T-2984	SCS - Partition Wall Opening Elevation	Closed	04/24/2015	05/04/2015	05/08/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kamran Azarbal To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Kamran Azarbal				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: A1-9236 Location: Lower Concourse Gridline: GL 12/B and 10.2/B Add'l Doc Ref: Sketch attached Please refer to rooms B1323 and B1324 at the Lower Concourse Level (GL 12/B and 10.2/B). Regarding the openings shown on details D/A1-9236 and F/A1-9236, please provide the elevation required for the lowest wall opening (see drawing attached for clarification.)			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Typically, the transformer vault room wearing slabs slope down (1/8" per foot) to the sump pit area through the opening in the wall (for high point (HP) and low point (LP) of the wearing slab, refer to drawings A1-3001 to A1-3003). The bottom elevation of the opening can be derived by deducting the thickness of 3-1/2" (consisting of floor coating, wearing slab, drainage composite, protection board, and WPM-5) to the low point elevations on plan. For the typical detail at the wall opening, refer to SKA-4623 Answered by Design Team: 5/6/15 Closed by WOJV: 5/8/15

T-2990	SSS - Decking Clarifications at Exit Mezzanine From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton REQUEST: Contract Doc Ref: 1/S1-2252, 4/S1-5032, and 10/S1-9001 Location: North Mezzanine Exit Gridlines: 21-22 Add'l Doc Ref: SK1, SK2, and SK3 1) Please confirm the rebar dowels tying into the slab wall shown in SK3 will be placed after the deck as the deck cannot be installed after the dowels. A similar condition occurs at the South Exit Mezzanine. 2) To the north-west of grid 22/C a S11 slab is shown. The deck for the S11 slab spans between two W12x40 beams and rests on the top side of the bottom flange. To clear the top flange the deck must be shortened by about 5". The net result is 1½" of bearing at each end of the sheet. The minimum requirement for bearing is 2". Furthermore, the maximum un-shored span for this deck is 10'-0". The beam to beam dimension is 10'-8 1/16" with a clear dimension of 10'-0 1/16". The max un-shored span is based on 2" of bearing. With the reduced bearing and maximum span reached we recommend the deck be shored prior to placing concrete. Please confirm 1 ½" of bearing is acceptable and shoring will be required.	Closed	04/27/2015	05/04/2015	Potentially		<input type="checkbox"/>
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1- This is a means and methods issue. Couplers at the CMU wall face as recommended by W/O would be an acceptable approach. 2) 1 1/2" bearing is acceptable. Shoring is a means and methods issue. Contractor is responsible for the stability of the structure in the temporary condition as indicated in General Notes Section GR-5 of Sheet S-0005. Reason for RFI (TT): We categorize this RFI as clarification on means and methods. Date answered by design team: 5/1/15 Date closed by WOJV: 5/4/15

T-2991	SSS - Voids Around Columns at Ground Level GL 10-14	Closed	04/28/2015		04/30/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Quang Le	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: TG0701-92A Sht. 2, S1-2303 Location: Ground Level, Zone 2 Gridlines: 10-14 Add'l Doc Ref's: WOJV 1, 2, and 3 There are voids around the columns at the ground level with no detail. Highlighted are the locations with similar shape and size openings. Please provide a response that could be implemented in zones 1, 3, and 4. 1) Please provide a general detail to close the L-shaped openings. 2) Please confirm sheet metal gauge size is to remain the same as deck per spec 05 30 00 (2.3A, 2.4C, and 2.4D) if opening is larger than 3"x3". 3) Please provide a general detail to close the line gap openings between top of flange to TR. 4) Please confirm sheet metal gauge size is to remain the same as deck per spec 05 30 00 (2.3A, 2.4C, and 2.4D) if gap is larger than 2". 5) Please provide a general detail to close the square opening. 6) Please confirm sheet metal gauge size is to remain the same as deck per spec 05 30 00 (2.3A, 2.4C, and 2.4D) if opening is larger than 3"x3". For Reference only: Spec 05 30 00- Steel Deck 2.3A) Galvanized Steel: roof steel deck, floor galvanized steel deck and all closures and flashing shall be formed from steel sheets conforming to ASTM A653, SS Grade 33 (min) with minimum yield strength of 38ksi. Before forming, steel sheet shall be coated with a zinc coating conforming to ASTM A653 Zinc coated per ASTM A653 G90. 2.4C) Pour Stops and Girder Fillers: Steel sheet, of same material as deck panels, and of thickness and profile indicated, but not less than deck gauge. 2.4D) Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material and thickness as deck panels, unless otherwise indicated.				Areas to receive concrete must be formed and the forms must be wet concrete tight. Method of forming is within the contractor's means-and-methods. Formwork shall conform to either Specification 05 30 00 or 03 10 01. Reason for RFI (TT): "clarification for issues on means and methods" and "called out in contract documents"

To provide code compliant CJP weld terminations at cast nodes 16-01 and 19-01 (girder top flange and continuity plate welds - see attached sketches) and eliminate weld dam conditions up against the casting, we must remove material from cast nodes 16-01 and 19-01 as shown in attached sketch. This will allow proper termination of CJP welds</p> <p>2.) Please also confirm that a 3/4" vertical fillet weld is required between continuity plates (above and below girder top flange) as none is shown on S1-4353 but shown on 5c/S1-4352.</p> <p>Please confirm this is acceptable, that architectural requirements are maintained and that there are no other feasible options as removal of cast node material will have time and cost impacts to our fabricator.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>Items 1) and 2) are confirmed. It is not correct that there are no other options available. The proposed strategy is preferred, as it salvages work already completed before the issue was brought to the attention of Design Team.</p>		
T-3003	BGP - Knee Wall Formsaver Location GL13/G	Closed	05/01/2015	05/11/2015	05/19/2015	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Kamran Azarbal To: Turner Construction Company Phil Militello</p> <p>Co-Author: Shimmick Construction Company, Inc. Scott Bunnell</p>			<p>Answered By: Adamson Associates, Inc. George Metzger</p>				
	<p>REQUEST:</p> <p>Contract Doc Ref: A1-2124 Location: Mat Slab Area 7 & 8 Gridline: GL 13/G Add'l Doc Ref: Attached</p> <p>Please reference attached comprehensive layout drawings for Area 7 & 8 Mat Slab. Following the Area 7 Mat Slab pour, Area 8 comprehensive layout drawings were returned with changes to the location of B2463 IDF Room at GL13/G. As a result, the eastern half of platform formsavers were installed 2" north of those previously installed on the western half. Please confirm:</p> <p>1. The eastern half of platform wall dimensions are correct.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>1. Confirmed; as marked-up on the RFI, from gridline G to the north wall, the dimension is 2'-10 3/8". For all other dimensions for the knee walls at IDF Room B2462 and Electrical Room B2461, please refer to reviewed and approved submittal TG0600-961.1 (sheet KW1.02). Please note that there can be no deviation from the dimensions on the submittal for the knee walls and walls above them to ensure Train Platform Clearance minimum requirements are maintained.</p> <p>2. Confirmed; the exterior formsavers placed outside of the submittal location/dimensions shall be abandoned and replaced by drill and bond # 6 dowels is acceptable.</p> <p>3. Confirmed; additional cover to exterior formsavers</p>

	<p>believe the concrete in the trestle piles is approximately the same elevation as the bottom of the mud slab. Please confirm TG06 fills the inside of the piles to the bottom of the compressible material". The response to the question states, "Refer to TG03 reference documents. TG06 trade sub is responsible for completing all details as shown on A1-8711".</p> <p>It is clear the TG03 contractor, which is once again the designer of the trestle and pile, does not require the concrete inside the pile above the excavation elevation as set forth in the above paragraphs. SCCI fully understands it is responsible for the waterproofing details depicted in the Architectural drawing A 1-8711 per contract and as stated in the response to QBD 111. Furthermore, see highlighted AI-8711 (Titled as "Train Box Waterproofing Details") stating "Piles for shoring, bracing, and trestle columns (not in package) penetrations thru WPM to be sleeved, waterproofed, and sealed". Additionally, see highlighted notes on Detail 2 of TG03 Sheet S1-3003 stating, "See architectural documents for waterproofing details". It is very apparent SCCI (TG06) is responsible for the waterproofing details depicted in the architectural drawings and more specifically A1-8711 titled "Train Box Waterproofmg Details."</p> <p>In conclusion, it is evident the TG03 contractor (trestle pile designer) does not require concrete inside the piles above the excavation elevation and the TG06 contractor is responsible for waterproofing the trestle pile.</p> <p>Please confirm the concrete inside the trestle piles above the excavation elevation is not required. If not, are there any specific structural requirements for this fill? Could it be gravel or a lean slurry grout?</p>

From: Webcor Construction LP Aseem Goyal To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST: Ref: A/A1-4650 , 7/A1-4650 Location: Light Column Lighting, Lower Concourse Closest Column Line: 23 & E Add'l Doc Ref's : N/A A/A1-4650 calls out for electrical routing for phase 2 lighting at the lower concourse level, since it will be unfeasible to run a conduit through the light column once its welded and grouted in place. Please confirm the following; 1) The intent is to drill 2 holes through horizontally and completely through the light column and stub a conduit through the column for future use. 2) Is there a home-run location for the Phase 2 conduit or is the conduit to remain stubbed and cap somewhere near the light column for future use. 3) Is Detail 7/A1-4650 is to be followed for where the conduit stubs into the center of the column.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1. No, the design intent for the Phase II does not require a conduit to go through the light column vertical members. The conduit can be routed through the Lower Concourse plenum space and through a soffit at the glass floor circular opening and be stubbed-out and capped to feed the future Phase II lighting. 2. Conduit is to remain stubbed just to the inside boundary of the future phase 2 ceiling soffit. 3. See item 1 above. Answered by Design Team : 5/15/2015 Closed by Webcor: 5/18/2015

T-3019	DAT - Riser Sleeves and Conduit at D-13 Column Discrepancies	Closed	05/07/2015	05/17/2015	05/12/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Aseem Goyal To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Fisk Electric Company Orvil Anthony							
	REQUEST: Contract Doc Ref: [ASI 128: TE1-2304/TE1-2404/TE1-2504/TE1-4204/TE1-4304/TE1-4404/TE1-4504] Location: Zone [04], Level [Lower Concourse/Ground level/level 2/Bus Deck] Closest Column Line Intersection is [D,13] Add'l Doc's Ref's: [ASI 128: A1-2864/A1-2884/A1-2894] At Column Line [D,13] there are (4)4" conduits rising from Lower Concourse to Bus Deck level along the interior of the column. Due to the design of the structural steel on the Ground Level Deck, Fisk had to manipulate their conduit runs and wrap them as close to steel as possible so they can continue on through the riser. As a result, there are 2 conflicts with Fisk's conduits protruding through the columns because there is not enough space once they clear the steel to keep them on the interior of the column. On the second level, the rectangular column encasement does not permit the same type of space thus resulting in 4 conflicts with the column encasement. On the Bus Deck, Fisk was able to avoid the same type of conflicts as the levels below but Fisk is required to revise the sleeves in order to avoid clashes with the exterior of the columns. See attached images for clarification and please advise .	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Revised Response : AAI Response: Refer to SKA-4678, SKA-4679, and SKA-4680 for the adjusted (4) 4" conduit runs with 5" sleeves rising from the Lower Concourse Level to the Bus Deck Level. SMW Response: Our conduits layouts are diagrammatic only to show intent, exact routing is done in the field as you have proposed, SM&W does not need to review every deviation unless it reduces separation of the redundant and diverse pathways layout and it appears this does not. REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc: M1-2404 and P1-2404			Accept Suggestion: <input type="checkbox"/>				
Location: Level 02			This is acceptable. WOJV shall coordinate the structural loads imposed on the catwalk and attachment method with the sub-contractor providing that work.				
Gridlines: E.2/16							
Add'l Doc Ref's: See attached model screenshots							
Please see attached screenshots of piping layout on Level 02, Zone 02 (Gridlines E.2/16). Due to space limitations in the cat walk area on Level 02 (Gridlines E.2/16), there is conflict with the 6in. storm drain, 4in. sewer line, and 4in. vent conflicting with the duct located in the same area. The attached screenshots show the proposed routing of the storm drain, sewer line, and vent line in this area to avoid clashes with the duct. Please confirm it is acceptable to hang the storm drain, sewer line, and vent line from the catwalk as shown in photo 1 thru 3.			Answered by Design Team: 5/21/15 Closed by Webcor: 5/27/15

REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: 11/S1-8005 Location: Roof Park Level, Zone 1 and 4 Gridlines: 1/ B and H; 33.5/ B and H Add'l Doc Ref's: WOJV 1, 2, 3, and 4 1) Per 11/S1-8005, the corner plates extending to the edge of flange conflicts with the installation of the W1 system at the roof park level. Per construction issues meeting on 5/6/15, please provide a revised detail for the corner plates called out in WOJV 2 and 3.					Accept Suggestion: <input type="checkbox"/> See the attached sketch for conceptual detail for the revised corner connection. See below proposed actions to be taken before final direction for constructions is provided: 1. CCI must confirm with Larsen that the proposed detail is OK with them. 2. WOJV is to discuss with Skanska to determine potential impact to cost and schedule and report back to TJP A and the Design Team for direction. 3. Once we receive the cost/schedule input, the overall team (with Owner's confirmation) will either accept or reject the modification. a. If the new detail is accepted, a formal sketch will be issued to track the change. b. If the new detail is rejected, WOJV is to proceed as-is with the W-1 and the structural steel. Under separate follow up RFI, some minor modifications need to be made to the W-16 metal panel fascia profile to coordinate with W-1. Answered by design team: 5/23/15 Closed by WOJV: 5/26/15

REQUEST: Contract Doc Ref: S1-2702, A1-3450 Location: Roof Park Restaurant Gridlines: 4-6 Add'l Doc Ref's: WOJV1 and 2 Please refer to the attached WOJV 1 and 2 for the following questions below: 1) Provide deck support detail. 2) Provide deck support detail. 3) Provide deck support detail. If ledger angle is required, please clarify its conditions at the curved wall areas. 4) Please confirm no metal deck in this area and advise "future deck" installation timing. 5) Please confirm no guardrails are required at the doors between room PK220 and the Roof Park Level. There is an approx. 6'-0" drop between the Roof Park Level and Room PK220 structural slab (no elevated slab is currently required at this location). No guardrails are shown between the doors leading to Room PK220 and the Roof Park Level. The doors within the W-2 system leading into Room PK220 (in the open position) do not meet the strength and attachment requirements for guardrails. Please refer to CBC 2007 1013.1 on guardrails. Per CBC 2007 1013.1: Guards shall be located along open-sided walking surfaces, mezzanines, industrial equipment platforms, stairways, ramps and landings that are located more than 30 inches (762 mm) above the floor or grade below. Guards shall be adequate in strength and attachment in accordance with Section 1607.7. Where glass is used to provide a guard or as a portion of the guard system, the guard shall also comply with Section 2407. Guards shall also be located along glazed sides of stairways, ramps and landings that are located more than 30 inches (762 mm) above the floor or grade below where the glazing provided does not meet the strength and attachment requirements in Section 1607.7. Exception: Guards are not required for the following locations: 1. On the loading side of loading docks or piers. 2. On the audience side of stages and raised platforms, including steps leading up to the stage and raised		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Per typical masonry details, refer to Detail 10/S1-9001. 2) See response to question 1. 3) Deck to concrete wall detail is per 7/S1-2731 as called out on the plan (see Sheet S1-2702). 4) As shown in Detail 2/S1-2730, the deck in this area is to be designed and installed by others. The extent of future deck area is called out on the plan (see S1-2702). Discuss the installation timing of the deck directly with TJPA. 5) Temporary fall protection and construction access are contractor's means and methods. Reason for RFI (TT): Not provided. We categorize this RFI as called out on contract documents.

<p>In past discussions with the Design Team (WSP) regarding installation of equipment and distribution in the MDF and IDF rooms for Phase 1.5 scope it was determined that Phase 1.5 will require clean, permanent building power. Due to the nature of this future equipment relative to overall building operations and the systems involved, it is necessary to energize the MDF/IDF rooms early and before most other systems and equipment are energized on permanent power. Realizing this requirement leads to several items that need clarification as follows:</p> <p>1.) Will permanent power for Phase 1.5 be subject to any early commissioning or acceptance testing and sign-off of power distribution, panel and switchgear?</p> <p>2.) Is emergency power required for Phase 1.5 initial installation and startup? If so, will the ATS, UPS and Generator systems need to be fully functional and, if so, will any of these systems require any level of commissioning and/or acceptance testing and sign-off prior to use?</p> <p>3.) Will CRAC units will need to be fully functional for head-in equipment install. If so, are they subject to any commissioning and/or acceptance testing and sign-off</p>

T-3041	ELV- Switchgear Submittal Clarification	Closed	05/18/2015	05/28/2015	05/18/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Justin Graham		To: Turner Construction Company Phil Militello		Answered By: Webcor Construction LP Tim Maxwell			
Co-Author: Fisk Electric Company Orvil Anthony							
REQUEST: Contract Doc Ref: Specification section 26 24 12 Location: Zone [N/A], Level [N/A] Closest Column Line Intersection is [N/A] Add'l Doc's Ref's: N/A The specification Section 26-24-12 Paragraph 1.6 A requires that several items must be completed prior to the finalized review of the Switchgear. The proposed manufacturer, Square D will be performing several item listed under Paragraph 1.6 A. Square D is reluctant to submit the Main Switchgear until they complete the coordination Short Circuit, Coordination and Arc Flash system studies as they have been informed by the Consultant WSP that none of the equipment can be submitted until the coordination study is completed. This will require input from PG&E and realizing that this may take significant time for PG&E to complete. This is preventing Fisk from providing Gear Submittals. In reviewing the specifications, Fisk views the specification as a multi-step review process, as Seismic Restraint and anchoring details, Factory Certified test reports, As-Built record switchgear drawings, cannot be completed prior to receiving an conditional approval of the Switchgear. Furthermore the Short Circuit, and coordination study is typically performed after the switchgear is submitted, reviewed, manufactured and shipped to the site. Please review Fisk requests for allowing us to submit on the Switchgear while PG&E completes the required information for the coordination Short Circuit and Arc Flash studies.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is generally understood there are several steps involved prior to final switchgear approval. Therefore, Fisk shall submit all data is can but included within its upcoming product data submission detailed explanations of what's missing and why. The product data submission will probably be returned as revise & resubmit, but at least the initial data will have been reviewed in preparation of remaining specified requirements.

REQUEST: Ref: A1-7575 Det 1 & 2 Location: N/A Closest Column Line: N/A Add'l Doc Ref's : N/A Sheet A1-7575, details 1 and 2 illustrate typical shaft wall constructions. It appears that running the interior of the shaft is a 2" finished, painted sheetrock wall. This covers the metal posts that Otis Elevator has instructed be located along the hoistway edges, preventing a connection. This is a very unusual construction of an elevator shaft wall and will cause clearance issues on nearly all elevators. In addition, the detail is citing a CBC OSHPD detail, and it is Otis Elevators? understanding that this job is not subject to OSHPD requirements. Please consider alternative methods for fire-rating the shaft.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The interior drywall elevator shaft lining is not for rating, it's for architectural finish (furring) that requires coordination with elevator rail installations. The CBC OSHPD refers to the fire rating assembly only and does not apply to the interior furring condition

Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: N/A Location: Area 16, Second Lift Wall Gridline: 34 & 34.8 Add'l Doc Ref: Attached.				Per field walk with SCCI, Gerdau, and TT field representative, the 2 1/2" cc spacing indicated in the RFI does not occur and there is no need to modify the contract ties as detailed. At embedded columns C33 and C34, the wall thickness increases 6" and the indicated reinforcing occurs in a separate layer.			
Due to the added vertical reinforcing on each side of the Future Train Box opening in Area 16 2nd Lift Wall, the spacing at the embedded columns will be reduced from 5" to 2 1/2" center to center. The 135 degree hook on the #5 contract hairpin will conflict with the adjacent vertical before being able to engage the intended vertical. For constructability, Gerdau proposes the use of a #4 hairpin with a 180 degree hook in lieu of the 135. Hairpin spacing would remain unchanged. Please advise.				Field walk indicated that #5 cross ties delivered to the site for use in embedded columns C33 and C34 do not accommodate the additional 6" of Foundation Wall thickness.			
				With reference to Section 6/S1-3307 for Columns C33 and C34 within the projection of the spandrel and moment frame beams, the embedded column ties may consist of bundled pairs of #5 and #4 cross ties. The #5 cross tie shall engage all outside face wall verticals and the extensions of the inside face wall

T-3056	MCS - Testing and Inspection Program	Open	05/26/2015	06/05/2015	05/27/2015	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Jonathan Flaming			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Southwest Specialty Contractors, LLC Anthony Laws							
REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: 09 51 23					Accept Suggestion: <input type="checkbox"/>		
Specification 09 51 23 Section 1.9 C.4 calls for every 1 out of 100 panels to be tested.					Specification 09 51 23 Section 1.9 C.4 refers to including testing at full negative design pressure, on one unit per 100 manufactured for the Project. Testing shall be witnessed and certified by the Design Engineer.		
The proposed Gordon, Inc. design allows for the W-14 corrugated panel to connect to the suspension tee with a horizontal torsion spring system. The failure of the panel will be the shear of the metal at the torsion spring assembly. Gordon, Inc. proposes to test a tee, spring clip and panel connection assembly with an outside, third party Testing Agency to demonstrate that the panel to suspension tee connection pullout exceeds worst case specified loads.					The testing described above is actually for the pull-out test of the hanger itself from the concrete slab, not from the ceiling panel to the ceiling support system. The contractor should test one hanger per bay per floor, in lieu of one per 100 units. A bay is defined as the space between the east/west column lines.		
Please confirm this is an acceptable alternative to testing 1 out of every 100 panels, as currently required in the specification 09 51 23: 1.9 C.4.					The proposed independent testing of a tee, spring clip and panel connection assembly with an outside, third party Testing Agency to demonstrate that the panel to suspension tee connection pullout exceeds worst case specified loads is acceptable.

From: Webcor/Obayashi Joint Venture Jonathan Flaming			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Southwest Specialty Contractors, LLC Anthony Laws							
REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: 09 51 23					Accept Suggestion: <input type="checkbox"/>		
As the current designed W-14 Metal Ceiling system is repetitive in nature, Southwest Specialty Contractors and Gordon, Inc. propose one profile in Module Type A, including two (2) Collection Pans, complete with insulation, light fixtures, sprinkler heads, speakers, other ceiling mounted items or components (devices to be provided by WOJV or TJPA for mockup purposes) to Gordon, Inc. Mockup will also include suspension mains/tees, side by side and end to end panel joints (to exhibit panel break), as well as a transition reveal from flat ceiling to sloped ceiling.					The Design Team has no general objections to the proposed outline for the factory mock in this RFI. However, before we confirm this mockup, we require a drawing of the mockup. We also would like to ask that the DB Contractor include a segment of the River Cove, as this is an extensive and important element that will require special attention.

Co-Author: Fisk Electric Company Orvil Anthony							
REQUEST: Contract Doc Ref: [ASI 128 Specification 262501/E1-0053 thru E1-0061] Location: Zone[N/A], Level [N/A] Closest Column Line Intersection is [N/A] Add'l Doc's Ref's: N/A Fisk Electric is in the process of generating product submittal material for the Track Busway under Division 26 25 01. In reviewing the product data provided by the specified manufacturer Universal Electric Corporation for their Starline series busway, the following items have been identified as not possible to meet the specification requirements for the 60 Amp products only. Division 26 25 01 Track Busway, Paragraph 2.2 (C) identifies all of the the Ampacity rating as 225A, 100A and 60A. Item (E) states that all Phases A,B,C and 200% Neutral) for all Ampacity ratings. Drawing E1-0053 also requires that the 60 A Track Busway have AIC RMS: rating of 22,000A. The specified manufacturer Universal Electric Corporation "Starline" Busway Series does not meet the 200% Neutral and the 22KAIC ratings on the 60 AMP Busway. Their design for 60 AMP is 100% Neutral and 10KAIC for the 60 AMP Busway. Please confirm acceptability of the Starline 60 AMP Busway design parameters.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Double neutral bus will not be required for these systems. Stricke this requirement from specification section 26 25 01. 2) AIC fault ratings must be adequate to meet available fault currents with busways loaded to 100%. Propose method to meet fault current ratings and confirm required ratings with project short circuit analysis required by section 26 24 13. Method may include higher ampacity busways to meet fault current requirements. Answered by Design Team : 6/3/2015 Closed by Webcor : 6/4/2015

	<p>Per the discussion in the Construction Issues Meeting on 5/27, it appears that the development of the rebar shown below dictates the extent of the concrete block-out required for the seismic joints at GL 10 & 20.</p> <p>1. Please provide dimensions from the construction joints to Grid Lines 9.9 and 10.1 (see sketch attached.) 2. Please provide the rebar development length required. (see sketch attached.)</p>						
					joint shall also satisfy the 2'-3" dimensional requirement in Detail 1/S1-5005 relative the drop at embedded angle. Until the contractor selects a product, the minimum distance satisfying the aforementioned criteria cannot be determined; however, it is acceptable to oversize the blockout in anticipation of the range of available products. It is also acceptable to run the slab reinforcing long and trim it as required when the product is delivered.

T-3074**BGP - Zone 1 Foundation Walls at Stair 901 - W474A/B and W473B****Closed****From:** Webcor Construction LP

Kamran Azarbal

To: Turner Construction Company Phil Militello**06/02/2015****06/12/2015****06/12/2015****Potentially****Answered By:** Webcor Construction LP Kamran Azarbal**Co-Author:** Shimmick Construction Company, Inc. Scott Bunnell**REQUEST:**

Contract Doc Ref: N/A
Location: Vehicle/Bike Ramp - W474
Gridline: V
Add'l Doc Ref: Documents Attached.

Per SEOR Field Representative, Foundation Wall W474B requires added horizontal bars to tie into Foundation Wall W474A. Please confirm it is acceptable to use standard hooks that match the horizontal reinforcing size and spacing to tie the corner together.

Please see attached sketch and confirm the following:
A. Extend Foundation Wall 2'-0" east. Wall thickness is 30" to accommodate Stair 901 entry plane and 6" threshold trench.

B. Trim back Foundation Wall step flush with Stair 901 interior wall (doghouse) face.

C. 6"x6" threshold trench.

1. Provide typical Foundation Wall verticals and ties in wall extension. Inner face may be placed inboard of existing horizontal steel below. Develop new verticals below EL 15'-0" such that they lap 78"

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

Confirmed that standard hooks matching horizontal size and spacing are required to be lapped in W474B and hooked to W474A. Hooks into W474A shall extend to the outside curtain.

The (4) sketches attached to the RFI are confirmed.

The contractor is reminded to locate the B142 corbel such that the center point of the beam bottom support plate and lower PTFE shown in Detail 1/S1-3411 coincides with the centerline of B142 per sketch (3) of the RFI.

REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: 4/S1-5022 Location: Ground Level, Zone 2 Gridlines: 10.1-11 Add'l Doc Ref's: WOJV 1, WOJV 2					Accept Suggestion: <input type="checkbox"/>		
1) There are no stud spacing call outs for MFB's wider than 30". Please confirm the 12" OC horizontal and 6" OC vertical stud spacing are correct. 2) At C01 north GL 10.1 to 11, the two MFBs do not have proper concrete cover due to close proximity between stud and MFB sides. Please confirm if the beam sides could be flared out to encapsulate the studs. If so, please provide the required dimensions.					1) 12" horizontal spacing of stud columns and 6" vertical spacing of stud rows is acceptable. 2) Where condition occurs, including minor misalignments, the concrete beam may be widened within an area defined by the edge of formwork parallel to the steel beam and the steel beam web. For each face of MFB, the widening shall provide 3" of concrete measured from the stud centerline to the widened face. In no case shall the widening of an MFB face exceed 6" from planned. The widening may be rectangular and need not be tapered.		
					Reason for RFI (TT): " clarification for issues on means and methods" and "no cost clarification"

T-3081.1	SSS - MFB and Stud Misalignment Correction	Closed	06/08/2015		06/09/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: N/A Location: Ground Floor Gridline: GL C between GL 11 & 12 Add'l Doc Ref: See Attached Sketches					Accept Suggestion: <input type="checkbox"/>		
In order to correct the misalignment between the MFB's and steel studs shown on the attached sketch between GL 11 & 12, the contractor is proposing to pre-attach the studs onto a 1/2" plate and then attaching the plate with 5/16" welds on either side of each stud. This is done due to the congested condition existing in the field. There will be a 2" minimum clearance between the edge of the stud and the edge of the MFB. One row of studs at each MFB will be abandoned in place. Please confirm that this is acceptable or advise otherwise.					Provided that the method of correction is at no additional cost to the owner, the proposal is acceptable. Reason for RFI (TT): " request for corrective field work"

From: Webcor Construction LP Kamran Azarbal To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: N/A Location: Ground Level Gridline: N/A Add'l Doc Ref: RFI T-1858 Please see attached design for foam block-out to be utilized for Ground Level soffit and Metal Deck slab in order to pour Partition Walls. This block-out design will meet all the requirements described on the response to RFI # T-1858. This block-out will be positioned such that no rebar is relocated or cut. During the pour-back at the soffit the 1" gap between bottom of slab and top of Partition Wall will be kept with a 1" filler material. At the Metal Deck, the cut to create access in the pan-decking will be smaller in diameter than the foam block-out to ensure a repair can be made to the pan-decking prior to the pour-back occurring. The metal piece will be tack welded after the concrete wall is poured per RFI T -1858. Please confirm the design is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The foam block-outs proposed are acceptable. Answered by Design Team: 6/12/15 Closed by WOJV: 6/12/15

	<p>4) If the 1 inch gap in question 2 above is confirmed, please revise the various structural section details for each of the C & G line columns with baseplates. For example, refer to the C & G line perimeter columns along 12 line that are detailed structurally from framing plan S1-2303 by details 3/S1-3705 and 9/S1-3702, respectively. In these details the formed deck rebar and concrete are shown to encapsulate the steel transfer beam and don't depict the column baseplate or any structural steel separation from the concrete slab. This condition repeats for other column baseplates details. However, Details 6 & 7/S1-3707 depict the baseplate at Column Lines 19.9, 20.1, 22 & 24 and could possibly be incorporated for the other column lines.</p>						
T-3091	SSS - Weld Inspection at Corner Cast Node	Closed	06/09/2015	06/19/2015	06/17/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>Contract Doc Ref: n/a Location: Zone 1, Ground Level Gridlines: 1.4 and G Add'l Doc Ref's: SK001</p> <p>Contract specification section 05 10 00-8 5e. requires a 24 hr delay period after welding before final NDT can be carried out for heavy shapes.</p> <p>At the ground level corner cast nodes, several welds will ultimately be boxed in and enclosed following completion of welding continuity plates at the back of the ground level corner cast nodes. See attached SK 001.</p> <p>To meet the 24 hr delay period on these highlighted welds presents a significant risk to the integrity of the restrained welds at the cast node-transfer girder interface. In the past, our fabricator has experienced an increased rate of cracking and repairs when subjecting these areas to multiple or unevenly distributed heat patterns and cycles.</p>				<p>The proposal to limit the node to one heat cycle and verify the boxed-in welds with high temperature UT is acceptable provided that:</p> <p>1. The independent inspector, ISI, has an approved procedure for hot UT inspection</p> <p>2. The required oil-based couplant is known to cause porosity if it comes into contact with joints that have not been completely welded. The removal of couplant from joints at elevated temperatures with volatile solvents may be difficult at elevated temperatures. While the independent inspector will make efforts to keep couplant away from unwelded joints, the burden of preventative measures, preparation, cleanup, and repairing possible subsequent weld flaws in joints exposed to the couplant will fall on the fabricator. If condition 2 is not acceptable to the fabricator, they are free to have UT performed after cool down and delay period for both the box-in joints and the exterior joints.</p>

	<p>excavations of these indications has extended deep into the casting material in an effort to completely remove the indication. This removal is a requirement, in accordance with the provisions of the AWS D1.1 Code for the Fabricator doing the repair. However, such removal is not a requirement for the applicable ASTM A216 or A958 casting specification. It is proposed that the Fabricator be given relief to allow repair of non-linear indication in casting base material based upon the attached repair narrative provided by Bradken entitled Casting Excavated Preparation - Base Material" dated 5-27-15. Each Fabricator (TMF, OIW and XKT) will perform the weld repairs in accordance with their attached Weld Procedure Specifications (WPS). It is noted that the weld procedures are based upon successful completion and approved Procedure Qualilification Records for casting to casting and casting to steel that have been previously submitted (referenced on the individual WPS).</p> <p>Does the SEOR confirm the each Fabricator may make repairs to casting base material in accordance with the provisions of the Bradken Casting Excavated Preparation ¿ Base Material narrative utilizing the applicable weld procedures shown and as described in Item #2 ?</p>

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please reference response to RFI# T-0474. The manufacturer and installer will not provide a waterproofing detail for the micropile located in the sloped sump pits. Please provide a waterproofing detail acceptable for the use under the conditions specified in RFI# T-0474.				As indicated in the response to RFI T-0519, the contract drawings and specifications cover the general requirements and waterproofing system parameters.			
				Per the General Conditions, shop drawings shall be submitted to demonstrate the way the CM/GC proposes to conform to the information given and the design concept expressed in the contract documents.			
				As the response to RFI T-0474 previously directed, please submit a shop drawing based on the waterproofing manufacturer's recommendations for this condition.			
T-509	BGP - Orientation of Protection Board	Closed	04/23/2013	05/03/2013	04/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference Specification: 07 12 10 - 3.2.D				Install the protection board as specified. It is not intended for protection, but to serve as a substrate for the waterproofing assembly.			
This section states "Install Protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces." Per the manufacturer's installation instructions, "the protection board will be installed length wise for easier handling during the fastening procedure." SCCI suggests installing the protection board length wise per the manufacturer's instructions. Is this acceptable?				Protection board is 4' x 8'. When installed vertically, the edges of the boards will be butted and fastened at each pile. This will provide a line of fasteners on the edge of each board and help accommodate the board to pile misalignment. When installed horizontally, the board will be fastened on the intermediate pile which will complicate the installation if the piles are twisted

From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By:Webcor Construction LP Joanne Filipas				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Exhibit A, 2.A & 4.F					A. The insurance requirements for this scope of work are as described in Exhibit A, Section VI. Insurance Requirements.		
A. Confirm \$25,000 dollar policy is required. Conflicts w/ 16.4 (page 11) of the LONG FORM SUBCONTRACT document. However, 16.9 says more stringent of requirements apply.					B. 4.F of Exhibit A, Section VI. Insurance Requirements was revised in Addendum 2 stating the professional liability insurance maintenance period will be for a period of 3 years beyond the Contract Final Completion.		
B. Confirm duration of E & O insurance. EXB-A Section 4.F states insurance shall be maintained "...10 years beyond the Contract Final Completion Date..." Considering the internal bracing, trestle, and bridges are temporary shouldn't the policy only apply when the system is in use. Once removed (street level construction complete), the liability should shift to the permanent structure's design team as the station superstructure is erected. Taken literally, this could require the E & O maintained 17 years (7 years of construction + 10 years beyond).

From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Webcor Construction LP Michael Constable				
Co-Author:							
REQUEST:			ANSWER:				
Reference Exhibit A, IV.C.20 thru 6			Accept Suggestion: <input type="checkbox"/>				
A. Pin piles, micropiles, and other deep foundation systems are noted that they may remain in the permanent mat slab once the temporary structures are removed. What is the criteria for locating these items so they do not interfere with permanent foundatoin system by interrupting mat slab reinforcing, installation of column base plates or similar? Will deisgn team provide a "stay clear" or "no fly zone" type of instruction or plan related to proximity to permanent building columns, tie downs, permanent walls, and other special regions of the mat?			1. Pin piles (piles for supporting shoring wall struts) can bae placed at the locations determined by the contractor, but they shall not affect the future construction of the columns, walls, elevator pits, etc. The contract documents for other work to be issued in the distant future will include waterproofing details around the pin piles, where pin piles penetrate through the mat slab (this work is not a part of the scope for the BSE package).				
B. See also Page A3-3 of Exhibit A, last item.			2. Micropiles are to be located, in general, in accordance with the typical layout shown on Sheet S1-2024. Minor deviation in location will hvae only a small effect on the mat slab reinforcement, which the design team will address after receiving micropile layout shop drawings from te contractor. Per note C on S1-2024, the micropile contractor shall coordinate the locations of the micropiles with the shoring contractor.				
Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 08/03/2010			3. Trestle piles: Trestle piles are to be located and detailed in the shop drawings and submitted for review. Trestle pile locations shall be coordinated with pin piles and micropiles by the contractor.

REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Reference Exhibit A Render on page SL-006					The Engineer of Record for the street bridge and trestle shall determine minimum clearance so as not to interfere with the shoring wall. Note - Specific criteria related to placement of temporary features such that they do not damage permanent features should be directed to designer of such permanent features.			
A. Provide design criteria, if any, for minimum clear distance between street bridge columns, trestle, and shoring wall in the train box trench. Render shows single line of columns on either side of the trestle approximately equal distance between shoring wall and trestle edge.								
B. Confirm that clear-spanning from shoring wall to trestle is not required.					Answered by David Fyfe URS-Corporation 08/18/2010

REQUEST:

Reference Geotechnical Drawings

A. Both the Architectural and Structural drawings show the west end of the train box curve continuing to the south west to an extent greater than that shown on the Geotechnical drawings. The structural drawings indicate a line showing the "extent of shoring wall in the bid package". Please confirm that the shoring wall's final design will follow the geometry shown in the architectural and structural drawings.

B. Both the Architectural and Structural drawings show the south east of the train box curving once Beale street is reached. The Geotechnical drawings show the wall continuing straight along line J until it intersects the end wall. Please confirm that the shoring wall's final design will follow the geometry shown in the architectural and structural drawings.

C. Please provide new workpoints & centerline dimensions of CDSM Wall based on the correct end conditions at both the east and west ends.

08/23/2010

TG03.00-0008	TG03 Question 0008 - Micropile	Closed	08/10/2010	08/17/2010	08/19/2010	No	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture	Manuel Saldana	To: Turner Construction Company Daphne Faulkner	Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

Reference: Structural Drawings; tiedowns

Questions:
1. 10" diameter tiedowns are shown in the structural drawings. Confirm this drawing is typical along the train box between grids A & J.
2. At the longer bays (51'), what is the tiedown configuration?
3. South of line J, where the train box curves at south west end, please provide a drawing indicating tiedown

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Micropile layout for the typical bay (42'-6" bay) is shown on S1-2024. The contractor shall bid based on the quantity indicated on S1-2024. Prior to the contractor start of the shop drawing process, the base building structural engineer will provide a micropile layout for the entire Trainbox.

From: Webcor/Obayashi Joint Venture Manuel Saldana			To: Turner Construction Company Daphne Faulkner			Answered By:Transbay Joint Powers Au Gerry MacClelland	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Ref: 01 15 70 3.2.A.12							
Question: Specification section 01 15 70 3.2.A.12 states, " Work is restricted during the holiday moratorium (day after Thanksgiving to January 1. inclusive, 24 hours a day, seven days per week as set forth in the Blue Book by the SFMTA. Blue Book allows work at night within the restriction zone , "...as long as the proper night noise permit is obtained." Please confirm that DPW issues the night noise permit, what are the parameters, and that it will be obtainable so that we may at least work night shifts during this period.			DPW issues authorization for work in the public right-of-way that generates night noise. TJPA is responsible for night noise authorization for work done on TJPA property.				
Submitted by: Charles Gardner Kiewit Infrastructure West Co. 8/4/10			Please note that there is no specific threshold or criteria that qualifies for or would guarantee DPW night noise authorization; issuance of this authorization is solely at the discretion of DPW. However, DPW is cognizant that there are times when compelling reasons make it in the public’s interest to allow for night noise and DPW reasonably grants night noise authorization.				
			Generally, the application for night noise authorization

				requires: submission by a responsible party. In this case, the contractor would prepare the application form and provide it to TJPA to submit to DPW. the following information is needed for the permit: project description and address/location, including map and/or drawing compelling reasons for work at night rather than during the day description of night work to be accomplished description of all equipment used for night work, including associated noise level days/time of proposed night work contractor doing the night work contact phone for 24/7 response by both the contractor and project sponsor demonstration that those within a 150¿ radius have been notified at least 5 days in advance of the night noise work			
TG03.00-0016	TG03 Question 0016 - Professional Liability Insurance	Closed		08/10/2010	08/17/2010	08/18/2010	Potentially <input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP Joanne Filipas			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Exhibit A, VI.2.B. and spec. 00 08 05, 1.3.B				The Professional Liability and Commercial Liability requirements included in the TG03 BSE package are the same as those required during prequalification for this scope of work. All five prequalified Trade Subcontractors responded in the affirmative that they have ¿or can obtain a liability insurance policy issued by an insurance company licensed in the state of California¿ for these limits. These insurance requirements are higher than those required of the CM/GC under the prime contract due to the risk associated with the design-build aspects of the BSE work, and because the work will be performed by parties other than Webcor/Obayashi Joint Venture.			
Specification 08 05 1.3.B requires Professional Liability Insurance in the amount of \$10,000,000 each claim with a deductible not to exceed \$50,00 each claim. Exhibit A VI.2.b requires \$25,000 with a deductible not to exceed \$250,000.							
Q. Can you clarify why the Trade Subcontractor would be held to an amount higher than the CM/GC?

From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Transbay Joint Powers Au Sara Gigliotti				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference specification 00 08 13/APA.17					Accept Suggestion: <input type="checkbox"/>		
Spec section 00 08 13/APA.17 Buy America Requirements provide , " **					Specification 00 08 13/APA 17 incorrectly states that Buy America requirements do not apply to lower tier Subcontractors. The certification requirement does not apply to lower tier Subcontractors, e.g., lower tier Subcontractors do not have to each submit Buy America certifications. However, the Buy America requirement applies to the entire contract and the Prime Contractor is responsible for ensuring that lower tier Subcontractors are in compliance, and the CM/GC is requiring the certification from all Bidders (but not Bidders' subcontractors). A revised Specification will be issued in a forthcoming addendum.		
** This provision applies only to the following types of Agreements: construction agreements of any value; agreements for the acquisition of goods valued at more than \$100,000; and agreements for the acquisition of rolling stock valued at more than \$100,000. This requirement does not apply to lower tier Subcontracts. 00 08 13/APA 17 (b) further states that, "The Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.							
A) Please confirm "This requirement does not apply to lower tier Subcontracts"

TG03.00-0021	TG03 Question 0021 - SBE Program	Closed	08/10/2010	08/17/2010	08/13/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Transbay Joint Powers Au Sara Gigliotti				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Exhibit A Section IV Scope Section D					Accept Suggestion: <input type="checkbox"/>		
Exhibit A Section IV Scope Section D SBE Program states that "Trade Subcontractor shall obtain a minimum SBE participation of 24% of the total value of Trade Subcontractors bid value". Volume 1 section 00 08 21 1.3B states that the SBE goal for this contrat is 17%. Please clarify what the SBE requirements are for the Trade Subcontractor for the BSE package. Also clarify how the % is calculated. Is the SBE participation % based on the total value of the Trade Subcontractors bid price or is it based on the amount of the bid that has been subcontracted to others?					17% is the overall SBE goal for the entire CM/GC contract. The CM/GC will set varying percentage goals for each individual package. The goal for the BSE package is 24%. SBE percentages are calculated by determining the ratio of firms in the nine-county Bay Area for a particular NAICS code to the number of SBE firms in the same area for that same NAICS code. SBE participation is calculated based on the total value of the Trade Subcontractor's bid price. For example, if the total bid is \$1,000,000, and the SBE goal is 24%, the Trade Subcontractor (if not an SBE itself) must make good faith efforts to subcontract out at least \$240,000 to SBE subcontractors.

REQUEST: Reference Project Bidding Manual (20/44) and specification 01 14 10/APA 1 Please clarify the definition of "ancillary permits". Request specific differentiation of responsibilities between Contractor/Trade Subcontractor/ TJPA. Perhaps a new responsibility matrix with a column for the Trade Subcontractor would help. Submitted by Charles M. Gardner Kiewit Infrastruncture West Co. 08/06/2010		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Revised Specification 01 14 10 / APA 1 will be provided in an upcoming Addendum. Trade Subcontractor is responsible to obtain all permits identified in the matrix as Contractor's responsibility, that are required for Trade Subcontractor's work.			
TG03.00-0025	TG03 Question 0025 - Access Trestle	Closed	08/10/2010	08/17/2010	08/16/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP Joanne Filipas			
Co-Author:							
REQUEST: Reference: SL-001 Concept drawing for the access trestle shows a width of 48' in Zone 4 and 32' wide everywhere else. Are there minimum width requirements for the access trestle? If so, please provide details. Are there maximum width constraints? If so, please provide details. Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/06/2010		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The access trestle shown in the drawing is conceptual only. Since there is minimal access at the perimeter of the site the intent of the trestle is to allow for access for excavation, shoring, structural concrete and steel erection. See Exhibit A, Attachment 3 for minimum requirements. There are no maximum requirements.

TG03.00-0026	TG03 Question 0026 - Surveyor Insurance	Closed	08/10/2010	08/17/2010	08/16/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Webcor Construction LP Joanne Filipas				
Co-Author:							
REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Exhibit A, Section VI			The intent of Exhibit A, Section VI.2.A is to require \$25,000,000 in professional liability insurance with respect to the design-build elements of the work, which can be obtained either by the Trade Subcontractor or its retained engineers. However, with respect to land surveyors only, the Trade Subcontractor or its retained engineers should only have to evidence \$1,000,000 in professional liability insurance covering that scope of work, consistent with the standard requirements set forth in Article 16 of the Long Form Subcontract. This will be included in Addendum 3.				
Part 2A indicates the Trade Subcontractor must utilize surveyors who can provide \$25,000,000 of insurance. This will effectively eliminate many survey engineers from being able to bid on this work. The resultant effect will be higher bid costs. Please consider this and confirm what the insurance requirements are for land surveyors.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference specification 01 35 65, sections 1.7.G & 1.7.H.				Settlement Treatment			
Section 1.7H.2 describes construction of a "small-scale batch wastewater treatment system to remove dissolved contaminants" such as petroleum hydrocarbons, benzene, toluene, etc. Please verify that the treatment costs to handle contaminated groundwater will be paid as extra work by TJPA.				Costs associated with settlement of dewatering effluent to reduce sediment load prior to discharge are not to be treated as extra cost items.			
Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/09/2010				Chemical Treatment			
				Costs associated with treatment to removed dissolved contaminants, as described in specification 01 35 65, section 1.7H.2 will be considered extra cost items only if chemical testing shows elevated levels of dissolved contaminants that cannot be brought into compliance with SFPUC permit requirements by settlement alone. Treatment shall be done in the most cost effective manner to bring dewatering effluent into compliance with SFPUC discharge permit requirements.

TG03.00-0032	TG03 Question 0032 - Extend Bid Date	Closed	08/10/2010	08/17/2010	08/13/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By: Transbay Joint Powers Au Sara Gigliotti			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Exhibit A, II, "Key Dates for Bidding Process" of the Project Bidding Manual establishes the Bid Due Date as Sept. 14, 2010, 6 weeks from the date of bid package issuance.				Please refer to the answer to question 47 for information on the SBE program.			
Six weeks is an insufficient amount of time to adequately prepare a \$200M estimate and bid. We therefore request that the Bid Due Date be extended an additional 8 weeks for the following reasons				Response by Gerry MacClelland 8/18/2010			
Design-Build The SBE package includes major deisgn-build elements. The extent of the design work related to shoring, bracing, trestle, cross-street bridging and dewatering that the BSE Trade Subcontractor will be responsible for performing became fully apparent to the prequalified contractors only when the bid package was issued. Developing these required Trade Contractor designs far enough to allow accurate pricing to begin will take time.				A forthcoming Addendum will include a time extension of 4 weeks beyond the current bid date. The TJPA will continue to monitor contractor questions and the content of future addenda to be satisfied it allows a reasonable period to finalize contractor bids.			
Considering the magniute and location of the construction work, the risk accompanying the design is also extremely high. A memorandum of understanding that adequately addresses this risk must be negotiated with the Trade Subcontractor's Professional Engineer before design can even beign. This will take time.							
Similarly, the Trade Subcontractor will likely enlist the services of an independent Professional Engineer to act as a peer reviewer to check the work of the Trade Subcontractor's principal engineer. Reconciliation of any differences identified during this review will take time.							
Liquidated Damges Liquidated damages associated with not meeting the CM/GC's schedule for Substantial Completion are extraordinarily high. It appears to us that the BSE Trade Subcontractor's time for substantial completion, i.e. 1,825 days following Notice to Proceed with pre-construction services, is highly interconnected with the work of other trade subcontractors and also contingent on their performance. If this is the case, it becomes very difficult to accurately assess risk of exposure to liquidated damages. The Joint Venture will need time to clarify with the CM/GC the relationship between the other trade

	<p>subcontractors' work and the BSE Trade Subcontractor's substantial completion date. Then we can adequately assess the risk resulting from this relationship, include it in our pricing and secure surety commitment.</p> <p>Small Business Program The Trade Subcontractor is required to achieve a minimum small business enterprise participation of 24% of its' total bid. Given the magnitude of the principal scopes of work required in the BSE package - shoring/bracing, excavation, drilling - most small businesses will neither be interested in participating nor qualified to do so. Time will be needed to identify a sufficient amount of reasonable scopes of work for small business participation and to work with interested small businesses, as necessary, prior to bid day to help them with insurance, bonding, scheduling, and performance issues.</p> <p>Given the circumstances outline above, Shimmick / Skanska / Traylor strongly urges the Transbay Joint Powers Authority and Webcor / Obayashi to postpone the bid date for the TG03 BSE Package until Nov. 9, 2010.</p> <p>Submitted by Rich Zito Shimmick / Skanska / Traylor, a Joint Venture 08/09/2010</p>

REQUEST:			SUGGESTION:		ANSWER:		
Reference drawing sheet D-2230					Accept Suggestion: <input type="checkbox"/>		
Q - Note #2 states that, unless otherwise specified, all utilities to be removed have been cut and capped. The only remaining utilities shown to be cut and capped are the sewer systems at First, Fremont, and Beale. We interpret this note to mean that, except for the sewer systems discussed, there are no other active utilities in the work zone (including in First St, Fremont St, and Beale). 1) Please confirm there are no other active utilities that the Trade Subcontractor has to either cut/cap or maintain in place. 2) If there are other utilities that have to be cut and capped, please provide specific details. 3) If there are other utilities that have to be maintained in place, please provide specific details.					1) Protect in place active existing sanitary and combined sewers, manholes, catch basins and storm drain culverts as indicated on the plans. Protect in place NEW active sewers constructed as part of the Relocation of Utilities Project as shown on the plans. Coordinate with and protect in place NEW active utilities (PG&E and Verizon) constructed by the private utilities that will be supported by the temporary bridge. With the exception of the utilities indicated, all known active utilities will be demolished capped and/or plugged by the Relocation of Utilities Project at the demarcation line indicated in the plans. The Relocation of Utilities Project includes exploratory subsurface trench explorations in First, Fremont, Beale, Minna and Natoma streets at the demarcation line where the new CDSM wall crosses perpendicular to each street. Following subsurface investigations, all unknown (as well as known) active and inactive encountered utilities will be demolished capped and/or plugged at these locations by the Relocation of Utilities Project.		
Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/11/2010					2) Demolish and plug existing sewers per City of San Francisco Standard Plans and Specifications.		
					3) See response to part 1.

TG03.00-0047	TG03 Question 0047 - SBE Program	Closed	08/12/2010	08/18/2010	08/13/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By:Transbay Joint Powers Au Sara Gigliotti			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Exhibit A, Part IV and specification 00 08 21, paragraph B, item D and paragraph 1.3, item B.				That assumption is correct. 17% is the overall SBE goal for the entire CM/GC contract. The CM/GC will set varying percentages for each individual package, and the goal for this package is 24%.			
Q - Exhibit A, Part IV., Scope of the Package and Bid Item Information, Paragraph B., General Work, Item D., SBE Program states "Trade Subcontractor shall obtain a minimum SBE participation of 24% of the total value of Trade Subcontractor's bid value." However, Section 00 08 21, Disadvantaged & Small Business Enterprise and Equal Employment Opportunity/Employment Nondiscrimination Requirements, Paragraph 1.3 Small Business Enterprise (SBE) Program Requirements, Item B. states "The TJPA has established an SBE Utilization Goal of 17% overall for this Contract."							
Are we correct in assuming that the SBE participation is to be 24% of our bid value for this contract (Contract No. 08-04-CMGC-000), but that the SBE Goal for the entire Transit Center Project is 17%?

Reference Transbay Terminal Center Bid Package TG03 Shoring, Buttress and Excavation (Cont.)			A forthcoming Addendum will include a time extension of 4 weeks beyond the current bid date. The TJPA will continue to monitor contractor questions and the content of future addenda to be satisfied it allows a reasonable period to finalize contractor bids.				
Q - We have started into our second week of intensive review of bid documents and drawings in which to grasp what is prescriptive work and what requires additional contractor design and scheduling in our bid proposal preparation. Having been involved in not only pre-bid contractor designed support-of-excavations but final design and construction of numerous deep supported excavations in urban environments in numerous cities in California, we look forward to working on this unique and challenging project. This project brings additional elements to be considered during design of support-of-excavation

	<p>and traffic supported trestles that would not normally be considered in below street level construction. One, the width of the supported excavation at approximately one hundred and eighty L.F., will require at least two intermediate vertical piles to support the horizontal bracing levels. Second, the need to incorporate both longitudinal and transverse traffic trestle decking whose vertical support locations will add to the constraints and interference with the location of the horizontal bracing levels. Third, the phasing of the shoring and excavation will require various locations of bracing levels of the CDSM cut-off walls. Fourth, the tie-down anchors will have to be designed to meet project specifications. Fifth, the volume of information including as-builts and the myriad of geotechnical information provided will consume considerable time which our designers can ill afford not to digest the pertinent information. And lastly, the tremendous coordination and evaluation of the various key subcontractors scopes and proposals will be itself a considerable effort since various proprietary information will be provided to them for pricing Tutor-Saliba's in-house designs. For these various reasons, we strongly urge a postponement of at least four weeks to the current scheduled bid date of September 14th in which we can properly develop the most complete and competitive design concepts and pricing proposal to Webcor/Obayashi. It is very important that you evaluate this request in a timely manner in which we can allocate the limited time available to our engineering and estimating forces. Your timely written response is appreciated.</p> <p>Submitted by Gerald W. Brown Tutor-Saliba Corporation 08/12/2010</p>

TG03.00-0056	TG03 Question 0056 - Access Trestle Permanent Structure	Closed	08/16/2010	08/22/2010	08/20/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By:Webcor Construction LP Joanne Filipas			
Co-Author:							
REQUEST: Reference Exhibit A, Attachment 3 A. Q - We note that the access trestle is to be coordinated with permanent construction, not conflict with the permanent structure except for penetrations, and is to be at the same level of the temporary bridges at the connections. This would appear to require that the trestle deck be below the bottom of the ground floor permanent structure section, with built-up ramps to match the street bridges. We also note that the permanent ground level structure is lower at the street crossings than elsewhere. This would push the trestle deck further down, conflicting with the limits of placement of the top level bracing strut. No guidance is given regarding how the future Trade Subcontractor will want to use the trestle to construct the ground floor or the superstructure. Please clarify where the top of trestle deck is intended to be located, and whether it is acceptable to locate the trestle deck at ground floor level, such that it could be used for sequential construction of the ground floor and superstructure.Is there an upturned longitudinal beam down the middle of the street crossings? . Schedule A on S1-3201 only indicates a 30" slab. Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 08/13/2010		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> A. Per Exhibit A, Attachment 3 "The level of the Access Trestle shall be the same as the level of the Temporary Bridges at the connections." B.(insert TT answer)

Co-Author:							
REQUEST: Reference drawing sheet GT-1111 Legend. A. Q - Please help to clarify the strut and waler system stiffness requirements. Our initial interpretation and the associated analyses indicate that strut and waler sizes increase very significantly over what would be required by strength considerations alone. Please provide a sample calculation or procedure for determining stiffness for comparison with the values given in kip per foot, per foot of wall. B. Pre-loading will take out a portion of the axial shortening of the struts. We assume that it is appropriate to subtract out that deflection from the stiffness calculation. Please confirm. Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 08/13/2010		SUGGESTION:	ANSWER: The strut and waler system stiffnesses are governed by the need to control ground movements outside the excavation. Consequently the operational stresses in struts and walers implied by the specified stiffnesses will be lower than would be obtained by factoring ultimate stresses. See Attached SSK-RFI TG0300-058. Question B is not clear.		Accept Suggestion: <input type="checkbox"/>

TG03.00-0073	TG03 Question 0073 - Existing Piles and Pile Caps	Closed	08/18/2010	08/24/2010	08/19/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By:Transbay Joint Powers Au Gerry MacClelland				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
After reviewing the reference documents we are not able to find details of the existing San Francisco Terminal pile caps and piles to be removed. Document No. 1 in the attached listing appears to be the one we need. Where can we get a copy of this document and any other pertinent as-built drawings for the existing terminal structure?				This information is available and will be added to the TJPA FTP site referenced in Section 00 03 31.1.1B. A hard copy will be provided to Webcor/Obayashi. An addendum will be issued adding a reference to these requested drawings to Section 00 03 31.1.2D			
Submitted by Kelley Wigton Shimmick / Skanska / Traylor JV (SST) 08/17/2010							
TG03.00-0074	TG03 Question 0074 - Tax Certificate	Closed	08/18/2010	08/24/2010	08/20/2010	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Project Bidding Manual, Section V, paragraph A (BCL), #3 Item # 3 requires each bidder to provide a specifically what certificate is required. Is this certificate issued by the State or by the Federal government? It is our understanding that General Partnerships are not usually registered with the State of California, therefore this document would presumably be a Federal certificate. Please advise.				Refer to Specification Section 00 04 54.

TG03.00-0075	TG03 Question 0075 - Temporary Bridge	Closed	08/19/2010	08/25/2010	08/25/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By:Webcor Construction LP Joanne Filipas				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<p>Reference specification 01 53 13, paragraph 1.3.A.1</p> <p>Specification states "design shall include cross bridge travel including typical semi truck traffic and a fully assembled Manitowoc 999 crane weighing 500,000 lbs traveling from trestle to trestle without a hook load." Please verify it is the intent of the specifications that the 999 crane only travels across the temp street while moving from trestle to trestle and that the temp street design does not have to include the Manitowoc 999 loading at any other area of the temporary street.</p> <p>Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 8/18/2010</p>						
TG03.00-0076	TG03 Question 0076 - Access Trestle	Closed	08/19/2010	08/25/2010	08/19/2010	Potentially	<input type="checkbox"/>
<p>From: Webcor/Obayashi Joint Venture Manuel Saldana</p> <p>To: Turner Construction Company Daphne Faulkner</p> <p>Co-Author:</p>		<p>ANSWERED By: Webcor Construction LP Joanne Filipas</p>					
<p>REQUEST:</p> <p>Reference Exhibit A</p> <p>Attachment 3, Access Trestle Criteria, states "The level of the access trestle shall be the same as the level of the Temporary Bridges at the connections." Attachment 3 also states "The layout for each member of the Access Trestle, shall not conflict with the permanent structure." Tying the trestle to the cross streets will cause the trestle structure (which is approx 7' deep) to conflict with the concrete roof of the follow on structure. It is our understanding that the CM/GC understands this and will coordinate the removal of the acess trestle and the temp streets such that the concrete roof can be constructed after these conflicting structures are removed. Pls confirm.</p> <p>Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/18/2010</p>		<p>SUGGESTION:</p>		<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>Coordination is the responsibility of the Trade Subcontractor. Temporary roadways/bridges must remain in place until the permanent structure can support the permanent roadway.</p>

TG03.00-0077	TG03 Question 0077 - Mat Slab Pile Sleeve	Closed	08/19/2010	08/25/2010	08/18/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Ref: 2/S1-3003 Slip Detail @ Trestle Pile/Mat connection shows a pipe sleeve over the trestle pipe pile to allow for vertical movement of the mat slab per Note 2. Not clear how that will be achieved since the detail shows the Mat slab with the mud slab directly bearing on the concrete encasement of the trestle pipe pile. Please clarify. Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/18/2010		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The slip detail is to allow the mat slab (and the waterproofing to adhere to the mat slab) to move upward when ground water table rises to the design level (mat slab will move up approximately 1" under the designed ground water pressure).			
<hr/>							
TG03.00-0078	TG03 Question 0078 - CSM	Closed	08/19/2010	08/25/2010	08/19/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Ref: CSM Width/GT-5101 Plan Sheet 35 of 105, GT-5101, detail 2 shows 3' diameter multi auger soil mixing or a cutter soil mixing system (CSM) with conflicting widths. The stated width is 3'-6", yet the schedule width equals 3'-0", which matches dimension of the multi auger system. However, a 30" wide CSM system and a 36" multi auger system provide the same minimum width. Please confirm the desired width of the CSM system, 30, 36, or 42 inches. Submitted by Andres Melgoza Drill Tech & Shoring Inc 08/18/2010		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The 3'-6" dimension for the CSM system on detail 2/GT-5101 should read 3"-6" maximum. GT-5101 will be revised to reflect this in an Addendum.

TG03.00-0079	TG03 Question 0079 - Insurance	Closed	08/19/2010	08/25/2010	08/23/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By:Webcor Construction LP Joanne Filipas			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference General Requirements - Insurance				With respect to land surveyors only, the Trade Subcontractor or its retained engineers should only have to evidence \$1,000,000 in professional liability insurance covering that scope of work, consistent with the standard requirements set forth in Article 16 of the Long Form Subcontract. This will be included in Addendum 3.			
Says surveyor must carry professional liability of \$25 million/claim. What general liability would the surveyor need to carry? I assume it is not the \$100 million/occurrence as noted for the trade subcontractors. The insurance would cost the surveyor more than it would cost to survey the project.

	requires Trade Subcontractor to maintain professional liability coverage continuously throughout the the term of the Contract, and without lapse, for 10 years beyond the Contract Final Final Completion date. The maximum policy term commercially available is 10 years combined for the construction and extended reporting period. A more usualreporting period is 3 years. Please change the extended reporting period to 3 years, or revise the requirement to a total of 10 years. Carrying \$25,000,000 professional liability insurance for 10 years will addsignificant cost to the Project without corresponding benefit as the majority of the design performed by Trade Subcontractor is for temporary work rather than the permanent structure.						
	Submitted by Kelly Turner Granite / CJA / NCC Joint Venture 08/19/2010						
TG03.00-0093	TG03 Question 0093 - Insurance	Closed	08/19/2010	08/25/2010	08/23/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By:Webcor Construction LP Joanne Filipas			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Exhibit A, paragraph 1.B		In an upcoming addendum, the following language will be added to 1.B of Exhibit A, VI. Insurance Requirement: ¿Notwithstanding Section 16.7 of the Long Form Subcontract, the requirement to maintain \$100,000,000 in Commercial General Liability Insurance shall apply ONLY to the bidding Trade Subcontractor. Sub-subcontractors/Lower-Tier Subcontractors shall maintain the levels of Commercial General Liability Insurance set forth in Section 16 of the Long Form Subcontract agreement.¿					
Section 1.B requires the Trade Subcontractor to maintain \$100,000,000 Commercial General Liability Insurance. Section 16.7 of the proposed subcontract between Webcor and the Trade Subcontractor requires that Sub-subcontractors carry the same amounts of coverage. Potential SBE sub-subcontractors will not be able to provide \$100,000,000 CGL. As a result, Trade Subcontractors will not be able to reach the 24% SBE Goal. It is highly likely that all of the Trade Subcontractors will offer 0% SBE participation as a result of section 16.7. Please advise if Webcor intends to modify section 16.7 and if so, how will it specifically be changed?

From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By: Transbay Joint Powers Au Gerry MacClelland			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Reference specification 00 35 65.				Accept Suggestion: <input type="checkbox"/>			
1.11.A. States "Limit or prohibit use of construction techniques that create high vibration levels. Do not drive piles"				There will be no hammer-driven piles on this project. References to pile driving in 01 35 65, 1.11.C.3 are for illustrative purposes only. Other construction techniques that may create high vibration levels are limited to the hours and times defined in section 1.11.C.3. Applicable vibration guidelines are issued b the FTA Office of Planning and Environment¿s Transit noise and Vibration Impact Assessment (Table 12-3 for building categories I, II and III).			
1.11.C.3. States "Perform vibration intensive activities such as pile driving only on weekdays during daytime hours between 7 a.m. and 8 p.m."							
These two sections contradict each other. Please confirm that pile driving, if desired, may be performed on this project.

Reference GT drawing set.				Accept Suggestion: <input type="checkbox"/>			
The SCDSM cut-off walls are to be located by the contractor as needed. Do these walls serve any purpose for the final design? If not, can other earth retaining systems be used or could they be eliminated if they are not needed by the contractor.				Cut-off walls do not serve any purpose of the final design. Other earth retaining systems can be used or cut-off walls can be eliminated with Trade Subcontractor's means and methods if Trade Subcontractor can meet the milestone requirements without sectionalized dewatering.

Reference specification 31 23 19, paragraph 1.3.A, drawing sheet S1-2024, Note A Exhibit I, and Schedule (Dewatering).					Accept Suggestion: <input type="checkbox"/>		
The above ref specification indicates TG03 dewatering system responsibility for duration of TG03 package. The referenced schedule shows dewatering thru March 2016. Note A DWS S1-2024 states dewatering maintained thru all dead load applications. Question: Does TG03 dewatering responsibility end Feb 2015 and remaining dewatering responsibility by subsequent contractors? (Pump Ownership/Pump/etc).					No. TG03 Trade Subcontractor shall have all responsibilities for dewatering work specified in Exhibit A, IV. C18 and C19. Specification Section 31 23 19 will be revised in a upcoming Addendum.

From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Turner Construction Company Daphne Faulkner		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference specification 39 09 13							
<p>The plans show geotechnical instrumentation including inclinometers, MPBXs, piezometers and settlement points. Specification Section 39 09 13 states that "... Geotechnical instrumentation consists of inclinometers, settlement casings, settlement monitoring points, survey reference points, piezometers and multiple point borehole extensometers." The plans state that the geotechnical instruments for monitoring the TBT excavation and shoring work are to be drilled and installed by the TJPA representative. However, the specifications call for "...furnishing, installing, monitoring, reading, recording, maintaining, protecting geotechnical instrumentation." The specifications go on to state that "...where shown on the drawings, the Contractor will procure and install the specified instrumentation." We find no notes on the plans calling for the Contractor to procure and install the specified instrumentation nor notes as to who is responsible for monitoring the shoring performance. The plans appear to be inconsistent with local practice in that it is customary in Northern California for the Contractor to furnish, install and monitor appropriate geotechnical instrumentation when the Contractor is responsible for constructing works involving deep excavations and shoring. We recognize the Internal Bracing Specification requires a monitoring program for struts, but is silent on exterior monitoring.</p>		<p>1. All instrumentation shown on the 7/30/10 geotechnical drawings will be procured, installed, and monitored by the TJPA's Representative. The specifications describe monitoring, which is the responsibility of the contractor, e.g., monitoring procedures to check internal bracing performance in Section 31 55 00, and monitoring wells for the dewatering system in Section 31 23 19.</p> <p>2. The TJPA will monitor ground movements inside and outside the excavation using the instruments shown on GT-1301 and 1302. The Contractor will monitor the internal bracing system.</p> <p>3. The TJPA is evaluating the implementation of an automated data collection and management system which uses a web-based portal to assemble data generated by contractor, the TJPA's Representative, and others for examination by relevant parties. In lieu of this, the TJPA's Representative will read the instruments at a frequency dictated by the stage of construction and by the magnitude of movements observed.</p>					
1. What is the Owner's intent in this regard?							
2. Will the TJPA be responsible for the exterior monitoring as implied, and the Contractor be responsible for monitoring the performance of the shoring systems in the Specifications which state "...furnishing, installing, monitoring, reading, recording, maintaining, protecting geotechnical instrumentation." , Or will the TJPA representatives read and monitor for all the geotechnical instrumentation?							
3. If the TJPA representatives read the geotechnical instrumentation, will the TBJPA representatives take the geotechnical instrumentation data readings on a daily basis? If the TJPA representatives are to be responsible for timely reading and reporting on the shoring systems

Reference drawing sheet GT-1111, Legend				Refer to response TG0300-0058.			
(TG0300-0058) requested: A. Please help to clarify the strut and waler system stiffness requirements. Our initial interpretation and the associated analyses indicate that strut and waler sizes increase very significantly over what would be required by strength considerations alone. Please provide a sample calculation or procedure for determining stiffness for comparison with the values given in kip per foot, per foot of wall. B. Pre-loading will take out a portion of the axial shortening of the struts. We assume that it is appropriate to subtract out that deflection from the stiffness calculation. Please confirm.							
Q/A Answers received this morning did not address this question, and can have a significant impact on the Contractor's design and potential for competitive underbidding of this project. We request your clarification on a priority basis as this may affect our decision to Bid this project.

REQUEST: Referene drawing sheet U-2009. Per Transbay Transit Center Program Relocation of Utilities Project drawing sheet U-1121 (30 of 172) issued 8-6-10 there are 2 large vaults indicated on the SW corner of Minna and 1st Streets. According to the Demolition and Construction Sequence note 6 ¿after electric services are connected and existing electric ductbank is abandoned by PG&E, demolish as indicated existing electrical ductbank manholes, and contents to the limits shown¿ as well as all other utilities that run North and South on 1st Street between Minna and Natoma. Drawing sheet U-2009 (50 of 172) do not indicate these utilities in the Composite Utility Plan and Elevation. Please confirm as per Transbay Transit Center Program Butress/ Shoring/ Excavation drawing D-2230 detail 1 Remove Utilities that the utilities removal will be complete by the TG03 contract start date. REQUEST:		SUGGESTION:		ANSWER:			
Reference specification 31 55 00.				Accept Suggestion: <input type="checkbox"/>			
In Spec Section 31 55 00 on Page 5 Sub-Section 1.5.B.3. it says that we are to include incidental loads defined by the Contractor (Webcor/Ob??). Can you Please define these loads now during the Bidding Process?				1. Incidental Loads: See response TG0300-0107, posted 8/31/10.			
In Spec Section 31 55 00 on Page 6 Sub-Section 1.5.I. it says that we are to coordinate clearances with the Contractor (Webcor/Ob???). Can you Please define the required clearances now during the Bidding Process?				2. Clearance: Refer to response to TG0300-0005 (posted 8/23/10) for comment on clearances.			
In Spec Section 31 55 00 on page 8 Sub-Section 1.7.D. it says that the Contractor (Webcor/Ob???) shall retain a Special Inspector. Does ¿shall retain¿ mean that the Contractor (Webcor/Ob???) will also pay for the Special Inspector services and their testing(s)?				3. Special Inspector: For Section 31 55 00, Page 8 paragraph 1.7.D - Inspections of temporary works are the responsibility of the Trade Contractor.			
In Spec Section 31 55 00 on page 8 Sub-Section 1.8.B. there is reference made to Section 33 55 00 1.4.B.7.. This Section 33 55 00 does not exist in the documents, but should be a reference to 31 55 00 1.4.B.7., The 33 should be a 31. Can we get this confirmed and changed?				4. Reference to Section 33 55 00 paragraph 1.4.B.7: Yes, confirmed that reference to 33 55 00 should be 31 55 00.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Reference specification 01 17 40.				Accept Suggestion: <input type="checkbox"/>			
1) Please confirm that the 2 year warranty for subsurface work applies to this Trade Subcontractor package				1. The warranty requirements in Section 01 17 40 are for the project as a whole and are not specific to an individual package. The warranty items for the BSE package, if any, would be limited to those works in place when the contract is complete.			
2) Request a copy of the Contractor's Builder's Risk insurance so we can review terms and conditions.				2. The Builder's Risk policy will be made available prior to the start of construction. Refer to Section 00			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
3)	Does the California Public Contract Code 7105 (Acts of God) statute apply in this Trade Subcontract?						
4)	Will a Contractors Protective Professional Indemnity policy in the amounts specified in Exhibit A section VI be sufficient evidence of coverage to the Owner? 5) Request the general liability requirements be amended to more customary rated A-VII or higher						
Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 08/25/2010							
08 05, paragraph 1.3.A, in Addendum 2 for the Contractor's requirements.							
3. The Public Contract Code 7105 allows public entities to require Builder's Risk insurance from public works contractors to cover damage to the construction site. The requirements of Section 00 08 05 are for the CM/GC. The insurance requirements for the Trade Subcontractors is defined in the Webcor/Obayashi long form subcontract.							
4. Yes, a Contractor's Protective Professional Indemnity Policy (CPPI) is sufficient evidence of coverage.							
5. See Addendum 2 for the revision to rating.

Co-Author:							
REQUEST: Reference drawing sheet GT-5102. Section 9/GT-5102 Indicates CLSM Shoring wall placed abutting the existing 301 Mission Wall. 301 Mission Drawings Sheet SH-31 Wall D section indicates a grade beam which may extend south past the wall line. This may interfere with the CLSM Shoring wall installation. Please provide more detail to confirm the coordinates of the existing building at 301 mission and the interface with the new CLSM wall, and confirm that the CLSM wall is sufficient to act as one side of shoring for the existing pile removal program. Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 08/26/2010			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The 301 Mission drawings show the grade beam on the 301 Mission side of the property line and therefore should not interfere with installation of the Transbay Transit Center CDSM shoring wall. Regarding the adequacy of the existing 301 Mission shoring walls to act as one side of shoring for the existing pile removal program, no information regarding the as-built and as-remaining/buried condition of these walls has been provided. These walls should not be needed to retain earth on the 301 Mission side of the wall since the 301 Mission structure is deeper than the depth of excavation required to remove the timber piles. However, the integrity of the existing shoring wall to support itself is unknown.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Owner response to question TG0300-0080 is incomplete. The BSE concept schedule does not contain any information concerning the removal of the access trestle nor the temporary streets. Further, the concept schedule provided shows no work activities beyond the construction of the lower concourse walls. Please provide specific information regarding the expected dates for these NTP's so the bidders can estimate the total costs for performing this work.				Refer to response TG0300-0150.			
TG03.00-0143	TG03 Question 0143 - Long Form Subcontract	Closed	09/01/2010	09/08/2010	09/08/2010	Potentially	<input type="checkbox"/>

Reference Exhibit B "Long Form Subcontract". Some of the terms and conditions that were provided in the Long Form Subcontract to be utilized as the written agreement between Webcor/Obayashi and the low bid Subcontractor are overly burdensome, unacceptable and potentially not in conformance with statues and regulations. Please confirm that mutually agreeable terms can be negotiated with Obayashi/Webcor prior to the bid date for the Project.				Refer to response TG0300-0150.			
If the terms and conditions for the Subcontract are not negotiable, then we regret to inform you that we will not be able to supply a bid for this Project.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference 301 Mission St. Drawings, drawing sheet GT-5102.					The 301 Mission drawings show the grade beam on the 301 Mission side of the property line and therefore should not interfere with installation of the Transbay Transit Center CDSM shoring wall.		
The Temporary Shoring and Earth Retention Drawings for 301 Mission St. show a grade beam on K line in Section 1 Drwg. SH-32 under the screening wall that is to be relocated by others, it appears that this grade beam carries through the parking structure as shown in Section 2 Drwg. SH-31 and Section 9 Drwg. GT-5102 of these bid documents. Please confirm this grade beam will be demolished prior to CDSM Shoring wall obstruction removal and Geotechnical Monitoring Instrumentation.					GT-5000 is consistent with D-5103 regarding the amount of crushed concrete backfill at the start of the contract.		
In Transbay Demolition Plans, drawing # D1060, and D1076, show the backfill material fill to first floor elevation in the area adjacent to 301 Mission Building. In BSE Plans, drawing # GT5000 shows the backfill material fill to about basement slab elevation. Please confirm which one is correct?

TG03.00-0159	TG03 Question 0159 - Temporary Bridge	Closed	09/03/2010	09/10/2010	09/13/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana			To: Turner Construction Company Daphne Faulkner				
Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER:		
<p>Schedule A on S1-3201 identifies top of structure elevations. When these elevations are cross referenced against the elevations of the cross streets the temporary bridges that tie into it will be several feet above grade, unless there is a provision for a concrete "leave out" Drawing A 5206 shows First Street Elevation at 14.94. The top of structure at this zone is from 12.79' to 13.47', this allows less than 2' for the temporary bridge installation. Depending on the final Temp. bridge design and clearance necessary to construct box structure below the bridge deck may be as much as 6' above the city street. Is it the owners intent to ramp up on the city street to the temp bridge elevation? If so what is the max grade allowed for the approach ramp?</p> <p>Also, please comment on the intent for side sloping, access for business, support of fill, etc. This condition applies to Beale street as well.</p> <p>Submitted by Charles M. Gardner Kiewit Infrastructure West Co. 09/02/2010</p>					Accept Suggestion: <input type="checkbox"/>		
			<p>S1-3201 shows general top of structural elevations at the Ground Floor Slab. The schedule is not intended to show all top of structual elevations.</p> <p>Utility corridors are to be provided at the cross streets of Beale, Fremont, and First. Where required, the temporary bridges are provided over the area of the utility corridors, which are lower than the adjacent slabs. See architectural drawings A1-6000, A1-6118, and A1-6231 provided for reference.</p> <p>Note that drawing A-5206 referred to in the information request was not included in the BSE package.</p> <p>The temporary bridges will be set to tie into existing street grades without significant changes in elevation. This approach will avoid the need for side sloping, or other grading for access.</p>

REQUEST: As noted in Question TG0300-0058, preloading the struts will increase the effective stiffness of the bracing system (particularly by pre-compressing the struts). (1) Can this factor be considered when evaluating the average stiffness tributary to a given strut per the note in the lower right-hand corner of GT-1111? (2) Can preload values higher than those specified in Tables 1 through 4 on GT-1110 be used to increase the effective stiffness of the bracing system? Submitted by Rich Zito Shimmick / Skanska / Traylor JV (SST) 09/07/2010			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> We do not believe that preloading increases the effective stiffness of the struts. The struts will expand and contract due to temperature variations and this could be interpreted as changing the effective stiffness, but we do not believe it is feasible to control the temperature at the time of installation and pre-loading to account for this when selecting the member sizes.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference Exhibit A, Section IV.C.14 (p. 10).				Note 10 on D-0001 (and similar notes on others drawing sheets) requires Contractor to provide means for temporary ground support as required and as necessary to protect adjacent ground when excavation demands such protection. One example of this requirement is the pre-trenching activities prior to installing CDSM wall as required per note 11 on GT 2101 (and similar notes on other sheets). The temporary shoring walls installed for excavation by this Work will need to be removed by this trade contract as part of underground structure demolition and clearing per the same note 10 on D-0001.			
Exhibit A states: ¿Existing temporary shoring wall installed by Existing Terminal and Ramps Demolition Contractor at the eastside of Fremont Street shall be removed and disposed in accordance with the Contract Documents.¿							
However, the Terminal Demolition Plans include notes stating that ¿. . . Contractor to furnish and install shoring and bracing as necessary to ensure no adverse impacts to adjacent roadways and building.¿ These notes seem to apply to the entire perimeter of the existing building and not just to the eastside of Fremont St.							
Please clarify if the TG03 Contract includes removal of the previously installed shoring and bracing along the eastside of Fremont Street only, or also around the entire perimeter of the existing terminal structure.

REQUEST: The response to previous question TG0300-0054 states that the rebracing loads can be determined based on the information provided on GT-1110. Please identify the specific information on GT-1110 that is to be used to determine these loads. We note that the computation of these loads will depend upon the assumed degree of CDSM wall fixity at the base slab, the assumed distribution of seismic loads, as well as, other inherent assumptions. The CDSM wall analysis and design computations (which we assume must have included an analysis of the bracing removal/rebracing stages) have not been made available to the bidders so it is not possible to ascertain the basic loading and support conditions assumed by the CDSM wall designer for the bracing removal/rebracing conditions. We recommend that the static and seismic components of the rebracing design loads be provided so that all bidders are designing the rebracing for bracing demands that are consistent with the CDSM wall designer's computations. Submitted by Rich Zito Shimmick / Skanska / Traylor JV (SST) 09/07/2010		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Our staged analysis of the build-out case indicates that the total compressive force due to soil pressure does not change from that obtained from our analysis of the excavation case. This is compatible with the need to control ground movements during the build-out stages. The soil loads on the temporary re-bracing struts and the permanent structural elements used for propping the shoring wall can be determined by tributary area using the pressure diagrams on GT-1110.				
TG03.00-0176	TG03 Question 0176 - Below Grade Structure	Closed	09/09/2010	09/09/2010	09/08/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Constable		To: Turner Construction Company Daphne Faulkner		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Will it be permissible to incorporate additional reinforcing steel in the permanent structure concrete walls so that a portion of the wall can act as a wale to spread loads to the rebracing rakers/struts? Submitted by Rich Zito Shimmick / Skanska / Traylor JV (SST) 09/07/2010		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The Shoring Contractor may propose a waler design that would allow the concrete wall to act as a waler. Contractor-proposed design shall include calculations and supporting design data. All aspects of the design shall comply with requirements in the Contract Documents and the design intent of the building systems not fully designed at this point. Note the maximum spacing of rebracing elements is to be modified in Addendum 3.

Sheet GT-1110 shows numerical values for horizontal strut loads. GT-1110 also shows a design profile. Are we to use the numerical values shown or are we to calculate loads based upon the design profile?				The "Design Profile" earth pressure was obtained by fitting a trapezoidal diagram to the strut loads obtained by analysis. Therefore, the results obtained using tributary areas from the "Design Profile" will vary slightly from the strut loads presented in tables 1 thru 4. Tables 1 thru 4 shall be used for strut loads. For seismic increment strut loads, refer to tables 5 thru 8.

REQUEST: 1. As per the Site Mitigation plan by Treadwell & Rollo, the extent of hazardous of material information is available for the proposed project location except in the CDSM wall segment X1-1 & R2-1 areas. Please provide the related hazardous material information for the above mentioned areas.			SUGGESTION: Answered by Gerry MacClelland, 9/14/10 At the time the Site Mitigation Plan was drafted there was uncertainty concerning the perimeter of the shoring wall, so a conservative boundary was used which did not cross south of Natoma St. Information on the soil contamination in the area of wall segment X1-1 and R2-1 can be found in the following reference documents: Soil Investigations of 546 Howard and 75 Natoma, ERM West, January 2009 Site Investigation Report, San Francisco-Oakland Bay Bridge West Approach Project Including Transbay Terminal Loop. California: Professional Service Industries, Inc., 1999. (see pg. 43) See Section 00 03 35 for references to these documents.		ANSWER: Accept Suggestion: <input type="checkbox"/> At the time the Site Mitigation Plan was drafted there was uncertainty concerning the perimeter of the shoring wall, so a conservative boundary was used which did not cross south of Natoma St. Information on the soil contamination in the area of wall segment X1-1 and R2-1 can be found in the following reference documents: Soil Investigations of 546 Howard and 75 Natoma, ERM West, January 2009 Site Investigation Report, San Francisco-Oakland Bay Bridge West Approach Project Including Transbay Terminal Loop. California: Professional Service Industries, Inc., 1999. (see pg. 43) See Section 00 03 35 for references to these documents.

From: Webcor/Obayashi Joint Venture Manuel Saldana To: Turner Construction Company Daphne Faulkner			Answered By: Transbay Joint Powers Au Gerry MacClelland				
Co-Author:							
REQUEST: The traffic lane requirements as per the specification 01 15 70 says that contractor needs to maintain 3 lanes of 11' at all the times on the First Street from Mission to Folsom and also at the intersection of Fremont and Natoma. With the above restrictions, safe operations for CDSM walls by using big equipment may not be obtained. Is it allowable for contractor to perform the work with half the street closed?			SUGGESTION: Answered by Gerry MacClelland, 9/14/10 Base your bid on maintaining the requirement of 3 lanes of 11 feet each, per the specification.		ANSWER: Accept Suggestion: <input type="checkbox"/> Base your bid on maintaining the requirement of 3 lanes of 11 feet each, per the specification.

REQUEST: Reference drawing sheet GT-5202. This plan calls out "(4) 4 in. diameter PVC or steel pipe sleeves...tied to the reinforcement steel cage" We assume that these are the access tubes for the required Cross Hole Sonic Logging Test. Usual access tube size is only 2 inches in diameter. Please confirm that you specifically require 4 in. or that regular 2 inches in diameter access tubes (PVC or steel) can be used instead. Question B: Can reinforcement spiral be replaced by regular ring hoops?			SUGGESTION: Answered by: George Metzger, 9/14/10 The four 4-inch-diameter pipes shown on the plans are required. Regarding Question B, #7 circular hoops at 6" o.c. with couplers or welded splices are acceptable in lieu of spiral reinforcement.			ANSWER: Accept Suggestion: <input type="checkbox"/> Answered by: George Metzger, 9/14/10 The four 4-inch-diameter pipes shown on the plans are required. Regarding Question B, #7 circular hoops at 6" o.c. with couplers or welded splices are acceptable in lieu of spiral reinforcement.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Answers to Pre-Bid Meeting Questions.				Answered by Gerry MacClelland, 9/14/10			
The answer to Question 13 says that retention is withheld for the duration of each subcontractor's scope of work rather than the entire project. Most of the SBE Subcontractor's scope of work will be complete with the placing of the rat slabs. However, the contract will continue until the SBE Subcontractor's responsibility for shoring/bracing removal and trestle/bridge removal is complete. The schedule for this work is contingent on other Trade Subcontractors and the completion date for the entire scope of the SBE Trade Subcontract Package is unknown. Will Webcor/Obayashi release retention attributable to all work completed up until the placing of the rat slabs when the placing of the rat slabs is complete?				Retention to the CM/GC shall be reduced as described in 00 70 00.9.04. Section 00 05 20.5.04D states "the CM/GC must proportionately reduce retainage for its Trade Subcontractors." The amount of retention released upon placement of the rat slab will be based on the amount to the Trade Contractor's contract billed at that time.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference Exhibit "B" Warranty, 2nd paragraph.				Refer to Section 01 17 00.1.3C. Since it is the intention to put these relocated utilities into service once complete, this paragraph establishes the basis for an early Substantial Completion. Also see Section 00 07 00.3.19C. The period for the warranty is generally defined in Section 01 17 40 as well as in individual specification sections, as stated in 01 17 40.1.2B.			
Does warranty period extend to after completion of the entire project or only after TG04.5.1 is completed? The warranty form says indicates after "Filing Notice of Completion on all improvements". See attached which can be more than 4 years.							
<hr/>							
TG04.5.1-0009	TG0451 Question 0009 - Length Of Warranty	Closed	08/31/2010	09/07/2010	09/08/2010	Potentially	<input type="checkbox"/>

	Co-Author:						

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	REQUEST: This project is indicated as to be 100% SBE. Please confirm that this means that all of our subcontractors (and sub tier subcontractors if any) and truckers must therefore be SBE companies. Please also confirm that not all suppliers must be SBE. It will be impossible to obtain quotations for asphalt, VCP, aggregate import materials etc. from SBE companies.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
			All subcontractors, at any tier, including truckers, must be SBEs. Good faith efforts must be made to purchase materials and supplies from SBE manufacturers or dealers. If materials or supplies are purchased from an SBE manufacturer, 100 percent of the cost counts as SBE participation. If materials or supplies are purchased from an SBE dealer, count 60 percent of the cost of materials and supplies toward SBE participation.				
TG043-0003	Lead in AWSS Pipes	Closed	11/02/2010	11/16/2010	11/03/2010	Potentially	<input type="checkbox"/>

TG043-0007	Bid Form Clarification	Closed	11/02/2010	11/16/2010	11/02/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP David Hungerford			
Co-Author:							
REQUEST: The bid form is far too complex. We can possibly understand the need for the data indicated by the bid form from the subcontractor awarded the project, but we can see no need for each and every bidder to fill out every space in a ten page bid form. In addition the bid form requires us to fill in the quantities. As every subcontractor will have different quantities, this seems somewhat odd. A typical SF PUC style bid form, with quantities provided, would result in bids that could be confidently compared with each other- ¿Apples to Apples¿, not¿ Oranges to Apples¿. We request that such a bid form be provided. If the bid form is not simplified greatly, we will not be able to bid this project, since it will take more time to complete the form than actually estimate the project. W/O to provide answer.		SUGGESTION:		ANSWER: See revised bid form in Addendum 3.		Accept Suggestion: <input type="checkbox"/>

Co-Author:							
REQUEST: Can the bid date please be delayed?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		The bid opening date will proceed as currently scheduled.	
TG043-0009	Exhibit I Schedule and Exhibit A.V	Closed	11/02/2010	11/16/2010	11/04/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP		David Hungerford	
Co-Author:							
REQUEST: Exhibit I, Schedule, appears to show the physical work occurring between 1/27/11 and 3/31/11, approximately 68 calendar days (CD). This is approximately 48 working days. In this amount of time we are to install the sewer, install the water, get SFWD to do the tie ins (which often takes 2 weeks) and then do all the demolition and restoration. Please confirm that this is your intent. Also note that Exhibit A.V appears to require (under milestones) that the water work be completed within 80 CD of NTP-thus it seems that the water will have to be completed prior to the sewer. Please confirm this is your intent. W/O to provide answer.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		VOID	
TG043-0010	Bid Package Drawing Clarification	Closed	11/02/2010	11/16/2010	11/02/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP		David Hungerford	
Co-Author:							
REQUEST: Exhibit A.IV, Clarification of Bid Package. It states that the revisions are for construction of Bid Package TG04.5.1 ONLY. However the Delta 1- Field Order-revisions state that the revisions (are) for TG04.3 and TG 04.4. So if they are for construction of Bid Package TG04.5.1 ONLY, why are they revisions for TG04.3 and TG04.4? Are you trying to say- Use all the drawings as provided, and then when we give you a contract we will reissue the drawings, without changes, other than stating		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		The list of drawings to be used in this bid package is found in section 00 01 15.1 of the specifications. Use all of the drawings provided. Upon completion of this bid process, a conformed set of these documents for this trade package will be issued at a later date.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Exhibit A.IV (page 9), Number 11 states to include two investigation trenches as shown on sheets U-1007 & U-1008 dated 8-27-10. This is not the date of the drawings provided. Please clarify.				Correction: Correct drawing is 9-29-10 "For Construction Drawings."			
W/O to provide answer.							
<hr/>							
TG043-0012	Demolition of Existing Electrical, Gas and Telecom	Closed	11/02/2010	11/16/2010	11/02/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP David Hungerford			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Sheet U1110 and all the other demo sheets. On sheet U1110 note 5 does not specifically state that the gas is to be demolished by PG&E, note 7 does not say duct bank to be removed by AT&T (other notes are similar), but the notes also do not specifically state that ¿Trade contractor is to demolish¿ or something similar. Exhibit A.IV.D.2 (page 7), third bullet, states: ¿Unless noted otherwise on the drawings, Electrical, Gas & Telecommunication lines will be abandon and all feeders removed by the respective utility owners prior to demolition by this contract.¿ Thus there is an ambiguity. Are we, or are we not to include demolition of the Electrical, Gas & Telecommunication lines? In either case, who removes the boxes, vaults etc.? Please clarify. Exactly what is required at all locations on the plans?				Demo as shown on the drawings. Note 5 says ¿"DEMOLISH AS INDICATED EXISTING HP GAS" Note 7 says ¿"DEMOLISH AS INDICATED EXISTING TELECOMMUNICATIONS DUCTBANKS/ MANHOLES"			
W/O to provide answer.				In regard to Exhibit A.IV.D.2, demolish as shown in the drawings.

Co-Author:			Answered By: Webcor Construction LP David Hungerford				
REQUEST: Specs. 011570.1.2.D requires that the contractor or subcontractor to have a C-31 license to do the traffic control. We have an A license. Does this mean we cannot do our own traffic control, but must instead hire a subcontractor? Or, are you providing traffic control including plans, signs etc.? If we are allowed to provide our own traffic control (or if we must hire a subcontractor) does the three man traffic control need to be dedicated solely to performing traffic control work?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Traffic control to be by trade subcontractor. Traffic control to be as required by specifications.

TG043-0034	Traffic Lane Requirements	Closed	11/02/2010	11/16/2010	11/02/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford			To: Turner Construction Company Daphne Faulkner				
Co-Author:			Answered By: Webcor Construction LP David Hungerford				
REQUEST: Specs. 011570. Traffic Lane requirements. Does Natoma need a lane open, 1 at 11¿ westbound and if so where? It is difficult to understand what is required where, perhaps due to the line spacing of the table. And, how are we to keep an 11¿ lane open on a 22¿ wide street and still perform the work? Please allow closure of Natoma with local traffic access.			SUGGESTION:		ANSWER: Contractor is to follow the Traffic Lane Requirements in the specifications. If the number of lanes and/or lane widths for through traffic cannot be achieved, contractor shall submit for a Special Traffic Permit.	Accept Suggestion: <input type="checkbox"/>	
TG043-0035	Specialty Traffic Permits	Closed	11/02/2010	11/16/2010	11/04/2010	Potentially	<input type="checkbox"/>

TG043-0039	Pavement Mill and Fill Requirements	Closed	11/02/2010	11/16/2010	11/03/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST: Specs. 321217.3.4.A. This section states that ç Contractor shall mill and fill AC pavement as directed by TJPA representative.ç Prior to bid we must be told exactly which areas are to be milled & filled. If you cannot provide exact and complete parameters (such as a drawing showing the exact limits of the mill and fill required), we will have to assume that absolutely no mill and fill is required. We cannot be expected to know what the TJPA representative will require.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Restore all excavations for the Work in accordance with the specifications inclusive of DPW Order No. 176,707, "Regulations for Excavation and Restoring Streets in San Francisco," which describes the limits of milling and filling for ACWS restoration.				

TG043-0040	Permanent Pavement Restoration Requirements	Closed	11/02/2010	11/16/2010	11/03/2010	Potentially	<input type="checkbox"/>

TG043-0041	Fire Hydrant Procurement Clarification	Closed	11/02/2010	11/16/2010	11/04/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST: Specs 331100.1.1.B & 331100.3.3.C&D. There is ambiguity regarding fire hydrants. It appears SFFD installs fire hydrants. Do they supply the hydrants? If not, do we have to pay for the hydrants and valves etc.? If we have to pay, EXACTLY what must we obtain and EXACTLY what is the cost? If we are required to purchase something from one source only, we need to be provided with information regarding what we are buying and what it will cost.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> SFFD installs fire hydrants. Furnish all materials for Fire Hydrant Services per 33 11 00.3.3.C. Purchase materials from SFFD (through SFPUC) in accordance with 33 11 00.3.3.D. Contact the SFPUC City Distribution Division Material Coordinator at 1990 Newcomb Ave., San Francisco, CA.				
TG043-0042	SFWD Temp. Connections	Closed	11/02/2010	11/16/2010	11/03/2010	Potentially	<input type="checkbox"/>

REQUEST: What is the Agency's Definition of a Joint Venture and what agreements need to be in place if firms want to submit their proposal as a Joint Venture?		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The CM/GC defines a joint venture as provided in California Business and Professions Code section 7029, et seq. Any respondent joint venture must be properly licensed as a single entity and must submit with its Qualification Statement a copy of the joint venture agreement. The agreement shall identify the responsibilities of each partner in the joint venture for the scope of work established by the RFP, demonstrate the relationship between partners, and provide for contractual relationships and authorities to bind each entity to the obligations of the joint venture. The joint venture respondent should submit experience and qualifications as an entity and should submit experience and qualifications for each joint venture partner.

TG05.04-0003	Temporary Pavement Clarification	Closed	02/10/2011	02/20/2011	02/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford		To: Turner Construction Company Kevin Chiu		Answered By:Transbay PMPC		Alfred Lau	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
In the Traffic Control Specification 01570-2F # 10 "TEMPORARY PAVEMENT" is Temporary Pavement in regards to traffic controls limited to the following: A. Pothole Patching; B. "Cutback or Coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs; C. Misc Roadway Maintenance; D. Does not include Roadway Grinding or Hot Asphalt Application.				Section 01 15 70, paragraph 1.2.F.10 defines temporary pavement as part of the scope for Traffic Routing Work. The requirement for temporary pavement is to accommodate construction traffic control and maintenance of public and construction safety throughout the complete construction duration. It is envisaged that the scope may include pothole patching; "cutback or coldpatch" at bridging and plating, handicap ramps, and sidewalk repairs; and misc. roadway maintenance. Usually, roadway grinding and hot asphalt application, which are typically utilized for larger paving areas, and possibly permanent installations, will not be necessitated by temporary pavement work. However, without the opportunity to review the traffic control plan as stipulated in 1.2.A of the same section, we cannot preclude the need at this time.

REQUEST: Spec Section/Dwg Sheet: 08 44 26-2 3. Joints: Ventilation shall be provided through the awning through the 3/4" gaps between each of the glass panels, according to spec 08 44 26-2, para 1.2-A-5. [More]"¿designed using rainscreen system with 2 layers of defense with rainscreen seal and continuous air seal system." - spec 08 44 26-8, para 1.5-D. Interpret that the joints shall be opened, not sealed. If the joints will not be sealed, all items specifying the sealing system in spec 08 44 26, will not be applied to W-1? Please confirm the interpretation.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Two layers of defence with rainscreen seal are not required at W-1. Paragraph 1.5-D will be deleted from Section 08 44 26 when the section is issued for bid.		
TG08.1-A007	Cable supported glazed curtain wall (W-3) - Steel	Closed	11/30/2010	12/14/2010	11/30/2010	Potentially	<input type="checkbox"/>

We need direction for the electrical installation inside the new concrete stem wall. We are planning on installing the formwork for the south-side of the wall starting Wednesday morning. As such, we need to install the electrical conduits and boxes tomorrow, Tuesday, at the latest to meet our schedule. Please provide detailed information on the entire conduit run and the elevation of the boxes. It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents.			The question stated "It is our understanding that we are completing abandoning the originally anticipated electrical lighting work as anticipated in our contract documents." However there are no electrical drawings in the contract documents. This RFI was recieved at 4:28pm, the day before the wall was to be closed up, and requests an answer by tomorrow, which is not enough time to review. Due to the timing of this RFI, it was not submitted to the design team, but instead a meeting was held with URS in the field for direction. For record, see the attached inspection report and email for what is to be done.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference: C/S-5000, B/A-6000, attached sketches, and referenced RFI's Field verified measurements and layout for the location of the structural steel does not coordinate with the stucco inset locations as shown on detail C/S-5000. In addition framing around the perimeter of the wall (aluminum panel locations) had to be modified due to assembly and installation methods. (See attached pictures and sketches. This RFI addresses three framing issues. All issues have been discussed in the weekly 301 Mission Wall subcontractor meeting with URS, Turner, Transworld, TJPA and Webcor-Obayashi. 1.) In two of the four stucco slot locations, field conditions show that a portion of the base plate conflicts with the stucco slot. This base plate encroaches into the stucco panel per dimensions shown on the attached sketch. Please advise. 2.) The structural steel had been relocated to CL of the wall (per RFI T-0098) and therefore studs around the steel per B/A-6000 could not be set per plan. Transworld			Can't find answer in Constructware.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
This is to respond to submittal title TA1010.S-5000.A01 Rapid Set for Concrete Repair (TCI #31) Please identify a product or a custom mix design that would meet these specifications. In our past practice we have successfully used the suggested grout product as a concrete patch. In our investigations with suppliers and other contractors, it seems that the general conclusion is that using a grout product (such as the one proposed) would be the appropriate product for this application and condition. The proposed grout seems to offer greater strength and structural performance than the original concrete that has since been removed. Is there another product that you could identify that would achieve these specifications? Since we are not the project designers, we can only suggest those products that would generally be used and accepted in our standard of practice It was based on this standard of practice that we submitted the RapidSet grout product.		The submittal response referenced in this RFI is incorrect. The suggested product was never submitted past Webcor-Obayashi's possession. Due to compliance with the direction given per response to RFI T-0130, a submittal was not required. An email chain was generated from conversations between W/O and Turner, then a message sent between Turner and URS, which relayed the product type and an email chain starting from URS was recieved noting that the material is not acceptable. Upon further review of codes, the material is acceptable, which had been discussed in the weekly subcontractor meeting held on Monday June 6, 2011. This RFI is no longer valid. Transworld is to submit products that will be used to repair this condition, per sub meeting. Transworld is aware of this and is submitting product for review.

Section Q/U-3410 shows a 5" and 2" electrical line on the north side of the joint trench. Section P/U-3410 shows the same 5" and 2" electrical lines on the west side of the joint trench as it turns north on Shaw Alley. Is the intent for these electrical lines to cross within the joint trench? Please advise.					No. The 5-inch and 2-inch electric conduits in Section Q/U-3410 should be located on the south side of the Joint Trench

U-0017	JT Conflict with Basement @ Rickenbacker Rest.	Closed	11/09/2010	11/23/2010	01/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jeffrey Negley To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference sheet U-3407. PG&E has been potholing on the south east corner of Minna @ 2nd St. for a new gas line over the past number of days. We have observed in their potholes that a basement structure for the Rickenbacker Restaurant (123 2nd St.) extends out beyond the property line and under the sidewalk, along both Minna and 2nd Street. The basement appears to extend almost up to the roadway curb on 2nd Street and to face of curb or beyond on Minna. The joint trench at its current alignment (on Plan Sheet U-3407) along the south east corner of 2nd & Minna will be in conflict with this basement structure. Please review and advise.			E. Zagol 1/11/11 See revised Joint Trench Plan and Elevation Phase I Plans titled "Revisions - Minna Street 12/27/10" for realignment of Joint Trench. ***** E. Zagol 12/17/10 The Joint Trench as currently shown in Sheet U-3407 is in conflict with the 123 Second Street sidewalk basement between Minna Street stations 0+75 and 0+90. Separate from the conflict mentioned above, PG&E has requested TJPA to add additional conduits to the Joint Trench. Revised drawings will be provided that address the following: Realignment of Joint Trench west of station 2+00, realignment of the sewer west of station 2+25, and revisions to the water line (vertical and hydrant lateral) west of station 1+02 to address the conflict with 123 Second Street sidewalk basement. Modifications to Joint Trench sections from First Street to Second Street to accommodate PG&E's additional conduits. Modifications at the future Transit Center stubouts to accommodate PG&E's Joint Trench configuration revisions. RFI-U0050. ***** ***** E. Zagol 11/18/10 AECOM will attend the planned site visit to 123 Second Street on 11/19/10 to evaluate conflict. We are actively working with PG&E to identify options for the Joint Trench alignment west of STA 1+12 if 123 Second Street basement is confirmed in conflict.

U-0020	Street Lighting Relocation Plan for Minna	Closed	11/15/2010	11/29/2010	11/18/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jeffrey Negley			To: Turner Construction Company Michelle Smith Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Plan/Drawing Reference: U-3201					Accept Suggestion: <input type="checkbox"/>		
<p>We have been informally advised that the Design Engineer and BLHP are considering a revised installation plan for the street lights on Minna. This would include the installation of temporary overhead power lines to feed the relocated street light poles, until such time as the new lights are powered from underground by Trinet.</p> <p>Here is a sequence as Trinet understands it. Trinet would install the new light pole foundations on the north side of Minna and then relocate the light poles from the south side, per plans. BLHP would then install overhead cable, extending from a pole on 2nd St., to provide power for the lights. During installation of the new foundations, Trinet would install underground conduit from the pole to an adjacent splice box, and then later extend the underground conduit from the splice box to the PG&E power source, as depicted on the plans.</p> <p>Please clarify the street lighting relocation plan currently under consideration. Also, if the BLHP plan to feed the lights temporarily from overhead, will any changes be required to the foundation and light pole installation plan to accommodate an overhead power feed?</p> <p>Please review and advise.</p>					<p>11/18/2010, per Eric Zagol; At the request of the TJPA, SFPUC BLHP provided temporary overhead power for four street lights on Minna St. The temporary overhead power is shown in the attached sketch RFI-U0020 SKU-01. The temporary overhead street light power allows PG&E to de-activate existing underground electric ductbanks in Minna St. while maintaining power to the existing street lights.</p> <p>The temporary overhead power to existing street lights can remain active until the two street light relocations in Minna Street are constructed, new underground street light duct, bull boxes and cables are constructed, and new underground power connections have been coordinated with SFPUC BLHP and PG&E.</p> <p>Since SFPUC BLHP provided temporary power to the existing street lights, the construction sequence of the new street lights with respect to the other works on Minna St. now has more flexibility and is not required prior to performing other works in Minna St.</p>

U-0021	M.H. #501 and existing utilities	Closed	11/17/2010	11/22/2010	12/02/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jeffrey Negley		To: Turner Construction Company Michelle Smith		Answered By: AECOM Technical Services Eric Zagol			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Plan/Drawing: U-3021				Please provide a mark up of U-3021 indicating the horizontal location of the utilities discovered that correlate to the section sketch provided. Also, please clearly indicate those utilities that were not marked in the field in response to the USA ticket for this excavation work.			
During potholing activities in 1st St. where Manhole #501 is to be installed Trinet has encountered a number of existing utilities which occupy the same intended space for Manhole #501. Please see the attached sketch for locations and clarifications of these utilities.				*****			
Some of these utilities, particularly UT Group #2 and UT Group #5 (reference sketch) are intended to be disconnected by PG&E by November 24th. Please confirm.				E. Zagol 11/24/10			
UT Group #1, which appears to be owned by ATT is noted on the drawings as to be disconnected and demolished. Please advise as to when this utility is scheduled to be disconnected.				In response to items listed above:			
UT Groups #3 and #4 are unidentified and were not included in the USA markings for this area. In order to construct M.H. #501 per the contract drawings these utilities must be removed or relocated. Please advise as to the ownership of these utilities and provide direction on how to proceed.				1. As of 11/17/10 PG&E has stated that the de-energization of Minna St. will be complete by 11/24/10. In accordance with Specification 024100 1.3 B and 024100 3.5 B obtain in writing a Utility Severance Certificate (or equal) that all connections have been disconnected and the utility is not active.			
Note: due to construction, we are requesting that this RFI be answered by 11/22/10 if possible.				2. As of 11/17/10 AT&T has stated that contents in AT&T existing ducts along First St. have been terminated with the exception of the new duct from Howard St. to 400 Howard St. property. Confirm that the existing AT&T duct subject of discursion is the exiting duct from TMH-1887 to Existing Transbay Terminal as shown to be demolished on U-1121. In accordance with Specification 024100 1.3 B and 024100 3.5 B obtain in writing a Utility Severance Certificate (or equal) that all connections have been disconnected and the utility is not active.			
				3. Groups #3 and #4 utilities are not shown on AECOM's existing utility plans and as noted in the RFI are not included in the USA markings. Pending direction from TJPA's representative in accordance with Specification Section 00 08 10 the suggested first course of action is to notify USA and request a "No Response Follow Up Message". Other suggested actions have been provided to TJPA PMPC for consideration and direction further direction provided by the TJPA's Representative.

REQUEST:			SUGGESTION:		ANSWER:		
Reference Plan/Drawing: U-1002 and attached PDF.					Accept Suggestion: <input type="checkbox"/>		
Current USA markings have identified (2) SFWD laterals which are not indicated on the drawings. These are located at approximately STA 8+59 and 9+06 and extend from the main in Minna St., North toward the building of 100 1st. ST. These laterals need to be identified and recorded in order to properly document and construct both the new water line and the new joint trench.					100 First St. Building Engineer confirmed existing laterals do not provide service to 100 First St.		
Any additional work associated with these utilities may result in a cost or schedule impact. Please review and provide direction on how we should proceed.					After new water in Minna Street is constructed, water services and hydrant laterals are connected; main to main connections are made by CDD, and pipes are secure; and the existing water main is abandoned, demolish existing laterals identified at approx. STA 8+59 and 9+06.		
					DO NOT provide a connection from new water main to existing laterals at approx. STA 8+59 and 9+06.		

					Tap record and meter information provided by SFPUC Customer Service Bureau indicates two water laterals to the 100 First St. property entering the building from First Street approximately 50 feet south of Mission St. Meter boxes located along First St. west sidewalk.		
					Coordinate with the 100 First St. Building Maintenance, Bradford J. Collins (CAC Real Estate Management Co., Inc.), Tel: 415.243.8803 thru the TJPA's representative to confirm that laterals do not provide service to 100 First St. property from Minna Street.		
U-0023	MOP 1 for de-energizing PG&E at Minna St. between 1st and 2nd St	Closed	12/01/2010	12/02/2010	12/02/2010	Potentially	<input type="checkbox"/>

	REQUEST: Reference: Sheet U-3109 (dated 2010-09-29) During Trinet's potholing for the Joint trench along the North side of Minna St, a basemenet for building "100 First St." was revealed. The basement wall is located just behind the face of curb and extends to more than 8 feet below finish grade. The extent of the basement is unknown, but assumed to run the length of the "100 First St" property. The basement structure is in conflict with the proposed new fire hydrant installation at Station 9+10. Please provide layout for the fire hydrant.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The wall encountered appears to be an abandoned side walk basement wall for the 4 story brick building that existed prior to the current 100 First St. building. Approximate width of wall is 2 feet and the outside face is approximately at the face of curb. Neatly cut and remove wall to form a trench. Required trench width and depth per Detail 7 on U-5101. Construct hydrant lateral, riser and hydrant as shown in Detail 2 on Sheet U-5101.		
U-0035	Installlation Depth of Storm Drain New Catch Basins	Closed	12/09/2010	12/13/2010	12/13/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Kevin Chiu			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
	REQUEST: Reference: Sheet U-3023, U-3033 (Detail B), Attached detail from Department of Public Works Buearu of Engineering Trinet is concerned that the installation depth for many of the new catch basin does not comply with SFDPW Sewer Departent guidelines, specifically regarding access to the traps for the maintenance department. The DPW sewer maintenance crews need to have ready access to the p-trap during flooding emergencies. DPW crews need to be able to reach the p-trap to, either remove the cleanout cap and release the flow to the culvert pipe (if the trap bottom is plugged), or rod the culvert line through the trap (if the culvert is plugged). To get some clarification of the installation guidelines, Trinet had informally talked to one of the design engineers at the SF Bureau of Engineerring, Hydraulics Department. He advised Trinet that new catch basins should be installed with center of trap and discharge piping grade located between 3 and 4 feet below the culvert runs to cross under existing utilities that are in conflict with a direct run to the discharge manhole. Bends should be 22	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> AECOM has confirmed with SFDPW Hydraulics that limited vertical bends in the 10-inch culvert run are acceptable. SFDPW also confirmed that from a maintenance perspective the clean out on the cast iron trap is more accessible at a depth of 3 to 4 feet below ground surface. Please submit subsurface utility investigation information including top, bottom and size of existing utilities along the 10-inch culvert alignment from catch basin to manhole such that the 10-inch culvert can be engineered and the catch basin depth can be determined to avoid existing and future utilities.

	1/2 degrees where possible as required, and if 45 degree bends must be used we should limit the number to two (2).						
	Please provide the depth of CB#603 on Fremont Street. To expedite the work in the field, we require an answer by 12/13/10.						
U-0035.1	Fremont Street Storm Drain from CB#603 to (E) Manhole	Closed	12/23/2010	01/02/2011	12/28/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jason Dunne		To: Turner Construction Company Kevin Chiu	Answered By:AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to Sheet U-3023, U-3033 (detail B) and see RFI #U-0035		Based on a site visit on 12/28/10 with Jason Dunne (W/O) and Victor (Trinet) to review exposed trench alignment for 10-inch culvert it was confirmed that the culvert alignment will clear the new temporary 8-inch water and existing 8-inch water main with adequate separation.					
Per the response to RFI #U-0035, find attached for your review a drawing showing the proposed alignment for the catch basin (CB# 603) installation and storm drain run to the existing manhole on Fremont St.		Alignment as shown in the attached drawing is acceptable.					
Please confirm this proposed alignment is acceptable or provide another solution.		Note, existing 3" HP Gas immediately west of the catch basin is to be abandoned by PG&E per Sheet U-1123 Demolition and Sequence item 2. Coordinate with PG&E to confirm 3" HP Gas is inactive and can be demolished and removed to facilitate construction of the catch basin and culvert, if required.					
***Please confirm this alignment by 12/27/10 if possible.		Answered by Eric Zagol AECOM 12/28/2010					
		***** ***** *****					
		Please indicate the location of new temporary 8-inch water main in Fremont Street in the section drawing and resubmit for review.

REQUEST:			ANSWER:				
Reference: Sheet U-1008, attached sketch of section from Trinet RFI 28 and documentation of notifications to USA North			Accept Suggestion: <input type="checkbox"/>				
See the attached section through the investigative trench at station 4+40 on Fremont St. Per note 4 on sheet U-1008, Trinet hereby requests that Webcor "notify TJPA" of the unidentified 6" steel pipe at 7'-9" from the east face of curb and 3'-4" to cover that Trinet encountered in their trenching which was not indicated on the contract plan. Per the same note, Trinet requests "direction on the demolition" of this line.			Unknown unforeseen existing utility condition.				
Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/16/10.			In accordance with specification 00 08 10 section 1.3 EXISTING UTILITIES NOT INDICATED and specification 020630 section 4.1 POTHOLES AND TRENCHING OPERATIONS paragraph C, please proceed with the following in order to identify all interfering utilities that are unknown after all specified procedures or other non destructive methods proposed by the contractor have been exhausted:				
			Pipe: If conductive material, perform subsurface investigation via electromagnetic detection (or other nondestructive methods) to trace utility back to nearest vault, pull box, manhole or valve to identify owner and content. If nonconductive, excavate along pipe alignment to expose coating and a joint. Inspect and provide information on coating and joint type. If content is still unknown, tap each line in order to identify contents and operating status of utility (i.e. abandoned or operational.)				
			Conduit and duct bank: Determine if utility is a charged electric utility utilizing a contractor that performs NETA type work. Determine if telecommunication cables are operational.				
			Once the utility has been identified including owner and contents, and determined inactive or de-energized, cut and cap utility at the demolition demarcation line shown in the drawings.				
			Note, 6" steel pipe is in the same alignment as PG&E's excavated manhole 1675. Coordinate with PG&E to see if PG&E has demolished this line.

U-0050	Lower Sewer Laterals on Minna	Closed	12/15/2010	12/25/2010	01/11/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Mario Saldana Sr.		To: Turner Construction Company Kevin Chiu		Answered By: AECOM Technical Service Eric Zagol			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST:				1/11/11			
Reference: Sheets U-3007 & 3008, and Trinet RFI 41				See revised Sewer Plan and Elevation Phase I Plans titled "Revisions - Minna Street 12/27/10" for revisions to sewer main elevations.			
Two of the active sewer service laterals potholed on Minna St. are lower than the new sewer main and will not drain. The details of each issue are as follows:				*****			
1. Station 5+05 - Service for #2 Shaw Alley				12/27/10			
Top of pipe grade @ FOC for the 6" VCP sewer lateral is 11.37. The invert elevation is approximately 10.8. The invert elevation of the new 24" sewer main @ Station 5+05 is approximately 11.4				Adjust new sewer main in Minna Street to accommodate existing laterals as shown in the "Minna Street Revisions" sheet revision forthcoming addressing both this RFI and RFI U-0017.			
2. Station 2+10 - Service for Anchor & Hope Restaurant							
Top of pipe grade @ FOC for the 6" VCP sewer lateral is 13.51. The invert elevation is approximately 12.94. The invert of the new 18" VCP sewer main @ Station 2+10 is approximately 13.4.							
Please review these issues and advise. An expedited response is requested by 12/16/10.

REQUEST:			SUGGESTION:		ANSWER:		
Reference: Sheet U-1008, attached sketch of section from Trinet RFI 38 and documentation of notifications to USA North					Accept Suggestion: <input type="checkbox"/>		
See the attached section through the investigative trench at station 4+40 on Fremont St. Per note 4 on sheet U-1008, Trinet hereby requests that Webcor "notify TJPA" of the unidentified 6" clay pipe at the west face of curb and 4'-7" to cover that Trinet encountered in their trenching which was not indicated on the contract plan. Per the same note, Trinet requests "direction on the demolition" of this line.					Possible existing Transbay Terminal sewer laterals. Coordinate with Existing Terminal & Ramps Demolition Plans Project (Demolition Project) through the TJPA Representative to confirm that the Demolition Project has abandoned sewer laterals. Sewer laterals should be abandoned per SFDPW Standards.		
Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/16/10.					Once confirmed abandoned, cut and plug at the demarcation line shown in the Drawings.

REQUEST:

Reference: Sheet U-1007 and attached sketch of areas plan view

See attached, plan views of the investigative trench on the East side of First St, West of the concrete MUNI median, from Stn. 9+70 to 9+59.5. Per note 4 on sheet U -1007, Trinet requests direction on the 4" Cardboard Pipe found 2'-0" West of the concrete MUNI median face of curb and 3'-6" to cover that was encountered but not indicated on the plans.

Trinet has this plated but would like to backfill the trench as soon as possible. An expedited response is requested with official direction on how to proceed with this facility by 12/23/10.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Unknown unforeseen existing utility condition.

In accordance with specification 00 08 10 section 1.3 EXISTING UTILITIES NOT INDICATED and specification 020630 section 4.1 POTHOLING AND TRENCHING OPERATIONS paragraph C, please proceed with the following in order to identify all interfering utilities that are unknown after all specified procedures or other non destructive methods proposed by the contractor have been exhausted:

Pipe: If conductive material, perform subsurface investigation via electromagnetic detection (or other nondestructive methods) to trace utility back to nearest vault, pull box, manhole or valve to identify owner and content. If nonconductive, excavate along pipe alignment to expose coating and a joint. Inspect and provide information on coating and joint type. If content is still unknown, tap each line in order to identify contents and operating status of utility (i.e. abandoned or operational.)

Conduit and duct bank: Determine if utility is a charged electric utility utilizing a contractor that performs NETA type work. Determine if telecommunication cables are operational.

Once the utility has been identified including owner and contents, and determined inactive or de-energized, cut and cap utility at the demolition demarcation line shown in the drawings.

U-0066	Minna St Station 2+09 - 4" Water Service Lateral Encountered	Closed	12/23/2010	01/02/2011	12/28/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Kevin Chiu			Answered By:AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Refer to Sheet U-3107			Existing 4-inch service for 83 Minna Street is indicated in specification 331160 Appendix A. Service is an active fire service to 83 Minna Street and must be connected to the new 8-inch water main.				
During the water installation on Minna St we encountered an existing 4" water service lateral at Sta 2+09. The 4" service extends from the old 8" water main to 83 Minna St (Anchor & Hope Restaurant). This is in addition to a 1" service lateral to the same building which we encountered at station 2+09. The contract drawings only show the 1" water lateral service connecting to the new main.			Furnish and install 8"x8"x4" tee with joint restraint in accordance with the specifications. Furnish and install service 4-inch DIP, fittings and valve. Set 4-inch service and valve elevation to match existing 4-inch service elevation.				
Please advise if the existing 4" service lateral is active and if it must be connected to the new water main. There was no material on site to install a tee in the line, and to avoid delaying the work, the new water main isntallation continued past the 4" service lateral. The recommendation is that if the 4" service line needs to be connected to the new main, work can be performed by SFWD as an additional tie-in.			Connection from new 4-inch service valve to existing 4-inch service by SFWD. Answered by Eric Zagol AECOM 12/28/2010

	REQUEST: Reference Sheet U-3107 and Trinet RFI 059.1	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
	This is a follow up to the engineer's response to Trinet RFI #59 (RFI#U-0066). Upon further evaluation of the 4" fire service connection at 83 Minna by Tom Farhnam (SFWD Senior Inspector), the water department proposed the attached installation detail for an 8"x4" tee in the 8" main, to be performed by Trinet, and the connection detail to the existing 4" service, to be performed later by the SFWD crew. This change was proposed to avoid conflicting utilities running along the south side of teh new 8" main. AECOM's Design Engineer, Eric Zagol, was advised of the changed design plan proposed by SFWD in the field on 12/28/2010. Please confirm if the attached plan is acceptable and approved for construction.		Construct water serve lateral in accordance with contractor's attached plan and note the following:				
			1. Provide full joint restraint in accordance with contract documents				
			2. Provide 4" DI pipe for the section labeled "9" DI NIPPLE"

Co-Author:

REQUEST:

See attached drawings and photos

During the water main installation on Minna St, Trinet encountered what appears to be an old abandoned sewer manhole in the trench line at station 1+15. The structure was not indicated on the drawings and was not discovered until the pavement asphalt was removed. The sewer manhole is directly in conflict with the alignment of the new water main. The installation of the watermain cannot proceed further until the manhole is demolished and/or abandoned.

Per a field walk with Eric Zagol on 12/23/10, the existing MH was confirmed abandoned. Please confirm/advise the top of the MH will be demolished to allow the installation of the waterline, and the MH will be backfilled with CDF.

****Please provide direction by 12/28/10.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1. Remove and dispose of existing abandoned separated sanitary sewer system manhole to a depth of 1 foot below bottom of new water main.

2. Plug existing abandoned 8-inch sanitary sewer with concrete per 024100 3.6 A.

3. Backfill abandoned manhole with CDF to an elevation 1 foot below bottom of new water main.

4. Provide 6-inches of bedding material between CDF and bottom of trench bedding per Detail 7 on Sheet U-5101 such that the total depth of trench bedding crossing the abandoned structure is 1 foot.

REQUEST: Reference Sheet U-2008 and Trinet RFI 63			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
During our potholing on Minna St. for the proposed AT&T vault in the sidewalk (Stn. 3+72), we encountered an existing subsurface foundation and slurry shoring wall. The top of the subsurface foundation is at a depth of approximately 4' from the top of the sidewalk and is in conflict with the installation of the proposed AT&T vault. Installation of the proposed AT&T vault in accordance with the plans will require partial demolition of the existing foundation wall encountered. Please advise.			As determined during a site visit on 1/10/11 with W/O, Turner, AECOM and Tishman Speyer, the exposed wall is an abandoned sidewalk basement wall. Remove and dispose of existing abandoned sidewalk basement wall as required (approx. 1.5 feet in depth) to construct proposed AT&T vault.				
U-0071	Existing fittings at tie in location for Minna St. 8 in. Water Main (Stn. 9+30)	Closed	01/10/2011	01/20/2011	01/12/2011	Potentially	<input type="checkbox"/>

U-0075	Water Main Connection at 2nd St and Minna St - expose new line for SFWD	Closed	01/11/2011	01/21/2011	01/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Mario Saldana To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3107 and attached photos					Accept Suggestion: <input type="checkbox"/>		
At the intersection of 2nd St and Minna St, there is an existing 2in gas line running directly on top and next to the existing 8in main to be tied into. SFWD cannot make the Tee connection due to the bells of the fittings with the 2in gas line so close.					Provide labor and equipment to excavate and shore trench for pipes, fittings, and valves as necessary for connections to the existing water mains by SFWD in accordance with U-3100 Note 4 and specification section 33 11 00 par. 3.5.		
The end of the new line installed by Trinet will need to be exposed about 2ft for SFWD to move the end of the line by 1ft east so that SFWD can make the connection without moving the gas line. This will require extra work for Trinet to expose the new line for SFWD. Eric Zangol from AECOM and Dan Helminiak from SFWD were present during the discussion of this issue.							
Please provide direction as soon as possible as this will impact the chlorination and tie-in schedule.							
U-0076	Water Main Connection at 2nd St and Minna St - demo/excavate per SFWD	Closed	01/11/2011	01/21/2011	01/14/2011	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3107 and attached photos					Accept Suggestion: <input type="checkbox"/>		
At the intersection of 2nd St and Minna St, the new 8in water main is to be connected to an existing 6in water line. The new 8in line installed by Trinet is above and below existing utilities, and SFWD requires more demo/excavation to make the connection.					Provide labor and equipment to excavate and shore trench for pipes, fittings, and valves as necessary for connections to the existing water mains by SFWD in accordance with U-3100 Note 4 and specification section 33 11 00 par. 3.5.		
This will require extra work for Trinet to demo/excavate per SFWD. Inspector Dan Helminiak is scheduling the SFWD to come back and measure this afternoon (01/11/2011). Eric Zangol from AECOM was also present during the discussion of this issue.							
Please provide direction as soon as possible as this will impact the chlorination and tie-in schedule.

U-0077	Fire Hydrant Installation at Minna St Stn. 0+90	Closed	01/12/2011	01/22/2011	01/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3107					Accept Suggestion: <input type="checkbox"/>		
With reference to the fire hydrant at Minna St. Stn. 0+90, (northeast corner of Second St. and Minna St.) General Note #5 on sheet U-3107 directs Trinet to "replace in place existing fire hydrant."					As discussed on site with Daniel Helminiak (SFPUC Inspector) and those mentioned above, the proposed construction sequencing of the fire hydrant at Minna St. STA 0+90 is acceptable.		
Per on site field discussions with Eric Zagol from AECOM, Robert Friend from Trinet and Mario Saldana from W/O, it was determined that the existing hydrant would remain in place until after the new water main connections are performed by CDD crews. After which the existing hydrant will be removed and new hydrant and lateral piping will be installed and tested.					Coordinate with Daniel Helminiak (or assigned SFPUC Inspector) and the SFWD to ensure the fire hydrant is properly decommissioned by SFWD and SFFD following main connections by SFWD and prior to abandonment of the existing main in Minna Street by SFWD prior to fire hydrant installation by Trinet. Coordinate with SFPUC inspector to ensure SFWD and SFFD installs a black hydrant "donut" on the existing fire hydrant and new fire hydrant prior to the new fire hydrant being placed in service. Coordinate the removal of the "donut" once new fire hydrant is in service.		
Please confirm if this is acceptable. An expedited response is requested.							
U-0078	6in and 4in Service Laterals to 2 Shaw Alley	Closed	01/12/2011	01/22/2011	01/14/2011	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-2008					Accept Suggestion: <input type="checkbox"/>		
The existing 4" water service found at Stn. 5+37 has been confirmed abandoned by SFWD personnel through on site investigations. Since the service is determined to be inactive, Trinet intends to not provide service from the new main for this 4" service as discussed in the field, with Eric Zagol from AECOM, Mario Saldana from W/O, Dan Helminick from SFWD and Robert Friend from Trinet. In addition, Dan Helminick from SFWD requested to have the service tee installed in the new 8" main which was to provide service for this 4" lateral removed and straight pipe installed. Please confirm if this is acceptable.					Existing 4" water service at STA 5+37. Subsurface utility investigations should have been performed and submitted prior to installation of water main to determine status of existing lateral in accordance with U-3108 General Note No. 3. It is acceptable to remove the 8"x8"x4" tee installed and replace with straight pipe per the request of SFPUC SFWD inspector.		
The 6" water service lateral found at Stn. 5+30 has been confirmed as an active fire service to 2 Shaw Alley by SFWD personnel through on site investigations. Trinet					Provide 6" water service later at STA 5+30 per contract documents.		
					AECOM suggests that there is no change in contract price to perform this work.

U-0079	Fremont St Temp Water Line Installed over AT&T Duct	Closed	01/17/2011	01/27/2011	01/19/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company Michelle Smith		Answered By: AECOM Technical Service Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Sheet U-3123 and attached detail							
During Trinet's installation of the temporary water line in Fremont St., Trinet encountered an existing AT&T duct that was in direct conflict with the temporary water line. Trinet was directed by Eugene Chu of SFWD/SFPUC to run the temporary water line over the existing AT&T duct using 45 degree bends. This resulted in less cover for the piping than what is required by the Water Department. Due to the lack of cover, Trinet was directed to install a 1/2in steel plate beneath the concrete base along the trench as depicted in the attached detail. The plate was approximately 2ft wide by 6ft long and extended to the limits of the installed 45 degree bends. Please provide confirmation that this is acceptable.		It is AECOM's understanding that Trinet encounter an existing PG&E electrical duct (4-4") crossing the water alignment feeding 301 Mission property and not an AT&T duct as referenced above. It is also AECOM's understanding that Trinet encountered an existing PG&E electrical duct (8-3") parallel to the water alignment which is ultimately to be abandoned by PG&E and demolished by Trinet. Both PG&E ducts are shown in the plans. Per sequencing shown on U-1123, the water line should be constructed after PG&E completes their work on Fremont Street.					
		Given the fact that the PG&E duct parallel (8-3") has not been abandoned by PG&E, and given the fact the option to go under the existing 4-4" PG&E duct per plans is not feasible because the existing 8-3" PG&E duct is not demolished, and given the fact that the new water main is a temporary condition, the above mentioned installation proposal is acceptable.					
		AECOM suggests no additional cost to contract price to perform this work.

U-0080	Proposed Design Change for MH #501	Closed	01/17/2011	01/27/2011	01/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-2021 and attached drawings					Accept Suggestion: <input type="checkbox"/>		
Trinet proposes to change the design of sewer manhole #501 from a Modified Box Manhole (per SF Standard Plan #87,184) to a Precast Concrete Manhole (per SF Standard Plan #87,181 - see attached drawing). The proposal includes the installation of a temporary 24" PVC pipe stub, extending south from the manhole and connected to the brick sewer per SF Standard Plan #87,197.					CCSF DPW Standard Plan #87,181 referenced specifies a 4 ft diameter precast concrete manhole. Three (3) 24-inch pipes connecting to a 4 ft diameter manhole at invert elevation as proposed by contractor may yield an unstable structure and is not approved. A larger diameter precast concrete manhole may be acceptable however the alternative would need to be submitted as a substitution for CCSF SFDPW approval.		
The proposed manhole design will facilitate construction around the many utilities identified in the excavation - see RFI # U-0021 (Trinet RFI 04). It is also the preferred manhole design for 24in pipe per the SF Standard Drawings, especially since the brick sewer on the south side will later be abandoned and plugged (in the manhole) by the owner. This plan will also facilitate the later abandonment of the outlet to the south, as the owner will just have to plug the 24in outlet pipe and not a 3x5 brick sewer.					As per the response to RFI U-0021, please provide a mark up of U-3021 indicating the size, and horizontal and vertical location of the utilities identified in the excavation for review.		
Please consider. An expedited response is requested.							
U-0080.1	Proposed Design Change for MH #501	Closed	02/09/2011	02/18/2011	02/22/2011	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-2021, RFI #U-0080, and attached drawings					Accept Suggestion: <input type="checkbox"/>		
In response to the Engineer's concerns with the number and size of pipes in Trinet's original revised detail for MH 501 (RFI#U-0080), Trinet has changed their proposed installation drawing to include a 5' I.D. cast-in-place MH base. The lower precast section of the MH will be 5' I.D., with a precast reducer section transitioning from 60" to 48" I.D. placed above. Attached is the revised drawing for MH 501 and shop drawings for the precast MH sections. The design was discussed with Cliff Wong from the SF Bureau of Engineering, Hydraulics Department, and he did not have a problem with a 5' I.D. manhole.					02/22/2011 - Kevin Chiu		
					A Change Request (CR) may be issued for the accepted substitution of the 5-foot diameter precast concrete manhole in lieu of the cast in place Modified Box Manhole.

REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3119 and attached drawing					Accept Suggestion: <input type="checkbox"/>		
Please confirm that it is acceptable for M Squared to install the new 12in water line in a straight line as sketched on the attachment. Contract Drawings show the pipe offsetting between Sta 18+72 and Sta 19+98. Due to existing utilities discovered in potholes the 12in line will be installed 18ft from centerline.					1. Contract Drawings indicate an offset to avoid a bus island, as shown on the plans, that was to be constructed as part of the Transbay Temporary Terminal Project. AECOM received confirmation from Philip Sandri TJPA/PMPC that the bus island was deleted from the Transbay Terminal Project. It is acceptable to eliminate the offset and construct water main between STA 18+72 and STA 19+98 at 18ft from centerline.		
Also, please confirm the elevations of the water line can be raised dependant on the depths of the existing utilities					2. Elevations of the water line can be raised dependant on the depth of the existing utilities. Minimum depth of cover shall be 18-inches below the bottom of the concrete base pavement section per DPW Order No. 176,707 or 28" which ever is greater.		
Also, the referenced drawing has a discrepancy shown between the 12in water line bend station called out and the location shown in plan view. Please confirm that the first 45degree bend is located at 18+72, and not 18+27.

REQUEST:			ANSWER:				
Reference Specifications Section 33 31 10, 1.4.E			Accept Suggestion: <input type="checkbox"/>				
Please clarify if TJPA or DPW is going to complete the inspection of the pipe as described in the referenced specification section.			For general materials, please follow the specification requirements regarding delivered materials in 01 16 00 1.6D.				
SUGGESTION:			For materials falling under specification section 33 31 31, section 1.4C determines that all piping is SUBJECT to inspection by TJPA and/or DPW. This means that all piping is to be made available upon delivery if TJPA/DPW deems it is necessary to inspect the material. Contractor to inform TJPA of all deliveries and assure the storage facility is accessible. TJPA will inform contractor if material will be inspected prior to installation. When TJPA determines that additional labor is needed to move materials around for inspection, please reference 1.4E, which states that contractor is to furnish labor as needed to assist TJPA with this effort.				
			There is no <i>“HOLD POINT”</i> for TJPA or SFWD to inspect materials at manufacturer or upon delivery. TJPA/DPW intends to inspect the materials deliveries of each subcontractor until such time as a confidence level is built that subcontractor and W/O are ensuring the proper amount of quality control through their own material inspections.				
			Per specification Section 01 14 00 1.4, W/O shall verify all dimensions in the field and shall check all field conditions continuously during construction, including materials. Any inspection of materials by TJPA, DPW, or any other agency does not alleviate the subcontractor or W/O of the responsibility of

REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3125 and attached sketch					Accept Suggestion: <input type="checkbox"/>		
The existing 4no. 4in AT&T lines on Beale Street at Sta 6+10 are not as shown on the contract drawings. See attached sketch. Contract drawings show the conduit crossing M Squared's trench for 6 or 7 feet, however the duct bank is in the trench for 37 feet due to the alignment and width of the duct bank. The conduits are covered with a 2 foot wide concrete cap and appear in the trench for the new 12in water main at Sta 6+12 before leaving the trench at Sta 5+75. M Squared cannot lay the pipe on top of the concrete cap as the pipe will not have the required coverage. Due to this M Squared is unable to install the new 12in water as shown. Juan with AT&T advised that M Squared remove the concrete cap from the conduits to allow for excavation of this portion of trench. With the cap removed it is more likely that the pipe will have the necessary minimum coverage. Please confirm that this is how M Squared is to proceed. An expedited reponse is requested.					Please proceed as per AT&T's suggestion. Please coordinate with AT&T's representative Huan Hunynh and field representative Dave Olson for an onsite inspection by AT&T of the affected AT&T conduits prior to backfill. Confirm minimum cover of 30-inches or 18-inches below concrete pavement base which ever is greater, is maintained. Provide distance between top of water main and bottom of AT&T conduits for review.		
U-0086	Concrete Slab & Rail Ties at Howard STA 13+60	Closed	01/24/2011	02/03/2011	01/25/2011	Potentially	<input type="checkbox"/>

	<p>REQUEST:</p> <p>Reference San Francisco Standard Specification Section 703.08, attached</p> <p>Trinet requests authorization from the Engineer to compact the sewer trench backfill sand by jetting in accordance with the San Francisco Standard Specification Section 703.08.</p> <p>The native material along Minna, which Trinet is re-using for trench backfill, is a clean well grade dune sand. Trinet believes jetting is an ideal method of compaction for this type of material. It is also an effective means of compacting the sand around the top and sides of the pipe without disturbing the pipe, and backfilling any voids left from removal of the shoring or that might have formed behind the shoring. This method of compaction is commonly utilized in San Francisco for sewer projects in similar ground conditions.</p> <p>An expedited response is requested.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>Jetting in accordance with CCSF DPW Standard Specification Section 703.08 of the backfill layers above the sand backfill (pipe zone) as specified in CCSF DPW Standard Specification Section 703.06 for sewer installations is acceptable.</p> <p>Contractor shall determine that jetting will not result in damage to sewers, adjacent structures, or cause adjacent materials to be softened. Any resulting damage shall be repaired at the Contractors expense.</p> <p>Meet compaction requirements for each horizontal lift. If compaction requirements are not met, discontinue the use of jetting.</p> <p>Notify TJPA's geotechnical engineer through the TJPA representative in advance of jetting to coordinate on-site observation of jetting and compaction testing.</p>		
U-0088	Minna St 18in Sewer Conflict with PG&E MH#1355 at STA 1+77	Closed					
	<p>From: Webcor Construction LP Nhi Tran</p> <p>To: Turner Construction Company Michelle Smith</p> <p>Co-Author:</p>						
	<p>REQUEST:</p> <p>Reference Sheet U-2007 and attached drawings</p> <p>During layout for the installation of the new 18in Sewer Main on Minna St., Trinet observed that the alignment of the 18in Sewer Main is in conflict with existing PG&E MH #1355 at STA 1+77.50, which is to remain in place. The center line of the new sewer main is 0.10ft north of the outside edge of the manhole wall, as depicted in the attached drawing. The north side wall of the manhole is constructed on top of the existing 3ft x 5ft brick sewer. The brick sewer structure extends approximately 16in into the vault along its entire length. The brick sewer therefore cannot be demolished without undermining the north wall of the electric vault. Eric Z. of AECOM was notified of this issue via phone call on 01/21/2011.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>==UPDATE== 3/24/11</p> <p>See revised drawings Minna Street Revisions dated 3/16/11 associated with ASI#003.</p>

U-0090	46 Minna St 6in Fire Service Connection	Closed	02/01/2011	02/11/2011	02/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By:Turner Construction Comp Kevin Chiu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3108 and attached sketch and photos					Accept Suggestion: <input type="checkbox"/>		
The original plan for connection of the 6in Fire Service Lateral @ 46 Minna St. was to leave the existing 6in gate valve (which is located at FOC) in place and connect the new 6in fire line to the downstream side of the old valve (See attached photo and sketch). This plan was proposed by SFWD inspectors, Tom Farhnam and Dan Helminiak, at a field meeting on 12/28/10. On Friday 1/28/11 the SFWD, plumbers when taking measurements for the tie-in, proposed a different plan. They want to extend the new 6in fire line beyond the curb and into the basement, and connect to the homeowners fire line inside the basement (under the sidewalk).					VOID.		
Note: This will require coordination with building owner to put a hole through their foundation. Layout and a detail would need to be provided for the wall penetration, as well a detail to plug the hole where the existing water line is entering the basement.					See RFI U-0093, 46 Minna 6in FS Water & 1in Copper Water Service Lateral at STA 5+17 Tie-In.		
Please provide direction on how to proceed.

	<p>SFWD has proposed the new tie-in pipe configuration.</p> <p>1. New 6in Fire Service Lateral Tie-in at 46 Minna St (See Attachment A)</p> <p>- Old existing fire service lateral is to be cut out of the existing water main up to the gate valve as shown in the sketch, and replaced with straight pipe. A new 10in hole is to be core drilled into the existing basement wall 22in east of the existing service lateral to incorporate the new 6in fire service lateral. SFWD will run the new 6in fire service lateral through the hole and Trinet is to provide Link Seals (see attached material information sheets) to seal the space between the new pipe and wall hole.</p> <p>2. New 1in Copper Service Lateral Tie-in at STA 5+17 (See Attachment B)</p> <p>- Old existing 1in plastic poly pipe is to be cut and plugged with non shrink grout. A new 2in hole is to be core drilled 4in east of the existing 1in service, to incorporate the new 1in copper service lateral. The space between the new pipe and wall hole will be sealed with non-shrink grout.</p> <p>Please advise if this is acceptable. An expedited response is requested.</p>			<p>2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.</p> <p>3. SFWD to cut and remove existing pipe.</p> <p>4. Remove excess fill material to create flat even surface for link seal type pipe sleeve.</p> <p>5. SFWD to install and connect new service.</p> <p>6. Restore wall per SK-U-0005 attached.</p>				
				1-inch Water Service Renewal -				
				<p>1. Coordinate with SFWD for the shutdown of the existing domestic water service. Shutdown by SFWD.</p> <p>2. Neatly remove existing fill material between the existing pipe and wall penetration to dislodge and free the existing pipe such that it can be removed by SFWD.</p> <p>3. SFWD to cut and remove existing pipe.</p> <p>4. SFWD to install and connect new service.</p> <p>5. Fill void between pipe and exposed wall penetration with non-shrink grout.</p>

U-0094	Joint Trench Alignment Conflict With (E) Steam MH at Minna St. STA 0+85	Closed	02/03/2011	02/13/2011	02/04/2011	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company Michelle Smith		Answered By: AECOM Technical Service			Eric Zagol
Co-Author:								
REQUEST:		SUGGESTION:		ANSWER:				Accept Suggestion: <input type="checkbox"/>
Reference Sheet U-3107 revised 12/27/10				Steam MH at STA 0+75 has been abandoned by NRG Energy. Demolish as indicated on U-1107 (rev. 1 12/27/10) and in accordance with the contract documents.				
The revised drawings show the Joint Trench alignment crossing through an existing old steam MH (Sta 0+85). The vault is a very large structure and extends to the north face of the curb of Minna St. Trinet believes that this vault is an abandoned structure.				Coordinate with Mike Eurkus (NRG Energy) at (415) 644-9668 through the TJPA's representative for the pick up of the salvaged steam MH ring and cover.				
Trinet requests direction for abandonment and/or demolition of this structure.

U-0096	PG&E Conflict with Sewer Installation at Natoma STA 9+50	Closed	02/09/2011	02/19/2011	02/14/2011	Yes	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By: Turner Construction Company Kevin Chiu				
Co-Author:							
REQUEST:			ANSWER:				
Reference Sheet U-3012 and attached drawing			Accept Suggestion: <input type="checkbox"/>				
On 02/07/2011, M Squared encountered what appeared to be a live PG&E duct bank during their sewer installation excavation on Natoma Street STA 9+50. Due to this conflict, M Squared was unable to continue excavating for the sewer (See attachment). On 02/09/2011, M Squared's Superintendant met with a PG&E Representative and PG&E Representative confirmed that the duct bank is live and is not due to be decommissioned for at least 3 months.			02/14/2011 Kevin Chiu				
In order for M Squared to continue with the sewer installation, M Squared is proposing to: - install MH #305 and begin installing pipe west of MH #305 - perform a temporary connection from MH#305 to the existing 3' x 5' brick sewer			See CR U-006 issued on 2/14/11				
M Squared can then perform the remainder of the work once PG&E has decommissioned the duct bank.			----- 02/10/2011 Eric Zagol				
M Squared estimates that the additional cost to perform the temporary tie-in would be approximately \$4,500.			Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E. Given the fact that PG&E has experienced construction delays associated with their structures on First Street, the proposed sequence for sewer construction is acceptable.				
Please confirm how you would like M Squared to proceed. M Squared requests an expedited response as they are currently stopped work and awaiting a response.			Submit a temporary connection detail for review.				
			Coordinate with PG&E to abandon the existing 2-inch HP Gas along Natoma per U-1112 and U-1120 prior to demolition.				
			Coordinate with Verizon to abandon existing conduit (labeled "U" on base plans) prior to demolition per U-1112 and U-1120.				
U-0096.1	PGE Conflict with Sewer on Natoma at First Workaround	Closed	02/15/2011	02/25/2011	02/18/2011	Potentially	<input type="checkbox"/>

U-0097	PG&E Conflict with Sewer Instll on Natoma at First	Closed	02/10/2011	02/20/2011	02/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By:AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3012					Accept Suggestion: <input type="checkbox"/>		
Following on from M Squared's RFI #U-0096, M Squared has confirmed in the field that there is a grade conflict between the proposed sewer and the existing electrical duct bank on Natoma between STA 9+30 to 9+50. The conflict is between the bottom of the electrical duct bank and the top of the new 24" sewer pipe.					Demolition and Construction Sequence shown on U-1112 and U-1120 lists per sequence order that the sewer work is to commence after PG&E has completed their Phase I work in Natoma and First St., all services cut over and existing duct bank is abandoned by PG&E.		
The elevation of bottom of electrical duct bank is 11.5' The top of the 24" VCP sewer is 11.82'					Proceed per response to RFI U-0096.		
M Squared has also confirmed with PG&E that 3 of the 4 concrete encased conduits are occupied, 2 being occupied by 12KV lines. The duct bank is to be abandoned in the future but PG&E was unable to provide a schedule for this work.							
Please advise M Squared on how to proceed.							
U-0098	Potholing at Blackrock	Closed	02/10/2011	02/20/2011	02/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By:Webcor Construction LP Marina Rosso				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
M Squared is planning to pothole next week at Howard STA 9+40, First St STA 1+50 and First St STA 2+10 to confirm the alignment and depths of the new 12" water main on First St. from Howard to Natoma.					Accept Suggestion: <input type="checkbox"/>		
Guy Hollins from TJPA has advised M Squared that Blackrock is requesting additional potholing in the off-hours to determine locations of AT&T facilities in the area.					Can't find answer in Constructware		
Please provide M Squared information regarding the locations of the additional potholes requested, including the requested depths and sizes.

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

Co-Author:**REQUEST:**

Reference Sheet U-3021, attached sketch, and USA ticket

During excavation for CB#501, Trinet encountered what appears to be a PG&E vault (shown in plans as EMH 7712), PG&E Duct (Shown in plans as 1- 2" & 4-6" EP), 2- 2" steel conduits (not shown in plans), and a concrete shoring wall (not shown in plans).

- The 2-2" steel pipe is in conflict with Trinet's installation of CB#501, and will need to be relocated or abandoned to facilitate the installation of the catch basin. Trinet has done their due diligence (2nd and 3rd No Response follow ups) and these lines were not marked by the owner through USA (attached). Trinet requests direction on the relocation/abandonment of these utilities.

- Trinet proposes to move CB#501 two-feet north to avoid the conflict with the existing EMH 7712. Please advise if this is acceptable.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

Pending approval by the TJP, a deductive CR will be issued.

02/28/2011 - Eric Zagol

Following AECOM's review of the Transbay Transit Center Project 50% construction documents (rev. 12/20/10), further review of the Existing Terminal Ramps & Demolition Plans Project construction documents, and AECOM's understanding of the demolition of the existing Terminal "hump" structure and the timing of such demolition, CB#501 is no longer required.

Delete catch basin #501 and associated 10-inch sewer lateral.

U-0102 **First St. CB#206 in Conflict with (E) Subsurface Conc. Structure / Duct Bank** **Closed**
From: Webcor Construction LP Nhi Tran **To:** Turner Construction Company Michelle Smith

02/23/2011 **03/05/2011** **03/04/2011** **Potentially** ☐
Answered By: Turner Construction Company Daphne Faulkner

Co-Author:**REQUEST:**

Reference Sheet U-3009 and attached sketch and photo

During Trinet's excavation for replacement of CB#206 on the northwest corner of First St. and Minna St. (at STA 9+31), they encountered a concrete subsurface structure or concrete encased duct bank not indicated on the contract drawings. The existing catch basin is approximately 30in deep and is constructed on top of the existing concrete structure/duct bank (see attached drawing).

Trinet requests direction on the demolition of the existing catch basin and the installation of the new catch basin CB#206.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

Pending approval by the TJP, a deductive CR will be issued.

03/04/2011 - Eric Zagol

As determined during a site visit on 3/3/11 with Trinet, AECOM and W/O; existing unforeseen conditions including an abandoned sub-sidewalk basement wall along Minna Street, an active sub-sidewalk basement wall for the 100 First St. property, and an abandoned telecommunications concrete duct along First Street create a situation where the installation of a new catch basin would require an extensive amount of unforeseen demolition.

				In lieu of installing a new catch basin barrel to replace existing modify the existing catch basin as follows:			
				Clean interior walls and bottom. Apply 1/2-inch think uniform layer of mortar on interior walls and bottom. Install cast iron trap. Install pipe culvert and connect to MH#207 as shown in Plans. New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.			
U-0102.1	Catch Basin #206 redesign	Closed	04/01/2011	04/11/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Michelle Smith		Answered By: AECOM Technical Service Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Please clarify the following items relating to the re-design of CB#206:		Eric Zagol 4/12/2011: 1) SikaTop 123 Plus mortar is acceptable. 2) MJ DIP for 22.5 degree fittings is acceptable for culvert runs with less than 3 feet of cover.		Accept Suggestion: <input type="checkbox"/>			
1) The only specification section addressing mortar coating is in 33 31 10 Paragraph 2.1.I, which specifies a "Wet Spray Mortar" application. This process would be cost prohibitive for coating only one catch basin. Trinet proposes the use of "SikaTop 123 Plus" mortar - product data sheets are attached. Please advise if this product is acceptable or specify an alternate material.							
2) The RFI response directs Trinet to use ductile iron pipe for culvert runs with less that 3' of cover. If 22.5% DI bends are required to construct the culverts Trinet would prefer to use Mechanical Joint Fittings. Please advise if these are acceptable.

Reference Sheet U-1113 and U-3113				It is AECOM's understanding that the existing 4-inch lateral is "killed" (not supplying water) however the "killed" lateral may still be pressurized up to the lateral terminal point at the gate valves located on the south side of Natoma Street at Natoma Street STA 10+95.			
A 4-inch water line runs from east to west on the south side of Natoma from Sta 9+40 to Sta 10+95. At Sta 10+95, the 4-in water line 90degrees into the building at 400 Howard St. This building however, appears to be fed from the existing 8-inch line on 1st St between Howard and Natoma.				Demolish 4-inch water as indicated on U-1112, U-1113 and U-1120.			
Is this 4-inch water lateral at Sta 10+95 on Natoma already abandoned? If not, can M Squared abandon it? It is currently in conflict with the proposed location of MH#306, and is also in conflict with the excavation and shoring for the new 30-inch sewer along Natoma (TG04.1).				Prior to demolition: 1. Coordinate with SFPUC inspector to confirm 4-inch lateral is "killed". 2. Coordinate with SFPUC inspector to confirm that the lateral is not pressurized and that the 4-inch gate valve at Natoma Street STA 9+40 (intersection with existing First Street 8-inch water main) is closed. 3. Coordinate with SFPUC inspector and install cap in First Street as shown on U-1120 at Natoma STA 9+55 +/-.

U-0104	Natoma St. Temporary Sewer Connections at Sta 9+25 and Sta 7+20	Closed	02/24/2011	03/06/2011	03/01/2011	Yes	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By:AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Sheets U-1112, U-1120, U-3012, and RFI#U-0096				Due to existing PG&E duct in conflict caused by PG&E's delay with First St. Phase I relocations, the two 12-inch temporary HDPE connections as proposed are acceptable as an interim condition until PG&E Phase I work is complete and the existing duct in conflict can be demolished per plans.			
In order for M Squared to install the new water main on Natoma Street between Sta 6+40 to Sta 10+00, the existing 3'x5' sewer must first be demolished. The 3'x5' sewer cannot be demolished until the new 24-inch VCP has been installed and connected to the existing sewer on First Street at Sta 9+59. Per sheets U-1112 and U-1120, the new 24-inch sewer is to be constructed after the demolition of the PG&E ducts. However, demolition of the PG&E ducts cannot be completed because PG&E has not completed their relocation work				Daphne Faulkner - Pending approval by the TJPA, a CR will be issued.			
Per RFI#U-0096 (M Squared RFI #009), as confirmed by

	<p>mean M Squared's work cannot start until after this.</p> <p>In order for M Squared to continue with their work, M Squared proposes the use of 12-inch HDPE pipe from Sta 12+80 to existing sewer at Sta 13+15 (proposed location of MH#602). Once PG&E has completed their cutovers and the duct bank is abandoned, M Squared will demo the duct bank per specifications and complete the installation of the 30-inch VCP sewer from Sta 12+80 to MH#602.</p> <p>M Squared estimates the cost for this work is \$15,000.</p> <p>An expedited response is required to avoid impact to the installation of the sewer and water line</p>						
U-0106	First St Sewer MH#502 Adjustment to Avoid Conflict w/ (E) PG&E Duct	Closed	02/25/2011	03/07/2011	02/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Michelle Smith		
Co-Author:		Answered By: AECOM Technical Service Eric Zagol					
REQUEST:		SUGGESTION:		ANSWER:			
Reference Sheet U-3021 and attached sketch				Accept Suggestion: <input type="checkbox"/>			
In order for Trinet to avoid a conflict with the existing PG&E duct along the west wall of their excavation, Trinet adjusted the south end of the MH#502 structure by 7 inches to the east (as shown in attached sketch). MH#502 is still aligned to incorporate the connection to the existing brick sewer, and the alignment of the new 24-inch VCP run is unaffected by this change. Trinet will adjust rebar as required to maintain the required spacing and clearances.				The sketch referenced above is based on CCSF DPW Standard #87,184 that shows the minimum reinforcing plan for the connection to the existing 3'x5' brick sewer. Provide reinforcing for connection to 3'x5' per CCSF DPW Standard.			
Please confirm if the adjustment of MH#502 is acceptable.				Confirm that the manhole is being constructed per CCSF DPW Standard #87,182 as shown in Detail 10 on U-5001.			
				Provide width of west wall and location of reinforcing steel at 3'x5' brick sewer connection and 24-inch VCP sewer connection for review.

U-0111	Minna St. Joint Trench Conflict with (E) 8" elbow and thrust block	Closed	03/04/2011	03/14/2011	03/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference drawing sheet U-3409 and attached sketch.					Accept Suggestion: <input type="checkbox"/>		
During our excavation for the joint trench on the east end of Minna St. (STA 9+29) Trinet encountered the (E) 8" water main in Trinet's trench line, approximately 1 foot from our termination point. The existing alignment is different from what is shown in the contract drawings. The drawings do not show the water line crossing the joint trench. The alignment and grade of the water main changed in Trinet's excavation to avoid the adjacent catch basin. A 22.5 degree elbow is located in the center of the joint trench excavation. The elbow is rolled up to accommodate the grade change and there is a thrust block under the footing. Trinet does not believe that it would be safe to excavate under the water main for Trinet's duct bank without having the line shutoff. Extending the PG&E ducts to FOC will also place the connection point for PG&E's extension of the duct bank directly under the water main fittings and elbows. There is adequate clearance to install the 4" gas line above the water main and extend it out to FOC per contract. The top of the water main is 49" below FG at the south side of the joint trench, at the location of the gas line.					Per request to Jason Dunne (W/O) via email on 3/4/11 please provide the following information for review: Horizontal (from a known point i.e. FOC along First St.) and vertical location of "top of water main". Horizontal (from a known point i.e. FOC along First St.) and vertical location of water line at "22.5 degree elbow". Determine if the water main is mechanically restrained with tie rods at each bend in questions. Approximate size of existing concrete thrust block at the "22.5 degree elbow".		
Trinet proposes to terminate the concrete encased duct bank approximately 5 ft. back from FOC. This would allow adequate room for Trinet to mandrel the ducts after the joint trench is installed without undermining the water main. PG&E could then extend their duct bank under the water main to connect to Trinet's water main. Please advise.							
U-0111.1	Minna St Joint Trench Conflict @ Existing Water Line Elbow	Closed	04/18/2011	04/28/2011	04/21/2011	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST: Reference Sheet U-3408 At the 02/03/2011 Joint Trench Pre-Construction meeting and field walk through, the AT&T inspector expressed concern with the configuration of the AT&T ducts connecting to the AT&T vault at Sta 3+71. The AT&T inspector was specifically concerned with the east side of the vault where all eight 4-inch ducts are shown entering the vault on the one side (north side) of the center line. Trinet would like AT&T to review the duct configuration connection to the vault as depicted in the contract drawings and provide a revised drawing if they wish to make a change.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> AT&T has reviewed the information and has proposed revisions to the Joint Trench to accommodate the following: 1. Revised information from AT&T regarding 555 Mission St. service point of connection, and 2. AT&T preferred Minna St. AT&T vault conduit penetration locations Attached SK-U-0009 is a markup of the AT&T Vault at STA 3+71 butterfly drawing indicating conduit penetrations and schematic diagram of conduit alignments. Revised Minna St. Joint Trench Plans are being prepared as part of ASI#3 to address these revisions as well as changes associated with RFI U-0088.

U-0114	PG&E Abandonment Schedule for Natoma St. at Second St.	Closed	03/09/2011	03/19/2011	05/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Kruttsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			ANSWER:				
Reference Sheet U-1110 and U-2010			Accept Suggestion: <input type="checkbox"/>				
On 03/04/2011, M Squared met with a PG&E representative on site at Natoma and 2nd Street. The PG&E representative confirmed that none of their utilities had been abandoned in the area, and that the PG&E representative would be unable to provide a schedule for this abandonment.			Eric Zagol 3/18/2011 ***5/5/11 UPDATE***				
Per note 2 on sheet U-1110, the services for 77 Natoma and 83 Natoma were to be terminated by Feb 2011. To date, this work does not appear to be completed. In PG&E's letter to the TJPA regarding their schedule, there is no reference to work on Natoma Street at 2nd St.			77 Natoma and 83 Natoma services have been terminated, refer to USR Nos. 11 and 13 as executed by W/O, Turner and PG&E on 4/21/11.				
M Squared is unable to proceed with their sewer and water utility installation on Natoma St. west of shoring wall until PG&E has completed abandonment of their existing utilities.			As of 5/4/11, PG&E estimates that Natoma Street will be de-energized by 5/21/11. Coordinate USRs for the remaining electric ducts with Turner and PG&E.				
Please provide M Squared with an updated schedule for all PG&E's termination/abandonment work at 2nd and Natoma St.			***3/18/11 RESPONSE***				
			Per demolition and construction sequencing shown on sheet U-1110, water and sewer work shall commence after PG&E has completed their Phase I relocations in First St., Natoma St. and existing electric ducts are abandoned by PG&E.				
			PG&E services to 77 Natoma and 83 Natoma have been terminated as part of the Existing Terminal & Ramps Demolition Project. USRs for these services are currently being prepared by the TJPA's Representative (Turner). The USRs shall indicate the service conduits and cables that are abandoned subject to demolition as indicated in sheet U-1110.				
			To facilitate schedule, AECOM has requested PG&E to de-energize Natoma St. to the extent possible in an effort to re-sequence construction of the sewer. PG&E's response and schedule of abandonment is forthcoming.				
			As shown on U-3110 the water line could be constructed prior to PG&E abandoning their facilities. Pothole to confirm the water line can be constructed as shown on U-3110.

REQUEST: Refer to Sheets MA-5, MA-8 There are two caps that are required to be installed in order to shutdown the AWSS service on First St between Mission to Howard St. Per the construction schedule, both caps were supposed to be worked on simultaneously. Please confirm per a conversation in the field on 03/07/2011 with inspectors Michael Smith (SFDPW) and Dan Helminak (DPW), only one AWSS cap can be installed at a time.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The below response was copied into Constructware on behalf of Michael B. Smith SFDPW/BOE/Mechanical (see attached, "RFI U-0115 1490J Phase I First Street BOE Response 03 11 11") "Installing/capping of the AWSS lines at two locations in sequence instead of simultaneously was a decision made by the SFWD/CCD together with SFFD. Please contact Dan Helminiak of SFWD/CDD at (415) 420-4821 for further information" - Michael B. Smith SFDPW/BOE/Mechanical dated 03/11/2011 ----- ---- 03/14/2011 - Eric Zagol Michael Smith from SFDPW BOE will respond to this RFI.				
U-0116	Abandoned 6" Fire Water Service Thru 100 First St Basement Wall	Closed	03/18/2011	03/28/2011	03/21/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST: Refer to sheets U-1109 and U-3109 An abandoned existing 6" fire water service lateral was discovered while demolishing the old 8" water main running down Minna St. The 6" fire water service lateral was not shown on the plans and there were no existing water valve covers to indicate the existence of this line. The abandoned lateral penetrates the foundation wall entering the basement to 100 First St at Station 7+36. Please provide direction for plugging the void that will be left after 100 First St management removes the 6" water lateral pipe. A roughly 1ft x ft x 1ft deep square opening will remain after the fire water lateral pipe is removed.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor had knowledge of existing abandoned 6-inch fire water service at STA ~7+35. Existing abandoned 6-inch fire water service at STA ~7+36 was exposed and potholed by Trinet on 11/19/2010 and included in Submittal TG0405-024 Item No: UA0000-020630A01.0 as Pot Hole No. 29. Cut and plug abandoned 6-inch fire water service in accordance with specification section 02 41 00 3.6 at face of curb along the North side of Minna St. Please clarify why private property improvements are being requested.

Reference Sheet U-3113					Accept Suggestion: <input type="checkbox"/>		
Sheet U-3113 shows an 8in x 8in x 6in tee in the new 8-inch water main on Natoma at Sta 11+79. The note on the drawing makes reference to it being used as a future location for a fire hydrant. Sta 11+79 is in front of a loading dock and parking garage on Natoma Street.					As discussed in the field on 3/21/11 with Noel (M Squared) and Dan Helminiack (SFWD), construct tee for future fire hydrant and lateral connection at STA 11+37 (4 ft min. west of existing street light).		
Please confirm that it is intended for M Squared to install the tee in the water main line at this location.							
U-0118	Minna Street Joint Trench, PG&E Duct Routing and Termination Points	Closed	03/24/2011	04/03/2011	04/06/2011	Potentially	<input type="checkbox"/>

Sheet U-3022 shows MH601 @ Sta 0+70 on Fremont Street. This location is also in the middle of the crosswalk on Fremont Street. USA markings show the existing traffic signal conduits crossing thru the center of the manhole. By moving the manhole approx 8' north the conflict with the traffic signal conduits would be avoided and it would also avoid having a manhole cover in a crosswalk. Please advise on how you would like to proceed.			Move proposed sewer MH north to STA 77.56 to avoid existing Traffic Signal conduit conflict as shown in SK-U-013 attached. Construct 10-inch CB culvert lateral as shown SK-U-013 attached.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
1 - Current bid documents for Trade Group TG04.2R (AWSS system at Mission Street) call for capping of the AWSS system on Beale Street near the intersections with Howard Street and with Mission Street. Because of delays in the bid schedule for TG04.2R, the construction schedule dictates that these caps be completed well before the anticipated start of the TG04.2R field work. Please provide details so as to allow this capping work to be done in advance of the awarding of the TG04.2R scope of work.				Pothole the existing AWSS gate valve at the Beale at Mission street proposed cap location as shown on M-6 (Rev No. 1, 1/31/11) to determine if the existing gate valve has lugs. SFWD to inspect condition of gate valve once excavated, coordinate with SFWD inspector accordingly.			
2 - Please confirm whether the material required to do this work is available at the City of San Francisco.				Details for the capping work at Beale and Mission, and Beale and Howard will be provided following gate valve inspection.			
3 - Please provide direction as to how this scope of work should proceed.							
This capping is near critical path on the current construction schedule. An expedited response is requested.							
<hr/>

U-0124	Conflict Between New 24" Sewer and existing AWSS Line on Beale	Closed	04/07/2011	04/17/2011	04/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
M Squared has confirmed that the 14" AWSS Line shown on sheet U-3024 is in conflict with the proposed 24" VCP on Beale Street. The AWSS line is shown on the plan view but not on the elevation view on sheet U-3024. M Squared also shot the elevation of the existing sewer manhole. The elevation is 4.60, and not 4.70 as shown on the plans. The invert of the 14" AWSS is 6.2. (See attached) Please advise.					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 4/26/2011: Construct temporary 2-10" VCP and new SMH as shown on revised U-3024 (rev 2 4/26/11) and SK-U-0018. Construct SMH #701 to allow for future 24" VCP connection as indicated.		
					Relocate AWSS line in Howard St., not included in package. Design forthcoming potentially to be included in TG04.2R.		
					Following relocation of the AWSS line, construct 24" VCP sewer per contract documents.		
U-0124.1	Conflict Between 24" Sewer and AWSS Line on Beale	Closed	07/07/2011	07/17/2011	03/27/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jeff Thiel				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Per the response to RFI#U-0124 a design to relocate the AWSS line @ Howard and Beale is forthcoming. Please advise the status of this design.			Eric Zagol 7/20/2011 Design is being performed by SFDPW BOE and will be tracked and issued via a forthcoming ASI. Schedule will be discussed with SFDPW BOE on 7/22/11. An update will be provided in the RUP OAC on 7/26/11.		Accept Suggestion: <input type="checkbox"/>		
					RFIs U-128.2 and U-124.1 were responded to in July of 2011 and provided temporary solutions to utility conflicts with a full resolution planned to come via future ASI. ASI 21, which addresses these issues, was uploaded to Constructware on 3/21/12 by Eric Zagol for design approval. A CR for this work will be issued in the near future.		
U-0125	Precast Catch Basin Bases	Closed	04/08/2011	04/18/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In lieu of a cast in place base per CCSF DPW Standards, M Squared would like to propose the use of a precast catch basin. The catch basin barrel is attached to the precast base and it comes as one single unit. Before installing the precast catch basin base with barrel, M Squared will place a minimum 6" compacted level layer of crushed rock as the sub base. The proposed material					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 4/12/2011 Precast catchbasin base is approved with conditions specified. The 5 foot catchbasin barrel shall be attached to the base section to form a monolith structure with the same dimensions, compressive strength and reinforcement as the CCSF DPW Standard cast in place base.

U-0126	Existing Brick Man Hole @ Second and Natoma In Conflict With Joint Trench	Closed	04/11/2011	04/11/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
While potholing the Second St. Joint Trench crossing Trinet encountered an existing brick sewer man hole which is in conflict with the joint trench alignment. The manhole is not shown on the plans and had been paved over. The manhole also appears to have been previously abandoned. See the attached sketch and photograph detailing the location of the manhole.					Accept Suggestion: <input type="checkbox"/>		
Please advise on how to proceed.					Eric Zagol 4/12/2011: Confirm existing abandoned sewer manhole is filled with slurry grout to 4 feet below rim elevation. Demolish and remove existing abandoned sewer manhole as required to construct the Joint Trench to an elevation 1-foot below bottom of Joint Trench. Backfill and restore in accordance with contract documents.

U-0127	Minna Street Sewer Manhole #201 in Crosswalk	Closed	04/11/2011	04/21/2011	04/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:				
Plan Sheet U-3007 shows MH#201 to be installed in the center of the crosswalk @ Minna and Second Street. The City of San Francisco typically avoids locating manholes in crosswalks, whenever possible, for ADA considerations. Please advise if MH#201 should be installed outside of the crosswalk.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			Eric Zagol 4/13/2011: Sewer manhole location can not be adjusted due to an existing 8-inch Water and 4-inch HP Gas main. Construct manhole at the location per Plans. In lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications: 1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tensile strength shall be considered the primary test for qualification. 2. FINISH- STANDARD FINISH SHALL BE RAW, AS CAST, AND YIELD A MINIMUM COEFFICIENT FOR FRICTION OF .6 OR BETTER IN WET OR DRY CONDITIONS. 3. CASTINGS - SHALL BE FREE OF BLOW HOLES, FLASHING, GRIND MARKS, AND OTHER SURFACE BLEMISHES. 4. Cover shall incorporate a "pic-hole" for lifting purposes. 5. ADA COMPLIANCY- CASTINGS SHALL HAVE HOLES NO GREATER THAN 1/2" IN THE DOMINANT DIRECTION OF MOTION, NO VERTICAL RISE OF GREATER THAN 1/4", IF THE RISE IS GREATER THAN 1/4" THE RISE/RUN RATIO NEEDS TO BE 1:2 AND THE MAXIMUM HEIGHT SHALL BE 1/2". 6. Cover shall BE MADE TO FIT EXISTING FRAMES OR be MACHINED to FIT EXISTING FRAMES PER SFDPW STANDARD PLAN 87,190. 7. Cover should be MADE of quality EQUAL TO OR GREATER than THE PRODUCTS MADE BY D&L Foundry or Equal, see attached product data sheet.

U-0131	Minna St PG&E Duct Bank Termination Points	Closed	04/19/2011	04/29/2011	04/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Michelle Smith			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
PG&E has confirmed Trinet is to terminate the PG&E duct back 3' outside the east and west walls of manhole 1319. Please confirm that the termination points of the PG&E duct bank as described will fulfill Trinet's scope of work and the future completion of the duct bank will be performed by PG&E.					Accept Suggestion: <input type="checkbox"/>		
Please note terminating the duct bank 3' outside the west wall of MH 1319 will leave the end of the ducts directly under the 24" high pressure water main. This may create an issue with future access for complete the duct bank by PG&E.					Eric Zagol 4/21/2011: 1 Joint Trench termination points at EMH 1319 and 1318 are as follows:		
					1319 East wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.		
					1319 West wall; PG&E would like the conduit capped and left 6 feet short (or 1-foot clear of existing 24-inch water, whichever is greater) of the vault with concrete encasement 15 feet short of the vault.		
					1318 North wall; PG&E would like the conduit capped and left 3 feet short of the vault with concrete encasement 15 feet short of the vault.		
Please advise.					The new termination points shall be considered as the limit of new conduit installation at EMH 1319 and 1318.

REQUEST:			ANSWER:				
The SFDPW inspector Jason Chin has advised Trinet that he will be requesting a pressure test of the newly installed 18" and 24" VCP sewer main. The contract specification and drawings to do not specify any form of testing for the sewer mains.			Accept Suggestion: <input type="checkbox"/>				
Please advise if pressure testing of the sewer main will be required.			Eric Zagol 4/26/2011: Test sewers in accordance with the contract documents. See specification sections:				
			034010 3.1 E				
			CCSF DPW Standard Section 319 Low Pressure Testing per 333110 1.2 A.				
			333110 1.4 C				
			333110 3.7				
			333110 3.8 B				
			333110 3.9				
			Provide TJPA Representative and SFDPW inspector 72 hours of advanced notice prior to testing.

U-0132.1	Sewer Main Pressure Test	Closed	05/07/2011	05/17/2011	05/11/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: AECOM Technical Services Eric Zagol				
REQUEST:			ANSWER:				
Trinet has been advised by Mission Clay (the VCP manufacture) that the hydrostatic test described in the SF Standard Specification Section 319.02 is primarily for cast iron or ductile iron pipe and is not recommended for clay pipe. The National Institute of Clay Pipe and Mission Clay recommend a low pressure air test in accordance with ASTM C 828. See attached copy of ASTM C 828. Trinet proposes using this low pressure air test in lieu of the 10psi hydrostatic test called for in the standard specifications. The low pressure air test will allow test on pipe runs with no service laterals ie: MH501-502, 206-207, 203-204, 202-201. Please advise if this is acceptable.			Accept Suggestion: <input type="checkbox"/>				
With regards to the three remaining pipe runs that have lateral connections, please provide direction of how to plug the laterals if required to test the main lines.			=====UPDATE 5/23/2011=====				
			Kevin Chiu 5/23/2011 Below are links to devices for testing newly installed sewer pipes, specifically for main lines with active lateral connections that have been suggested within conversations between SFDPW, SFPUC and AECOM				
			http://newsite.cherneind.com/pneumatic/Long_Test_Ball_MS2_Test_Ball/				
			http://www.munipipe.com/chemical_grouting.html				
			http://veoliaes-is.com/Services/Environmental-and-Waste-Management/Total-Sewer-Management/Chemical-Grouting				
			Whether or not the contractors decide to utilize these devices is still up to them, as these are suggestions, not specifically required devices to be used for testing. It is the contractor's responsibility to perform testing on newly installed main lines, laterals, and manholes with their own means and methods while still protecting new and existing utilities.				
			=====				
			Eric Zagol 5/10/2011 ASTM C828 air test is an acceptable method to test sewer pipe in lieu of hydrostatic testing.

U-0134	Water Department Tie In Conflict at Howard and Beale	Closed	04/26/2011	05/06/2011	05/02/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The SF Water Department has determined they are unable to perform the water tie in at the south west corner of Howard and Beale because of a conflict with the existing sewer sludge force main. M Squared has potholed the line and confirmed it is the existing 10" concrete encased sewer sludge force main.					Accept Suggestion: <input type="checkbox"/>		
Please advise.			Eric Zagol 4/29/2011: Cut and remove a section of the existing 10-inch sludge line to allow SFWD to perform the water main connection. Coordinate with SFWD to determine the extent of the existing sludge line to be removed.				
			Plug the ends of the existing 10-inch sludge line with concrete per 02 41 00 3.6 A.

REQUEST: While excavating for the 6" service connection to the new water line on First Street at Sta2+25 M Squared located an additional 4" ductile iron service that is connected to the existing water main. This 4" line is not shown in the contract documents. SFWD records show this to be a live service and would like for this to be tied into the new main. There is now no point of connection on the new water line to receive this 4" service. Please advise.		The existing sludge line to the north will be demolished per TG04.6. The connection of the new sludge line to the existing sludge line (south) per TG04.6, shall be made south of the plug. Eric Zagol 5/2/2011 Retap the existing 4" service to 500 Howard St. Coordinate service location with SFWD inspector. Submit piping plan showing the 4", 6" and 1" services for review. Kevin Chiu 5/4/2011 Pending approval by the TJPA, a CR will be issued.

U-0135.1	4" Water Service at First and Natoma	Closed	05/09/2011	05/19/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In response to RFI #U-0135, see attached piping plan, as requested in RFI response.					Accept Suggestion: <input type="checkbox"/>		
Once approved M Squared will coordinate with SFWD to perform the work.					Eric Zagol 5/10/2011 With the understanding that the 12" main, 12" GV, 6" service and 1" service are already installed, furnish and install 4" GV and DIP service and connect to 12" main per piping plan.		
An expedited response is required as this is holding up all other water work on Natoma Street							
U-0136	Existing Water Bypass @ Howard and Fremont	Closed	05/03/2011	05/13/2011	05/05/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
While planning for the water tie in at Howard and Beale the Water Department discovered that there is an existing bypass line that will connect the existing water system (which is to be abandoned) to the new water system. This bypass is not shown on the plans. The Water department has requested that the existing bypass be excavated and plated so it can be cut and capped while they have the line shut down for the tie in on the new system at Howard and Beale the night of 05/04/2011.					Accept Suggestion: <input type="checkbox"/>		
Please advise.					Eric Zagol 5/4/2011 RFI is not accurate and locations are incorrect.		
					Based on a field meeting with W/O ,SFWD Inspector and AECOM on 5/3/11, SFWD identified an unforeseen existing bypass pipe and gate valve that connects the existing 8-inch main in Fremont Street (to remain) to the existing 8-inch main in Howard Street (to be abandoned). The existing 8-inch main in Howard Street will be abandoned once the new 12-inch main is Howard is active.		
					Once the new 12-inch main in Howard Street is placed into service and the existing main is abandoned, the existing bypass and gate valve from the existing 8-inch active Fremont main will be connected to the abandoned Howard Street main. To mitigate the situation the SFWD proposes to cut and cap the existing bypass such that the existing Fremont main is not connected the abandoned main in Howard Street.		
					Coordinate with SFWD to locate existing bypass and define the limits of excavation required to cap the existing bypass.		
					Excavate to expose bypass. Shore and plate per specifications. Restore per specifications.

U-0137	Verizon Ductbank conflict w/MH 701	Closed	05/03/2011	05/13/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Service Eric Zagol			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST: M Squared's sewer potholing on Beale (Sta 0+30) has indicated a conflict between an existing Verizon duct bank and MH# 701 on Howard Street. See attached drawing. The ductbank is approximately 18" wide x 18" deep. It is 2'4" to the top and it is slurry encased. Verizon underground locators have confirmed that this is live and serves Charles Schwabb building south of Howard on Beale Street. Please advise.				Eric Zagol 5/10/2011 Unforeseen condition, Verizon utility not shown in existing utility survey.			
				As suggested by Noel of (M Squared) during a site visit on 5/3/11 with W/O and AECOM, based on Noel's discussions with Mike Roybal (Verizon Field Engineer) and confirmed by AECOM based on follow up discussions with Mike Roybal (Verizon) and Pam Brown (Verizon), coordinate with Verizon and remove existing concrete encasement from existing duct to expose conduit in area of conflict. As directed in the field by Verizon, remove concrete encasement around duct from area in conflict to adjacent Verizon manhole. Move and support exposed Verizon conduit as required and directed by Verizon to construct manhole.			
				Coordinate with Mike Roybal (Verizon) at (415) 716-6736 such that a Verizon representative is present during the Verizon duct concrete encasement removal, moving and support install.			
				Restore Verizon duct to match existing concrete encasement following completion of sewer manhole.

U-0138	Temporary Telecom Pole Layout in Lot N and N'	Closed	05/09/2011	05/19/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference attached layout and submittal package#TG0406-014:					Accept Suggestion: <input type="checkbox"/>		
Due to the future use of lot N and N' prime, the temporary telecom poles must be relocated. The attached sketch indicates the proposed layout of these poles which has been coordinated with AECOM. Submittal Package#TG0406-014 has been submitted for formal approval of the pole locations.					Eric Zagol 5/10/2011 The pole alignment changes requested by CMGC along with additional requests from Telecommunications companies has required a pole and pole placement redesign. An ASI has been generated for the redesign with a CR forthcoming.		
Please confirm relocating the poles is acceptable.							
U-0139	Existing Water Line on Beale in Conflict with New Sewer	Closed	05/09/2011	05/09/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Today while trying to execute the USAR for the existing 12" water line on Beale Dan Helminiak with SFWD informed Webcor/Obayashi and M Squared that the existing water line will remain active until the water tie in at First and Natoma is completed and the existing 8" is capped at First and Howard as shown on sheet U-3116.					Accept Suggestion: <input type="checkbox"/>		
The water tie in and capping of the existing line on First Street is currently being delayed by separate issues and it is unclear when this work will be completed.					Eric Zagol 5/10/2011 Please clarify the question(s).		
Dan Helminiak suggested that the existing 8" water line running down Howard could be capped by the water department at one of the existing tees which would allow the decommissioning of the existing line on Beale.					Subject states "Existing Water Line on Beale in Conflict with New Sewer". Per U-1124 Demolition and Construction Sequence order, Beale Street sewer is to commence after existing water main in Beale Street is abandoned. Please clarify where and what the conflict is.		
Please advise.					Also, please confirm the following:		
					1. Is the new 12" main along Howard Street between First and Main streets active?		
					2. Is the new 12" main along Beale Street north of Howard Street active?		
					3. Is the new 12" main along Beale Street south of Mission Street active?

U-0141	Street Light Connection Point at Second and Minna	Closed	05/16/2011	05/26/2011	05/20/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In the response to our RFI # U-0016, Trinet was directed to connect the street lighting conduit on the west end of Minna into PG&E MH #1319 on 2nd St. At a field meeting on 5/10/11 with Eric Zagol and Robert Kawano, to discuss the alignment of the street lighting run for the relocated light on the west end of Minna, Eric advised that PG&E was contemplating a change in the connection point for this conduit run from MH 1319 to MH 1320. MH #1320 is located to the south of 1319 and further west towards the middle of 2nd St. Please confirm the connection point on 2nd St for the street lighting conduit.					Accept Suggestion: <input type="checkbox"/>		
					5/26/11 UPDATE		
					Supply point has been confirmed as PG&E EMH 1320. Coordinate connection location with PG&E Field Engineer.		
					Eric Zagol 5/19/2011 Related to Joint Trench changes and PG&E's de-energization of Minna Street after the response to RFI U-0016 was provided, PG&E has revised their electrical plans with respect to EMH 1319 and has indicated that the preferred location for new street light power would be EMH 1320.		
					In accordance with U-3201 Note 7, AECOM considers this RFI as the request to coordinate connections with BLHP and PG&E through the TJPAs representative for new street light circuit connections. AECOM and the TJPAs Representative are in the process of coordinating Street Light Service Orders with BLHP and PG&E. Once the Service Order is processed the final connection point will be provided.		
U-0142	Concrete Specifications for Sidewalk Replacement @ 555 Mission	Closed	05/16/2011	05/26/2011	05/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Kevin Chiu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The sidewalk concrete @ 555 Mission (on Minna) is not the typical San Francisco sidewalk mix design. It is a colored concrete with what appears to be a sandblasted finish. Please provide the concrete specifications for repair and/or replacement of the sidewalk in this area.					Accept Suggestion: <input type="checkbox"/>		
					Kevin Chiu 5/18/2011 Sidewalks shall be constructed of a dark gray, Hi-con @ 5 lbs. per cubic yard carbon black based concrete finish, with 25 to 30 lbs. per 100 square feet of silicon carbide sparkle grains. The surface of the concrete shall be washed and rinsed using a stiff brush, and if necessary shall be sandblasted to remove the concrete surrounding the aggregate to minimum depth of 1/8 inch.		
U-0143	Demolition of PG&E Duct Bank Alongside (N) 18" Sewer Main on Minna	Closed	05/16/2011	05/26/2011	05/20/2011	Potentially	<input type="checkbox"/>

<hr/>								
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Service Eric Zagol			
Co-Author:								
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>				
During excavation and shoring for installation of the 18" Sewer main along Minna St., between the (E) electrical vault @ Stn 1+80 (demolished) and (N) manhole # 201, Trinet was unable to save the entire length of the existing PG&E duct bank (currently abandoned), which runs along the south side of the sewer trench. Between stations Stn 0+95 and 1+25 (approx.) the duct bank had veered into the sewer trench and had to be demolished - see attached sketch. Please review and advise.				Eric Zagol 5/19/2011 U-1107 (rev 2 3/16/11) indicates that the existing 6-4" PG&E duct is to be protected in place.				
				2 of the 6 existing 4" conduits will be utilized by PG&E to provide temporary construction power to W/O Skids 1 and 2 along Minna Street.				
				Mandrel existing conduits east of STA 1+25 to STA 1+70 (where new conduit caps were to be installed per contract) to confirm that the existing conduits that were to be protected in place have no blockages.				
				Coordinate with PG&E as STA 0+95 is exposed to determine which 2 of existing 4" conduits will be utilized for temporary construction power.				
				Furnish and install 2-4" conduits concrete encased to replace those that were removed during sewer construction. Connect new conduits to existing that will remain to provide temporary construction power.				
<hr/>								
U-0143.1	(E) PG&E Duct Bank from EMH #1320 to Demolished EMH #1355	Closed	06/14/2011	06/24/2011	06/14/2011	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Service Eric Zagol			
Co-Author:								
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>				
After further investigation of the existing PG&E duct bank between EMH #1320 and demolished EMH # 1355 (@ Anchor & Hope), Trinet found that there is only one unobstructed conduit between the two manholes. The unobstructed conduit is the one that already had a pull rope in place. Trinet had demolished a section of this conduit during excavation for sewer MH # 201 because it was in conflict with the shoring. Trinet replaced the damaged section (approx. 8 LF) on Saturday 6/1, and reconnected the pull rope in the conduit run. A sketch of the conduit run, depicting the section replaced, is attached. Please review and advise if one 4" conduit will be adequate from EMH #1320 to the west end of				Eric Zagol 6/14/2011 PG&E plans to use the existing conduit package to provide temp power to Skids 1 and 2. Mike Balmy of PG&E was notified and has confirmed that only 1-4" unobstructed conduit is required between EMH1320 and the cap at demolished EMH1355 for future temp power service.

U-0144	PGE Vault conflict with 24" VCP on Beale	Closed	05/17/2011	05/27/2011	05/20/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Gary Krutsch	Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
PG&E confirmed the location of the inside of the east wall of PG&E manhole 1702 at Howard and Beale Street. Allowing for a 12" thick wall, the vault will be in conflict with the proposed alignment of the future 24" VCP, even with moving the alignment 1' further east as directed in RFI U-0124. The conflict could be avoided by moving the alignment another 6" further east. However this will cause a conflict between manhole #701 and the existing 14" AWSS. Additionally the Verizon duct bank conflict increases(RFI#U-0137). Please advise.			Eric Zagol 5/19/2011 As discussed in the field on 5/18/11 with Jason Dunne (W/O) and Noel McCarthy (MSquared) the exact location of the existing PG&E MH outside wall and the existing AWSS is currently unknown.				
			Adjust locations of MH#701, MH#702, MH#704 and sewer alignment east as required (~6" as mentioned) for the 24" VCP installation (new and future) to avoid the existing PG&E MH however not in conflict in conflict with the existing 14" AWSS line.				
			Note, the existing AWSS line will be abandoned North of Beale Street STA 1+10.				
			Confirm alignment (2-10" VCP and future 24" VCP) will clear existing AWSS valve at STA 0+70.				
<hr/>							
U-0144.1	PG&E Vault conflict with 24" VCP on Beale	Closed	06/30/2011	07/10/2011	07/01/2011	Potentially	<input type="checkbox"/>

U-0146.1	Proposed Pavement Reconstruction	Plan for Minna Street	Closed	05/27/2011	06/06/2011	05/27/2011	Potentially <input type="checkbox"/>
From: Webcor Construction LP		Colin Azevedo	To: Turner Construction Company Gary Krutsch		Answered By: AECOM Technical Service Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: <input type="checkbox"/> Accept Suggestion: <input type="checkbox"/>			
Attached, please find a sketch detailing Trinet's revised pavement reconstruction plan for Minna St., between 1St to 2nd Streets, which incorporates Balfour Beatty's request that Trinet stop the new pavement section 5' north of centerline of the CDSM shoring wall (2' north of demarcation line).				*** 5/31/11 Revision ***			
				Restore entire width of Minna street using concrete road base and ACWS curb to curb in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 11.			
				5/27/11 Response:			
				Please provide BBIs traffic control plan and construction logistics plan for Minna St. during pre-trenching and CDSM shoring wall construction.			
				AECOM's specific questions are as follows:			
				1. What portion of Minna St. will be maintained for vehicular traffic during pre-trenching and CDSM wall construction? Please provide dimensions from face of north curb along Minna St.			
				2. Is a traffic barrier (k-rail or other) planned to be installed along Minna St. during pre-trenching and CDSM wall construction? Provide location, dimension from face of north cur along Minna St.			
				3. If a traffic barrier is planned, what is the schedule for the installation?			
				4. Once pre-trenching is complete will any of the pretrenching trench area be restored and used for vehicular traffic?			
				5. Once the CDSM shoring wall is constructed will the traffic barrier move south and the vehicular area be widened? If so by how much? Please provide a dimension from the face of north curb along Minna St.			
				This information is critical in order to provide a responses to this RFI as well as RFI U-147 and U-148 in an effort to determine how RUP will restore Minna St.; crowned or sloped, and how the Minna St. restoration conforms to the future Transit Center Minna St. design.

U-0146.2	Pavement Reconstruction Plan for Minna Rev 2	Closed	06/02/2011	06/12/2011	06/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:AECOM Technical Service Eric Zagol				
REQUEST:			SUGGESTION:		ANSWER:		
Please find attached a revised (Rev2) pavement Reconstruction Cross Section drawing for Minna St., which details Trinets understanding of the Engineer's latest response to RFI#U-0146.1 and RFI#U-0147. Please confirm pavement reconstruction can proceed per the attached detail..					Accept Suggestion: <input type="checkbox"/>		
			Eric Zagol 6/7/2011 Street restoration detail is acceptable with the following corrections:				
			1. The southern extent (limit) of concrete base and ACWS between STA 2+30 and First Street shall be based on U-5101 Detail 6 and the limit of excavation required to do perform the Demolition and New utilities work in Minna Street. Conform to final saw cut lines as indicated in Detail 6.				
<hr/>							
U-0147	Existing Top-Of-Curb Grades @ Minna Driveways for 575 Mission Building	Closed	05/27/2011	06/06/2011	06/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:AECOM Technical Service Eric Zagol				
REQUEST:			SUGGESTION:		ANSWER:		
The existing driveways entering the 575 Mission St building, are depressed between 2 ½" to 3" below the adjacent top-of-curb and sidewalk grades - see attached drawing depicting the driveways. This condition seems to be a consequence of repeated overlaying of Minna street, which has resulted in a curb height in many areas far less than the City standard of 6 inches. The street grade along the north side of Minna along the 575 Mission building ranges from 3 ½ to 4 ½ inches below top-of-curb grade.					Accept Suggestion: <input type="checkbox"/>		
Trinet has been directed in the field by Jason Chin, and by the Engineer in RFI #U-0146, to construct the new roadway with finish grade at curb line 6" below top-of-curb grade. This is consistent with City standard plan # 87,169. The new roadway grades will result in 3" to 3 ½" of exposed curb height at the driveways to 575 Mission, which is considerably deeper than the 1" called for in the San Francisco standard plans for driveway construction (plan # 87,171). It will also not be possible to raise the street grade at the driveways without impeding road runoff drainage and causing ponding.					Eric Zagol 5/31/2011 Restore pavement along existing curbs and driveways along the north side of Minna St. in accordance with Contract drawings and DPW Order No. 176,707 (and latest revision 178,940) Section 12 to match existing flow line elevations at curbs and driveways shown on U-1001. 6-inch curb and driveways along Minna St. will be reconstructed at a later date as part of the Transit Center Project.		
Please review and advise.

U-0148	Pavement Reconstruction Plan for West End of Minna Street - Stn 2+15 to 2nd St	Closed	05/27/2011	06/06/2011	06/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please provide a pavement reconstruction drawing, or typical cross section detail, for the west end of Minna St from Stn 2+15 to 2nd St. Trinet had planned to reconstruct the street in this area from curb to curb. We find however, that there is a grade difference of approximately 6 inches between top-of-curb on the north side of the street and the south side, with the south side being at the higher grade. The construction detail approved in RFI #U-0146 (Trinet #094) cannot be utilized in this area, because the street already has a cross slope of approx. 2% from south to north.					Accept Suggestion: <input type="checkbox"/> Eric Zagol 6/7/2011 See response to RFI 146.2		
U-0149	MH#701 Conflicts with existing utilities	Closed	05/27/2011	06/06/2011	06/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The 14" AWSS line west of MH#701 was found to be constructed thru the roof of the existing 3x5 sewer. Several bends were used in the AWSS line construction and these bends included lugs and tie rods. As a result of the presence of these tie rods and fittings we can now not move MH#701 any further west. To install the new 24" VCP in a straight line (perpendicular to MH wall), and in order to get by the existing PGE MH we will have to pour the pipe wall and 2" of the internal diameter of the pipe into the west wall of MH 701. Please advise on how to proceed.					Accept Suggestion: <input type="checkbox"/> Eric Zagol 6/8/2011 Deflect VCP pipe joints in accordance with ASTM C425 (max 1.8 degrees per joint) to allow for 6" of deflection to avoid the existing PG&E MH and connect to MH#701 as shown in the attached SK-U-0019. Confirm in the field that 6" deflection will allow the 24" VCP to be clear of the MH wall.		
U-0149.1	MH#701 Conflicts with existing utilities	Closed	06/30/2011	07/10/2011	07/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jonathan Flaming To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Kevin Chiu				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In response to RFI U-0149, please note the following: M Squared confirms that 6inch deflection of the VCP will allow the 24inch pipe to be clear of the manhole wall.					Accept Suggestion: <input type="checkbox"/> Kevin Chiu 7/1/2011 RFI does not request additional information.

REQUEST:			SUGGESTION:		ANSWER:		
Please see the attached detail from Trinet Construction Inc for their proposed solution to mitigate the incorrect installation of CB203 identified in Field Condition Report 40C.					Accept Suggestion: <input type="checkbox"/>		
Please advise if the proposed solution is acceptable.					Eric Zagol 6/1/2011 The proposed solution has been reviewed and approved by SFDPW BOE and is acceptable. Construct catch basin as shown in the Trinet proposed construction detail attached to CR40C. Construct the clean out on the cast iron trap such that it is accessible from above for maintenance via removal of the grate. Coordinate inspection during installation with DPW BCM inspector through the TJPA's Representative.		
U-0151	Additional Sewer Lateral Connection for 100 1st Street	Closed	06/02/2011	06/12/2011	06/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Trinet has discovered an additional sewer lateral for the 100 1st Street building which was not connected to the new 24" sewer main - see attached sketch. The lateral is located at sta. 7+09 and services a single toilet and the rear of the building. This lateral was not shown on the plans and there was no vent in the sidewalk to indicate the existence of a lateral. Trinet potholed the lateral in the sidewalk and a 4" cast iron lateral, a 4" cast iron trap and a 4" cast iron vent pipe capped 2' below grade. Please confirm Trinet is to tie the lateral into the new 24" sewer main on Minna. Also, please advise what is to be done with existing cast iron trap and vent pipe assembly which are not up to current DPW standards.					Accept Suggestion: <input type="checkbox"/>		
					Eric Zagol 6/8/2011 In accordance with U-3000 General Note 12, contractor was to verify that there are no active sewer lateral connections to the existing sewer prior to sewer demolition.		
					Please provide the elevation of the existing sewer lateral and the location of existing 4" cast iron vent pipe for review.		
					Renewal of this lateral will be discussed with TJPA and 100 First St. property owner, final direction forthcoming.

U-0151.1	Additional Sewer Lateral Connection	Closed	06/29/2011	07/09/2011	07/05/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jonathan Flaming			To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol	
Co-Author:							
REQUEST: This is a follow-up to the request by the Engineer in his response to W/O RFI #U-0151 (Trinet RFI #097) for additional information relating to the 2nd sewer lateral connection for the 100 1st St building. Trinet also clarifies the issue of the existing 4" trap on the line, which was raised in the original RFI. The sewer lateral is located @ Stn. 7+09 and the invert elevation of the 4" cast iron sewer lateral pipe at face-of-curb is 14.6'. The elevation for the top of the new concrete encased ductbank @ Stn 7+09 is 13.85'. The sewer lateral was therefore not in conflict with the new joint trench utilities. With regards to the existing 4" trap on the line, Trinet checked with the SF Plumbing department which advised that a 4" cast iron trap was adequate for a 4" sewer lateral. The existing trap was therefore in compliance with the SF plumbing code. Trinet advised Jason Chin of this in the field and he agreed that the trap did not need to be replaced. The 4" cast iron vent pipe for the trap did not extend to street level but was capped-off approximately 18" below grade. Per field discussions with Jason Chin, Trinet extended the trap vent piping to grade and installed a street vent frame & cover in the sidewalk.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 7/5/2011 In reference to RFI-151 and 151.1: 1. Reconnect existing lateral to new 24" Minna St. sewer in accordance with SFDPW Standard Plan 87,196. 2. Extend fresh air inlet and air inlet cover to existing sidewalk grade.	

U-0152	Alternate Manhole Testing Method	Closed	06/02/2011	06/12/2011	06/07/2011	Potentially	<input type="checkbox"/>

U-0157	Pressure Testing for Sewer Manhole #'s 501 & 502 on 1st St.	Closed	06/28/2011	07/08/2011	07/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jonathan Flaming To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
This RFI is a follow-up to discussions in the field with AECOM and the SFDPW Inspector and Trinet, regarding Trinet's inability to perform a pressure test on sewer manholes 501 & 502 on 1st St. due to field conditions. MH #502 is constructed around the existing 3x5 brick sewer on one side (per SF Standard Plan #87,184) and Trinet has no means of plugging the brick sewer effectively to withstand a pressure test.					Eric Zagol 7/8/2011 Confirmed. Pressure tests for sewer manholes #501 and #502 are not required due to the restrictive conditions.		
In the case of sewer MH #501, the original design was similar to MH #502 and a pressure test would not have been possible. The revised design (see attached drawing) includes a temporary 24" corrugated PVC pipe stub extending south from the manhole and connecting to the existing 3x5 brick sewer. The inside of the temporary 24" pipe stub is also corrugated, and therefore cannot be sealed with an inflatable pipe plug, as would be required to perform a pressure test of the manhole structure.							
Please confirm that a pressure test will not be required for sewer manholes 501 & 502 on 1st St.							
U-0158	MH #301 Location	Closed	07/15/2011	07/25/2011	07/20/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
During our sewer work at 2nd and Natoma M Squared discovered that the Telecom Vault shown on the drawings is in fact significantly larger in the field than is shown on the plans. In order to be able to shore for MH#301 construction M Squared has had to move the location of MH four (4) feet east along Natoma. As a result the jack and bore alignment is now a few inches south of what is shown on the plans.					Eric Zagol 7/20/2011 Adjustments proposed are acceptable.		
Please confirm that these adjustments are acceptable.					Since the adjustment pushes the MH and cover into the crosswalk path of travel, in lieu of CCSF DPW Standard MH cover, provide an ADA complainant cover that meets the following specifications:		
					1. MATERIAL - The cast iron shall be in accordance with ASTM "Standard Specifications for Gray Cast Iron Castings" Designation A 48, Class 30. The tensile strength shall be considered the primary test for qualification.		
					2. FINISH- STANDARD FINISH SHALL BE RAW, AS

REQUEST:			Eric Zagol 8/16/2011 In accordance with specification sections 000810 and 020630, please submit for review locations and findings for all potholes performed along Mission Street associated with the Sludge FM.				
While potholing at the locations shown on the attached drawing M Squared discovered what appears to be a concrete wall under the parking strip. M Squared excavated both potholes 7' deep and at that depth the wall appeared to be continuing deeper. This concrete structure is in direct conflict with the proposed location of the new sludge main on Mission Street. The concrete curb on the north side of Mission St also extends 7' deep.							
See attached pothole findings.							
Please advise on how you would like to proceed.

From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Gary Krutsch			Answered By:AECOM Technical ServiceEric Zagol				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
M Squared discovered an obstruction in the Beale Street investigative trench on station 2+55 approximately 25' west of centerline. The obstruction appears to be a 2'-3' thick concrete wall starting directly below the street base and extending down to an unknown depth. M Squared began demoing the obstruction yesterday believing it was part of a concrete encased PG&E trench. It is now known it is not part of any duct package. Please advise on how you would like to proceed.				Eric Zagol 8/1/2011 Unknown non utility structure. A similar structure was found in AECOM's subsurface investigation trench at Beale Street Station 2+80.52 as shown in Specification Section 020630 Appendix A.			
				Protect in place. Non utility structures (i.e. walls) within zone of CDSM shoring wall and Transit Center footprint are to be removed by Buttress/Shoring/Excavation (BSE) contractor.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The PG&E manhole at Station 2+55 is actually further south than is shown on the drawings. As a result of this the new water main on Natoma Street was installed in a different alignment than shown on the drawings. In order to excavate and shore for the new Manhole #602, without damaging the new water main M Squared will have to install the manhole at a different alignment than what is shown on the plans. M Squared will maintain the correct internal manhole dimensions per DPW standard drawings.				Eric Zagol 8/9/2011 Construct sewer MH #602 to avoid existing water main as shown in the sketch provided. Maintain internal manhole dimensions, wall thickness, and steel reinforcement per DPW Standard Plans #87,182.

REQUEST: The submittal TG04.4 - UG1020-024100B01 Utilities Demolition Plan was returned to M Squared marked "Revise & Resubmit". The review note was: Please provide demo and sequencing plan per specification 02 41 00 Part 1.3A. M Squared is unable to acquire the necessary utility abandonment schedules from the utility companies concerned. Please provide us with a schedule showing when each of the utilities is to be abandoned by the relevant agencies. Once this has been provided M Squared will be able to provide the sequencing plan per the specifications.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The intent of the submittal comment was to reference specification section 024100 1.3A requiring the contractor to submit a utilities demolition and construction sequencing plan showing commencement, order, sequence and completion dates for approval prior to commencing with the demolition of existing utilities. The schedule submitted didn't include sequencing of the new work.

U-0169.1	CB#703 Location	Closed	11/15/2011	11/25/2011	11/23/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Steve Cunningham		Answered By: AECOM Technical Services Eric Zagol			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
- CB#703 was constructed in the location of the existing catch basin. - See attached profile with culvert elevations. Culvert was installed deeper as several utilities were lower than shown on the drawings. - Per M Squared's response to comments made in the RFI #U-0181, one of the duct banks shown on the drawings could not be located and was not as shown on the drawings. The alignment of the other duct bank is also different than what is shown on the drawings. (See attached) The depth of this duct bank at the point where M Squared capped it (3' south of the unknown concrete structure) was 6' 8" to the top. Its location/alignment beyond that point are unknown.				Please provide the invert elevation of constructed 10" culvert at CB#703. Based on the sketch provided in the RFI169.1, the 10" culvert was reversed slope. A culvert with reversed slope is not acceptable.

REQUEST:

Per the response to RFI #U-0176 a field meeting was attended by Michael Smith and M Squared. M Squared received direction to perform additional potholes further west of First St on Howard St. Please see attached pothole findings. Please advise how you would like to proceed.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Michael Smith's (SFDPW) response, "Please refer to comments on attached sheet. SFDPW Response: This conflict between the existing AWSS line and utilities at the original design location are unforeseen field conditions due to incorrect information being furnished to the City. Thus the motorized gate valve vault is being relocated west of the original location. The contractor shall pothole 10-feet west of Pothole No. 1B and 10-feet east of Pothole No. 1A to verify that there is adequate clearance for installing a horizontal offset and motorized gate valve vault the approximate location of Pothole No. 1A. Please notify the engineer of the potholing schedule in order that we can request the major utilities to attempt to identify the 4-inch steel pipe running parallel on Howard Street." Signed and Dated 11/18/11 (see attached)

REQUEST:			ANSWER:				
Per response to RFI#U-0176.1 M Squared performed additional potholing at Location 7.			Accept Suggestion: <input type="checkbox"/>				
Please see the attached pothole findings.			Jeff Thiel 2/15/2012 Michael Smith's (SFDPW) Response.				
Please advise how you would like to proceed.			"Furnish and install horizontal offset as shown on the attached drawing in order to locate the proposed concrete valve vault with minimum 6-inches clearance to the existing electrical duct bank running on the North side of Howard Street. Adjust nipple lengths as required between elbows and to connect into the ends of the existing cast iron pipes. Concrete valve vault and placement of motorized gate valve shall otherwise be shown on drawings MA-22 and MA-25.				
Note: The 4" Unknown Utility was confirmed to be an abandoned PG&E gas main. On 1/10/12 PG&E drilled the line and confirmed it to be abandoned.			Work for installation of new concrete valve vault and gate as show on Drawing MA-18 shall be deleted from the scope pending installation of the new valve vault as shown on the attached drawing."				
			Signed and dated 2/13/12.				
			Christina Young 2/15/2012 Pending TJPA approval, a CR will be issued.

U-0177	Ductbank Demo on Fremont St	Closed	10/04/2011	10/14/2011	10/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST: See attached sketch. The duct bank shown on Fremont Street to be demolished is in fact underneath the curb and gutter and portion of the sidewalk on Fremont St. In order for M Squared to remove this duct bank it will require us to close the west sidewalk on Fremont St, demo and remove the sidewalk, remove the ductbank and then replace the sidewalk. Currently the east sidewalk is closed also due to BBI activity. Please advise how you would like to proceed.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 10/6/2011 Coordinate with PG&E to confirm the duct indicated in the M2 sketch is PG&E's 6-6" duct from PG&E's EMH 7605. Demolish and remove the 6-6" duct segment between STA ~2+40 (at the gutter) and the demarcation line south of shoring wall. The intent is to remove the segment within Natoma Street. The segment south of STA 2+40 (STA 2+40 to STA 1+85) can be abandoned in place. Provide cap at STA 2+40 instead of STA 1+85 shown in the plans. PG&E will break in and connect to the existing 6-6" duct at STA 1+85 as part of PG&E's Phase II relocations.				
U-0178	Sludge line layout on Mission between Beale and Main	Closed	10/04/2011	10/04/2011	11/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: AECOM Technical Service Eric Zagol				
Co-Author:							
REQUEST: Continued potholing on Mission Street between Beale and Main has revealed additional grade conflicts on the proposed alignment for the new 12" steel sludge line. Some of the utilities are not as shown on the drawings nor marked in the field by USAN. See attached sketches. Please advise if M Squared is to continue potholing on Mission Street as it may be necessary to excavate the entire length of the trench between Beale and Main to locate and map all conflicts.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Eric Zagol 11/7/2011 Modifications to the 12" Sludge FM are currently being evaluated under ASI-018. Revised plans and specifications forthcoming following redesign and execution of ASI-018.

U-0179	AWSS Main line conflicts at Location 7	Closed	10/05/2011	10/15/2011	11/21/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: Turner Construction Company Jeff Thiel				
Co-Author:							
REQUEST: Some of the existing utilities are not shown on the drawings and have been installed on top of the existing 12" AWSS line. Due to the proximity and volume of these utilities it is not possible to even hand excavate down to the existing AWSS line to verify its location and depth. Please see attached pothole information. Please advise.			SUGGESTION: the following response received 10-17-2011 does provide direction in this matter: It shall be the contractor's responsibility per the Contract Documents to perform the required potholing in order to identify the existing AWSS facilities prior to actual excavation. Background utility information was provided by TJPA/consultatns and shall be verified in the field by contacting Underground Service Alert (USA). Direct conflicts oted during potholing shall be directed to the utility owner(s) for relocation/removal as required to perform the contract work. NOTE: email from Rick Buellesbach 10-18-2011 requests an answer to the question.			ANSWER: Accept Suggestion: <input type="checkbox"/> UPDATED RESPONSE (11/18/11) Michael Smith's (SFDPW) response, Refer to comments on attached sheet. These comments supercede response provided on 10/17/11. SFDPW Response: This conflict between the existing AWSS line and utilities are unforeseen field conditions due to incorrect information being furnished to the City. There are no design alternates at this location due to the necessity of removing the existing cross that was capped on the First Street side outlet to accommodate the utility relocation work for the proposed transit center. The engineer will contact the owners of the utilities in conflict with the AWSS facility for resolution." Dated 11/18/11 (see attached)

U-0180	Conflict with CB 305	Closed	10/10/2011	10/20/2011	10/17/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo To: Turner Construction Company Steve Cunningham			Answered By: Webcor Construction LP Richard Buellesbach				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
While excavating to install CB305 M Squared encountered a large unknown concrete structure. The concrete structure is in conflict with CB305. CB305 cannot be installed as planned. See attached photo.					Accept Suggestion: <input type="checkbox"/>		
Tsu-Ling with AECOM and Alberto with SFDPW reviewed the situation in the field and agreed the solution was to salvage the existing CB where CB 305 was to be installed. This work was performed on 10/7/2011 under the inspection of SFDPW.					As determined during a site visit on 10/7/11 with M Squared, AECOM, SFDPW and W/O; the existing unforeseen condition, a large concrete structure, is in conflict with CB 305 and the installation of a new catch basin would require an extensive amount of unforeseen demotion.		
Please confirm.					In lieu of installing a new catch basin barrel to replace existing, modify the existing catch basin as follows:		
					1. Clean interior walls and bottom. 2. Apply 1/2" thick uniform layer of mortar on interior walls and bottom. 3. Install cast iron trap. 4. Install pipe culvert and connect to MH#305 as shown in Plans.		
					New culvert size and invert shall match existing culvert at catch basin. Use ductile iron pipe if depth of cover is less than 3 feet.		
U-0181	Unknown subsurface structure on Beale	Closed	10/13/2011	10/23/2011	10/24/2011	Potentially	<input type="checkbox"/>

REQUEST:			ANSWER:				
Please refer to drawing MA-15 and response to RFI U-0190.			Accept Suggestion: <input type="checkbox"/>				
As a result of differing site conditions between Sta 8+50 and 9+00, the new location of the HP fire hydrant shown on drawing MA-15 is to remain in the existing location per response to RFI U-0190.			Jeff Thiel 11/21/2012 Response per Michael Smith (SFDPW),				
Please provide a detail drawing showing the new hydrant lateral with all SFDPW requirements for HP hydrants in an areaway.			"Please find attached a sketch for changing the design for replacing the existing HP hydrant at the above location.				
			The existing hydrant is in an "areaway" since the property at this location has a basement that extends under the sidewalk.				
			The proposed new hydrant off the proposed 16" DI main will be replaced in this "areaway" structure. Please see attached sketch. The originally proposed hydrant lateral that bends 90-degrees as shown in the contract documents drawing MA-15 will be deleted from the work scope. There is no change in work for drawing MA-5. The attached drawing HPL-5142.1 is also shown on the AWSS standard drawings which are part of the contract work.				
			The contractor is cautioned to use extreme care in this area due to the basement below and to prevent issues with water leakage from the street/sidewalk."				
			See attached.

Co-Author:							
REQUEST:			ANSWER:				
In order for the controller enclosures for the motorized gate valves at Location #1, #2 and #7 to be operational a power source will need to be provided at each enclosure location.			Accept Suggestion: <input type="checkbox"/>				
Please confirm that the owner has applied to PG&E for the power sources at these locations and advise on the status of these connections.			Revised Responce 2/27/2012				
SUGGESTION:			Jeff Thiel 2/23/2012 The TJPA has completed its application to SFPUC for power to AWSS facilities. The SFPUC has requested a minimum of four (4) weeks to make these connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior to start of work.				
			Below is the MOP for coordinating power source connection as confirmed by Mathew Ho of the SFPUC.				
			1. Contractor to schedule coordination meeting with PG&E, PUC (Mathew Ho or Michael Mack) and Turner. Contractor to provide a construction schedule and set up Pre-con with PG&E (Per SFPUC request to inform them when Contractor expects to trench for electrical service and have the power pedestals installed)				
			2. Contractor to schedule PG&E trench inspection which is needed after contractor installs conduit but before closing the trench so that PG&E can prove the conduit via mandrel test (30days notice needed, Call PG&E inspection # 415-695-7519 and provide PM# located on drawing and provide PG&E job owner contact as Matt Herron)				
			3. PG&E to pull cables				
			4. Schedule a DBI inspection of the meter pedestal (Dave Green DBI 415-558-6654, forward PG&E a copy of the DBI green tag)				
			5. Once green tag is applied, PG&E to set up meter and then energize.				
			=====				
			Original Response 1/26/2012				
			The TJPA has completed its application to SFPUC for power to AWSS facilities. The SFPUC has requested a minimum of four (4) weeks to make these connections. Sub contractor to coordinate meeting with SFPUC and PG&E prior to start of work.

From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Steve Cunningham		Answered By: Transbay PMPC		Cory Traylor	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Recent meeting on the AWSS project resulted in the response to RFI#U-0191 being revised to include a procedure to be followed once the controller cabinets were ready to accept power. However, what was sent in the revised response was a new scope of work followed by the mentioned procedure.				Cory Traylor 5/1/2012 In accordance with PG&E Greenbook standards and practices, power connections for motorized gate valve equipment shall be installed at the referenced locations per the attached PG&E sketches, directions and requested equipment requirements. Work not outlined in the attached documents shall take place per contract drawings.			
The contract drawings show M Squared's work beginning at pull boxes and going to the controllers. M Squared's interpretation of the drawings sent in the revised response to RFI#U-0191 is the scope of work that goes from the pull boxes to PG&E manholes. This is unclear because the PG&E drawings are not comparable with the contract drawings.				Final coordination for connections shall take place in the field per note 7 on drawings MA-29 and MA-31.			
Please clarify the intent and scope of the PG&E drawings. Please clarify how the PG&E drawings correlate with the contract drawings.				Connecting for power per the attached PG&E sketches/direction has been approved by SFDPW-Bureau of Engineering.			
U-0191.2	Amperes Interrupting Capacity (AIC) at AWSS Location #1 (Market St.)	Closed	05/23/2012	06/02/2012	06/21/2012	Potentially	<input type="checkbox"/>

U-0192	AWSS Strong Backs	Closed	01/18/2012	01/28/2012	02/08/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Steve Cunningham		Answered By: Turner Construction Company Jeff Thiel			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Current project drawings show that this project requires two (2) 14" Strong Backs and two (2) 10" Strong Backs to be used at different locations. Olympic Foundry does not produce strong backs and were unable to include them in the order to M Squared. M Squared has contacted several sources trying to locate the strong backs but have yet to find a supplier. Please advise if it is possible to purchase these from the City stock. If this is not possible M Squared will have no other option but to have them manufactured at a steel mill and this may take a considerably long time due to the lead time in the specialized steel.				Jeff Thiel 2/3/2012 Response per Michael Smith (SFDPW), -"We have been advised that the SFWD does not have the requested strong backs in their inventory." -Typically strong backs were torch cut at local machine shops that handle larger fittings. Suggest contacting other contractors who have performed AWSS work for sources." Signed and dated 02/01/12

	<p>On the detail for the strong backs on the San Francisco Standard AWSS Plans M Squared has discovered an error in the dimensions for the 14" strong back. Dimension C (outside diameter) is smaller than dimension B (inside diameter). See attached.</p> <p>M Squared believes the OD should be 27.37". Please confirm.</p>		Jeff Thiel	3/14/2012	Michael Smith's (SFDPW) response,		
					"M Squared is correct. Thank you for pointing this out. We will update our drawing."		
					Signed and dated 3/14/12. (See Attached)		
U-0195	Parking Sensors on Mission	Closed	03/13/2012	03/23/2012	04/16/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Colin Azevedo		To: Turner Construction Company Steve Cunningham		Answered By:Turner Construction Comp; Jeff Thiel			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST:		Jeff Thiel 4/12/2012 Per email conversation with Alex Demisch of the SFpark Project (SFMTA), any parking sensors found on Mission Street from 2nd Street to Main Street are inactive. SFPark's vendor plans to remove these parking sensors late April or early May of this year 2012. SFPark realizes TJPA plans to conduct AWSS construction work in the upcoming months and has asked if it was possible to for the TJPA sub-contractor, once AWSS construction begins, to separate the parking sensor equipment from other construction debris so that SFPark may dispose electronic waste properly if there are any parking sensors still remaining. However, if the parking sensors cannot be separated then SFPark understands they will end up being demolished from TJPA AWSS construction work.					
M Squared has discovered that either SF Park or MUNI have installed what appear to be sensors in the street surface along Mission Street. See photo attached.							
They existing between Fremont and Beale in particular.							
As the AWSS line is installed along Mission St from 2nd to Main these sensors will be in conflict. Please confirm these sensors will be removed prior to trenching.

REQUEST:

Please refer to spec section 33 34 10-3.1 H

The method of HDPE pipe testing listed in the contract documents differ from the testing methods provided by the pipe manufacturer: The specifications call for the pipe to be filled 24hrs in advance and then the pipe pressurized to 115psi for a duration of 4hrs, The manufacturer's method involved filling the line with pressure for 3 hrs to allow expansion etc. in the pipe and then adding additional water, per Table 2 of the attached document. Once this additional water has been added the pressure can hold for the duration listed. Or alternatively allowing a 5% fluctuation in the pressure target for the test over 1 hour.

Please see attached pipe manufacturer's data attached and provide direction. M Squared believe that the testing method in the specifications is not suitable for HDPE due to its flexibility and would be more suited to steel pipe.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Eric Zagol 7/3/2012 It is acceptable to perform HDPE Hydrostatic Testing per HDPE pipe manufacturer's recommendations. The test phase shall be performed based on the specified "Test Phase - Alternate 2" in manufacturer's data sheet for 3-hour test.

Specification section 33 34 10 (3.1, C-7) forbids the use of flooding or jetting in order to gain the necessary levels of compaction in the HDPE pipe trench. However due to the amount of utilities and duct packages in the trenches it will not be possible to gain the necessary levels of compaction under and around these utilities by utilizing the methods referenced in the specifications. By not gaining the necessary compaction around utilities it is possible that voids will occur over time causing the utility to be come unsupported and the street surface to sink.

M Squared is requesting the use of jetting (as described in Section 703.08 of the City and County of San Francisco Standard Specifications) as a method to gain the necessary levels of compaction for the Sludge Line trenches.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Zagol 7/5/2012 Flooding or water jetting is not an acceptable method of compaction for HDPE pipe trench backfill.

In limited areas, under and around adjacent utilities, consider using a low strength, low water content concrete fill material. Submit proposed alternate backfill material and mix design for review.

REQUEST: While excavating to expose the existing AWSS Main on Market Street M Squared's crew discovered that a portion of the existing cast iron main had already been abandoned in place. They then discovered a ductile iron main that is running parallel to the cast iron pipe. The ductile iron main is the portion of pipe that is live and this is the line we should now be connecting to in order to proceed with the work. See attached photos. Please note that additional costs will be incurred, as a result of this unforeseen condition. Please advise on how M Squared is to proceed.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 7/11/2012 Michael Smith's (SFDPW) response, "-The contractor shall connect the new 14" DI pipe to the (E) 14" DI pipe on the East end of the excavation to the nearest pipe joint to the original CTCL location. -Where possible, please deflect new pipe joints 1 degree to compensate for (E) joint deflection at CTCL joint." Signed and dated 7/11/12. (See Attached) Pending TJPA approval, a CR for additional cost is forthcoming.				
U-0208	AWSS - Clearance Issues with Domestic Water Line on Market Street	Closed	07/10/2012	07/20/2012	07/11/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch Co-Author: M Squared Construction, Inc. Aidan Foley			Answered By: Transbay Joint Powers Au Jennifer Tongson				
REQUEST: While excavating west of the gate valve vault location on Market Street M Squared's crew discovered an 8-inch cast iron water line sitting on top of the existing AWSS main to be removed. This 8-inch line also appears to be leaking slightly. 1. As a result of this line M Squared is unable to install the new AWSS with the necessary clearances. Aside from the clearance issues M Squared can no longer install the 14-inch reducer where it is required. M Squared will be able to relocate the reducer which will then require a longer spool piece. Please advise how M Squared is to proceed. 2. This 8-inch line also has three concrete kickers on the pipe that make it impossible to install the pipe and fittings at this vault location. Please confirm that it is acceptable to remove these kickers temporarily, as they are already restrained with tie rods, for construction purposes. The			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 7/11/2012 Michael Smith's (SFDPW) response, "-The Contractor shall request the SFPUC SFWD relocate their (E) 8" low pressure water piping in order to maintain a 12" clearance between their own two utilities. -Please coordinate with SFWD prior to removing the (E) concrete thrust blocks on the SFWD line. Support SFWD line as required to prevent movement." Signed and Dated 7/11/12 (See Attached) Pending TJPA approval, a CR for additional cost is forthcoming.

U-0208.01	AWSS - Clearance Issues with Domestic Water Line on Market Street	Closed	07/24/2012	08/03/2012	08/03/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Turner Construction Comp Jeff Thiel			
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Per the response to RFI # U-]0208, M Squared met with SFWD engineers on site to discuss the relocation of the domestic 8-inch line. As a result of this coordination, SFWD agreed that relocating the 8-inch line was the best possible resolution to this issue. M Squared has excavated and shored for SFWD crews to perform the repairs. As of 7/23/12 no relocation work has been performed by SFWD. Please provide M Squared with a schedule for this relocation.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 8/2/2012 Per Dan Helminiak of the SFWD, the SFWD is scheduled to relocate the 8" water line on the morning of Monday 8/6/12.

U-0209	AWSS - Misison and Anthony Valve Vault	Closed	07/26/2012	08/05/2012	08/07/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: See attached documents and photos. M Squared has potholed this location for the AWSS valve vault. It has been confirmed that the gas line is abandoned and can be removed and that the 12" water is also abandoned. In order for the vault to be constructed here M Squared will need to remove the abandoned 12" line; however, removing the 12" line will significantly weaken the live 8" line that runs on Anthony as the 90 degree bend on the 8" line is supported by a redwood block resting against the abandoned line. Please advise on how M Squared is to proceed.			SUGGESTION: Have SFWD restrain the existing 90 degree bend so that the abandoned lines and redwood plug can be removed. UPon completion of the valve vault M Squared can our a new concrete kicker if required by SFWD.				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 7/30/2012 Response per Chi Yu of SFWD, " The redwood plug is for the abandoned line to stop any residual water in the pipe and does not serve as a kicker. The live 8" main was built quite recently using a field-lok gasket restraint joint. No kicker is required. Remove the 12" and 8" abandoned lines together with the redwood plug. Provide adequate vertical support for the live 8" main." See attached email from Chi Yu dated 7/30/12.				
U-0210	AWSS - 12" Water Conflict at 1st and Mission Street	Closed	07/26/2012	08/05/2012	08/10/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: While performing the preliminary excavation across 1st and Mission street Intersection, M Squared's crew exposed a 12" water line that is running on top of the AWSS line for approx half of the intersection. Due to other utilities being present we are unable to excavate down to the AWSS main. M Squared met with SFWD crews on site and they have confirmed that the line is active, despite them agreeing with M Squared that the line sounded very hollow (an indication that it may be dead) M Squared believes that despite the presence of many unknown utilities they will still be able to remove and replace the existing AWSS main if this 12" water line can be abandoned or relocated. Please advise on how M Squared is to proceed.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 8/10/2012 Chi Yu's (SFWD) response, "SFWD will cut and cap both ends of the 12" line that is on top of the AWSS Main and restore the 12" main at the same location after the new AWSS line is in place." SFWD will require two weeks advance notice prior to starting this work.

U-0218	AWSS - PG&E Duct Bank Conflict at Sta.6+05 to Sta. 6+25	Closed	11/06/2012	11/06/2012	11/15/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Between Sta 6+05 and Sta 6+25 there is a PGE duct bank sitting on top of the AWSS pipe; as a result, M Squared is unable to install the new AWSS main at this location. See attached photo. The pipe cannot be lowered due to the AWSS penetrating PGE Vault #1302. In order for M Squared to be able to install the new AWSS main through PGE vault #1302, the PGE duct bank needs to be raised up. Please advise.			SUGGESTION: PG&E remove concrete encasement from ducts and lift the PVC conduits up so that M Squared can install the pipe at the existing alignment.				
			ANSWER: Accept Suggestion: <input type="checkbox"/> - SFDPW accepts M Squared's suggested solution for this utility conflict. - Coordinate with PG&E for removing concrete and raising conduits in order to install AWSS facilities and provide 6-9" clearance. Michael Smith SFDPW/IDC/EME - 11/09/12				

U-0219	AWSS - PG&E Vault #1313 Conflict with 4x4 Support Post	Closed	11/06/2012	11/16/2012	11/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: On 10/26, PGE completed work on Vault #1313 on Mission Street. The existing AWSS pipe has been removed and M Squared is ready to install the new AWSS Main per the attached sketch (current condition). In order for M Squared to install the AWSS pipe, the five 4"x4" supports installed by ARB crews require removal. As a result, a portion of the vault wall will overhang the pipe, with no support. . Please advise if this is acceptable.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 11/9/2012 Response per Michael Smith (SFDPW) "Per field meeting today, support AWSS pipe through cut in (E) PG&E vault as follows: -Support (N) 16" AWSS pipe over vault under hang with a CDF "cradle" for the length of the vault. Pour CDF to 5 and 7 O'clock pipe positions. - Backfill pipe with jetted sand to vault overhang. -Fill vault concave spaces with CDF over sand backfill through (N) 8" Diameter holes chipped into the top of the vault." Signed and dated 11/20/12. (See Attached) Per meetings with PG&E, M Squared to perform this work.

U-0222	AWSS - Flanged Spools for Hydrants	Closed	01/31/2013	02/10/2013	02/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome Co-Author: M Squared Construction, Inc. Aidan Foley			To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel	
REQUEST: Reference Drawings: MA-14 & MA-15 Hydrant at Sta 6+30 Contract drawings show the 45deg bend being connected directly to the rolled down tee. However the hydrant lateral is much lower than the main and it will not be possible to connect them directly together. Hydrant at Sta 9+00 Due to the changes per RFI U-190 M Squared are to install the new fire hydrant in the same location as the existing, in the breezeway. As a result the new hydrant lateral will be higher than the newly installed main (the grade of the main being dictated by various utility conflicts). Please confirm M squared's suggested mediation is how M squared is to proceed			SUGGESTION: Hydrant at Sta 6+30 Suggestion - custom fabricate a HPW flanged x flanged spool for to connect to the tee and the 45deg bend. Hydrant at Sta 9+00 Suggestion - In order to connect the tee to the 90deg bend a HPW flanged x flanged spool, custom fabricated will be necessary.			ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 2/5/2013 Response per Michael Smith (SFDPW), "-Hydrant at station 6+30 - Proceed as required due to unforeseen field conditions. -Hydrant at station 9+00 - Per field / phone conversations with M2, Pipe spool is no longer required at this location." Signed and Dated 2/1/13. (See Attached)	
U-0223	AWSS - Electrical Sevice at 2nd Street Intersection	Closed	02/06/2013	02/16/2013	05/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu Co-Author: M Squared Construction, Inc. Aidan Foley			To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel	
REQUEST: The contract drawings show M Squared replacing the existing 10" gate valve on Mission at 2nd St with a new 16" gate valve. Due to a PG&E conflict M Squared will have to now move the valve location north onto 2nd Street. In moving the vault M Squared will now have to relocate the existing electrical service to the new vault location. M Squared will need the service disconnected so that all existing electrical cable and conduits can be removed. Once the new vault has been constructed M Squared can reestablish the service to the new vault location. These were previously thought to be street lighting conduits as mentioned in RFI U-182.2 and will need to be removed for the construction of the new vault anyway.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 5/20/2013 Existing PG&E service has been disconnected and removed. See attached drawing for new routing of PG&E power service connection from existing PG&E connection point to a new PG&E meter enclosure. Please provide pricing proposal for work associated with installing a new connection from PG&E connection point to new meter enclosure as show on the attached drawing. Do not proceed with this work until pricing has been agreed to. Reconnection for service at this location has been acknowledged from SFPUC (via PG&E) to be about 5 to 6 weeks out.

U-0224	AWSS - Pipe Alignment between Fremont to Beale	Closed	02/06/2013	02/16/2013	02/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: The existing AWSS main on Mission Street between Fremont St & Beale St is running through three (3) PGE vaults. By upsizing the AWSS main to 16" there is a possibility that the pipe will not fit back through the structures. By having PGE move/alter their facilities M Squared believes there will be significant project delays. M Squared will also inevitably have to install the new main within PGE structures, something the SFPUC prefers to avoid. M Squared believes it is possible to shift the alignment of the new 16" main further north to avoid all of these PGE vaults. See attached potholing results from potholing further north than the existing main. M Squared does not know yet if additional fittings will be needed to shift the alignment north, and then realign it back south at Beale Street. This will not be known until the trench has been excavated. Please confirm it is acceptable for the AWSS alignment to shift north as currently coordinated to avoid the delay impacts and vault conflicts.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 2/8/2013 Response per Michael Smith, (SFPDW) "Shifting the proposed AWSS alignment North is acceptable provided that there are no utility conflicts and the gate valve frames/covers do not end up directly in the gutter due to potential flooding of the vaults." Signed and Dated 2/8/13. (See Attached				
U-0225	AWSS - Lead Joint Clearances at Sta 6+30	Closed	02/08/2013	02/18/2013	02/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jeff Thiel				
Co-Author: M Squared Construction, Inc. Stewart Mitchell							
REQUEST: Please refer to attached W/O Sketch SK-U-0225 and drawing MA-4. The newly installed fire hydrant lateral at station 6+30 is to connect to the existing AWSS main; however, the existing main pipe is "oval" shaped and the new pipe is circular. As a result of the differing pipe shapes, the minimum clearances for inserting the "hokum" to draw the lead in when heated are not achieved. The minimum clearance around the pipe required is 1/4". The existing fitting is part of a series of fittings needed to raise the fire hydrant lateral up in elevation to avoid a			SUGGESTION: Field conditions appear to indicate that where the existing laterals clear over the sewer, at the next joint there is a possibility of a full length pipe (12'-0") which takes you closer to the curb. There is a possibility to switch out the entire lateral to the fire hydrant. ANSWER: Accept Suggestion: <input type="checkbox"/> Jeff Thiel 2/13/2013 Response per Michael Smith (SFPDW), "Due to the unforeseen conflict between the existing AT&T duct bank which was poured directly onto the AWSS Hydrant lateral pipe, blocking access to the next two downstream lead joints, the contractor shall locate a lead joint South of the conflicting duct bank that is readily accessible for their plumber to melt the existing lead joint. The contractor shall then furnish and install ductile iron pipe and fittings to this accessible location in order to connect to the existing cast iron line. The alternate is for AT&T to relocate

U-0228	AWSS - Sidewalk Expansion Evaluation between First Street and Beale Street	Closed	05/31/2013	06/10/2013	10/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Gary Krutsch				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Per the attached email it appears that the City's intent to is to move the curb lines south between First St & Fremont by 3' and also between Fremont & Beale Street by 4'. First to Fremont St - In moving out the curb line by 3' the AWSS Line on this block will be pretty close to being under the new curb line, therefore making any maintenance of the AWSS line in the future very difficult. There would also be an impact to the gate valve location on the east side of the 1st and Mission intersection and the west side of Fremont & Mission due to the new curb coming south. It is possible a modified roof to the vault would be required as half of the vault would be in the street and another half would be in the sidewalk (judging from rough field measurements). The AWSS Fire hydrant would also need to be relocated as it would now be in the middle of a widened sidewalk, whereas the distance acceptable is 24" to 26" from FOC. Fremont to Beale Street - The current alignment for the AWSS along Mission between Fremont & Beale is close to the curb on the north side (in order to avoid 3 PG&E utility vaults). By moving the curb 4' south the AWSS line will now be underneath the sidewalk on this block. Similar to above the gate valve vaults would be partially under the sidewalk here and modifications/relocations may be required. Please advise if M Squared is to continue with the AWSS install per plan. Alternatively please provide direction on the conflicts that moving the sidewalk creates for the main.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Judy Long 10/16/2013 RESPONSE: - TJPA has not received confirmation from the SFPUC that the new AWSS service can be installed per the contract drawings. As discussed in our weekly coordination meeting after completing the paving in the intersection at First and Mission, M2 is directed to jump to the intersection at Main and Mission and proceed westward towards Beale Street. - Submit RFI#U-0228.1 once work is complete in the Main Street intersection and request SFPUC's approval to proceed with the original AWSS alignment per contract drawings between Beale and First streets.

U-0230	AWSS - AWSS Vault at 2nd Street	Closed	07/18/2013	07/28/2013	07/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Comp Jeff Thiel			
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Due to the grade of the 16" AWSS gate valve, combined with the valve actuators the roof of the AWSS valve vault at 2nd Street will not be under the surface of the street. Previous AWSS valve vaults have 2" AC/8" concrete street base on top of the roof of the vault. If M Squared installs the vault roof and then covers it with 2" AC then there is a danger that future contractors will saw cut through the roof of the vault while cutting out their trenches. Our suggestion is to pour the vault roof to the same grade as the current street surface on 2nd Street. There does not appear to be any room for adjustment here and we are unaware of any other options in this case. Please confirm it is acceptable to construct the vault roof in this manner, with a concrete broom finish.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Response per Michael Smith (SFDPW), "M Squared shall proceed with constructing the valve box cover in a manner such that the portion to be located in the parking strip shall be flush with the surrounding concrete. For the portion of the cover to be located in the paved traffic lane, reduce top surface by 2". Place a sheet of 10 gauge galvanized sheet steel on recessed area of concrete cover. When repaving street, extend A/C paving over vault to provide paving flush with concrete portion of cover/manhole lid. Signed and dated. (see attached)

U-0231	AWSS - Concrete Sampling for Kickers	Closed	07/25/2013	08/04/2013	08/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: The contract specifications require concrete sampling of all cast in place concrete on the AWSS project. However in the pre-construction QC meeting the City confirmed that the SFWD Inspector - Dan Helminiak is permitted to inspect all concrete thrust blocks. Due to the small size of the thrust blocks it is not practical for concrete samples to be provided to an inspection agency. Please confirm that per the agreement SFWD inspector can inspect all concrete used in the AWSS thrust blocks and that no concrete sampling is required.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Response per Michael Smith (SFDPW), "It is acceptable to the City for thrust blocks to be visually inspected by the SFWD inspector for compliance with the contract documents. No concrete sampling is required." Signed and dated. (See attached) (Jack Adams) Although the contract specifications require concrete sampling and testing of all cast in place concrete on the AWSS project, the City of SF Engineer of record has allowed visual inspection only by City SFPUC (SFWD) of these concrete thrust blocks. See attached from M. Smith CCSF PUC.				
U-0232	AWSS - Schedule Change of AWSS Install	Closed	07/30/2013	08/09/2013	08/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jeff Thiel				
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Per our recent AWSS meetings M Squared had been directed by the owners' representative to complete the AWSS install at 1st & Mission intersection and then mobilize to Main Street intersection to begin work down there. IF M Squared is to begin work at Main St then there will be no connection made on the east side of 1st and Mission. The new 16" line will be installed up to the 16"X10" tee and the 10" connection will be done heading North on 1st. We can see 3 options that would allow us to proceed to Main Street. 1. Cap the new 16" Tee on the east side of the tee. This would allow the AWSS system to be in service from 2nd Street all the way to the east side of 1st Street, including 1st Street heading towards Market. 2. Perform a connection from the new 16" Tee to the			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Response per Michael Smith, (SFDPW) "Please proceed with Option No. 1 - Capping of the East end of the (N) 16"x16"x12" tee installed at Mission and First Streets. The concrete thrust block to be installed behind the 16" cap shall be poured with 3x the concrete as a typical thrust block for a 16" AWSS fitting. Pour thrust blocks against 12" CI pipe and 16"x16"x1" Steel plate. Option No. 2 is not approved due to unavailability of fittings for 4-6 months and the vertical/horizontal alignments between (N) and (E) pipes. Bill Gunn of SFWD approved option No. 1 based on the above issues for implementing option No. 2" Signed and Dated. (See attached)

	<p>REQUEST:</p> <p>Please refer to drawing MA-17.</p> <p>Due to the high number of utility duct banks on Main Street & Mission Street Intersection M Squared's crews effectively tunneled under sections of the street in order to install the new AWSS main. Where possible M Squared removed the street base and excavated as much as we could. The remainder of the trench was tunneled under duct banks and under the street, with the street base remaining in place.</p> <p>Now that all the AWSS main has been installed M Squared will shortly be faced with backfilling this intersection. There is currently only a small portion of trench that can be backfilled using conventional methods i.e ram compactor etc. The remainder of the trench will also not be suitable for backfilling using the jetting method as there will be no way to compact the area directly underneath the street base.</p> <p>M Squared is requesting permission to create several small holes (approx. 6" dia) in the street base, between some of the utilities and backfill the AWSS trench using a sand cement slurry backfill. See attached submittal sheets. This mix design is effectively sand and water, with just a minor amount of cement included to allow the sand to reach 95% compaction.</p> <p>If this is not acceptable please provide direction.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>This is acceptable provided that the dried sand/cement mixture has a minimum density of 120 lb/ft3. Please provide test verification of this density with site test as continued from previous sheet: "witnessed by SFWD Inspector". Test can be performed at contractor's yard. REQUEST: Sheet MA-16 shows that the hydrant tee is to be rolled down 45-degrees in order to tie in to the lateral piping. However, when M Squared excavated this section, they discovered that the hydrant lateral piping is shallow and the main is approx. 2-feet deeper. In order to install the piping, the hydrant tee will need to be rolled UP 45 degrees. In addition to this M Squared will need to order a customized 8-inch DIP flanged spool to join the tee to the flanged 45-degree elbow. Please confirm it is acceptable to proceed with the customized flange or provide direction.			SUGGESTION: Roll the tee upward 45-degrees as required to suit field conditions. F/J pipe spool between TEE and flanged 45-degree elbow. Spool length shall be determine dint he field to suit existing pipe alignments Michael B. Smith SFPDW/JDC/EME - 01/22/14. 	<p>Due to the unforeseen utilities in place, M Squared cannot install the concrete vault around the gate valve at STA 16+40. In order to avoid delays to the project M Squared reached out to the engineer of record to bring this issue to his attention. See attached email chain.</p> <p>As it appears M Squared is directed to return to 1st Street and work east again; M Squared will be unable to build any structure around the gate valve at Sta 16+40. Due to the flip flop of the schedule we will not be able to tie in at this point for several months so we suggest the following:</p> <ul style="list-style-type: none">- Install the gate valve at Sta 16+40 and direct bury the valve, leaving access to the gates with ductile risers and valve caps. FYI - these gates should not be opened anyway as the line will be out of commission during construction.- Re-excavate this gate valve when M Squared installs the pipe from Fremont St heading east and tie in the pipe to it then. In the interim M Squared will drive a sheet pile behind the gate valve and support it with a 1.5ton concrete block. This will prevent any gate valve movement.- As M Squared will be working their way from 1st St towards Beale Street, they should have several weeks in which to design some sort of modified manhole, custom sized vault in which to encase the valve. <p>Please advise if this is acceptable.</p>

	<p>First Street:</p> <p>1. M Squared is able to install the gate valve and gate valve vault at the west side of 1st Street on Mission Street without impacting the new sidewalk expansion. The valve vault will be in the street and outside any sidewalk limits. The vault can be constructed once the street light conduit has been relocated. This work has already been coordinated with the City Street Lighting Division. Please advise on when the City will remove the conflict to install the gate valve/vault.</p> <p>Fremont Street (east side):</p> <p>2. See attached sketch. Due to the amount and location of existing utilities M Squared will be unable to install a gate valve vault of any kind at this location. It is also looking highly unlikely that M Squared will be able to install any gate valve at this location due to the utilities in the</p>						
						Response by Judy Long 3/28/2014	
						The contractor shall field investigate installing the 16" gate valve and reducers directly east of the tee serving Fremont Street. Install riser and 23 1/2" square AWSS manhole cover above gate valve operating nuts similar to 10" AWSS gate valve. Notify engineer of any conflicts to performing the above work, and for direction for riser and manhole support.	
						Michael B. Smith SFDPW/IDC/EME 03/28/14 Judy Long 3/28/2014	
						REVISED 4/1/2014:	
						Per Yesterday's coordination meeting with PG&E and Last night's site investigation by M2, there currently is no space to install a gate valve east of the main line tee at Fremont Street. In order to maintain water	

supply for SFFD, the contractor shall temporarily cap 16" tee on the east side until PG&E relocates conflicting duct banks. The contractor shall install 16" diam. nipple, 16" DI AWSS MJB flat cap and tie rods. Use steel spacers up against (e) 12" CI AWSS line. Have SFWD test completed line and place back into service.

Per Michael B. Smith SFDPW/IDC/EME on

U-0247	AWSS - PG&E Utility Conflicts at Fremont Intersection	Closed	03/27/2014	04/06/2014	04/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: M Squared Construction, Inc.		Jackson Tukuafu Aidan Foley	To: Turner Construction Company Phil Militello		Answered By: Turner Construction Company Judith Long		
REQUEST: Please refer to drawing MA-16 and attached M Squared sketch SK-TG04.2-071. There are 3 duct banks exiting out of PG&E Vault #1669: <ol style="list-style-type: none"> 1. PG&E Duct bank #1 runs from 1st Street down Mission to Fremont Street and has been in our trench all that time. It has not encroached on the AWSS Main alignment and there is enough clearance from AWSS main most of that time. It has impacted excavation but should not pose too much of a problem for pipe installation. 2. PG&E Duct bank #2 sits on top of the existing 12" AWSS Main and runs directly on top of the AWSS Main for a large portion of the intersection. Due to this duct bank we are unable to excavate down to the AWSS Main, unable to remove pipe and will be unable to install new 16-inch AWSS. 3. PG&E Duct bank #3 runs underneath the existing 12" AWSS main, it is concrete encased and part of the concrete encasement encroaches onto the existing 12" AWSS Main. This duct bank appears to leave our trench after 10ft or so. Where duct bank #2 and duct bank #3 cross each other there is only 11-inch between the two duct banks. Not		SUGGESTION:	ANSWER: Judy Long 4/1/2014		Accept Suggestion: <input type="checkbox"/>		
					PG&E shall remove/relocate conflicting duct bank(s) as identified by the contractor in order to obtain the necessary working space and clearance as required to remove the (e) AWSS pipe and install the (n) pipe. PG&E shall demo portions of their electrical vaults that were constructed on the (e) AWSS pipe.		
					Currently should the (e) CI AWSS be compromised, the SFWD would not be able to even access the fire fighting line due to the three conflicting PG&E duct banks surrounding the AWSS pipe. City Standards call for a minimum 12" separation for utilities being installed in the proximity of the AWSS line.		
					Michael Smith 4/1/2014

From: Webcor Construction LP Co-Author: M Squared Construction, Inc.		Lynn Kowallis Aidan Foley		To: Turner Construction Company Phil Militello		Answered By:	
REQUEST: Please refer to drawing MA-16 and M Squared Sketch-TG04.2-072.1 and TG04.2-072.2. Question #1 - Does every joint between the new GV west of Fremont Street, and the new 16"x10" tee in Fremont Street intersection need to be restrained with bell & stop collars? This distance is approx. 50ft. Question #2 - Currently there does not appear to be enough space to install the new 16" pipe WITH bell & stop collars through the utilities in the Fremont St intersection. There does appear to be space to install 16" pipe without the stop/bell collars on. - Our suggestion would be to install the 16"x10" tee and restrain that tee on one joint heading east. Install piping across the Fremont St intersection without stop/bell collars, delete the 16" GV at that location (we believe we will not be able to fit one anyway), and tie off the last piece of pipe coming into the hydrant tee east of Fremont Street. Please clarify if this is acceptable.		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>

U-222	AWSS - Flanged Spools for Hydrants	Void	01/31/2013	02/10/2013	02/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Webcor Construction LP Jackson Tukuafu			
Co-Author: M Squared Construction, Inc. Aidan Foley							
REQUEST: Reference Drawings: MA-14 & MA-15 Hydrant at Sta 6+30 Contract drawings show the 45deg bend being connected directly to the rolled down tee. However the hydrant lateral is much lower than the main and it will not be possible to connect them directly together. Hydrant at Sta 9+00 Due to the changes per RFI U-190 M Squared are to install the new fire hydrant in the same location as the existing, in the breezeway. As a result the new hydrant lateral will be higher than the newly installed main (the grade of the main being dictated by various utility conflicts). Please confirm M squared's suggested mediation is how M squared is to proceed.		SUGGESTION: Hydrant at Sta 6+30 Suggestion - custom fabricate a HPW flanged x flanged spool for to connect to the tee and the 45deg bend. Hydrant at Sta 9+00 Suggestion - In order to connect the tee to the 90deg bend a HPW flanged x flanged spool, custom fabricated will be necessary.		ANSWER: see U-0222		Accept Suggestion: <input type="checkbox"/>
