Work not outlined in the attached documents shall take place per contract drawings.

Final coordination for connections shall take place in the field per note 7 on drawings MA-29 and MA-31.

Connecting for power per the attached PG&E sketches/direction has been approved by SFDPW-Bureau of Engineering.

Co-Author:

REQUEST:

M Squared has discovered that either SF Park or MUNI have installed what appear to be sensors in the street surface along Mission Street. See photo attached.

They existing between Fremont and Beale in particular.

As the AWSS line is installed along Mission St from 2nd to Main these sensors will be in conflict. Please confirm these sensors will be removed prior to trenching.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 4/12/2012 Per email conversation with Alex Demisch of the SFpark Project (SFMTA), any parking sensors found on Mission Street from 2nd Street to Main Street are inactive. SFPark's vendor plans to remove these parking sensors late April or early May of this year 2012. SFPark realizes TJPA plans to conduct AWSS construction work in the upcoming months and has asked if it was possible to for the TJPA sub-contractor, once AWSS construction begins, to separate the parking sensor equipment from other construction debris so that SFPark may dispose electronic waste properly if there are any parking sensors still remaining. However, if the parking sensors cannot be separated then SFPark understands they will end up being demolished from TJPA AWSS construction work.

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

See attached photo. M Squared discovered a conflict on 4/4/12 at 11.10am while excavating to remove the existing AWSS Main at Howard and First.

PGE's new Phase 2 duct package is sitting directly on top of the existing AWSS main at First and Howard intersection. The top and sides of the duct bank are encased in concrete however the PVC conduits are not encased on the bottom and the PVC Conduits are currently touching the AWSS Main at this location.

As a result M Squared is unable to remove the existing AWSS main from this point east.

Please advise on how you would like to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 4/12/2012

Please confirm that the Phase 2 PG&E duct package that is in conflict with the AWSS main was installed at the correct elevation per the approved Phase 2 Utility plans.

U-0197.1	**AWSS/PG&E Phase 2 Duct Conflict Location 7**	**Closed**	**04/16/2012**	**04/26/2012**	**04/17/2012**	**Potentially**	☐

From: Webcor Construction LP Colin Azevedo **To:** Turner Construction Company Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author:

REQUEST:

The Phase 2 PG&E plans only provide minimum depths and clearances. It appears the Phase 2 ducts were installed in accordance with the minimum depth requirement but not the minimum clearance requirement. Please confirm this with PG&E.

Regardless, the AWSS main can not be reinstalled per

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Michael Smith's (SFDPW) response,

"Per a site inspection this morning with SFWD, M2, Turner, and Webcor/Obayashi, the clearance conflict between the recently installed PG&E duct bank and the existing 12-inch cast iron AWSS main was confirmed. The duct bank conduits are in direct

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

plan and maintain minimum clearance required in the AWSS specification. Please advise how M Squared is to proceed.

contact with the existing AWSS pipe.

The two options to rectify this situation include:

1.) Request that PG&E or their contractor vertically relocate the recently installed duct bank in order that there is the required 12-inch clearance between the two utilities.

2.) Realign the proposed replacement AWSS main either over or under the PG&E duct bank by the installation of a vertical offset.

Should option No. 2 be selected, please advise as soon as possible since revision drawing(s) for the vertical offset will need to be prepared prior to the installation of the vertical offset."

Signed and Dated 4/11/12.

The phase two duct bank was not installed per PG&E Green Book requirements for minimum clearance between utility services, and the contractor failed to properly coordinate utility installation.

Work related to this RFI response shall be performed at no additional cost to the owner.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

U-0201	AWSS - Countersunk Bolts in 14-Inch Ductile Iron Pipe Strong Back Plate	Closed	05/04/2012	05/14/2012	05/08/2012	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Steve Cunningham **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Please reference attached excerpt from the AWSS STANDARD DRAWING III, drawing No. AWSS 3.

The sizing chart for 14" diameter pipe require the use of Strong Back Type B. The Type B Strong Back configuration requires the use of a countersunk bolt and nut to adjoin connecting DI pipe. The countersunk bolts are a special order product and will have to be fabricated specifically for each piece.

Please confirm it is acceptable to use the typical 316 Stainless Steel bolt and nut without the countersink, similar to what is used and shown in Type A for all 14" diameter DI pipe.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 5/7/2012 Michael Smith's (SFDPW) response,

"-The proposed change is acceptable.
-The Contractor shall field verify the actual pipe outside diameter at each location prior to having strong back fabricated due to differing pipe diameters in use."

Signed and date 5/7/12 (See Attached)

U-0202	SLUDGE LINE - Unknown Subsurface Structure at 301 Mission	Closed	06/07/2012	06/17/2012	06/12/2012	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Steve Cunningham **Answered By:** AECOM Technical Service Eric Zagol

Co-Author:

REQUEST:

Please refer to attached detail 3/U-5001.

Detail 3 on sheet U-5001 which shows the connection detail for 12" HDPE to existing 10" steel, uses a 10" steel to 12" sleet reducer and then using a 12" steel to 12" HDPE Coupling in order to connect new sludge main to existing sludge main.

Our preference is to use a 10" steel to 10" HDPE coupling and then install a 10" HDPE to 12" HDPE Reducer. As the O.D of the existing sludge is unknown it will cause significant delay in the ordering of the 10" steel to 12" steel reducer as we will have to get the OD at the connection point and then order the material. Even with this piece of material, it will be extremely difficult to get a welder into the trench to weld the reducer on to the exiting pipe as a result of the amount of utilities which were discovered in potholing.

The use of the 12" HDPE to 10" HDPE reducer eliminates the need for a welder in the trench.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Proposed modification is acceptable.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Co-Author:

REQUEST:

Please refer to spec section 33 34 10-3.1 H

The method of HDPE pipe testing listed in the contract documents differ from the testing methods provided by the pipe manufacturer: The specifications call for the pipe to be filled 24hrs in advance and then the pipe pressurized to 115psi for a duration of 4hrs, The manufacturer's method involved filling the line with pressure for 3 hrs to allow expansion etc. in the pipe and then adding additional water, per Table 2 of the attached document. Once this additional water has been added the pressure can hold for the duration listed. Or alternatively allowing a 5%fluctuation in the pressure target for the test over 1 hour.

Please see attached pipe manufacturer's data attached and provide direction. M Squared believe that the testing method in the specifications is not suitable for HDPE due to its flexibility and would be more suited to steel pipe.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Eric Zagol 7/3/2012 It is acceptable to perform HDPE Hydrostatic Testing per HDPE pipe manufacturer's recommendations. The test phase shall be performed based on the specified "Test Phase - Alternate 2" in manufacturer's data sheet for 3-hour test.

U-0206 **SLUDGE LINE - Compaction Method for Trade Package TG04.6** **Closed** **06/22/2012** **07/02/2012** **07/05/2012** **Potentially** ☐

U-0208	AWSS - Clearance Issues with Domestic Water Line on Market Street	Closed	07/10/2012	07/20/2012	07/11/2012	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Transbay Joint Powers Au Jennifer Tongson

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

While excavating west of the gate valve vault location on Market Street M Squard's crew discovered an 8-inch cast iron water line sitting on top of the existing AWSS main to be removed. This 8-inch line also appears to be leaking slightly.

1. As a result of this line M Squared is unable to install the new AWSS with the necessary clearances. Aside from the clearance issues M Squared can no longer install the 14-inch reducer where it is required. M Squared will be able to relocate the reducer which will then require a longer spool piece.

Please advise how M Squared is to proceed.

2. This 8-inch line also has three concrete kickers on the pipe that make it impossible to install the pipe and fittings at this vault location. Please confirm that it is acceptable to remove these kickers temporarily, as they are already restrained with tie rods, for construction purposes. The

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

7/11/2012 Michael Smith's (SFDPW) response,

"-The Contractor shall request the SFPUC SFWD relocate their (E) 8" low pressure water piping in order to maintain a 12" clearance between their own two utilities.

-Please coordinate with SFWD prior to removing the (E) concrete thrust blocks on the SFWD line. Support SFWD line as required to prevent movement."

Signed and Dated 7/11/12 (See Attached)

Pending TJPA approval, a CR for additional cost is forthcoming.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

kickers can be reinstalled once the work in this location has been completed.

U-0208.01 **AWSS - Clearance Issues with Domestic Water Line on Market Street** **Closed** **07/24/2012** **08/03/2012** **08/03/2012** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Per the response to RFI # U-]0208, M Squared met with SFWD engineers on site to discuss the relocation of the domestic 8-inch line.

As a result of this coordination, SFWD agreed that relocating the 8-inch line was the best possible resolution to this issue. M Squared has excavated and shored for SFWD crews to perform the repairs.

As of 7/23/12 no relocation work has been performed by SFWD.

Please provide M Squared with a schedule for this relocation.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 8/2/2012 Per Dan Helminiak of the SFWD, the SFWD is scheduled to relocate the 8" water line on the morning of Monday 8/6/12.

U-0209	AWSS - Misison and Anthony Valve Vault	Closed	07/26/2012	08/05/2012	08/07/2012	Potentially	☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

See attached documents and photos.

M Squared has potholed this location for the AWSS valve vault. It has been confirmed that the gas line is abandoned and can be removed and that the 12" water is also abandoned.

In order for the vault to be constructed here M Squared will need to remove the abandoned 12" line; however, removing the 12" line will significantly weaken the live 8" line that runs on Anthony as the 90 degree bend on the 8" line is supported by a redwood block resting against the abandoned line.

Please advise on how M Squared is to proceed.

SUGGESTION:

Have SFWD restrain the existing 90 degree bend so that the abandoned lines and redwood plug can be removed. UPon completion of the valve vault M Squared can our a new concrete kicker if required by SFWD.

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 7/30/2012 Response per Chi Yu of SFWD,

" The redwood plug is for the abandoned line to stop any residual water in the pipe and does not serve as a kicker. The live 8" main was built quite recently using a field-lok gasket restraint joint. No kicker is required. Remove the 12" and 8" abandoned lines together with the redwood plug. Provide adequate vertical support for the live 8" main."

See attached email from Chi Yu dated 7/30/12.

To: Turner Construction Company — Gary Krutsch
Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

While performing preliminary trenching across 1st & Mission Street Intersection, M Squared's crew discovered many unknown and unmarked utilities. See attached photos.

The presence of these unknown utilities will greatly impact the ability to install shoring and install full pieces of pipe. Please Identify the utilities in this section and determine which can be removed in order for M Squared to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

The TJPA Representatives do not have any further information on the unidentified utilities not shown on the Contract Drawings. Please proceed as follows in order to identify these utilities:

Request the list of contacts registered with USA and compare those who marked with those that didn't mark and conduct follow up calls to the utilities and agencies that didn't mark. Also, contact SFPUC BLHP to mark street lights and DTIS comm and SFMTA to mark traffic signals.

In accordance with specification 00 08 10 section 1.3 EXISTING UTILITIES NOT INDICATED and specification 020630 section 4.1 POTHOLING AND TRENCHING OPERATIONS paragraph C, please proceed with the following in order to identify all interfering utilities that are unknown after all specified procedures or other non destructive methods

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

proposed by the contractor have been exhausted

Pipe: If conductive material, perform subsurface investigation via electromagnetic detection (or other nondestructive methods) to trace utility back to nearest vault, pull box, manhole or valve to identify owner and content. If nonconductive, excavate along pipe alignment to expose coating and a joint. Inspect and provide information on coating and joint type. If content is still unknown, tap each line in order to identify contents and operating status of utility (i.e. abandoned or operational.)

Conduit and duct bank: Determine if utility is a charged electric utility utilizing a contractor that performs NETA type work. Determine if telecommunication cables are operational.

Once the utility has been identified including owner and contents, and determined inactive or de-energized, cut and cap utility at the demolition demarcation line shown in the drawings

Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

Between Sta 6+05 and Sta 6+25 there is a PGE duct bank sitting on top of the AWSS pipe; as a result, M Squared is unable to install the new AWSS main at this location. See attached photo. The pipe cannot be lowered due to the AWSS penetrating PGE Vault #1302. In order for M Squared to be able to install the new AWSS main through PGE vault #1302, the PGE duct bank needs to be raised up.

Please advise.

SUGGESTION:

PG&E remove concrete encasement from ducts and lift the PVC conduits up so that M Squared can install the pipe at the existing alignment.

ANSWER: **Accept Suggestion:** ☐

- SFDPW accepts M Squared's suggested solution for this utility conflict.
- Coordinate with PG&E for remvoing concrete and raising conduits in order to install AWSS facilities and proivde 6-9" clearnce. Michael Smith SFDPW/IDC/EME - 11/09/12

Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

On 10/26, PGE completed work on Vault #1313 on Mission Street. The existing AWSS pipe has been removed and M Squared is ready to install the new AWSS Main per the attached sketch (current condition).

In order for M Squared to install the AWSS pipe, the five 4"x4" supports installed by ARB crews require removal. As a result, a portion of the vault wall will overhanging the pipe, with no support.
.
Please advise if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 11/9/2012 Response per Michael Smith (SFDPW)

"Per field meeting today, support AWSS pipe through cut in (E) PG&E vault as follows:

-Support (N) 16" AWSS pipe over vault under hang with a CDF "cradle" for the length of the vault. Pour CDF to 5 and 7 O'clock pipe positions.

- Backfill pipe with jetted sand to vault overhang.

-Fill vault concave spaces with CDF over sand backfill through (N) 8" Diameter holes chipped into the top of the vault."

Signed and dated 11/20/12. (See Attached)

Per meetings with PG&E, M Squared to perform this work.

REQUEST:

Reference Drawings: MA-14 & MA-15

Hydrant at Sta 6+30
Contract drawings show the 45deg bend being connected directly to the rolled down tee. However the hydrant lateral is
much lower than the main and it will not be possible to connect them directly together.

Hydrant at Sta 9+00
Due to the changes per RFI U-190 M Squared are to install the new fire hydrant in the same location as the existing, in
the breezeway. As a result the new hydrant lateral will be higher than the newly installed main (the grade of the main being dictated by various utility conflicts).

Please confirm M squared's suggested mediation is how M squared is to proceed

SUGGESTION:

Hydrant at Sta 6+30
Suggestion - custom fabricate a HPW flanged x flanged spool for to connect to the tee and the 45deg bend.

Hydrant at Sta 9+00
Suggestion - In order to connect the tee to the 90deg bend a HPW flanged x flanged spool, custom fabricated will be
necessary.

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/5/2013 Response per Michael Smith (SFDPW),

"-Hydrant at station 6+30 - Proceed as required due to unforeseen field conditions.
-Hydrant at station 9+00 - Per field / phone conversations with M2, Pipe spool is no longer required at this location."

Signed and Dated 2/1/13. (See Attached)

Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

The contract drawings show M Squared replacing the existing 10" gate valve on Mission at 2nd St with a new 16" gate valve. Due to a PG&E conflict M Squared will have to now move the valve location north onto 2nd Street.

In moving the vault M Squared will now have to relocate the existing electrical service to the new vault location. M Squared will need the service disconnected so that all existing electrical cable and conduits can be removed.

Once the new vault has been constructed M Squared can reestablish the service to the new vault location.
These were previously thought to be street lighting conduits as mentioned in RFI U-182.2 and will need to be removed for the construction of the new vault anyway.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 5/20/2013 Existing PG&E service has been disconnected and removed. See attached drawing for new routing of PG&E power service connection from existing PG&E connection point to a new PG&E meter enclosure.

Please provide pricing proposal for work associated with installing a new connection from PG&E connection point to new meter enclosure as show on the attached drawing. Do not proceed with this work until pricing has been agreed to.

Reconnection for service at this location has been acknowledged from SFPUC (via PG&E) to be about 5 to 6 weeks out.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

The service is currently the responsibility of the SFPUC and PG&E have indicated that any impact to the service needs to be handled by the SFPUC and not M Squared.

Please advise on how to proceed

U-0224	AWSS - Pipe Alignment between Fremont to Beale	Closed	02/06/2013	02/16/2013	02/11/2013	Potentially	☐

From: Webcor Construction LP — Jackson Tukuafu
To: Turner Construction Company — Gary Krutsch
Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

The existing AWSS main on Mission Street between Fremont St & Beale St is running through three (3) PGE vaults.

By upsizing the AWSS main to 16" there is a possibility that the pipe will not fit back through the structures. By having PGE move/alter their facilities M Squared believes there will be significant project delays. M Squared will also inevitably have to install the new main within PGE structures, something the SFPUC prefers to avoid.

M Squared believes it is possible to shift the alignment of the new 16" main further north to avoid all of these PGE vaults. See attached potholing results from potholing further north than the existing main. M Squared does not know yet if additional fittings will be needed to shift the alignment north, and then realign it back south at Beale Street. This will not be known until the trench has been excavated.

Please confirm it is acceptable for the AWSS alignment to shift north as currently coordinated to avoid the delay impacts and vault conflicts.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/8/2013 Response per Michael Smith, (SFDPW)

"Shifting the proposed AWSS alignment North is acceptable provided that there are no utility conflicts and the gate valve frames/covers do not end up directly in the gutter due to potential flooding of the vaults."

Signed and Dated 2/8/13. (See Attached

U-0225	AWSS - Lead Joint Clearances at Sta 6+30	Closed	02/08/2013	02/18/2013	02/13/2013	Potentially	☐

From: Webcor Construction LP — Jackson Tukuafu
To: Turner Construction Company — Gary Krutsch
Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Stewart Mitchell

REQUEST:

Please refer to attached W/O Sketch SK-U-0225 and drawing MA-4.

The newly installed fire hydrant lateral at station 6+30 is to connect to the existing AWSS main; however, the existing main pipe is "oval" shaped and the new pipe is circular. As a result of the differing pipe shapes, the minimum clearances for inserting the "hokum" to draw the lead in when heated are not achieved. The minimum clearance around the pipe required is 1/4".

The existing fitting is part of a series of fittings needed to raise the fire hydrant lateral up in elevation to avoid a

SUGGESTION:

Field condtions appear to indicate that where the existing laterals clears over the sewer, at the next joint there is a possibility of a full length pipe (12'-0") which takes you closer to the curb. There is a possibility to switch out the entire lateral to the fire hydrant.

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 2/13/2013 Response per Michael Smith (SFDPW),

"Due to the unforeseen conflict between the existing AT&T duct bank which was poured directly onto the AWSS Hydrant lateral pipe, blocking access to the next two downstream lead joints, the contractor shall locate a lead joint South of the conflicting duct bank that is readily accessible for their plumber to melt the existing lead joint. The contractor shall then furnish and install ductile iron pipe and fittings to this accessible location in order to connect to the existing cast iron line. The alternate is for AT&T to relocate

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

conflict with an existing sewer line. Moreover, there is a duct bank over the sewer and it was poured over the next fitting only compounding the conflict.

Please advise.

their duct bank in order that there is a minimum 12" clearance between the duct bank and the existing AWSS pipe.

Should the duct bank not be relocated, and due to the fact that there will be a minimum amount of cast iron pipe remaining in the hydrant lateral run, the contractor shall provide a cost for removing the remainder of the cast iron hydrant lateral and for replacing with ductile iron pipe and fittings.

Replacing this remaining section of cast iron pipe and hydrant will be an improvement to the SFWD's facilities."

Signed and Dated (See Attached)

U-0225.1 **AWSS - Lead Joint Clearances at Sta 6+30: SFWD Decision to Replace Full Lateral Closed** **03/11/2013** **03/21/2013** **03/28/2013** **Potentially** ☐

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Turner Construction Comp Jeff Thiel

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

As a result of several coordination efforts to discuss potential options, AT&T has chosen not to relocate their duct bank that is in conflict with the hydrant lateral at Sta 6+30. Instead they have agreed to compensate M Squared for the costs to connect to the next most southern joint.

1. Please confirm that this is acceptable, as the response to the previous RFI U-0225 mentioned the possibility of replacing the full lateral including the hydrant.
2. Please advise whether the SFWD want to replace the full lateral. M Squared need to know so an agreement can be reached on materials etc.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 3/26/2013
Response per Michael Smith (SFDPW),

"CCSF SFWD (Dan Helminiak 420-4521) will coordinate with contractor to provide funding / materials to replace the remaining cast iron portion of the hydrant lateral."

Signed and Dated 3/19/13. (See Attached)

From: Webcor Construction LP Jackson Tukuafu **To:** Turner Construction Company Gary Krutsch **Answered By:** Webcor/Obayashi Joint Ve Jackson Tukuafu

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Refer to drawing U-1002, U-2003, MA-15.

M Squared is unable to trench to the connection point as shown on the attached M Squared sketch SK-047.1 and SK-047.2 on First Street due to the presence of two (2) PG&E duct banks in the trench. One duct bank is deeper than the other and is sitting directly on top of the AWSS Pipe that is required to be removed.

Please provide direction to how M Squared will proceed.

SUGGESTION:

Suggestion #1 - Remove existing gate valve and connect to the existing pipe (see attached SK-047.1). Install an IBeam behind the 16" Tee on Mission Street as an alternative restraint system. Please note: In order to perform Suggestion #1 an AT&T duct bank will need to be moved west 2' so M Squared can drill for the I-Beam.

Suggestion #2 - If the AT&T duct bank cannot be moved install an offset from the 16" tee using 22deg bends to get back to original alignment. (see attached sketch SK-047.2)

ANSWER: **Accept Suggestion:** ☐

Jeff Thiel 3/12/2013 Response per Michael Smith (SFDPW)

" 1.) Proceed with suggestion No. 1.

2.) Should AT&T not be able to relocate their duct bank, proceed with suggestion No. 2. Replace 22.5 degree elbows with 11.25 degree elbows if fittings are available."

Signed and Dated 3/12/13. (See attached)

After further investigation while this RFI was being reviewed, it was found that the duct bank previously thought to be AT&T is owned by TCG. Do not proceed with either option until TCG has been notified of potential costs and has reviewed the proposed solutions.

REQUEST:

Per the attached email it appears that the City's intent to is to move the curb lines south between First St & Fremont by 3' and also between Fremont & Beale Street by 4'.

First to Fremont St - In moving out the curb line by 3' the AWSS Line on this block will be pretty close to being under the new curb line, therefore making any maintenance of the AWSS line in the future very difficult. There would also be an impact to the gate valve location on the east side of the 1st and Mission intersection and the west side of Fremont & Mission due to the new curb coming south. It is possible a modified roof to the vault would be required as half of the vault would be in the street and another half would be in the sidewalk (judging from rough field measurements). The AWSS Fire hydrant would also need to be relocated as it would now be in the middle of a widened sidewalk, whereas the distance acceptable is 24" to 26" from FOC.

Fremont to Beale Street - The current alignment for the AWSS along Mission between Fremont & Beale is close to the curb on the north side (in order to avoid 3 PG&E utility vaults). By moving the curb 4' south the AWSS line will now be underneath the sidewalk on this block. Similar to above the gate valve vaults would be partially under the sidewalk here and modifications/relocations may be required.

Please advise if M Squared is to continue with the AWSS install per plan. Alternatively please provide direction on the conflicts that moving the sidewalk creates for the main.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Judy Long
10/16/2013
RESPONSE:
- TJPA has not received confirmation from the SFPUC that the new AWSS service can be installed per the contract drawings. As discussed in our weekly coordination meeting after completing the paving in the intersection at First and Mission,M2 is directed to jump to the intersection at Main and Mission and proceed westward towards Beale Street.

- Submit RFI#U-0228.1 once work is complete in the Main Street intersection and request SFPUC's approval to proceed with the original AWSS alignment per contract drawings between Beale and First streets.

From: Webcor Construction LP — Jackson Tukuafu
To: Turner Construction Company — Gary Krutsch
Answered By: Turner Construction Comp — Jeff Thiel
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

Due to the grade of the 16" AWSS gate valve, combined with the valve actuators the roof of the AWSS valve vault at 2nd Street will not be under the surface of the street. Previous AWSS valve vaults have 2" AC/8" concrete street base on top of the roof of the vault.

If M Squared installs the vault roof and then covers it with 2" AC then there is a danger that future contractors will saw cut through the roof of the vault while cutting out their trenches.

Our suggestion is to pour the vault roof to the same grade as the current street surface on 2nd Street. There does not appear to be any room for adjustment here and we are unaware of any other options in this case.

Please confirm it is acceptable to construct the vault roof in this manner, with a concrete broom finish.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith (SFDPW),

"M Squared shall proceed with constructing the valve box cover in a manner such that the portion to be located in the parking strip shall be flush with the surrounding concrete. For the portion of the cover to be located in the paved traffic lane, reduce top surface by 2". Place a sheet of 10 gauge galvanized sheet steel on recessed area of concrete cover. When repaving street, extend A/C paving over vault to provide paving flush with concrete portion of cover/manhole lid.

Answered By: Turner Construction Comp — Jeff Thiel

REQUEST:

Per our recent AWSS meetings M Squared had been directed by the owners' representative to complete the AWSS install at 1st & Mission intersection and then mobilize to Main Street intersection to begin work down there.

IF M Squared is to begin work at Main St then there will be no connection made on the east side of 1st and Mission. The new 16" line will be installed up to the 16"X10" tee and the 10" connection will be done heading North on 1st.

We can see 3 options that would allow us to proceed to Main Street.

1. Cap the new 16" Tee on the east side of the tee. This would allow the AWSS system to be in service from 2nd Street all the way to the east side of 1st Street, including 1st Street heading towards Market.

2. Perform a connection from the new 16" Tee to the

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith, (SFDPW)

"Please proceed with Option No. 1 - Capping of the East end of the (N) 16"x16"x12" tee installed at Mission and First Streets. The concrete thrust block to be installed behind the 16" cap shall be poured with 3x the concrete as a typical thrust block for a 16" AWSS fitting. Pour thrust blocks against 12" CI pipe and 16"x16"x1" Steel plate.

Option No. 2 is not approved due to unavailability of fittings for 4-6 months and the vertical/horizontal alignments between (N) and (E) pipes.

Bill Gunn of SFWD approved option No. 1 based on the above issues for implementing option No. 2"

Signed and Dated. (See attached)

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

existing 12" AWSS main on Mission east of 1st Street. This would allow the AWSS system to be fully operational from 2nd all the way to Main. This would be temporary as M Squared would presumably return to complete the 16" install here.

3. Leave the new and existing pipe as is. The AWSS main would be operational from 2nd Street all the way to the gate valve on Mission west of 1st Street. The main would remain shut off on the 1st and Mission intersection, and also 1st Street heading towares Market as the new 16" AWSS line would be open at the tee (not capped/connected) and the exisiting 12" would not be connected to anything.

Please provide an option to M Squared to allow us to proceed.

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Reference: Attached Photos

Technically the 2 operating nuts should be on the same side. That way you can operate the nut on both the valve and the by pass from the 24"x24" valve cover in the street. Now that the nut on the valve is facing a different way there is no possibility that you can access both nuts from the valve cover.

SUGGESTION:

Install an 8" pipe into the roof of the vault and put an 8" valve cover in the street as an access point to the by pass. The main operating nut on the gate calve would accessible from the 24" cover in the street per plan.

ANSWER: **Accept Suggestion:** ☐

Response per Michael Smith (SFDPW),

"Our understanding is that the concrete valve vault lid has been fabricated and installed. Please provide an as-built drawing of the placement of the covers and rebar layout."

REQUEST:

Please refer to drawing MA-17.

Due to the high number of utility duct banks on Main Street & Mission Street Intersection M Squared's crews effectively tunneled under sections of the street in order to install the new AWSS main. Where possible M Squared removed the street base and excavated as much as we could. The remainder of the trench was tunneled under duct banks and under the street, with the street base remaining in place.

Now that all the AWSS main has been installed M Squared will shortly be faced with backfilling this intersection. There is currently only a small portion of trench that can be backfilled using conventional methods i.e ram compactor etc. The remainder of the trench will also not be suitable for backfilling using the jetting method as there will be no way to compact the area directly underneath the street base.

M Squared is requesting permission to create several small holes (approx. 6" dia) in the street base, between some of the utilities and backfill the AWSS trench using a sand cement slurry backfill. See attached submittal sheets. This mix design is effectively sand and water, with just a minor amount of cement included to allow the sand to reach 95% compaction.

If this is not acceptable please provide direction.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

This is acceptable provided that the dried sand/cement mixture has a minimum density of 120 lb/ft3. Please provide test verification of this density with site test as continued from previous sheet: "witnessed by SFWD Inspector". Test can be performed at contractor's yard.

3/3/2014
RESPONSE:
The 8" slump for the Bode Mix 604cc is acceptable.
Michael B. Smith SFDPW/IDC/EME on 3/3/14

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

City standards call for the concrete to be poured with a 4inch slump, and that no traffic drive on the concrete for a period of 10 days. M Squared made the decision to add 2% calcium to the concrete mix to speed up the concrete setting process. M Squared used the same mix design as is used for the street base:
- Bode Concrete Mix Design 604 - sidewalk, curb and gutter and parking strip.
- Bode Concrete Mix Design 604CC - Street base

The only difference between the 2 concrete designs is the added 2% calcium.

The concrete was poured with an 8inch slump in order to allow the crew enough time to satisfactorily finish the concrete to the required surface. M Squared acknowledge that this is out of spec, however the concrete still reached over 4000psi, when specs required only 3000psi. M Squared believes that this will be required in the future on other portions of Mission Street on account of Mission St. being MUNI¡¦s busiest route. SFMTA have asked that M Squared minimize lane closures where possible.

Please confirm that this 8inch slump is acceptable on Bode Mix 604CC (attached).

U-0241 **AWSS - Proposed Fire Hydrant Re-Location on Mission and Fremont Street** **Closed** **01/21/2014** **01/31/2014** **02/13/2014** **Potentially** ☐

ANSWER: **Accept Suggestion:** ☐

This is Acceptable.

Please coordinate site visit with Engineer and Bill

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

Due to the unforseen utilities in place, M Squared cannot install the concrete vault around the gate valve at STA 16+40. In order to avoid delays to the project M Squared reached out to the engineer of record to bring this issue to his attention. See attached email chain.

As it appears M Squared is directed to return to 1st Street and work east again; M Squared will be unable to build any structure around the gate valve at Sta 16+40. Due to the flip flop of the schedule we will not be able to tie in at this point for several months so we suggest the following:
- Install the gate valve at Sta 16+40 and direct bury the valve, leaving access to the gates with ductile risers and valve caps. FYI - these gates should not be opened anyway as the line will be out of commission during construction.
- Re-excavate this gate valve when M Squared installs the pipe from Fremont St heading east and tie in the pipe to it then. In the interim M Squared will drive a sheet pile behind the gate valve and support it with a 1.5ton concrete block. This will prevent any gate valve movement.
- As M Squared will be working their way from 1st St towards Beale Street, they should have several weeks in which to design some sort of modified manhole, custom sized vault in which to encase the valve.

Please advise if this is acceptable.

Gunn CF SFWD to review valve installation for providing design for modified valave box and gate valve support.

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

Please refer to drawing MA-16 and attached M Squared sketch SK-TG04.2-071.

There are 3 duct banks exiting out of PG&E Vault #1669:

1. PG&E Duct bank #1 runs from 1st Street down Mission to Fremont Street and has been in our trench all that time. It has not encroached on the AWSS Main alignment and there is enough clearance from AWSS main most of that time. It has impacted excavation but should not pose too much of a problem for pipe installation.
2. PG&E Duct bank #2 sits on top of the existing 12" AWSS Main and runs directly on top of the AWSS Main for a large portion of the intersection. Due to this duct bank we are unable to excavate down to the AWSS Main, unable to remove pipe and will be unable to install new 16-inch AWSS.
3. PG&E Duct bank #3 runs underneath the existing 12" AWSS main, it is concrete encased and part of the concrete encasement encroaches onto the existing 12" AWSS Main. This duct bank appears to leave our trench after 10ft or so.

Where duct bank #2 and duct bank #3 cross each other there is only 11-inch between the two duct banks. Not

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Judy Long
4/1/2014

PG&E shall remove/relocate conflicting duct bank(s) as identified by the contractor in order to obtain the necessary working space and clearance as required to remove the (e) AWSS pipe and install the (n) pipe. PG&E shall demo portions of their electrical vaults that were constructed on the (e) AWSS pipe.

Currently should the (e) CI AWSS be comprimised, the SFWD would not be able to even access the fire fighting line due to the three conflicting PG&E duct banks surrounding the AWSS pipe. City Standards call for a minimum 12" seraration for utilities being installed in the proximity of the AWSS line.

Michael Smith 4/1/2014

Response by Judy Long

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed

enough space to install a 16inch pipe with tie rods and stop collars. The AWSS is pinched between these 2 duct banks for approx. 10ft with one duct bank on top of the 12-inch main and one touching the main from underneath. While all duct banks impede us it seems there is a higher chance of making this work with the removal of duct bank #2.

Please provide direction on how to proceed or advise when PG&E will begin to remove their duct banks.

REQUEST:

Please refer to drawing MA-16 and M Squared Sketch-TG04.2-072.1 and TG04.2-072.2.

Question #1 - Does every joint between the new GV west of Fremont Street, and the new 16"x10" tee in Fremont Street intersection need to be restrained with bell & stop collars? This distance is approx. 50ft.
Question #2 - Currently there does not appear to be enough space to install the new 16" pipe WITH bell & stop collars through the utilities in the Fremont St intersection. There does appear to be space to install 16" pipe without the stop/bell collars on.

- Our suggestion would be to install the 16"x10" tee and restrain that tee on one joint heading east. Install piping across the Fremont St intersection without stop/bell collars, delete the 16" GV at that location (we believe we will not be able to fit one anyway), and tie off the last piece of pipe coming into the hydrant tee east of Fremont Street.

Please clarify if this is acceptable.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Answered By: Turner Construction Comp — Judith Long
Co-Author: M Squared Construction, Inc. — Aidan Foley

REQUEST:

Please refer to drawing MA-15 and attached M2 sketch SK-TG04.2-073.

1. Please confirm that it is acceptable to install the new hydrant at Fremont St. (Location #4, STA 12+50), 31" from face of concrete (FOC) at approx. STA. 7+15 on drawing MA-16. The revised location is a result of various conflict in the vacinity that prevent the hydrant from being installed as shown on MA-15.
2. Due to the 10" main being relatively deep, additional fittings will be required to install the hydrant at the revised location (STA 7+15). Please confirm it is acceptable to install the hydrant as shown in the attached sketch SK-TG04.2-073.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Judy Long
7/7/2014

Per our conversation on 7/7/14 with M2, the contractor shall investigate the use of using a hydrant riser and no elevation changes for lateral piping.

Co-Author: M Squared Construction, Inc. Aidan Foley

REQUEST:

See attached photos.

The location for the gate valve on Mission Street, east of Fremont Street is in conflict with the piping on the hydrant lateral. The valve cannot be placed any further west due to the street light and traffic signal conduits. Moving it further west would also put the vault within the new curb return that is planned as part of the previously discussed sidewalk expansions project on Mission Street.

SUGGESTION:

Relocate the hydrant lateral piping away from the vault location. Domestic fire hydrant location to remain the same.

ANSWER: **Accept Suggestion:** ☐

Relocate SFWD low pressure fire hydrant lateral piping as required to install new SFWD AWSS gate valve and valve vault. The contractor shall coordinate with SFWD and perform relocation work as approved by SFWD.

Co-Author: M Squared Construction, Inc. — Aidan Foley
To: Turner Construction Company — Phil Militello
Answered By: City and County of San Fr — Michael Smith

REQUEST:

See attached sketch.

The existing lead joint (outside contract scope) is leaking. It appears that the pressure of the string back pulling on the lead has caused the lead to leak.

Our crews have excavated further north and exposed more of the existing main to allow our plumber to repack the lead joint. In doing so we discovered ears on the existing pipe approx. 3ft north of the lead joint.

Our suggestion is to repack the lead joint and tie back the adaptor to the ears on the existing pipe. In eliminating the strong back we will be eliminating the pressure on the repacked joint.

Please confirm you are in agreement with our suggestion.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please proceed as suggested above. Spare strong back shall be delivered to the San Francisco Water Department at the close of the project.

U-0253	AWSS - Valve Vault West of Fremont St	Closed	10/10/2014	10/20/2014	10/14/2014	Potentially	☐

From: Webcor Construction LP — Claude Titche
Co-Author: M Squared Construction, Inc. — Aidan Foley
To: Turner Construction Company — Phil Militello
Answered By: City and County of San Fr — Michael Smith

REQUEST:

Following on from [previous discussion and previous correspondence, M Squared would like to clarify the issue with the gate valve vault on Mission St west of Fremont St.

Due to the presence of 2 duct banks and a gas main, no vault will be possible at this gate valve location. M Squared proposes to perform the same modifications as was performed west of Beale St.

See attached

Please confirm that this is how we are to proceed.

SUGGESTION:

ANSWER: **Accept Suggestion:** ☐

Please proceed with the construction of valve boxes for the main/bipass valves for this particular location due to adjacent utility conflicts.

Transbay Transit Center – San Francisco, CA

Noise and Vibration Mitigation Management Plan

Webcor/Obayashi

September 07, 2012

GENERAL:

The Webcor/Obayashi (W/O or CM/GC) Noise and Vibration Mitigation Management policy that will be implemented on the Transbay Transportation Center Project will be an overall project policy, with each Trade Subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with Specification Section 00 08 13, 00 08 13/APB, the San Francisco Noise Control Ordinance, regulations and requirements and section 01 35 65, Specific Project mitigation measures and monitoring requirements as applicable to the various phases of work.

When required by the specifications, W/O will ensure its Trade Subcontractors comply with this plan as well as the San Francisco Noise Control Ordinance.

To expedite the project or minimize impacts, W/O will ensure that its Trade Subcontractors apply for written waivers of some of the noise requirements by application to the TJPA in accordance with Section 00 08 13 Specific Project Requirements when required by the specifications or contract. Written waivers shall be uploaded to Constructware by CM/GC. It is anticipated that some Work may require multiple shifts or for other reasons need to be performed outside of typical weekday daytime construction hours. Trade Subcontractors shall minimize construction activities during evening, nighttime, weekend, and holiday periods and shall obtain specific permits before performing construction in noise sensitive areas during these periods.

Night noise permits requests shall be submitted to the TJPA at least 7 days in advance of work. Noise permit request shall include:

1. Name of person in charge of work and phone number
2. Hours to be worked
3. Narrative of scope of work including necessity of doing work at night, maps, and truck routes
4. List of noise/vibration/light making equipment including make and model
5. Mitigation and monitoring methods being used

W/O will ensure that its Trade Subcontractors provide noise inspections and testing of equipment to ensure that all equipment onsite is in good condition and effectively muffled per manufacturer's recommendation. If inspection or testing documents are requested by the TJPA, or any of its representatives, W/O will require its Trade Subcontractors to provide requested documentation in a timely manner. Trade Subcontractors shall provide inspection and testing documents to CM/GC prior to start of work and as the equipment is replaced. CM/GC shall upload documents to a file location within Constructware.

W/O will ensure that its Trade Subcontractors minimize use of vehicle backup alarms and demonstrate how backup alarms will be minimized by using mitigation measures such as designing the construction site with a circular flow pattern that minimizes backing up of trucks and other heavy equipment. Trade Subcontractors shall submit quarterly reports of measures to reduce back up alarms. W/O shall upload these reports to a specific location within Constructware.

W/O will ensure that all its Trade Subcontractors' equipment onsite is equipped with broadband back-up alarms that will automatically adjust based on the ambient noise during nighttime hours (between 8 p.m. and 7 a.m.) when ambient noise is low. If safety considerations and applicable regulations will not allow use of broadband back-up alarms, Contractor shall request an exemption in writing to the TJPA

Representive including the applicable safety regulations (Cal/OSHA, OSHA). Trade Subcontractors shall comply with the TJPA's request for broadband back-up alarms for all work between 8 p.m. and 7 a.m. If requested by the TJPA or its representative, Trade Subcontractors shall provide W/O with equipment specifications showing broadband back-up alarms for submission via Constructware.

Through W/O's requirement of the submittals outlined in this noise and vibration plan, W/O will verify Trade Subcontractors' construction operations are performed in such a manner to minimize noise.

W/O will verify that its Trade Subcontractors perform noise monitoring to demonstrate compliance with noise limits and endeavor to minimize construction activities during off hours except for those required and deemed acceptable per the Contract Documents. Trade Subcontractors shall submit monthly monitoring reports to W/O for submission via Constructware.

W/O will verify Trade Subcontractors haul routes to ensure that they minimize noise intrusion into residential areas, and control noise during nighttime hours.

W/O will require all Trade Subcontractors to use procedures and equipment, when it would be effective, that produce lower noise levels than normal when required by the specifications or contract. W/O will require the Trade Subcontractor to submit manufacturer special noise control kit information. If none is available, then the Trade Subcontractor needs to submit a statement of this. Upon receipt and review of the information, W/O and the Trade Subcontractor will identify the events when the noise control measures should be used based on the specifications.

W/O will require all Trade Subcontractors plans to include use of temporary barriers near noisy activities as required by the specifications or contract. Such barriers shall be located close enough to the noise source to achieve noise attenuation. As necessary and when it is shown it would be effective, Trade Subcontractors shall construct shed-like structures or complete buildings to contain the noise from nighttime activities.

W/O shall require haul route map, plan and storage location to be part of Trade Subcontractor's plan and included within its submittal.

VIBRATION CONTROL

Vibration limits are based upon the Federal Transit Administration's Planning and Environment Transit Noise and Vibration Impact Assessment guidelines. W/O will require all Trade Subcontractors' to limit or prohibit use of construction techniques that create high vibration levels when it affects adjacent properties.

If construction techniques that create high vibration levels are used, W/O will require all Trade Subcontractors' to comply with the following additional restrictions:

1. Provide advance notice to TJPA of any vibration intensive activities. Perform vibration intensive activities only during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Perform vibration monitoring during vibration intensive activities during daytime hours between 7 a.m. and 8 p.m. unless otherwise allowed by special permit or variance, as required by the specifications or contract. Recorded data should be part of the Trade Subcontractor Daily report. A summary shall be submitted monthly and uploaded to Constructware.

2. Investigate alternative construction methods and practices to reduce the impacts if present and implement alternative methods and practices as reasonable.
3. Provide a plan to measure vibration levels including but not limited to measurement locations, times and metrics. Plan shall also include contingency plan if operations exceed the limits. This plan shall be uploaded into Constructware by W/O.
4. Limit or prohibit use of construction techniques that create high vibration levels.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. Trade Subcontractor's plan shall be submitted via Constructware for Record Only.

Transbay Transit Center – San Francisco, CA

Air Quality Plan
Webcor/Obayashi
January 16, 2012

GENERAL PLAN:

The Webcor/Obayashi (W/O) Air Quality Plan that will be implemented on the Transbay Transit Center Project will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to comply with the Bay Area Air Quality Management District regulations and requirements.

W/O will require its Trade Subcontractors to establish a plan that complies with all requirements set for in specification sections 00 08 13, and 01 35 65 prior to starting Work onsite. W/O shall check and verify trade subcontractor's compliance with air quality requirements on a daily basis. Any non-compliant trade subcontractors will receive both verbal and written notice through Safe Site One (W/O internal program). Additional, W/O will require trade subcontractors to demonstrate they are actively monitoring air quality by providing checklists or documentation on each Trade Subcontractors daily report. W/O shall verify its Trade Subcontractors Air Quality plan includes the following but not necessary limited to:

1. Specific measures to minimize impacts to sensitive receptors associated with exposure to respirable nuisance dust (PM10) and achieve a goal of No Visible Emissions.
2. W/O shall verify Trade Subcontractors comply with City Dust Control Order (DPW Order No. 171,378. Water active construction areas at least twice daily to control dust using non-potable water in accordance with San Francisco Ordinance 175-91
3. Identify specific measures to minimize dust generation; to reduce health risks to workers and the public.
4. Mist the immediate excavation area with a water spray to prevent airborne dust particles. Perform continuous water spraying during dust-generating activities. Mist or spray in such a way as to prevent puddling or generation of runoff, which could potentially reach storm drains or catch basins.
5. Minimize the amount of excavated material or demolished debris stored at the Site. Remove excavated material and demolished debris, with the exception of hazardous materials or suspected hazardous materials, from the Site no later than the end of each workday. If hazardous materials or suspected hazardous materials are stored on site, store such materials in accordance with all applicable California Environmental Protection Agency regulations, including providing storage in proper containers and protection from exposure to the elements. Remove such materials from the Site as soon as possible for disposal or recycling in accordance with applicable laws and regulations.
6. Wet all exposed soil surfaces at least 3 times daily during dry weather or more frequently if dust is blowing or if required by the TJPA. Immediately wet sweep serpentine residuals from the street.
7. Keep the Site and adjacent areas clean and perform wet sweeping at the end of each shift. Sweep daily (with water sweepers) all paved access roads, parking areas and staging areas at construction sites. Sweep streets daily (with water sweepers) if visible soil material is carried onto adjacent public streets.
8. Load haul trucks carrying excavated material so that the material does not extend above the walls or back of the truck bed. Wet before covering and tightly cover the surface of each load before the haul truck leaves the loading area. Cover trucks hauling soil, sand, and other loose materials or require trucks to maintain at least 2 feet of freeboard
9. Clean up spillage on City streets, whether directly or indirectly caused by Contractor's operations.

10. Minimize use of on-site diesel construction equipment, particularly unnecessary idling. Shut off construction equipment to reduce idling when not in direct use. Where feasible, replace diesel equipment with electrically powered machinery.
11. Retain receipts of ultra-low sulphur fuel (ULSF) purchase and equipment tuning and repair and make these available to the TJPA Representative or to the Federal Transit Administration (FTA) designee upon request.
12. Locate diesel engines, motors, or equipment as far away as possible from existing residential areas.
13. Properly tune and maintain diesel power equipment. To manufacturer's specification and frequency.
14. Suspend grading operations during first and second stage smog alerts, and during high winds (i.e., winds greater than 25 miles per hour).
15. Upon completion of the construction phase, buildings with visible signs of dirt and debris from the construction site shall be power-washed and/or painted (provided that permission is obtained from the property owner to access and wash the property with no fee charged by the (owner). Trade Contractor shall request CMGC to contact Singer and Associates to notify property owners for access. If permission from property owners for access is not granted, Trade Contractor is not responsible for power-washing or painting.
16. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites.
17. If applicable, replant vegetation in disturbed areas as quickly as possible.

W/O will verify Trade Subcontractors comply with the requirements of the Bay Area Air Quality Management District (BAAQMD) Regulation 6 (for particulate matter and visible emissions), Regulation 7 "Odorous Substances," Regulation 11 "Hazardous Pollutants," and the California Health and Safety Code Division 26 "Air Resource", Chapter 3 "Emission Limitations," Section 41700 "Prohibited Conduct," and related regulations. Trade Subcontractors shall notify the BAAQMD 10 working days prior to commencing demolition or hazardous materials abatement work.

1. Such notification shall include the names and addresses of operations and persons responsible; description and location of the structure to be demolished or altered including size, age and prior use, and the approximate amount of friable asbestos; scheduled starting and completion dates of demolition or abatement; nature of planned work and methods to be employed; procedures to be employed to meet BAAQMD requirements; and the name and location of the disposal site.
2. The BAAQMD randomly inspects removal operations and will respond to any complaints received. Contractor shall cooperate with and facilitate all BAAQMD authorized inspections.\
3. Notifications shall be documented and provided to CM/GC for submission to the TJPA via ConstructWare.

Trade Subcontractors shall be responsible for providing technical information, as required by the specifications, in their plan. All trade subcontractors plans shall be submitted for Record Only via ConstructWare.

Transbay Transit Center – San Francisco, CA

Waste Management and Construction Debris Plan Revision 6

Webcor/Obayashi
November 7, 2013

Exhibit P

GENERAL PLAN:

Webcor/Obayashi Joint Venture (Webcor/Obayashi) understands that the building contractor plays a critical role in the management of jobsite produced construction waste. Webcor /Obayashi has adopted a waste reduction and recycling policy that will be implemented on the Transbay Transportation Center Project. This policy will be an overall policy with each subcontractor contributing their specific plan as they come on board to the project.

The primary goal of the plan is to divert as much construction generated debris & unused material from landfills as possible. At a minimum, Webcor/Obayashi and its trade subcontractors will divert 75% of the waste generated on the construction project from landfills. Trade subcontractors Construction Waste Management Plan shall be prepared and submitted in compliance with the Owner's LEED project requirements and the requirements of the City and County of San Francisco.

The Trade Subcontractors are required to comply with Specification Sections 00 08 15, 01 74
00, and 01 81 13 as well as any or all of the procedures listed below. If a conflict in percentages exists between this section and Section 01 81 13, General LEED Building Design and Construction Requirements, the most stringent section shall govern.

- Use of approved debris haulers with documented recycling levels.
- Source separated debris boxes will be provided onsite for mixed debris and recyclable items such as lumber and wood related products, dirt, concrete and asphalt, cardboard & metals.
- Trade Subcontractors are required to handle and dispose of any generated hazardous waste.
- Requesting Trade Subcontractors and vendors to utilize reusable packaging when possible.
- Trade Subcontractor shall provide a Construction Waste Management Plan.

All Trade Subcontractors shall develop their own Waste Management and Construction Debris Plan that complies with the Contract Documents and this plan. Trade Subcontractors shall submit this plan in accordance with the specifications and it shall become part of Webcor/Obayashi's overall project plan. All technical requirements defined in the contract documents shall be fulfilled by Trade Subcontractors and submitted to the Construction Management Oversight (CMO) For Record Only through ConstructWare

Webcor/Obayashi will ensure the Trade Subcontractors are effectively implementing the procedures and are in compliance with Specifications.
Webcor/Obayashi will verify that after Award of Contract and before commencement of the Work at the site, the Trade Subcontractor conducts a Reuse/Recycle Assessment as part of their Solid Waste Management Plan (SWMP): Trade Subcontractor's assessment shall

estimate the types and quantities of materials for the Project that are anticipated to be feasible for source separation for recycling or reuse, either onsite or offsite, and note the procedures intended for a recycling, reuse, and salvage program. Documentation of the trade subcontractor's plan shall consist of the following:

- Trade subcontractor and vendor waste management strategies.
- Trade subcontractor required to provide a monthly summary of the total waste material with backup documentation (weight tickets) if processed offsite.
- The amount recycled (in tons), material types, recycling procedures, and processing facility locations to which materials were diverted if processed offsite.

Trade Subcontractor's Construction Waste Management Plan shall also include estimated wastes, disposal, and handling with the following:

A. List of materials that comprise source separated materials include, but are not limited to:

- Concrete, Wood, Mud, Mixed Aggregates, Yard waste, Metals, and Cardboard.
- Yard waste is not included in our overall diversion rate calculation on the template or corresponding spreadsheet per the requirements from the LEED BD&C v3.0 Reference Guide.

B. List of materials that comprise Miscellaneous Construction Debris include, but are not limited to:

- Wood, Scrap Metal, Drywall, Plastics, Film Plastics, Wire, Cable, Glass.
- The total quantity estimated, inception to completion Disposal.
- Total Project Generation, Diversion + Disposal.
- Project Diversion Rate.

Webcor/Obayashi will verify that Construction and Demolition Waste; Non- hazardous solid resources resulting from Trade Subcontractor's construction, remodeling, repair, and demolition operations for the Project are properly transferred to a C&D Recycling Facility. The C&D Recycling Facility shall be a facility that receives only C&D (construction and demolition) material. Trade Subcontractors shall provide Webcor/Obayashi a summary sheet, including all receipts for transport materials each month with the progress billing if any materials are processed offsite.

Webcor/Obayashi will verify that of the inevitable waste generated, Trade Subcontractor's reuse, salvage, or recycle as many of the waste materials as economically feasible.

Webcor/Obayashi will participate/attend a meeting with Trade Subcontractor, the TJPA Representative and representatives of the City's Solid Waste Management and recycling programs prior to commencement of work. Webcor/Obayashi will

ensure all Trade Subcontractors are made aware of the LEED requirements for C&D diversion before being allowed to work on the site.

Webcor/Obayashi will verify that Trade Subcontractors submit a Monthly Disposal and Recycling Summary Report; quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill. Contractor shall also send a copy of this report to the TJPA Representative and the SWMP to the City Government Recycling Coordinator. The Comprehensive Disposal and Recycling Summary Report shall be submitted quantifying the construction and demolition waste generated and recycled, reused or disposed of at Class 3 Landfill, on a monthly basis. This report is a condition of progress payment and failure to submit this information shall render the Applications for Payment incomplete. The Trade Subcontractors/trades are also responsible for contracting with a regional facility to haul any hazardous materials from the site. The Trade Subcontractor shall calculate the C&D diversion rate for both LEED requirements (excluding yard waste) and the requirements set by the City (including yard waste) for all materials processed offsite. The W/O LEED representative will screen every C&D Submittal and review Trade Subcontractor and lower-tier subcontractors C&D Plans for clarity, completeness, and compliance with City/LEED requirements.

Webcor/Obayashi will verify that Trade Subcontractors develop and implement procedures for source separation to the greatest extent feasible.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for transporting commingled (mixed) construction and demolition waste that cannot be feasibly source-separated if the intent is to process it offsite instead of using debris boxes provided onsite.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for Salvage and Reuse.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement practices for this project that will reduce waste at the source.

Webcor/Obayashi will verify the Trade Subcontractors plans develop and implement procedures for materials that are recycled and/or reused onsite

Webcor/Obayashi will verify that Trade Subcontractors participate in reuse programs by reviewing each Trade Subcontractors Monthly Disposal report for any material processed offsite. For such reuse programs, Trade Subcontractor shall refer to the City's construction and demolition recycling program.

Webcor/Obayashi shall review the environmental goals of this Project with all Trade Subcontractors during the preconstruction meeting. Webcor/Obayashi shall make a proactive effort to increase awareness of these goals among the job site workers. Webcor/Obayashi will make a proactive effort to increase awareness of these goals among the site workers by requiring that each Subcontractor take Click Safety training prior to stepping on the jobsite. As part of this Click Safety training, there is a module dedicated to teaching and reviewing the

LEED requirements of the project during construction activity.

Webcor/Obayashi will verify that Trade Subcontractors are using registered transporters and registered facilities. Only registered transporters can remove mixed construction and demolition debris from the construction site, and they must take this material to a registered facility. NOTE: A Registered facility: is any facility that accepts mixed construction and demolition debris for processing and recycling must be registered with the City and County of San Francisco and must demonstrate an overall minimum recycling rate of 65% for mixed construction and demolition debris. A registered facility must have applied for and received a registration from the San Francisco Department of the Environment. Webcor/Obayashi will ensure that Waste Management Companies that service San Francisco and retained by the Trade Subcontractors are registered transporters and meet the City/LEED requirements. Trade Subcontractors shall refer to SFEnvironment.org for the City's most current list of registered transporters.

Webcor/Obayashi will verify that Trade Subcontractors are implementing the following:
1. Eliminate the procurement of unneeded supplies.
2. Reduce waste by printing and copying double-sided.
3. Submit all submittals, reports, and forms in electronic format (PDF) unless otherwise noted.
4. Fully participate in available and required recycling and composting programs.
5. Purchase products made with recycled content such as paper and recycled aggregate.

Webcor/Obayashi will verify that Trade Subcontractors shall submit:
1. Construction and Demolition Debris Management Plan.
2. Construction and Demolition Debris Recovery Monthly Summary Report and supporting documentation for any materials processed offsite.
3. Construction and Demolition Debris Recovery Final Report for all materials processed offsite.

Trade Subcontractor's plan shall comply with specification section 02 41 00. All Trade Subcontractors will remove and dispose of all waste materials from the site for off-site disposal in compliance with all applicable laws, ordinances, rules, and regulations. Webcor/Obayashi and all Trade Subcontractors will work with the TJPA representative so that the representative may characterize the waste materials as required by law to the extent required by Webcor/Obayashi's selected disposal facilities.

Trade Subcontractor's plan shall comply with specification section 01 15 00. Trade Subcontractor's shall perform work in a manner to minimize generation of dust, dirt, rubbish, and other debris, to prevent dust and debris from interfering with the progress of the work, and to keep dust and debris from accumulating at the work site or adjacent areas. Trade Subcontractor's shall remove debris and rubbish from the site on a daily basis.

Trade Subcontractor's plan shall comply with specification section 01 13 50, by preventing the mixing of hazardous and non-hazardous materials.

Trade Subcontractor's shall be required to provide technical information, as required by the specifications including compliance with the City and County of San Francisco Ordinance 27-

06, in their plan which will be submitted For Record Only to the CMO.

Mr. Rick Buellesbach
Senior Project Manager - Transbay Transit Center
Webcor/Obayashi Joint Venture
175 Beale Street
San Francisco, CA 94105

Re: Transbay Transit Center Quality Control Surveys
Subject: December 2011 Control Verification Survey Results

Dear Mr. Buellesbach:

The field work for subject surveys was conducted by Chaudhary & Associates December 5 - 8, 2011. The surveys included verification of Chaudhary & Associates control (as shown on the Survey Control Plan dated 11-10-2011), with the exception of control point 217 which was destroyed sometime between the November 2011 and December 2011 control verification surveys.

Horizontal control values for point numbers 54, 208, 209, 213, 101, 105, 215, and 227 were constrained in this control network horizontal adjustment. The elevation values remain unchanged from the November 2011 surveys. The table below shows both the 11-10-2011 and the 12-21-2011 values for the remaining control points. Because data values can be impacted by environmental factors (temperature and humidity), seismic activity, and the various combinations of back sight and foresight data available on any given day, only the values which differ by 0.01' or more are adjusted and shown on the following table (and updated on the 12/2011 control map to be sent to you tomorrow). Field note copies and Star Net Reports have been mailed to you.

Horizontal Values

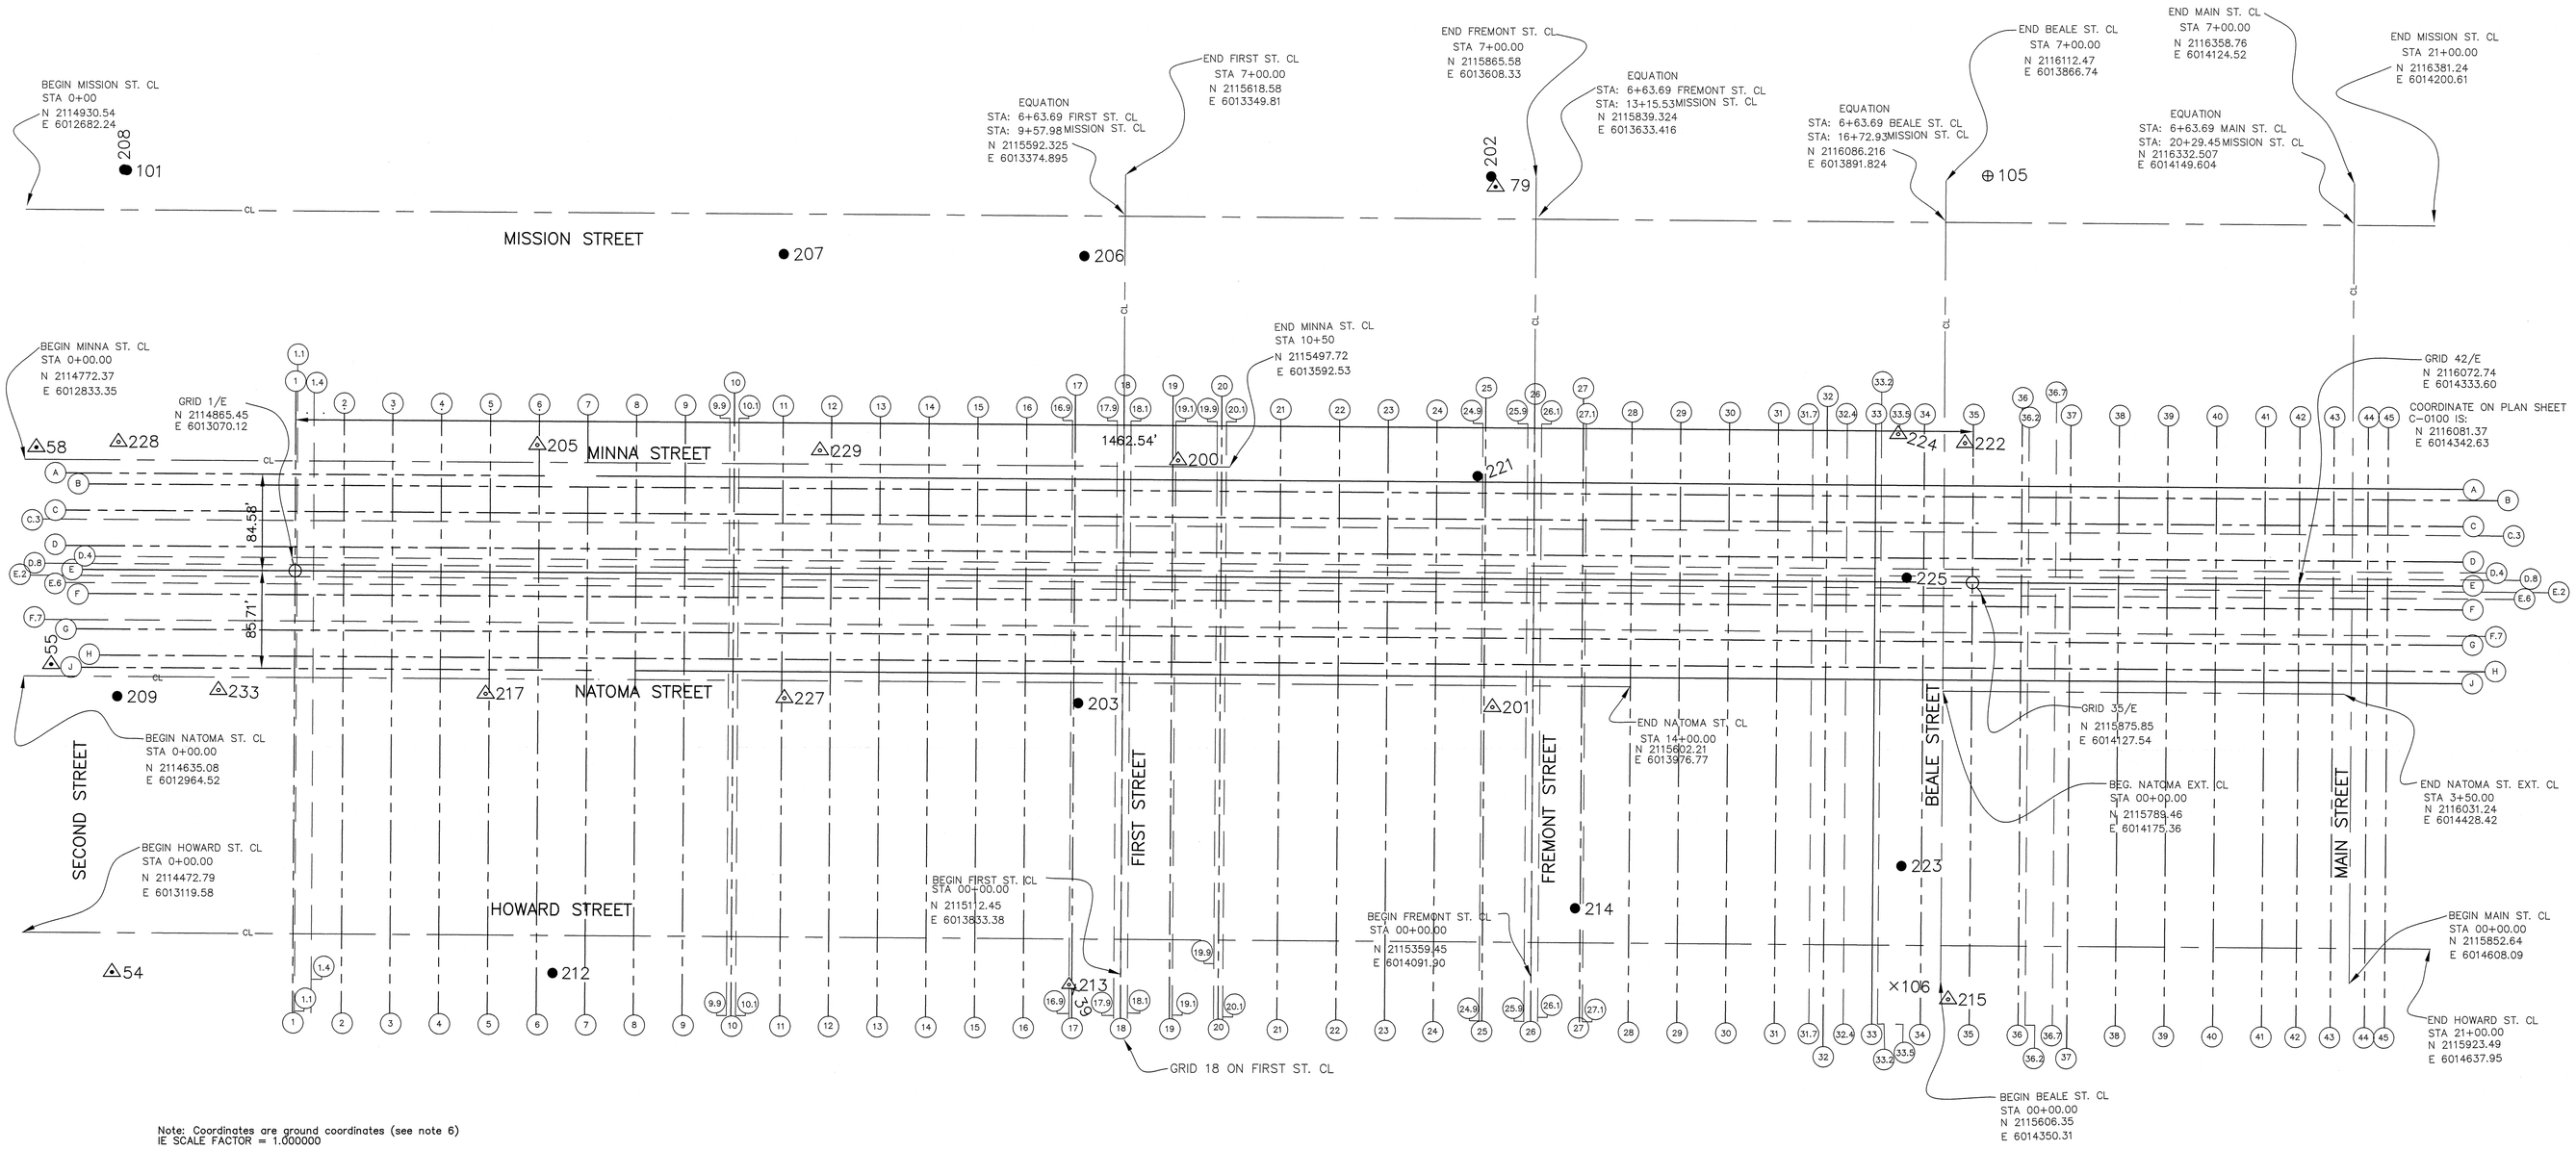
SURVEY PROCEDURES

1) CHAUDHARY AND ASSOCIATES FIELD CREW LOCATED AND TIED OUT CONTROL BETWEEN APRIL 22–MAY 13, 2011. DIGITAL LEVELS WERE UTILIZED FOR THE VERTICAL COMPONENT, AND A TRIMBLE S6 WAS USED FOR THE HORIZONTAL COMPONENT. CONTROL WAS ADJUSTED UTILIZING STAR–NET SOFTWARE. OF THE 4 MAIN CONTROL POINTS SHOWN ON SHEET GT–0100 OF PLANS (BEING PTS. 54, 101, 105, AND 106), PTS. 54, 101, AND 105 REMAIN AS OF THE DATES OF THIS SURVEY. CONSEQUENTLY, PTS. 54, 101, AND 105 WERE HELD IN THE STAR NET ADJUSTMENT. A TOPCON DL–102 DIGITAL LEVEL WAS UTILIZED FOR THE VERTICAL COMPONENT. NOTE: CONTROL POINTS 220–226 WERE FIELD SURVEYED BETWEEN SEPTEMBER 9–14, 2011.

2) CENTERLINES AS SHOWN ON PLAN SHEET C–0100 TO BE FIELD VERIFIED.

3) GRID LINES TO BE SET BY PLACING A CUT X OR OTHER APPROPRIATE SURVEY MARKER ON THE EXTENSION OF SAID GRID LINES WHERE PRACTICAL OR PER WEBCOR AUTHORIZATION.



Note: Coordinates are ground coordinates (see note 6)
IE SCALE FACTOR = 1.000000

Traffic Control Plan
Webcor/Obayashi
WO-TCP0001
REVISION 2
8/22/2012

GENERAL

The Webcor/Obayashi Joint Venture (W/O) Traffic Control Plan that will be implemented on the Transbay Transportation Center Project is an overall project policy, with each trade subcontractor contributing their specific plan as they come on board to the project. The primary function of this plan is to provide a framework to insure compliance with Specification Section 01 15 70. To assist in this effort, W/O has enlisted the services of a traffic control consultant (TCC) – Sandis Engineering. Award of this contract between Sandis Engineering and W/O was based on a competitive request for proposal (RFP) process referred to as TG05.4.

TCC is responsible for participating in all aspects of traffic control planning and implementation including, but not limited to:

- Traffic control design oversight;
- Coordination between trade subcontractor traffic control designs;
- Interface with City of San Francisco and other agencies as necessary;
- Participate in coordination efforts of the TJPA Representative;
- Oversight of implementation of approved traffic plans;
- Provide daily reports regarding status of traffic control measures;
- On call traffic control services as requested.

TRAFFIC PLAN REVIEW AND COORDINATION

TCC shall prepare a detailed "as built" traffic plan for approximately four blocks in all directions from the jobsite. This map will be based on SFMTA maps and will be augmented as appropriate per field review of existing conditions. This map will include all striping, signage, curb lines, curb cuts, curb painting, buildings and any other feature of the street layout and traffic control. Beyond the four block distance, the map will include street layout and striping configuration.

Once a trade subcontractor is under contract, W/O shall provide the trade subcontractor with the as-built plan in CADD format. The trade subcontractor will then be required to use this base map for preparation of all their traffic control plans. A summary of the below criteria can be found in the attached Traffic Control Plan Preparation Packet.

The trade subcontractor is required to prepare and submit a complete traffic plan consistent with requirements of the project specification and all requirements per the City of San Francisco. The submittal must be made in a timely fashion to allow for the review timeframe prescribed in the specifications plus an additional four weeks for review by the TCC.

Upon receipt of the submittal from trade subcontractor, W/O will forward it to the TCC for review. The plan will be reviewed for adherence to specifications and for compatibility with previously submitted plans. Comments will be returned to the trade subcontractor who will make modifications as is appropriate.

When the trade subcontractor's traffic control plan is reviewed and coordinated with the TCC, it will be submitted to the TJPA Representative for approval. Submittal will be in compliance with Specification Section 01 15 70, paragraph 1.4B.

Upon approval by the TJPA Representative and SFMTA, the TCC will update the baseline traffic

control plan as appropriate. The baseline plan will be updated only when a change to the traffic pattern will be in place for three or more months. If the traffic control plan will be in place for less than three months, the plan will be superimposed over the base map for coordination but the baseline drawing will not be modified.

FIELD IMPLEMENTATION

It is intended that the TCC will maintain a regular, but not full time, presence on site. Similar to the traffic control design review, their scope of work is to review the trade subcontractor's adherence to city standards, project specifications and approved traffic control plans.

TCC review and assistance in in field coordination includes but is not necessarily limited to:

- Perform site review of traffic control;
- Note traffic control deficiencies;
- Coordinate correction of site deficiencies with W/O and trade subcontractor;
- Provide daily report of traffic control observations and corrective measures;
- Attend site meetings as necessary to review short term Special Traffic Permit and coordinate between subcontractors and SFMTA;
- Miscellaneous coordination with SFMTA as necessary;
- Review of pedestrian protection as it relates to vehicle traffic;
- Provide traffic control devices and personnel as required to augment traffic control efforts;
- Confirm proper training of subcontractor flagging personnel;
- Provide continuous oversight of traffic control for major construction operations as determined by CM/GC.

TASKS NOT CURRENTLY ANTICIPATED BY TCC

Training of flaggers for the trade subcontractors although it is an option should it become apparent that subcontractor employees need additional training.

Coordination of the 10b police officers between subcontractors will be the responsibility of the CMO.

Pedestrian control unless it is specifically impacted by vehicle traffic.

TRANSBAY TRANSIT CENTER – TRAFFIC CONTROL PLAN PREPARATION PACKET

Overview

The purpose of this packet is to provide the contractor with the information necessary to prepare a Traffic Control Plan (TCP) for their work in accordance with the requirements of the Project Specifications and the City and County of San Francisco (CCSF). It includes procedures, timing, a base map, plan sheet template and examples for use when preparing and submitting Traffic Control Plans (TCPs) for review and approval. The documents included in the TCP Packet are described below.

Flow Diagram

The flow diagram included within the TCP packet identifies the specific components and required time intervals for TCP submittal, review and approval. Please note time requirements for Plan review and approval. No work will be allowed without an approved plan. It is the contractor's responsibility to anticipate and allow for required lead times.

Base Map File

The AutoCAD drawing of the Base Map file included in this packet represents the City of San Francisco street layout as of the date indicated on the Base Map file title block. ALL proposed TCPs shall be created using this Base Map file as a starting point. It is crucial that proposed TCPs be provided on the same coordinate system as the Base Map file so multiple approved TCPs can be overlain in a composite exhibit. TCPs prepared using a different base or plan template will be rejected.

TCP Standards

Design Standards

The Traffic Control Plans shall be prepared and submitted in accordance with the following documents:

1. Transbay Transit Center Project Specification Section 011570 – Traffic Routing Work, dated September 23, 2010. A copy of this specification is included in the TCP Packet.

2. City and County of San Francisco Regulations for Working in San Francisco Streets (Bluebook), 7th Edition dated October 2006. Refer to the following link for a copy of this document: http://www.sfmta.com/bluebook

CAD Standards

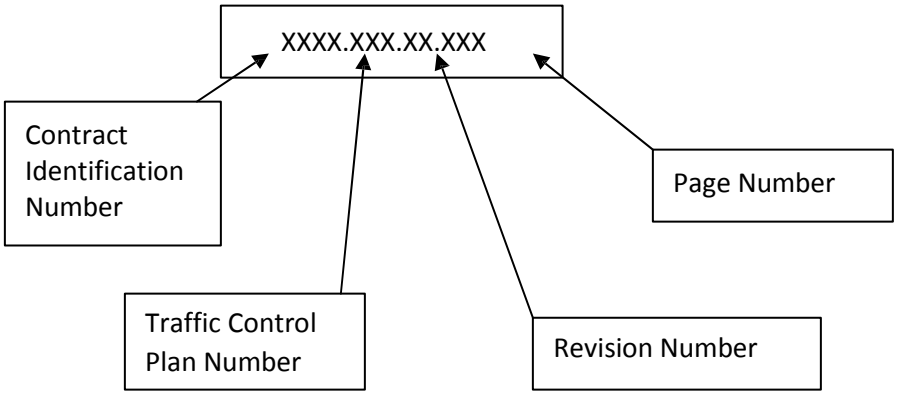
The sheet TCP-001 provides a template with title block, symbols, and specific details pertaining to the presentation and setup of drawings to be used when preparing a TCP. The CAD standards identified under the Vendor Submittal Instructions, including layering configuration, title block, and symbols, shall be referenced and followed when creating all TCP AutoCAD drawings. The contractor shall include additional signs in the form of blocks, notes, and details as needed.

TCP Samples

There are three sample Traffic Control Plans included in this packet. These samples provide an example of how the TCPs shall be set up and configured.

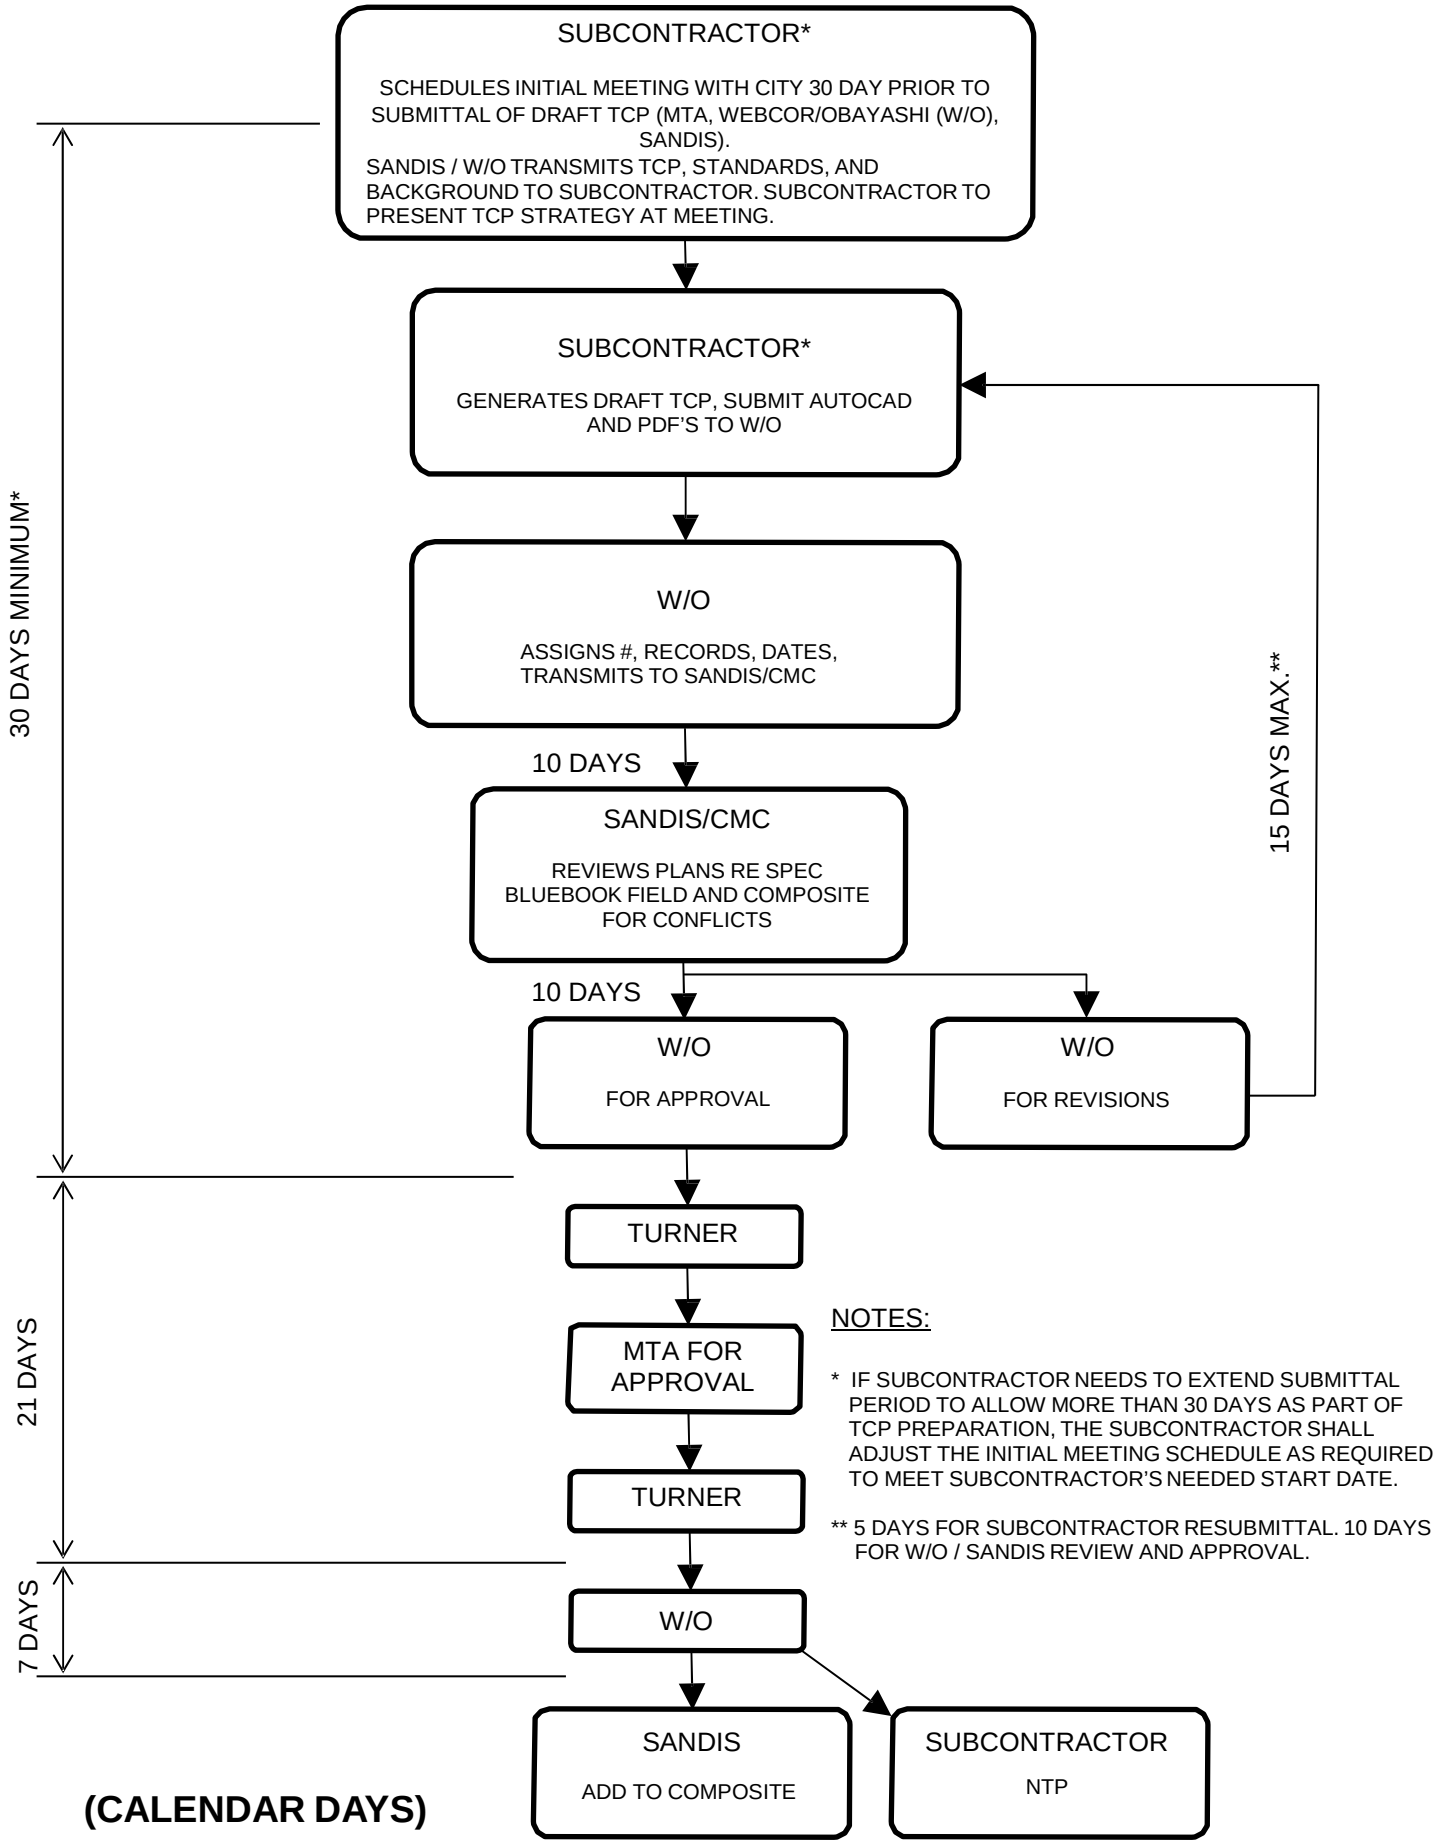
TCP Submittals

All proposed Traffic Control Plans shall be submitted at 1"=80' scale on 22"x34" sheet size in both pdf and AutoCAD 2007 formats. They are to be submitted electronically to Webcor-Obayashi's trade package project manager. An important item to be included on all TCP sheets is the submittal tracking number. The tracking number consists of four segments separated by a period. The first segment is the 4-digit contract identification number, the second segment the 3-digit TCP number (provided by Webcor), the third segment is the 2-digit revision number, and the fourth the 3-digit page number. Refer to the Submittal Tracking Number Diagram below for additional direction.



Submittal Tracking Number Diagram

TRAFFIC CONTROL PLAN SUBMITTAL REVIEW AND APPROVAL PROCESS



NOTES:

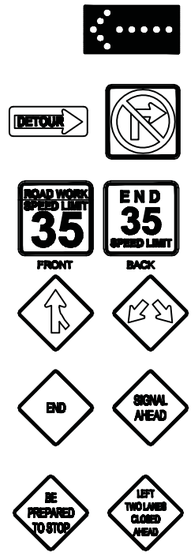
* IF SUBCONTRACTOR NEEDS TO EXTEND SUBMITTAL PERIOD TO ALLOW MORE THAN 30 DAYS AS PART OF TCP PREPARATION, THE SUBCONTRACTOR SHALL ADJUST THE INITIAL MEETING SCHEDULE AS REQUIRED TO MEET SUBCONTRACTOR'S NEEDED START DATE.

** 5 DAYS FOR SUBCONTRACTOR RESUBMITTAL. 10 DAYS FOR W/O / SANDIS REVIEW AND APPROVAL.

VENDOR SUBMITTAL INSTRUCTIONS

TRAFFIC CONTROL PLANS SHALL BE SUBMITTED AS FOLLOWS:

1) FIVE (5) HARD COPIES
2) ELECTRONIC COPY IN PDF AND AUTOCAD 2007 FORMATS
3) 11"x17" SHEET SIZE
4) 1"=80' SCALE
5) SHEET NUMBERING "TCP-###"
6) ELECTRONIC FORMAT PER TEMPLATE PROVIDED: SINGLE CAD FILE CONTAINING MULTIPLE LAYOUT TABS WITH A SINGLE TCP PER TAB. THE TCP SHALL BE DRAFTED IN MODEL SPACE ON TOP OF THE STREET BASE FILE WITH NOTES/LEGEND IN PAPER SPACE. MODEL SPACE SHALL BE DRAFTED AS FOLLOWS:
   a) EACH TCP PAGE SHALL CONSIST OF FIVE LAYERS WITH A PREFIX FOR THAT PAGE NUMBER. FOR EXAMPLE, PAGE 001 WOULD CONTAIN THE FOLLOWING LAYERS:
      001-TC-DIM
      001-TC-NOTES
      001-TC-SIGN
      001-TC-SIGNTEXT
      001-TC-STRIPELINE
      001-TC-WORKAREA
   b) ALL SYMBOLS, BLOCKS AND DIMENSIONS SHALL MATCH THOSE ON THIS SHEET IN SIZE, COLOR, AND LAYER. CREATE NEW BLOCKS USING SIMILAR COLOR AND SIZE FOR SIGNS/DEVICES NOT SHOWN HERE.
   c) INSERT STANDARD TITLE BLOCK PER SHEET. USE ATTRIBUTE EDITOR TO FILL IN TITLE BLOCK WITH APPLICABLE INFORMATION.
   d) TABLES, NOTES, AND LEGENDS SHALL BE IN PAPER SPACE PER SHEET ON LAYER XXX-TC-GENERAL, WHERE XXX IS THE PAGE NUMBER
   e) STANDARD TEXT STYLES, SIZES, DIM STYLES PER TEMPLATE
   f) STANDARD LAYER COLORS AND NAMES; AND CTB/PEN SETTINGS PER TEMPLATE
   g) FREEZE LAYERS IN VIEWPORTS AS NECESSARY TO ONLY SHOW THOSE NEEDED FOR THAT INDIVIDUAL SHEET.
7) REFER TO PROVIDED SAMPLE TCP PLAN FOR AN EXAMPLE OF THE FORMAT BEING IMPLEMENTED.



NOTE:
SAMPLE TEXT FOR FREESTANDING NOTES.

SHEET

Exhibit U Submittal Schedule

Trade Subcontractor's Schedule submission shall include a full submittal schedule per Specification Section 01 13 00 1.4 – Submittal Schedule.

1. All submittals are to be submitted to Webcor/Obayashi Joint Venture within 60 days of Award.
2. The Submittal Schedule shall contain additional data fields to indicate: 1) the duration in work days for procurement of the item starting from the date that the submittal is approved until the item is available for construction, and 2) the Activity ID of the earliest construction activity for which the item will be required (the submittal/procurement item's successor).
3. The Trade Subcontractor should use the attached data format, Submittal Schedule Excel Template, for the submission of Submittal Schedule as Microsoft Excel File. Contact Webcor/Obayashi Joint Venture to obtain the blank excel file of the Submittal Schedule.
4. The Trade Subcontractor shall show critical submittals in the Exhibit I Construction Schedule in addition to providing the comprehensive submittal schedule required herein. Critical submittals are those submittals considered vital to the timely progression of the project schedule. These items may include, but are not limited to, engineering submissions; long lead items; items required within the first 25% of Subcontractor's performance period; and items that are required for construction or installation of a task with less than 20 working days of total float in the overall project schedule. The last group of items may not be determined until after acceptance of the Trade Subcontractor Construction Schedule submission and its full incorporation into the project schedule. Therefore, the Subcontractor may be required to add items to its Primavera schedule file subsequent to approval of its Construction Schedule submission.

- ✓ **Exterior Wall Systems (Precast, Stucco, EIFS, GFRC)**
- ✓ **Water Shedding Systems**
- ✓ **Flashings**
- ✓ **Expansion Joints**
- ✓ **Caulking, Sealants**
- ✓ **Primary and Secondary Water Barrier Systems**
- ✓ **Above & Below Grade Waterproofing**
- ✓ **General Waterproofing Systems**

1.0 Purpose

The purpose of this procedure and guideline is to set forth a commissioning process, which will ensure that the building's exterior envelop and waterproofing systems perform and function in conformity with design intent and to provide a means of verifying the implementation of these systems based on the project specifications, design and applicable industry standards.

2.0 Definition of Commissioning

The term "Commission" refers to a Quality Assurance process by which the building's exterior envelop and waterproofing systems (i.e., below and above-grade waterproofing, decks, roofs, caulking, plaster, precast concrete and GFRC, curtain-wall, flashing, expansion joints, etc.) are provided, installed and tested in order to verify the systems perform in accordance with the contract documents and the design intent.

Commissioning entails the development of a clear and complete process that verifies the systems design and operational intent. It also is to verify that the exterior envelop and waterproofing systems and its components are installed according to the contract documents, manufacturer's recommendations and published industry standards and that the system receives adequate installation and performance inspections by the installing contractor.

The process must include verifying and documenting the installation steps, phases, and system performance with respect to the design intent and the contract documents. Commissioning is a team effort that requires cooperation by all parties to succeed.

3.0 Description of the Commissioning Process

Commissioning is a **"systematic"** process for achieving, validating and documenting the performance of building systems as so that it meets the design intent and requirements.

The process extends through all phases from design to occupancy, and extending through the warranty period. Numerous checks and inspections shall be performed at each stage of the process to ensure that established procedures are followed. The process also includes training of facility operational personnel to ensure continued efficient use of the exterior envelop and waterproofing systems as originally designed and installed.

This guideline provides a uniform, integrated and consistent approach for the commissioning of all waterproofing systems as well as assisting in insuring product and design compatibility. Since many building waterproofing systems are integrated, a deficiency in one system or component may result in sub-optimal performance and failure among others.

4.0 Commissioning Plan

Commissioning is a **"Quality Process"** for validating the system and component design performance.

The reports from the commissioning process are not just test reports, but reports that document design, installation, inspections, and particular tests and or evaluation procedures. The commissioning plan is continually updated to reflect changes in program and design of the waterproofing system(s). Commissioning reports shall document and record the results of the commissioning process.

Each Trade Subcontractor's specific commissioning plan must be neatly organized in a consistent manner that reflects the nature of the building systems and their performance. The commissioning plan shall include schedules, requirements and procedures.

Trade Subcontractor(s) shall be responsible for the timely and efficient completion of all commissioning in accordance with the Subcontract Agreement.

At no time shall any work be permitted to commence without a WEBCOR/OBAYASHI' approved Trade Subcontractor Waterproofing Commissioning Program.

Failure to do so may require Trade Subcontractor to assume all related costs and expenses in accordance with the Subcontract Agreement.

In addition, Trade Subcontractor may also be required to assume all related cost should WEBCOR/OBAYASHI find it necessary to develop, manage and or perform any Trade Subcontractor commissioning work.

5.0 Objectives

The fundamental objectives of the commissioning process are:

5.1 Create a procedure to verify and provide documentation that the waterproofing performance of the facility meet the design requirements.

5.2 Enhance communication by documenting data and decisions throughout all phases of the project.

5.3 Validate and report that the performance of waterproofing systems meets design intent.

5.4 Provide a means of Quality Control and Quality Assurance (QA/QC) throughout all phases of the waterproofing system(s) installation, inspection, and testing process.

6.0 Contractors Normally Participating in the Commissioning Process

- ✓ Waterproofing Consultant
- ✓ Architect
- ✓ Structural Engineer
- ✓ Mechanical
- ✓ Plumbing
- ✓ Electrical
- ✓ Fire Sprinkler
- ✓ Glass Systems
- ✓ Caulking
- ✓ Brick, Tile, Precast, GFRC, and Stone
- ✓ Fountains and Ponds
- ✓ Swimming Pools & Spas
- ✓ Roofing
- ✓ Insulation
- ✓ Flashing & Sheetmetal
- ✓ Waterproofing Contractors
- ✓ Concrete (If waterproofing admixtures are included by design)
- ✓ Stucco, EIFS, DEFS systems
- ✓ Elastomeric Painting
- ✓ Rough Carpentry (Wood cladding)
- ✓ Architectural Metal Cladding
- ✓ Expansion Joint Systems
- ✓ Water Tanks
- ✓ Special Systems or Components

7.0 Commissioning Team

The commissioning team members may consist of the following:

- ✓ WEBCOR/OBAYASHI - Project Team as required

- ✓ Owner - Designated representative of the owner, building operator/engineer, and/or the owner's construction management firm
- ✓ Engineers - Architect and Designers
- ✓ Waterproofing Contractor
- ✓ Waterproofing Consultant
- ✓ Flashing / Sheet Metal Contractor
- ✓ Exterior Skin Contractor
- ✓ Roof Contractor
- ✓ Glass and Curtain Contractor
- ✓ Caulking and Sealants Contractor
- ✓ Commissioning Agent (CA)
- ✓ Mechanical Contractor
- ✓ Plumbing Contractor
- ✓ Fire Sprinkler Contractor
- ✓ Electrical Contractor
- ✓ Testing Contractor
- ✓ Other as necessary

8.0 Meetings

Regularly scheduled commissioning meetings of **the entire team** shall be conducted for site coordination, communicating issues of concern, resolving conflicts, reporting on system process and status, identifying urgent work and all deficiencies.

Commissioning meetings are critical to the **Quality** of the commissioning process as well as timely completion of the project.

9.0 Trade Subcontractor Performance Requirements

9.1 Designation of the primary person who will be responsible, accountable, and act as the main contact person for all commissioning communications. Provide organizational chart indicating personnel who will be involved in the project. The chart should indicate factory, office, and on-site field personnel.

9.2 Review of drawings and specifications for completeness, appropriateness of details, and acceptance by Trade Subcontractor thereof.

9.3 Review WEBCOR/OBAYASHI standard details.

9.4 Preparing and submitting documentation of Trade Subcontractor's respective materials and systems to be integrated into the overall Commissioning Plan.

9.5 Submitting information on the intended commissioning protocol used on materials, and the integration into the system as a whole.

9.6 Provide a presentation of the commissioning process to WEBCOR/OBAYASHI, the Owner and or the owner's representatives. Demonstration shall indicate compliance with the Trade Subcontractor Commissioning requirements as outlined in this document.

9.7 Submitting shop drawings detailing waterproofing system layout as outlined in the contract documents. Shop drawings shall reflect all conditions present in the building, including but not limited to the following:

a. Conditions where different materials meet (i.e. windows to plaster or stone to plaster).

b. Corner conditions.

c. Conditions where vertical planes meet horizontal planes (i.e. soffits and sills).

d. Expansion joints and control joints.

e. Flashing.

f. Penetrations (i.e. Z-ducts, electrical outlets, louvers).

g. Conditions typically utilized by Trade Subcontractor's common practices.

Shop drawings shall include installation drawings indicating the planned sequence of installation of all components.

9.8 Providing means and method for preliminary testing of the exterior envelop and waterproofing systems with manufacturer's representative present as required:

a. Caulking: Include complete coordination with the caulking manufacturer's representative to assure compatibility of the caulking system with the

surrounding substrate and finishes. Trade Subcontractor shall submit caulking samples including manufacturer's specifications for materials, color, cleaning procedure, required primers, proper backer rod, installation procedures, testing requirements and results. Testing of caulking samples between all combinations of materials shall be performed by qualified testing agencies in direct accordance with A.S.T.M. Standard Test Method C794 (75), including seven (7) day immersion. A letter from the Caulking Manufacturer shall be submitted approving all testing procedures, the installation procedure and the use of the specified materials for the intended application. Any materials installed without such approval that may be in conflict with the approved procedures or of unacceptable color and appearance will be removed and replaced at the Trade Subcontractor's expense.

b. Windows and Sliding Glass Doors: Assemblies shall be field tested in accordance with American Architectural Manufacturers Association (AAMA) 502-02 Voluntary Specification for Field Testing of Windows and Sliding Glass Doors using Test Methods A and B, testing a minimum of 1% of the products for air leakage resistance and water penetration resistance as specified for various stages of the product installation.

9.9 Reviewing all required testing under the witnessing of WEBCOR/OBAYASHI, Building Owner, and or the Owners representatives.

9.10 Correcting all system deficiencies at Trade Subcontractor expense.

9.11 Obtaining all required permits, code required inspections and final certifications.

9.12 Preparing complete as-built record drawings made from an original set that has been marked up throughout the duration of the project. Drawings must indicate all work as it was actually installed showing change order revisions, field changes required to meet the working conditions, and any other items that will affect or reflected in the operation and maintenance of the facility.

9.13 Obtaining all manufacturer’s warranties and guarantees.

9.14 Organizing the O&M manuals, if any, from suppliers and manufacturers.

9.15 Performing any specified training for the facility’s operational staff.

10.0 Information Management

The management and continued organization of the commissioning information shall be the sole responsibility of the Trade Subcontractor.

WEBCOR/OBAYASHI and the Trade Subcontractor shall mutually agree on the location were all the commissioning information and documentation shall be stored.

The Trade Subcontractor shall make every effort to continually update and manage the information throughout the commissioning process. WEBCOR/OBAYASHI and the Building Owner may review the commissioning information provided by the Trade Subcontractor at any time for updates, accuracy and completeness.

WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's monthly progress billing in the event the commissioning information or performance requirements as described in the Waterproofing Quality Commissioning Procedures & Guidelines are not being performed, managed and updated by the Trade Subcontractor.

11.0 Trade Subcontractor Commissioning Submittal Requirement

Each Trade Subcontractor has a responsibility to WEBCOR/OBAYASHI and the Building Owner to comply with the terms of the contract and to verify that the design intent of the waterproofing systems for the project is achieved.

Each Trade Subcontractor is required to provide two completed commissioning manuals containing the information outlined in Section 19 - Commissioning Binder Tab Index of this guideline. Each proposed formatted “3-ring” binder containing all information, including blank forms shall be provided to WEBCOR/OBAYASHI and the Owner for **“review and comment”** before the commissioning process begins, or by an agreed upon date.

WEBCOR/OBAYASHI, the Owner and the owner representative shall review the information and return it to the Trade Subcontractor within **two-week** time with all comments.

Each Trade Subcontractor shall make all required changes as agreed, to the commissioning manuals and resubmit them to WEBCOR/OBAYASHI within **two-weeks**.

Each Trade Subcontractor shall schedule and provide a formal demonstration of their commissioning process to WEBCOR/OBAYASHI, the Owner and the Owners representative after all required changes to the manuals have been satisfactory completed. Demonstration shall indicate compliance with the Trade Subcontractor Waterproofing Commissioning requirements as outlined in this document.

Each Commissioning Manual **shall be neatly organized** using appropriate tabs, dividers, table of content, index, etc. as required for easy referencing. Refer to Section 19 Commissioning Binder Tab Index for a standard binder organization. All Commissioning Manual(s) **must be user friendly**.

12.0 Commissioning Binder Tab Index

Tab 1. **Project design criteria specifications –** Provide information that describes the overall design criteria and performance requirements for the waterproofing system(s).

Tab 2. **Manufacture products and components** – Provide complete submittal list of all components that shall be contractually provided and installed.

Tab 3. **Manufacture installation instructions –** Provide manufacture documentation insuring that the system and components installation complies with all Manufacture requirements to maintain performance and guarantee obligations.

Tab 4. **Manufacture details –** Provide manufacture details or published industry standards for penetrations and terminations interfacing with other installed systems.

Tab 5. **Design transition review –** Provide design review comments and concerns on transition interfaces to other s or other compatibility issues.

Tab 6. **Quality Assurance / Quality Control Program –** Provide QAQC program with complete field inspections and checklists.

Tab 7. **Documentation –** Trade Subcontractor shall maintain a separate field binder documenting the QAQC inspections and field-testing for all installed work.

Tab 8. **Field mock-up and testing –** Provide information on mock-up or field performance tests that shall be preformed for all installed system(s). Provide manufacture recommendations or published testing standards used. If no performance testing is preformed, Trade Subcontractor shall provide documentation on how each system is performing in accordance to the documented design intent and contract warranty requirements.

Tab 9. **Schedule –** Provide schedule for, shop drawing devolvement, submittals fabrication, delivery and installation.

Tab 10. **Agency and factory test reports –** Provide all factory, agency, and field performance-testing reports on installed systems.

Tab 11. **Factory and Trade Subcontractor guarantee information –** Provide warranty responsibilities and durations for all systems and components installed.

Tab 12. **Owner Training –** Provide (O&M) and training for all required service and maintenance requirements as it extends throughout each system to maintain warranty. Include owner sign-off sheets verifying training.

Tab 13. **Attic Stock –** Provide list of spare material that shall be supplied by Trade Subcontractor to owner – Paint, applied materials, gaskets, handles, glazing, or patching products.

Tab 14. **As-Built Drawings –** Provide completed set of drawing and details accurately reflecting all installed and completed work.

Tab 15. **Material Safety Data Sheets –** Provide all Material and Data Safety Sheets (MSDS).

13.0 Identifying the Defects

It is the intent of the commissioning process to avoid defects in waterproofing systems. A standard of care exhibited during the commissioning process should anticipate potential defects and determine appropriate solutions prior to the installation of these systems. In the event that defects do occur, proper defect identification will help determine the repair needed and assist in selecting the appropriate method and materials.

It is important to acknowledge which factors have caused deficiencies in the waterproofing system and its components, and how a deficiency in one system may influence or amplify another. Careful and thorough defect identification is critical to obtain long-lasting, quality repairs. It is critical and necessary to eliminate the cause of the defect and not solely treat the symptom.

Each Trade Subcontractor shall be responsible for determining the cause and origin of various problems as it pertains to their contractual scope of work. Failure to do so may require Trade Subcontractor to assume all related costs and expenses for damages, repairs performed by others, testing, special inspections, and consultant fees.

14.0 Applicable Industry Standards

Unless the Contract Documents include more stringent requirements, applicable published construction industry standards shall be utilized. Where compliance with two or more standards is specified for quality or quantity levels, comply with the most stringent requirement.
Where sections of the specifications require that a product, material, installation, or test complies with a specified industry standard, the Trade Subcontractor shall obtain copies directly from the publication(s) source and include the information in the submitted commissioning information.

Each Trade Subcontractor engaged in construction on the project must be familiar with published industry standards applicable to their construction activity.

15.0 Schedules

An initial schedule shall be developed by the Trade Subcontractor identifying dates, times, and durations for shop drawings, approval of submittals, material fabrication, product delivery, acceptance, installation, testing and completion.

The schedule shall also include any commissioning task that shall be performed on waterproofing systems that may involve or affect other related building systems.

Each Trade Subcontractor shall update schedules, daily, weekly, monthly, or as required to keep WEBCOR/OBAYASHI and the Owner informed of the activities performed. This schedule will indicate appropriate milestones during the installation to allow WEBCOR/OBAYASHI and or the Owner the ability to observer and witness system installations prior to being cover up by subsequent s. The schedule will indicate milestone dates for Trade Subcontractor inspection and testing.

16.0 Execution of Inspections and Checklists

Trade Subcontractor and or vendors shall schedule initial inspections and checklist review with the commissioning team. The inspections and reviews shall be directed, executed, and documented by the Trade Subcontractor or vendor.

To document the process, the Trade Subcontractor performing the task shall provide and complete all documentation forms and checklists. (See attached sample checklist)

17.0 Field Inspections

One of the most important commissioning activities for waterproofing systems is field inspections. The field inspection process shall serve as a method and means of documenting the installation process as well as indicate variations between contractual design and construction.

Each Trade Subcontractor shall identify in detail the scope of their field inspections, and the types of field procedures that will be required to obtain the necessary information to provide a complete waterproofing quality control evaluation at the completion of the job.

18.0 Field Witnessing of Trade Subcontractor's Quality Control

WEBCOR/OBAYASHI, the Owner, consultants and the Architect reserve the right to witness the waterproofing system installation at any time. Spot checks shall be conducted on a random basis. If inconsistencies are discovered in quality, performance, or if commissioning information differs from those submitted, the Trade Subcontractor may be required to completely remove and remedy all conditions where the inconsistencies occurred at no additional cost or impact to the schedule.

Witnessing shall include all or part of, but not limited to the following:

14.1 Mock ups

14.2 Waterproofing component and system installation

14.3 System inspection and checks

14.4 Performance tests

14.5 Special Inspections

19.0 Documentation

Trade Subcontractor shall maintain a separate field binder documenting quality control inspections and field-testing for all installed work. Documentation shall include dates, quality control field checklist, reports with inspected locations defined by grid lines and elevations. Provide a dated photo log, documenting inspected areas and general sequence of installed work for the duration of the project.

20.0 Testing and Methods

The objective of field-testing is to correlate paths of moisture infiltration and to observe the source of damages. Moisture entering a building during extreme weather may be obvious, but the most reliable method to discover the infiltrating path is to recreate the leakage condition in a controlled manner. Testing also allows verification of the theory for the cause of leakage.

As all system and component tests are unique to some degree, there may not be one standard or method for testing that can be applied to all. There are several methods, standards, governing requirements, and manufacture recommendations, etc., which should be applied.

There are three types of acceptable testing methods that can be used during the investigation. All of which must be approved by WEBCOR/OBAYASHI. These testing categories include:

- ✓ Non-Destructive Testing
- ✓ Destructive Testing
- ✓ Laboratory Testing

20.1 Non-Destructive Testing

Non-destructive testing uses a variety of non-invasive tools. This type of testing causes little or no damage or interference to the building envelope. The various methods of non-destructive testing include:

a. *Rilem Tube* - This calibrated device is adhered to exterior masonry walls to determine the porosity and condition of brick masonry units, mortar joints, head joints, and embedment joints.

b. *Water Spray Rack (ASTM E1105)* - This test simulates a wind-driven rain condition on a facility. It can assist in determining the specific cause and origin of moisture infiltration when it is used to test independent components of the envelope. Spraying water over a large area in an uncontrolled fashion will not reveal specific causes of water infiltration.

c. *Hose Spray Test (AAMA 501.2)* - This test method also simulates wind-driven rain in small segmented areas using a standard garden hose in which a calibrated nozzle is attached with a pressure gauge. The spray is

directed at a specific joint, crack, or defect to reveal potential moisture intrusion.

d. *Differential Pressure Test (ASTM E1105)* - A pressure chamber is constructed on the interior of the facility at a specific location to test moisture driven through an assembly or component. The assembly or component is subjected to a negative force while simultaneously a spray rack is directed at the assembly to draw the moisture into the facility to simulate a negative pressure under a wind-driven rain condition.

e. *Infra-Red Thermography* - Infra-red Thermography photographs the building exterior to determine the locations of wet components. Components, such as insulation and sheathing, etc., will act as heat sinks if they contain high levels of moisture. During the day, moist and dry components absorb heat. At night, the moist areas release the heat much slower than the dry areas. By reading the heat signature, Infrared Thermography will help expose the problem areas. Small test cuts may be required to verify moisture areas.

f. *Soundings (ASTM D4580)* - There are different ways to perform sounding tests including the hammer tap test. In this test, a 16 oz. hammer is tapped against concrete for sound. A hollow sound indicates areas where the concrete has separated from the reinforcing steel, typically due to exfoliation or corrosion of the steel. Another method of sounding is to chain drag a heavy 15 ft. link chain along a concrete surface to listen for hollow sounds, indicating defective concrete. This method can cover larger areas effectively and is commonly used on parking garages and loading docks.

g. *Pachometer Survey* - This test uses a magnetic device used to locate embedded steel reinforcement and help determine the concrete cover over the reinforcement. Generally, the Pachometer is fairly accurate when measuring ¼ inch to 3-inch thick concrete cover and when reinforcing placement is not too congested.

h. *Poly-sheet Tape-down* - This test determines the presence of moisture coming through a concrete surface, typically a slab-on-grade type of assembly where the typical problem is tile or membrane separation from the floor. A 2’ x 2’ section of polyethylene is sealed to the concrete with duct tape and removed 24 hours later. If there is moisture beneath the polyethylene, it is a good indication that there is a vapor drive through the concrete section.

i. *Glass-Slide Epoxy or Crack-o-meter* - This device is sealed in place over a crack and periodically checked to determine if any movement has occurred. If movement has occurred, the glass will crack or the meter will record movement.

j. *Optical Illuminated Boroscope* - A boroscope is inserted into a 5/8-in. diameter pilot hole through an exterior wall system and allows the cavity walls of brick veneer, stud wall backup of exterior insulated finish systems (EIFS), or other types of constructions to be observed without large-scale destructive testing.

k. *Smoke/Dust Tracer* - The smoke/dust tracer helps to find air infiltration. It is moved across the interior face of a window to observe the smoke and dust particles coming through the assembly.

l. *Moisture Meter* - A Delmhorst meter is a digital device that detects the presence of moisture in various building components. This test is typically accompanied by a gravimetric analysis (oven drying of samples), which is used to confirm the results of the Delmhorst meter.

m. *Flashlight and mirror* - These simple tools can be very useful to detect problem areas. Placing the mirror into the plenum or behind difficult-to-access areas with the flashlight will allow observation of concealed conditions.

20.2 Destructive Testing

When the main objective is to determine the existing composition and configuration of concealed assembly conditions, destructive testing may be warranted. The most common methods of destructive testing are test cuts and borings.

Any type of destructive testing must be reviewed and approved by WEBCOR/OBAYASHI.

a. *Roof Testing* - Test cuts in the roof assembly may be necessary to determine the condition of the underlying insulation and substrate. Cutting into the system may help verify whether roofing problems are causing corrosion of the steel deck, or a spalled and cracked concrete deck, etc. Test cuts may also expose the as-built configurations of the flashing components at roof-to-wall locations, curb locations, etc. This information is critical to the appropriate remedial design and/or repairs.

b. *Exterior Wall/Skin Testing* - Test cuts on exterior walls may be required to identify the origin of moisture infiltration. For masonry walls, it is most effective to make test cuts at window heads and sills, and at any through-wall flashing locations that may be suspected of allowing moisture intrusion. Masonry test cuts may expose defective through-wall flashing that is allowing moisture intrusion. Test cuts may also help determine the underlying conditions of the steel components in wall systems, including wall ties, reinforcing steel, sub-steel columns, etc.

20.3 Laboratory Testing

Destructive testing is also used to obtain samples for lab analysis. Samples of sealants, coatings, painted finishes, roofing materials, etc. can be sent to a laboratory to determine the presence of lead or asbestos. Samples of masonry or concrete can also be tested to help identify causes of moisture/air infiltration (descriptions of these analyses follow).

Laboratory testing may help obtain a better understanding of existing material types, presence of contaminants, and the possibility of hazardous components.

This type of testing can also provide valuable information concerning proper surface preparation, material selection, and implementation of repairs.
The following laboratory tests are some of the more useful when performing building envelope evaluations:

a. *Gravimetric Analysis* - This test will determine moisture content. After weighing and recording the in-situ existing sample, completely dry the sample in an oven and re-weigh it. The weight difference indicates moisture content and is particularly useful for insulating materials. Testing moisture contents of samples is critical to verify results from non-destructive moisture scans.

b. *Petrography* - Petrography determines the "make-up" of concrete. This test will indicate the size and type of aggregate, air/void ratio, type of cement, and general mix design data of the concrete. Most materials testing lab can perform this test.

c. *Air Entrainment* - Provides an indication of the existing concrete's durability and freeze-thaw resistance. Air entrainment is generally indicated by petrography.

d. *Presence of Carbonization* - Accomplished by spraying a solution of phenothelene on the concrete substrate and recording the depth of the solution's color change. This will indicate to what depth carbon dioxide has progressed into the concrete. Carbon dioxide will degrade the cement matrix of the concrete and lower the pH level of it. The layer surrounding the reinforcement is then destroyed, allowing corrosion of the reinforcing steel. Corrosion by carbonization usually occurs over a broad area.

e. *Chloride Ion Content* - Chlorides from marine atmospheres or mists from road salts entering the concrete substrate, and salts originally introduced to the concrete via admixtures or aggregates can promote accelerated corrosion of reinforcing steel, usually at concentrated or specific locations. The chlorides are not consumed in the corrosion process but rather act as catalysts in the process. The corrosion will progress along the reinforcing bars causing concrete de-bonding, cracking, and spalling.

f. *Reinforcement Placement, Depth, Quantity, and Type* - This information may be established with the use of a Pachometer or similar electronic metal detector. It is useful in determining required steel replacement and structural capacities during engineering analysis phases.

21.0 Engineering Analysis

Using information obtained from the field, laboratory results, and collected data, a comprehensive engineering analysis may be required. The engineering analysis should include an assessment of field and laboratory data, structural analysis as well as the following:

- ✓ Thermal Analysis
- ✓ Drainage Analysis

- ✓ Vapor Drive Analysis
- ✓ Fire Rating Requirements
- ✓ Cost Estimations

22.0 Deficiencies and Non-Conformance

The Trade Subcontractor shall identify and list any outstanding deficiencies or procedures that were not completed successfully during any final testing. Documented deficiencies shall be submitted to WEBCOR/OBAYASHI within 48 hours of each test completion.

The Trade Subcontractor shall also provide in writing, the corrective action for each deficiency as required within 48 hours. The installing Trade Subcontractor and or vendor shall correct all outstanding issues or deficiencies in the materials or the installation of the materials and provide the commissioning team with dates and times for the required corrections and any re-testing.

23.0 Remedial Work

General considerations for the repair of defects and replacement of components should include the following:

23.1 Determine the effect, if any; the repairs have on the structure, surroundings, and operations of the building.

23.2 Ensure proper preparation of surfaces to be repaired and provide chemical and mechanical bonds for new materials.

23.3 Material selection should include an understanding of performance limitations and should rely on the products past acceptable performance. Material selections should include consideration of the following:

- ✓ Compatibility
- ✓ Maintenance
- ✓ Life cycle

24.0 Project Commissioning Closeout

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative shall determine when the Trade Subcontractor commissioning process has been satisfactorily completed and when to submit the final report information and all other documentation to Webcor.

As part of the project turnover, the quality of all work will be reviewed to determine whether it is within specific and manufacturers' guidelines, industry standards, and code compliance.

WEBCOR/OBAYASHI, the Owner, and/or the Owner's representative consultant must be completely satisfied that the commissioning procedures have been performed accurately and professionally.

In the event the commissioning information or performance requirements outlined in the Waterproofing Quality Commissioning Procedure & Guidelines have not been met, WEBCOR/OBAYASHI may elect to withhold or make appropriate adjustments to the Trade Subcontractor's final billing.
