T-1474	BGP - Seismic Joint Fire and Smoke Barrier	Closed	06/26/2014	07/06/2014	06/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Webcor/Obayashi Joint Venture Spencer Sayles				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference the attached drawing, AI-8881. Per ASI-107, a fire and smoke barrier is added at the top of Gridline 35 on 3/AI-8881. Please confirm: - 1. The fire and smoke barrier is not to be incorporated in TG06 Contract. 2. There will be no embeds associated with the fire and smoke barrier that will need to be installed in TG06 Contract. 3. Please verify who will be supplying the flexible drain to be installed in the top wall poured in TG06 Contract.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Fire smoke barrier and seismic cover to be supplied and installed by others. 2. No specification exists for the referenced seismic joint. Currently there are no known embeds. TG06 scope delineation on this sheet remains. SCCI to incorporate any ASI modifications to its originally contracted work. 3. The drain pipe design through the wall appears to be not fully developed at this point in time. WOJV is requesting structural sleeving details via RFI.

	drawings do not supply consistent information for the location of the AESS enclosures. Please clarify where the AESS enclosures are required. 2) The AESS enclosure plate on A1-8692 is weldable only on one vertical side where it contacts the node. Confirm that is the intent. 3) The AESS enclosure plate on A1-8693 is weldable only on one vertical sides and the bottom side where it contacts the node. Confirm that is the intent. 4) Confirm all AESS enclosure plates are A572 GR50 material.			information required for AESS elements is consistent between Architectural & Structural drawings. 2) It is correct that only one side of AESS cylindrical plate is welded to cast node and it is to extend below the concrete topping slab. All exposed edges of the plate shall be finished per AESS requirements, as documented on drawings and Spec Section 05 12 13 2.3; welding shall meet QA in Spec Section 05 10 00, 1.8 D.5.d. Contractor is to submit detailed shop drawings of this AESS work describing the AESS closure fabrication, prep and welding procedures, so that basket column nodes may be reviewed as complete elements to confirm all conditions documented in Sheet A1-8690. 3) It is correct that AESS cylindrical plate is welded to one side and the bottom side onto the cast node. Additionally, plate is to extend below the concrete topping slab. All exposed edges of the plate shall be finished per AESS requirements, as documented on drawings and Spec Section 05 12 13 2.3; welding shall meet QA in Spec Section 05 10 00, 1.8 D.5.d. Contractor is to submit detailed shop drawings of this AESS work describing the AESS closure fabrication, prep and welding procedures, so that basket column nodes may be reviewed as complete elements to confirm all conditions documented in Sheet A1-8690. 4) Confirmed.			
T-1480	SSS - ST301 Shear Plate to HSS Connection	Closed	06/30/2014	07/10/2014	07/11/2014	Potentially	<input type="checkbox"/>

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 472 SK1: Please supply the size and location for the noted slab opening.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			The opening noted in this RFI is no longer there. Refer to the A-2902 issued as part of Roof Park Restaurant IFC.				
<hr/>							
T-1483	BGP - Dimension to Door on North Vehicle Ramp Wall	Closed	07/01/2014	07/11/2014	07/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: The door in question is at the east end of the north Vehicle Ramp Wall. There is a dimension on AI-2853, dimensioned at 7'-5 7/4" from GL 6 to the end of the wall and it is shown without a door attached. On all other drawings a door is shown at the east end of the wall, but there are no other dimensions indicating the east-west location of the door. Please confirm if it is the designer's intent to have the door placed on the end of the wall shown in AI-2853 so the east face of the door is 6'-5 1/4" off of GL 6 or if the door is to be placed per scale at 6'-3" off of GL 6.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			For door location with updated dimension at the east end of the north and south Vehicle Ramp walls, refer to SKA-3747 & SKA 3748.

REQUEST: See attached CD RFI # 478 SK1: Please supply the missing slab opening locations.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> For missing slab opening dimensions refer to SKA-3674 attached. Drawing A1-2864 will be issued as part of an upcoming ASI.		
T-1485	SSS - East and West End Hole Dimension Clarification	Closed	07/01/2014	07/11/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please confirm that grout hole "5" as shown on the attached sketch, SK1, is required on the west side only on grid 1 and on the east side only on grid 33.5. If not please clarify locations.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Hole "5" (3 in dia port in steel pipe) is used not only at East and West ends of the buildings as indicated in Sheet S1-4018 and at other locations as indicated in Sheet S1-4003. At East and West ends of the Buildings: In detail B/S1-4018 at GL H, a 3" hole (indicated as hole 5 in the RFI) is to be provided above the Bus Deck Level. On detail B/S1-4018 at GLs F.7 and E.6, a 3" grout hole above the Bus Deck Level is not needed since Bus Deck castings (casting 37 per S1-5120) include 3" holes to allow concrete flow through. Per symmetry and as called out, all pipe columns at D4., C.3 and B require the same hole configuration as those of H, F.7 and E.6. Hole requirements for pipe columns between the ground level and the roof level in detail A/S1-4018 are identical to those of Detail B/S1-4018.		
T-1485.1	SSS - East and West End Hole Dimension Clarification	Closed	07/25/2014	08/04/2014	08/05/2014	Potentially	<input type="checkbox"/>

T-1487	SSS - Shear Plate Weld Connection Clarification	Closed	07/02/2014	07/12/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: For roof level shear plate connection details at GL11D & GL11F, S1-2603 refers to 3/S1-5013. This detail calls for a 3sided PJP weld at the shear plates, with a t-1/8 bevel (t=shear plate thickness). The shear plate located at the center of the web has a thickness of 2 ½", which results in a 2 3/8" bevel. The column web at this location has a thickness of 1 ¼"; the stiffener plates top and bottom have a thickness of ½". A 2 3/8" PJP weld will greatly distort the ½" stiffener plates. The weld size should not exceed the thickness of the thinnest member. Also, Detail 3/S1-5013 refers to Connection Detail 4/S1-5013 which in turn refers to Shear Connection Detail 3/S1-5013. Since both sides of the shear plate are accessible (note 1), is a ½" fillet both sides as shown in 3/S1-5011 acceptable for this location?			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Double sided 1/2" fillet welds are acceptable at the top and bottom stiffener plates as indicated in the RFI. Also, reduce the weld size at the column web from 2-3/8" PJP welding to double sided 1/2" fillet welds.

	<p>pins for the basket columns, a Type 2(M) drag connection, are to be galvanized to class A or Class B-1 per ASTM A153. After reading this note, and looking through all of the applicable details, Skanska interpreted all of the remaining drag connection pins to be provided as bare steel. In the response to the submittal package TG0701-60.1 SSS - PIN Drawings (Central Zone), drawing A9312, a Type 2 (N2) drag connection at GL 11, was marked to receive a galvanized coating. Similar pin connections occur at GL 21 & GL 22 (Type 2-P) and GL 28 (Type 2-N2). Does the design team want these pins galvanized too? If so, please provide the standard required.</p>						
	<p>protection/finish of remaining pins (other than the Basket column pins) is not correct. AESS elements documented to receive IFRM should receive IFRM in all instances (pins are included), both as fire protection method and as a corrosion prevention measure.</p> <p>The Design Team as the TJPA Representative will offer this as Contractor's Option; to hot dip galvanize ALL the remaining pins (other than the Basket column pins), or apply the intumescent coating system over non-galvanized steel, in either option, the tolerances required for installation of pins is a means and methods solution the responsibility of the contractor</p>						
T-1490	BGP - IDF Room B1545 on Concourse Level	Closed	07/03/2014	07/13/2014	07/08/2014	Potentially	<input type="checkbox"/>

T-1498	SSS - Continuity Plate Thickness at Moment Beam Flange GL 20.1	Closed	07/07/2014	07/17/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 480 SK1 & SK2: At the Bus deck level at grids 20.1/C & 20.1/G (Sim.) shown on SK1 & SK2 the bottom continuity plate is currently shown as 4 3/8" thick to accommodate the moment beam flange thickness and elevations. Please confirm it is acceptable to use 4" thick plates by tapering the bottom flanges, similar to the response to Webcor RFI # T-1234 (SK RFI # 427).			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. We assume that the SFRS moment frame beam bottom flange continuity plate is not shown on sketch SK2 of the RFI for clarity.		
T-1499	SSS - W-1 Brace Details at Bus Level	Pending	07/07/2014	07/17/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By:				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 470 SK1 to SK3: CD RFI # 257 was issued to confirm that detail 8/S1-5015 would be referenced for all information not shown in detail 4/S1-8003 and the response in RFI SK 330 referred us to revised ASI 109 drawing S1-8003. The revised detail added (1) bolt at the bottom end of the brace connection but did not give any additional information for the connection at the top end of the brace to the beam. The connections for the braces per detail 4/S1-8003 were therefore applied per the information in detail 8/S1-5015 and RFI's T-0919, T-0919.1 & T-0919.2 (SK 173, 173.1 & 173.2, CD 127, 127.1 & 127.2). Please confirm the connection as submitted and shown on SK3 is typically acceptable. Note: no approval comment was made for the same connection on drawings 4207 & 4208 in sequence CS8.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>

T-1502	SSS - Decking Around Bus Deck Level Crash Rails	Void	07/09/2014	07/19/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By:				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
With reference to the Bus Deck Level crash rail post detail 1/S1-8000, the post base plate is 18"x30" and spans or overhangs the width of the supporting beam allowing no bearing for the deck. As a result along grid lines B & H where the deck runs parallel to the support beam, our decker is required to provide a gauge support angle and flashing where required around the base plate, see details 1 & 2 on SK1. At grid lines 1.1 & 33.5 where the deck runs perpendicular to the support beam, a beam flange extension is required to achieve the 3" end bearing requirements for the S8 slab, see detail 3 on SK1.							
Please confirm these details are acceptable or provide an alternative detail for the deck support around the crash rail base plate.

Per the breakout meeting held after the TTC progress meeting on 7/9 @10:30, and email correspondence between Adib Sassine and Walter Melville (Attached). Please confirm the following items regarding the grounding mesh in electrical room B1441 at Grid Lines 15/G.5.					1) WSP has no exceptions to this proposal, subject to SFPUC acceptance.		
- Due to constructability issues please confirm that the attached PUC approved alternate detail is acceptable and will be incorporated into lower concourse electrical room B1441 at GL15/G.5					2) WSP has no exceptions to this proposal, subject to SFPUC acceptance.		
- The attached alternate detail incorporates a 4/0 field fabricated grid in lieu of the original #6 mesh and 4/0 ground ring. Please confirm that the alternate detail 4/0 grid will suffice to also act as the ground ring, and all pigtails can be attached to the grid.					3) WSP has no exceptions to this proposal, subject to SFPUC acceptance.		
- Please confirm the grounding grid spacing is 4' on center with connections to mat rebar at 8' on center.					4) WSP has no exceptions to this proposal, subject to SFPUC acceptance.		
					5) WSP has no exceptions to this proposal, subject to SFPUC acceptance.		
					6) Refer to SFPUC response.		
					7) WSP has no exceptions to this proposal, subject to SFPUC acceptance.

T-1507	BGP - Seismic Joint Removable Corbel Connection Variance	Closed	07/11/2014	07/21/2014	07/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per contract drawing S1-3205, the removable W14x61 steel corbel and WT8X28.5 angles it connects with are to be fabricated with a 2" vertical slotted hole.					1.) Not acceptable.		
In order to eliminate the lead time of field measured fabrication of the corbels after concrete formwork removal from the SJ assembly, the contractor is proposing either or preferably both of the following modifications:					2.) The beam portion of the corbel may be coated for corrosion protection rather than galvanized. Refer to specification section 09 97 13, part 3.6, item E for acceptable coating types.		
1. Change the slotted hole from vertical to horizontal (east to west) direction on the angles and or the steel corbels							
2. Change the finish of the removable W14X61 steel corbel only from galvanized to primed steel (all other embedded metals would remain galvanized per the contract drawing).							
Please confirm if either of these proposals would be acceptable?

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
As discussed onsite with the SEOR, please confirm the following for partition walls:				Confirmed, noting disagreement that ties are added scope.			
1. All isolated pilasters have ties over their entire height							
2. All pilasters thicker than the adjacent integral wall have ties over their entire height- Please note that this is added scope to TG06 Contract							
3. Pilaster that are the same thickness as the adjacent integral wall require ties only for the lengths defined in Note 3 of Detail 9/SI-9050							
4. Where ties are present at a pilaster base, the ties are not required to penetrate the supporting slab or foundation.							
5. Ties may be built up from stirrups and hairpins containing 135 hooks.

T-1519	BGP - Formsavers for Ramp Walls Embedded in Lower Concourse	Closed	07/17/2014	07/27/2014	07/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please confirm that it is acceptable to use formsavers for the Ramp Walls that are to be embedded in the Lower Concourse in lieu of dowels shown in A/S1-3203 or 3/S1-3502. This is done to improve construction access. Locations for the proposed formsavers are per attached documents- highlighted in red.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Use of formsavers is acceptable, provided the following: - please adjust placement of dowel to accommodate formsaver cap and provide vertical wall clear cover per drawings. - formsaver dowels to be straight bars where dowel full embedment length into beam at lower concourse is provided. Otherwise formasvers to be provided with standard hook at end. - please provide proposed formsaver for use of dowels with terminator. Formsaver must have equal or greater capacity of dowel with terminator to be acceptable.

T-1532	SSS - Deck Support Angle at Column Base Plate	Closed	07/19/2014	07/29/2014	07/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Per detail 1/S1-5052 when the column base plate and the transfer girder flange is the same width, there is no deck support for the length of the column base plate when the deck sits at the same level as the girder. Please confirm it is acceptable to provide a gage angle to support the deck around the column base plate. The gauge angle will be welded after the column to girder connection is made to avoid the angle and weld interfering with the connection. See attached SK1 & 2 for clarification.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Using gage angle for connection to the metal deck around the base plate is acceptable, however, the gage angle is to be welded to the transfer girder flange, not the base plate. Extend the vertical leg of the gage angle down as needed.	

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-1532.1	SSS - Deck Support Angle at Column Base Plate	Closed	07/31/2014	08/10/2014	08/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
This is a follow-up to the response of RFI T-1532.				Welding the deck support angle to the base plate is acceptable if the welding is made only in the zones marked on attached sketch SKS-0396. The gage angle welded to the base plate will provide adequate deck support. Using Hilti pins to attach the angle to the base plate is not acceptable. We disagree with the claim that overhead welding at the deck support angle constitutes a "cost increase". Detail 8/S1-3705 which shows deck support angle detail at the transfer girder flanges was part of bid documents. The only exception to this detail at the column base plates is that the angle is being welded to the base plate and not the transfer girder flange. Also, refer to details on A1-9317 for slab edge detail at the column base plates.			
As per the response, restricting welding to only the girder flange creates several issues: 1. See detail 17 on SK1 - an additional 4" would be required on the vertical leg of the angle to allow welding to the girder flange. This creates a 12" vertical leg, welded at the bottom toe to the girder and supporting a 13" concrete slab. Our decker does not believe this is adequate support. This occurs at 9 locations. 2. See detail 5 & 17 on SK1 - overhead welding will be required from the underside to weld to the girder flange. Detail 5 occurs at 67 locations and 17 occurs at 9 locations. Our decker will incur additional labor and equipment costs for this work. If welding to the base plate is prohibited, an alternative solution which will have lower additional cost impact is to use Hilti pins to attach the gauge angle to base plate or girder flange. See attached product data and application details. See attached SK2 for clarification. Please confirm if welding to the column base plate is prohibited, Skanska can use Hilti pins as per SK2.							

T-1532.2	SSS - Deck Support Angle at Column Base Plate	Closed	08/25/2014	09/04/2014	09/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
This is a follow-up to the response of RFI T-1532.1				1.) We believe that deck support during construction is a means and methods issue, however in our opinion, the simplest solution is running angles parallel to the transfer girder, from one perpendicular beam to another, around the column base plates. This will also help to provide the 1" separation needed from the column base plate in detail A1-9317. 2.) As indicated in the design drawings there are no elements around the base plate that require welding to the base plate. Any accidental welding in the field to			
As per the response to the above RFI, direction to drawing A1-9317 (which was provided as part of FO 27) indicates a deck closure/support angle separated 1" from the column base plate, with no structural information provided. As a detail for deck support around the column base plate is not provided in the structural drawings and Skanska's proposals have been rejected in previous RFI responses, this remains an open issue. We require a detail in order to proceed

	<p>with the detailing of shop drawings. Please note this condition occurs at CS1 and throughout the central zone and is currently holding up the resubmittal of the metal deck shop drawings for the central zone.</p> <p>Additionally, the RFI response identified a "no weld zone" that was not shown on the design documents. As this was not called out on the contract drawings, this zone is not being identified with paint strips as per the protected zone requirements. This may lead to trade workers accidentally welding in the field. Please provide direction for the identification requirements for the base plate "no weld zone".</p>						
T-1532.3	SSS - Deck Support Angle at Column Base Plate	Closed	10/07/2014	10/17/2014	10/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER:			
Please provide a structural detail indicating the designer's requirements for the deck support/closure angle around the column base plate to top of transfer girder connection on all sides of the base plate.				Accept Suggestion: <input type="checkbox"/>			
				Our response to RFI 1532.2 stands. This RFI is written in a misleading manner. In the 10/02/2014 meeting, we have reiterated that temporary shoring of slab is a means and methods issue. This RFI does not include any new information over the .2 version therefore refer to .2 version which already provided a direction as part of question 1. What was stated in the 10/02/2014 meeting was SER agrees to look at the proposal of the contractor to help resolve the issue however the RFI question is identical to the first question in RFI 1532.2 therefore no further action taken.

T-1536	SCS - Concrete Cover & Tolerance on Foundation Wall Terminator Rebar	Closed	07/24/2014	08/03/2014	08/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Drawing SI-3201 and other similar foundation wall sections call out a 2" concrete cover on the terminators of the foundation wall vertical rebar. These vertical bars have no adjustability because one end is a terminator and the other end is a male coupler end. The elevation of the top of terminator will be dependent on the coupler elevation above the Lift 3 Foundation Wall. The ground floor slab is 10" thick and sloped along the top of foundation wall. To allow for maximum deviation to accommodate for the slope of the slab, tolerances in rebar fabrication and location from the previous wall lifts and the final wall lift: 1. Shimmick proposes to change the concrete cover from 2" to 5" and increase the tolerance to 2.5". Please confirm this is acceptable. 2. If the proposal is not acceptable, please provide a concrete cover and tolerance that is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Standard ACI tolerance shall apply on concrete cover, increasing the cover and deviation of the tolerance is not acceptable. These proposed modifications to the cover and tolerances would be acceptable only if contractor provides additional U bars over the moment frame beam top rebar with size and spacing matching the size and spacing of stirrups in Zone 1 of Detail 6/S1-3600 at no cost to the owner. The U bars would span between the top corner bars of the moment frame beam have vertical legs that are equal to embedment length per 1/S1-3001. No additional U bars is required between the beams.

T-1559	SSS - TPG1 Stiffener Connection Clarification at GL 3	Closed	07/25/2014	08/04/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 529 SK1 & SK2 for items 1a & 1b: 1a) The typical connection for the TPG1 to the perimeter BU Beam is per 6/S1-5010 as shown on SK2 but at this location a pull-out shear plate is shown. Supply thickness, bolt and weld information for the shear plate connection if that is the connection to be used at the noted location. 1b) The stiffener will foul the bolts for the top plate per 7/S1-5032 if the connection per 6/S1-5010 is used. Please provide a solution.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) Detail 6/S1-5010 is to be applied at this location. 2.) For the 8 bolts on the same side as the stiffener: Move 4 bolts 1.5 inches to east and move the other 4 bolts 1.5 inches to west. This modification will increase the spacing between the central bolts from 4.5 inches to 7.5 inches and reduce edge distance from 4.5 inches to 3 inches (each side).

REQUEST: The 1 1/2" stiffener with 1" fillet welds per 5/S1-4205 will not fit between the bolts. Please provide a solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to RFI response T-1559.		
T-1562	SSS - Protected Zone Signage	Closed	07/28/2014	08/07/2014	07/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello				
Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Detail 10/S1-4202 shows the protected zone signage attached directly to both sides of the beam. The response to submittal package TG0701-37A includes a note directing the contractor to remove the signage before SFRM application, and then reattaching it after the SFRM is applied (See SK1). Please confirm this note is to be ignored.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contract documents indicate paint and signage for protected zone. It has been previously established that the paint may be applied directly to the beam before the application of SFRM. This should serve to designate the protected zone during erection and over the life of the building. The signage is intended to be an exterior alert, over the life of the building, and must be visible from the exterior. Therefore, the signage must be outside of the SFRM. The contract documents do not specifically indicate that the signage be present before the application of SFRM as the contract documents generally show the final condition. It would, however, behoove the contractor to have the signage present at all stages of construction, before and after application of SFRM, in order to mitigate the risk of accidental damage to the part, which would be very expensive to replace.

T-1568	BGP - Pile Location Discrepancy at GL E/34.5 - Zone 4	Closed	07/29/2014	08/08/2014	08/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:				
SCCI is in receipt of RFI response T-0741. RFI response T-0741 references RFI response T-0264.3, which states: "... Note that a pile in this location will require the pile to be cut off at a lower elevation than the typical detail, which will involve a larger block-out..."			ANSWER: Accept Suggestion: <input type="checkbox"/>				
1. Please provide an elevation, referenced in the above mentioned RFI response, which the pile will be cut.			1) Per the RFI attachments, the bridge pier appears to be completely contained between the shallow eastern sump and the deeper sump immediately west. As such, the cutoff elevation for the bridge pier may be the same as for blockouts at the typical top of mat slab elevation. Detail 4/S1-3009 will apply to the blockout in the north-south direction except that diagonal trim bars are not required. For the east-west direction, Detail 4 would not apply but may be modified such that the #5 at 8" infill cap bars lap with the pit wall reinforcing on the west side and lap with embedded dowels of same size and spacing on the east side. The resultant depth of blockout will be approximately 30". The (6) additional #11 bars shown on 1/S1-2065 may be relocated adjacent to the pier below the shallow east sump. Additional reinforcing beyond the (6) #11's mentioned is not required above the bottom of the mat. Additional reinforcing per Detail 7/S1-3009 is required at the bottom of the pit.				
RFI response T-0264.3 also states: "... the mat shall be re-braced at the block-out by TG03 ..."			Temporary blockouts are the responsibility of the contractor and the suggestion above is but one acceptable way to accommodate the change in pier location. The contractor is requested to provide a sketch of the final proposed configuration and reinforcing for confirmation through the RFI process.				
2. Please provide a detailed description of this required re-brace and how it will effect TG06 formwork, rebar, etc.			2) The comment regarding re-bracing may be ignored.

REQUEST: Please reference RPI response T-1568, attached photo of bridge pier/sleeve at Grid Lines 34.5/E and attached sketch. SCCI is in receipt of RFI response T-1568. The bridge pier in question is not fully contained within the sumps pits referenced in RPI response T-1568 (see photo attached). The galvanized pile sleeve encroaches into the Eastern most sump pit approximately 5/8". In order to facilitate the installation of this sump pit the provided contract details will need to be modified. The pile will need to be cut off at a lower elevation than the typical detail, which will require a larger block-out. The typical contract rebar details will need to be altered, as well as the typical waterproofing details. 1. Please confirm the attached sketch showing revised rebar and formwork details is acceptable. 2. In order to install a deeper blockout, the galvanized sleeve will be cut down to 4" above bottom Of blockout. This cut will remove the sleeve flange. Please confirm this is acceptable. All waterproofing detail revisions will be performed per Grace's recommendation and referenced mat slab "Ready-to-Pour" sign-off document for Mat Slab 16			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Item 1 is confirmed. Item 2 is not acceptable. Submit a proposal for providing a flange on the sleeve, field repair of galvanizing, and any waterproofing details that are proposed to be modified.	
T-1568.2	BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4	Closed	09/15/2014	09/25/2014	09/25/2014	Potentially	<input type="checkbox"/>

T-1573	SSS - Dimension Clarifications for W-3 Support Beams on Ground Level	Closed	post per 1/S1-8016 at WP1 (W-12 system) may be waived.				
			07/31/2014	08/10/2014	08/11/2014	Potentially	<input type="checkbox"/>
			Answered By:Adamson Associates, Inc. George Metzger				
			REQUEST: See attached CD RFI # 537 SK1: Confirm the dimensions on B/S1-6050 are the dimensions to be used to locate the beams on S1-2305 noted thus * (beams indicated by bold red line on SK1).				
T-1573.1	SSS - Dimension Clarifications for W-3 Support Beams on Ground Level	Closed	SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			We confirm that the dimension provided on B/S1-6050 and 2/S1-6051 are to be used to locate the beams noted thus * on S1-2305. These sheets were part of the Design-Build Glazing IFB Addendum 10.				
			REQUEST: See attached CD RFI # 537.1 SK1: It is not clear where the row of beams west of Grid 19.1 & east of Grid 24.9 are located. Per B/S1-050 they are located 3'-8" off the noted Grids. S1-305 appears to show the beams centered under the 1'-3" wide thick portion of the slab and detail 9/S1-5022 does not provide a dimension. Confirm the beams are located 3'-8" off the noted Grids.				
T-1573.1	SSS - Dimension Clarifications for W-3 Support Beams on Ground Level	Closed	SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			The W12x14 beams east of GL 19.1 and west of GL24.9 shall be centered on the 1'-3" slab step shown on 9/S1-5022. The W14x68 beams with * symbols that are graphically shown in the same row as the W12 beams shall be centered on the W-3 system supports located on S1-6050. Note that the 3'-8 1/2" dimension on S1-6050 locates the W-3 outside cable centerline at the corner condition, not the centerline of the W-3 supports. Refer to base plate detail PL3 on S1-8005 for centerlines of the W-3 system supports at the corner condition. Refer to the Architectural Slab Edge Plan A1-2865 for the location of the slab step and concrete curb.				
			REQUEST: See attached CD RFI # 537.1 SK1: It is not clear where the row of beams west of Grid 19.1 & east of Grid 24.9 are located. Per B/S1-050 they are located 3'-8" off the noted Grids. S1-305 appears to show the beams centered under the 1'-3" wide thick portion of the slab and detail 9/S1-5022 does not provide a dimension. T-1573.2	SSS - Dimension Clarifications for W-3	Closed	09/22/2014	10/02/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 537.2 SK1 for items 1 to 3: 1) The reference to S1-8005 in RFI T-1573.1 (SK 732.1, CD 537.1) is not helpful in locating the W14x68* as dimensions are not provided. Supply the locations for the W14x68* beams from Grids 19.1 & 24.9. 2) S1-2305 locates the W12x14 beams 4'-3" from Grid 19.1 & 24.9. Confirm we are to proceed to revise the beam locations to center them under the 1'-3" slab step per RFI T-1573.1 (SK 732.1, CD 537.1). 3) Depending on the amount of off-set between the W12x14's and the W14x68, confirm it is acceptable to connect the W12x14 per 1/S1-5011 at one end.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The Architectural Slab Edge Plan A1-2865 locates the exterior face of the curb 3'-3" from Gridlines 19.1 and 24.9, respectively. Per 4/S1-8005, the dimension to the centerline of the plate is 11'-7/8". The resulting dimension for locating the W14x68 beams parallel to Gridlines 19.1 and 24.9 is 4'-2 7/8". 2) Confirmed. The 4'-3" dimension will be removed from S1-2305 in the next ASI. 3) Confirmed. We agree with the reason for RFI request "Verification", disagree with "Insufficient Information". We categorize this as no cost clarification and change to be issued in future bulletin.			
T-1574	SSS - Dimension Discrepancies at W-3 Support Beams on Bus Deck Level	Closed	07/31/2014	08/10/2014	08/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 539 SK1: The dimensions on S1-2607 (SK2) do not match the dimension on A/S1-6058 (SK1). Please clarify.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The beams indicated in the RFI are at the Roof Level, whereas W-3 system spans from Ground to Bus Deck Level. Refer to Bus Deck Level plans for W-3 support beams.			
T-1575	SSS - Locations for W-3 Support Beams on Ground Level	Closed	07/31/2014	08/10/2014	08/11/2014	Potentially	<input type="checkbox"/>

T-1579	BGP - Seismic Joint Stepped Embed Clarifications	Closed	08/01/2014	08/11/2014	08/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please reference Contract Drawing S1-3010 and Submittal TG0600-051 .1. Please clarify the following: 1. Sheet 8.01 of Submittal TG0600-05 l.1 calls for a M30x4-1/2" stud welded to the embed. Due to the unavailability of M30x4-1/2" studs, please confirm it is acceptable to fillet welding M30x4-1/2" long cut pieces of fully threaded rod. 2. Submittal TG0600-051.1 requested design to determine bar lengths for the hooked #6 welded rebar. Please provide missing lengths for the hooked welded #6 rebar. 3. Please clarify the (. 11 7) at the double flare bevel weld on the hooked #6 rebar and the deformed #6 bar. It is SCCI's understanding the 3/8" is the weld size and the 5 is the weld length. What is the (.117) referring to? 4. See attached SI-3010. The east embed top vertical leg appears to be welded to the horizontal leg with a square bevel and convex weld with a fillet on the other side. Typically, a square bevel has a given dimension that depicts the gap between plates. As no dimension is given and the other side is a fillet weld, it appears to be a flat fillet laid down on the joint, with no gap. Please confirm this is the design intent.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1). The headed studs, their weld attachment forming a part of clamping assembly are a part of assembly designed by seismic joint supplier. Changing of the clamping assembly shall be approved by the supplier. 2). The hook #6 shall be 36" long (length without hook) same length as the 3/4" deformed bar anchors. 3). The double flare weld is 3/8" with 0.117" effective throat. 4). Gap of the square groove weld shall be per AWS prequalified weld joint detail. The gap size depending on the weld process used.				
T-1580	SSS - Stiffener Fouling 2" Plate at GL21G	Closed	08/04/2014	08/14/2014	08/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: See attached CD RFI # 541 SK1: With the actual location of MFB11 relative to TR21 as shown, the PL2 1/2" x 14 x 2'-6 will foul the vertical stiffeners. Confirm it is acceptable to locate the PL 2 1/2" as shown and terminate the vertical stiffener plates 1" below MFB11 as shown. If not, please clarify detail 8/S1-3702 at Grid G/21.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The 2 1/2" x 14" plate should locate as close to the 2" holes as possible, say changing the 1 1/4" clearance to 1/2" clearance. 2) The vertical stiffeners does not need to keep 1' clear from the bottom of MFB. They can be extended into MFB 11, just short of 2 1/2" plate.

T-1581	SSS - Inaccessible Welds at Corner GL Cast Nodes	Closed	08/04/2014	08/14/2014	08/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello				
Answered By:Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached CD RFI # 474 SK1 to SK6 for item 1 to 10:				1). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column.			
1-							
8) Several of the shop and field welds required at the ground level corner cast nodes are inaccessible once the cast node is set in position. Please see items 1 through 8 on SK1 through SK8 for clarification and provide direction.				2). The CP weld noted may be achieved by weld a backup bar/angle prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.			
9) Supply the welding for the north flange plates of the BU column to the node.				3). The double bevel weld may be changed to single bevel weld from the east side.			
10) The welds required at this external corner create an unweldable condition, See SK5 & SK6 for clarification. Please provide direction.				4). The CP weld noted may be achieved by weld a backup bar prior to setting the column. The back-gouge and 5/16" reinforcing fillet may be deleted.			
				5). See response #4			
				6). See response #4			
				7). Backup bar may be installed prior to fitting the transfer girder to the cast node. The back-gouge and 5/16" reinforcing fillet may be deleted.			
				8). Cannot see when the weld cannot be made. The vertical stiffener may be installed after the 2" PP weld is completed.			
				9). The weld info is called out as CP weld with back gouge and 5/16 reinforcement weld, which is questioned in item 4 above.			
				10). Weld access hole per AWS D1.1.			

Confirmed.

T-1584	SCS - Wall Construction Joint - Moment Frame Beam Conflict	Closed	08/04/2014	08/14/2014	08/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: See attached diagram of a wall lift construction joint overlay on the ground floor plan. Per Specification Section 03 30 02 - 3.2, Foundation wall and ground floor construction joints shall align with the location of joint below in TG06 and will not impair the strength of the structure. A conflict occurs at the noted areas of the attached diagram, where the wall joint placed according to specification, will intersect at a moment frame beam. SCCI proposes to move wall construction joints in order to avoid conflicting with the moment frame beams. Please confirm shifting construction joints to not align with the construction joints below is acceptable and provide permissible parameters to assign new construction joints for SCCI to reflect upon and modify the construction joint layout. A conceptual sketch is attached reflecting the proposed shift in vertical construction joint.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The foundation wall construction joints cannot run through Ground Level MFB's. The best option to avoid this situation is to jog Foundation Wall construction joints around the MFB's as proposed. The recommended location for the offset is the horizontal Foundation Wall construction joint immediately below the MFB's. The Design Team will evaluate contractor proposed construction joints during submittal review of the Ground Level construction joint layout that shall include any modifications to the previously reviewed and approved Foundation Wall construction joint layouts.

T-1590	SCS - Concrete Form Support Kicked To Temp Bridge	Closed	08/04/2014	08/14/2014	08/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: A unique support system is necessary for the foundation wall under the temporary bridges (First, Fremont, Beale). Shimmick proposes that in these areas, the form work will kick to support brackets mounted to the underside of the bridges to provide better support. Without this, the form system will be a cantilever system supported by 1 row of anchors which will exert a significant force on the wall lift below. Please confirm it is acceptable for the fourth lift form system to be supported by the bridge underside.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The bridge is designed by a WOJV subcontractor. WOJV shall respond to this RFI.				
T-1591	SCS - Pendulum Bearing Test Results	Closed	08/05/2014	08/15/2014	08/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Per Specification Section 03 20 02-1.4-A-7, "test results for [pendulum] bearings with similar size" are to be submitted for approval. Per Mageba, they have test data on pendulum bearings (isolators) with similar sizes which they believe have been tested under more severe conditions than the ones required for this project. See attached email correspondence with Mageba for further explanation and more specific details in regards to their test and how the results apply to satisfy the requirements in the specifications. The referenced Annex documents in the email are also attached. Only a sample of the data has been included for preliminary approval; full test data will be submitted once this data is confirmed acceptable. Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the requirements in the specifications.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Reports from past test data can serve as a basis to waive the testing requirement. However, the information provided with this RFI is not sufficient to waive the testing requirement. The test data provided in the RFI seems to belong to a bearing of similar size but it does not seem to meet vertical load carrying requirements outlined in the specifications. It is also not clear whether it meets the horizontal force requirements (friction coefficient) outlined in the specifications or not. To waive the testing requirement: - Provide specifications for the product that is intended to be used in this project that meets the design requirements outlined in the contract documents. - Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements.

T-1591.1	SCS - Pendulum Bearing Test Results	Closed	09/10/2014	09/20/2014	09/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: RFI T-1591 response noted two requirements to waive the testing requirements. 1. Provide specifications for the product that is intended to be used in the project that meets the design requirements outlined in the contract documents. See attached preliminary Pendulum Bearing product information and drawing. 2. Provide test data for a bearing that is comparable in size and performance to those intended to be used in this project tested with conditions that are comparable to the design requirements. Please see attached additional performance test results from other bearings of comparable size and performance. Also reference T-1591 for previously submitted test results. Please confirm that the mentioned test reports could serve as evidence of the proper functioning of mageba pendulum bearings, as well as the fulfillment for the testing requirements in the specifications.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the information provided can be considered sufficient to fulfill testing requirement. Note that per Section 3.2.D of specification 03 20 02: "Pendulum bearing dimensions shall fit within the columns they are installed at. Anchors for the bearings shall not interfere with the column reinforcement." In current design, PM8.89 does not seem to satisfy this requirement for the 34 in diameter columns at Gridline 34.8. Verify this requirement is satisfied for all pendulum bearings.				
T-1592	SSS - PE201 Splice Location Clarifications for Weld Access	Closed	08/06/2014	08/16/2014	08/22/2014	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Based on review of structural and referenced specification section it appears that Supplemental destructive testing of galvanized pins is not required after pins are galvanized per para 2.3.J. As per our previous QAQC meeting of June 17, 2014, it was requested by the TJPA representative that additional galvanized steel pin samples (ASTM A668 Class M) with associated nuts for each pin size be provided for destructive testing by TJPA representative testing lab and as follow: 1. 7" dia. X 2'-1" (A1551 as shown on 1551 of Pin shop drawings) 2. 7" dia. X 1'-2 3/16" (A1553 as shown on 1553 of Pin shop drawings). 3. 7" dia. X 1'-6 7/8" (A1554 as shown on 1554 of Pin shop drawings). 4. 8" dia. X 2'-7" (A1555 as shown on 1555 of Pin shop drawings). 5. 6" dia. X 1'- 8 13/16" (A13001 as shown on 13001 of Pin shop drawings).							
Please provide the following: 1. Provide testing criteria to the testing lab agency after pins have been galvanized and in addition to the specified forged steel pins ASTM 668 Class M testing requirements. 2. Provide WOJV with a CR to supply and ship these additional pins and nuts to the testing lab. 3. If additional samples of other pins on the project are

T-1602.1	SCS - Gas Line Lateral Pipe Size at GL 7.3/A	Closed	09/02/2014	09/12/2014	09/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: See attached RFI T-1602. Per response to RFI T-1602 please confirm the following. 1.) Please confirm PG&E has approved both the gas meter room and the use of a 4" sleeve and routing/elbow to pull plastic tubing as reflected in this project design. 2.) Confirm the sleeve through the perimeter structural and shoring wall is an 8" (or larger) sleeve. 3.) What are the required structural and architectural details for suspending a concrete encased gas main from the structural lid/deck for the entire run between perimeter wall and gas meter room?			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. PG&E has reviewed three options proposed by the design team for routing the incoming gas service into the gas meter room. There are two options that locate the gas piping above the trainbox lid and under the sidewalk that are being coordinated to determine the final design solution which will then be submitted to PG&E for approval. The third option to penetrate the foundation wall and steel beam will not be pursued further. 2. Based on the options reviewed with PG&E no sleeve will be required through the foundation wall. The gas piping will be installed above the trainbox lid under the sidewalk. Coordinated details will be provided in a future drawing issue. 3. A suspended concrete encased gas main will not be required for the two preferred options described above.				
T-1603	SSS - Transfer Girder Flange Shop Splices	Closed	08/12/2014	08/22/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: It has been understood that, due to the availability of mill run plate size and length, it would be necessary to splice some of the top and bottom flange components of several of the Transfer Girders in order to achieve the overall length required. The Contract provisions and AWS D1.1 Structural Code require that all splices made by welding are to be shown on the shop drawings. However, the location of the shop splice(s) was not shown on the shop drawings that were issued for fabrication to Thompson Metal Fab. TMF has fabricated flanges that have been spliced by full penetration welds. The welds have been inspected and have been accepted in accordance with the provisions of the AWS D1.1 Structural Code for static load criteria. The locations of the splices in the transfer girder components and the affected flanges are shown in the attached documentation. Girder A626 - top and bottom flange			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the as-built shop splices shown in Appendix B and proposed splice locations in Appendix C are acceptable.

REQUEST: See attached CD RFI # 560 SK1 for items 1 & 2: 1) The CJP weld cannot be applied at the sharp edges of the 2 3/4" thick (2) plates and the 3" thick connection plate. Verify it is acceptable to shape the edges of plates as shown. 2) Confirm the solution in item 1 can be applied to similar conditions e.g. 4/S1-6006 and 3&5/S1-6005.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. It is acceptable to shape the edges of the plates at shown. 2. Confirmed.			
T-1606	SSS - Type Drag Connection Geometry at Bus Level Cast Node 29A-01 and 29B-01	Closed	08/12/2014	08/22/2014	08/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to attached SK RFI 744 SK01. The shear plates at drag connection type 1-A at cast node 29B-01 and 29A-01 land on the edge of the welding pad. This condition does not make allowance for as-cast tolerances on the welding pad edge and may impact our ability to achieve effective weld size. Please advise. Skanska acknowledges the response to SK RFI 004.1 (T-0738) and 004.2 (T-0738.1). Following these RFIs, Skanska increased shear plate spacing to give a 1/8" gap on the inside of each shear plate for erection clearance. Even had this gap not been added, Skanska would still flag this issue for designers review as 1/8" still does not allow for as-cast tolerances at these locations.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The information provided in the RFI is not sufficient to provide a single solution at this time. Consider following solutions, which depend on the actual size of the pad: 1-) If the as cast dimensions of the pad allow the shear plate to land on the pad, no action needed. Since the contractor has opted to machine the pads, the rounded edges of the pads will likely be removed to create a wider weldable pad surface. 2-) Once the as cast dimensions of the pad are determined and if the plates do not fit in the pad, the ends of the plates can be tapered 0.25" with 1:2.5 ratio (e.g., 0.25"x 0.625" taper) at the outside faces of the plates. Lastly, the contractor plans to use 1/8" gap on each side of the shear plate per the RFI. Considering that these are slip critical connections, a smaller gap might be considered by the contractor which can decrease the out to out connection width. To achieve slip critical, shim plates are needed if there is a 1/8" gap between the connection plate and beam web.

T-1622	BGP - Top of Vertical Wall Interface with Ground Level MFB	Closed	08/18/2014	08/28/2014	08/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The current design indicates the top of the # 11 vertical wall reinforcing terminating with a terminator maintaining 2" concrete clear cover above the bar as seen in Section 1 on S-3201 .				Confirmed, provided that the resulting clear cover to the Foundation Wall Vertical Reinforcing Terminator is within the parameters of the RFI T-1622 response including the supplemental U-bars. We disagree that a potential clash is anything other than insufficient means and methods.			
A # 11 555 t-head is 11/ 16" thick and a #11 Lenton Terminator is 11/16" thick. The Ground Moment Frame Beams appear in Section 5 of S1-3600. The concrete clear cover indicated over the stirrup is 2 3/4".							
Due to the designed concrete clear cover called for, the thicknesses of the different terminator products and the allowable tolerance in fabrication and placement per ACI a conflict with the two interfacing componets is expected to occur at the top bars of the MFB.							
Please confirm if the tenninator on the vertical bar can terminate below the ground level MFB top bars to avoid the expected conflict similiar to that allowed between the column and concourse MFB as indicated within RFI T-0917.							
Should this proposed solution not be acceptable please provide direction how to proceed.

T-1626	BGP - Column 101E and 101F Concrete Elevation	Closed	08/20/2014	08/30/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By:Webcor Construction LP Adib Sassine				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Column 101E and 101F was poured 1 ft below shoring elevation.				Proposed using concourse slab mix to pour back both columns is unacceptable.			
Is it acceptable to use concourse slab concrete mix 1558218 to pour back the remaining top foot concurrently with concourse deck D201?				Pour the remaining 1 ft of concrete at both columns 101E and 101F the same mix as the concrete columns with the following options as discussed with Sean McNeil:			
				Option 1: Pour both columns separately under separate IR.			
				Option 2: Or pour both columns at the same time as the concrete deck D201 provided you allow 2 hours for the concrete to set and then you pour the deck with the scheduled concrete mix. This will require a separate IR to track this condition at both columns. Include special instruction in the IR to ensure consolidation of both columns are inspected separately as well as paying close attention not to disturb the concrete of poured column sections when consolidating. Prep the top of concrete column surface to achieve the required amplitude as required per previous column pour cold joint condition.

T-1627	SCS - Bridge Blockout CIDH Piles	Closed	08/21/2014	08/31/2014	09/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please provide details for blockout(s) at the concrete roadway section as shown in the attached sketch. A Blockout will be necessary to allow the CIDH pier(s) to be removed from the ground level, pulled up through the deck, after the concrete bridge(s) section has reached design strength. Once the CIDH piers have been removed the circular section will need to have rebar installed, concrete poured back, and waterproofing repaired prior to receiving infill pursuant to contract documents; 10 sets of CIDH piers, per temporary structure, will require Blockouts at First, Fremont, and Beal street.				1. Reference RFI T-0470 and RFI T-0807. Temporary blockouts are the contractor's responsibility. Refer to General Notes GR-4, GR-5, and GR-9. 2. Refer to attached conceptual detail representing an acceptable method of restoring a temporary opening to contract final condition at the roadway slabs. It does not relieve the contractor from the obligation of verifying the suitability of the detail to actual field conditions and construction loading. 3. Should the contractor elect not to shore the temporary condition, the contractor shall submit a statement or supporting calculations justifying the unshored condition under construction loads signed by a licensed professional engineer. Should the contractor elect to use conceptually different detailing, the detailing and any required supporting calculations shall be submitted for review. 4. The final choice of detailing shall be explicitly indicated on the deck reinforcing submittals for each unique blockout case for coordination with surrounding reinforcing.			
T-1628	SSS - Weld Columns to TG-33.2	Closed	08/25/2014	09/04/2014	09/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See SK-1 attached 1) Ref.; 3/S1-4357 Confirm no weld at 1-inch plate to web as shown 2) Ref.; 3/S1-4357 Confirm no weld at 2-inch plate to TG-33.2 inside of pipe column as shown 3) Ref.; 3/S1-4357 Cannot back gouge weld as shown - access is not provided please resolve 4) Ref.; 4/S1-4357 Clarify 5/16 fillet weld shown - provide complete extents for all-around weld. No weld show for WF flange to TG-33.2 shown please confirm 5) Ref. S1-4357 Suggest use of base plate to resolve				Refer to attached sketch SKS-0415, which provides a simplified connection at the locations indicated the RFI. We disagree with the reason for RFI request "Engineering Conflict". We categorize this as "clarification for issues on means and methods" and "change to be issued in a future bulletin".

T-1629	SSS - Shop Prime Coat Thickness for Carbozinc 859	Closed	08/25/2014	09/04/2014	09/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton REQUEST: Specification 05 10 00 3.2.P.1.b.1 requires a primer of DFT 2.5 to 3.4 mils. The product data sheet for the approved Carbozinc 859 specifies a DFT of 3-5 mils. OIW coating instruction CI-2770-14-04 notes the 3-5 mils as recommended by the coating manufacturer. Please confirm that a prime coat of 3-5 mils of Carbozinc 859 is acceptable.							
SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Prime coat of 3-5 mils of Carbozinc 859 is acceptable. Specification Section 05 10 00 3.2.P.1.b.1 is changed to: Apply primer to a DFT between 3 and 5 mils.				
T-1630	SSS - ST201 Weld Details for Access at W14x311	Closed	08/25/2014	09/04/2014	09/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton REQUEST: For erectability and weld access, the following is proposed: stiffener plates will be shop welded while the HSS will be field welded (as far back as allowable with only a 2-5/16" gap). Please confirm sketch is acceptable; otherwise, provide alternative.							
SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Provide connection detail per attached sketch SKS-0409 where detail 10/S1-7605 is called out on plans except at two locations on 2/S1-7003. At these two locations, provide detail as shown on SK1 in the RFI.				
T-1631	SCS - Elevation at Transformer Vaults Room	Closed	08/25/2014	09/04/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang REQUEST: On Sheet AI-2203, on the slab around the transformer vaults room, grid lines 12-C, the elevation is indicated as TOFF -7'-9". On Plan 1/A1-3002, there is an elevation point corresponding to the same slab at grid lines 12.1-B.5 that indicates an elevation of TOC -7'-9". On the detail A/AI-9236 same point has an TOC elevation of -8'-2". Please confirm that elevation -7'-9" on Detail 1/A1-3002 corresponds to TOFF instead of TOC.							
SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The elevation -7'-9" on Detail 1/A1-3002 corresponds to TOFF instead of TOC. Refer to SKA-4049 which reflects updated elevation tag.

REQUEST: See attached CD RFI # 554 SK1 to SK3 for items 1 to 14: 1) Supply missing dimensions. 2) Confirm dimensions. 3) Supply location for the MC4. 4) Confirm the vertical hanger is interrupted at the upper beam. Please clarify. 5) Clarify where the MC4x13.8 is located and supply a connection to the W12 & CMU wall. 6) Supply missing dimension. 7) Connection per 9/S1-5028 will not work at the noted location. Supply an alternate detail. 8) Confirm off-center connection per 9/S1-5028 is acceptable or supply an alternate detail. 9) Supply the elevation for the W12x40 at the landing and depending on the elevation, supply a connection detail at each end. 10) Supply missing dimension. 11) Supply length of weld. 12) Supply a connection detail for brace to hanger/beam. 13) Confirm dimension for plate orientation. 14) Confirm detail 9/S1-5028 also applies to the top of the hangers. 15) Confirm a 2-sided fillet is acceptable as the welding access of the end of the brace is not sufficient.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. For updated slab edge drawing confirming and showing missing dimensions, refer to SKA-4081. 2. See updates on SKS-0403. Braces to be placed at equal spacing. 3. The MC4x13.8 channel may be waived at the highlighted location. In lieu of the MC4x13.8, provide a W12x40 beam as shown in sketch SKS-403 and SKS-0405. 4. See SKS-0403 and SKS-0405 for hanger locations. 5. See response to question 3. Connection of W12 to CMU wall per 12/S1-9001. Connection of W12 to W12 per 1/S1-5011. 6. For wall dimension to GL F.7, refer to A1-7009 issued with ASI-123. 7. See SKS- 0403. 8. Align W12x40 with centerline of W40x230 above, as specified on 2/S1-2252. See SKS-0403. 9. See SKS-0405. 10. S1 slab to attach to top of W12x40 bottom flange, as shown on 4/S1-5032. Requested dimension approx. 3-7/8". 11. Provide 6" min weld length at double angle brace to gusset plate. 12. Connection of brace and hanger to beam above per 6/S1-5028 sim. 13. Confirmed. 14. Confirmed. 15. Confirmed.

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Contract Doc Ref: 3/S1-6005, 5/S1-6005 Location: Light Column Cast Node LC301, Roof Park Gridline: D.4 Add'l Doc Ref's: RFI T-1640 The center of pin elevation relative to the top of steel elevation of the W30x173 is shown in 3/S1-6005. The response to RFI T-1640 confirmed and determined that the 2" thick lug plates are more similar in shape to the plates detailed in 5/S1-6005. 1. As the assembly detailed in 5/S1-6005 does not require a 1" thick stiffener at the top, please confirm if the requirement for top stiffener in 3/S1-6005 can be waived. 2. If the stiffener is required, please confirm weld required between 2" thick plate and horz stiffener 3. If a CJP is required, confirm weld termination hole can be provided as shown in SK 1 attached with a min 1/2" radius.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The stiffener at the top is required. 2. Double-sided 15/16 inch fillet weld with length equal to or greater than 4 inches may be used instead of a CJP. 3. Notch is not acceptable. Fillet weld alternative given in answer to point 2. SBP agrees with the reason for request (alternate proposal) and categorize it as a no-cost clarification. Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

T-1647	SCS - 12" Thick Partition Walls over 24' height	Closed	08/25/2014	09/04/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Partition walls taller than 24'-0", as indicated in Section 3/S1-9050, have vertical reinforcing of #7 bars @12" centers. Section 4/S -9051 indicates that the vertical bars will have a 90 degree tail at the top end of the bar. The standard tail length for #7 bars is 14" and will not fit within the 12" thick walls. Rotating the #7 bar tails to clear the concrete face by 1 1/2" clash with one another. Harris Rebar requests permission to utilize #7 straight vertical bars with a #5 'U' shaped cap with 30" lap@ 6" centers at the top of walls. Is this acceptable? In order to minimize multiple varying lengths of the #7 vertical wall bars, the #7 threaded vertical dowel bar length will be increased from 49" to 56". The #7 wall vertical bar will be held up to the top of wall elevation, less clear cover, and maintain a minimum 49" lap splice at the Concourse Level. Is this acceptable?			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed, it is acceptable to use #5 "u" bars with splice length of 30" at 6" OC in lieu of standard hooks for #7 vertical partition wall reinforcement. At contractor's option it is also acceptable to provide a reduced-dimension hook length at wall ends for the #7 vertical partition wall reinforcement. A hook length of 9" is acceptable. Confirmed, 49" lap splice for #7 vertical wall reinforcement is acceptable.

9519 & 9526).	2) 3 3/4" is correct to place the pipe collar on the centerline of the HSS8x8 post per 1/S1-7600 above as shown. Confirm no further action is required.						
				applicable. Details 11/S1-7600 and 12/S1-7602 call out 8" long studs.			
				2) Embed Angle A9516 is noted in two locations, 3 on Train Platform (drawing EM46) & 2 on Bus Deck Levels (drawing EM47). The Corrected dimension applies to embeds at the Train Platform level (see drawing EM46). Skanska to confirm if Embed A9516 is designed for both levels.			
T-1650	SCS - Requesting Approval for Precast Panels in Lieu of Cast-In-Place	Closed	08/27/2014	09/06/2014	09/15/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Claude Titcher	To: Turner Construction Company Phil Militello	Answered By:	Adamson Associates, Inc. George Metzger			
	Co-Author: Shimmick Construction Company, Inc. Henry Chiang						
	REQUEST:	SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>		
	See attached Exhibits A through D as a possible means of precast installation method. Using a precast yard facility in lieu of concrete cast in place will reduce the construction duration for the scallop, perimeter, and sky light elliptical wall operations since production can start prior to the construction start date. Precasting concrete elements also results in a better final product. Quality advantages of using a precast yard facility over cast in place methods are improved formwork design, curing procedures, temperature control, and form striping methods since work space, formwork weight, formwork relocation and reassembly, and hoisting equipment restrictions are greatly reduced if not eliminated.		In concept, the proposed P/C scheme will work structurally. However, we would point out that the support of the panel on the steel beam shall be detailed to allow for in/out and up/down adjustments. The detail shall also accommodate the nature camber in the steel beam. Structural calculations and shop drawings shall be submitted for review. The calculations and shop drawings shall be stamped and sealed by a California Structural Engineer.				
	shimmick requests approval from the engineer to allow precast manufactured panels in lieu of the cast in place walls shown on S1-2752 & S1-3282 scallop walls, S1-2602 stair well, S1-2603 elliptical skylight, S1-2604 light column opening, S1-2606 stair shaft, and S1-2607 elevator shaft.		In concept, the proposed P/C scheme will work visually for the architectural team. However, without an existing precast concrete specification and drawings that outline visual and quality control issues there may be some details that require a joint agreement on what is to be provided between the Contractor, TJPA, and the TJPA Representatives. Submit a draft design package including specification, confirmation on waterproofing details, and more developed design drawings to the TJPA Representative for review prior to final agreement on this substitution.				
	Please confirm that the concept drawing is acceptable as well.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Direction provided is limited to: EXHIBIT A - TRADE SUBCONTRACTOR BID PACKAGE MANUAL AND FORMS, IV. SCOPE OF PACKAGE, D - 13. pg-13 - "Cut Interior Flange and Web of the CDSM Shoring Wall Steel Soldier Pile. Assume that the cutting of the pile will occur between 2' and 8' below the finish grade surface. The precise elevations for the cutting of the pile beams will be determined by a future design requirement."</p> <p>In order to perform this work the elevation of the cut is needed.</p> <p>Shimmick was informally provided a copy of the attached drawing from Webcor Obayashi Joint Venture which only identifies a vertical distance in elevation from finished grade elevations. Shimmick was then informed by WOJV that Thornton Tomassetti is currently making corrections to the site grading civil drawings C1-1000's to C1-8000's Rev 0 Dated 03/31/14 which show top of curb elevations. The civil drawings do not provide complete curb elevations to determine the elevation of the cut at all piles.</p> <p>1. Confirm that the attached drawing which identifies a vertical distance in elevation from finished grade elevation is to be used.</p> <p>2. Are the top of curb elevations in the civil drawings to be used as finish grade elevations for the depth of cut on the CDSM piles?</p> <p>a. Provide finished grade elevations for cutting the interior flange and web of the CDSM piles or provide a height from top of concrete elevations shown on the ground level deck on plans sheet A1- 2862 to A1-2781. Also, please provide a drawing identifying the type of cut required ie., horizontal, angling up, or angling down.</p>					<p>1. See attached sketch for notching depths.</p> <p>2. ASI 123 roadway at curb (low point) elevations will be used to calculate notching elevation.</p> <p>Note. Refer to submittal package "TG0702-145 SCS - CQC Plan for CDSM Notching" for "Means and Methods" procedures.</p>

From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
ASI 121 issued new wall CJ locations. Reference sheet AI-2203, Detail I/AI-3008 and B/AI-9240.				A. Omit wall CJ running through Mech opening.			
A. On the south wall of the room at GL 13-B.2 there is a construction joint (see plan attached indicated as location "A") running through one of the MEP blocks outs. That creates a cantilever section below the beams cutout and above the MEP block out. Is that acceptable? If not, where should the CJ be relocated?				B. Wall CJ to be moved 1'-0" west of Electrical opening.			
B. On the same wall there is a construction joint (see plan attached indicated as location "B"), the distance between the MEP block and the construction joint is 5' 5/8", which is not enough to place diagonal trim bars on the comers of the MEP block out that are closer to the construction joint. Please provide detail for this location.				C. Wall CJs are continuous behind steel plates and are shown as hidden lines.			
C. In the same wall, the construction joints are not shown in the area cover by the spall plate, do the CJ's start at the top of the wall plates? Please confirm intent and provide further direction.				For updated A1-9240, refer to SKA-4094.

REQUEST: In an effort to mitigate delays, WOJV is proposing moving the construction joint between walls W318 - W319 and W357-W358 2' to the west, See markup sketch attached, this move if approved would result in the contractor forming and pouring walls W318 and W358 prior to Deck pour D219. As part of this change WOJV is also requesting using Lenton A2 couplers in lieu of the #7 horizontal reinforcement lap splices between these walls Please confirm if this is acceptable at this one-off location.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed

T-1666	SCS - Wall Opening Detail Conflicts	Closed	09/08/2014	09/18/2014	09/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please reference drawing S1-3001. See attached marked up drawing 4/S1-3207 details typical wall opening reinforcement, noting to use additional bars for 10" to 30" wall openings with lengths LTS + W. The typical vertical bars used for the foundation walls are #11 rebar and the added bar length is 19'-6" (LTS + W + W + LTS + W = 102" + 1 0" + 10 + 102" + 10"). Depending on the location of the penetration, the added bar would have to extend LTS + W beyond the opening, which in the 10" opening case is 9'-4" (102" + 10"). This is not possible considering the foundation walls under TG07.2 scope of work are between 8' to 12'. Additionally these additional vertical bars will potentially conflict with moment frame beam rebar at ground level by adding to the rebar congestion. See attached marked up drawings for example conflict. 1. Please provide an alternative to the current wall opening detail for the foundation wall. 2. Please provide an alternative detail for cases where additional vertical bars conflicting with moment frame beam rebar.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Coordination between trade packages in the responsibility of the contractor. Details shown on S1-3207 stand. Calculation of development length in the RFI is incorrect, vertical bars are not considered Top Bars. Where the opening occurs high in a wall and the calculated length of additional reinforcing exceeds the wall height, additional reinforcing may be terminated with a hook or a head. In order to avoid congestion and potential conflict with intersecting elements, the additional vertical reinforcing may be placed in an interior layer and aligned with the uninterrupted vertical bars.				
T-1667	SCS - Foundation Wall Conduit Penetration Locations	Closed	09/08/2014	09/18/2014	09/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Webcor Construction LP Claude Titcher				
REQUEST: Reference drawings: A1-2862 to A1-2871, E1-2862 to E1-2871 and E1-3208 to E1-3210. Please see attached marked up drawings noting atypical set of conduit penetrations. A1-2862 provides a lateral distance relative to a grid line to set of conduits; however 3/E1-3208 details the set of conduits as not aligned. On top of this, the referenced drawings do not provide an elevation for the conduit penetrations. SCCO requires the locations of these penetrations to proceed with foundation wall rebar detailing.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> See attached drawings for electrical conduit penetration locations.

T-1669	SSS - Insufficient Cope for Erection Clearance	Closed	09/09/2014	09/19/2014	09/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to beams highlighted in S1-2503 (attached) and work with this RFI. The 7" cope shown in 2/S1-5017 is not sufficient for erection clearance. The connections on the other end of these beams dictate that the beams cannot be dropped vertically into position during erection (Please refer to attached SK RFI 813 SK1 and SK RFI 813 SK2). Beams have either a gravity moment connection (per 1/S1-8003) at odd gridlines or a shear plate connection (per 1/S1-8000) at even gridlines. These beams connect into the bus deck perimeter beams which must be installed first in our erection sequence due to the constraints of knife/pin connections at either end at the bus deck level cast nodes. Please advise.			SUGGESTION: We propose increasing the 7" bottom flange cope to 9.5" for both scenarios. We have modelled both cases and can erect the beams with a cope of this size.		ANSWER: Accept Suggestion: <input type="checkbox"/> Suggestion acceptable.		
T-1670	SSS - Reviewer Comments - Decking Dwgs GL 1-4	Closed	09/09/2014	09/19/2014	09/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Reference metal decking shop drawings submittal package TG0701-92D & SK1 1) On sheet 24, reviewer's comment requires studs on transfer girder. Note at TR3 the concrete cover on top of girder flange is 3". T/slab=21.344, T/steel=21.19) The shortest available stud is 3" after welding, resulting in insufficient concrete coverage. Please confirm shear studs are not required at TR3. 2) On sheet D16, detail 4, reviewer's comment requires 3" of bearing at S3 slabs per 2/S1-5000. Note, detail 4 depicts a deck flute parallel condition, note 2 on 2/S1-5000 indicates 2" bearing (3" bearing where noted) at supporting members perpendicular to deck span and 1-1/2" at members parallel. As this is a parallel condition the minimum bearing required is 1-1/2". Confirm detail is acceptable as is.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Confirmed. TT: RFI Reason for Request is appropriate.

T-1671	SSS - Kicker Interference at Ground Level GL 22-24	Closed	09/09/2014	09/19/2014	09/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 578 SK1 for items 1 & 2: The kicker brace connections to the girder will foul the 2-1/2" stiffeners at two locations on each grid line. Confirm if option 1 or 2 is acceptable. 1) Option 1: Confirm it is acceptable to remove the fouling 2-1/2" thick stiffener plate and model the full height 1" shear plate as shown. 2) Option 2: Confirm it is acceptable to move the W30x90 as shown and connect to a 2 1/2" thick full height stiffener plate extended to the top as shown. Note option 2 has additional cost implications.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Options 1 and 2 are not needed. Move the W30 beams by few inches towards GL E so that the kicker braces clear the 2 1/2" stiffener plates. TT: We disagree with the reason for RFI request. We categorize this as no cost clarification.		
T-1672	SSS - Stiffener Interference at Ground Level GL 24	Closed	09/09/2014	09/19/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 595 SK1: Confirm the beam location dimensions per S1-6050 & RFI T-1573 shown in red may be adjusted as shown in blue in order to connect the noted W44x230's to the 2" stiffener plate below the column flange. If not, supply an alternate solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Moving the beams as shown on SK1 in the RFI to utilize transfer girder stiffeners by omitting the shear plates is acceptable with the following condition: Provide (5)- 1 1/2" diameter A490-X bolts (single vertical row) at the connection on the west ends of the two W44x230 beams. Minimum bolt edge distances Leh and Lev shall be 3" and 4" respectively and bolt spacing shall be 4 1/2". Note that only the WF beams are allowed to be moved. Steel above the WF beam supporting the W-3 system shall be located per locations on S1-6050 and details on S1-8004. TT: We agree with the reason for RFI request "Alternate Proposal", disagree with "Engineering Conflict". We categorize this RFI as request for substitution and no cost clarification considering the omitted shear plates.

	<div>REQUEST:</div> <div>Per the response to SK RFI 812 (T-1673), the EOR made</div>	<div>SUGGESTION:</div>	<div>ANSWER:</div>	<div>Accept Suggestion: <input type="checkbox"/></div> <div>As discussed TJPA/Turner would revisit the NDT</div>			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>recommendations that allowed for certain reductions in NDT. The final decision rested with TJPA/Turner and at that time they decided to not permit the reduction of any NDT testing.</p> <p>However, as per the meeting held at XKT Engineering on 11/14/14, it was discussed that TJPA/Turner would revisit the NDT reduction request from XKT Engineering. XKT has continued to demonstrate the quality of their welders, keeping repair percentages at 2%, well below the required limit of 5% as per AISC. At this time, XKT has completed 16 moment frame columns with another 20 columns currently in fabrication (see attached status report). This experience has allowed them to substantiate their repair percentages and the overall quality of their work.</p> <p>Please confirm that the EOR's recommendation to SK RFI 812 (T-1673) is acceptable and the NDT reduction may occur at the XKT Engineering facility.</p>						
						<p>reduction request from XKT Engineering. Skanska Subcontractor XKT welding of Moment Columns and weld repair percentages may now be below the required limit of 5 percent.</p> <p>The moment frame column NDT requirements on all weld configurations is per specification section 05-12-10 Structural Steel Additional Seismic Requirements, Table 2-1. As specified in AISC 341-05 (and 341-10), any reduction of UT or MT requires the approval of the EOR and the AHJ.</p> <p>Any decision to reduce the level of NDT must consider the criticality, redundancy, loading types, peak loads and other information in the domain of the EOR, in addition to weld reject rates, etc. AISC states that any allowable reduction in NDT requires the approval of the EOR and the AHJ. This means that it is EOR prerogative, and not a mandatory requirement. The EOR may allow such reductions per Note 2 below Table 2-1 which references AISC 341. However; AISC 341 (-05 & -10) stipulates that any reduction in NDT is for individual welders based on their reject rate. There is nothing in the AISC provisions (or in the project specifications) that suggest that any reduction in NDT be approved for a facility, only for individual welders whose reject rates do not exceed 5%. The RFI does not propose a reduction in NDT for specific individual welders, but requests it for the facility. This is not in keeping with the AISC provisions and a blanket reduction for the facility is not approved.</p> <p>However, the EOR will allow for QA Special Inspectors to reduce the NDT of those welds on the moment frame columns (Non-demand critical welds and Non-butt joints in the column splices) to MT on 25% of the joints and UT on 100% of the joints based on the AISC provisions. This will require Skanska and QA Special Inspectors to verify statistically the acceptance/rejection rates of each welder or welding operator proposed for reduction. The statistics should include the number of 'welds' made, the number of 'welds' examined by MT and UT, and the number of 'welds' rejected by MT and UT to comply with the AISC provisions. QA Special Inspectors would review</p>

REQUEST: See attached CD RFI # 604 SK1 & SK2 for items 1 & 2: 1) Condition at Transfer Girders with 4" thick flange: It is not possible to fit in the number of bolts as requested in 1/S1-5010 with the 4" thick Transfer Girder flange even with minimizing the end distance on the angles to 1 1/4" as shown. This condition occurs at W40x183, W36x135, W33x118, W30x108, W30x90 & W21x44 on S1-2606 & S1-2607. Confirm it is acceptable to reduce the number of bolts by one or supply an alternate connection. 2) Condition at Transfer Girders with 3" thick flange: It is not possible to fit in the number of bolts as requested in 1/S1-5010 with the 3" thick Transfer Girder flange unless we minimize the end distance on the angles to 1 1/4" as shown. This condition occurs at W40x183, W36x135, W33x118, W30x108, W30x90 & W21x44 on S1-2606 & S1-2607. Confirm this is acceptable or supply an alternate connection.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Double angle connection detail at gravity beams framing into transfer girders is per 12/S1-5010 which calls out N-1 bolts, where N is the number of bolts per schedule on 1/S1-5010. Connection detail as shown on SK2 in the RFI is incorrect. Also note that the reference to S1-2606 and S1-2607 in item 1 is incorrect as transfer girders are at ground level. 2) See response to 1). We disagree with the reasons for RFI request "Engineering Conflict", "Alternate Proposal" and "Verification". We categorize this as "Called out in contract documents".				
T-1680	SSS - ST301 Post Location Discrepancy	Closed	09/09/2014	09/19/2014	09/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 591 SK1 & SK2: The dimensions locating the HSS posts shown in detail 2/S1-7007 and detail 3/A1/7006 do not match as shown. Please clarify the discrepancy.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The dimension locating the HSS post are correct in detail 2/S1-7007. Architectural drawing revised, refer to SKA-4002.				
T-1681	SCS Clarification of Amount of Camber in BU-40x28x1x2.25 Beam	Closed	09/09/2014	09/19/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Shimmick is requesting the engineer to provide the amount of camber that the roof top perimeter beams BU-40-28x1x2.25 will have before the perimeter walls are installed and after the roof is fully loaded. Refer to S1-2602 for location of BU-40-28x1x2.25.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) As indicated in the construction drawings, no camber is specified for perimeter BU40 beams at Roof Park Level. Coordinate with Skanska to see if the BU40 beams have any natural camber if that's the question. The deflection in the BU40 beam portion between the pipe column supports is expected be less

T-1687	SSS - Light Column Pipe Ring Bending Radius at EL 12ft	Closed	09/10/2014	09/20/2014	09/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The light column ring at EL. 12'-0" is specified as 6'-11 3/4" diameter (measured from center of pipe), from 14" diameter pipe with a wall thickness of 1.97". Refer to section C on S1-6006. The minimum achievable bending radius for a pipe this size and wall thickness is 42". This exceeds the actual designed radius by 1/8". We are requesting permission to change the diameter of this ring to 7' which will allow the minimum bending radius to be achieved. The difference in ring member size will be accommodated in the connection plates which join the ring to the cast nodes. Please confirm acceptance for this proposal			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> We confirm that changing the ring diameter from 6'-11 3/4" to 7' in order to accommodate the minimum achievable bending radius is acceptable. When accommodating the difference in the connection plates, ensure minimum distances (ie edge of bolt hole to edge of plate) are adhered to. We agree with the reason for the request, stating that it is a substitution request.

REQUEST: See attached CD RFI # 553 SK1 for items 2 and 3: 2) Confirm the noted weld is intended to be a one-sided fillet weld as there is insufficient access for a 2-sided fillet weld. 3) 1 1/2" is insufficient space for the expansion anchors considering the inside radius of the angles. Confirm the 5 1/2" dimension may be reduced to 4 1/2" to increase the 1 1/2" to 2 1/2".			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 2) Confirmed. 3) Confirmed. TT: We disagree with the reason for RFI request ""Engineering Conflict". We categorize this as no cost clarification.				
T-1695	SCS - Foundation Wall Conduit Penetration Location	Closed	09/12/2014	09/22/2014	09/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: See attached exhibits. See Exhibit A mark-ups. A minimum depth criteria is provided but the actual elevations or a finite depth for the 2" PVC conduits are not given. The dimensions for the typical support bracket are not given either. 1. Please provide either an elevation or a finite depth for the conduits. 2. Please provide the spacing between the 2" RG conduits and 6" RG conduits. The section detail A/ES-2107 provides elevations and dimensions between the 6" PVC to 2" PVC but the numbers do not add up nor does the dimension convert correctly. 3. Please clarify which value to use in detail A/ES-2107 and correct the remaining values. See Exhibit B. There is a spacing discrepancy between A1-2862, E1-3208 and ES-2108 for the 2" PVC sleeves. The architectural slab edge plan A1-2862 shows a typical dimension 1'-9" centers between pairs of electrical sleeves. Detail 3/E1-3208 shows a 3' clear spacing between conduits. ED-2108 showing the vertical centerline matching the below 6" sleeve.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> AAI, WSP, and SFPUC Consolidated Response: 1. For invert elevations of the 2" and 6" RG conduits, refer to ES-2017 REV C EDIT attached. Invert elevations for 2" RG conduits is 1.79' TYP at the foundation wall from invert elevation of the 6" RG conduits. SFPUC Note: In general, the depth of the 2" conduits is not critical at the trenches and was not identified in order to allow flexible choice by the Contractor of conduit supports spacers between the 2" and 6" conduits. Maintain minimum of 3" separation between the 2" and 6" conduits at the trenches. 2. For spacing between 2" and 6" RG conduits, refer to architectural slab edge plans for horizontal dimensions, SFPUC drawings for vertical dimensions or invert elevations. Typical vertical spacing between 2" and 6" RG conduits is 1.79', refer to ES-2017 REV C EDIT attached. 3. For the updated and coordinated sheets between architectural, electrical, and SFPUC drawings, refer to architectural slab edge plans issued with ASI-127, for updated electrical plans, refer SKE-RFI-T-1695-1 to 4 and for updated SFPUC ES-2107, refer to ES-2107

REQUEST: Per specification section 03 10 01 Part 2 - Products 7. H. Snap-Off Ties: Use for concrete walls below grade and walls which will not remain exposed to view and are not scheduled for architectural finishes. Drawing A 1-8608 shows the scallop and perimeter walls and A 1-8402 shows the skylight walls not being visible from the sides because of the fascia details and the earth backfill. These walls are not called out as architectural walls on the architectural drawings. Please confirm that typical snap ties are acceptable at perimeter wall, scallop wall, and sky light wall locations.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The Design Team does not object to the use of Snap-Off ties only at skylight wall locations. At Roof Park level perimeter parapet wall including Scallop walls, removable form ties may be used, provided they comply with 03 10 01 2.2 B.7.g - "Removable Ties". Perimeter wall and scallop concrete walls shall be prepared TO receive elastomeric coating finish.				
T-1698	SCS - Wall Opening Detail Conflicts for Horizontal and Diagonal Bars	Closed	09/15/2014	09/25/2014	09/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention. One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar. 1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar. Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Per General Note GR-11, the contractor shall apply contract details to similar conditions. It is acceptable for review of contractor's adaption of details to similar conditions to occur in submittal review or through the RFI process. Note that this RFI does not make reference to any specific condition where the typical detail cannot be similarly applied. Neither, does it contain suggestions for application of the detail to the conditions the contractor may have in mind. Responding to the RFI in a general sense, the first issue raised is the potential for diagonal trim bars to conflict with MFB reinforcing. As with openings near the tops of walls, typically trim reinforcing is bent parallel with the top of the wall or trim reinforcing on either side of the top of the opening is combined in one piece of reinforcing. Either approach is acceptable when necessary to avoid the MFB's or tops of walls. The second issue raised is the potential for horizontal

	2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.			additional reinforcing to interfere with the MFB's. The horizontal reinforcing is a smaller diameter than the MFB longitudinal reinforcing and the conflict is not obvious to us. If the contractor encounters a conflict, the spacing requirements of Detail 4/S1-3207 may waived in favor of providing the number of required bars over the specified spacing. It is also permissible for added horizontal bars to be placed in interior layers where the previous method is not achievable.			
				The third issue raised is that additional horizontal bars may extend past Foundation Wall CJ's. This is no different than typical wall horizontal reinforcing. The contractor shall either build their forms around the required added reinforcing, as with typical horizontal wall bars or they may request the use the Type 2 couplers. Where additional horizontal reinforcing bars would extend past a corner, the bar may be terminated with a standard hook at the far face of the corner.			
				Lastly, the RFI requests that RFI T-1666 response be applied. RFI T-1666 and T-1698 are to be applied separately to the respective bars they address.			
				Reason for request is "Other" - agreed.

REQUEST: See attached CD RFI # 533 SK1 for item 2: 2) Confirm the 3/8" bent plate (50 ksi) terminates on top of the "S1" slab on the Second Level and it does not extend to the top of the side plates in detail 5/S1-5004.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed, terminate the S2 slab 3/8" bent plate in detail 5/S1-5013 at the top of the adjacent S1 slab. Note: there was no item #1 submitted with this RFI. TT: RFI Reason for Request appears appropriate.				
T-1701	SSS - Insufficient Cope for Erection Clearance	Closed	09/15/2014	09/25/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please refer to beams highlighted in S1-2503 (SK1) and work with this RFI. The 1' 11 ½" cope is not sufficient for erection clearance as shown on A4644, A4645 (SK2, SK3). The Type 4 (V) drag connection on the other end of the beam limits the position in which the beam can be erected (See SK4, SK5). The beam needs to be erected from below and positioned through the shear plate on the moment frame column. As you slowly lift the back side that is currently coped, a ¼" clash transpires between the top flange of W40x327 and the shear plates on the bus deck casting. Please advise.			SUGGESTION: We propose increasing the 1' 11 ½" top flange cope to 2' 0 ½", please confirm this is acceptable. ANSWER: Accept Suggestion: <input type="checkbox"/> Increased cope dimension proposed in the RFI is acceptable. TT: We disagree with the reason for RFI request, erection is a means and methods issue. We categorize this RFI as clarification for Issues on means and methods.

T-1702	SSS - Weld Terminations on Moment Frame Column Shafts	Closed	09/15/2014	09/25/2014	09/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please see Section 5.17.1- Figure 5.2 from the AWS D1.1 Structural Welding Code (See SK1). In the sketch, proper terminations are shown for both a CJP weld and fillet weld as they approach an access hole. The moment frame column shafts have been designed with a varying thickness of web. These web splice locations require an access hole to account for the different weld details between the web and flange, with generally a CJP weld being performed on one side and a fillet on the other (See SK2). The shaft drawings that have been detailed show an access hole that conforms to 5.17.1 - Figure 5.2. Note, however the shaft drawings do not show the weld termination detail. It is industry standard for the modeler to exclude these details as it is up to the fabricator/inspector to understand that welds should always be terminated as per the section of the AWS code they fall under, unless the design engineer specifies otherwise. Currently, the TJPA shop inspection staff has directed our fabricator to terminate both the CJP & fillet welds similarly - as shown for a fillet weld (See SK3). Please confirm that this is acceptable as currently shown. Please also confirm that the weld terminations should be completed as per AWS D1.1 - Section 5.17.1- Figure 5.2 for all columns fabricated in the future. Terminating CJP welds, as currently directed by the inspection staff to be flush with the end of the access hole will result in additional costs to our fabricator.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) First question is not entirely clear since CJP and fillet welds are not terminated similarly per AWS D1.1. Per Figure 5.17 of AWS D1.1, fillet welds are not returned whereas CJP welds are terminated smoothly within the weld access hole envelope and shall not create any stress risers. 2.) For weld access holes in the SFRS, refer to specification 05 12 10, section 2.2.C.c, which requires compliance with ANSI/AISC 360 as a minimum, which is compatible with AWS D1.1, Section 5.17. TT: We disagree with the reason for RFI request "Engineering Conflict". We categorize this RFI as called out in contract documents. Jack Adams 9/26/2014 RESPONSE: Contrary to the RFI question, the TJPA shop inspection staff does not direct fabricators. These NDE Inspectors either accept or reject welds based on AWS Code. In this case the EOR has provided the answer that weld terminations should be completed as per AWS D1.1 - for all columns fabricated. Terminating CJP welds, as per AWS Code to be flush with the end of the access hole if there are any additional costs are solely the responsibility of the Contractor, not TJPA.				
T-1702.1	SSS - Weld Terminations on Moment Frame Column Shafts	Closed	10/01/2014	10/11/2014	10/17/2014	Potentially	<input type="checkbox"/>

	<p>that currently do not conform with Section 5.17.1- Figure 5.2 from the AWS D1.1 Structural Welding Code.</p> <p>Skanska proposes two options that would allow the transitions to be permissible as per AWS code. Option 1: Remove material from the web/CJP that would allow for a proper transition down to the flange. See SK1. Option 2: Add additional weld metal to the CJP that would allow for a proper transition down to the flange. See SK2.</p> <p>Please confirm that both options are acceptable & it is at the fabricators discretion to choose which method.</p>						
T-1703	SSS - Fouling Issues for CP8	Closed	09/15/2014	09/25/2014	10/06/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer Co-Author: Skanska USA Civil West California DisRyan Clayton	To: Turner Construction Company Phil Militello	Answered By: Adamson Associates, Inc. George Metzger				
	REQUEST: See attached CD RFI # 611 SK1 to SK4 for items 1 to 4: 1) This hole at the bottom flange for CP8 fouls the full depth gusset plate for the CP6 brace per 4/S1-8003. Please provide a solution. 2) The noted hole at the bottom flange for CP8 fouls the full depth gusset plate for the W40x277 beam on Grid 1.4. Please provide a solution. 3) The noted 4 holes will not be accessible as they are within the plate closure for CP5 per 1/S1-8003. Please provide a solution. 4) The noted holes are too close to the 2" thick stiffeners for the CP5 connection per 1/S1-8003. Please provide a solution.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) See response to RFIs T-1514 and T-1514.1. 2) Move the shear plate for the W40 beam connection towards the other side of the beam web. Move the two bolt holes along GL 1.4 to the east of GL 1.4 by few inches so that the bolts clear the shear plate. 3) For bolt installation at the 4 holes, tack weld the bolt heads to the top of bottom flange and tighten the nuts from below. Alternatively, 5" diameter access holes may be provided in the 1" stiffener plates similar to detail 11/S1-8001. 4) Move the two bolt holes by few inches so that the bolts clear the 2" stiffener plates. TT: We disagree with the reason for RFI request. We categorize this RFI as clarification for issues on means and methods and previously answered RFI.

T-1710	SCS - Roof Scallop Wall Construction Joint Relocation	Closed	09/19/2014	09/29/2014	09/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Per drawing SI-3282 detail 4 and 5 the base of the scallop wall requires a chamfered starter wall that transitions from a 1 to 1 angle, 3 to 2 angle, and a 4 to 1 angle throughout the geometry of the scallops. Shimmick requests approval to relocate the construction joint from the wall to the deck and pour the full height of the wall including the deck beneath. See attachment "A" for clarification. This change would only occur at the scallops and detail 2 "Typical walls at the roof north & south edges" would not change. Please confirm the joint location is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor's proposal is acceptable in concept however moving the construction joint to the slab will result in long rebar dowels which will likely require splicing via laps or form saver couplers. The contractor should consider those detailing issues and submit the modified rebar detailing via shop drawings for review.		
T-1711	SCS - Roof Shear Key and Pylon Rebar Epoxy Connection	Closed	09/19/2014	09/29/2014	09/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Per S1-3282 detail 9 "SHEAR KEY AT ROOF" calls for vertical #4 rebar dowels to be cast with the structural deck. Per S1-3281 detail 7 "SIGNAGE PYLON FOOTING DETAIL" calls for vertical #5 rebar dowels to be cast with structural deck. For constructability reasons it is essential that Shimmick's operations maintain open access for roof top small cranes and man lifts for all trades. Per specification section 03 20 02 Part 2.3 F. 3. Adhesive for dowels in existing concrete b. HIT-RE 500_SD injectable adhesive by HIL TI, Inc., is an approved method. The minimum embedment depth requirement for #4 rebar is 2.75 inches and the concrete thickness requirement is 4 inches at the shear keys. The minimum embedment depth requirement for #5 rebar is 3.125 inches and the concrete thickness requirement is 4.375 inches for the signage pylon. The roof deck is 7" with 3" tall flutes leaving a clear space of 4 inches. Shimmick's solution for the 4.375 inch concrete thickness requirement is to pour an additional .5 inches of concrete at the concrete deck where the pylons will be installed. See drawing attachment "A" and product data attachment "B" on page 4 for rebar drill and epoxy requirements. Shimmick requests approval for the shear keys and the			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Request not acceptable, follow the details provided in the construction drawings. Alternatively, contractor may consider using form saver couplers at no cost to the owner.

From: Webcor Construction LP Claude Titche Co-Author: Shimmick Construction Company, Inc. Henry Chiang			To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
REQUEST: The answer to QBD 18 for the TG07.2 Trade Package, which asked if the "slab and beam mix can be used for the fourth wall lift", was "Confirmed. The slab and beam mix can be used for the fourth wall lift." Submittal TG0702-118 submitted the slab and beam mix and included the foundation wall as one of the usage locations. The review comment stated "Mix design for Foundations Walls shall be as approved in Submittal TG0600-203.1. Omission of SRA is not acceptable" which is the Foundation Wall mix. Please confirm if the Submittal Response to use the Foundation Wall Mix is superseding the answer to QBD 18 which confirmed the use of the Slab and Beam Mix design on the fourth lift foundation wall.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The number of Foundation Wall lifts changes with the contractor's means and methods. See RFI T-1467, issued after QBD 18, which increases the number of Foundation Wall lifts by one. In as far as QBD 18 confirms that it is acceptable to pour the Ground Floor slab and beams with the topmost Foundation Wall lift using the approved slab and beam mix, the QBD 18 response remains accurate. Similarly, it remains unchanged that the approved Foundation Wall mix design shall continue to be used below the topmost wall construction joint. Regarding reviewer comments on Submittal TG0600-203.1: Submittal makes no reference to lift numbers and simply states "Foundation Wall", for which an approved submittal already exists and for which the present submittal could not replace and meet Specification.		
T-1716	SSS - Field Weld Shear Plate Detail	Closed	09/22/2014	10/02/2014	10/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer Co-Author: Skanska USA Civil West California DisRyan Clayton			To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
REQUEST: Detail 3/S1-7632 requires a field fillet weld for the shear plate to beam connection. Positioning an electrode or gooseneck to achieve the 7/16" weld on the back side will not be possible in the field due to the limited gap between the weld and vertical HSS member. Please confirm it is acceptable to weld the shear plate to beam web on three sides on the near side and omit the far side weld. See attached SK1 for clarification.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is not clear to us why this weld cannot be made. We understand the access is relatively limited but the same detail was used successfully in many other projects. If the concern is formation of unequal weld legs, that is acceptable as long as minimum weld size is satisfied and approved by the inspector. TT: The reason for RFI is listed as "Alternate proposal". We categorize this RFI as request for substitution.

T-1733	SCS - Bus Deck Embeds - Hose Bibb Location at Gride Line 10-13	Closed	09/23/2014	10/03/2014	09/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please see attached marked up drawings.				For Hose Bibb HB-4, a 3/4" CW connection with a sleeve size of 3" is noted. Refer to P1-0051 rev 4 'Pipe Sleeve Schedule'. Only 4" or larger sleeves are called out and located on the slab edge drawings. On A1-2883, the sleeve on the second level is not the same sleeve and should not be used for any bus deck related information.			
Drawing PI-2503 notes a hose bibb type HB-4 which leads directly to a 3/4" CW pipe through the bus deck level. However, this sleeve is not displayed in drawing AI-2893, the corresponding drawing for embed location dimensions. Drawing AI-2883 notes a similar sleeve within the same column cover through the second floor level with location dimensions.							
Please confirm that the noted AI-2883 sleeve dimensions may be used for the noted bus deck sleeve with missing dimensions. If not, please provide the dimensions for the noted bus deck sleeve with missing dimensions.							
T-1733.1	SCS - Bus Deck Embeds: Hose Bibb HB-4 at GL 10-13	Closed	10/06/2014	10/16/2014	10/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello Answered By: Webcor Construction LP Claude Titche							
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference RFI T-1733 and also attached marked up drawings.				George Metzger 10/10/2014:			
Drawing PI-2503 notes a hose bibb type HB-4 which leads directly to a 3/4" CW pipe through the bus deck level. However as this is a 3", this sleeve is not displayed in drawing AI-2893 which does not locate sleeves smaller than 4".				Bus deck sleeve for HB-4 at GL 11 F can be located within the column cover at 1'-6" west of GL 11 and 1'-3" south of GL F. Note that this information will not be reflected on the slab edge drawing as only 4" diameter sleeves or larger are located in the slab edge drawings.			
Please provide the dimensions for locating the noted bus deck sleeve.

T-1735	<div>SCS - Roof Architectural Stair 301 Joint Chamfer</div> <div><div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div></div><div><div>To: Turner Construction Company</div><div>Phil Militello</div></div></div> <div>Co-Author: Shimmick Construction Company, Inc. Henry Chiang</div>	Closed	09/24/2014	10/04/2014	09/29/2014	Potentially	<input type="checkbox"/>
<div>Answered By: Adamson Associates, Inc. George Metzger</div>							
<div>REQUEST:</div> <div>A1-8645 shows horizontal and vertical lines between plywood sheets bolder than what is created by plywood alone. Specification Section 03 33 00 - 2.2 B Chamfer Strips: calls for 3/4" chamfer to be "used for horizontal joints between pours" Shimmick is assuming that the vertical lines are chamfer strips as well. Vertical chamfer strips would provide a weakened plane and help confine any vertical shrinkage cracks to the chamfer location.</div> <div><div>1. Please confirm only vertical 3/4" chamfer strips at the plywood joints is being depicted by the wall elevations on A1-8645.</div><div>2. Please provide additional direction if anything is required at the vertical and horizontal joints.</div></div>			<div>SUGGESTION:</div> <div>The assumption stated in the RFI is incorrect. Details 3 and 4 on A1-8645 show the layout of the W-17 modular façade trellis panels, as noted on the drawings and the in the titles of the details. The cast-in-place architectural concrete layout is shown in detail 1 on A1-8645. Elevation 1/A1-8645 references detail 5/A1-8648, which details the panel joints, reveals and tie hole layout.</div>			<div>ANSWER:</div> <div>Accept Suggestion: <input type="checkbox"/></div> <div>The assumption stated in the RFI that only vertical joints are shown in detail 1/A1-8645 is incorrect. The cast-in-place architectural concrete wall layout shown in detail 1 on A1-8645 clearly shows both horizontal and vertical joints. Typical formwork details are indicated in 1/A1-8645, which is detail 5/A1-8648 showing the panel joints, reveal and tie hole concept.</div> <div>Use drawing chamfer strips dimension in lieu of sizes in Specification Section 03 33 00 2.2 B.</div>

T-1740	SCS - Confirming Construction Joint Increased Spacing	Closed	09/24/2014	10/04/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference specification section 03 30 02 3.2.A.3, RFI #T-1104, and rejected submittal number TG0702-503.0, in reference to Ground Level CJ layout.					Accept Suggestion: <input type="checkbox"/>		
The specification calls out 60' maximum CJ spacing in the ground floor concrete slab. RFI #T-1104 permitted TG 06.0 to use a maximum CJ spacing of 96'. The rejected submittal includes comments suggesting to reduce the number of pours in Comment #2 on Sheet CJ-000, specifically in the metal deck section. Further comments would require a 97' 6" span at First and Fremont Streets and a potential 120' span between GL 19 and Wall 421. In order to match both suggestions, TG 07.2 would need to also increase CJ spacing beyond the specified 60', similar to TG 06.0.					1) Confirmed		
1) Please confirm the ground floor 60' CJ spacing requirement only applies to the formed MFB/slab section and not the metal deck section.					2) Confirmed to allow submittal comments		
2) Shimmick requests permission to increase CJ spacing in the formed MFB/slab sections beyond the specified 60' to 120' to allow for CJs per the submittal's comments. If this proposed limit is unacceptable, please provide a maximum for use at Ground Level.					3) Confirmed		
3) Please confirm there is no maximum construction joint spacing for slabs on metal deck.							
T-1741	SCS - Upgrading Ground Level Mix Designs	Closed	09/24/2014	10/04/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference Sheets S1-2302 through S1-2307, Spec Section 03 30 02 2.1.					Accept Suggestion: <input type="checkbox"/>		
Between any single set of grid lines, the ground level features multiple mix designs. The ground level pandecking slabs S1, S3, and S10 have a 4,000 psi mix design. Between grid lines 16-17, 24-25, and 27-29, the pandecking slabs S11 and S12 have a 8,000 psi mix. Formed MFB/slab decks RCS 2 and RCS 16 have a 5,000 psi mix design. Currently each mix design would require					1) Contractor proposed increase in concrete strength acceptable at the locations indicated.		
					2) Contractor proposed increase in concrete strength acceptable at the locations indicated.		
					Incorporate changes to corresponding CJ submittal.

	<p>separation by CJs. Shimmick plans to pour a continuous deck from north foundation wall to south foundation wall.</p> <p>1) Typical: Shimmick suggests to replace all the 4,000 psi pandecking mix on the ground level with the 5000 psi RCS mix to match the formed MFB/slab deck. Please confirm this is acceptable.</p> <p>2) Shimmick suggests to replace the 5,000 psi RCS mix on the ground level formed MFB/slab deck between GL 16-17, 24-25, and 27-29 with the 8,000 psi S11/S12 mix to match the pandeck. Please confirm this is acceptable.</p> <p>An attachment demonstrates the change in the mix layout on ground level. Final CJ location is pending submittal approval.</p>						
T-1742	SCS - ST201 Slope of Grade Beams	Closed	09/25/2014	10/05/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please see attached SKA-4052 (per RFI #T-1661), SKS-0398 & SKS-0400 (confirmed in RFI #T-1661and 1658), and Markup A1-2960A (per email from TT on 8/8). SKS-0400 visually shows the grade beams sloping but does not provide the exact percent of slope. Cross referencing the available sheets provides conflicting slopes for each beam.				1) Slopes of GB1 and GB2 are the same as that of the RCS3 slab which is 1.2%. GB3 and GB4 shall have a slope of 28%.			
				2) T/beam at the west ends for GB1 and GB2 shall be 19'-2". T/beam for GB2 on 1/S1-7001 will be updated in a future ASI.			
				3) Grade break for GB3 and GB4 occurs at the east face of the foundation wall.			
				4) Top elevation of GB3 and GB4 at east face of the foundation wall is 15'-7".			
				5) Top elevation of GB3 and GB4 at GL 1.4 can be determined from information provided in 1) and 4).			
		Note that markup A1-2960 has been superseded by drawings submitted with ASI 127 on 9/12/2014.					
The grade beams GB1 and GB2 (see SKS-0398 for naming) are indicated on Mark up A1-2960A as "Constant Slope: Projection of Ground Level Slab". SKA-4052 calls out a single west-east slab slope of 1.2%. However, SKS-0398 provides two unique end of beam top elevations for GB1 and GB2, suggesting that the beams have two different slopes. The grade beams GB3 and GB4 (see SKS-0398 for naming) are indicated on Mark up A1-2960A as "Slope to Foundation Wall", where the grade break occurs at the west face of the foundation wall at EL + 15' 7". 3/SKS-0400 visually indicates the grade break at the east face of the foundation wall. No elevation on the east

T-1746	BGP - Bar Layering Issues at Beam Intersection	Closed	09/26/2014	10/06/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please verify that per detail 1/S1-3600, the call out for 1 ½" - 2" clear between top and 2nd layer bars is a minimum distance between bars. As demonstrated in the attached picture, at the intersection of GL-3, GL-G, and GL-X, the 1 ½" - 2" clear cover is not attainable due to layering issues with intersection beams.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Grid 3 and Grid X MFB layering is per Elevations 1/S1-3603 and 2/S1-3653, respectively. The plan geometry of the intersection is per Detail 4/S1-3307. The specified bar clearance referenced in the RFI as 1-1/2 to 2" clear is incorrect as is the detail referenced. The specified bar clearance for MFB-3 is 2-1/2" and is not a minimum. Design intent for the MFB-X splice bars passing through the joint is for these bars to pass below ALL of the MFB-3 top bars, including MFB-3 add bars. Field observation indicates that the splice bars only pass beneath the MFB-3 topmost bars, above the MFB-3 add bars. The field layering configuration will only increase the specified 2-1/2" clearance marginally (within placement tolerance) and will be acceptable when all MFB top bars are brought to their highest elevation by crane or other means and subsequently secured.				
T-1747	SSS - ST201A Approval Comment Clarification at Bus Deck Level	Closed	09/26/2014	10/06/2014	10/02/2014	Potentially	<input type="checkbox"/>

	<p>Upper basket column pipes located at gridline 1/G and 1/C are shown to be concrete filled to top of pipe in S1-4018 Rev 4. Details shown in B/S1-4018 require a 2" diameter vent hole in the roof level cast nodes. Roof level cast nodes at these locations are 72-36 and 72-37 and according to machining drawing CN-0127 Rev 4 (issued 12/19/13), neither of these cast nodes have vent or grout holes.</p> <p>Currently, pipes are detailed with (2) - 5/8" vent holes approx. 7" from the top of the pipe so the pipes could be filled to this point. Please confirm currently detailed pipe vent holes can remain as is or provide new vent hole details for the pipe and/or cast nodes.</p> <p>Please note cast nodes 72-36 and 72-37 have already been released to Oregon Iron Works by Bradken.</p>

T-1753	SSS - Stiffener Fouling Box Beam at GL 2-3	Closed	09/26/2014	10/06/2014	10/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 631 SK1: The full depth stiffeners per 8/S1-8003 foul the Box beam as shown. Please supply a solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> We assume that the reference to detail 8/S1-8003 in the RFI is incorrect and intended reference was to detail 6/S1-8003. At the location indicated in the RFI, run the stiffeners from the bottom flange of the WF beam to the underside of the box beam. Weld stiffeners per detail 6/S1-8003 except provide welding on two sides only, no welding required between the stiffener and the box beam. TT: We disagree with the reason for RFI request. We categorize this RFI as no cost clarification.		
T-1754	SSS - ST202 Approval Comment Clarifications at Second Level	Closed	09/29/2014	10/09/2014	10/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 629 SK1 The model has been built per the dimensions in 3 & 5/S1-7004. This approval comment directs us to confirm locations per A1-7004 in AS1-121 and introduces conflicting dimensions as A1-7004 shows different post locations than S1-7004. Per the American Institute of Steel Construction Code of Standard Practice Section 3. Design Drawings and Specifications, subsection 3.1, the structural drawings are the document Skanska used to locate the stair posts. Please clarify the conflicting information.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Architectural Details locate stair support posts according to typical structural stair details (sheet S1-7601). Actual stair layout and tread locations are determined by Architectural Drawings. At this location it is acceptable to have the landing and stair support beams not aligned to the center of the post.

T-1756	BGP - Area 3 Concourse Rebar- Displacement of Top Added Bar Due to Congestio	Closed	09/29/2014	10/09/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Per the attached picture, please verify that is acceptable that a 2nd layer was created for top added bars due to congestion at beam and column intersection. This occurs between GL-3 & GL- 4 at GL-K.3.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable for the (3) beam bars indicated to be placed in a second layer. The layering, however, shall not interfere with the specified 1-1/2" clearance between MFB top bar layers. To this end, beam top second layers shall be introduced below the level of MFB add reinforcing as they typically have been. In the photograph attached to the RFI it appears that both beam layers have been placed between the MFB layers. This is not acceptable as it results in the depression of the MFB add layer beyond the specified 1-1/2".

	(1) - p395 104" long - Cut to 103.75"						
	Skanska proposes to proceed with fabrication as is, by laying out the holes and machined channel from the center of the cap plate, see SK1 for reference. Please confirm this is acceptable.						
T-1765	SSS - Tapered Slab at Bus Deck Perimeter	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer	To: Turner Construction Company Phil Militello	Answered By: Webcor Construction LP Gregory Kemerer				
	Co-Author: Skanska USA Civil West California DisRyan Clayton						
	REQUEST: 1)The perimeter Bus Level slab tapers from a 14" slab to 10" at the edge of slab, with the perimeter beam requiring 9" studs as per 9/S1-5004. Please confirm it is acceptable to provide two 9" studs on the framing steel to account for the sloping slab, see attached SK1 & 2 for clarification. 2)At the Bus Deck level node the slab tapers from a 14" slab to 6" at the edge of slab. Please confirm it is acceptable to provide 6" studs on the framing steel to account for the sloping slab, see attached SK1 for clarification.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
				1-) The first pour for the perimeter slab will be 9 inches thick at the outer edge (see detail 1/S1-8000) therefore the stud length shall be accordingly. It is acceptable to have two studs at the tapering slab that are the same length as the ones at the spandrel beams. 2-) Acceptable to locally provide 6" studs. Indicate these studs clearly in the shop drawings.

T-1766	SSS - DCW Backing Bar on Moment Frame Columns	Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Section 05.12.10 Structural Steel - Additional Seismic Requirements, 2.2 Fabrication Section C.2.A.1 (See SK1) states, "connections in which backing is not removed: backing shall be attached to the member or plate that does not have its surface prepared for the groove weld. Attachment shall be by either a 5/16" fillet weld or 3/16" groove weld along the complete bar length on the side of the bar opposite the groove weld" On shop drawing A1723 (See SK 2, SK3), section cut B & C show two continuity plates that are with-in approx. 2 1/2" of each other with a CJP DCW marked as the weld detail. In these conditions there is insufficient access to provide a continuous weld along the backside of the backing bar. Please confirm that in situations where there is insufficient access between the two continuity plates, the backing bar can be tac welded within the weld zone and left in place on one of the plates. The other plate will have the backing bar attached as per the aforementioned specification. However, on CS1 columns A1723, A1731, A1759 and A1760 the backing bar was tact welded within the weld zone in cases where the continuity plates were in close proximity. Please confirm these columns are acceptable. *Note - the typical continuity plates that are spaced properly have a double bevel prep and therefore will not be affected.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The moment frame beam continuity plates are per detail 5/S1-4202. At the contractor's request, a double sided CJP welded was accepted (see RFI T-0959) in lieu of the welding shown in this detail. Therefore, the continuity plate that lines up with the moment frame beam flange shall follow this detail, with or without a nearby second continuity plate. Where there is a second continuity plate nearby and there is insufficient access to it, it is acceptable to weld the its backing bar using tac welding and leave it in place as proposed in the RFI. Note that the spec section referred in the RFI is triggered when backing bar is not removed and does not apply to the seismic moment frame condition since the standard detail require backgouging and reinforcing fillet weld, or alternatively, double sided CJP welding. Provide additional information for the CS1 columns listed in the RFI. It is not clear if a) backing bars for both continuity plates were tac welded, or b) one was tac welded and the other one was fabricated per Specification Section 2.2.C.2.A.1, or c) one was tac welded and the other was fabricated with double sided CJP.				

T-1767	SSS - Weld Clearance Hole Size at Moment Frame Column Cruciform			Closed	10/01/2014	10/11/2014	10/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer					To: Turner Construction Company Phil Militello				
Co-Author: Skanska USA Civil West California DisRyan Clayton									
REQUEST: Several Moment Frame Columns have cruciform sections that weld over column web splice joints. The splice joint provides a transition from thick web to thin web. In a majority of these cases, the cruciform web as detailed has a 1" radius cutout to clear the column web splice joint. The 1" radius cutout is insufficient to adequately clear the tapered double bevel splice joint and provide space for runoff tabs necessary for the CJP weld.					SUGGESTION:				
					ANSWER: Confirmed				
					Accept Suggestion: <input type="checkbox"/>				

Webcor/Obayashi Joint Venture

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: S1-2505 Location: Zone 4, Bus Deck Grid Line: A & 23, H & 23 Add'l Doc Ref's: SK1, SK2, SK3, RFI T-1768 Response				Confirmed that the T/steel elevations shown on SK3 are correct. Note that providing shims that are beveled in both directions to fill the gaps while maintaining erection tolerances is a means and method issue. Therefore we disagree with the cost and time increase claims associated with this RFI if Skanska wants to go with the other option (modifying slope at GL23).			
The response to RFI T-1768 confirmed that detail 1/S1-5018 calls for shim plates as required. The response also indicated that it is acceptable to slope Grid 23 to match Grids 22 and 24 - in order to avoid slope in two directions.				Reason for RFI (TT): Disagree with the reason noted in RFI: Engineering conflict, agree with other: verification. TT categorizes this as Shown in Contract Documents and Request for Substitution.			
Skanska has indicated that the second option is preferable, as the complex shims (as detailed in SK1 and SK1) would likely cause erection problems.							
Please confirm the top of steel elevations as shown in SK3, which would result from sloping Grid 23 to match Grids 22 and 24.							
T-1769	SCS - Foundation Wall Embeds: Plumbing at GL 6-10	Closed	10/01/2014	10/11/2014	10/01/2014	Potentially	<input type="checkbox"/>

T-1773.1	SSS - AB Analysis - TB Column Base Plates	Closed	10/20/2014	10/20/2014	10/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

This is a confirming RFI following our October 9, 2014 structural coordination meeting. The following items / actions were discussed:

1. For anchor bolts that do not clash with the column base plates but are out of AISC tolerance thus limiting the ability to adjust for structural steel fabrication and erection tolerances, the EOR takes no exception to modifying the base plate holes in the shop or field to suit the as-built anchor bolt position.

2. The EOR takes no exception to reducing the size of the plate washers above and below the horizontal stiffener/anchor plate in the column. This will be done to clear the fillet weld for the vertical stiffener below the horizontal anchor plate and to allow for consistent plate washer sizes. The plate washers will be larger than the major diameter of the anchor nuts. The attached spreadsheet details the sizes we will use at each location.

3. The EOR takes no exception to adding a spacer plate below the horizontal anchor plate and above the nut at the 2-1/2" anchor rod locations where necessary. This is necessary to accommodate out of tolerance anchor bolts so that the nut can clear the fillet weld between the horizontal anchor plate and the vertical stiffener below.

Please confirm the above items.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

- 1). Confirmed.
- 2). Confirmed.
- 3). Confirmed.

Reason for RFI: We agree with the reason "Field Conflict" noted in the RFI, but disagree with probably cost increase and time increase noted. TT categorize this as "request for corrective field work".

T-1776	SCS - Bus Deck Level Composite Slab Concrete Placement Sequence	Closed	10/06/2014	10/16/2014	10/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche			To: Turner Construction Company Phil Militello				
Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference 4/S1-5003 Please confirm the following sequence regarding the Bus Level Composite Slab. - Place 10" structural slab. (first pour) - Provide raked concrete finish, to achieve required amplitude. - Apply curing compound day of first pour. Please specify the cure time required for the 10" structural slab before the 4" structural topping slab can be placed.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed sequence is acceptable. Blast clean the curing compound before the second pour for achieving bonding between two pours. Alternatively, water cure with wet burlap may be use for the first pour. Curing time shall be in accordance to the specification. 2nd pour may be placed after the concrete for the first pour reaches 3000 psi mini.

REQUEST: Reference attached sketch. Please confirm, 1. Once A1 is poured and cured, is it acceptable to place A2-C2 in one pour prior to B1 and C1 being placed? 2. If #1 is confirmed, is it acceptable to then place A3-C3 in one pour, following A2-C2? 3. If #2 is confirmed, is it acceptable to then place A4-C4 in one pour, Following A3-C3?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See the response to RFI T-1778.		
T-1778	SCS - Ground, Second, Bus, and Roof Level Concrete Placement Sequence	Closed	10/06/2014	10/16/2014	10/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Claude Titché				
Co-Author:							
REQUEST: Reference attached sketch. Steel erection begins in Area C01, which is between gridlines 10-11. 1) The construction Joints in the trainbox walls do not line up with gridlines. Is it acceptable to align the fourth lift foundation wall construction joints with gridlines? Note that ground level slabs will also follow this layout as shown in the attached sketch. 2) WOJV believes that the formed and metal deck concrete at ground level GL 10-11 needs to be placed before pouring any other metal decks above this level. Please confirm this is correct. If required to place more east/west concrete at ground level prior to placing decks above, please provide requirements. 3) Please provide the required cure time of ground floor concrete before the placing of concrete in metal decks above ground level can be poured. 4) Once the ground level concrete reaches required strength is it acceptable to pour the 2nd level, bus deck			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger: 10/10/2014 1). Foundation walls below the topmost horizontal construction joint that are cast with the approved foundation wall mix in accordance with RFI T-1715 response shall have aligned vertical joints. The foundation wall within the projection of, and poured with, the Ground Floor slab and beams above this joint utilizing the slab and beam mix design need not have joints aligning with the foundation wall below. Note that many formed Ground Floor concrete construction joints cannot be located on the Gridlines due to MFB's. In the West Throat, construction joint location will be governed by where it would fall across intersecting formed framing members. Also refer to RFI-T-1740, T-1584, and Submittal TG0702-503 comments. 2). It is recommended that the entire ground floor slab for each wing be casted before pouring the above grade floor slab. It is to ensure that the ground floor slab can act as a floor diaphragm to distribute the seismic force induced from the upper floors (transmitted thru the longitudinal BRB frames and

T-1790.1	SSS - Weld Clearance Holes	Closed	11/04/2014	11/14/2014	11/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: This RFI addresses the information requested and the response given to SK RFI 867 (T-1790). To clarify the applicability of the reference code, Skanska's fabricator has provided details on the fabrication of the column assemblies: · The web welds (splices) are welded first and NDT is performed- no access holes needed at ends of welds. · Web plates are fit/assembled to flanges. · Flange to web welds are made - again, no access holes are required. · There is no welding being performed through access holes for these conditions. There is no code or project requirement to install weld access holes given the order of operations. AWS D1.1, Section 2.8.2 addresses weld transition from full penetration to fillet welds as required on these flange to web welds. Given that the three welds are not done concurrently, please confirm that it is acceptable to eliminate unnecessary access holes.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to omit the weld access holes indicated in the RFI (at web transitions). Comply with AWS D1.1 for CJP to fillet weld transitions. TT: We agree with the reason for request: Alternate Proposal. We categorize this RFI as clarification on means and methods.

Co-Author:

REQUEST:

After searching through sky light drawings AI-8401 through AI-8479 and SI-8000 through SI-8020 Shimmick was not able find information providing the sky light attachment to top of wall embed sizes, anchor bolt length, and spacing of embeds. For the central sky light from grid line 19.1 to 22 on page A 1-8451 which shows the structural truss frames for the sky light, which determines the embed layout, the truss frames are called out as equally spaced between each grid line. This does not give you the complete perimeter and requires too many assumptions. Also on AI-8401Note2. Dimensional control sub part A. "Dimensional control shall be derived from the three dimensional (3D) computer model and the two dimensional (2d) drawings." Sub part B. "See sheet AI-0009 for an index of 3D models". The 3D models referenced on AI-0009 are models that Shimmick TG07 Superstructure currently does not have access to. Shimmick would prefer to have the embed information on a drawing sheet equivalent to what is provided for the roof park railing details on sheets AI-8680 to AI-8685.

Shimmick is requesting the engineer to provide sky light attachment to top of wall embed sizes, anchor bolt lengths, and spacing of embeds for the top of concrete skylight support walls?

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The information requested cannot be provided at this time. The sky light is a design build element and no subcontractor has been awarded a contract. Information will be provided as it becomes available. February 2015 is the anticipated award date of this subcontract.

T-1797	SCS - Roof Top Sky Light Hand Rail Foundations	Closed	10/07/2014	10/17/2014	10/07/2014	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Henry Chiang		To: Webcor/Obayashi Joint Ventu Spencer Sayles		Answered By:Webcor Construction LP Claude Titché			

Co-Author:

REQUEST:

Per LI-8683 the Sky light hand rail foundations are not tied to the structural deck with rebar and appear to be independent.

1. Please confirm that the sky light hand rail foundations do not need to be incorporated into Shimmick's roof slab detailing.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

- 1. Confirmed.
- 2. Confirmed.

REQUEST: Section 07 09 16 - Part 1.6.E describes the requirements of the jobsite constructed Seismic Joint Assembly Mock-up. As discussed during TJPA Program QA/QC Coordination Meetings, confirm it is acceptable to employ "First-In-Place" interim inspection reviews of the actual seismic joint assembly installation in lieu of a job-site constructed mock-up.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
					Confirmed.		
					Discuss Owner credit for deletion of the 10' x 10' x 10' mock-up with TJPA.		
T-1801	BGP - D201&202 RCS-1 & RCS-7 Reinforcing Steel Field Change Confirmation	Closed	10/09/2014	10/19/2014	10/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please confirm the following: 1. Arrangement of RCS-1 top reinforcing hooks at the west foundation wall may be per the attached sketch. 2. Matching hooks may be spliced to RCS-7 top reinforcing above the knockout wall to conform to Detail 4/S1-3204. 3. Minimum splice length for RCS7 hooks is acceptable at 76" based on a 23" embedment of the typical bar into the foundation wall. 4. RCS-7 hooks may be omitted where congestion results in inadequate clear spacing. All such locations will be reviewed by the Structural Field Representative before inspection. 5. Top formsaver in Detail 4/S1-3204 may be relocated immediately below the top reinforcing of B60 to reduce top steel congestion in RCS-7.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
					All items confirmed.

	REQUEST: Portions of the East Wall have CDSM encroachments -per RFI T-1372 and approved submittals require 6" spacing of vertical reinforcing. The original call out was for 17 Verts each face between GL C & C.3 and between GL G & G.2 (at 6" OC). We installed 13 each face in both sections (at 8" OC)- see attached drawing. Please confirm it is acceptable for the 8" spacing to remain and there is no further action needed.	SUGGESTION:	ANSWER: Confirmed.	Accept Suggestion: <input type="checkbox"/>			
T-1803	SCS - Roof Edge of Deck Bent Plate From: Webcor Construction LP Claude Titche Co-Author: Shimmick Construction Company, Inc. Henry Chiang	Closed To: Turner Construction Company Phil Militello	10/09/2014	10/19/2014	10/15/2014	Potentially	<input type="checkbox"/>
	REQUEST: S1-5000 detail 8 & 9 shows a bent plate as the typical edge of deck detail. The bent plate is also shown on SI-8008 for the sky light opening. SI-3282 details do not show a bent plate for the rooftop seismic detail 3, perimeter detail 2, and scallop wall detail 4 & 5. 1. Please confirm that the roof top seismic, perimeter, and scallop walls will have a bent plate per detail 8&9/S1-5000. 2. Please provide detail on what the scallop bent plate will look like (4&5/S1-3282). 3. Please confirm that it is acceptable for Shimmick to place a 1 inch hole in the bent plate to install a removable tie for overhang brackets. Holes for overhang brackets will be roughly 6' O.C.	SUGGESTION:	ANSWER: 1). Per details on sheet S1-3282, no bent plate will be needed. The slab beyond the supporting steel beam will be formed and casted. 2). See response to #1. 3). See response to #1.	Accept Suggestion: <input type="checkbox"/>

T-1810	SSS - Grouting Train Box Column Base Plates	Closed	10/13/2014	10/13/2014	10/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Structural Steel specification part 3.3E, requires the column base plates to be grouted immediately after plumbing the first tier of columns. Skanska's erection plans prepared by our structural engineer indicate that the grouting of the columns shall be done after erecting the EBF columns and tie-in steel at the bus deck and prior to setting the ancillary bus deck fill-in steel. See EP3.0 and EP3.1 attached for reference. This is done to allow for flexibility when plumbing and aligning the EBF steel. Please confirm that Skanska has the option to follow the EP3.0 notes for the timing of the column grouting operation.			SUGGESTION:			ANSWER: This is a "means and method" issue. The proposal by the contractor to delay the grouting is acceptable, as long as it will not cause any safety issue. Reason for RFI: Clarification of issue of means and methods Accept Suggestion: <input type="checkbox"/>

T-1822	BGP - Seismic Joint Vertical Wall Reinforcing	Closed	10/15/2014	10/25/2014	10/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: The configuration of welded reinforcing on the train box side of the seismic joint is installed as if there were an adjacent horizontal trough similar to the horizontal leg of the joint at the mat slab. There is no such trough on the walls. To accommodate the existing vertical west embed please see the following: 1. An additional #7 hook will be added to the foundation wall that will engage the welded angled bar and the welded deformed anchor - See Sketch #1 2. As necessary to provide 2" clear to the waterproofing or as is required to place foundation wall reinforcing, the welded angled hook may be field bent. Bending will be controlled as to not stress the bar end weld and bend radius will not be less than ACI minimum. See Sketch #1 3. Termination of north and south foundation wall horizontal reinforcing shall be hooked. Hooks shall be oriented per the attached sketch. See Sketch # 1. 4. The interior leg of 5/8" plate terminating at Grid A may be omitted and replaced with a formed edge-See Sketch # 1, reference AI-8881 detail 5. 5. Please confirm that the South East Termination Bars can be installed per attached Sketch #2 . 6. Please confirm that the North East Comer of the East Wall: Within the projection of the seismic joint toward the eastern CDSM wall, the interior foundation wall cross ties were not installed. Please confirm that this field condition is acceptable and that a uniformly detailed east foundation wall will resume in the second lift per the attached sketch #3. S1-3010 does not depict detail of terminated horizontal bars along North and South wall and Seismic Joint embed. Please approve the following sketches.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Items 1-6 and sketches are confirmed. Subsequent segments of the trainbox side of the seismic joint shall have welded reinforcing that mirrors that of the east side, except it will be permitted to have 48" long straight welded bars in lieu of hooks per Sketch #1. The contractor has omitted the last leg of joint plate terminating at Grid A on the western edge of the joint in the first vertical segment. This is acceptable. The contractor may include this plate in subsequent segments or omit and form at their discretion.

T-1823	BGP - Upturned Beam Conflict at GL 21	Closed	10/16/2014	10/26/2014	10/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference: various attached drawings. Sheet S1-2205 shows an upturned beam at GL 21. Due to a conflict with the internal bracing system please confirm it is acceptable to pour the upturned beam portion separately following the D221 pour with a horizontal cold joint between D221 and the upturned beam. Skanska's Anchor Bolt Layout Plan TG0702-070.4 sheet AB14 detail 18 shows the upturned beam column anchor bolts embedded 4'-0 1/2" into concrete. Detail 5 on S1-3621 shows the height of a typical upturned beam at 3'-3" above top of Lower Concourse concrete. This results in the anchor bolts being embedded through the upturned beam and the Lower Concourse. Please confirm it is acceptable to utilize couplers as seen in attached SKA to facilitate anchor bolt installation in this specified location.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed that it is acceptable to pour the upturned beam portion separately. 2) Confirmed that it is acceptable to use couplers to facilitate anchor bolt installation in this specific location.		
T-1824	SSS - Column Base Plate Grout Pads	Closed	10/16/2014	10/16/2014	10/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Skanska and their construction engineer, Hassett have evaluated several options for setting and securing the train box columns in position until the grouting operation has been complete. Based on Hassett's calculations the only feasible option to adequately stabilize the column is to utilize shim packs at each corner of the base plate. Due to the congestion of rebar at the base plate block-out, there is currently insufficient room to set shim packs on a flat surface, therefore Skanska propose to pour 10"x10" grout pads at each corner to achieve the required uniformed surface for shim packs, see attached SK-5.0 for clarification. Skanska propose to use TG07.2's Dayton Superior grout, previously approved in submittal TG0702-500.			SUGGESTION: Webcor expects Skanska to have these pads poured by early next week to allow the grout to be cured and achieve 8,000 PSI at 7 day break.		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed procedure is acceptable in concept. Contractor and Sub-contractor, WOJV, Skanska and their construction engineer, shall confirm the grout pad is adequate for supporting the construction loads imposed and confirm that this meets all safety regulations. Reasons for RFI: Verification for issues on means and methods.

T-1835	BGP - Removal Sequence of Internal Bracing System Within Zone 4	Closed	10/21/2014	10/31/2014	10/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Further to last Monday's (10/13/14) meeting with TJPA, Arup, Turner and WOJV where the removal sequence of the internal bracing system within the Zone 4 East end Diaphragm was discussed, please confirm the following is acceptable:					TT's response:		
Remove the walers which are connected together in a sequence referred to as the observation method where one waler on the north and one on the south as well as the two cross lot struts attached to the walers would be de-stressed and removed at any one time. Once the first pair of cross lot struts have been de-stressed and removed and little or no movement has been recorded on the WOJV installed survey points or the Arup inclinometer's over the following 24 hours after de-stressing, the contractor can then proceed and begin de-stressing and removing the next pair of walers and struts to the east. This removal method would then be repeated until only four cross lot struts at that particular level remain; which are numbers ST-65 to 68.					The contractor shall submit necessary structural calculations in a Submittal to justify the proposed re-shoring procedure will not overload the train box structure, e.g., eliminating walers might cause the punching shear failure of the wall at the strut locations; it might also cause overstressing (in bending) of the train box wall.		
If acceptable, please specify 1) the movement tolerance for a given waler removed, 2) the observation period for analyzing movement, and 3) the acceptable means for monitoring for movement (survey, inclinometer, or both).					In addition, if any stress induced to a train box structure element as a permanent stress (e.g., vertical bending of the wall) that is additive to the stresses that the train box will experience during its service life (including effects of earthquakes), this stress shall be kept minimum (say not more than 10% of the capacity of the train box structure element).		
					Reason for RFI: Clarifications on means and methods issue.		
					Arup Response:		
					We take no exceptions.		
					The movement tolerances are those in the specifications.		
					We take no exceptions to the proposed monitoring duration.		
					Arup can produce manual inclinometer readings after each waler segment is distressed. Installation of targets on the inside face of the shoring wall and monitoring these targets during this activity is recommended.

T-1837.1	SSS - Cast Node Repair LAST Temperature	Closed	10/22/2014	11/01/2014	10/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisJim Bowers							
REQUEST: The AWS D1.8 Structural Welding Code - Seismic Supplement, and the Contract specifications, require that either: 1) Each lot of weld electrodes (filler metals) used to make demand critical welds (DCW) must be tested in accordance with AWS D1.8 Annex A 2) Filler metals may be exempt from individual lot testing, provided the electrode manufacture perform three (3) separate lot tests in accordance with Section 6.3.8.1 Additionally, the testing specified shall be not less than the Lowest Anticipated Service Temperature (L.A.S.T.) plus 20 degrees F (AWS D1.8 Section 6.3.6). Bradken has made repairs to the ground node castings utilizing Hobart Brothers weld electrode in one, or both, types, of TM-771 and FabCO RXR (data and test reports attached). The weld repair(s) were not considered DCW welds, and were made in accordance with an approved repair procedure in conformance to the contract specifications. The attachment of the Ground Node to the Transfer Girder is specified in the drawing at the girder flange/web to casting interface to be a DCW. The required weld will intersect with this previously repaired weld metal. The Fabricator has qualified a welding procedure for the specified base metal combination (ASTM A572-50 to ASTM A216WCC). It is the understanding of the Code that this		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Based on the data provided by W/O to date (see the attached), it appears that they will meet AWS D1.8 requirement. However it is contractor's responsibility to obtain the complete test data to confirm. Since the data was originally requested by OIW, it is their own risk if they decide to proceed without the complete data. 2). The CVN test requirement specified in the contract document may not be altered. Carlos de Oliveira 10/22/2014 RESPONSE: Section A3.3 of AISC 341 stipulates a minimum CVN of 20 ft-lb at 70 °F for base metals of heavy sections of structural steel in the SFRS. Note that the casting specification for the Transbay project requires the castings to exhibit a minimum CVN toughness of 25 ft-lb conducted at 70 °F, which exceeds the aforementioned requirements of the code. AISC 341 also stipulates CVN requirements for weld filler metals. The code requirements for the CVN of base metals is less stringent than the code requirements for weld filler metals. This is due to the fact that weld metal is less ductile than rolled (or cast) steel base metal and because welds have significant residual stresses locked into them during welding.

However, the testing temperature was 70 degrees F, not at the Contract required L.A.S.T. of 25 degrees F plus 20 degrees F (45 degrees F).</p> <p>Please confirm that the three (3) ASW D1.8 Lot Tests for the TM-771 and the FabCO RXR weld electrode performed at a L.A.S.T. temperature of 70 degrees F, in lieu of the required 45 degree F, for the weld repair are acceptable:</p> <p>1) Specifically to Ground Cast Node 5-02 And 2) To any future repairs in the DCW weld zone of the ground cast nodes</p>						
T-1837.2	SSS - Cast Node Repair LAST Temperature	Closed	10/31/2014	11/10/2014	11/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST: The AWS D1.8 Structural Welding Code - Seismic Supplement, and the Contract specifications, require that either: 1) Each lot of weld electrodes (filler metals) used to make demand critical welds (DCW) must be tested in accordance with AWS D1.8 Annex A 2) Filler metals may be exempt from individual lot testing, provided the electrode manufacturer perform three (3) separate lot tests in accordance with Section 6.3.8.1 Additionally, the testing specified shall be not more than the Lowest Anticipated Service Temperature (L.A.S.T.) plus 20 degrees F (AWS D1.8 Section 6.3.6).		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
				1) Confirmed that AWS D1.8 lot tests for TM-771 weld electrode performed for Cast Node 5-02 is acceptable.			
				2). TM-711 weld electrode is acceptable to any future repairs; but complying to AWS D1.8 CVN requirements is not required for cast node repair.			
				Reason for RFI: Shown in contract documents.			
				Carlos de Oliveira 10/31/2014 RESPONSE: See attached document for response.			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Bradken has made repairs to the ground node casting 5-02 utilizing Hobart Brothers weld electrode in TM-771 (data and test reports attached). The weld repair(s) were not considered DCW welds, and were made in accordance with an approved repair procedure in conformance to the contract specifications.</p> <p>The attachment of the Ground Node to the Transfer Girder is specified in the drawing at the girder flange/web to casting interface to be a DCW. The required weld will intersect with this previously repaired weld metal. The Fabricator has qualified a welding procedure for the specified base metal combination (ASTM A572-50 to ASTM A216WCC). It is the understanding of the Code that this additional weld filler metal of the casting repair to be included in the final girder to casting weld must comply with the AWS D1.8 Seismic requirements in order to be in conformance to the Code provisions.</p> <p>The manufacturer has lot tested three (3) individual lots of TM-771 in accordance with the AWS D1.8 requirements. (documents attached). In addition to the test results provided at 70 degrees F, Hobart has provided additional test data from three (3) lots at 0 degrees F. These additional test results exceed the contract required L.A.S.T. of 25 degrees F plus 20 degrees F (45 degrees F).</p> <p>Please confirm that the three (3) ASW D1.8 Lot Tests for the TM-771 weld electrode performed at a L.A.S.T. temperature of 0 degrees F for the weld repair are acceptable:</p> <p>1) Specifically to Ground Cast Node 5-02 And 2) To any future repairs in the DCW weld zone of the ground cast nodes</p> <p>Note: Additional test results for Fabco RXR weld electrodes will be provided when they are available.</p>

T-1838	SCS - 4th Lift Foundation Wall - Moment Frame Beam Alignment	Closed	10/22/2014	11/01/2014	10/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: See attached sketch. This RFI is related to RFI T-1467.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Ground level moment frame beams tie into the foundation wall. Due to level shoring towers, the moment frame beams will be step in elevation. The level moment frame beams will be interfacing with the sloped 4th lift foundation wall causing issues in alignment and constructability in the remaining foundation wall. SCCI proposes to have the top of 4th lift be 3'-11" below top of slab. This method will clear the alignment issues, provide a starter wall edge and will result in a 1"±1/4" encroachment of 4th lift wall into the moment frame beam.					The proposed encroachment is acceptable provided that:		
Please confirm it is acceptable for the 4th lift encroach into the moment frame beam by 1"± 1/4"					1. The specified placement elevation of intersecting reinforcing is not affected.		
					2. In the event of a wall overpour, all wall concrete interfering with the specified placement of intersecting reinforcing will be removed.		
					3. In order to meet the intent of contract specified clear cover (to intersecting reinforcing), the encroaching wall lip within the projection of intersecting framing shall have a roughened chamfer bushed down to the soffit of the intersecting framing.		
T-1839	SCS - Roof Top Bracket Attachment at Protected Zone	Closed	10/22/2014	11/01/2014	10/31/2014	Potentially	<input type="checkbox"/>

REQUEST: Please confirm it is acceptable to substitute HRC-555 T-Heads in lieu of standard hooks at 4-ft deep East-West Beams where they frame into Moment Frame Beams in Areas 11-16. Please reference the attached drawing for example.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
						1. HRC 555 T-Heads may be used for beam long bottom bar end conditions in lieu of hooks where beam long bottom bars are placed above the bottom bars of the supporting member.	
						2. HRC 555 T-Heads shall be staggered.	
						3. HRC 555 T-Head bars may be spliced to beam long bottom bars where the detailer has verified, on a case by case basis, that the resulting clear spacing does violate ACI clear spacing requirements and does not hinder concrete placement and consolidation. In this determination, consideration shall be given to the presence of beam short bottom bars. As a reduction in clear spacing will occur with the introduction of splices, the detailer will verify the clear spacing and determine the appropriate splice category per Detail 1/S3001.	
						4. Splices, when used, shall begin at the face of the supporting member.	
						5. Splices, when used, shall be alternated in single spans.	
						6. Splices shall not be used in continuous spans.	
						7. Splices shall not be used that overlap bundled bars.	
						8. RFI response may be used in beams other than 48" deep beams.	
						9. Contractor is responsible for evaluation and the selective implementation of the proposal for conformance with ACI and contract document clear spacing and lap requirements.

T-1841	SST - Stair 304 Clarifications	Closed	10/28/2014	10/28/2014	11/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: Olson and Co. Steel			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Q1: At the second level final landing, the stair stringers are to be supported per connection 3/S1-7601. There is no supporting beam on plan. Please clarify missing information for beam size. Q2: There is a stair landing elevation discrepancy: A/7007, 1/A1-7506 show the stair landing elevation at 39'-9. This will put the missing beam noted in Q1 at elevation EL. 39'-8 3/4" for the required 1/4" landing plate shown in the detail. 3/S1-7006 shows the stair landing at top of slab 39'-4 1/2" and a landing support 7 1/2" below at EL. 38'-9. Please clarify missing beam elevation. Q3: The architectural detail 1/A1-7506 and structural detail 3/S1-7601 show completely different support details. Please clarify which of the architectural or structural stair support details should take precedence -typical for all stairs.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The stair stringers shall be bent stringers and shall be welded to the bent plate at the south edge of the opening on 2nd floor level. Stair landing shall be supported on the flat portion of the bent stringers with connection between plate and stringers similar to detail 4/S1-7601. At the east stringer, the flat portion of the stringer shall be a C10x30 channel as shown in the attached sketch SKS-0427. Also, see responses to RFIs T-1266, T-1266.1 and T-1266.2. 2) Stair support beam is not missing. See response to 1). 3) Detail 3/S1-7601 governs over 1/A1-7506 at ST304 with the exception that the 1/2" plate at the end of the stringer shall be welded to the bent plate. Typically architectural drawings refer to structural drawings for stringer support details and in such cases structural details shall govern. The Architectural detail has been revised to match structural detail sketch SKS-0427, see attaches SKA-4296 & SKA-4297.	
T-1842	SST - Stair Stringer to Landing Beam Conn at the Offset WT	Closed	10/28/2014	11/07/2014	11/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: Olson and Co. Steel			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: (comments are revised in blue on attached sketch) Channel end plates are usually flush with the back and the tow of the channel. Olson has projected the end plate 1/2" past on both sides for welding to the supporting WT. Please confirm this is acceptable.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> AAI's Response: The plate cannot project into the stair tread clearance because it would cause a tripping hazard. There is no issue with the plate projecting outward at the Toe of the Channel. TT's Response: Welding the end plate to the WT from back side as shown on SK-RFI2 in the RFI is acceptable.	
T-1843	SST - Edge of Slab for Stair Opening at Stair 403	Closed	10/28/2014	11/07/2014	11/03/2014	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
From: Webcor Construction LP Co-Author: Olson and Co. Steel			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Q1: Stair 403 design is setup for 5'-6 stair clearances at ascending and descending flights and a 9 1/2" guardrail clearance. This creates a total wall to wall clearance of 11'-9 1/2". The slab opening at the concourse level in the north to south direction is currently at 12'-0 1/2". But the opening must be 12'-1 1/2" for the required clearances. See attached sketches for layout information. Please advise.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> See detail 1 & 5 on A1-7011 and stair section c/A1-7111 . Detail 1 shows the plan layout for stair 403 rising from Train platform level to Lower concourse level. It notes a 5'-6" stair flight width with a 7" guardrail clearance, totaling 11'-7" wall clearance. This 11'-7" wall clearance is carried through the Lower Concourse slab. The south flight face of wall dimension from Grid line E is 6'-0", the south edge of slab opening at the lower concourse level is 6'-1" from gridline E. The North Stair flight only shifts to the north 2-1/2" above the Lower concourse level slab. In summary, the central guardrail clearance from train Platform Level to Lower Concourse Level is 7" and from Lower Concourse Level to Ground is 9-1/2". There is no conflict with the Architectural Documents and revision to the slab edge opening is not required.	
T-1844	SST - Checkered Plate Stair Tread Clearance	Closed	10/28/2014	10/28/2014	10/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: Olson and Co. Steel			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Q1: Architectural design for the setup of checkered plate treads shows the vertical bent lip fitting up tight with the bottom of tread's riser. As illustrated in the attached sketch, the vertical bend of the lip creates a natural radius that will clash with the riser if you were to create this tight fit. Please advise if it's acceptable to back-off the riser portion of the tread by 3/8" to create a gap that clears the lip radius.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. 3/8" gap is acceptable as shown on the sketch.

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST: Q1: Per the stair layout dimensions provided on 2/A1-7012, stair 401 nosing location at landing elevation 39'-9 will go 7" past the supporting column and beam per 3/S1-7009. As a result, the designed conneciton called out 10/S1-7601 will not work. The cantilevered beam has no purpose in this scenario. Please see included sketch and advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			AAI's Response: A sacrificial gage plate should not be required at this location, if the stair stringer extend to the back of landing kick plate return. TT's Response: The cantilevered portion of the W10x22 beam shall be waived. The slip connection at the base of the stringer per 10/S1-7601 shall be provided at the W10 beam perpendicular to the stringer with the 3/4" dia. bolt attached to beam flange. TT: We categorize this RFI as no cost clarification.

<div><div>Co-Author: Olson and Co. Steel</div><div>Avel Solomon</div></div>							
<div>REQUEST:<div>1) There does not appear to be any specific detailing that allows for transverse drift to occur, without inducing loads in the stairs themselves. Is there an expectation that the stairs can handle this displacement-induced load demand? 2) We would like to modify the base detail of the typical stairs in order to add a second base plate with a horizontal slot in the transverse direction, in order to accommodate transverse drift without inducing load on the stairs. Do you have any issues or concerns with that? 3) We would like to ensure that there are adequate seismic gaps at the perimeter of the stair framing, in order to avoid inducing any horizontal seismic loading on the building framing members at the stair perimeter. In the process of accomplishing this, we may need to reduce slightly the overall widths or lengths of the stairs themselves ¿ possibly by one or several inches. Are there any specific reasons that this could not be done? Would this be acceptable to the design team? 4) We will list the vertical and horizontal stair reactions at the perimeter of the stair framing. Do you have any specific format that we should attempt to use for this effort? 5) We understand that the review of the stair drawings and calculations will not proceed through the City and County of San Francisco, but instead has been delegated to the design team. Is this correct? Please elaborate. 6) Please let us know the best persons to coordinate our efforts with, both at Thornton Tomasetti and at Pelli Clarke Pelli Architects.</div></div>		<div>SUGGESTION:</div>	<div>ANSWER: Accept Suggestion: <input type="checkbox"/></div> <div>1. The subcontractor shall design and detail the stair framing in accordance with the seismic design criteria specified in the General Note CD-6.</div> <div>2. See the response #1.</div> <div>3. Widths and lengths of the stairs cannot be reduced because their egress capacity is fixed to the given dimensions.</div> <div>4. The reactions shall be tabulated in sufficient clarity that can be understood by the EOR without further back and forth clarification. Each load case and load combination shall be clearly identified.</div> <div>5. Your statement is not correct. The Contractor shall obtain all approvals required by the Authorities Having Jurisdiction for the work designed and engineered by the Contractor. Contractor should contact TJPA and Authority Having Jurisdiction to determine what is required related to approvals by the Authorities Having Jurisdiction (Permitting Authorities). See Contract Document specifications for shop drawing submittal requirements. Design Team will NOT be performing a Peer Review or replacing the responsibilities of the Authorities Having Jurisdiction.</div> <div>6. If W/O agrees, the Design Team - TJPA Representatives may participate in the coordination sessions. However, the communication between Subcontractor and the Design Team - TJPA Representatives must be through General Contractor.</div>

T-1854	SCS - Roof Top Pole Foundation Bolted Connection	Closed	10/29/2014	11/08/2014	11/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: S1-3281 Detail 4 Roof park security pole and mast light foundation is anchored using bolts going through an angle iron and metal deck. For constructability reasons it is essential that access remains open on the roof top for operations needing crane and man lift support. Please confirm that it is acceptable for Shimmick to place the anchor bolts through the deck after the concrete deck placement and not before the concrete is placed resulting in access obstructions.			SUGGESTION:		ANSWER: Confirmed. Accept Suggestion: <input type="checkbox"/>		
<hr/>							
T-1855	BGP - Lower Concourse GL16 Escalator Opening As-Built Locations	Closed	10/29/2014	11/08/2014	10/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please see the attached surveyed As-Built Locations of the Escalator Blockouts at GL 16. As shown the thinner portion of the Escalator BO at GL 16/C is shifted approximately 4 1/2" South of the planned location(centered on larger portion of BO). Similarly, the thinner portion of the Escalator BO at GL 16/G is shifted approximately 5 5/8" North of its planned location. Please confirm the As-Built locations are acceptable.			SUGGESTION:		ANSWER: The as-built escalator slab edge locations, described in this RFI, are not acceptable. Remedial action is required to rectify slab edge to the designed location. Accept Suggestion: <input type="checkbox"/>		
<hr/>

	<p>1. It is acceptable to use Cemex mix design # 1558218, per submittal TG0600-204, when pouring the stem walls with elevated slabs. Reference RFI T-1394 - Sketch SKK-0353. Both RFI T-1394 - Sketch SKK.-0353 and submittal TG0600-204 are attached.</p> <p>2. Due to finish wall being concealed from view, please confirm the walls can remain unfinished.</p>		#1558218.				
			AAI response to Item 2:				
			Confirmed. The knee walls are inboard of the future platform walls and below the platform level and will eventually be concealed, therefore the walls can remain unfinished.				
T-1856.1	SCS - Knee Wall Finish	Void	11/14/2014	11/24/2014		Potentially	<input type="checkbox"/>

Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per RFI T-1856 response question #2 was not answered:							
Due to finish knee wall being concealed from view, please confirm it is acceptable the walls remain unfinished (not sacked & patched after stripping).							
T-1857	SCS - Roof Top Perimeter Wall Finish Requirements	Closed	10/29/2014	11/08/2014	11/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per the meeting with WOJV and Designers on 10/15/14 regarding changes to the roof perimeter wall in ASI 124 and RFI T-1793 response, Shimmick was to receive the new finish requirements for the exterior face of the wall and a delineation line for the new finish requirements. Shimmick has not received this information yet. Please provide.		The Roof Park perimeter concrete wall shall be finished per revised specification Section 03 30 02 paragraph 3.6 H (enclosed). Additionally, the wall will receive an elastomeric coating specified in Division 09. Refer to enclosed SKA-4265R for extent of concrete finish specified on Section 03 30 02 3.6 H and extent of concrete coating.					
T-1858	SCS - Opening blockouts through Ground Level	Closed	10/30/2014	11/09/2014	11/12/2014	Potentially	<input type="checkbox"/>

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

Co-Author: Shimmick Construction Company, Inc. Henry Chiang

REQUEST:

Due to the North to South shoring along the Lower Concourse Level, the concrete partition walls cannot be built until the Ground Level is poured and struts have been removed.

Since the Ground Level will be completed before the partition walls are built, SCCI proposes installing blockouts in the Ground Level above the walls in order to complete the concrete pours and vibrate for the partition walls in GL 10 to GL 13.

The blockouts will be 8" diameter circle, the rebar detail will be the one shown at 9/S1-5003. The blockouts will not be farther than 5' O.C. or closer than 2' 6" O.C. See the attached drawing for blockouts layout.

Please confirm this is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

TT response:

In concept, blockouts in formed concrete and fill-on-metal-deck are acceptable for the purpose of pouring partition walls. Please provide specific details for each case for design team to review. The referenced Detail 9/S1-5003 is not applicable to formed concrete and does not meet requirements stated below.

Structural Requirements for Formed Concrete:

- Blockouts shall only be made in concrete slabs and not in beams.
- The pourback shall be secured to the blockout.
- Pourback shall not impinge on 1 1/2" minimum clear gap between soffit and top of partition.
- Blockout shall not be larger than reinforcing spacing.
- Reinforcing shall not be cut.

Structural Requirements or Fill on Metal Deck:

- Blockouts shall permit patching of metal deck prior to pourback with same gage sheet metal or matching metal deck.
- Reinforcing shall not be relocated or cut.

Details shall address waterproofing of cold joint in penetrations located outside of building envelope.

AAI response:

Further to TT's response, WOJV have indicated that the slab penetrations will be poured back before the slab is waterproofed.

Contractor to clarify and describe how 1 1/2" minimum clear gap between soffit and top of partition will be maintained during pour and firestopped after.

T-1859	SCS - Vertical Trim Bar Termination	Closed	10/30/2014	11/09/2014	11/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Please reference drawing 4/S1-3207, RFI T-1666, RFI T-1698 and see attached spreadsheet listing out the length of trim bar to be embedded into poured spans of 3rd lift for relevant openings. The foundation wall penetration detail 4/S1-3207 requires vertical trim bar of LTS + W above and below the opening. RFI T-1666 and RFI T-1695 responses have noted that a hook or head may be used to terminate trim bars where bar length exceeds height of wall. However the third lift will require embedded trim bars for all foundation wall openings where this detail is applied. seer proposes to terminate trim bars with hooks at the bottom of the 4th lift, similar to RFI T- 1666's response for the top of wall. Please confirm if terminating trim bars with hooks at the bottom of the 4th lift is acceptable or provide parameters for cases where this would be acceptable.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The proposal is not acceptable. The contractor shall coordinate between packages and provide trim reinforcing in the third lift where it is required. For locations where the contract reinforcing was not provided in the poured third lift (various locations between Grids 6 and 18 as stated in the RFI attachment), resolution will occur through the NCR process.

T-1863	SSS - E510, E511, & E512 Missing Slab Information	Closed	10/31/2014	11/10/2014	12/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 673 SK1 for items 1 to 4: 1) The model and drawings match the elevation shown on S1-2305 which shows T/SLAB 12.73'. Confirm the TOC 12.58' shown on A1-2865 is correct and the model/drawings are to be revised. 2) Confirm the loose 1/4" bent plate over the beams is an acceptable edge between the knock-out and permanent slab since a structural detail is not provided. 3) Detail 6/S1-5004 noted on S1-2305 does not address the knock-out slab condition at a dropped slab condition as occurs here. Provide a detail showing the edge of slab requirements at both the top and bottom slabs. 4) Supply a detail showing the edge of slab requirement for the low slab.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Acceptable, except tack weld the ¼" bent plate to the two W16 beams. Also, the edge bent plate (A8525 in the submittal) shall be welded to the W36x160 beam (north of member A6674) and not to the W16 beam (A7949). This also applies to the bent plate at the south side of the escalator pit. Welding the edge bent plate to the W16 beam will make it difficult to remove the W16 beam for a future opening. 3) Provide slab edge details per typical detail 8/S1-5000 at the high and low slabs. For escalator pit at E510, E511, & E512, the north and south pit walls will be constructed with a bent metal plate. Refer to SKA-4294 & SKA-4295 and RFI TG7.3-065 response. 4) See response to 3).

REQUEST:			SUGGESTION:		ANSWER:		
Accept Suggestion: <input type="checkbox"/>			Confirmed.				
The dimensions shown in Field Order 027 have been revised in ASI-127 as shown. Please confirm that the beam locations remain the same and only the bent plate for the edge of slab shall be modified to accommodate the revised opening dimensions.			TT: We agree with the reason for request: Verification.

From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc Ref: T-1875, S1-2304 (ASI 128) Location: GL 15-16 Add'l Doc Ref: CD RFI 672.1 SK1 The noted W33 beams were located 9" from the edge of slab opening. ASI-127 revised the dimensions from the edge of opening to the W33's as shown. RFI T-1875 confirmed that the beams may remain where they were prior to ASI-127 but the edge plates are to be moved to suit ASI-127. That will result in the slab opening dimensions changing to what is shown in blue. Confirm that is the intent.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> There is to be no change to the Architectural edge of slab. The beams and bent plates are to be located and sized as per the Architectural Edge of slab drawings submitted in ASI-0128.		
T-1875.2	SSS - ST401 Slab Opening Dimension Clarifications	Closed	02/13/2015	02/23/2015	02/23/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Turner Construction Company Phil Militello				
REQUEST: Contract Doc Ref: T-1875.1, T-1875, S1-2304 (ASI 128), S1-2304 (ASI 127) Location: Zone 2, Ground Level, GL 15-16 Add'l Doc Ref's: CD RFI 672.2 SK1 This is a follow-up RFI to RFI T-1875.1. The noted dimensions were revised on S1-2304 in ASI-127 from 9" to 11" on the north side and from 9" to 8 1/5" on the south side. Since moving the steel to suit these revised off-set dimensions would be substantial, RFI T-1875 confirmed that the steel could remain where it was and the edge plates could be moved to suit these revised off-set dimensions. The result of the response in T-1875 was that the architectural slab opening changed as shown on the left side. The response in RFI T-1875.1 now states that the architectural slab opening cannot be changed and must match A1-2864. Which RFI response is correct? Please note that the field work drawings to revise the edge plates to suit ASI-127			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The opening dimensions and architectural edge of slab on A1-2864 did not change in ASI-0127. Opening size was updated in the structural drawings in ASI-0127 to match architectural. This changed the edge distances to the W33 beams north and south of the opening which remained in their place. So responses to both RFIs T-1875 and T-1875.1 are correct. Contractor to provide revised bent plates per new edge distances shown on structural drawings. Reason for RFI (TT): We disagree with the reason for RFI: Insufficient Information. We categorize this RFI as previously answered. Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

REQUEST:			SUGGESTION:		ANSWER:		
See attached CD RFI # 677 SK1: The connection for the W16x26 to the W40 is currently per detail 1/S1-5028 but it interferes with the connection for the W16x26 to W16x26 as shown. Please provide a connection for the W16 to W40 and W16 to W16.					Accept Suggestion: <input type="checkbox"/>		
					The three W16x26 beams in the north-south direction shall be lowered so that T/steel of these beams is flush with the underside of W16x26 beams in the east-west direction. Provide double angle connections per 1/S1-5010 at the W16x26 beams framing into the W40x503 beam. W16 to W16 beam connections shall be as shown in the attached sketch SKS-0429. Note that detail 1/S1-5028 is only applicable at beams with "*" symbol.		
					TT: We disagree with the reason for request: Engineering Conflict. We categorize this RFI as no cost clarification.

T-1882	SCS - Geothermal Manifold Conflict at Field 7, 8, and 11	Closed	11/04/2014	11/14/2014	11/12/2014	Potentially	<input type="checkbox"/>
<div><div><div>From: Webcor Construction LP</div><div>Claude Titcher</div></div><div>To: Turner Construction Company Phil Militello</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div>							
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please Reference RFI's T-1042 and T-1179				The configuration shown in RFI T-1882 does not comply with the Design Team response for RFI T-1042.			
As shown in the attached mark up, the geothermal manifolds penetrate the 4th lift walls. RFI's T-1042 & T-1179 confirmed elevations for the geothermal manifolds at GL 17.5 (Field 7 & 8) and GL 26.5 (Field 11).				Response to RFI T-1042 stated: "Riser penetrations into the building must occur within the beam space of the ceiling of the lower concourse level. The elevations shown on the sketches fall below the beam pockets and conflict with future emergency ventilation ducts within the building. Elevations shall be modified and resubmitted to verify that the pipes enter the building within the beam space. Risers 7 & 8 may be greater than 14'-0" below finished grade and should be reviewed by ARUP for confirmation."			
Per the confirmed manifold elevations, the upper sleeves at both locations enter the 32" roadway slab.							
Please provide the designers' intent for these manifolds to enter the roadway slab at only these locations. Please provide direction.				RFI T-1179, it's related sketches and the mentioned discussions, were entirely regarding the piping installation passing underneath future ductwork. It was not related to the sleeve heights which had already been dealt with in RFI T-1042.			
				There is no design intention, nor any confirmation, for the geothermal piping to enter the roadway slab at these locations.			
				The geothermal manifold pipe penetrations are to be lowered to avoid interference with the roadways slabs. Please submit modified pipe elevations, avoiding interference, as requested previously in RFI T-1042, together with a corrective action plan for review by the Design Team.

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 686 SK1 & SK2 for items 1 to 6: The design intent in this revised connection for the W40 beams east of Grid 26 is not clear as it contradict various other details as listed below. The noted beams are currently connected to the perimeter beams per S1-8003. Please review and confirm for items 1 to 5: 1) Indicates W40 beam supported by perimeter beam and W30 at the opposite end. a) Confirm the connection to the perimeter beam is per 1/S1-8003 at the CP5 location. b) Confirm the other end of the W40 may be connected to the W30 per 1/S1-5011 except with a full depth shear plate and 7 bolts as there is insufficient room for a double angle connection per S1-5010. See enlarged typical detail on SK1 2) Confirm the connection for the W40 to the perimeter beam is per 1 & 1B/S1-8003 at the CP5 location. 3) Indicates W40 beam supported by perimeter beam and BU-40 at the opposite end. a) Confirm the connection to the perimeter beam is per 1/S1-8003 at the CP5 location. b) Confirm the other end of the W40 may be connected to the BU-40 per 1/S1-5011 except with a full depth shear plate and 11 bolts. 4) Indicates W40 beam supported by perimeter beam and W24 at the opposite end. a) Confirm the connection to the perimeter beam is per 1/S1-8003 at the CP5 location. b) Confirm the other end of the W40 may be connected to the W24 per 1/S1-5011 except with a full depth shear plate and 6 bolts. 5) Indicates W40 beam supported by perimeter beam and W40 at the opposite end. a) Confirm the connection to the perimeter beam is per 2/S1-8003 at the CP6 location with the brace omitted and the W40 connected to the 1 1/2" thick plate with 11 bolts per 1/S1-5011. b) Confirm the other end of the W40 may be connected to the W40 per 1/S1-5011 except with a full depth shear plate and 11 bolts. 6) If the noted connections are to be revised to suit S1-			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			1a) Confirmed.				
			1b) Confirmed.				
			2) Connection at the noted beams is per 1 and 1B/S1-8003, except, that the number of bolts, bolt sizes, bolt spacing and edge distances shall be 1/S1-8000.				
			3a) Confirmed.				
			3b) Confirmed.				
			4a) Confirmed.				
			4b) Confirmed.				
			5a) Confirmed.				
			5b) Confirmed.				
			6) The intent of the revision to detail 1/S1-8000 was to revise connections (bolt size and configuration) for beams along moment frame lines only (shorter beams in between not affected). Detail 1/S1-8000 will be updated to clarify this intent. LEV may be changed to 4" to fit the bolts within the available connection length.				
			TT: We disagree with the reasons for request: Engineering Conflict and Insufficient Information, agree with Verification . We categorize this RFI as no cost clarification.

T-1898	SSS - Light Column - Holes for Electric Lighting System	Closed	11/08/2014	11/18/2014	11/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please provide hole locations and orientations required for the lighting system cabling on the top ring of the light column (EL 98'- 9"). No detail is provided in A1-4650.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> GC to coordinate conduit routing locations and submit for Architect's review.				
T-1899	SST - Terrazzo SS Riser Clarification	Closed	11/08/2014	11/18/2014	11/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST: Attached are drawings A1-7511 and A1-7512 regarding the details for the stainless steel risers at the terrazzo stair treads (affected stairs are 205, 307, 308 and 309). Need clarification on the following items: Stair 307 specifies etched risers, while stairs 205, 308 and 309 are to be perforated. Please clarify the desired "etch". Do the risers on stair 307 have the same hole-pattern as stairs 205, 308 and 309? Is the etch an alternate finish? Please clarify design intent. With regard to the hole pattern, there is not enough information for the desired stagger or border (if required). Please clarify design intent. Olson Steel priced all of the risers as grade 304 stainless steel. Please confirm this is the desired grade versus grade 304L, 316,316L etc. Olson Steel priced all of the risers with a mill finish.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Confirmed, the etch-pattern for stair 307 is the same as hole-pattern for stair 205,308, & 309. The etch is not an alternate finish. Refer to SKA-4301 2. The etch-pattern and perforated-pattern are to use 3/4"Ø circle. The pattern is to start at the center on the plate and have a minimum of 1" side border. Refer to SKA-4302 for updated information. 3. Provide 316 or 316L Stainless Steel are preferred. 4. Confirmed, #4 brush

T-1900	SST - Middle Handrail Location Clarification	Closed	11/08/2014	11/18/2014	11/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Olson and Co. Steel		Avel Solomon					
REQUEST: Please see attached for a handrail location question. Olson has located the center stringers so that the handrail clearances are equal-equal. This creates uneven stringer to stringer clearances. Olson has done middle stringer centered between stringers and centered between handrail and it seems both meet code. Please note the architectural drawings have not located them correctly. Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The center stringers will be located Equal distance between the stair handrail typically as shown in attached sketch with originating RFI T-1900.			
T-1901	SST - Stair 304 Base Support	Closed	11/08/2014	11/18/2014	11/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Olson and Co. Steel		Avel Solomon					
REQUEST: As per the edge of slab setup dimensions on A1-2863, the stair base support expansion anchor called out in detail 11/S1-7601 will be 1" from the edge of the slab. With a 3/4" DIA bolt and a 1/4" edge plate, that makes for only 3/8" total clearance of bolt and slab edge. This is not enough room for the expansion anchor to work as designed. Please advise on a solution.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Move the curb and edge of slab as shown in attached sketch SKA-4314 so that the expansion anchor is centered on the curb per detail 11/S1-7601. Provide kicker braces at the W16 stair support beam as shown in the attached sketch SKS-0430.

T-1902	SST - Terrazzo Tread Clarification	Closed	11/08/2014	11/18/2014	12/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Adamson Associates, Inc. Paul MacPhail	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST: One of the specified terrazzo tread suppliers, Wausau, has indicated that using only marble chips in the aggregate mix for the terrazzo stair treads is "unusual" as per Spec Section 09 66 14, section 2.4.C. Olson Steel priced the terrazzo stair treads from Wausau per this spec. Please confirm the design intent does not include any glass/mirror into the aggregate mix. Under Spec section 09 66 23 Epoxy Terrazzo Flooring, section 2.3.B.5 the terrazzo stair landings are specified to use an aggregate mix of 50% recycled glass/mirror and 50% natural marble/stone. The aggregate mix for the landings differs from the tread; please confirm this was the design intent.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Confirmed, terrazzo treads aggregate mix does not include glass/mirror. 2. The aggregate mix for the landings TERR-2, same as for the landings. Refer to the attached sections 09 66 23 and 09 66 14.			
<hr/>							
T-1903	SST - Stair 401 Structural Framing Clarification	Closed	11/08/2014	11/18/2014	11/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Olson and Co. Steel Avel Solomon							
REQUEST: Q1. From the General Structural Notes note CD-13 on sheet S-0006, it is our understanding that the stair structure should not impose torsion on the superstructure members. However, for Stair 401 sheet A1-7111 shows the stair columns located eccentrically from the centerlines of the superstructure beams. In addition, Structural sheet S1-2404 calls out detail 9/S1-5027 which shows the superstructure beam supporting the stair column eccentrically. Is it acceptable to detail this connection as shown in 9/S1-5027 even though it applies torsion to the beam? Q2. Should the 3/8" side plate shown in detail 9/S1-5027 be installed for the full length of the beam?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Structural beam shown in detail 9/S1-5027 is designed considering the torsion induced by the eccentric stair post. Similarly, in detail 1/S1-7600 kicker braces have been provided at the structural beam to take torsion induced due to eccentric posts. General Note CD-13 applies where structural details do not show any kicker braces, stiffeners or side plates at the support beam or in cases where the eccentricity per contractor's design exceeds those shown in the structural details. Another example where General Note CD-13 would be applicable is elevator machine beams. Per detail 8/S1-5004 elevator machine equipment needs to provide bearing over full width of the beam flange to prevent torsion in the machine support beams. 2) Length of side plate to match length of opening per note 2 in detail 9/S1-5027. TT: We categorize this RFI as no cost clarification.

T-1904	BGP - Partition Wall Top Brace Layout	Closed	11/11/2014	11/21/2014	11/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: See attached for SCCI's interpretation of the layout of the top braces for the Train Level Partition Walls in Area 3 and 4 based on the structural details in the S1-9000's. Please confirm that the locations and spacing of the braces shown in the layout drawing are acceptable. Also please confirm or provide direction on several instances that are noted on the layout where SCCI was either unsure of the layout or had to space the braces beyond the specified maximum per the structural details.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Layout review of partition wall bracing shall occur through the submittal process. To assist the contractor with preparation of the submittal (and answer questions posed in the RFI attachment) the following general rules shall apply: - For connections to concrete slab, the 3/8" thick plate in Detail 3/S1-9001 is not required and the post-installed anchors may be installed directly to the L6x6. - The L6x6's in Detail 3/S1-9001 are not required to be directly opposite each other in the case of a corner pilaster. In the corner case, one should be centered on the pilaster opposite the return and the other as near to the reentrant corner as possible. - The L6x6's in Detail 3/S1-9001 are not required to be directly opposite each other in the case of a pilaster T-intersection. In this case, one should be centered on the pilaster opposite the intersection and the other as space permits. In the latter case, the length of L6x6 may be reduced to suit provided that a minimum of two anchors is provided. Small overhangs will be permitted. - Deviations in spacing of angle brackets in Details 7/S1-9052 and 4/S1-9051 will likely be acceptable. Acceptance will occur during the submittal review process. - It is not necessary that opposite angle brackets in Detail 4/S1-9051 be aligned. - Angle brackets at wall intersections that clash shall have the more restrictive wall face govern. Pilasters will generally take precedence over wall brackets.

T-1907	SCS - Moment Frame Beam spacing South of GL G and west of GL 10	Closed	11/13/2014	11/23/2014	11/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Please reference sheets S 1-2302 through 2311 for the ground level moment frame beams located South of GL G and west of GL 10. The locations of the moment frames referenced above require further information for detailing purposes and cannot be determined using General Notes GR 12 to 16. Reference the legend and callouts on each attached sheet to locate requested clarification, which match the below (6) requests. Please confirm or provide the following dimensions. 1 .Beams southwest of GL X: 8' 11" on center, except 9' 0" o/c at radius opening 2.Beams running east-west, located east of GL X: 9' 8 5/8" o/c 3.3 Radius Openings: Please provide North-South dimension from GL K or L to center of opening. 4.North concrete stringers connecting radius MFBs: Please confirm that beams are not curved. Please confirm the angles noted on Sheet 3. 5.South edge of Radius MFBs: Please confirm Sheet 3 correctly indicates sets of equally spaced beams. Please clarify whether the noted equal spacing occurs along the radius foundation wall or along the straight North concrete stringers. Please provide the distance between the equal sets, noted with ? on Sheet 3. 6.Please confirm that GL X and the noted set of equally spaced MFBs on Sheet 3 intersect, in order to provide a base point for future dimensioning.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			1) Confirmed.				
			2) Confirmed.				
			3) The centerlines of the two openings are 11' from GL L and are noted on A1-2870 submitted with ASI 127 on 9/12/2014.				
			4) Confirmed that the beams are straight and the angles noted on Sheet 3 in the RFI are correct.				
			5) The equal spacing between MFB beams shall be along the north concrete beams. The distances corresponding to '?' as noted on Sheet 3 are acceptable.				
			6) Confirmed.				
T-1908	BGP - Partition Wall - Pier Under Concrete Beam Detail	Closed	11/13/2014	11/23/2014	11/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Shimmick Construction Comp Henry Chiang			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: See attached clouded detail 3/S1-9003 regarding the double fillet weld. Due to sequence of construction, the weld shown on the drawing (currently shown as shop welded) will need to be field welded. Please confirm that it is acceptable to field weld a 1/4" single fillet weld as shown in the attached.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			Keep the double sided fillet welds at the location indicated in the RFI. In lieu of the 5/8 inch bent plate use a flat plate of the same thickness that is longer such that it can accommodate a L6x6x3/8 angle on the no beam side of the pier. Weld the horizontal leg of the angle to the flat plate at the near and far side using 1/4 inch fillet welds (i.e. welds perpendicular to				

the longitudinal axis of the angle).

T-1910	BGP - As-Built Condition of Rebar Dowels for Shear Walls W390B and W390D	Closed	11/14/2014	11/24/2014	11/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: SCCI recently performed an as-built survey of the western-most Shear Wall rebar dowels for the 3rd Lift that were cast into the 2nd Lift Shear Walls and Lower Concourse. These dowels dictate the western face of the 3rd Lift Shear Walls as well as a couple of columns on the West Throat Slab and a B130/B131 Beam alignment. Out of the walls that were surveyed, two of the walls had rebar dowels that were several inches to the west of where they should have been. Based on the results shown in the attached drawings, please confirm that the resulting as-built conditions are acceptable for construction: 1. Encroachment of the western faces of W390B and W390D into the adjacent corridor. 2. New location of C19 Column above W390B (roughly 8" to the southwest in alignment with the western face of W390B below). 3. New alignment of B130/B131 Beam below the Vehicle Ramp as a result of the new C19 Column location above W390B			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The minor encroachment of shear walls into South West service corridor, location of C19 column above the shear wall and beam alignment below the vehicle ramp, resulting from the as-built location of the rebars, as described in this RFI, are acceptable.				
T-1911	BGP - Foundation Wall/Corbel Below Vehicle and Bike Ramp	Closed	11/14/2014	11/24/2014	11/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please confirm the following items related to the Foundation Wall/Corbel below the Vehicle and Bike Ramp and the response to RFI T-1850: 1. The corbel supporting the slab for the Communication Vault Room between the Vehicle and Bike Ramp is level and the top of the corbel remains at EL+ 14.0' per Detail 5 on AI-7413 even though it is not indicated on SKA-4289 (A1-7401). 2. The corbels below the Vehicle and Bike Ramps extend to the outside faces of the walls for each ramp and the corbel supporting the slab for the Communication Vault Room spans the entire distance between the corbels under the Vehicle and Bike Ramp.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> AA Response to questions 1 and 2 follows: 1) Refer to attached sketches SKA-4308 to 4312 for updated architectural drawings related to foundation wall/corbels. There is no concrete corbel spanning the foundation wall directly below the Communications Vault Room. Refer to SKA-4309 (based on A1-7413) for updated Detail 5. 2) Refer to SKA-4308 (based on A1-7401) showing the extent of Vehicle Ramp Corbel and Bicycle Ramp Corbel and Top of corbel elevations. Refer also to ARUP and TT drawings. Arup Response to questions 1 and 2 follows:				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>3. S1-2251 shows the extent of the 4th Lift Foundation Walls that is included in TG06's scope in order to support the Vehicle and Bike Ramp. The western extent of the 4th Lift Foundation Wall is shown where the inside face of the foundation wall intersects with the outside face of the Vehicle Ramp Wall. The eastern extent of the 4th Lift Foundation Wall is shown to extend roughly 9 feet past the outside face of the Bike Ramp Wall to Gridline W. Additionally, the only elevation information for the portion of TG06's 4th Lift Foundation Wall is "TG0600 Foundation Wall=3/4" Below Bike Ramp (Varies)." Please confirm the eastern extent of the 4th Lift Foundation Wall as described above (per S1-2251) is correct. If it is correct, please provide a top elevation for the foundation wall that extends out past the Bike Ramp to Gridline W.</p> <p>4. SCCI intends to pour the section of TG06's 4th Lift Foundation Wall in 3 different pours (see attached markup of S1-2251 for SCCI's proposed construction joint layout). Please note that these construction joints do not match up with the construction joints below in the 3rd Lift Foundation Walls. However, SCCI assumes that a similar condition to the 3 rd Lift Foundation Walls above the Knockout Walls (see RFI T-1569) exists due to the West Throat Slab separating the 3rd and 4th Lift Foundation Walls below the ramp.</p>				<p>1) There is no corbel at the Communication Vault Room between the Vehicle and Bike Ramp.</p> <p>2) Refer to SK-C-0003 and SK-C-0004 issued in response to RFI T-1774 for extent and length of corbels and slide bearing plate locations.</p> <p>TT responses to questions 3 and 4 follows:</p> <p>3) The information provided on Sheets S1-2310 in conjunction with A1-2870 include correct information regarding top of wall elevation change at the ground level. Refer to attached sketch SKS-433 for updated Detail 1/S1-2251, which will be issued as part of ASI 128, showing concrete corbel configuration.</p> <p>4) TT does not take exception to the construction joints shown in item 4 of this RFI.</p>		
T-1912	SST - Stair 403 Clarifications	Closed	11/14/2014	11/24/2014	11/24/2014	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Gregory Kemerer</p> <p>Co-Author: Olson and Co. Steel Avel Solomon</p> <p>REQUEST:</p> <p>This question impacts stair 403 between concourse and ground level.</p> <p>1. Per the attached comments onSK-RFI-12A, the stair is currently setup to agree with 5/A1A7011and the structural steel locations noted by ASI-027. The new dimensions noted in ASI-127 will revise the edge of slab, thus revising the width of the stair well and the widths of the stairs inside it. Please furnish a revised detail.</p>		<p>To: Turner Construction Company Phil Militello</p> <p>SUGGESTION:</p>		<p>Answered By:Adamson Associates, Inc. George Metzger</p> <p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>1) The revised edge of slab on structural drawing in ASI0127 was to match the edge of slab shown in the Architectural Drawings. The architectural edge of slab has been designed and dimensioned to match stair design on A1-7011 and did not change in the architectural drawings issued in ASI0127. The stair widths have not changed.</p> <p>2) The proposed stair widths are not needed, these</p>

	<p>2. Per the attached comments on SK-RFI 12B,new stair width dimensions have been determined to be5'-4 and 5'-6 ½". Please verify these dimensions are correct. These new dimensions create uneven ascending and descending stair widths. Does the stair need to be re-centered to 5'-5 ¼" equal widths on each side or is it allowed to be uneven?</p> <p>3. Per the attached comments on SK-RFI-12C. the stair support columns would need to shift with the stairs and this creates a problem near the grid D.8 adjustment. The 2" shift south puts it too far off the edge of the concete beam below and 11/S1-7600 will no longer work. Please advise on a revised detail.</p> <p>*Please furnish revised details 2, 4, 5/A1-7011 to reflect changes on ASI-127 and furnish revised column edge detail to replace 11/S1-7600</p>						
T-1913	SST - Checker Plate Mid Landings at Detail 10S1-7601	Closed	11/14/2014	11/24/2014	12/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Olson and Co. Steel		Avel Solomon					
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
This question impacts all checkered plate mid-landings at detail 10/S1-7601					Provide a 3" gap between stair stringer and landing bent plate. Attach a Painted Galvanized steel bent closure plate to stair stringer so that the bent plate can slip past the landing bent plate. Refer to SKA-4330 for detail.		
Q1: At detail 10/S1-7601 there will be a checkred kicker plate butting up against the end of the stringer at the soudside stringer connections. The long slot and bolted connection that allows the stringer to float will not be able to float in the direction of the kicker plate that stops it. This is typical at midlandings. Please see included sketches and advise.

T-1914	SSS - PE201 Splice Location and Weld Clarification	Closed	11/14/2014	11/24/2014	12/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: See attached CD RFI # 493.3 SK1 & SK2: The response to RFI T-1692 (SK 681, CD 493) re the HSS6x6 to be continuous was implemented in the model and the Mill Order has been revised to maintain current submittal schedules as sis shown on attached SK2. The response in RFI T 1692.1 (SK 681.1, CD 493.1) confused this direction. At this time, for Skanska to move forward, they require a splice location and splice weld for the continuous HSS6x6x1/4 column. Confirm the proposed splice location and weld as shown on SK2 are acceptable.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			In response to RFI T-1692, TT requested the contractor to make the HSS6x6 column at the north-east corner of PE201 continuous. That said, the beam to connection issue highlighted in the RFI could have been resolved even with the column remaining discontinuous. The top angle per typical detail 8/S1-7604 would be connected to the HSS 8x8x5/8 and the bottom angle would be connected to the HSS6x6 column. Although making the column continuous can be considered a minor change, the intent was to facilitate easier detailing and erection. Then we received RFI T-1692.1 stating that the change requires revisions to the model and material order. Our position in response to that RFI was that if the contractor is planning to send a bill to the owner for something of this nature, we'd prefer going back to the contract drawings, i.e., a discontinuous column per 12/S1-7604 at that location. The current RFI (RFI T-1914) states that the change was already made in the model and mill order has already been revised to maintain current submittal schedules. We note that the shop drawings for this area has not been submitted yet and it is not clear how the mill order would be affected from a minor modification such as this one. We suggest that this item to be added to next weekly meetings agenda for further discussion and final resolution.				
			TT: We disagree with reason for request "insufficient information". We categorize this RFI as "other".

T-1925	SSS - Design Changes to TPG in CS3 ASI 127	Closed	11/14/2014	11/24/2014	11/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to the changes to the dimensions of web stiffener plates at the TPG at GL 13 (CS3) in the revised S1-5016 drawing that was provided with ASI 127. These tapered roof girders have already been fabricated, and are currently in the shipping yard at the fabricator. (1) Please verify that the 48" length of the web stiffeners is required per ASI 127. (2) If so, please provide a field weld detail (see sketch SK1) for the additional 31" length stiffeners plates that will be field attached.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed that web stiffeners are required to be 48" long at GL 13 per ASI 127. 2) The 31" long stiffener plates shall be CJP welded to the existing 17" stiffener plates. TT: We agree with the reasons for request: Verification. We categorize this RFI as no cost clarification.				
T-1926	SSS - Lower Pipe Cap Plate Weld Information and Vent Hole Location GL 33.2	Closed	11/14/2014	11/24/2014	12/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 695 SK1 for items 1 & 2: 1) Supply specific welding information for the cap plate to the pipe. 2) Confirm it is acceptable to relocate the vent holes as shown to avoid fouling the erection aid plates.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Please see enclosed detail 4/A1-9318 for weld type. This is a new sheet part of ASI-0128. 2) Confirmed.

	See attached CD RFI # 684 SK1 to SK2 for items 1 to 10: 1) Dimensions hi-lited in yellow match 2/A1-7020 and the current model. Dimensions hi-lited in purple do not match 2/A1-7020 and the current model. Note that the structural drawings do not locate the posts supporting the stair landings closer to Grid 31at all. Please clarify the discrepancy. (The posts not located on the structural drawings are currently located to suit the Revit model) 3) Clarify the (3) braces indicated in blue and supply more information if they are required. 4) Braces are indicated on plan (green lines) but sizes and connection details are missing. Supply sizes and connection details for each end of every brace. 5) These dimensions do not match 2/A1-7509 (SK3). Please clarify where the steel is located. 7) Supply connection details for the HSS12x6 & HSS6x6 hangers to the underside of beams. 8) These posts are shown as single posts on S1-7012. Please clarify the discrepancy. 9) These dimensions do not match 3/S1-7012 (SK1). Please clarify where the steel is located. 10) 3/S1-7012 shows (4) vertical posts. Clarify why this detail shows (6) posts.						
					locate posts that support stair landings are typically shown on architectural drawings.		
					2) No question provided.		
					3) Highlighted braces are part of braced frames. Elevations and connection details for these braces are shown on S1-4150 and S1-4206, respectively.		
					4) Braces highlighted in green on SK1 in the RFI are HSS6x6x1/4 similar to the braces at the other landing (T/landing = 29'-10 7/8") in detail 3/S1-7012. Per section 1.5C of specification 05 51 00 STEEL STAIRS AND RAILINGS, connection details for brace and hangers at the stair shall be designed by the contractor's engineer.		
					5) Detail 2/A1-7509 has been revised. Refer to attached SKA-4324.		
					6) No Question Provided.		
					7) See response to 4).		
					8) Post numbers have been revised as per S1-7012. Dimensions shown on SKA-4323 to locate posts supporting stair 601 shall govern.		
					9) The two W18x119 beams shown on 4/S1-7012 shall be centered on the HSS 6x6 hangers that support the landing with T/landing elevation 29' - 10 7/8". Refer to SKA-4323 & SKA-4324 for HSS hanger locations.		
					10) The 2 central Post shown on 2/A1-7509 are not posts. They represent the HSS braces shown on 3/S1-7012.

T-1929.1	SSS - ST601 Conflicting and Insufficient Information	Closed	01/06/2015	01/16/2015	01/16/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 684.1 SK1 to SK2 for follow up on items 1, 2, 5, 6 and 9 : 1) The response to item 1 in T-1929 SKA-4323 has provided dimensions to locate the stair posts on the Second Level (4/S1-7012) but it remains unclear where the post locations are in details 5 & 6/S1-7012. Where do the dimensions in 4/SKA-4323 apply? Note dimensions of nearest HSS 12x6x5/8" from GL 30 in detail 2 and 4 are not consistent (13'-5" from Detail 4 and 13'-10 1/4" from detail 2. Please clarify. 2) Braces are indicated on plan (orange lines) but connection details are missing. Supply connection details for each end of each brace. 3) Previous response is complete 4) Previous response is complete 5) SKA-4324 provides revised east/west locations for the hangers below the second level. Confirm the north/south dimensions in 3/S1-7012 are correct. 6) The post to beam connection per 1/S1-7600 does not work at the double posts. Supply a new connection detail. 7) Previous response is complete 8) Previous response is complete 9) The response is not clear please provide a revised structural plan 10) Previous response is complete			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Dimensions provided on 4/SKA-4323 locate hangers that support stair landings at elevations EL 31' - 1 1/4" and EL 29' - 10 7/8". These hangers are shown on 3/S1-7012. The HSS12x6x5/8 posts shown in details 2 and 4/S1-7012 and noted in the RFI are two different posts. HSS12x6 in detail 2 is above the 2nd floor level, where HSS12x6 shown in detail 4 hangs below the 2nd floor. 2) Per section 1.5C of specification 05 51 00 STEEL STAIRS AND RAILINGS, connection details for brace and hangers at the stair shall be designed by the contractor's engineer. Note that if the stair landing needs to be laterally braced, lateral bracing shall be designed such that it does not penetrate the W-16 system wall shown on A1-7020. 5) North-South dimensions to locate the hangers were provided in 4/SKA-4323 submitted with RFI T-1929. 6) Connection at the top of the double posts may be provided per attached sketch SKS-0455 which is similar to 1/S1-7600. 9) The 4 corner HSS posts shown on 2/SKA-4324 (2/A1-7509) are HSS hangers that support the landing at EL 29' - 10 7/8" and are shown on 3/S1-7012. These HSS posts hang from W18x119 beams shown on 4/S1-7012. The middle two steel sections shown on 2/SKA-4324 are HSS braces between the corner hangers. Reason for RFI (TT): We disagree with the reason for request: Insufficient Information. We categorize this RFI as no cost clarification.

Confirm that is acceptable or supply an alternate solution.</div> <div>2) RFI T-1929.1 SKS 0455 does not provide the thickness of the plate below the beam flange. Confirm 3/4" thick is acceptable or supply thickness.</div>						
T-1930	SSS - Stud Spacing Detail	Closed	11/18/2014	11/28/2014	12/01/2014	Potentially	<input type="checkbox"/>
<div>From: Webcor Construction LP</div> <div>Gregory Kemerer</div> <div>Co-Author: Skanska USA Civil West California DisRyan Clayton</div>		<div>To: Turner Construction Company Phil Militello</div>	<div>Answered By:Adamson Associates, Inc. George Metzger</div>				
<div>REQUEST:</div> <div>Please reference detail 1/S1-5000, Typical Headed Stud Spacing Detail. Note #4 indicates the maximum number of studs permitted per individual metal deck rib is 3. Also provided in this detail is a plan view titled "Beams Perpendicular to Deck" where the plan shows a three stud per rib condition. Skanska note the three studs are spaced 2-5/8" in one direction and 3" in the other which nets a diagonal spacing of 3". Skanska is running into conditions where the number of studs versus the number of available ribs will exceed 3 studs per rib, particularly at the bus deck level. See below for 2 examples:</div> <div>1. Sheet S1-2507, near the south east corner a W30x99 beam with 68 studs. The bay width is 16' wide and when you subtract the width of the support girders and the ribs lost by the drag plates we only have 11 available ribs. This results in 6 to 7 studs per rib.</div> <div>2. In the same general area are diagonal beams with 10 studs noted. Again due to the relatively short length of beam and long drag plates we may only have one full rib and a partial rib in which to fit 10 studs. Net result is 6 to 7 studs per flute.</div> <div>Please confirm the following is acceptable: Where the</div>		<div>SUGGESTION:</div>	<div>ANSWER: Accept Suggestion: <input type="checkbox"/></div> <div>1. Number of studs in the W30x99 beam may be reduced to 33 from 68 so that there are 3 studs per rib.</div> <div>2. For the short diagonal W40 beams with Type 3 flange plate connections, provide number of studs as indicated on contract documents. Stud placement shall be as follows:</div> <div>a) Provide studs at a maximum spacing of 1 stud per foot for entire length of the beam top flange.</div> <div>b) If more studs that can be fit by (a) is specified on the drawings, place remaining studs at the same spacing as (a) starting from the beam ends.</div> <div>c) At locations where there is no rib over the beam due to flange plates, studs shall be welded to the flange plate and centered on the beam web.</div> <div>d) If there are 2 studs at a location, spacing between the two studs shall be 3' with the studs aligned in a direction perpendicular (parallel) to the flange plates (ribs).</div>

T-1934	SCS - Basket Column Fill	Closed	11/19/2014	11/29/2014	12/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher Co-Author: Shimmick Construction Company, Inc. Henry Chiang			To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
REQUEST: Please reference drawings S1-4000 through S1-4018 regarding filling basket columns. Currently, basket columns are shown to be filled with both concrete and non-shrink grout. SCCI proposes to fill all basket columns to the elevations shown with self-consolidating concrete. Please see attached submittal TG0702-123.1 for approved mix design. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to use self-consolidating concrete in all locations, as long as this does not create a constructability problem. GC confirm the diameter of the hole where non-shrink grout was previously expected, is workable for installation of self-consolidating concrete. Arup's response: The proposed concrete appears to be acceptable. TT's response: The grout port for non-shrink grout has 1" diameter, while the grout port for the concrete has a 3" diameter. Contractor to confirm if the existing grout port is adequate as they are.		
T-1934.1	SCS - Basket Colum Fill	Closed	12/05/2014	12/15/2014	12/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher Co-Author: Shimmick Construction Company, Inc. Henry Chiang			To: Turner Construction Company Phil Militello		Answered By: Webcor Construction LP Claude Titcher		
REQUEST: Contract Doc Ref: S1-4000 - S1-4018 Location: N/A Grid Line: N/A Add'l Doc Ref's: RFI T-1934 Per the response to RFI T-1934, it was requested that SCCI confirm the diameter of the hole where nonshrink grout was previously expected, is workable for installation of self-consolidated concrete. SCCI intends to pump self-consolidating concrete through the 3" port in the basket column cast node. The self-consolidating concrete will then be pumped from the bottom of the column to the final elevation in one lift. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor to verify whether the self-consolidating concrete can flow thru the hole in the bus deck cast node (most of them have a 1" diameter). Also, please note there is only one nozzle hole, so grouting thru the bus deck cast node is not possible.

T-1937	BGP - Zone 1 C-19 and C-38 Column in Conflict with Level A Struts	Closed	11/21/2014	12/01/2014	11/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please see attached S1-2250, and attached rebar shop drawings. Please confirm it is acceptable to eliminate the stagger of the column dowels referenced on the attached drawings, in order to eliminate the conflict with level A struts.			SUGGESTION:			ANSWER: It is acceptable to eliminate splice stagger where it interferes with Level A excavation bracing. Maintain 2'-6" dimension from top of slab to splice level. Accept Suggestion: <input type="checkbox"/>

T-1938	SSS - Missing OCS Switch Information	Closed	11/24/2014	12/04/2014	12/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 296.11 SK1 & SK2 for items 1 & 2: 1) This brace per 3/S1-9101 fouls the corner post above the plate. Confirm this one brace may be omitted or supply an alternate solution. 2) The diagonal brace per 3/S1-9101 fouls the horizontal HSS4x4x1/4 per 2/S1-9101. Confirm it is acceptable to adjust the angle of the brace to clear to HSS4x4 as required at this location and other similar locations or supply an alternate typical solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The OCS hanger support angled bracing layout has been revised and there should be no conflict, please refer to ASI-0128 details 2,3 and 4/A1-8550. 2. Same response as above.		
T-1939	SSS - PE704 & PE705 Fouling Connections	Closed	11/24/2014	12/04/2014	12/09/2014	Potentially	<input type="checkbox"/>

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached SK1 & SK2 for items 1 to 4, and SK3 for item 5: 1) The connection for the W21 per 1/S1-5010 fouls the Type 4 drag connection. Please provide a solution. 2) The beam connection per 2/S1-5011 fouls the bolts for the column base plate. Please provide a solution. 3) The beam connection per 2/S1-5011 fouls the bolts for the column base plate. Please provide a solution. 4) The kicker connection is too close to the PL 2 1/2" stiffener. Confirm it is acceptable to omit the kicker braces or to move them north to the W40x149 on Grid D.4. If not, supply an alternate solution. 5) The connections for the W24x104 & W30x90 foul the connection for the BU-56 to the column per 3/S1-5011. Please provide a solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Provide a shear plate connection at the W21 beam similar to that shown in SKS-0421 submitted with RFI T-1553.3. Number of bolts at the connection shall be per 1/S1-5011. Move the W21 beam away from the slab edge and center the shear plate in the horizontal spacing between the bolts. 2) Move the full depth shear plate (and the W30 beam) by a few inches so that it is centered in the spacing between the bolts at base plate. 3) See response to 2). 4) The 1 1/2" stiffener adjacent to the kicker brace may be waived at the two locations highlighted in the RFI. Note that the stiffener is incorrectly called out as 2 1/2" thick in item 4 of the RFI. 5) Provide shear plate connections at the W24 and W30 beams similar to 1). Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict and Alternate proposal, agree with verification. We categorize this RFI as a no cost clarification.

T-1940	SSS - PE704 & PE705 Missing Base Plate Detail at HSS Posts	Closed	11/24/2014	12/04/2014	12/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 705 SK1: Please provide a detail showing the base plate for the HSS10x10 at the noted location with the support beams at varying elevations and slopes. Note: the opposite condition occurs between Grids D-D.4.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			Provide a base plate connection similar to "TYPE 2" shown on CD RFI 146.1 SK2, except, there shall be 4 bolts on each side of the HSS. The base plate shall be oriented parallel to the W40x278 beam with the base plate connected to the W40 and TPG1 beam flanges. Provide shim plates between the base plate and the beam flanges as required.				
			Reason for RFI (TT): We disagree with the reason for request: Insufficient Information. We categorize this RFI as no cost clarification.

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Contract Doc Ref: S1-2607 Location: Zone 4, Roof Park Level Grid Line: D.4 & F.6/32.4 Add'l Doc Ref's: RFI T-1940 Drawing S1-2607 shows HSS posts connecting over a tapered girder on gridline 32.4. (see attached sketch) These connections would require compound shims which would likely be problematic in the field. Confirm it is acceptable to supply a base plate as shown to avoid the compound shim that will be required between the base plate and the top of the TPG1. If not, confirm it is acceptable to provide 3/16" oversize holes in the 3.5" thick flange of the TPG1 in order to fit the bolts thru multiple layers with non-parallel surfaces.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			Provide base plate connection per response to RFI T-1940. It is acceptable to provide shims and 3/16" oversize holes in the TPG1 flange.				
			Reason for RFI (TT): We disagree with the reason for request: Insufficient Information. We categorize this RFI as no cost clarification.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference RFI T-1625 & T-1894				Confirmed. At contractor's option, it is also acceptable to keep the HRC couplers and replace the top-of-wall hook with a head similar to that shown on Section 1/S1-3201.			
See attached marked up drawing of detail 4/S1-3206. Similar to the embedded column detail mentioned in RFI T-1625 & T-1894, detail 4/S1-3206 is not constructible with HRC 420 couplers. SCCI proposes to utilize the method approved for embedded columns in RFI T-1894, using Bartee position couplers in lieu of the HRC 400 series on the rebar with hook. As before, note that Bartee is not listed in spec section 03 20 02 acceptable products, but is an or equal.							
Please confirm if Bartee couplers are acceptable to be used at detail 4/S1-3206 to allow hook installation.

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Spec Section 26 07 00-13 dated 03/21/2014					Accept Suggestion: <input type="checkbox"/>		
Specification Section 26 07 00-13 specifies the magnitude of current as 12000 amp in the Power Distribution Acceptance Test (See attached). Please confirm the magnitude of current should be 1200 amp in lieu of 12000 amp.					Magnitude of current shall be 1200A. Specification will be corrected in a future ASI.		
T-1955	BGP - West Foundation Wall As-Built Location	Closed	12/02/2014	12/12/2014	12/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER:		
Due to CDSM Encroachment, the thickness of the West Foundation Walls in the North direction in Area 3 was increased by 3 1/8" per RFI T-0576. During the Lower Concourse Deck D201/202 as-built survey, SCCI discovered that the CDSM encroachment was inadvertently taken into account twice. The result is that the starter wall and the corresponding 3rd Wall Lift Foundation Wall Rebar is approximately 3" thicker than planned(see attached drawing).					AAI's response:		
Please confirm the as-built condition of the North West Foundation Wall is acceptable and the wall alignment may be offset into the structure. The proposed inside face of the West Wall for the 3rd Wall Lift ONLY on the North Side is 1'-6 1/4." East of GL 1.					Architecturally there no objection to the slightly increased wall thickness at the one location described in this RFI. Please refer to TT's response.		
					TT's response:		
					Condition is structurally acceptable below grade. At grade, plain concrete (excessive cover) between outside face of foundation wall reinforcing and planned building line will not be allowed. Contractor shall propose method of providing reinforced concrete with specified cover at grade to make up any distance between offset wall and planned building line.		
T-1956	SCS - 4th Lift Foundation Walls - NW Corner CJ Layout	Closed	12/02/2014	12/12/2014	12/08/2014	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: P1-6001 Location: Mat Slab Grid Line: N/A Add'l Doc Ref's: N/A				Refer to the attached sketch for baffle and other oil sand interceptor dimensions.			
On Exhibit A it is indicated TG07.2 to "furnish and install the baffle wall below Lower Concourse Level".				Also refer to response to RFI #T-0677 BGP (August 2013) repeated below:			
Response to RFI T-1961 direct TG07 .2 to details 11 and 12 on drawing P1-6001. The information provided is not sufficient to build the baffle wall.				"The pit baffles are post-installed and will be part of the TG07.2 Superstructure Concrete Package. The baffles are to be 6" thick concrete walls with #5@8" OC EA WAY, bars centered in wall. Post-installed epoxy dowel embedment depths per structural General Notes."			
Please provide width, length and height of wall, concrete mix and reinforcement layout along with other detail views.

	Co-Author: Skanska USA Civil West California DisRyan Clayton						
	REQUEST: Contract Doc Ref: 2 & 3/S1-7003 Location: Zone 1, Roof Grid Line: E.6 & 1 Add'l Doc Ref's: CD RFI # 692 SK1 Details 6 & 12/S1-7604 call out weld information for HSS members shown on 2 & 3/S1-7003. Both of the noted welds in SK1 cannot be made for the locations in details 2 & 3/S1-7003, as there will be no access after one member is erected. Confirm it is acceptable to weld the HSS8x8 on the south side only or supply an alternative solution.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
					Weld the HSS10x8 beam on both sides per 6/S1- 7604. It is acceptable to weld the HSS8x8 beam on the south side only due to restricted access on the north side. Note that the HSS8x8 beam shall be CJP welded at top and bottom per 12/S1-7604. Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference drawings 4/A1-8712 and specification section 22 05 29 2.3B.				Architectural detail governs for sleeve material. Pipe thickness shall be per ANSI specifications standard weight class for each pipe size diameter.			
Detail 4/A1-8712 calls out ¼" Thick Stainless Steel Pipe sleeve, specification section 22 05 29 2.3B states to "Provide standard weight galvanized steel pipe sleeves". Standard weight would govern the pipe thickness according to ANSI specifications derived from pipe diameter.							
There is a discrepancy in base metals used and thickness between the drawing and specification.							
Please confirm what document governs.

T-1977	SCS - Roof Ellipse Sky Light Brace Wall Layout Dimensions	Closed	12/08/2014	12/18/2014	12/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: A1-2903, A1-2906 Location: Roof Park Grid Line: 11, 28 Add'l Doc Ref's: The ellipse sky lights at Grid Lines 11 and 28 have sloping brace walls around the perimeter as seen on sheet A1-2903, A1-2906, and S1-8008. The north, south, east, and west brace walls that fall directly on grid lines have layout dimensions but the remaining 4 walls do not. Please see attached for further clarification. Please provide layout dimensions for the ellipse sky light sloping brace walls.				The location of concrete counterfort walls at the W-10 skylights shall align with the location of the W-10 workpoints provided in structural drawing S1-6011 and derived from the W-10 3d digital model. This information was provided in RFI T-1052 and coordinated with the Steel shop drawings TG0701-073.1 (CS1) and TG0701-074.1 (CS2). The W-10 skylight at GL-28 is similar. Note: The 3d digital model is an essential part of the Contract Documents as defined on A-0007 and A-0008 as well as other areas in the Contract Documents. Information contained in the 3d digital model is not contained in any other location in the Contract Documents.			
T-1978	SCS - Roof Top Perimeter Wall and Scallop Final Design	Closed	12/08/2014	12/18/2014	12/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: SKA-3890, SKA-3049-R1 Location: Roof Park Grid Line: N/A Add'l Doc Ref's: RFI T-1905, RFI T-1739 SKA-389 (A1-8685) detail 2 shows dimensions for slope at top of wall and layout dimensions for notch at top of wall for roof park perimeter wall. ASI-124 SKA-3049-R1 (A1-8608) provided a dimension for identifying the 1'-6" increase in height with a deck and wall overhang. RFI T-1739 SKA-4265 then showed a notch in the bottom of the wall which replaced the overhang detail. RFI T-1905 drawing SKS-0437 provided clarification for the change to rebar. Please provide a drawing that incorporates all intended elements with rebar details and the new dimension for the roof deck overhang into a final drawing revision.				Please refer to the enclosed sketches of the revised Roof Park perimeter concrete wall. Sketches contain: -Revised geometry of perimeter wall with required dimensions. It identifies the top of wall revised height referenced in previously submitted sheet with dimensions. -Revised concrete wall overhang detail as reviewed and agreed to with TJPA and WOJV in 12/4/2014 meeting. -Revised edge drip detail. -Concrete reinforcement on straight wall and scallop wall.

If yes, supply a connection detail for the post to clear the beam to beam connection.</p>	<p>SUGGESTION:</p>			<p>ANSWER:</p> <p>Accept Suggestion: <input type="checkbox"/></p> <p>Confirmed. It is not clear what the conflict is from the sketch provided on SK1. If the beam stiffeners centered on the post and as shown on SKS-0434 submitted with RFI T-1923 are fouling the double angles, the stiffener plates may me moved slightly to clear the angles.</p> <p>Reason for RFI (TT): We disagree with reason for request: Insufficient Information agree with Verification. We categorize this RFI as called out on contract documents.</p>

T-1987	SSS - PE704 & PE705 Connection Clarifications at Roof Level	Closed	12/09/2014	12/19/2014	12/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Contract Doc Ref: S1-2607			1) Confirmed.				
Location: Zone 4, Roof			2) Confirmed.				
Grid Line: D.4 & 32.4, E.6 & 32.4			3) Provide a shear plate connection at the W30 beam similar to that shown in SKS-0421 submitted with RFI T-1553.3. Number of bolts at the connection shall be per 1/S1-5011.				
Add'l Doc Ref's: CD RFI # 720 SK1			Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.				
Drawing S1-2607 shows two angled beams at the corners of the PE704 and PE704 elevator structure.							
These connections are problematic.							
1) The dimensions shown are the minimum dimensions possible with the bent PL 3/4" with a 3" cold bending radius. Confirm they are acceptable or supply an alternate detail.							
2) Confirm the 5 1/2" dimensions may be reduced to 3 3/4" to avoid cutting the bottom flange flush to the web.							
3) Supply a connection detail for the W30x90 to the W40x278 as it fouls the connection per 9/S1-5032 as shown.							
T-1988	SSS - TPG1 Fouling Connections GL 32-32.4	Closed	12/09/2014	12/19/2014	12/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Contract Doc Ref: S1-2607			Not acceptable. Provide a double bent plate connection per 7/S1-5010 at the W40x199 beam and a shear plate connection per 1/S1-5011 at the W40x264 beam.				
Location: Zone 4, Roof			Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.				
Grid Line: B & 32, G & 32							
Add'l Doc Ref's: CD RFI # 721 SK1							
Drawing S1-2607 shows two W40 beams connecting near a tapered girder TPG1.							
The connections per 7/S1-5010 for the W40x199 to the TPG1 and 1/S1-5010 for the W40x264 to the W40x199 will foul each other.							
Confirm it is acceptable to connect both beams per 1/S1-5011 as shown or supply an alternate solution. NOTE: the same condition occurs on the south side.

T-1988.1	SSS - TPG1 Shear Plate Connection Access GL 32-32.4	Closed	03/04/2015		03/17/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc Ref: S1-2607 Location: Zone 7, Roof Level Gridline: 32-32.4 Add'l Doc Ref's: SK1 This is a follow-up RFI to RFI T-1988 (SK 968, CD 721) See attached CD RFI # 721.1 SK1: After applying the response per RFI T-1988 (SK 968, CD 721), it has become evident that access to the connection for the W40x264 is not possible as shown in Snapshot above. Please provide a solution. Note: the same condition occurs on the south side.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Bolt heads may be tack welded to the shear plate in the shop from the side where access is restricted and nuts may be tightened from the other side once the W40x264 is erected in place. Reason for RFI (TT): We disagree with the reason for request: Engineering Conflict. We categorize this RFI as clarification on means and methods.				
T-1989	SSS - Moment Symbol Connection Clarification at Bus Deck GL 33.2-33.5	Closed	12/09/2014	12/19/2014	12/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc Ref: S1-2507 Location: Zone 4, Roof Grid Line: B & 33, H & 33 Add'l Doc Ref's: CD RFI # 724 SK1 Drawing S1-2507 shows moment connections at several locations to the exterior W40x362 beams. Moment symbols are not shown at the (3) noted locations in SK1. Confirm that is the design intent or confirm S1-2507 is to be revised with the moment symbols added.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Moment connections are required at the 3 noted beams. Reason for RFI (TT): We disagree with reasons for request: Insufficient Information, agree with Verification. We categorize this RFI as Change to be issued in future bulletin.

REQUEST: Contract Doc Ref: 5/S1-7112 Location: Zone 4, Roof Grid Line: E & 32.4 Add'l Doc Ref's: CD RFI # 727 SK1 to SK3 Detail 5/S1-7112 shows several beam to post connections. Some of the information conflicts, and some of the information is missing. 1) The W12x19 in detail 4/S1-7112 fouls the W16x26 in detail 5/S1-7112, as shown in SK2. Please clarify. 2) The gap between the beams noted in SK3 is 1/8". Confirm that is the intent.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The T/steel of the machine beams is incorrectly called out on 4/S1-7112. T/steel of the machine beams shall be 103'-5" (datum to be confirmed with Elevator contractor). Move the W12 beams as shown in the attached sketch SKS-0442 and provide shear plate connections similar to 8/S1-5012 at the W-12 beams. 2) See response to 1). Reason for RFI (TT): Disagree with the reason noted in RFI: Engineering conflict, agree with other: verification. TT categorizes this RFI as no cost clarification.			
T-1993	SSS - Fill Plate on TR23 Bottom Flange	Closed	12/09/2014	12/19/2014	12/19/2014	Potentially	<input type="checkbox"/>

REQUEST: Contract Doc Ref: S1‐5011 Location: Zone 4, Roof Grid Line: Typ. Connection Details Add'l Doc Ref's: CD RFI # 726 SK1 The TT comments on Skanska shop drawing 708BC from the TG0701-121 submittal package included notes on connections. The noted connections are correct per 2/S1-5011 and per RFI T-0894 (SK 192, CD 143). (see SK1) 1) The (2) noted connections are correct per 2/S1-5011. Confirm the intent of the comment is to revise the connections. If yes, supply a detail as it is not possible to have 4 bolts per row as shown. 2) These connections with shear plates are correct per RFI T-0894 (SK 192, CD 143). Confirm the intent of the comment is to revise the connections.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Yes, the intent is to revise the connections. Provide (6) A325-X bolts in 2 vertical rows of 3 bolts each at the two W16 beams. 2) Shear connections per response to RFI T-0894 and as shown in the submittal are acceptable. Revisions to connections per review comments are not required. Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict. We categorize this RFI as a no cost clarification.				
T-1995	SSS - ST601 Fouling Connections at Second Level	Closed	12/09/2014	12/19/2014	12/19/2014	Potentially	<input type="checkbox"/>

	<p>REQUEST:</p> <p>Please reference detail 4/S1-3207 and RFI T-1666 about foundation wall opening conflicts. Since submitting RFI T-1666, more concerns regarding 4/SI-3207 have been brought to our attention.</p> <p>One of the concerns mentioned in RFI T-1666 was the case of additional vertical bars potentially conflicting with moment frame beam rebar. This issue can also occur with the diagonal cross bars and additional horizontal rebar.</p> <p>1. Please provide an alternative detail for cases where either additional horizontal bars and diagonal cross bars conflict with moment frame beam rebar.</p> <p>Due to the length of additional horizontal bars, wall openings near foundation wall CJs will cause the constructability issue of requiring rebar to be built out further to proceed with concrete pours.</p> <p>2. Please confirm that the alternate wall opening detail (requested in RFI T-1666) for additional vertical bar lengths can also be applied to additional horizontal bars.</p>	<p>SUGGESTION:</p>	<p>ANSWER:</p>	<p>Accept Suggestion: <input type="checkbox"/></p>

Please provide a solution.							
T-2000	SSS - CP6 Connection at GL 33.5 B &H	Closed	12/09/2014	12/09/2014	12/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Contract Doc Ref: S1-2507 Location: Zone 4, Bus Deck Grid Line: H & 33.5, B & 33.5 Add'l Doc Ref's: CD RFI # 738 SK1			1) Confirmed.				
Drawing S1-2507 shows CP6 connections at grid lines B/H and 33.5.			2) Not acceptable. Reduce the length of the web plate by 1" so that distance between the bolt centerline and the edge of the web plate increases to 2 1/2".				
The connections as shown cause a dimension to change and also cause a potential conflict with CP6 colt hole connections.			Reason for RFI (TT): We agree with reason for request: verification. We categorize this RFI as no cost clarification.				
1) With the 1 1/2" stiffener plate per 4/S1-8003 centered about the CP6 connection, the W40x149 will be located 5'-9 11/16 west of Grid 33.5. Confirm that is acceptable.							
2) The edge of the web reinforcing plate per 1/S1-5017 is 1 1/2" clear of the bolt holes for the CP6 connection. Confirm that is acceptable or supply a solution.

T-2001	SSS - AEES and Erection Aid Approval Comment Clarifications GL 24	Closed	12/09/2014	12/09/2014	01/06/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc Ref: E/A1-8660 & A/A1-8662 Location: Zone 3 Grid Line: E/24 Add'l Doc Ref's: CD RFI # 734 SK1, Skanska Shop Drawings 6805, TG0701-121 The AAI comments on drawing 6805 in submittal package TG0701-121 noted "AEES with IFRM-1 per E/A1-8660 and A/A1-8662". The approval comment is a revision to the contract documents as E/A1-8660 & A/A1-8662 are sections along Grid 23 and do not indicate that this beam on Grid E/24 requires AEES/IFRM-1. If painting is required on this beam, supply the extent on this drawing and on the MF beam on Grid 24 if required.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Painting and prep work for AEES and IFRM-1 are required for the beam at GL 24, as well as the beams at both sides of the Light Column on GL 23. For the extent of the painting and prep work, see the attached clarifications to the comments that were provided in Submittals TG0701-94 (ES3) and TG0701-121 (ES4). Details F/A1-8661 and A/A1-8662 have been revised for ASI 128 to clarify the AEES and IFRM requirements at these locations.		
T-2001.1	SSS - AEES/IFRM-1 Requirement at Roof Level GL 23E	Closed	01/19/2015	01/29/2015	01/21/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc Ref: T-2001, S1-2605 Location: GL 23E Contrary to the response in RFI T-2001, the extent of the painting for the beam on Grid E @ Grid 24 was not provided in the Submittal TG0701-121 (ES4). Supply the extent of the AEES/IFRM-1 requirement.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The full extent of the beam A6805 is AEES to receive IFRM-1. Refer to RFI T-2001 response for the sketches that already provided this information for this beam and the adjoining plate assembly.

<div><div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div><div>To: Turner Construction Company Phil Militello</div></div><div>Co-Author: Skanska USA Civil West California DisRyan Clayton</div></div> <div><div>REQUEST:</div><div>Contract Doc Ref: S1-2605 Location: Zone 3, Roof Park Level Grid Line: E.6/24 Add'l Doc Ref's: CD RFI # 732 SK1, Skanska Shop Drawings 2875, TG0701-121 The TT comment on drawing 2875 in submittal package TG0701-121 noted "bolt edge distance of 4" per 1/S1-5019". The requested 4" edge distance for the plate will foul the "k" distance of the incoming beam. The beam "k" distance is 3" + 1/2" plate radius (T & B). Please confirm is acceptable to use a 3" edge distance (T & B), if not, supply an alternate solution.</div><div>SUGGESTION:</div></div> <div><div>ANSWER:</div><div>Accepted Suggestion: <input type="checkbox"/></div><div>Confirmed.</div><div>Reason for RFI (TT): We disagree with reasons for request: Engineering Conflict, agree with Verification. We categorize this RFI as a no cost clarification.</div></div>							
T-2003	SSS - TPG3 Approval Comment Clarification at Weld Termination GL 25-27	Closed	12/09/2014	12/09/2014	01/06/2015	Potentially	<input type="checkbox"/>
<div><div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div><div>To: Turner Construction Company Phil Militello</div></div><div>Co-Author: Skanska USA Civil West California DisRyan Clayton</div></div> <div><div>REQUEST:</div><div>Contract Doc Ref: 9/S1-5026 Location: Zone 4 Grid Line: D.4 & E.6/25-27 Add'l Doc Ref's: CD RFI # 731 SK1, Skanska Shop Drawings P537BB, TG0701-207 The TT comment on drawing P537BB in submittal package TG0701-207 noted "missing WAH". It is not clear what is meant by the noted approval comment. A WAH is not required in the 4" vertical plate but it seems WAH's are required where the CJP weld for the 4" flange plates terminates at the 4" vertical plate. Please refer to detail 9/S1-5026 and supply the dimensions for the WAH's if required.</div><div>SUGGESTION:</div></div> <div><div>ANSWER:</div><div>Accepted Suggestion: <input type="checkbox"/></div><div>We agree that WAHs are required where the CJP welded flange plates terminate at the thickened web as indicated in the RFI. The dimension of the WAH at this location is a means and methods issue and shall be executed per AWS D1.1. Limit the dimension of the hole perpendicular to the beam web to 2 inches. Note that the welding detail at thickened web to TPG web is incorrectly shown as fillet welds (double sided 3/4 fillet welds) in this shop drawing. As indicated on Detail 9A/S1-5026, double bevel CJP splice is required at the thickened web to TPG web connections. TT: We disagree with the reason for request: insufficient information. We categorize this RFI as clarification on means and methods and called out on contract documents.</div></div>

REQUEST: Contract Doc Ref: Specification 08 44 27 Section 2.2H Location: Building Exterior Add'l Doc Ref's: RWDI dated June 7, 2014 The aforementioned report includes an importance factor of 1.15 and with the material safety factors to be utilized this may result in a complicated design and cost implications. Please confirm that the 150% is to be applied to the RWDI reported wind pressures for the structural analysis of the panels and the panels support structure.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Metal Panels and substructure must be designed to withstand the RWDI reported wind loads at either 150% or applicable LRFD load factors for strength design, whichever governs.				
T-2005	EAW - Uniformly Distributed Loads	Closed	12/10/2014	12/10/2014	12/15/2014	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Jonathan Flaming To: Turner Construction Company Phil Militello Co-Author: Crown Corr, Inc. Erik Bryant			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc Ref: Specifcation 08 44 27 Section 2.2K Location: Building Exterior The upper capacity of the panels must be achieved under a uniformly distributed load of not more than 150 psf, acting perpendicular to the panel surface. The load acts on the net area of the perforated panel and needs to be considered in both directions (inward and outward). It is Larson Engineering Inc (LEI's) interpretation that the panel shall not exceed 150 psf for its ultimate static capacity but can be less as long as the wind loads under ASD design provisions are obtained. Please confirm this interpretation is correct. LEI intends to use a phi factor of 0.9 for the ultimate design capacity as a safety margin for the design of the panels and the panels' support structure. Please confirm this is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> We confirm that this interpretation is correct. We confirm that this phi factor is acceptable.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>RFI #T-1872 Question 3. Please confirm that the skylight over hang bent plate will support the wet concrete deck weight. Answer 3. "Confirmed that the bent plate shown is to support the wet concrete weight (for the deck only). Verify location and dimensions of the bent plate with steel shop drawings."</p> <p>In response to answer 3 please see attached Skanska submittal 051000-0563 .1 shop drawings. The shop drawings show the sky light bent plate exceeding 2' in length without being supported by an angle brace required by contract drawing SI-5000 detail 9. Shimmick plans to pour the roof deck first and once the concrete has reached sufficient strength then pour the sky light wall on the concrete deck.</p> <p>1. Please confirm that Skanska will be installing an angle brace per S1-5000 detail 9 for bent plate over hang distances greater than 2 feet at the sky light opening.</p> <p>2. Please confirm whether or not Skanska will fill in gaps between bent plates as shown in the attached photo.</p>				<p>1. The bent plate at the skylight opening will be installed per detail 1/S1-8008, no angle brace included.</p> <p>2. Bent plate will be installed continuously around skylight opening, as shown on S1-2603.</p>

T-2016	<p>SSS - Moment Frame Column Testing Requirements</p> <p>From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello</p> <p>Co-Author: Skanska USA Civil West California DisRyan Clayton</p> <p>REQUEST:</p> <p>Contract Doc Ref: Spec Section 05 12 10-8 Location: Moment Frames Grid Line: N/A Add'l Doc Ref's: SK1</p> <p>Spec Section 05 12 10-8, Table 2.1 outlines the nondestructive testing requirements.</p> <p>Please review the following, and confirm:</p> <p>1) The moment frame columns that are being fabricated are currently being subjected to 100% UT and 100% MT on all weld configurations. However, Table 2.1 shows that only the demand critical welds and butt joints in the column splices should receive the aforementioned testing and that in general, the welds on the moment frame columns should be subject to MT on 25% of the joints and UT on 100% of the joints. Further, testing on the moment frame columns can be reduced as per AISC 341,</p>	Closed					
	<p>SUGGESTION:</p>						
	<p>ANSWER:</p> <p>1.) RESPONSE: The moment frame column NDT requirements on all weld configurations have been provided in specification section 05-12-10 and Structural Steel Additional Seismic Requirements, Table 2-1. This response has been coordinated with the EOR.</p> <p>Any decision to reduce the level of NDT must consider the criticality, redundancy, loading types, peak loads and other information in the domain of the EOR, in addition to weld reject rates, etc. This means that any allowable reduction in NDT is an EOR prerogative, and not a mandatory requirement. The EOR has agreed to allow such reductions per Note 2 below Table 2-1 which references AISC 341. However; AISC 341 (-05 & -10) stipulates that any reduction in NDT is for individual welders based on their reject rate. There is nothing in the AISC provisions (or in the project specifications) that suggest that any reduction in NDT</p>		12/15/2014	12/25/2014	01/06/2015	Potentially	<input type="checkbox"/>
	<p>Accept Suggestion: <input type="checkbox"/></p> <p>Answered By:Turner Construction Comp Jack Adams</p>						

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>Appendix Q5.2. Please see attached SK1 that highlights the testing requirements, as understood by Skanska, for the moment frame columns and confirm this is correct.</p> <p>If this is not accurate, please supply the NDT requirements for the Moment Frame Columns.</p> <p>2) Please clarify the Table 2-1 remark under welds not described below, "MT 25% of joints, full length". It is our understanding that 1 out of every 4 joints will receive full length MT inspection and the next 3 joints will not receive MT. Please confirm.</p>						
					<p>be approved for a facility, only for individual welders whose reject rates do not exceed 5%. This RFI does not (in keeping with the AISC provisions) provide a blanket reduction for the facility.</p> <p>EOR has allowed for QA Special Inspectors to reduce the NDT of those welds on the moment frame columns (Non-demand critical welds and Non-butt joints in the column splices) to MT on 25% of the joints and UT based on the AISC provisions. However, this will require Skanska and QA Special Inspectors to verify statistically the acceptance/rejection rates of each welder or welding operator proposed for reduction with a request in writing from Webcor-Obayashi/Skanska. The statistics should include the number of 'welds' made, the number of 'welds' examined by MT and UT, and the number of 'welds' rejected by MT and UT to comply with the AISC provisions. QA Special Inspectors would then review the statistics prior to accepting any specific welder NDT reduction request. The QA Special Inspectors only are authorized to reduce the NDT of those specific welders and the QA Special Inspectors only are also authorized to rescind this.</p> <p>NOTE: Regarding any proposed "Reduction of Rate of Ultrasonic Testing" specified in AISC 341-10 (J6.2g) compared to 341-05 (Q5.2 g). This exempts Demand Critical Welds from any reduction in UT testing. UT Testing shall remain as per specification section 05-12-10 Structural Steel Additional Seismic Requirements, Table 2-1.</p> <p>2.) RESPONSE: Any decision to reduce the level of NDT to 25% for moment frame column Complete Joint Penetration (CJP) welds and per specification section 05-12-10 Structural Steel Additional Seismic Requirements, Table 2-1, and AISC as noted above, Four of Four (4 out of 4) welds will receive QA Special Inspectors AWS Code visual welding inspection with some reduction in MT inspection only at the discretion of the QA Special Inspectors who are only authorized to reduce the NDT to 25% for those individual welders whose reject rates do not exceed 5% as described above. The QA Special Inspectors only are also</p>

T-2017	BGP - Foundation Wall - 3rd Lift - West Wall Rebar Cover From: Webcor Construction LP To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto REQUEST: Contract Doc Ref: N/A Location: West Foundation Wall. W379. W380 Grid Line: N/A Add' Doc Ref': Field Report SS10-073, attached sketches. Please see attached sketches and field report #SS8510-073, sections 073.3.2 and 073.3.3, authored by Sean McNeill. Due to a variance in concrete cover at foundation walls W379 and W380 SCCI proposesthe following solutions. 073.3.2: Where the 4 instances occur, SCCI proposes to excavate behind the vertical dowel approximately 6"down to allow for field bending of thee dowel in order to achieve specified cover. Vertical will be identified, concrete will be excavated and dowel will be field bent away from face of wall. (Please reference attached sketch referencing issue #073.3.2) Please confirm this is acceptable. 073.3.3: Where condition occurs at wall W80, a 12"x 12"grid of #4 temperature steel will be added. This grid of temperature steel will be dobed off of existing contract bars in order to achieve specified cover. The approximate height of the grid will be 3'to 6'and approximately 15'to 20'in length. At the top of the wall clear cover will be set to specified amount. (Please reference attached sketch referencing issue #073.3.3) Please confirm this is acceptable.	Closed	12/16/2014	12/26/2014	12/19/2014	Potentially	<input type="checkbox"/>
			authorized to rescind this.				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Regarding TT Field Report Item 073.3.3 referenced in the RFI: The proposal is acceptable at the location of excess concrete cover. It is acceptable to use larger reinforcing bars in accordance with the availability of materials on site. Regarding TT Field Report Item 073.3.2 referenced in the RFI: Field walk with Charlie Marrow of SCCI and TT Field Representative, Sean McNeill, on 12/19/14 identified additional locations, over those mentioned in the RFI, of less than minimum required concrete cover both north and south of Wall 191. Definitive identification of all individual bars in violation was difficult due to inconsistencies in the profile of the wall starter lip just above the concourse and the fact that many of the wall starter bars (and coupler sockets) are slightly out of plumb. An acceptable course of action is for the contactor to complete the installation of wall reinforcing and secure the top of reinforcing to the waler above at the contract plan location so that all verticals are in a straight line. The contractor shall establish the theoretical wall face at the base and measure the available cover to the nearest wall reinforcing, tie, or coupler with plum bob, level, or equivalent means. Where the cover measures less than 1" (specified cover minus ACI 117 tolerance), the contractor shall have the option of field bending the starter bars or offsetting the formwork to achieve the target cover. Should the contractor elect

T-2023	SSS - Missing Information at Bus Deck Level GL 32.4-33.2	Closed	12/18/2014	12/28/2014	12/27/2014	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LPGregory KemererTo: Turner Construction Company Phil Militello</div><div>Co-Author: Skanska USA Civil West California DisRyan Clayton</div></div>							
REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: S1-2507 Location: Zone 4, Bus Deck Grid Line: D & 33 Add'l Doc Ref's: CD RFI # 737 SK1					Accept Suggestion: <input type="checkbox"/>		
Drawing S1-2507 provides information for the framing of the bus deck near grid lines D and 33.					1) Confirmed.		
Some of the information is missing. Please provide clarification on the following:					2) Confirmed.		
1) Confirm 8/S1-5003 applies between Grids D-D.4, opposite of Grids E.6-F. 2) Confirm the noted symbols indicate bracing per 8/S1-5015 at (8) locations hi-lited. 3) Supply the missing clouded dimensions at (8) locations.					3) The kicker braces are centered on the W-3 connections below. W-3 connection workpoint locations are shown on A/S1-6058.		
					Reason for RFI (TT): We disagree with reason for request: Insufficient Information, agree with verification. We categorize this RFI as Called out on contract documents.		
T-2023.1	SSS - Missing Dimensions at Bus Deck Level GL 32.4-33.2	Closed	01/19/2015	01/29/2015	02/10/2015	Potentially	<input type="checkbox"/>

to SK3 for items 1 to 3:

1) Confirm the headed studs as shown are correct (work with item 2).

2) Detail 2/S1-5023 is referenced with a "SIM" designation and it is not clear what is required on grid 8 for the additional headed studs shown in detail 2/S1-5023. Confirm the headed studs as shown on SK3 are acceptable or supply a clarifying detail specifically for this location showing the stud locations.

3a) Confirm the 2" dia. hole locations as shown on SK3 are acceptable to clear the bolts in the bottom flange and the stiffeners.

3b) Detail 2/S1-5023 shows the holes at 5" OC but this contradicts the 6" OC shown in detail 7/S1-3701. Confirm the spacing shown in item 3a above is acceptable.

3c) Confirm the 3" dia holes are not required at grid 8 as they are not shown in detail 7/S1-3701. Supply location dimensions if they are required.

REQUEST: Contract Doc: S1-2607, S1-8002 Location: Zone 4, Roof Park Gridline: E/33.5 Add'l Doc Ref's: RFI T-2034, CD RFI 740.1 SK1 Per RFI T-2034, detail 1/S1-8002 was supplied for the W33x118 to the BU-40x22 connection at GL E/33.5. The connection per 1/S1-8002 will not work at the noted location: > 1/S1-8002 calls for 11 bolts but only 9 bolts will fit inside the W33. > the bottom flange of the W33 cannot be moment welded. Please see the proposed connection in the attached CD RFI 740.1 SK1. Confirm the connection is acceptable as shown or supply a new detail.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Number of bolts as shown on SK1 in the RFI is acceptable. Provide a moment connection through a WT welded to the bottom flange of the W33 beam similar to that shown in SKS-0376 submitted with RFI T-1520. Reason for RFI (TT): We disagree with the reason for request: Engineering Conflict, agree with Verification. We categorize this RFI as Other.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: 1/A1-7006, 1, 2/S1-7006, 6/S1-7601		Extending the header beam over the columns for stringer connections is acceptable.					
Location: Zone 1, Ground & Second Level							
Gridline: E/7							
Add'l Doc Ref's: CWSD RFI #27							
See the attached sketch.							
The beam and column locations at Stair 301 intermediate landing EL. 29'-0 1/8" are setup too narrow to support the outside stringers per required detail 6/S1-7601.							
Per the attached sketch, confirm the header beam can sit on top of the columns and extend East and West as required to support the stringers. If not, please advise on a solution.

REQUEST:			ANSWER:				
Contract Doc Ref: N/A			Accept Suggestion: <input type="checkbox"/>				
Location: Prefabricated Buildings			Current booth design accommodates various power system requirements. Providing a single panel per booth would require redesign to consolidate circuits and number of power sources. Listed below are circuits per voltage, amperage, and power source:				
Closest Column Line Intersection: N/A			Guardhouse				
Add'l Doc Ref's: RFI P1-2049			(3) 20A/120V emergency power [ELP-B1-A-LRS] [outlets]				
Per the response to RFI T-2049, the electrical within the prefabricated units are to remain as home runs to panels within the main TTC Building.			(1) 25A/208V emergency power [ELP-B1-A-LRS] [ACC]				
During the QBD meeting on 01/09/2015, it was agreed that the electrical within the prefabricated units is to be run to a panel attached to the prefabricated unit.			(1) 15A/208V emergency power [ELP-B1-A-LRS] [AC]				
Please confirm the electrical within the prefabricated units is to be run to a panel within the prefabricated units, and revise the electrical plans (i.e. show panel size and circuiting within prefab unit, and feeder size/home run information from within the TTC Building) to reflect the desired electrical routing.			(1) 20A/277V emergency power [EDMH-B1-A-LRS] [lights]				
			GGT/SFMTA Supervisor Booth				
			(5) 20A/120V normal power [LP-B1-D-1] [outlets, hand dryers, weather station]				
			(1) 20A/120V emergency power [ELP-B1-D-LRS] [FSD]				
			(2) 20A/120V emergency power [ELP-B1-D-EMG] [future detector, circuit camera]				
			(2) 20A/208V normal power [LP-B1-D-12] [EWH]				
			(1) 20A/120V normal power [LP-B1-D-12] [EF]				
			(1) 20A/277V normal power [LPH-B1-D-1] [HP]				
			(1) 20A/277V emergency power [EDMH-3-D-EMG] [lights]				
			Bus Deck Superintendent Station				
			(3) 20A/120V normal power [LP-3-A-1] [outlets]				
			(1) 20A/277V normal power [LPH-3-A-12] [HP]

Contract Doc Ref: (ASI 128 dated 12/16/14) Specification Section 07 42 13				There is no requirement for a Corrosion Engineer for the preparation of the corrosion analysis. Specification Section 07 42 13 paragraph 1.9 C was revised on ASI-0128 to eliminate the Corrosion Engineer.			
Location: N/A							
Closest Column Line Intersection: N/A							
Add'l Doc Ref's: N/A							
Specification Section 07 42 13 (1.9) C Preformed Metal and Clay Panel Cladding requires a corrosion analysis by a licensed engineer.							
Per previous discussions, QBD's (for example, TG07.3-145), and RFI's (for example, P1-0418):							
1.) ASI 128 was to remove the requirement for the corrosion analysis to be performed by a corrosion engineer from all specification sections.							
2.) The Contractor is to provide a component-by-component corrosion analysis report with their own forces, rather than providing an analysis by a corrosion engineer, when a corrosion analysis is called for in the specifications.							
Please confirm the corrosion analysis to be performed by a corrosion engineer is required per Specification Section 07 42 13 or revise the specification to be in accordance with previous discussions.

Contract Doc Ref: (ASI 128 dated 12/16/14) Sheet A1-6005 Sheet A1-8880 Specification Section 07 09 13 Location: Bus Deck Level Closest Column Line Intersection: GL 20 Add'l Doc Ref's: N/A Per Sheet A1-6005, the seismic/expansion joint at GL 20 passes through the W-18 system. No expansion joint is called out on Sheet A1-8880 and or in Specification Section 07 09 13 for a seismic joint within a cement plaster system. Please provide information on the seismic joint to be installed at the W-18 system.					Statement in this RFI is not quite correct, in ASI-0128 the seismic joint cover for the W-18 Portland Cement Plaster is contained in the Schedule in A1-8880 and indicated in 1/A1-8230. Clarification is required as to the model and material. Please refer to the enclosed marked up drawings and specification. Also, note other related minor revisions on the seismic Joint Assemblies specification. *Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Contract Doc Ref: 1/S1-3700, 2/S1-3702, 4/A1-2863, and S1-1003.			1) Acceptable where detail 1/S1-3700 is applicable.				
Location: Zone 1, 2			2) Acceptable where detail 2/S1-3702 is applicable.				
Grid Line: G							
Add'l Doc Ref's: Attached mark-ups							
Please find attached detail 1/SI-3700, 2/S1-3702, 4/A1-2863, and S1-1003.							
The elevation difference between the noted bottom of step and top of slab at Gridline G averages less than 4" per detail 1/S1 3700. The elevation difference required in detail 2/S1-3702 is nearly 1". See 4/A1-2863 markups attached noting the contract elevations provided. These small, top of slab differences will require an additional set of formwork and slow the schedule.							
Note that the slab steps will be later covered in 18" of asphalt as noted in S1-1003 and the concrete steps will not be seen.							
Please confirm the following is acceptable:							
1. Eliminate the first step at Gridline G in Zones 1 and 2 by sloping the top of CIP slab to the elevation of the metal deck slab, as shown in attached detail 1/S1-3700.							
2. Eliminate the step in 2/S1-3702 by sloping the slab to meet the elevation at the top of step. This would be applicable for all locations where this detail and similar occur.

REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: ASI 128 - L1-2624, L1-2639, 2/L1-7647, 8/S1-3281 Location: Roof Park Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A 2/L1-7647 shows the Play Structure Anchor Assembly Footing as part of the protection slab on the roof. 8/S1-3281 shows the Play Structure Footing as part of the structural slab on the Roof Park level. L1-2624 shows Play Structure Footings at GL 15/G on a Shear Key. L1-2639 states to SSD for the Play Structure Post Footing at Shear Key, but the only detail in the Structural Drawings for the Play Structure Footing is the typical detail 8/L1-3281 which does not show the footing at the shear key. Please provide details for the Play Structure Anchor Assembly Footings at the Shear Key located at GL 15/G.					Accept Suggestion: <input type="checkbox"/> The play structure footings are tied to the structural slab per 8/S1-3281 issued with ASI 128. The revised shear key location is noted in the attached sketches SKA-4412 and SKLA 354 allowing the footing to be clear of the shear key. Also refer to RFIs T-2081 SCS and T-1976 SCS. Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI		
T-2083	RPL - Vine Planting in Doorway	Closed	01/13/2015	01/23/2015	01/28/2015	Potentially	<input type="checkbox"/>

T-2084	RPL - Connecting Bridge at Roof Park Bus Fountain	Closed	01/13/2015	01/23/2015	01/15/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Sihaya Roselle To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Contract Doc Ref: ASI - 128 - L1-2605 Location: Roof Park Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A L1-2605 states that Structural Resolution is Pending at the Bridge on GL 21/B which are located within the Bus Fountain at the Roof Park. Confirm that the structural resolution that is still pending will not impact any of the elements of the Bus Fountain and if so define what those impacts will be.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The resolution of the Salesforce Tower bridge connection to the TTC is not in contract. Resolution is pending notice to proceed from the TJPA on an unknown schedule		
T-2085	SSS - W-20 Uncoordinated Drawings	Closed	01/13/2015	01/23/2015	01/22/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Sihaya Roselle To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Contract Doc Ref: ASI 128 - S1-2650, S1-6100, S1-6101, S1-6102 Location: Roof Park Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A W-20 is not coordinated in the Structural, Landscape and Architectural drawings. The Architectural and Landscape drawings show the W-20 stem walls with a concrete lid over the top so that the W-20 may be constructed in the future. The Structural drawings show two conflicting conditions for the Roof Park Cafe. 1/S1-2650 shows the stem walls while sheets S1-6100, S1-6101, S1-6102 show the final construction of the W-20 Roof Park Cafe in its entirety. Please clarify if the W-20 is meant to be constructed in its entirety or only the stem walls and concrete lid. Revise and coordinate the drawings with the required direction and define which drawings govern this scope.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per TJPA direction, the W-20 Café Building IS NOT part of the scope of ASI 0128. Please delete SBP's structural drawings S1-6100 thru S1-6102, which were inadvertently issued. The statement that the architectural and structural drawings are not coordinated is incorrect. AAI's & TT's construction documents in ASI 0128 are coordinated, and show the W-20 Café foundation walls capped, and without the Café structure.

REQUEST: Contract Doc Ref: ASI 128 - 1/S1-3282, A1-8685 Location: Roof Park Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A Perimeter Guard Rail at Park Level is not coordinated in Structural and Architectural drawings. 1/S1-3282 is showing a different Perimeter Guard Rail at the Park Level than A1-8685. Please clarify which detail is correct and revise/coordinate the drawings.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Perimeter guardrail at Roof Park Level has been coordinated between structural and architectural disciplines, however detail 1/S1-3282 was inadvertently left in structural drawing. Please use architectural detail on A1-8685. Detail 1/S1-3282 will be removed from the structural drawings in subsequent ASI.		
T-2087	RPL - Fountain Drawings Removed in ASI 128	Closed	01/13/2015	01/23/2015	02/04/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Sihaya Roselle To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Contract Doc Ref: ASI 128 - L-0000 Location: Roof Park Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A All fountain drawings (L1-7000 through L1-7071), except for hardscape, have been removed from the Landscape drawings. However, their removal is not indicated in L-0000. Confirm that the fountain drawings were meant to be excluded from the newly conformed ASI 128 and that their removal will not impact the fountain hardscape details, or provide the fountain drawings.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ASI-0129 was issued on 01/29/15 to include previously issued Fountain drawings which were inadvertently omitted from the ASI-0128 package. Please note there are no content changes to these documents. To match the documents issued with ASI-0128 the date was updated on these drawings to 12/16/2014 to avoid any confusion.

T-2092	BGP - Chord Bars at Vehicle and Bike Ramp	Closed	01/15/2015	01/25/2015	01/19/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Contract Doc Ref: S1-2251 Location: Bike Ramp Z1 Grid Line: N/A Add'l Doc Ref's: Attached. Please confirm it is the Engineer and Designer intent to install the Chord Bars at the Vehicle and Bike Ramp per the attached TT sketch and NOT per the Contract Drawings or Shop Drawings (Submittal TG0600-331.1) which were returned "Approved As Noted."			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Regarding the permanent blockout at Grid 5: S1-2202 shows that chord reinforcing passes continuously south of the column. Submittal TG0600-331.1 is incorrect if the submittal implies that the chord reinforcing is not continuous. The chord reinforcing shall be continuous as shown schematically in the sketch included in the RFI. This issue is being tracked as BIM360 ID 000943 and shall be resolved prior to final rebar inspection. Regarding the temporary blockouts: Per S-0005, GR-4, Gr-5, and Gr-9, the contractor is responsible for the design of temporary blockouts. In order to avoid having to splice chord reinforcing within the temporary blockouts, the chords may be realigned similar to what is shown in the sketch included in the RFI. Note that the length of overlap of offset chords exceeds that of a typical lap splice and requires engineering design. The structural field representative will assist the contractor in determining required length and layout, should the contractor opt to offset the chords. Regarding chord reinforcing size and number: The chord reinforcing size and number is correctly indicated on the sketch included in the RFI. Design team is not requesting that the contractor do anything other than what is shown on the contract drawings; however, should the contractor wish to avoid coupling chord reinforcing within temporary blockouts, layout deviations similar to what is shown in the attached RFI will be acceptable after review by the design team. Any such modification is for the contractor's convenience and shall be at no cost to the owner.

<p>Contract Doc Ref: S1-5022 Location: Ground Level Grid Line: C and G Add'l Doc Ref's: Attached</p> <p>Please reference Sheet S 1-5022 showing the typical steel to concrete connection at the ground level. Note the 1:1 slope from bottom of beam to bottom of flange in Detail 1B and 4A. Insufficient rebar details are available in this 1:1 slope in SI-5022. The details direct to the SI-37XX series for further rebar details. Sections are taken at various GLs at N/S Transfer Girders, but not between GLs at the E/W perimeter steel. The bottom bar embedment varies: 90 degree, 45 degree, and terminator ends are all used.</p> <p>Shimmick requires further rebar details in the 1:1 sloped region of the MFBs between GLs at the E/W perimeter steel along GL C and G to produce shop drawings. This RFI affects Submittal TG0702-076 for Ground Level 13-19 Rebar and has potential changes for Submittal TG0702-075 for Ground Level 10-13.</p> <p>1. Please provide a new rebar detail applicable to all MFB between grid lines, one each for GL C and GL G. Please include bent bottom bar requirements and stirrup requirements as applicable.</p> <p>2. Are bent bars, similar to those shown in the SI-37XX markups, required in the 1:1 sloped region of the MFBs between TRs along GL C and G?</p> <p>3. If bent bars are required per #2, please provide criteria</p>				<p>1). The intent of the bent bars was shown in many details in S1-37xx series details, e.g., Detail 7/S1-37-1, 10/S1-3703, 2 & 4/S1-3705. The 45 deg bent shall be placed as close as possible to the flange of the supporting steel spandrel beam and the vertical leg shall have a length equal to standard hook length. Please also see the response #3).</p> <p>2). Confirmed.</p> <p>3). Bent bars are to be used where the bottom of the beam has a 45 deg slope. Beam bottom flange slope is required where the bottom of the concrete beam is lower than the supporting steel beam.</p> <p>4). Confirmed that splicing the bent bar is acceptable. Please refer to detail 10/S1-3703 for splice detail.</p> <p>5). Where the concrete beam is supported by a spandrel beam at Grid C or G, the stirrup shall be placed starting from the face of supporting beam flange. Where the concrete beam is supported by a transfer girder, the stirrups shall start when there is a hole in the transfer girder that allow the placement of the stirrups.</p> <p>6). See response to item 3).</p>

	<p>on when to apply each of the following bottom bar end conditions: 90 degree, 45 degree, and terminator ends. Shimmick would propose the criteria as the size of the 1:1 slope region.</p> <p>4. If bent bars are required per #2, Shimmick proposes that the bottom bent bars are added with a splice to facilitate placing the bar. Propose (a) splice length per splice schedule on S1-3001, to extend from start of 1:1 toward foundation wall, (b) to reduce bent bar size from matching MFB to a #5, (c) splice length per larger bar size.</p> <p>5. Please provide a distance from the GL G and C at which to stop stirrups. Alternatively, please confirm it is acceptable for stirrups to end when the MFB 1:1 slope begins.</p> <p>6. Does the 1:1 slope occur at the built up drag beams along GL C and G? Does the bottom of beam (a) slope to middle flange or (b) run straight into the steel web?</p>

T-2098	SCS - Welded Bars At Cast Node/TRs Near Roadway Slab 1	Closed	01/16/2015	01/26/2015	01/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: S1-2304-S1-2306, S1-4109, S1-4304, S1-4354, 3/S1-4354 Location: Ground Level Grid Line: N/A Add'l Doc Ref's: Attached.			SUGGESTION:				
Please reference the following sheet path to reference welded bar conflicts at the Cast Node/TR connections: SI-2305 -> B/SI-4109-> B/SI-4304-> SI-4354. The below apply to 6 locations: C/16.9, G/16.9, C/19.1, G/19.1, C/24.9, G/24.9.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
1. In detail 3/S1-4354, the bottom bars on the transfer girders show a "TYPE 2 MECH COUPLER" joining the bent bar to the flange. Use of a standard coupler will not ensure correct final orientation of the 45 degree bend. Use of positional couplers for each bottom bar is cost prohibitive, since 26 bars are required at each of the 6 cast node connections. Results in a minimum of 156 couplers. Propose to eliminate the positional coupler in detail 3/S 1-4534 and use a single one piece bar, welded to the top of the bottom flange. Eliminates 156 couplers. Please confirm this proposal is acceptable.			1). Confirm that welding the bottom bars directly to the bottom flange of the transfer girder is acceptable. The weld size and length shall be the same as detailed on 3/S1-4354.				
2. In detail I/S1-4354, 1 of the bottom bars is shown with a Lenton half coupler similar to the top bars. Similar to above, the use of a standard coupler will not ensure correct final orientation of the 45 degree bend. Propose to eliminate this coupler and drape bar on either side of the plate, weld to plate or flange. Can place 1 bar on each face if needed. Please confirm this proposal is acceptable and if I bar on each face is needed.			2). We believe that the reference to Detail 1/S1-4354 is an incorrect, and it should reference to Detail 2/S1-4354. Confirmed that welding the bottom bars directly to the bottom flange of the transfer girder is acceptable, as long as there is sufficient access for field welding.

T-2106	SCS - Conflict Between TR Girder Stirrup Holes and Concrete Beams	Closed	01/16/2015	01/26/2015	01/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:				
Contract Doc Ref: S1-3705 Location: Ground Level Grid Line: N/A Add'l Doc Ref's: Attached. Please reference SI-3705, Sheet 631AC from SSS TG0701-074, and Sheet GN02F from SCS TG0702-075. All sheets are in reference to the concrete MFB framing into TR 12 at GL C as an example. SI-3705 shows 2" holes penetrating TR 12 at top and bottom of web for placement of stirrups. The steel shop drawing for TR 12 shows the hole layout. However, when detailing the MFB/TR connection at C/12, the stirrup holes fall outside the concrete beam bottom due to the 1:1 sloped region of the concrete beam (shown in SI-3705). The conflict is reflected in the rebar shop drawing. This results in exposed stirrups. Shimmick proposes that stirrups be eliminated when transfer girder stirrup holes fall outside the concrete limits. Please confirm this is acceptable. If this is not acceptable, Shimmick proposes to provide hanger bars through only the top holes in the web, with size to match original stirrups and fit concrete limits.			ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 3/S1-3705 shows that the concrete beam is framed into TR12, with bottom of the beam bearing on the TR12 bottom flange. The concrete beam bottom does not have 1:1 slope as stated in this RFI, so we cannot see problem in installing the stirrups per contract documents. Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI

REQUEST: Subject: Roof Park Restaurant Dumbwaiter (ASI # 128) Location: Grid 5 Roof Park Add'l Doc : N/A During Pre-Construction scope discussions regarding the Roof Park Restaurant, it was understood a dumbwaiter was to be included in ASI # 128. However, ASI # 128 Drawings and Specifications do not indicate a dumbwaiter requirement. Please advise if: 1.)Is Webcor/Obayashi to include the new Roof Park Restaurant dumbwaiter within its ASI # 128 pricing? 2.)If so, are there new specifications, drawings and details with which to price a dumbwaiter?		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) No - Webcor/Obayashi IS NOT to include the new Roof Park Restaurant dumbwaiter within its ASI-0128 pricing. 2.) There will not be specifications, drawings and details issued for this work, as this is work by the Tenant in a future Tenant fit out package.

T-2141	SST - Stair and Railing Mock-Up Location	Closed	01/29/2015	02/08/2015	02/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Claude Titche	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Olson and Co. Steel		Avel Solomon					
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
As discussed in Olson Steel's QA-QC Meeting of Mutual Understanding on 12/23/14 with Turner/WOJV, and again in Olson's Preparatory and Initial DFOV meetings on 1/5/15, it was agreed that the Stair and Tailing Mock-up (One complete floor to floor exit stair mock-up complete with landing and railing per 05 51 00, 1.8 Quality Control, Part C) will encompass the Stair #403 stringers and landings from the Train Platform EL.-20'-0" to EL -18'-7 1/8". Olson Steel is currently fabricating this mock-up, and as agreed with Turner/WOJV, the mock-up will be fully assembled in Olson's San Leandro shop for the Design Team to review. This RFI is being submitted for record to revise the location of the mock-up to Olson's fabrication shop in San Leandro, CA. Since the mock-up is an actual portion of Stair #402, a secondary review can take place if needed once the stair is installed onsite.				Confirmed.			
<p>Please confirm this is acceptable.</p>

REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: (ASI 128 dated 12/16/14) Detail 1/A1-9585 Sheets A1-9520 through A1-9537 Location: N/A Closest Column Line Intersection: N/A Add'l Doc Ref's: RFI Response P1-0457 Detail 1/A1-9585 calls out for the Grand Hall topping slab thickness to be 3-5/8", with radiant floor heating tubes and #4 rebar. Notes on Sheets A1-9520 through A1-9537 confirm that reinforcement within topping slabs is to be #4 rebar at 16" o.c. each way. Based upon the minimum clearances and material thicknesses (1.5" clr. for tubing, ¾" nominal O.D. for tubing, 1" for rebar mat, ¾" minimum clr. for rebar), the topping slab minimum thickness would be required to be 4" (NOTE: 4" does not include any room for allowable tolerances), which exceeds the thickness called out on Detail 1/A1-9585. Please provide direction as to the desired topping slab thickness at the Grand Hall (NOTE: RFI P1-0457 previously changed the reinforcement to 6x6x4.5x4.5 within the Grand Hall).					Accept Suggestion: <input type="checkbox"/> For reinforcing requirements at the Grand Hall topping slab, see attached sketches SKA-4435 and 4436. The notes on the topping slab have been revised typically and the detail at radiant floor has also been revised to match notes per the attached sketches.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Contract Doc Ref: (ASI 128 dated 12/16/14) Detail 1/A1-7572				Please refer to SKA-4431 for a typical detail for the knock out slab at the grand hall.			
Location: N/A							
Closest Column Line Intersection: N/A							
Add'l Doc Ref's: N/A							
Detail 1/A1-7572 appears to show a bolted connection between the edge of permanent terrazzo covered topping slab and the knock out panel topping slabs.							
No detailed information is given on the assembly (angle size, bolt size, how often does the bolted connection occur, what is the solid grey color, is this a typical detail at all edges of all knock out panels, etc.).							
Please provide the full detailing on the permanent topping

T-2148	TOP - Alignment of Topping & Structural Slab Joints	Closed	01/30/2015	01/30/2015	02/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Contract Doc Ref: (ASI 128 dated 12/16/14) Detail 1/A1-7572			Confirmed, the joint between the topping slabs and the structural slabs are not to align.				
Location: N/A			Statement about the topping slab/terrazzo cracking because it moves independently from the structural deck is not quite correct. Slabs are not designed to be connected.				
Closest Column Line Intersection: N/A							
Add'l Doc Ref's: N/A							
Detail 1/A1-7572 shows the topping slab extending past the edge of the structural slab joint (between permanent slab and knock out slab) by 3" with a steel angle pour stop.							
If the structural deck moved independently of each other (they are not tied into each other), there is a strong possibility that the topping slab/terrazzo will crack.							
Please confirm that the joint between topping slabs and structural slabs are not to align at the edge of knock out slab.

T-2161	SSS - Light Column Pipe to Cast Node Joints	Closed	02/02/2015		02/09/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton Answered By: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc: S1-6005, S1-6006 Location: Light Column Gridline: N/A Add'l Doc Ref's: SK RFI 1015 SK1 & SK2 Pipe for the light column structure is specified on structural contract drawings S1-6005 and S1-6006 as API 5L Grade X52. Pipe has been ordered and delivered in conformance with this specification. Detail 6/S1-6006 shows the intended fit between the vertical pipe legs and the cast nodes. The castings have a machined feature on each nozzle end that is intended to slide into the pipe ends and act as a backing ring. The corresponding weld between these two components is called out as a complete joint penetration weld in the same detail. In accordance with AWS D1.1 Section 5.22.1.1, the separation between faying surfaces of butt joints landing on a backing shall not exceed 1/16". The allowable tolerances for API 5L Grade X52 pipe do not require concentricity (between internal and external bores) or even a constant wall thickness that would be required by AWS D1.1 to provide a complete joint penetration weld. Further, there is no requirement in the contract documents for additional machining to the internal bores of the pipe ends as would be required by AISC Code of Standard Practice. As a result our fabricator has encountered the following conditions: 1. Pipe does not fit over the machined backing ring at the cast node nozzle end as intended without additional grinding and/or machining 2. Pipe fits over cast node backing ring; however, pipe ID is not circular or concentric, resulting in excessive gaps that exceed fit tolerance requirements for a complete joint penetration weld. Further, the lack of concentricity may result in misalignment of the pipe and cast nodes in the vertical legs. 3. Ring pipe segments will be made from different pipe sections. Pipe ends from such sections will have varying		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Response Dated 2.12.15: We see this as a means and methods of construction issue, as the fabricator and contractor are responsible for the coordination between structural steel and cast steel. Drawing 6/S1-6006 shows the required fit between the vertical pipe legs and the cast nodes. A CJP is necessary between the pipe and cast node, the fabricator's chosen solution must facilitate this. SBP disagrees with the stated reason for the RFI (engineering conflict), we classify this as alternate proposal submitted for approval. Revised Response Dated 3.9.15: For the ring splices of the horizontal rings located at elevation +12'-0" and +90'-11", it is acceptable to use PJP welds with a 2-inch effective throat depth. The NDT inspection requirements for CJP welds as per the contract document must be followed. For the cast node to cast node splices, located at the cast node ring at the lower concourse level (elev. - 8'-2"), the weld requirement was changed from a CJP in our response to RFI T-2062 dated 01/14/15. It was agreed that PJP welds with a 2-inch effective throat depth were acceptable to be used, with the NDT inspection requirements for CJP welds as per the contract document to be followed. For the remaining horizontal ring splices CJP welds must be used. For the vertical pipe splices, including pipe to pipe and cast node to pipe splices, CJP welds must be used.				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>and unmatched IDs again inhibiting the installation of a tight fitting backing ring required to complete a CJP.</p> <p>For demonstration please refer to attached SK RFI 1015 SK 1 and SK 2 which shows actual dimensions for the first pipe section cut by our fabricator (p16056) and corresponding measurements from cast nodes 702-01 and 702-02 machined backing ring (see attached sketches). The sketches compare the measured pipe ID to the cast node backing ring OD. This piece does not fit against either of the cast nodes</p> <p>To resolve these issues we see the following options / solutions:</p> <ol style="list-style-type: none"> 1. Grind internal bores of pipe ends to allow fit against castings. This option would not permit the completion of complete joint penetration welds so the CJP weld designation requirement would have to be modified to a PJP by the design team. Gaps exceeding PJP allowances would have to be built up with weld metal. Please note; however, that this option does not ensure a correct alignment between the vertical pipe and cast nodes. 2. Machine internal bores of pipe ends to ensure a tight fit against the castings and correct alignment between the pipe and castings. The actual machining work to achieve this would be minimal; however, building machining fixtures and set up time for each pipe end would be significant. 3. For pipe to pipe welds in the ring sections, we suggest removing the CJP weld designation. <p>Please advise or provide a solution as the above options have cost and schedule impacts.</p>

	REQUEST: Contract Doc Ref: B/ S1-6006, C/ S1-6006 Location: Light Column at elevations +12' and +90' Add'l Doc Ref's: n/a For the ring splices of the horizontal rings located at elevation +12'-0" and +90'-11", it is acceptable to use PJP welds with a 2-inch effective throat depth. The NDT inspection requirements for CJP welds as per the contract document must be followed. At the +12 and +90 light column ring beams, please confirm that an effective PJP weld depth of no less than 1.5" is acceptable for the pipe to pipe splices. NDT requirements will per original RFI response.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> We confirm that for the two horizontal light column rings located at +12 and +90, an effective PJP weld depth of no less than 1.5" is acceptable for the pipe to pipe splices. The NDT inspection requirements for CJP welds as per the contract documents must be followed.		
T-2161.2	SSS - Light Column Pipe Weld Joints	Closed	04/09/2015	04/22/2015	Potentially <input type="checkbox"/>		
From: Webcor Construction LP Quang Le Co-Author: Skanska USA Civil West California DisRyan Clayton		To: Turner Construction Company Phil Militello	Answered By: Adamson Associates, Inc. George Metzger				
	REQUEST: Contract Doc Ref: S1-6005 and S1-6006 Location: Zone 3 Gridlines: 22-24 Add'l Doc Ref's: SK001 and SK002 As previously documented (Ref RFI T-2161), the pipe specified for the light column will result in interferences, gaps and combinations of interferences and gaps at pipe to cast node and pipe to pipe weld joints. Following our 08 April meeting, please confirm the following: 1. For CJP welds, when a gap fit is encountered, the opening can be filled with weld wire ('battered') to close any gap exceeding AWS D1.1 Section 5.22.1.1 allowance of 1/16". (See SK001 and SK002 for illustration of this condition) 2. For interference fits (clashes) in the ring splices, material is to be removed to achieve AESS fit at the joint outside diameters (-0, + 1/16")	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. To achieve CJP welds where there is a gap fit, it is acceptable to weld butter the inner diameter to build up material. It must be ensured that proper penetration is achieved. 100% NDT weld quality must be ensured. 2. For interference fits, machining or grinding to allow for minimum clearance is acceptable as long as the minimum wall thickness as per the pipe specification/contract drawings is adhered to. Answered by Design Team: 4/22/15 Closed by WOJV: 4/22/15

	<p>702-02 machined backing ring (see attached sketches). The sketches compare the measured pipe ID to the cast node backing ring OD. This piece does not fit against either of the cast nodes.</p> <p>To resolve these issues we see the following options / solutions;</p> <p>1. Grind internal bores of pipe ends to allow fit against castings. This option would not permit the completion of complete joint penetration welds so the CJP weld designation requirement would have to be modified to a PJP by the design team. Gaps exceeding PJP allowances would have to be built up with weld metal. Please note; however, that this option does not ensure a correct alignment between the vertical pipe and cast nodes.</p> <p>2. Machine internal bores of pipe ends to ensure a tight fit against the castings and correct alignment between the pipe and castings. The actual machining work to achieve this would be minimal; however, building machining fixtures and set up time for each pipe end would be significant</p> <p>3. For pipe to pipe welds in the ring sections, we suggest removing the CJP weld designation.</p> <p>Please advise or provide a solution as the above options have cost and schedule impacts.</p>

T-2170	SSS - Light Column Cast Node Ring Joint Fit Up	Void	02/03/2015	02/13/2015			Potentially <input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By:				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Contract Doc Ref: S1-6005, S1-6006 Location: GL 23 Add'l Doc Ref: AWS D1.1							
The cast node ring has been laid out, plumbed, aligned and leveled. The ring layout has been optimized to maintain circularity as well as vertical and horizontal alignment to the greatest extent possible.							
The weld joint design being used for these welds is BC-P2-GF which allows for a root opening of zero and corresponding "As Fit-Up" tolerance of +1/8", -1/16". Please find attached AWS D1.1 extract for this joint.							
Following layout and fit using the primary criteria of maintaining circularity of the ring and both vertical and horizontal alignment of the ring geometry, some root openings exceed the allowable fit up tolerance (see attached Photos 1 and 2). Please confirm we can proceed by "buttering" the joints at these locations (closing gaps with weld metal).

Contract Doc Ref: ASI 128 - L1-1602 through L1-1607 Location: Roof Park Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A				The design intent as put forth in the construction documents is to run all required conduits through the designated utility corridor to the Security Pylons.			
L1-1602 through L1-1607 show an outline for the main pathway of the utility corridor and vault. However, there are no details for the main utility corridor or any parameters for branches from the main corridor.				The conduits runs utilize the Security Pylons as pull boxes, in addition to the pull boxes identified in the drawings for wire splicing and other code and system requirements.			
Please provide details for the utility corridor and all parameters for branching from the utility corridor to security pylons, etc. Include details and parameters for trenching, backfill, coverage, routing requirements, trench dimensions, additional pull boxes, etc.				Conduits shall be installed per code and following layouts indicated in the electrical and telecom construction documents. Conduits shall not be run under or through tree rootballs. Security pylons are intended to be daisy chained. No additional pull boxes should be necessary.			
				Trenching, backfill and branching are means and methods of construction; the Contractor is required to submit shop drawings for review and approval. The design superimposed dead loads are specified on the contract documents (sheets S1-1013, S1-1014 & S1-1015). The trench and associated backfill shall not exceed the design loads indicated.			
				Refer to attached SKLA-376 for proposed trenching

from footings. Detail the condition when utility corridor interfaces with footings at the roof park level.							
T-2179	FSP - Fire Storage Tank Capacity	Closed	02/04/2015	02/14/2015	02/20/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Aseem Goyal		To: Turner Construction Company Phil Militello		Answered By: Webcor Construction LP Aseem Goyal			
Co-Author: Transbay Fire Protection Kevin Malone							
REQUEST: Contract Doc Ref: P1-5040, 21 13 19-3 Location: Train Platform Level Closest Column Line Intersection: Between B,C.3 & 4,5 Add'l Doc Ref's: N/A P1-5040 calls out the Fire Water Storage Tank as a 45,000 Gallon Tank. The Tank should be sized for the worst case hazard classification of the building. Per Specification 211319-3, the Bus Deck Level is Classified as Extra Hazard Group 1 with a design density of .24 over 4,000 sq. ft. If sizing the tank for this density it should hold 131,400 gallons. 4,000 x .24 = 960 gallons 960 gallons + 500 gallons hose allowance = 1,460 gallons 1,460 gal. x 90 minutes duration = 131,400 gallons Please confirm water storage tank sizing?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The building is not a high rise and a fire water tank is not required by code. The fire water storage tank is provided as a system enhancement. The 45,000 gallons provides 1,500 gpm for a 30 minute duration.

T-2180	SSS - Shop Splice on TG 1.4 & 2	Closed	02/04/2015	03/09/2015	02/23/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:				
Contract Doc: S1-2302, S1-4300 Location: Zone 1, Ground Level Gridline: D.4-F.7/1.4-2 Contract Doc Ref's: TG0701-87.1, Shop Drawings No. 652AC, 653AB, 676AB See the attached SK RFI 1021 SK1-3. Please confirm it is acceptable to introduce shop web and flange splices as indicated on the attached girder segments on GL 1.4 & 2.			ANSWER: Accept Suggestion: <input type="checkbox"/> Original Response dated 2.14.15. Contractor proposed shop splices indicated in the RFI are acceptable for the GL 1.4 girder. Splices shall be performed per Detail 1/S1-5014 (double sided CJP at the web and flanges). For the GL 2 girder, the sheet number (676AB) and piece configuration included in the RFI does not match those reviewed in the shop drawings (WS4). In WS4 shop drawings, GL 2 transfer girder piece numbers are 655 and 656 and a field splice as shown in the RFI does not exist on the western end of the girder. Therefore, the additional shop splice requests for GL 2 girder are not reviewed at this time. We suggest that this item be discussed in next week's coordination meeting or the contractor to submit updated information with consistent reference. Reason for RFI (TT): We agree with reason for RFI: Verification. We categorize this RFI as substitution request. Revised Response dated 2.23.15. Contractor proposed shop splices indicated in the RFI are acceptable for the GL 1.4 girder. Splices shall be performed per Detail 1/S1-5014 (double sided CJP at the web and flanges). For the GL 2 girder, the sheet number (676AB) and piece configuration included in the RFI does not match those reviewed in the shop drawings (WS4). In WS4 shop drawings, GL 2 transfer girder piece numbers are 655 and 656 and a field splice as shown in the RFI does not exist on the western end of the girder. SER has been contacted by Skanska on 02/18 to clarify that the field splice was added due to crane capacity limitations and to request TT review the location of the new field splice along with the locations of the shop splices presented in the RFI. The locations of the field splice and shop splices included in the RFI are acceptable. Splices shall be performed per Detail 1/S1-5014 (double sided CJP at the web and flanges). Updated shop drawings that reflect these changes shall be submitted for record. We note that field or shop splices shall not be introduced by the contractor without approval from the

T-2198	FSP - Clarification on Fire Protection Zoning	Closed	02/05/2015	02/15/2015	02/20/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Aseem Goyal To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Transbay Fire Protection Kevin Malone							
REQUEST: Contract Doc Ref: P1-2003 & P1-2004 Location: Ground Level & 2nd Level Throughout Closest Column Line: N/A Add'l Doc Ref's: N/A P1-2003 & P1-2004 show the Zone boundaries for the project. The Zoning plan for the 2nd Level shown on P1-2004 includes large areas of the building that protect the Ground Floor Level (See dark blue areas on attached P1-2003). In our experience, the Fire Department requires a sprinkler system be zoned from the floor level it protects. Please confirm that the areas of the 2nd level protecting the Ground Floor should be zoned from the Ground Floor.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> There are other two story high spaces controlled by second level zone valves, for example Shaw alley and the passage at grid line 3. We considered the issue zoning and of zone control valve locations early on and what we currently show on our drawings was determined to be the most practical and consistent solution. The grand hall which is the largest two story space is supplied by four zone control valves that are not even located in this sector, two zone control valves are located on second level in Sector B and two zone control valves are located on second level in Sector D.				
T-2199	RPL - Circular Planter Field Mockup	Closed	02/05/2015	02/15/2015	02/19/2015	Potentially	<input type="checkbox"/>

T-2219	SCS - Maximum and Minimums for Pendulum Bearing	Closed	02/11/2015	02/21/2015	02/21/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:			SUGGESTION:		ANSWER:	Accept Suggestion: <input type="checkbox"/>	
Contract Doc Ref: 03 20 02 Location: Pendulum Bearing Grid Line: N/A Add'l Doc Ref's: Attached					1) The displacement specified in the Specification 03 20 02 (4") is the maximum displacement demand that would be observed in the isolators based on structural analysis. For the bearing manufacturer, these displacements are the "minimums" they need to meet in order for the structure to function as designed. Note that self-centering is not an issue as the structure will center the isolators back after a seismic event.		
Specification Section 03 20 02 indicates some maximum loads and minimum displacement for each type of Pendulum bearing, however additional information is needed.

Contract Doc Ref: (ASI 128 dated 12/16/14) Specification Section 09 66 23					Specification Section 09 66 23 (1.7) E describes the terrazzo Manufacturer (Fabricator) qualifications, while 09 66 23 (1.7) F describes the Installer's qualifications, the two entities may be one and the same provided they meet both qualification requirements.		
Location: N/A							
Closest Column Line Intersection: N/A							
Add'l Doc Ref's: N/A					*Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.		
Specification Section 09 66 23 (1.7) E identifies "Manufacturer (Fabricator) Qualifications."							
It is unclear who specifically is the "Manufacturer (Fabricator)."							
Please confirm that "Manufacturer (Fabricator)" refers to the trade subcontractor installing the epoxy terrazzo flooring on-site.							
T-2225	PLG - Missing Roof Drains at Roof Park Level at GL 4 & D	Closed	02/13/2015	02/23/2015		Potentially	<input type="checkbox"/>

From: Webcor Construction LP Aseem Goyal To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Transbay Fire Protection Kevin Malone							
REQUEST: Contract Doc Ref: A1-4506 & A1-4507(ASI 128) Location: ZONE 4, Grids 27 to 33.5, Level: Bus Deck Level Closest Column Line Intersection: N/A Add'l Doc Ref's: N/A Reflected ceiling plans A1-4506 & A1-4507 do not include wide flat ribs for the closely spaced ceiling sprinklers at Grid B between 27 & 33.5. All other sprinklers in the W14 Ceilings are shown in these widened ribs. Another problem with the head spacing on the sheets is the distance between the closely spaced sprinkler and the most northern standard sprinkler located in the widened ribs. They are located 3'-9" apart but NFPA #13's minimum spacing is 6' on center unless baffles are placed between the heads to prevent cold soldering. Baffles are not shown on sheets A1-4506 & A1-4507. Please confirm widened ceiling ribs and baffles between heads will be provided.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See response to T-2167.

TOC marked with yellow fills on A1-2883.</p> <p>The slab step markers on 2/S1-7302 and A1-2883 (per ASI 128) are still incorrect.</p> <p>Please update the slab step markers on sheets 2/S1-7302 and A1-2883.</p>						
T-2237	TTC - Curb Dimension Discrepancy	Closed	02/17/2015	02/27/2015	03/01/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2864, 1/S1-7660 Location: Zone 2, Ground Level Gridline: E.6-F/15-16.9 Add'l Doc Ref's: Virtual Building PH1-CR #071		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Unresolved issue from Phase 1. See attached.							
There is a contradiction between floor plan (A1-2864) and detail (1/S1-7660). Floor plan shows 0'-4 1/2" distance between the curb and escalator pit wall, but the detail does not indicate it.							
There is also a contradiction in the curb size. The architectural slab edge plan shows an 8" wide curb at the top escalator pit (16/D) and a 1'-2" wide concrete curb at the bottom escalator pit (16/F). The structural details (1/S1-7660) show a 10" wide concrete curb.							
Please provide updated curb dimensions on drawing A1-2864.

T-2251	TTC - Beam Placement Discrepancy	Closed	02/18/2015	02/28/2015	02/20/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company Phil Militello		Answered By: Webcor Construction LP Stephanie Azzolino			
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc: S1-2404; 1/A1-9353		Structural drawings will not be updated. This issue has					
Location: Zone 2, Second Level		been coordinated with submitted Steel Shop					
Gridline: G/14-15		Drawings.					
Add'l Doc Ref's: Virtual Building PH1-CR #133							
Unresolved issue from Phase 1. See attached.							
There is a contradiction between the structural framing plan (S1-2404) and detail (1/A1-9353).							
The detail shows the exact position of slab penetrations (marked with yellow fill) from gridlines C/G. The framing plan shows the exact position of the steel beam (marked with red dashed line) from the slab edge (value: 1'-10 1/2") and also provides the distance from the slab penetration (5" typ 3 sides). If the dimension from the penetration edge is followed the distance from the gridline will be greater by 2 1/2".							
Under the design response on the structural framing plan (S1-2404) (PER ASI 128) the W27x84 steel beam stays 1'-10 1/2" from the slab edge. There is no dimension showing the place of the vertical W27x84 steel beam (marked with yellow highlighted) from the gridline 15. The slab penetration should be surround with TYP steel beams on 2 sides (5" TYP 2 SIDES).							
Please provide an updated sheet S1-2404 that includes the marked TYP comment and corrected dimensions.

T-2252	TTC - Beam Placement Contradiction	Closed	02/18/2015	02/28/2015	05/07/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: S1-2303; 1/S1-7302; 6/S1-7660 Location: Zone 2, Ground Level Gridline: D.4-E.6/11 Add'l Doc Ref's: Virtual Building PH1-CR #136 Unresolved issue from Phase 1. See attached. There is a contradiction between the structural framing plan (S1-2303) and structural detail (6/S1-7660). The S1-7302 callout plan on the S1-2303 structural plan refers to 6/S1-7660 detail. The detail (6/S1-7660) shows that the steel beams are aligned with escalator pit walls (marked with green fill). The framing plan (S1-2303) shows the exact positions of the steel beams (marked with red dashed line). If we follow the dimensions of beams on S1-2303 (2'-4" from D.8; 2'-4" from E.2; 1'-10 5/8" from E.6; 1'10 5/8" from D.4; 8" from the edge of the escalator pit), the steel beams will be in a different position than what is shown on detail (6/S1-7660). In this case the typical detail cannot be applied. Please provide an updated sheet S1-2303 with the corrected detail callout.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> No revised drawings will be provided. This Virtual Building Comment has already been addressed by RFIs T-0868.2 and T-0951 and shop drawings have been reviewed and approved. Date Answered by Design Team: 2/18/2015 Date Closed by WOJV: 5/7/2015				
T-2253	TTC - Missing Information for Concrete Wall	Closed	02/18/2015	02/28/2015	02/25/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2203; A/A1-6013; A1-2223; 3/A1-9255; S1-2203 Location: Zone 1, Lower Concourse Gridline: A-B /9-10.1 Add'l Doc Ref's: Virtual Building PH1-CR #141 Unresolved issue from Phase 1. See attached. The ramp located at gridlines 9 to 10.1 and A to B are supported by a concrete wall (marked with yellow fill).			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> For updated 3/A1-9255 and structural requirements for the ramp knee walls, refer to response to RFI T-2212. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

T-2255	BGP - Knee Wall Vertical Reinforcement Issues	Void	02/18/2015	02/28/2015		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By:				
REQUEST: Contract Doc Ref: SSK-0353 Location: Mat Slab Grid Line: N/A Add'l Doc Ref's: Attached Per plan SSK-0353 (RFI T-1394), the O.F. vertical reinforcement where the knee wall is 14" thick shows a standard hook. This will be problematic since this vertical threads into a formsaver at it's base and orientation is critical. SCCI runs into another issue at the I.F. vertical at the top of the knee wall where the thickness is only 10", but the hook length of the vertical should be 12". Please confirm it is acceptable to substitute the O.F. standard hook vert with a straight vert and cap, as shown in the attached Gerdau Detail (Proposed). Please also confirm it is acceptable to minimize the length of the I.F. vert hook to 8" so as to maintain the 314" minimum clear cover, also shown in the attached Gerdau Detail.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>

REQUEST: Ref: Drawing OV-11(CL-24720), detail 4 dated 8/8/14 Location: N/A Closest Column Line: N/A Add'l Doc Ref's : Field Order No. T-00033 - TG12.2 OCS Will holes be available in OCS trough? Note 9 A-1 series drawings for 5/8" S.S. studs. What is the access to tighten 5/8" nuts on top of OCS trough? Please advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is a means and methods issue. SFMTA should coordinate with the CM/GC the sequence of construction. The holes in the OCS trough shown in AAI's drawings suggest that SFMTA installer will drill holes, or coordinate the hole location in advance with CM/GC and shop drill holes. It is up to the TJPA to coordinate the agency installer with CM/GC construction subs. Access to tighten the OCS bolt/nuts is readily available. Some areas of the OCS trough are below the ceiling; while the areas above the ceiling are accessible via W-14 removable panels. The W-14 DB Contractor has confirmed that ALL the corrugated ceiling panels are accessible via torsion springs. Answered by Design Team : 05/28/2015 Closed by Webcor; 06/02/2015

T-2282	TTC - Wall Thickness Contradiction	Closed	02/23/2015	03/05/2015	03/08/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Webcor Construction LP		Jeff Heath					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc: S1-2351;A-0022; A1-2963		AAI disagrees that the dimensions are missing.					
Location: Zone 1, Ground Level		Please refer to A1-2862 and A1-2863.					
Gridline: D-F/4-7							
Add'l Doc Ref's: Virtual Building CR #112		This is the third time WOJV has asked for clarification					
See attached Virtual Building CR #112.		on this issue related to actual vs. nominal dimensions					
There is a contradiction between the structural floor plan		of a CMU block wall. If WOJV still has a question on					
(S1-2351) and the architectural plans (A1-2862; A1-2963).		this issue please have Jeff Heath call George Metzger					
The CMU walls are annotated with 12" wide on the		to discuss this further so the design team can					
architectural plans. The A1-2862 slab edge plan refers to		understand your issue with an 8" block wall being 7					
the structural plans. The structural plan (S1-2351) shows		5/8" actual dimension.					
8" and 12" CMU walls in this area .The actual thickness of							
walls are 7 5/8" and 11 5/8" in the wall schedule (A-0022).							
Using actual wall thicknesses results in different							
dimensions on the architectural plan (A1-2963).							
Issue with 12" concrete walls is solved, but S1-2351							
(03/31/14, ISSUED FOR CONSTRUCTION) still includes							
noted 12" CMU walls. The 8" CMU still do not have							
dimension. ASI128 does not solve the issue.							
Please provide missing dimensions.

T-2287	SCS - Technical Design of Pendulum Bearing Isolators	Closed	02/23/2015	03/05/2015	03/08/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc Ref: 03 20 02 Location: Pendulum Bearings Grid Line: N/A Add'l Doc Ref's: Attached Please find attached Mageba's RFI and Technical Proposal. 1. In the attached technical proposal Mageba have considered the maximum load stated at static, even though the isolators can handle the load at maximum displacement. For dynamic displacement, Mageba have indicated the maximum load possible considering the need for re-centering capabilities of the devices. This consideration had been done due to the following reasons: - The nominal friction coefficient of Robo Slide for these devices is approximately 4.0%. considering the loads indicated in the specification, in case of displacement, such loads multiplied by the friction coefficient would be too high., and the static re-centering will not be possible, especially due to the relatively small displacements. - After reviewing the design of the pendulum isolators, we Mageba, found that the only way Mageba can ensure re-centering is by adjusting the displacement to 5.9 inches, where we would have re-centering with the proposed maximum loads under seismic conditions. The maximum loads proposed for these isolators under seismic conditions and displacement of 5.9 are: Type A: 1,708 Kips Type B: 1,236 Kips - Note that for horizontals loads, the proposed devices would actually reach the minimum displacement for 4" with the requested maximum horizontal force, which are: Type A: 125 Kips Type B: 90 Kips However please note that due to the short displacement, high loads and friction coefficient, the static re-centering will not be fulfilled, only the dynamic re-centering would be ensured.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1-) This question is very similar to those in RFI T-2219. Information on displacement demands, vertical load demands and re-centering were provided in response to RFI T-2219 along with contract specifications. The vertical loads under gravity loads and seismic loads are very similar (see response to RFI T-2219) hence only single set of vertical loads were including in the specifications. As indicated in RFI T-2219 bearings will be re-centered by the trainbox walls (designed to remain elastic) and a self-centering mechanism is not relevant. See structural sheet S1-3135 to how the bearings are located within the structure. This sheet shows Gridline 35 bearings, Gridline 34 bearings are located similarly. Maximum loads provided in this RFI (1708 kips for Type A and 1236 kips for Type B) are lower than those provided in the specifications and are not acceptable, that said the bearings will not experience more than 4" displacement. The vertical reactions provided in the specifications need to be satisfied at 4" displacement. Horizontal reactions provided in the specifications shall also be satisfied at 4" displacement. 2-) Isolator technical specifications shall be submitted to the design team as a submittal not as an RFI. The submittals shall include bearing properties and attachment information to the structure. As indicated in Specification 032002, section 1.4.9, calculations shall also be submitted to show that attachments develop the forces that can be developed in the bearing.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Please confirm if the loads indicated are acceptable or larger than the expected dead load of the structure on top of the isolators.</p> <p>2. The proposed technical design of the isolators intends to fulfill as much as possible the project specifications. Mageba needs the requested information and feedback on the proposed design and dimension to finalize the design.</p> <p>In The attached technical proposal, all the details for the dynamic parameters and performance for the two types of isolator are for review. The key part to clarify and agree on are the seismic loads and the re-centering capabilities, and where or not it would be acceptable not to have static re-centering capabilities for the minimum displacement.</p> <p>Please clarify and confirm the seismic lads and the re-centering capabilities, and whether or not it would be acceptable not to have static re-centering capabilities for the minimum displacement.</p>

T-2295	TTC - Not Enough Room for WP Assembly	Closed	02/24/2015	03/06/2015	03/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Webcor Construction LP		Jeff Heath					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc: A1-8851 Location: Zone 1-4, Roof Park Level Gridline: Global Add'l Doc Ref's: Virtual Building CR #385				No updated drawings will be provided. The WPM assembly is represented graphically in the Architectural drawings. The thickness of the WPM assembly, either real-world or virtual-world, will not be provided. The previous response from the Design Team stands: The protection slab and WP assembly total equals 4"-follow the elevations given on the protection slab plans.			
Please see attached Virtual Building CR #385.				Refer to specifications for WP membrane build up dimensions. Also account for the Electronic Frequency Vector Mapping systems requested by the TJPA. Coordinate with the manufacturer of the EFVM system.			
There is a 4" concrete protection slab on roof level and the assumed ~1" thick waterproofing assembly between the structural/built up slabs and the protection slabs.							
The architectural slab edge plans (A1-2902 to A1-2907) define the elevations of structural and built up slabs and the architectural protection slab plans (A1-2912 to A1-2917) provide elevations for the protection slabs. The difference between the elevations is 4".							
If we model the 4" protection slab with at given elevations, there won't be enough space to model the waterproofing assembly. If we model both the 4" protection slab and WP assembly, the WP assembly will be inside the protection slab.							
Please provide updated drawings showing the total thickness of WP assembly.

T-2296	TTC - Contradiction between the data	Closed	02/24/2015	03/06/2015	03/04/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2914; A1-2913; A1-2915 Location: Zone 1-4, Roof Park Level Gridline: General Add'l Doc Ref's: Virtual Building CR #386 Please see attached Virtual Building CR #386. The slopes of the protection slabs are 2.1% on the protection slab plan (A1-2914) but these are 2.0% if the elevations of the valleys and the ridges are followed. Protection slabs were modeled at the indicated elevations and with 2.0% slope. The value of the slopes and the elevations are still the same on the current drawings. Please provide updated sheets with corrected slopes.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Revised drawings will not be provided. The previous response from the Design Team is correct: The slope values are rounded off and indicate the direction of slope. Please use the spot elevation given on the drawings. This is a frivolous RFI, as it is identical to RFI T-2306.				
T-2297	TTC - Clashes between steel beams	Closed	02/24/2015	03/06/2015	02/25/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: S1-2604; 5/S1-4205 Location: Zone 1-4, Roof Park Level Gridline: Global Add'l Doc Ref's: Virtual Building CR #387 Please see attached Virtual Building CR #387. MC10x41.1 steel beams are clashing with the W steel beams above. Detail shows those beam without clash, but if the MC beam centerline is heading to the desired locations the MC beam will clash with the smaller W beam above. W steel beams were modeled according to framing floor plans and the MC steel beams according to the 5/S1-4205 structural detail. Clashes remain. Please provide corrected sheets.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> This is a structural conflict for which a solution has been provided to Skanska and WOJV through RFI T-0763. Steel shop drawings related to steel affected by this condition have been reviewed and approved for fabrication. Revised drawings will not be provided. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

T-2304	TTC - Contradicting dimensions for wall and landing	Closed	02/25/2015	03/07/2015	02/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Webcor Construction LP		Jeff Heath					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc: 1/A1-2951		Wall and landing dimensions conflict for Stair 201 are clarified in the enclosed sketch SKA-4451.					
Location: Zone 1, Roof Park Level							
Gridline: D/1							
Add'l Doc Ref's: Virtual Building CR #411		NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.					
Please see attached Virtual Building CR #411.							
There are contradicting dimensions for wall and landing on the enlarged floor plan (1/A1-2951). The landing and the wall is aligned on the floor plan, but the dimension values show different distances (2' - 4 1/2" and 2' - 5").							
The landing were modeled following the dimension values on the enlarged floor plan, and the wall is aligned to the edge of the landing. The wall's distance from the grid D is 1' - 6 1/2".							
Please provide corrected dimensions.

T-2315	TTC - Missing wall position	Closed	02/25/2015	03/07/2015	03/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: 3/S1-7013; 1/S1-3286; S1-2606; A1-2906 Location: Zone 4, Roof Park Level Gridline: F-F.7/30-31 Add'l Doc Ref's: Virtual Building CR #621 Please see attached Virtual Building CR #621. The position of the concrete wall on the Roof Park Level - Structural Framing Partial Plan (S1-7013) is missing. The Roof Park Level - Zone 06 Framing Plan (S1-2606) shows, the beam are centered below the concrete walls, but there is no information of the position of the yellow marked wall. 8'-8" distance was used between the concrete walls. The centerline of the concrete walls are aligned to the centerline of steel beams. Please provide missing information on the position of the wall.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> This question was answered in previous RFI - Refer to response to RFI T-1623.				
T-2316	TTC - Missing information about slab	Closed	02/25/2015	03/07/2015	03/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2906; A/A1-7121; 1/A1-8860; 2/A-2964 Location: Zone 4, Roof Park Level Gridline: D.8-F/29-31 Add'l Doc Ref's: Virtual Building CR #625 Please see attached Virtual Building CR #625. Missing information about the thickness of the rigid insulation on this location. The A1-8860 is a typical detail and shows the insulation is sloped to drain, but the floor plans do not show the elevation points or slope values. The A1-2906 Roof Park level zone 06 Slab edge plan shows a 6" sleeve, but does not show the exact location of this. The 2/A1-2964 Stair 601 - Lid drawing does not show this sleeve at all.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to enclosed sketch SKA-4485 for sleeve location.

T-2318	TTC - Contradicting opening position and width	Closed	02/25/2015	03/07/2015	03/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2906; B/S1-3271; 1/A1-9706 Location: Zone 4, Roof Park Level Gridline: E.2-F/30-31 Add'l Doc Ref's: Virtual Building CR #637 Please see attached Virtual Building CR #637. There is contradiction between Roof Park Level Zone 06 Slab Edge Plan (A1-2906), Roof Park Structures - Concrete Elevation (B/S1-3271) and the Door Schedule Roof Park Level (A1-9706). The A1-2906 Plan shows there is a 6'-8 1/2" wide door opening (marked with red fill), the B/S1-3271 elevation shows a 6'-0" wide door opening and the A1-9706 Door Schedule shows 6'-4" wide door in the concrete wall. The related contradictions marked with red bracket. Followed the A1-2906 the door opening has been modeled 6'-8 1/2" wide. Please provide revised dimensions for the opening position and width of the door opening.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to Roof Park Level slab edge plan A1-2906 for door opening location within concrete walls. Dimension with conflict on B/S1-3271 will be deleted in future ASI.				
T-2319	TTC - Missing size of connection plate	Closed	02/25/2015	03/07/2015	02/26/2015	Potentially	<input type="checkbox"/>

T-2321	TTC - Missing dimensions on the Roof Park Cafe	Closed	02/25/2015	03/07/2015	02/26/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-8634; A1-8630; A-0002 Location: Zone 3, Roof Park Level Gridline: F-H/21 Add'l Doc Ref's: Virtual Building CR #641 Please see attached Virtual Building CR #641. Missing dimensions of laminated glass beams (marked yellow) from the Roof Park Cafe on the W-20 Cafe Roof Plan (2/A1-8630) and Roof Edge Section @ Gutter (2/A1-8634). (The detail plan about roof edge (A1-8639; marked red and yellow) are missing from our drawings, but the drawing index shows it on the sheet A-0002. It was reported in CR#279.) The missing dimensions are scaled from the Roof Edge Section @ Gutter(2/A1-8634). They are indicated on the screenshots with red. The A1-8634 sheet is not included in ASI 128 package. The latest version of A1-8634 (rev #0 03/31/14 IFC) does not show the missing dimensions. Please provide a revised sheet A1-8634 including the missing dimensions.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The revised sheet was already provided as SKA-3248 with the previous response from the Design Team. The W-20 Glass Café Building has been removed from the Phase 1 work. Until such time when W-20 is added to the Phase 1 work will then Sheet A1-8634 be issued. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

T-2330	TTC - Contradiction between types of walls	Closed	02/26/2015	03/08/2015	03/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: 1/A1-3195; 1/A1-9001 Location: Zone 1, Ground Level Gridline: E.6-F/6-7 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #211 See attached Virtual Building PH3(ASI)-CR #211. There is a contradiction between the callouts 1/A1-3195 and 1/A1-9001. The types of walls are different on each plan. One of the wall has the same type number 17 but the comment is different. The other wall has different types number 8 and number 18. Followed the marked yellow types of walls because the Design Model contained that types. Please provide revised sheet with the correct wall type.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Wall types and comments on detail 1/A1-9001 are all correct. Detail 1/A1-3195 will be updated to match 1/A1-9001 and will be included with future ASI.		
T-2331	TTC - Contradiction on Second Level	Closed	02/26/2015	03/08/2015	03/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2402; A1-2403; A1-2882; A1-2883; 4/A1-9353; 1/A1-9353; 2/A1-9353 Location: Zone 1-4, Second Level Gridline: Global Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #212 See attached Virtual Building PH3(ASI)-CR #212. The A1-2402 plan shows the details number 4/A1-9353 and 1/A1-9353 as a typical plan between grid "C" and grid "G". These details show the type of wall is number 17 (marked with yellow) and the distance is 4'-11" from the grid. The A1-2882 sheet shows a CC1 curb (marked with green) and the distance is 4'-10" from the grid. If the elements are created according to the plans, the distance will be 1'-0" between the face of the curb and the face of the wall.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See SKA-4471 for revised details on A1-9353 addressing conflict.

T-2333	TTC - Contradiction between architectural curb and wall	Closed	02/26/2015	03/08/2015	03/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2882;A1-2402 Location: Zone 1, Second Level Gridline: D.8-E/4-5 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #214 See attached Virtual Building PH3(ASI)-CR #214. There is contradiction between the slab edge plan number A1-2882 and floor plan number A1-2402. The A1-2882 shows that the architectural curb has 1'-0 1/4" distance from the gridline number 5 (marked with red) but the floor plan shows another value. Because of this difference the wall will not fit properly with the curb. The plans will be followed. There will be a difference between the faces of curb and wall. Please provide revised sheets with corrected dimensions.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Per specification section 05 41 00 3.2.J - Erection Tolerances, metal studs shall be centered on concrete curbs. AAI considers this to be a frivolous RFI.				
T-2334	FAE - Horizontal Lifeline Stanchion Design-Build Requirements	Closed	02/25/2015	03/07/2015	03/03/2015	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Claude Titche			To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Shimmick Construction Company, Inc. Henry Chiang								
REQUEST:			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
Contract Doc Ref: S1-2303, S1-3700 Location: Shaw Alley Grid Line: GL 9-G Add'l Doc Ref's: Attached						1). Confirmed.		
Please reference S1-2303 and Section 2/S1-3700 for Ground Level CIP/Metal Deck connections at Shaw Alley. Section 2/SI-3700 cut on S1-2303 shows the Metal Deck slab support below the top of the steel beam. To match the cross referenced elevations provided on S1-2303 and S1-4003, the Metal Deck slab support must be above the top of steel beam. See sketch provided on S1-3700 attached for a proposed revised section detail. The revised deck location requires a change to the rebar detail.						2). Section 2/S1-3700 remain unchanged. The section on S1-2303 shall be changed to red-marked section shown on the sketch attached in this RFI question.		
1. Please confirm that the sketch correctly demonstrates the intended CIP, pandecking, and deck support listed.						3). The detail for rebars shall be similar to detail 11/S1-3700.		
2. If #1 is confirmed, please confirm that no DBAs are required in Section 2/SI-3700.								
3. I #1 is confirmed, please provide a new detail to supplement 2/SI-3700 that shows the rebar connection when the deck ab is supported above the top of steel beam.

T-2350	SCS - Beam B141 Corbel Support at West Foundation Wall	Closed	02/26/2015	03/08/2015	03/08/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Contract Doc Ref: A1-2251, S1-3411 Location: West Foundation Wall Grid Line: GL V Add'l Doc Ref's: Attached						1. The sides of the corbels are in the same plane as the sides of the intersecting B141's. Refer to submittal TG0600-956 comprehensive layout.	
See attached S1-2251 and S1-3411 regarding the Beam B141 corbel support at west foundation wall. Sheet SI-2251 indicates that the B141 beams intersect the west foundation wall at an angle. The B141 beams are 4' -0" wide. Because the beams frame into the wall at an angle, the connection widths at the wall for the two beams are about 4' 1 1/2" and 4' 3 3/8". Detail 10/SI-3411 indicates the end support width as 4'-0". A rebar detail similar to Section F on Detail 10/S1-3411 is required for the 4' 1 1/2" and 4' 3 3/8" end conditions.						2. Centerline face of corbel may be located 1'-6" from foundation wall measured along a line intersecting the foundation wall at a right angle.	
1. Please confirm that the base dimensions of the B141 beams at their intersection with the foundation wall are 4' 1 1/2" and 4' 3 3/8". If not, provide the correct dimensions.						3. See 2.	
2. Please confirm that the corbel support is square to the B141 beam on top, and not square to the foundation wall.						4. RFI response is sufficient to dimension the corbel. Final dimensions will be reviewed as part of the submittal process.	
3. If #2 is confirmed, please provide dimensions for how far the corbel extends from the wall.						5. B141 concrete beams are separated from the foundation wall by a 1" gap on the tops and on the beam ends. They are separated from the corbel by the bearing plates. There is no rebar connection between the B141's and the foundation wall.	
4. Please provide a plan view at the corbels.						Notes: The pilasters and their projection into foundation wall are parallelograms. (5) #8 corbel u-bars are parallel to face of corbel. #5 closed ties are parallelograms. #10 primary reinforcing welded is welded to corbel face plate at an angle equal to the beam intersection angle with the foundation wall. Similar detailing for (10) #5 face and bottom bars.	
5. Please provide the rebar connection detail between

Co-Author: Fisk Electric Company Orvil Anthony							
REQUEST: Contract Doc Ref: [ASI 128/TE1-4504, Detail 4/TE1-5504] Location: Zone[04], Level [Bus Deck] Closest Column Line Intersection is [Between 14 and 15, C.3] Add'l Doc's Ref's: RFI T-2352 1. Per RFI T-2352 response, please confirm that there are a total of (10)-4"C entering the IDF room 03484. 2. Per RFI T-2352 response, please confirm that detail 4/TE1-5504 should be revised to show a total of (10)-4"C penetrations on IDF room 03484 north wall. 3. RFI T-2352 response shows (4)-4"C leaving from PB-1 and (4)-4"C leaving from PB-2 both going to TE1-5504. One of the (4)-4"C arrows has moved to point out the straight section between PB-1 and PB-2. The other arrow still shows (4)-4"C from PB-1 which is misleading. In order to get (4)-4"C from PB-1 to PB-2 and (4)-4"C from PB-1 to TE1-5504, this note would need to be (8)-4"C. Please confirm the number of conduits leaving both PB-1 and PB-2. Please confirm.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Yes, there are (10) 4" C entering IDF 03484 through the Plan North Wall. 2) Confirmed, detail update are not required. 3) Drawings are accurately depicted. Drawings do not show (8) conduits originating from the same location and terminating at the same location, therefore we would not label it as (8) 4" C. Drawing shows: (4) 4" C from PB1 to PB2 (4) 4" C from PB1 to IDF 03484 (TE1-5504) (4) 4" C from PB2 to IDF 03484 (TE1-5504) Answered by Design Team : 05/18/2015 Closed by Webcor : 5/19/2015

Contract Doc Ref: Drawing A1-8112 Location: W-1 NE Corner Gridlines: 32.4 & 31.7 Add'l Doc Ref's: N/A The W-1 Exterior Awning mock up will have the lower struts in the correct project location. The upper struts will be moved down to fit the highlighted area shown in attached Drawing A1-8112. 1. Please confirm it is acceptable to use the highlighted area shown in attached Drawing A1-8112 for visual mock up pricing. 2. Please indicate if Bird Control, Lighting, and OCS rail are required for the visual mock up. If they are, please provide locations for these items.				1. Confirmed. 2. Bird Control, OCS pipe rail and lighting at lowest horizontal pipe should be included in the mockup. Bird control track should be located at the top and bottom horizontal pipe, as well as in the applicable struts of the awning mockup. The lighting should be included along the lowest horizontal pipe of the mockup - at minimum of two fixtures. The OCS rails (two - type 1 and type 3) should be included at the lowest horizontal pipe and the next one above. Please submit detailed shop drawings to confirm mockup layout and elements.		RFI Answered by Design Team: 03/04/2015 RFI Closed by WOJV: 04/28/2015

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Contract Doc Ref: N/A Location: Lower Concourse Grid Line: GL 29 Add'l Doc Ref's: Attached Please confirm is acceptable to step the bulkhead for Lower Concourse Deck D229 6' to the west. See attached document.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed.		
<hr/>							
T-2357	SCS - Foundation Wall 4th Lift Sleeve Supports Cast Into Wall	Closed	03/02/2015	03/12/2015	03/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: N/A Location: 4th Lift Foundation Wall Grid Line: N/A Add'l Doc Ref's: Attached Please see attached photos and cut sheets regarding Foundation Wall 4th Lift Sleeve Supports. The Foundation Wall 4th Lift stainless steel sleeves are currently supported by P4100 unistrut assemblies set on the top of wall. Shirmick is requesting approval to cast these supports into the 4th lift pour as opposed to removing the supports prior/during the pour. Leaving the supports in place will keep the sleeves more independent from the rebar in case adjustments are needed on the rebar cage. Please confirm it is acceptable to cast the Foundation Wall 4th Lift Sleeve Supports into the foundation wall.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is a means and methods of construction. The Design Team does not take exception to the proposed embedded Unistrut, as long as they conform with concrete cover requirements for reinforcement.

T-2360	SCS - Foundation Wall Sleeve in Conflict with CDSM Pile - GL9-9.9	Closed	03/03/2015	03/13/2015	03/19/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Contract Doc Ref: N/A Location: 4th Lift Foundation Wall Grid Line: GL 9-9.9 Add'l Doc Ref's: Attached See attached mark-ups. One (1) North Foundation Wall Sleeve between GL 9-9.9 conflicts with a CDSM wall soldier pile. Please confirm it is acceptable to move the sleeve 2' East and drop the invert elevation up to ½" to avoid conflict with the CDSM pile. The MEP Sub-contractor, Desert Mechanical , has confirmed this move is acceptable. (See attached email)			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			AAI: It is acceptable to move the sleeve 2' to the East and drop the invert elevation 1/2". For updated location of this sleeve, refer to attached SKA-4492. MDS/WSP: It is acceptable.				
T-2362	SCS - Foundation Wall Formwork Cure Requirements	Closed	03/03/2015	03/13/2015	03/08/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: 03 30 02 3.7A.5 Location: 4th Lift Foundation Walls Grid Line: N/A Add'l Doc Ref's: Attached Please find attached mark up of Spec 03 30 02 3.7.A.5 regarding Foundation Wall Cure methods. The direction is given to moisture cure all train box exterior walls. Shimmick is proposing an alternate moist cure method to the one prescribed in 03 30 02 3.7.A.5 to reduce follow-up weekend work for 4th lift Foundation Wall pours taking place on Thursdays and Fridays. To provide moisture cure for these Thursday and Friday wall pours, Shimmick will (1) leave the 4th lift formwork in place over the weekend, (2) place blankets on the top of the wall, and (3) place soaker hose along the top of wall to keep the concrete surface continually wet. Formwork would be stripped the following Monday and regular moisture cure per spec 03 30 02 3.7.A.5 will resume.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			Confirmed.

T-2390	SSS - Alignment of Elevator Posts and Kicker Braces	Closed	03/05/2015		03/16/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Add'l Doc Ref: SK1, SK2, SK3, SK4, SK5, SK6 Please refer to SK 1 to SK 6 for items 1 and 2 below: 1. The attached sketches show new elevator post locations (verified by elevator contractor) along with the original kicker brace locations in our current model. Confirm kicker braces can remain at current locations or verify they must be moved and aligned with the post locations. Alternatively, please verify if there is a maximum offset that would satisfy the design requirements 2. This plan seems to indicate that the (5) elevator posts apply from the Lower Concourse Level to the Roof Level. S1-7136 & S1-7137 show a different post pattern with HSS16x8 posts and horizontal W6x25's between the Ground Level and the Bus Deck Level. Confirm the information on this sheet replaces the information on the structural drawings.				1) Kicker braces can remain at current locations if the distance between the new post locations and the kicker braces is less than or equal to 2'. If the distance is greater than 2', move the kicker braces to align with the new post locations. 2) Refer to RFI T-2392 response. 3) Refer to RFI T-2392 response. Reason for RFI (TT): We agree with reason for request: Verification. We categorize this RFI as no cost clarification and previously answered.

3. What is the maximum vertical length/span allowed for all 12x6x5/8" elevator posts without horizontal support?							
T-2391	SSS - PE201 Framing Clarifications	Closed	03/06/2015	03/17/2015	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Quang Le	To: Turner Construction Company		Phil Militello	Answered By:Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California Dis		Ryan Clayton					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: 1/S1-7001		1) Horizontal HSS beams have been provided for guide rail support at PE201 as shown on contract documents. If Otis requests any changes to the elevator support framing indicated in the contract documents (for e.g. using vertical posts in lieu of horizontal beams for guide rail support), they shall design the post sizes and detail connections to existing framing. In addition, Otis shall submit calculations to show that design criteria (e.g., deflection requirements) can still be met with these modifications.					
Location: Zone 2		2) See response to 1).					
Gridline: 1		3) Refer to sheet A1-7001 for reference to the orientation of the elevator plan.					
Add'l Doc Ref's: Otis Sheet 1/7, CD RFI 789 SK1							
See attached CD RFI 789 SK1 & SK2 for items 1 to 3:							
1) HSS12x6x5/8 per 03.05.15 conference call. To be confirmed.							
2) The elevator posts are not shown on the current structural drawings. Please indicate the vertical extent of the added posts on SK2.							
3) Supply the directional orientation of this elevator plan.

REQUEST:		SUGGESTION:		ANSWER: <div>Accept Suggestion: <input type="checkbox"/></div>			
Contract Doc Ref: S1-7137, S1-7138				This RFI is not clearly presented and could lead to misunderstandings. Cover page includes a single question, however there are two separate questions in other pages. It is unclear whether some of this is internal within the contractor and their subs or whether they are directed to the design team. The Design Team's response assumes the red comments are from Otis and Blue ones are from the contractor, and that the contractor is seeking answers to both questions in the RFI.			
Location: All Elevators							
Add'l Doc Ref's: CD RFI 791 SK1, CD RFI 790 SK4							
See attached CD RFI 791 SK1:				1) It is not clear if the spacing mentioned in the Otis comment is the spacing understood by the contractor. Otis seem to be referring to plan spacing of the supports (elevator posts) and contractor seem to be referring to spacing of horizontal bracing of elevator supports between different floors. Contractor may want to clarify this further. We can confirm that the design intent only, as it is put forth in the construction documents, which is, posts typically go unsupported from floor to floor, unless otherwise noted in the contract drawings.			
All elevator posts currently shown on the structural drawings span unsupported from floor to floor except as shown on S1-7137 & S1-7138 @ PE502/503 (referenced in CD RFI 790 SK4). Please confirm that this remains the intent or supply revised structural drawings or details if this is to be revised.				Given this status, the Design Team is unable to confirm, nor verify this information without a complete shop drawing submittal process.			
				2) Elevator support framing as put forth in the construction documents is based on the on the design criteria provided by Division 14. If Otis requests any changes to the elevator support framing indicated in the construction documents (for example, reduce number of posts), it is required that they submit calculations to show that design criteria (e.g., deflection requirements) can still be met with those modifications.

REQUEST:		SUGGESTION:		ANSWER:			
Contract Doc Ref: Sheet A1-6006 Detail A/A1-7307 Detail A/A1-7805 Details 1, 4, & 6/A1-7836				Accept Suggestion: <input type="checkbox"/>			
Location: N/A		Confirmed. Beam A2987 is to receive IFRM-1 as stated in RFI Response T-2109. Detail 6/A1-7836 is clarified in attached sketch SKA-4504.					
Closest Column Line Intersection: N/A							
Add'l Doc Ref's: RFI RESPONSE T-2109							
Sheet A1-6006 illustrates a beam supporting the escalator at GL 28/Second Level and calls out Detail A/A1-7307 and Detail A/A1-7805.							
1. Detail A/A1-7307 references Detail 6/A1-7836. Detail 6/A1-7836 shows the beam fireproofed with SFRM and enclosed in a rated wall enclosure.							
2. Detail A/A1-7805, references Detail 4/A1-7836. Detail 4/A1-7836 shows the beam fireproofed with IFRM and enclosed in a rated wall enclosure. Furthermore, Detail 4/A1-7836 references Detail 1/A1-7836. Detail 1/A1-7836 shows the rated wall enclosure beginning 1'-5" off of the center line of GL E.							
By these details, beam A2987 (as referenced in RFI T-2109) would be approximately half SFRM and half IFRM.

	<p>RFI Response T-2109 states, "The full extent of beam A2987 is to be prepped and primed to receive IFRM-1."</p> <p>Please confirm that the entire length of beam A2987 is to receive IFRM-1 as stated in RFI Response T-2109 and revise the details to match.</p>						
T-2408	FPR - Fireproofing of Column Encased in Concrete	Closed	03/12/2015	03/12/2015	03/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Tram Nguyen	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Clayton National		Richard Clayton					
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Contract Doc Ref: Detail 1/A1-8900 (SKA-4477)		Revise the note to read, "Fireproofunjacketed portion of prefabricated column that occurs above the floor slab, if any."	Fireproofunjacketed portion of prefabricated column that occurs above the floor slab, if any.				
Location: N/A							
Closest Column Line Intersection: N/A							
Add'l Doc Ref's: RFI Response T-2299							
Per RFI Response T-2299, the note on Detail 1/A1-8900 (SKA-4477) that occurs below the T/O slab elevation line indicates SFRM at theunjacketed portion of column. Thisunjacketed portion of the lower column will be encased in the concrete floor slab. Per the manufacturer's requirement, the slab needs to precede the fireproofing.							
Please confirm theunjacketed portion of the column that is encased in the concrete floor slab requires SFRM as shown in Detail 1/A1-8900 (SKA-4477).

T-2419	ELV- Telecommunication Underground Pull box	Closed	03/13/2015	03/23/2015	03/24/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Justin Graham			To: Turner Construction Company Phil Militello				
Co-Author: Fisk Electric Company Orvil Anthony			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc Ref: (ASI 128/TE-0010, TE1-2602 thru TE1-2607/27 05 33) Location: Zone 02 - 07, Level Roof Park Closest Column Line Intersection is N/A Add'l Doc Ref's: N/A Per the response to RFI T-2158, it states "Please read specification 27 05 43 Section 2.1 A-G for Underground vault and pull box sizes. Use appropriate size unit for number of conduits and cables." The specification 27 05 43 section 2.1 C-G list different dimensions for vaults and pull box. Based on the RFI response, it is unclear if this symbol "U", as shown on the legend (TE-0010), only represents a pull box. Fisk is not the designer and therefore will need to know what type of box is required for each location shown on the plans. Please advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The RFI's stated response to RFI T-2158 is incorrect. WOJV to provide Fisk with the correct response to RFI T-2158, which is attached.		
T-2420	TTC - Missing Information and Contradiction	Closed	03/13/2015	03/23/2015	03/30/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John			To: Turner Construction Company Phil Militello				
Co-Author: Webcor Construction LP Jeff Heath			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc: A1-7821 Location: Ground Level Gridline: Global Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #257 See attached Virtual Building PH3(ASI)-CR #257. The 4/A1-7821 plan shows a type 3 wall but it does not have any information about the place of wall. The detail shows there should be a curb below the wall but according to the A1-2867 plan the curb has an exact position that is why the curb could not be below the type 3 wall even though the 4/A1-7821 shows this. The wall will be modeled 2-1/4" distance from the face of the elevator wall and the type 3 wall will float. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> AAI disagrees that there is "Missing Information and Contradiction" as stated in this RFI. The location of the type-3 wall is shown relative to the curb below on details 4/A1-7821 and 3/A1-7823. The opening in the curb is located on A1-2867. The finished opening at the elevator door can be found on 2/A1-7204. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

T-2433	SCS - Rebar/Coupler Connections at TR22 and TR 24 Along GL G	Closed	03/16/2015	03/26/2015	03/26/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Henry Chiang			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc Ref: S1-3705, S1-3707 Location: Ground Level Grid Line: GL22-24, G Add'l Doc Ref's: Attached Please reference SI-2305, SI-3705, and SI-3707 regarding the Concrete/Steel Connections at TR 22 and TR 24 along GL G. Refer to Section 6/SI-3702 cut on sheet SI-2305 on GL G, called out as being typ @GL 22 & 24. When cross referencing the elevations provided on S 1-2305 with the concrete/steel beam depths, B/O steel is about 1.5' below BIO concrete at GL 22 and 24. Section 6/SI-3702 shows B/O steel above BIO concrete. Under the provided elevations, the "5-#11X8'-6" W/LENTON HALF COUPLERS" at the bottom flange cannot be provided as required by Section 6/SI-3702. Section 3/S1-3705 correctly reflects the concrete/steel elevations referenced on S1-2305. Please confirm that Section 3/S1-3 705 may be used for the rebar/coupler connections at TR 22 and TR 24 along GL G in place of Section 6/SI-3702.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that Section 3/S1-3705 applies to Grid 24. At Grid 22, use 3/S1-3705 SIML (no stepping in the steel transfer girder).

REQUEST: Contract Doc: A/A1-7121; 2/A1-7020; A/A1-6006; A1-2406 Location: Zone 4, Second Level Gridline: D.8-E.2/30-31 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #270 See attached Virtual Building PH3(ASI)-CR #270. The A/A1-6006 section shows the A/A1-7121 callout (marked with yellow). The 2/A1-7020 plan shows the same callout as a section. However, on the 2/A1-7020 plan the A/A1-7121 section is between E and E.2 grid, but the A/A1-6006 section is between D.8 and E grid, so the A/A1-7121 section is on two places at the same time. A/A1-7121 section created according to the 2/A1-7020		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Section will not be revised; this is a frivolous RFI. The discrepancy in the exact position of the section tag on 2/A1-7020 with respect of the Building Section is irrelevant to the drawings and information contained therein.

From: Webcor Construction LP Aseem Goyal To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Fisk Electric Company Orvil Anthony							
REQUEST: Contract Doc Ref:[ASI 128/26 05 19] Location: Zone[N/A], Level [N/A] Closest Column Line Intersection is [N/A] Add'l Doc's Ref's: N/A The contract specification Section 26 05 19 for the 600 Volt wire and cable, under Article 1.3 Quality Assurance; states that wire and cable shall be of the same manufacturer for the project duration. Multiple manufacturers shall not be permitted. Based on the listed manufacturers provided within this specification section, the contractor view's Article 1.3 to mean that all cable shall be from one manufacturer for each type of cable listed, not a sole source for the entire list of cable. This would mean that all THHN or THWN shall be from a single manufacturer, all RHH/RHW-2 cable would be form a single manufacturer, as well as all Metal clad cable would be from a single manufacturer. We believe that this is the intent as Division 25 and 27 outline other manufacturers for the various other cables such as CAT 5 and CAT6. Based on the specification there is no one single cable manufacturer that can produce all of the specified cable. Therefore the contractor, will be submitting on multiple manufacturers for each type of cable, and once approved the contractor will select a single manufacturer for each type of cable and will only procure and install the selected single manufacturer for each type of cable throughout the project. Fisk standard submittal packages will at a minimum include three manufacturers, who are either listed or an approved equal. We would like to continue with this standard policy in order to avoid having one manufacturer as a sole supply source. Please confirm this as acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Yes - no exceptions taken.

REQUEST: Contract Doc: P1-2107, A1-2847 Location: Zone 4, Train Platform Level - Lower Concourse Level Gridline: G-H/32-32.4; D.4-D.8/31.7-32 Add'l Doc Ref's: Virtual Building FP-CR #015 See attached Virtual Building FP-CR #015 The vertical SPDR pipe which is indicated on the plumbing plan P1-2107 is not marked on the slab edge plan A1-2847. (2015.01.20.) Followed the plumbing plan P1-2107 to model the pipes and followed the slab edge plan A1-2847 to model the penetrations. Clash will remain between the pipes and the slab if there is not any penetration shown on the slab edge plans. Please clarify.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> There is no clash between pipes and slab. Drawing P1-2107 is correct. The SPDR does not go up to the Lower Concourse Level. Note 13 on drawing P1-2207 refers to the sprinkler control test and drain assembly, which drains locally in the Train Platform Level. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.				
T-2459	TTC - Missing Slab Penetrations	Closed	03/17/2015	03/27/2015	03/25/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello Co-Author: Webcor Construction LP Jeff Heath			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc: P1-2205; A1-2865 Location: Zone 3,4, Train Platform Level - Ground Level Gridline: B-C/27-28; B-C/21-22 Add'l Doc Ref's: Virtual Building FP-CR #016 See attached Virtual Building FP-CR #016 The vertical FSP pipe which is indicated on the plumbing plan P1-2205 is not marked on the slab edge plan A1-2865.(2015.01.20.) Followed the plumbing plans P1-2106, P1-2205 to model the pipes and followed the slab edge plans A1-2846 and A1-2865 to model the penetrations. Clash will remain between the pipes and the slab if there is not any penetration shown on the slab edge plans.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> There is no penetration required, as the FSP goes up only to the Passageway Level (sheet P1-2220), it does not go up to Ground Level, thus there is no clash.

T-2486	TTC - Contradiction Between Plumbing Pipe Types	Closed	03/18/2015	03/28/2015	05/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: P1-2207; 1/P1-3003 Location: Zone 4, Lower Concourse Level Gridline: D.4/32-32.4 Add'l Doc Ref's: Virtual Building PLMBG-CR #145 See attached Virtual Building PLMBG-CR #145 There is a contradiction on the P1-2207 Lower Concourse Level Zone 07 Plumbing Plan. It shows that the vent pipe from the Treated Grey Water Tank connect to the <35> 4" San Vent Riser from Sand/Oil Interceptor (marked with red) instead of the <36> 4" San Vent from Treated Grey Water Tank (marked with light blue). (2015.01.23.) The Vent pipe from the TGWT will be connected to the <36> marked riser (light blue). Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to attached sketch SKP1-2207 RFI T-2486 for the corrected vent connection. This item should be coordinated in the subcontractor 3D coordination process as part of the submittal development. Date Answered by Design Team: 4/10/2015 Date Closed by WOJV: 5/13/2015		
T-2487	TTC - GWW/PD Pipes Shown on Riser Diagrams not on Floor Plans	Closed	03/18/2015	03/28/2015	05/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: P1-3002; P1-5010; P1-2104 Location: Zone 1,2,3, Train Platform Level Gridline: C.3-D/4-5; B-C/18-19 Add'l Doc Ref's: Virtual Building PLMBG-CR #153 See attached Virtual Building PLMBG-CR #153 There are four GWW/PD pipes shown on Reuse Water System Piping Diagram P1-5010 but they are not indicated on any floor plan. (2015.01.15.) Pipes will not be modeled. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to attached sketches SKP1-2104, SKP1-2106, SKP1-2107, SKP1-2202, SKP1-2204, SKP1-2206, SKP1-2207, SKP1-3002, SKP1-3012. Plumbing plans show diagrammatic routing of piping. Exact pipe location and routing shall be coordinated with sub-contractor. Date Answered by Design Team: 4/27/2015 Date Closed by WOJV: 5/13/2015		
T-2488	TTC - Missing Dimensions Between HSS Beams	Closed	03/18/2015	03/28/2015	03/24/2015	Potentially	<input type="checkbox"/>

T-2489	From: Webcor Construction LP Co-Author: Webcor Construction LP REQUEST: Contract Doc: S1-2402; S1-2403; S1-2404 Location: Zone 1, 2, Second Level Gridline: B-H/1.4-16.9 Add'l Doc Ref's: Virtual Building STR-CR #003 See attached Virtual Building STR-CR #003 Missing dimensions on the second level framing plans S1-2402, S1-2403, S1-2404. Dimensions are not shown between the edge of slab and the HSS beams. The HSS beams will be placed 6" (to beam centerline) from the slab edge. Infill beams will be placed with equal spacing per general note GR-13 (S-0005). Please provide missing dimensions.	Julia John	Closed	03/18/2015	03/28/2015	03/24/2015	Potentially <input type="checkbox"/>
	To: Turner Construction Company Phil Militello						
	ANSWER: Accept Suggestion: <input type="checkbox"/> Please reject this RFI. This information has been answered before in numerous RFI's. This information has been confirmed via Shop Drawings thus, these dimensions are not missing. Many of the structural steel pieces this RFI refers to have already fabricated, Virtual Model notwithstanding.						
T-2489	From: Webcor Construction LP Co-Author: Webcor Construction LP REQUEST: Contract Doc: A1-2864; 1/A1-7311 Location: Zone 2, Ground Level Gridline: D-D.4/15-16.9 Add'l Doc Ref's: Virtual Building STR-CR #023 See attached Virtual Building STR-CR #023 There are contradictions between the marked dimensions of escalator pit on the architectural slab edge plan A1-2864 and the architectural callout plan 1/A1-7311. The sheet 1/A1-7311 shows 5' - 7/8" to width of pit slab but the sheet A1-2864 shows 5' - 7" to the same place. Followed the marked dimensions on architectural slab edge plan A1-2864. Please confirm.	Julia John	Closed	03/18/2015	03/28/2015	03/24/2015	Potentially <input type="checkbox"/>
	To: Turner Construction Company Phil Militello						
	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Please refer to SKA-4547 for clarification.

T-2490	TTC - Missing Sump Pit on Structural Drawings	Closed	03/18/2015	03/28/2015	04/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2302, A&B/A1-7101, 1&3/A1-8714, 1/A1-7001, S1-2302, 1/S1-7001 Location: Zone 1, Ground Level Gridline: E.6-F/1 Add'l Doc Ref's: Virtual Building STR-CR #031 See attached Virtual Building STR-CR #031 The architectural plans A1-2302, A&B/A1-7101, 1&3/A1-8714 show the sump pit in the PE201 elevator pit but the other plan (1/A1-7001) does not mark sump pit at this area. (2015.01.20.) The plans A1-2302, A&B/A1-7101, 1&3/A1-8714 will be followed to model the sump pit in the PE201 elevator pit. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. There is nothing to clarify in drawings.		

T-2491	TTC - Contradiction Between the Floor Plan and the Detail	Closed	03/18/2015	03/28/2015	04/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: S1-2302, 8/S1-3700 Location: Zone 1, Ground Level Gridline: C/5-6 Add'l Doc Ref's: Virtual Building STR-CR #033 See attached Virtual Building STR-CR #033 The structural framing plan S1-2302 shows a W40x503 steel beam on gridline C and a slab step but the lines on this plan show more slab edges (red dashed lines). The 8/S1-3700 detail (refers to S1-2302 floor plan) shows the steel beam not on the gridline and multiple steps of slab edges in the same area. In addition, the 4/S1-5022 detail shows a similar double-step, and there is a right step marker in front of that detail. Followed the structural detail 8/S1-3700 to model the slab steps and followed the structural framing plan S1-2302 to modeled the steel beam.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The previous response from the Design Team is correct: Detail 3/S1-3700 applies at this location.

The penetration marked with yellow is below a structural curb and the exact dimension of the penetration is missing. (2015.01.16.) The penetration will be modeled below the curb and the dimensions shown on the screenshot will be used. Please confirm.	SUGGESTION:	ANSWER: Confirmed.	Accept Suggestion: <input type="checkbox"/>			
T-2502	BGP - Lower Concourse Elevator Pit Conflict with Column	Closed	03/19/2015	03/29/2015	03/26/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kamran Azarbal		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
	REQUEST: Contract Doc Ref: S1-2207 & S1-7111 Location: Lower Concourse Level Elevator Pit Grid Line: GL 32 - 32.4 & GL E Add'l Doc Ref's: Attached See attached documents of elevator pit at grid lines 32-32.4 and cross grid line E. The current elevator pit's 10" wall encroaches columns C247 & C248 by 5". These columns have been poured to bottom of moment frame beam at 32.4. The structural details at this specific location are not provided and the current conflict is in-constructible. Please confirm that decreasing the 10" wall to a 4" wall is acceptable and provide rebar details at this location.	SUGGESTION:	ANSWER: It is acceptable to notch the elevator pit slab and exterior wall around the columns. The minimum pit wall thickness shall be 4" and the plan extent of the notch shall be 36" centered on each of the columns. The pit wall shall not contact the columns. THE ELEVATOR PIT INTERIOR WALL FACE SHALL REMAIN PER CONSTRUCTION DOCUMENTS EDGE OF SLAB PLAN. GC shall confirm pit dimensions with the elevator subcontractor. Pit Wall Reinforcing: Inside face vertical and horizontal bars are unaffected. They shall be the sole reinforcing passing through the notched wall section. Exterior face horizontal reinforcing shall terminate with a horizontal hook at each notch reentrant corner. The hook length at each notch may be reduced to 6". Exterior face vertical reinforcing shall terminate at each notch. On both sides of each notch, provide (2) additional exterior face vertical bars located within 16" of the notch reentrant corner.	Accept Suggestion: <input type="checkbox"/>

T-2503	TTC - Contradiction Between Structural Floor Plan and Detail in Sump Pit	Closed	03/19/2015	03/29/2015	03/31/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: S1-2024; 2/S1-3008; A1-2814 Location: Zone 3, 4, Mat Slab Level Gridline: C.3-C/18-19 Add'l Doc Ref's: Virtual Building PH3-CR #076 See attached Virtual Building PH3-CR #076. There is a contradiction in the dimensions of the sump pit. Meanwhile the S1-2024 shows a 4'-0" dimension between the 18 grid and the boundary of the pit, the S1-3008 detail restrict the highlighted dimension to 5'-0" between the deepest edge of the hole and the sloped face of the sump pit by its bottom. If we keep this 5'-0" dimension, it is impossible to keep a 4'-0" distance to the grid to the boundary and it becomes to 4'-0 3/8". At the opposite side, the deep of the hole is restricted by a 38'-6" elevation and the edge of the boundary of the pit is restricted by A1-2814 following the chain of dimension lines. In this case it is impossible to keep a 5" typical distance between the deepest edge of the hole and the sloped face of the right side of the pit and it becomes 5'-0 1/2". The dimension 4'-0 3/8" will be used from the grid 18 and 5 1/2" will be used at the sloped face. Please confirm.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The constructability assumption is incorrect. The 5'-0" clearance as labeled "MIN", which stands for "minimum". Follow the dimensions on the plans. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

REQUEST: Contract Doc: A1-2863 Location: Zone 2, Ground Level Gridline: F-G/11-12 Add'l Doc Ref's: Virtual Building PH3-CR #077 See attached Virtual Building PH3-CR #077. The elevations marked with yellow define the TOC and there is not any element which can set with the elevation marked with red. The elevation marked with red will be ignored. Please confirm.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The constructability assumption is incorrect. The contractor is advised to look at the latest drawing A1-2863 issued in ASI-0130. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.			
T-2505	TTC - Contradiction Between Curbs	Closed	03/19/2015	03/29/2015	03/31/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Webcor Construction LP Jeff Heath		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The previous response from the Design Team stands. Follow A1-2963. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.			
REQUEST: Contract Doc: A1-2863; A1-2963 Location: Zone 1, Ground Level Gridline: D-D.4/6-7 Add'l Doc Ref's: Virtual Building PH3-CR #079 See attached Virtual Building PH3-CR #079. There is a contradiction between the curbs (marked with yellow) on the plans A1-2863 and A1-2963. The run of the curb(s) are shown differently on the plans and the thickness of the curb(s) are also missing. The plan A1-2963 shows only one start and one end point for the curb. The dimensions on the plan A1-2963 will be followed to model the curbs. Modeled the curb with 9" thickness as shown the screenshot of A1-2963. Please confirm.

Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2250 Location: Zone 1, Lower Concourse Level Gridline: F.7-G/5-6 Add'l Doc Ref's: Virtual Building PH3-CR #098 See attached Virtual Building PH3-CR #098. If the radius of the curb (marked with yellow) is 52'-6" then the dimensions marked with red cannot be followed. The length of the arc need to be longer than the dimensions shown. The dimensions will be modeled as shown on the screenshot of the model. Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> WOJV to respond to this RFI. The Design Team has responded and issued a revised drawing in ASI-0127. See the "Design Response" and "Resolution" on page 2 of the attached pdf.				
T-2509	TTC - Contradicting Dimensions of Plumbing Penetrations	Closed	03/19/2015	03/29/2015	03/31/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2863; A1-2963; P1-0051; P1-2303 Location: Zone 1, Ground Level Gridline: D/6 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #102 See attached Virtual Building PH3(ASI)-CR #102. The architectural slab edge plan A1-2863 shows the pipe sleeves (diam.:10", 6" and 4"), the architectural callout plan A1-2963 shows two sleeves with 8" and 6" and one sleeve without diameter, but the plumbing floor plan P1-2303 shows a 4" SAN riser, an 8" ST riser and a 2" SAN VENT riser on the same place. Based on the pipe sleeve schedule P1-0051 the diameters of the sleeves are 10", 6" and 4". The diameters of the sleeves and the exact positions are contradicting. The PH3 - CR #089 issue includes the missing dimensions. The penetrations modeled with the diameters of 10", 6" and 4" and the PH3 - CR #089 was followed.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The Design Team disagrees that the plans do not match. A1-2863 and A1-2963 are identical. Plumbing drawings do not show penetration locations. NOTE: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI.

T-2520	TTC - Contradiction Between Width Dimensions		Closed	03/19/2015	03/29/2015	04/01/2015	Potentially	<input type="checkbox"/>	
From:		Webcor Construction LP	Julia John	To:		Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger
Co-Author:		Webcor Construction LP	Jeff Heath						
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>			
Contract Doc:		A1-2850		Confirmed, provide 1'-0" wide opening.					
Location:		Zone 1, Lower Concourse Level							
Gridline:		V-W/3							
Add'l Doc Ref's:		Virtual Building PH3(ASI)-CR #152							
See attached		Virtual Building PH3(ASI)-CR #152.							
The indicated dimensions of the penetration are contradicting A1-2850 plan.									
The opening will be modeled with the width of 1'.									
Please confirm.									
T-2521	TTC - Contradicting Sheets		Closed	03/19/2015	03/29/2015	04/01/2015	Potentially	<input type="checkbox"/>	
From:		Webcor Construction LP	Julia John	To:		Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger
Co-Author:		Webcor Construction LP	Jeff Heath						
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>			
Contract Doc:		3/A1-3008; A1-2842		The plumbing penetration shown on A1-2842 and 3/A1-3008 are one and the same. Follow the dimensions on A1-2842 for locating the penetration.					
Location:		Zone 1, Lower Concourse Level							
Gridline:		D/3-4							
Add'l Doc Ref's:		Virtual Building PH3(ASI)-CR #153							
See attached		Virtual Building PH3(ASI)-CR #153.							
There is a contradiction between the 3/A1-3008 and the A1-2842 sheet. The 3/A1-3008 plan shows a PLBG penetration but this penetration is not on the slab edge plan (A1-2842).									
The slab edge plan will be followed and the penetration is not modeled.									
Please confirm.

T-2526	TTC - Incorrect Dimension Values	Closed	03/20/2015	03/30/2015	04/06/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: 1/A1-3002 Location: Zone 2, Lower Concourse Level Gridline: B-C/12-13 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #159 See attached Virtual Building PH3(ASI)-CR #159. There is an incorrect dimension on the plan 1/A1-3002. The plan 1/A1-3002 shows that the distance between the pier and the face of the wall is 7'-3' (marked with yellow) but the distance will be 7'-9" if the size of the pier is 1'-4"x1'-4" (marked with green). The distance will be 7'-9" face of the wall as it is shown on the screenshot from the model. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The dimension 7'-3" on 1/A1-3002 is correct. Piers at this location are 22"x16", refer to reviewed and approved submittal TG0600-363.2.		
T-2527	TTC - Contradiction Between Plumbing Penetrations	Closed	03/20/2015	03/30/2015	05/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: 1/A1-2204;1/A1-3008 (SKA-3169);1/A1-2844 Location: Zone 2, Lower Concourse Level Gridline: B-C/13-14 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #160 See attached Virtual Building PH3(ASI)-CR #160. There is a contradiction between the 1/A1-3008 plan and 1/A1-2844. The 1/A1-3008 plan shows a plumbing penetration (marked with red), but the A1-2844 does not show that. (2015.01.16.) The model will be followed to 1/A1-2844 and 1/A1-2204 sheet. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Follow plumbing penetration dimensioned on A1-2844. Only #46 SAN Vent pipe penetrates the lower concourse slab. The #48 3/4" CD (pumped) pipe drains to the floor sink (FS) beside it and does not penetrate the lower concourse slab. Also, please refer to reviewed and approved submittal TG0600-121.2. The design team suggests that Tim Maxwell or a similar WOJV person experienced in MEP construction and the on-going already completed submittals is involved with the Virtual Building team to assist them in reading MEP, A, and S drawings. Date Answered by Design Team: 4/8/2015 Date Closed by WOJV: 5/13/2015

T-2532	TTC - Contradiction Between Framing Plan and Floor Plan	Closed	03/20/2015	03/30/2015	04/07/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: S1-2203, A1-2203, 3/A1-9255 Location: Zone 1, 2, Lower Concourse Level Gridline: H-L/7-11 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #168 See attached Virtual Building PH3(ASI)-CR #168. There is a contradiction between the floor plan (A1-2203) and the framing plan (S1-2203). The framing plan shows different wall layout from the floor plan. The walls marked with green are missing from the plan A1-2203. The beams will be modeled according to S1-2203. The ramp knee will be modeled according to A1-2203. The width of the wall is missing it is scaled from the plan and it will be modeled with 8". Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Vehicle and Bike Ramp shop drawings have been approved, and the ramps are currently under construction.		
T-2533	TTC - Contradiction Between Sheet A/A1-7233 and 4/A1-7576	Closed	03/20/2015	03/30/2015	04/07/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A/A1-7233; 4/A1-7576 Location: Zone 1, 2, Lower Concourse Level Gridline: 16-D.8 / E / E.2; 4-5/D.4-E.6; 8-9/D.8 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #170 See attached Virtual Building PH3(ASI)-CR #170. There is a contradiction between sheet A/A1-7233 and 4/A1-7576. A/A1-7233 shows that the distance between elevation of Lower Concourse West (-4'-11") and the T/O Elevator Pit (-10'-11") is 6'-0" but the detail number 4/A1-7576 shows the same distance between elevation Lower Concourse West (-4'-11") and Bottom of Elevator Pit. The A/A1-7233 will be followed. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Pit depth clearly identified on A/A1-7233 and on the edge of slab drawings. Note on detail 4/A1-7576 should read "to bottom of pit".

T-2544	SSS - Roof Park Restaurant Missing Information and Clarifications	Closed	03/20/2015		03/30/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc Ref: S1-2706, 2/A1-2972 Location: Roof Park Restaurant Gridline: 5 Add'l Doc Ref's: CD RFI 771 SK1 See attached CD RFI 771 SK1 for items 1 to 3: 1) It appears the edge of slab/curb information is not consistent. Please clarify where the edge of slab/curb is. 2) Depending on the response to item 1, please note the close proximity of the beams to each other and clarify their location to avoid fouling each other. 3) The W18x50 beams are shown on S1-7103 without giving their TOS Elevation and they are not shown at all on S1-2732. Confirm they are at TOS Elevation 117'-0 1/2 or clarify.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The 2" dimension between the two steel beams as shown on SK1 in the RFI is incorrect. S1-2732 does not callout the 11' - 5 5/8" dimension as shown on SK1. Distance between the W16 and W18 beams is 8 3/4" which makes the total distance between the west edge of the elevator roof curb and GL 5 to be 12' - 0 3/8" and is consistent with A1-2972. However, with the current locations of the two W18x50 beams (centered on the guide rail HSS posts), the beam flanges project into the hoistway space. To provide required hoistway clearance move the W18x50 posts away from the hoistway space so that centerline distance the two W18x50 beams increases to 9' -9 1/2". 2) The two beams do not foul each other. See response to 1). 3) As per the Elevator consultants recommended dimension, the datum will be 116'-7". Please note that this datum is subject to change as required by the awarded Elevator Contractor's requirements. Reason for RFI (TT): We disagree with reason for request Insufficient Information and Engineering Conflict. We categorize this RFI as no cost clarification.			
T-2544.1	SSS - PE204 Missing Information	Closed	04/01/2015		04/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Contract Doc Ref: S1-2706 and 2/A1-2972 Location: PE 204 and Roof Park Restaurant Gridline: 5 Add'l Doc Ref's: CD RFI 771.1 SK1 This is a follow-up RFI to RFI T-2544 (SK 1051, CD 771) See attached CD RFI 771.1 SK1: The dimensions have been updated to suit the response in RFI T-2544 (SK 1051, CD 771) but the following instruction in the response "To provide required hoistway clearance move the W18x50 posts away from the		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Locate the two W18x50 beams as shown in the attached sketch SKS-0466. Note that the W18 beams are offset from the centerline of the HSS posts below. Reason for RFI (TT): We disagree with reason for request: Insufficient Information. We categorize this RFI as no cost clarification.

The telcom conduits penetrate the spandrel beams as shown on detail 6/TE1-8014. Refer also to reviewed and approved submittal TG0600-128.0.				
	See attached Virtual Building PH3(ASI)-CR #175.		Date Answered by Design Team: 4/8/2015 Date Closed by WOJV: 5/13/2015				
	There is a clash between telecommunications opening and moment frame on the Lower Concourse Level. The sheet A1-2843 shows that the distance is 0'-7" between the telecommunications openings and the grid line A but the sheet S1-2203 shows a moment frame at the same place.						
	The clash remains until further qualification.						
	Please confirm.

T-2562	TTC - Contradiction Between Plumbing Penetrations Marking	Closed	03/20/2015	03/30/2015	05/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Julia John To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-2204; A1-2844 Location: Zone 2, Lower Concourse Level Gridline: F.7-G/14-15 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #177 See attached Virtual Building PH3(ASI)-CR #177. There is a contradiction between the Lower Concourse Level slab edge plan (A1-2844) and floor plan (1/A1-2204). The A1-2204 shows that the penetrations are future penetrations but the A1-2844 does not show the same. The penetrations will be modeled according to A1-2844. Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The penetrations shown on A1-2204 and A1-2844 are one and the same. Follow dimensions on A1-2844 for locations of plumbing penetrations. WOJV shall coordinate the Virtual Building modeling process with the subcontractor submittal and MEP 3D coordination process Date Answered by Design Team: 4/8/2015 Date Closed by WOJV: 5/13/2015				
T-2563	TTC - Incorrect Annotation	Closed	03/20/2015	03/30/2015	05/13/2015	Potentially	<input type="checkbox"/>

	REQUEST: Contract Doc: A1-2865; S1-2305 Location: Zone 3, Ground level Gridline: C.3-D/19-20 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #180 See attached Virtual Building PH3(ASI)-CR #180. The architectural slab edge plan A1-2865 shows a floor drain in the area marked with red fill but the structural framing plan S1-2305 shows a W44x230 steel beam below the floor drain. There is a clash between the marked floor drain and the structural steel. (2015.01.19.) The floor drain was placed based on the slab edge plan A1-2865. The steel beams were placed according to the structural framing plan S1-2305. The clash remains. Please confirm.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Please refer to enclosed sketch SKA-4609 for revised floor drain locations. Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: A1-7010/8; A1-2305; 4&6/A1-7830 Location: Zone 3, Ground level Gridline: C.3-D/19.9-20 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #182 See attached Virtual Building PH3(ASI)-CR #182. The architectural callout plan 8/A1-7010 (reference on architectural floor plan A1-2305) shows a 'CC2' architectural curb and refer to architectural detail 4/A1-7830. This detail shows the walls on different position and the architectural details 4 & 6/A1-7830 do not shown the 'CC2' architectural curb. The 'CC2' curb was placed based on the architectural callout plan 8/A1-7010 and follow the 1' - 6" wall dimension on the architectural detail 4/A1-7830. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Enlarged architectural detail 4/A1-7830 is rotated in orientation in the drawing, but shows the correct condition. It is the correct detail reference - no concrete curb is required. Date Answered by Design Team: 4/27/2015 Date Closed by WOJV: 5/13/2015		
T-2567	TTC - Missing Dimension	Closed	03/23/2015	04/02/2015	05/13/2015	Potentially	<input type="checkbox"/>

REQUEST: Contract Doc Ref: M1-5000-Detail 6 / Spec 23-05 29-3 Location: Zone: N/A Closest Column Line Intersection is: N/A Add'l Doc Ref's: N/A There is a conflict between spec. 23 05 29-3 and drawing detail 6/M1-5000. The detail shows 2 rod roller hanger for pipe sizes 6" and a larger. Spec calls for 2 rod roller hanger for 8" and above. Although specifications trump drawing details please confirm that rollers for 8" mechanical pipe and larger is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Specifications do not trump the drawings. When there is a conflict in the Contract Documents, the Design Team/TJPA Representative will determine the correct item. Drawings and specs are both Contract Documents and "where requirements differ, apply the more stringent" (per Mechanical General Provisions 23 05 01-1.2D), unless otherwise approved by the TJPA Representative. In this specific case only, rollers for 8 inch and larger pipe are acceptable.				
T-2579	TTC - Missing Information About the Position of a Concrete Curb on Ground Level Closed		03/23/2015	04/02/2015	05/13/2015	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc: A1-3404; A1-9034 Location: Zone 3, Roof Park Level Gridline: E.6-F/25 Add'l Doc Ref's: Virtual Building PH3(ASI)-CR #551				Refer to enclosed sketches SKA-4613 and 4614 for wall types and curb locations. Also, please refer to sketch SKA-4612 (issued with RFI T-2598). Zone plans and restrooms plans do not have duplicate tags			
See attached Virtual Building PH3(ASI)-CR #551				Date Answered by Design Team: 4/30/2015 Date Closed by WOJV: 5/13/2015			
There is a contradiction between the 1/A1-3404 - Service Building at GL25 roof Park Level Plans and the 1/A1-9034 - Public Restrooms - Roof Park Level Plans. The plans show different location of yellow marked wall and curb. The 1/A1-9034 plan does not show type of this wall and curb.							
The location of this wall and curb will be modeled according to 1/A1-9034 plan with type '11-CC4'.							
Please confirm.

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Contract Doc Ref: S1-2604, 7 & 8/ S1-5020 Location: Zone 4, Roof Level Gridline: 14 Add'l Doc Ref's: LS-RFI 37 Sketch #1 and #2 Please reference the Roof Park Level sheet S1-2604. At grid 14/F is the call out for a 3"x18"x53' drag plate. The plate is shown butting into the flange of the column. With a 53' length the plate would extend all the way to perimeter gridline H. The metal decking abuts to each side of the plate per detail 7/S1-5020. The drag plate is installed over the column per detail 8/S1-5020. With the 53' length the end of the drag plate stops 3' short of the perimeter beam and terminates over the row of W24 beams. This is typical at all drag plate ends.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Reason for RFI (TT): We agree with reason for request Verification. We categorize this RFI as clarification on means and methods.

	<p>States, in the City of San Francisco, California, by Local International Brotherhood of Electrical Workers (IBEW).Fisk Electric has reviewed three (3) FTA ruling regarding sub-components: one for the Charlotte Area Transit System, one for the Los Angeles County Metropolitan Transportation Authority, and the last one for the Southern California Edison.</p> <p>Fisk Electric is following the FTA's conclusions in preparing this RFI. Enclosed please find copies of all three (3) FTA rulings outlined above. Please note that Fisk Electric intends to utilize fittings manufactured by the O.Z./Gedney Company, one of the acceptable manufacturers specified in the contract specifications. Please review and approve our use of the O.Z. Gedney fittings for various conduit systems requirements.</p>						
T-2634	FSP - PRV Locations	Closed	03/27/2015	04/06/2015	04/14/2015	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Aseem Goyal</p> <p>Co-Author: Transbay Fire Protection Kevin Malone</p>		<p>To: Turner Construction Company Phil Militello</p>	<p>Answered By:Adamson Associates, Inc. George Metzger</p>				
<p>REQUEST:</p> <p>Ref: 21 13 19 Location: N/A Closest Column Line: N/A Add'l Doc Ref's : Fire Sprinkler Permit Submission Meeting #1 ı Item 1.05</p> <p>Low Rise buildings in San Francisco are normally provided with Manual Wet Class 1 Standpipe systems which are pressurized by Fire Trucks through the FDCs. SFFD confirmed this is the approach they expect and would prefer not to have to deal with PRVs. Since we have combined standpipe/sprinkler systems under pump pressure, PRVs will be required where pressures exceed 150 psi. This occurs only in the below grade levels of the building. TFP requests acknowledgement that PRVs will only be provided on levels where pressures require them.</p>		<p>SUGGESTION:</p>	<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>As discussed in the meeting with the SFFD, the pressure reducing type fire hose valves will be used for levels B2 and B1 only. Level 1 through 4 will have standard fire hose valves. Fire Sprinkler Subcontractor is the engineer of record for this system and shall be responsible for confirming all final Regulatory Agency requirements for the system.</p>

<div>Co-Author: Transbay Fire ProtectionKevin Malone</div> <div><div><div>REQUEST:</div><div>Ref: 21 13 19 Location: N/A Closest Column Line: N/A Add'l Doc Ref's : Fire Sprinkler Permit Submission Meeting #1 - Item 1.07 Cross connection supply to each Sprinkler Zone has been added to the Transit Center as an enhancement. Unlike a high rise the additional supply is considered a secondary supply. TFP intends to include the secondary supply into our hydraulic calculations which we believe is necessary to provide the large volume of water required at the Bus Deck level. This approach is acceptable to the SFFD but we want the Design team to confirm that it's acceptable to them</div></div><div>SUGGESTION:</div><div><div>ANSWER: No, this is not acceptable. The second supply to the sprinkler zones was added as a building system increased reliability feature. The system is hydraulically calculated to be supplied from one riser in the event that the other riser is not operational. For the bus deck some of the risers at the east end could be 8" in size, if necessary</div><div>Accept Suggestion: <input type="checkbox"/></div></div></div>							
T-2636	DLV - Slab Edge Plans in Conflict with Detail	Closed	03/31/2015	04/10/2015	04/06/2015	Potentially	<input type="checkbox"/>
<div>From: Webcor Construction LPAndrew KitchenTo: Turner Construction Company Phil Militello</div> <div>Answered By:Adamson Associates, Inc. George Metzger</div> <div>Co-Author:</div> <div><div><div>REQUEST:</div><div>Contract Doc Ref: A1-2862, A1-2863, A1-3191 Location: GL 5-6 See attached marked up drawings. A1-2862 and A1-2863 show the Top of Wall elevation surrounding the Dock Leveler Pits as 22.88 ft. and the elevation of the pits as 21.35 ft. and 21.33 ft. 4/A1-3191 shows the top of wall elevation as 23.5 ft. and the elevation of the pits as 21.83 ft.</div></div><div>SUGGESTION:</div><div><div>ANSWER: A1-2862 and 2863 will not be updated as the information indicated is correct. Please refer to enlarged plan A1-2963, which is referenced in the two drawings above that indicates top of leveler pit slab at 21.83', which matches the detail. Note that top of wall elevations are taken from the underside of slab and the detail is only calling out top of slab values.</div><div>Accept Suggestion: <input type="checkbox"/></div></div><div>Please advise.</div></div>

REQUEST: Contract Doc Ref: 1/S1-2720 Location: Typical HSS Column to WF BM Connection Gridlines: n/a Add'l Doc Ref's: n/a For the Fire-Trol columns, please advise on questions 1 and 2 below: 1. Detail 1 / S1-2720 shows that the FIRE-TROL shell extends near the base plate around EL: 80'-7", but the architectural drawings show the shell starting at EL: 86'-9". Please verify that the FIRE-TROL shell is only required between EL: 86'-9" and EL: 98'-0" and that the spray-on fireproofing (Not in Skanska's scope of work) will be used to fire rate the columns below and above those elevations? 2. Please confirm the shell primer finish for the column shells.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Follow attached SKA-4550-R2, for elevations of start and stop of the FIRE-TROL shell. Structural detail will be adjusted accordingly. 2. Shell primer shall be manufacturer's standard product to accept interior paint finish.

REQUEST:			SUGGESTION:		ANSWER:		
Ref: Fire Sprinkler Permit Submission Meeting #1 - Item 1.11 (A1-4403) Location: Shaw Alley Reflected Ceiling Closest Column Line: N/A Add'l Doc Ref's : N/A Sprinkler heads running East to West are spaced less than 6 feet apart. To prevent cold soldering, NFPA #13 requires baffles between heads spaced less than 6 feet apart. Two of NFPA #13's conditions for baffles (non-combustibility and an 8 inch minimum width) don't seem to be met by the light fixtures that separate the sprinklers. Please have the design team advise on this issue.					Accept Suggestion: <input type="checkbox"/> Sprinkler locations were revised so that they are not less than 6 feet apart. Please refer to the two enclosed sketches; SKA-4591 and SKA-4594. Date Answered by Design Team: 4/13/2015 Date closed in CMIC: 4/20/15

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

Contract Doc Ref: A1-8550 through A1-8532
Location: Zone 4
Gridlines: 27-28/D-C.3
Add'l Doc Ref's: CD RFI 815 SK1

See attached CD RFI 815 SK1:
The referenced RFI's and drawings do not show sufficient information for the vertical plates. Supply a revised structural drawing or sketch showing the information and dimensions required for the vertical plates.

SUGGESTION:

ANSWER: Accept Suggestion: ☐

The 3D computer model is part of the construction documents for this part of the project.
Please refer to 3D model as noted on detail 2/A1-8552 for information regarding vertical plate dimensions.
Vertical plates and horizontal plate form one assembly; see detail 2/A1-8551.

T-2663.1	SSS - OCS Vertical Plate Missing Dimensions	Closed	04/17/2015	04/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Quang Le	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger	

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

Contract Doc Ref: A1-8550 through A1-8532
Location: Zone 4, Second Level
Gridlines: 27 and C.3
Add'l Doc Ref's: SK1, SK2, SK3, SK4

The response to RFI T-2663, refers us to a 3D model file provided to Webcor. From this we have taken rough dimensions for the vertical sides of the OCS plate. The model does not provide sufficient information for steel detailing.

- Please confirm dimensions taken from the 3D model (Ref SK RFI 1075.1 SK01).
- Please provide vertical plate thickness and grade (Ref SK RFI 1075.1 SK02).
- Please provide vertical plate to horizontal plate weld detail (Ref SK RFI 1075.1 SK03).
- What is plate configuration at corners (Ref SK RFI 1075.1 SK04).

SUGGESTION:

ANSWER: Accept Suggestion: ☐

It appears that the image in red is the rhino model (outside surface model) which a part of the construction documents. The blue plate appears to be offset from the red image and might be a result of the 2D shop drawing mis-coordination. The design intent is to have the 1/2" vertical plates (same thickness as horizontal plate) flush at the end of the horizontal plate on three sides. It is acceptable to have small tolerance of geometrical difference on the north and south sides. However, the east and west sides must match the rhino 3D model. The plate vertical walls per the 3D model shall be 1'-1" in height. 12'-9 1/2" for the lower dimension is confirmed. Upper dimension of walls to match the plate edge is confirmed. The vertical plates shall be welded to the horizontal plate with a 3" long, 1/4" fillet weld spaced at 12" on center on both sides.

We suggest that the DB Ceiling contractor be copied on RFI's such as this for future coordination.

T-2678	TTC - Contradictions between type of curbs	Closed	04/03/2015	05/01/2015	05/11/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michelle Collanton To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: 2/A1-3220; A1-2884; A1-2404; 2&3/A1-9355 Location: Zone 2, Second Level Gridline: D-F/16 Add'l Doc Ref's: Virtual Building ARCH (ASI 128)-CR #035 Please see attached Virtual Building ARCH (ASI 128)-CR #035. There are contradictions between type of curbs around structural column at D/16 and F/16 grids. 2/A1-3220 floor detail drawing shows CC5 curb at D/16 grid, but A1-2884 slab edge plan shows CC2 type to the same curb. The 3/A1-9355 detail drawing shows differences at grid F/16 because this drawing shows CC curb type, but this type is CC3 and CC2 on the slab edge plan A1-2884. Curb types should be corrected. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Shop drawings for this area have already been reviewed and approved. Refer to TG0702-048.0 dated 2/13/2015. WOJV shall coordinate the work developed in submittals between the trade subcontractors on their team including the Virtual Building modeling team. Date Answered by Design Team: 4/30/2015 Date Closed by WOJV: 5/11/2015

REQUEST: Contract Doc: A1-2502; 1/A1-7002; 2/A1-7001 Location: Zone 1, Bus Deck Level Gridline: D-F/1 Add'l Doc Ref's: Virtual Building ARCH (ASI 128)-CR #036 Please see attached Virtual Building ARCH (ASI 128)-CR #036. There are contradictions between the type of walls (marked with yellow) on 1/A1-7002 typical stair drawing and 2/A1-7001 landing drawing. The A1-2502 floor plan shows these callouts to the same place. The 1/A1-7002 shows 11E;7 C,Z;11 A,C wall types around the stair at D-F/1 grids, but 2/A1-7001 shows these walls with different types.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Part of this RFI question was included in previous RFI T-2675. Refer to sketches on RFI T-2675 for response. Additionally, refer to the attached sketch SKA-4645 for additional clarification. Date Answered by Design Team: 5/6/2015 Date Closed by WOJV: 5/11/2015

T-2687	TTC - Two different tags for one system	Closed	04/06/2015	05/04/2015	05/11/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michelle Collanton To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: E-0011 Location: Global Gridline: Global Add'l Doc Ref's: Virtual Building EL (ASI 128)-CR #001 Please see attached Virtual Building EL (ASI 128)-CR #001. The Electrical Legend Plan (E-0011) shows two different tags (LSI and LCI) for the Life Safety Interface To PA System. The LCI should means an another system. Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> There is no piece of equipment with acronym 'LCI'. Refer to attached sketch SKE-RFI-T-2687-1 for clarification. Date Answered by Design Team: 5/7/2015 Date Closed by WOJV: 5/11/2015				
T-2688	TTC - Contradiction between the geometry of type F15 lighting fixture	Closed	04/06/2015	05/04/2015	05/11/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michelle Collanton To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: E1-0062; E1-4102 Location: Global Gridline: Global Add'l Doc Ref's: Virtual Building EL (ASI 128)-CR #002 Please see attached Virtual Building EL (ASI 128)-CR #002. There is a contradiction between the Schedules-Lighting Fixture plan (E1-0062) and Train Platform Level Zone 02 Lighting Plan (E1-4102). The Schedules-Lighting Fixture plan shows the type F15 lighting fixture has a round geometry, but the Train Platform Level Zone 02 Lighting Plan shows the type F15 is rectangular. The manufacturer website (http://www.visual-3d.com/tools/photometricviewer/default.aspx?id=53790) shows the IBL 24L SD125 LP740 lighting fixture is rectangular so the Schedule should show rectangular geometry as same as the Train Platform Level Zone 02 Lighting Plan (E1-4102).			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Symbol shape shown on drawings is not representative of actual fixture shape. All F15 fixtures per light fixture schedule on Sheet E1-0062 are rectangular. WOJV Virtual Modeling team should also be aware that the light fixture housing above the ceiling finish will not be the same size as the fixture opening in the ceiling finish. REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: Field Order T-00036 (ASI # 131) Phase 2 Documents Location: Train Platform Level					Accept Suggestion: <input type="checkbox"/>		
During ongoing MEPS coordination with ASI # 131 (Field Order # T-00036) Phase 2 documents an issue arose involving required ceiling clearances above the actual track areas in the Train Platform level. It was mentioned in weekly BIM coordination meetings that there exist a Dynamic Vehicle Envelope requirement reflecting future track clearances in the Train Platform Level for each track. Please provide required track clearances for continued Phase 2 MEPS coordination.					Refer to enclosed sketches SKA-2456, SKA-2457, SKA-2458, SKA-2459, SKA-2461 and SKA-2473 for the required Dynamic Vehicle Envelope clearances.

	REQUEST: Contract Doc Ref: 08 88 53 Location: Zone 3 Ground Level and Roof Park Level Specification Section 088853, article 2.3.K provides some guidance on the temperature design criteria. However, we need more accurate temperatures for the interior and exterior surfaces of W-12 and W-13 skylight glazing. Due to limitations on the fire-rated glass provided by manufacturer VETROTECH, the maximum in-service temperature of the fire rated glazing cannot exceed 122 degrees Fahrenheit (F) (50 degrees Celsius). We have methods to control the temperature include adding various solar control low-e layers to the laminated glazing or adding some limited air conditioning to the interiors (under-side of fire rated glazing). However we have run initial modeling and the current design temperatures are	Jonathan Flaming Erik Bryant	To: Turner Construction Company Phil Militello	ANSWER: Accept Suggestion: <input type="checkbox"/> The branch and the equipment are shown on the floor plan. An updated riser diagram will be coordinated in the shop drawings. Date Answered by Design Team: 5/17/2015 Date Closed by WOJV: 5/19/2015			
T-2732	GCW - Ambient Temperatures for the Glass Floors	Closed	04/07/2015	04/17/2015	04/14/2015	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Co-Author: Crown Corr, Inc.		Jonathan Flaming Erik Bryant	To: Turner Construction Company Phil Militello ANSWER: Accept Suggestion: <input type="checkbox"/> We cannot provide exterior and interior glass surface temperatures as requested. The surface temperature of the cladding material is a result of sun exposure, duration, and ambient temperature on the specific properties of the material, material temperature absorption and retention properties, mass of the material, etc., which are not fully known by the design team and can vary and spike with natural climate conditions. We can provide guidance from thermal comfort analysis conducted for the natural ventilation and radiant floor system performance in the Grand Hall during the design phase. The results of the computer modeling predicted a maximum interior air temperature of 92.5 degrees F at the ground floor when the outdoor air temperature is 95 degrees F. We expect to see higher temperatures (3-5degF) at the underside of the W-12 system as the heat rises through the space to the exhaust discharge points in the glass box and light column skylight. If exterior air temperatures exceed 100 degrees F then interior air

From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Contract Doc Ref: (ASI 128 dated 12/16/14) Specification Section 07 81 23 Details 1, A, & B/A1-8662 Sheet S1-2505 Detail 5/S1-5017 Detail 1/S1-6008 Detail 1/S1-4206 Location: Light Column and Bus Deck Level Closest Column Line Intersection: Bus Deck Level GL 21 & GL 22 GL D.4/28 to GL D.4/38 Add'l Doc Ref's: Letter from International Paint Specification Section 07 81 23 Intumescent Fire Resistive Material has the following IFRM-1 and IFRM-2			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The design intent is to not install IFRM-2 at any connections or areas with bolts; thus neither bolts, nor pins require fireproof bolt covers. Detail 5/S1-5017 does not require IFRM-2, thus it does not need bolt covers. At detail 1/S1-6008 there are not fireproof bolt covers, they are bolt protection caps, apply IFRM-1 at this location. At the braced frame details referred to in this RFI, install IFRM-2 only on straight pipe runs and install IFRM-1 elsewhere. Submit shop drawing to confirm all demarcation lines between the two fireproofing types. Date Answered by Design Team: 04/24/2015 Date Closed by WOJV: 04/24/2015

T-2770	TTC - Missing information about mark	Closed	04/07/2015	05/05/2015	05/07/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michelle Collanton To: Turner Construction Company Phil Militello Co-Author: Webcor Construction LP Jeff Heath			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc: C-0010;C1-4001;C1-4002;C1-4003;C1-4004; C14006;C1-4007;C1-4008;C1-4009 Location: Global, Ground Level Gridline: Global Add'l Doc Ref's: Virtual Building L (ASI 128)-CR #001 Please see attached Virtual Building L (ASI 128)-CR #001. There is missing information about mark on the civil drawings. C-0010 sheet shows CS characters for the proposed combined sewer manhole (marked with yellow), but C1-4001 - C1-4009 drawings show this type with only S character. The C1-0010 sheet does not contain the "S" mark. Proposed combined sewer manhole should be corrected on C1-4001 - C1-4009 sheets. C-0010 should give information about "S" mark. Please confirm.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> No revision is necessary. The symbol shown on C1-0010 is for "PROPOSED combined sewer manhole". The word "PROPOSED" indicates NEW work. The callout on sheet C1-4001 states "(E) CS MH". "(E)" indicates it is an EXISTING utility. Refer to General Note 2 on C-0005 regarding existing utilities. Date Answered by Design Team: 5/5/2015 Date Closed by WOJV: 5/7/2015

T-2772	TTC - Contradiction between type of Combination Fire/Smoke Dampers	Closed	04/07/2015	05/05/2015	05/11/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michelle Collanton To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor Construction LP Jeff Heath							
REQUEST: Contract Doc: M1-2102; 4/M1-3103 Location: Zone 1, Train Platform Level Gridline: C-D/4 Add'l Doc Ref's: Virtual Building MECH (ASI 128)-CR #001 Please see attached Virtual Building MECH (ASI 128)-CR #001. There is a contradiction between type of Combination Fire/Smoke Dampers. The Train Platform Level Zone 02 Mechanical Plan (M1-2102) shows B2-A-18 (marked yellow), B2-A16 (marked pink) and B2-A-15 (marked green) dampers but the Mechanical Sections (4/M1-3103) shows other type there. The two plans should match. Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> It is unclear what is meant by "other type". The symbols for all three of these FSDs (FSD-B2-15, 16, 18) on M1-2102 and 4/M1-3103 are all the same and consistent with the legend for fire-smoke dampers. FSD-B2-15 (30x18) is on the return duct from the IDF Room. FSD-B2-16 (8x8) is on the supply duct going into the IDF Room. FSD-B2-18 (8x8) is directly above the supply duct and is an inlet for transfer air. Refer to schedule note 1 on M1-0053. Date Answered by Design Team: 5/6/2015 Date Closed by WOJV: 5/11/2015

T-2782	BGP - C19 Frame into B118 on West Throat Slab	Closed	04/07/2015	04/17/2015	04/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kamran Azarbal To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: S1-2250, S1-3301, S1-3303					Accept Suggestion: <input type="checkbox"/>		
Location: West Throat Slab					1. Confirmed.		
Gridline: 1-4					2. Confirmed.		
Add'l Doc Ref: Attached					3. Confirmed.		
Please refer to SI-2250, S1-3301, and S1-3303.					4. Confirmed.		
Columns C19 that frame into beams B118 on the west throat slab shown on SI-2250 are shown in section as having 1-1/2" clear cover to the ties. Detail 5/S 1-3301 indicates the same amount of cover for beam ties. The applicable column elevation, Detail 3/S 1-3303 indicates that the column cage is to nest within the beam support below as well as above. C19 columns cannot nest within intersecting beams at the clear cover given without reinforcing clashing. Further, the tie configuration indicated for Type 020 column on S1-3306 presents constructability and congestion issues given the tie size (#6's) at 4" spacing. Please confirm the following or provide another solution:					5. Confirmed		
1. Per the attached sketch, confirm the proposed tie layout is an acceptable alternative. Note that (1) cross tie has been omitted in the north-south direction.					Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI		
2. Per the attached sketch, confirm that the clear cover to the column tie may be increased to 2-5/8" so that the column cage may nest within the intersection framing.							
3. Within the beam-column joint, confirm that the interior beam stirrup/tie may be omitted. The exterior stirrup will remain.							
4. It will not be possible to fill all beam reinforcing bars in the same layer and pass through the column cage. Please confirm that bars that cannot pass may be layered vertically.							
5. Confirm that the exterior (2) beam bars may pass outside of the nested column cage. Such bars will be contained with beam exterior stirrups through the joint.

Contract Doc Ref: S1-2705, RFI T-2555, T-2793				1. Confirmed.			
Location: Roof Park Restaurant							
Gridlines: 4-5							
Add'l Doc Ref's: CD RFI 816.1 SK1, SK2, SK3, SKS-0471, SKS-0472				2. T/O Steel is 114'- 0 1/2" per 6/A1-8901.			
This is a follow-up RFI to RFI T-2793 (SK 1077, CD 816)				3a. Refer to attached sketch SKS-0472A. For information not shown, refer to sketch SKS-0472.			
See attached CD RFI 816.1 SK1 to SK3 for items 1 to 4:				3b. Refer to attached sketch SKS-0472A, connection similar. For information not shown, refer to sketch SKS-0472.			
1) RFI T-2555 does not provide this information. This dimension is 4'-5 on the south side. Confirm this dimension is also 4'-5 or supply the dimension.				3c. Refer to attached sketch SKS-0472A, connection similar. For information not shown, refer to sketch SKS-0472.			
2) The response in RFI T-2793 (SK 1077, CD 816) item 4 including the referenced architectural drawings do not provide the T/STEEL elevation. The elevation on the south side is T/STEEL 114'-5 3/4. Confirm this elevation is also 114'5 3/4 or supply the elevation.				4. Refer to attached sketch SKS-0471A. For information not shown, refer to sketch SKS-0471.			
3) The connections provided for the PL 1 5/8 & PL 1 3/4 will not work. See SK2 for items 3a, 3b & 3c:				Date answered by design team: 5/7/15 at 5:54 pm			
a) The connection on SKS-0472 does not work because the underside of PL 1 5/8 is not at top of HSS10x6. Supply a new detail.				Date closed by WOJV: 5/8/15 at 7:13 am			
b) Supply a connection detail for PL 1 5/8 to underside of HSS8x6.							
c) The same occurs on the south side except the HSS10x6 is a W12x19. Supply connection details for top and bottom of PL 1 3/4.							
4) The connections provided on SKS-0471 for the PL 1 5/8 will not work. See SK3: The steel framing per contract drawings and as shown in the model does not match the information shown on SKS0471. Please clarify and supply connection details for the PL 1 5/8 at top and bottom.

T-2800	TTC - Missing wall openings	Closed	04/08/2015	05/06/2015	05/14/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michelle Collanton To: Turner Construction Company Phil Militello Co-Author: Webcor Construction LP Jeff Heath			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc: A1-2202; M1-2202 Location: Zone 1, Lower Concourse Level Gridline: D.4-E.6/3-4 Add'l Doc Ref's: Virtual Building MECH (ASI 128)-CR #027 Please see attached Virtual Building MECH (ASI 128)-CR #027. There are some missing wall openings from A1-2202 Lower Concourse Level Zone 02 Floor Plan. The M1-2202 Zone 02 Mechanical Plan indicate some mechanical ducts (marked pink, purple, olive, green, orange, blue and light green) but the Architectural Floor Plan does not contain any enlarged plan or wall elevation witch shows the exact position of the wall openings. The architectural wall plan should contain the exact position of these wall openings. Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> For the exact positions of mechanical duct openings that go through the concrete walls at the Security Operations Suite, refer to detail references on A1-2202 and A1-3005 which in turn reference 3/A1-3008 and 1/A1-9804 (both enlarged plans). The enlarged plans have section references to A1-9241 showing concrete wall openings with dimensions including the mechanical openings highlighted on the RFI. These architectural drawings were issued with ASI-130. Also, please refer also to RFI T-2518 response for additional information. WOJV to confirm the Virtual Building modeling team and all subcontractors have the current CDs. Date Answered by Design Team: 5/12/2015 Date Closed by WOJV: 5/14/2015				
T-2801	PLG - Vent line conflict with Future Grease Duct	Closed	04/08/2015	04/18/2015	04/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Aseem Goyal To: Turner Construction Company Phil Militello Co-Author: Desert Mechanical, Inc. Mark Mikhail			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Contract Doc Ref: P1-2303, & P1-2304 Location: Zone 4, Ground Level Closest Column Line Intersection is 15-D Add'l Doc Ref's: N/A On P1-2303 and P1-2304 (see attached vent #1 and #2), the vent line is in conflict with the future grease duct. To avoid the clash the vent pipe is forced to run below the grease duct which further creates conflicts with the future TI spaces and the walk way (See attached vent #3, #4, #5). Please confirm it is acceptable to break the vent into segments and re-route to level 2 through the column enclosures.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The plumbing vents will run flat with no slope. This way there is more flexibility in routing the vents away from the grease duct. REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc: A1-7005; 5/P1-3013 Location: Zone 1, Lower Concourse Level Gridline: B/4-5 Add'l Doc Ref's: Virtual Building PLMBG (ASI 128)-CR #086 Please see attached Virtual Building PLMBG (ASI 128)-CR #086. There is a contradiction between Architectural Stair 203 at Lower Concourse Level (A1-7005) and Plumbing Partial Plan at gridlines 5/B (5/P1-3013). The plumbing partial plan shows incorrect underlay drawing. The slab penetration is different on plumbing plan than the architecture plan shows. The underlay of the plumbing partial plan should follow the architectural plans. Please confirm.				The plumbing plans are diagrammatic and the discrepancy in the backgrounds shown on 5/P1-3013 is not relevant in locating plumbing penetrations on the slab. The architectural edge of slab drawings locates these penetrations. Please read in conjunction with the plumbing plans (for pipe sizes) and plumbing pipe sleeve schedule (for sleeve sizes). Refer to reviewed and approved submittal TG0600-129.1 for slab penetrations near Stair 203. Date Answered by Design Team: 5/8/2015 Date Closed by WOJV: 5/11/2015

Co-Author: Desert Mechanical, Inc. Mark Mikhail							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: E1-2102 and E12204 Location: Zone 2&4 Level B1&B2 Closest Column Line Intersection is GL2-D and GL15-C Add'l Doc Ref's: N/A				Liquid is Class 2 flammable, but the room is NEC 500 Class 1, Division 2. Sheet E1-2102 is correct as is. Refer to attached sketch, SKE-RFI-T-2896-1, for correction.			
Drawing E1-2102, Note 6 classifies the electrical race ways and equipment in Room B2261 (aboveground storage tank room) as NEC Division1, Class 1 and that all electrical race ways and equipment should be installed per this Classification. Similarly drawing E1-2204, Note 5 classifies the electrical race ways and Equipment in Room B1485 (aboveground storage tank room) as NEC Division 2, Class 2 and that all electrical race ways and equipment should be installed per this classification. Both storage tanks will contain Diesel No. 2. Diesel No. 2 is classified as a Class II combustible by the NFPA having a flash point higher than 100 degrees F. Per the NEC the proper classification of the electrical installation in these two rooms is "non-hazardous" since Diesel No. 2 is a not a flammable liquid. Please revise these notes to reflect the correct NEC classification for these two tank rooms as "non-hazardous". There is no cost impact to the project, since Becker Electric priced the electrical installation for this portion of the install based on a non-hazardous classification. T-2955	SCS - Ground Level Air Vent - Moment Frame Beam Conflict #2	Closed	04/12/2015	04/22/2015	04/28/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kamran Azarbal To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Kamran Azarbal				
Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: A1-2864 Location: Ground Level Gridline: GL G @ GL 22 Add'l Doc Ref: Attached			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
On architectural plan sheet AI -2864, the air vent slab opening (South of GL G, at GL 22) interferes with the moment frame concrete beam. Reference RFI T-1010.1 for concrete beam spacing & RFI T-2103 for direction to center air vent slab opening location between beams. The opening cannot be centered similar to RFI T-2103's direction due to a small span between beams. Please revise contract documents to resolve this conflict by either adjusting air vent slab opening location or moment frame concrete beam location.					Adjusting the location of the MFB to 7'-1" west of GL 22 is acceptable structurally.		
					Answered By Design Team: 4/25/15 Closed by WOJV: 4/28/15		
T-2956	SCS - Ground Level Vault Openings - Moment Frame Beam Conflict	Closed	04/12/2015	04/22/2015	04/28/2015	Potentially	<input type="checkbox"/>

Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: A1-2865 Location: Ground Level Gridline: GL 21 Add'l Doc Ref: Attached			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
On architectural plan sheet AI-2865, the (2) 7'x10' slab openings directly to the East and West of GL 21 interfere with the moment frame concrete beams. Reference RFI T-1010.1 for concrete beam spacing. Please confirm it is acceptable to adjust the slab opening location to have one edge of block-out flush with beam face.					Refer to enclosed sketch SKA-4602 for transformer vault openings with moment frame beam information superimposed. 7' wide openings east and west of GL 21 do not conflict with moment frame beam locations. No changes are required and A1-2865 will not be revised.

<p>location of shear keys and specifics of what the shear key is and how we can secure the embed plate to it. We would anticipate a steel shear key allowing us to weld or mechanically attach the embed. It is our assumption that the shear key will be provided for steel embed attachments, and will NOT be by GREENLITE. Reactions can be provided. It is our assumption that the shear key will allow for the transfer of lateral and transverse shear forces into the structure, and NOT transferring the shear forces directly into the concrete through the embedded threaded rods. Please confirm.</p>							
T-2962	GCW - Glass Floor Tension Rods	Open	04/13/2015	04/23/2015	04/30/2015	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Jonathan Flaming		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Crown Corr, Inc. Erik Bryant							
REQUEST: Contract Doc Ref: 08 88 53 1.Specification 08 88 53 Section 1.2.A.1: This section describes basic system configuration calling for primary girders (trusses) with a tension rod suspension system. What does the design team expect from the tension rods in a fire condition? ie (A) Do we ignore the tension rods when designing the primary steel members which traverse the opening for dead load and applied design live load? - in which case the truss becomes irrelevant in a fire condition. But we may have larger truss members to span the opening. Or (B) is the design intent to design for the tension rods to assist the primary steel members and assist with carrying the dead load and applied design live load? - in which case the performance of the composite structure in fire conditions is a much more complicated issue and probably impossible to test for in the furnace to ASTM-E119. Please note: Even if a portion of the truss structure was to be replicated inside the furnace under the primary steel members, testing this would not replicate the performance		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> To RFI question 1: We had assumed 'B' as it had led to a more slender and efficient design of the glass floors. However, as the design of the glass floors changes, we would not be opposed to option 'A'. We are not attached to the trusses and from a structural point of view, both options can be made work. However, the trusses without the tension rods will most likely become heavier. Regarding the testing, is the intent to fire-test the entire assembly of one truss with glass and tension rods? Or, is the test only for glass and directly supporting steel beams? If second, then the test assembly would be much smaller. Answered by Design Team: 04/30/2015 Closed by WOJV: 05/04/2015

REQUEST:			SUGGESTION:		ANSWER:		
Contract Doc Ref: A1-2203					Accept Suggestion: <input type="checkbox"/>		
Location: MDF & IDF Rooms					1. Confirmed. Furnish and install standard product fencing (as shown on attached SK-1 and as noted on item #3 of the VE correspondence between WOJV and TJPA) at IDF and MDF Rooms.		
Closest Column Line Intersection: n/a					2. Installation shall be based on dimensions provided on the contract documents and other requirements stated on specification 05 50 00.		
Add'l Doc Ref's: Sketch SK-1 E-mail Correspondence							
Contract documents call for custom "Security Screen w/ Gate" at IDF and MDF rooms (see Sheet A1-2203 for example).							
Per negotiations with TJPA (see attached e-mail correspondence), TG07.3 shall furnish and install standard product fencing in lieu of custom fencing at locations called out in the contract documents.							
Please confirm the following for IDF and MDF rooms: 1. Where custom fencing is specified by the contract documents, standard product fencing (see attached sketch SK-1 for agreed upon materials and details) shall be furnished and installed.							
2. Fence dimensions and other requirements within the contract documents will remain unchanged.

REQUEST: Contract Doc Ref: A1-2863 Location: Ground level curbs at Cruciform Columns The curbs that support the W-2 curtain wall currently do not connect to the cruciform column. In the TG08.11R Glass Curtain Walls and Skylights Design Meeting on 4/16/2015 it was discussed that welding studs to the base of the cruciform column would help support the curbs. Provide typical detail to support the W-2 curb at the cruciform columns.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See the attached SSK-0475 for headed studs where the concrete curb terminated at the cruciform columns. Reason for RFI (TT): Not provided by W/O. TT categorize this as changes to be issued in future ASI. Answered by Design Team: 04/28/2015 Closed by WOJV: 05/04/2015

	<p>Please reference Detail 6/S 1-5003 regarding the plate supporting the deformed bar anchors for high curbs on metal deck. Harris Rebar would like to propose an alternate to detail 6/S 1-5003. The original detail calls for welded DBA's attaching to a plate screwed into the metal deck. We would like to propose to replace the DBA bars and supporting plate with a rebar hat bar. This bar would be at the same size and spacing as the DBA bars, matching the schedule. The difference is that the bar would tie into the deck reinforcing rather than being welded to a deck plate. The bars would be supplied in sections with the ties fusion welded with bracing wire to the project site. Please confirm if this is acceptable.</p>				Answered by Design Team: 4/28/15 Closed by WOJV: 4/30/15		
T-2981	<p>SSS - PQRs for Light Column Casting Material</p> <p>From: Webcor Construction LP Quang Le</p> <p>To: Turner Construction Company Phil Militello</p> <p>Co-Author: Skanska USA Civil West California DisRyan Clayton</p> <p>REQUEST:</p> <p>Contract Doc Ref: S1-6005 to S1-6007 Location: Light columns at all levels. Gridlines: 22-24 Add'l Doc Ref: n/a</p> <p>To maintain project schedule requirements, our subcontractor Oregon Iron Works (OIW) will be taking back a portion of the light column fabrication scope from their subcontractor, XKT Engineering. The scope of this work will involve welding API 5L Gr. X52 pipe and A572 Gr. 50 plate to ASTM A958 castings. In accordance with the project specifications, XKT performed the required Procedure Qualification Record (PQR) testing for casting to pipe and for casting to plate material welds. The tests were witnessed and the mechanical testing was performed by the TJPA's third party inspection firm (ISI). The PQR documentation was submitted and approved as Submittal TG0701-105B. Skanska is requesting that OIW be allowed to utilize the PQR tests and data performed by XKT to develop their own Welding Procedure Specifications (WPSs) for their use in welding light column components</p>	Closed	04/23/2015	04/29/2015	Potentially <input type="checkbox"/>	Answered By:Adamson Associates, Inc. George Metzger	
	<p>SUGGESTION:</p>				<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>TT and sbp have no objections to this alternate proposal.</p> <p>Date answered by design team: 4/28/15 Dated closed by WOJV: 4/29/15</p>

Co-Author: Shimmick Construction Company, Inc. Henry Chiang							
REQUEST: Contract Doc Ref: A1/9236 Location: Vault Room B1324 Gridline: 11-12 Add'l Doc Ref: Attached Refer to transformer vault room B1324, on the south wall, detail A/A1-9236, there is a Construction Joint 3" away from the edge of the beam. In order to accommodate the trim bars around the beam block-out, please confirm that is acceptable to move the Construction Joint to the West 1' 3". Please provide acceptable offset to relocate Construction Joints in similar scenarios.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> AAI Response: Confirmed. The control joint can be moved 1'-3" to the west as indicated on the RFI. Please note that for transformer vault rooms, the vertical wall control joints start 30" above structural slab. Refer to general note on transformer vault enlarged plans (A1-3001 to A1-3003). TT Response: The control joint indicated in the RFI may be relocated as proposed. SCCI has received, on comprehensive layout submittals, the locations and sizes of control joints and movement joints. Joint labeled as control joints, in general, can be moved; however, design team would need to review all proposed relocations. Please incorporate the locations and sizes of control and movement joints shown on the comprehensive layouts and any reviewed changes to control joint locations on partition wall comprehensive layout submittals and partition wall bracing submittals.
