Per the response to RFI T-0239, BBII needs to extend the length of rebar cages to accommodate buttress shafts that are deeper than 240'. The exact length of the rebar cage cannot be known until the drilling of the adjacent shaft. Due to this uncertainty, and the long lead time required to fabricate cages with varying lengths, BBII proposes to fabricate all rebar cages to a pre-extended length of 260'.			The proposal is acceptable with the following notes. Detail 12/GT-5201 requires the reinforcing steel to be placed up to 1'-0" below the top of the concrete. The top of concrete is shown on GT-5201. Longitudinal bar extensions shall be spliced as needed to achieve this (as noted on the sketch; attached). If the top of the fabricated cage is within 3'-0' of the top of the concrete, no bar extensions are required.				
Once the depth of the adjacent shaft is known, the final length of the rebar cage will be adjusted by cutting the top of the rebar cage and the CSL tubes to the desired length. The length of the bottom "structural cage" section that consists of 24 Ea. vertical rebars will remain unchanged at 186'. The length of the top "setting cage" section that consists of 8 Ea. vertical rebars will be adjusted as described above. Please refer to the attached documents and the original shop drawings for the "structural cage" and the "setting cage" details.			The 24" tie spacing shown on the shop drawings at the setting cage (Drawing SC1) is acceptable at the bar extensions.				
BBII proposes to accommodate this change at no additional cost to TJPA beyond the bid item quantity payment per drilled shaft lengths.							
Please advise, if it is acceptable.

T-0253	BSE - Trestle Design Criteria Confirmation	Closed	10/19/2011	10/29/2011	11/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Kruttsch Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By: Turner Construction Company Kevin Chiu				
REQUEST: Reference Attachment 3 of Exhibit A of the TG03 Bid Package and attached memo from PB&A Pursuant to the trestle design meeting held on October 12, 2011, Balfour Beatty Infrastructure Inc.' (BBII) requests clarification regarding their interpreted design criteria of the Temporary Access Trestle As the only Contract document regarding the Trestle, Attachment 3 of Exhibit A of the TG030 Bid Manual has the following instructions: In the second sentence of the second paragraph, the following statement is made, "For the design criteria for the Access Trestle, the Contract Documents and applicable standard shall be referred to." The next sentence states, "All requirements in the Temporary Bridge Specification in the Contract Documents, Section 01 53 13, shall apply to the Access Trestle." Attachment 3 goes on further to provide very specific design load conditions and structural elements (i.e. Deck & barrier) that contradict the requirements of the Temporary bridge Spec Section 01 53 13. Based on the more "Trestle Specific" requirements of Attachment 3 and the interpreted function, being for construction use and not public use, of this type of temporary works structure, BBII and its Engineering Team arrived at the criteria (basis of design) described in the attached memo from PB&A. This document was included with BBII's original design submittal; however for this RFI BBII has expanded some of the explanations. Please review the provided information and confirm whether or not BBII's design criteria is appropriate for the Temporary Access Trestle.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> PMPC response per Roger Rothenburger, 11/01/11: "1. The RFI process is not the appropriate venue to "review the provided information and confirm whether or not BBII's design criteria is appropriate." The RFI requested at the October 12, 2011 meeting was to request clarifying instructions to specific perceptions of conflict between Exhibit A - Attachment 3 and Specification Section 01-53-13 (Temporary Bridges) 2. As for the design criteria, the fourth sentence of "Exhibit A - Attachment 3" is explicit; "All requirements in the Temporary Bridges Specification in the contract Documents, SECTION 01 53 13, shall apply to the Access Trestle." This would include the requirement in Section 01-53-13 Part 1.3.A.1 (Temporary Bridges - Performance - Design Loads) stating the use of seismic design load for 475 year earthquake (earthquake with 10% probability of being exceeded in 50 years), 3. Among other criteria, wood decking material, "wheel stops, hand rails, special working access, etc listed in the balance of Attachment 3 modify the requirements in Section 01-53-13 and are not contradictory. 4. Attachment 3 does not address crash barriers or lateral bracing, among other criteria, which would defer to section 01-53-13. (Temporary Bridges) 5. PMPC recommends a small group meeting of the constructing parties to discuss the technical details to meet as many requirements as possible for BBI to get approval for Zones 1 and 2 and proceed with the Access Trestle work in a timely manner."				

T-0253.1	BSE - Trestle Design Criteria Follow-Up	Closed	11/21/2011	12/01/2011	12/02/2011	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/>				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0254	<p>Reference RFI#T-0253, Attachment 3 of Exhibit A of the TG03 BSE Bid Package, Specification Section 01 53 13, and attached memo from PB&A</p> <p>Follow up to RFI T-0253 and the meeting held 11/16/11</p> <p>As noted in the 11/16/11 meeting, the cross lot bracing "struts" are supported by the Trestle substructure and analysis requires limiting trestle deformations to be compatible with the allowable strut deflections (approximately 2"). As a result the "push over" analysis as required by the AASHTO Seismic Design Criteria "SDC" (requirement of bridge spec 01 53 13) is not applicable. This was discussed in detail during the 11/16 meeting and it was concurred that due to unique structural configuration and deflection requirements, an alternate analysis method other than the SDC would be required. Discussions were had that a site specific elastic analysis using the 475 year seismic loads that is controlled by the deflection limits of the cross lot bracing would be necessary. Please confirm that a "push over" type analysis of SDC will not be required for the trestle and that the attached detailed Design Criteria (and analysis method) is acceptable.</p> <p>(W/O added clarification) BBII believes the site specific analysis would demonstrate the trestle substructure will not deform greater than 2" however the trestle superstructure will deform greater than 2".</p>	Closed	10/20/2011	10/30/2011	11/01/2011	Potentially	<input type="checkbox"/>

If the Access Trestle is designed to resist the full 475 year earthquake design requirement with all response being elastic (R=1), then the Access Trestle system is not subjected to inelastic deformation for the design event. If the design is additionally shown to be capable of sustaining significant overload (no connection failures, no weld failures, no member failures, remaining stable under loading corresponding to at least two times the required design load, or corresponding to a ductility demand requiring R=2), then a pushover analysis is not necessary to verify performance. If there are questions raised regarding if this is sufficient, then the response could be demonstration that the system remains fully stable without connection or member failures at a load level corresponding to the deterministic earthquake load corresponding to the maximum event capable of being delivered by the earthquake fault system at the project location. If the design presented is in accordance with the above, then URS would be able to assist with technical engineering discussions to validate this design approach to the City of San Francisco during the building permitting process.

Further clarification: The procurement specification requires an integrated model capturing interaction between the Cross Lot Bracing and the Access Trestle, note the Cross Lot Bracing is not a component against which the trestle reacts but the Cross Slot Bracing delivers load to the Access Trestle. This behavior must be captured with sufficient accuracy and within all project criteria.

If another alternative is proposed that meets all required design criteria at all structure elements, including contractor teams identified maximum allowable deflection of 2 at the Cross Lot Bracing, URS takes no objection to the contractor pursuing this potential design alternative.

Please address the following information request from BBII's sub contractor Becho Inc.:					Accept Suggestion: <input type="checkbox"/>		
"... Becho would like to start performing Sonic Caliper analyses within 20 feet of the projected final bottom elevation of the shaft(s) to expedite the "Drill, Place, Pour" process. In order to continue the Buttress Drilling Operation without interruptions, Becho would like to utilize the hours between 1am - 6am to perform the Sonic Caliper test. For example, if Becho anticipates the completion of shaft at 10am, it would be beneficial to perform the Sonic Caliper test during the hours of 1am - 6am. This allows crews to prep, setup and perform the airlift process without having to wait for Becho engineers to test the shaft(s) during normal hours of operation, thus expediting the "Drill, Place, Pour" process.					George Metzger's response is limited to the first sentence of this RFI which states, "... Becho would like to start performing Sonic Caliper analyses within 20 feet of the projected final bottom elevation of the shaft(s) to expedite the "Drill, Place, Pour" process." Acceptance of permissible work activities between 1am-6am will come in the form of a TJPA Night Noise Permit. Please be sure to include the proposed work activity on the Night Noise Permit application.		
Please advise, if it is acceptable.					----- 10/27/2011 - George Metzger Arup Response: This is acceptable.		
T-0258	BSE - Demolition Status of Pile Cap at GL 33.5	Closed	10/27/2011	11/06/2011	12/09/2011	Potentially	<input type="checkbox"/>

Reference Specification Section 32 12 17					Accept Suggestion: <input type="checkbox"/>		
With regard to the areas of non-conforming backfill compaction inspection i.e. FCR #TCB-00246: In lieu of contemporaneous compaction inspection by ISI, BBII has proposed the methodology described in attached letter #4225-000-00238. Please confirm the alternate methodology, assuming acceptable results, would suffice to meet the contract requirements.					The proposed methodology will be evaluated pending receipt of the test results.		
					Submit test results for review and evaluation.		
T-0260	BSE - D.I. Installation at Natoma Street and First Street	Closed	11/01/2011	11/11/2011	11/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Sheet U-3012 and attached sketch					Accept Suggestion: <input type="checkbox"/>		
BBII carried out an investigation of the active catch basin around the perimeter of the BSE project; and has a concern regarding the street elevation relative to the flow line on Natoma Street between GL 10-17.					The referenced decommissioned CB at the north west corner of Natoma and First streets was to be protected in place per RUP documents.		
The flow line directs surface water in a North East direction towards First Street. The only active catch basin at the intersection of Natoma and First Street is CB #305, which is approximately +8.5" higher than the currently decommissioned CB located at the intersection of Natoma St and First St (see sketch attached).					AECOM understands that the CB was decommissioned by BSE contractor in accordance with D-2230 Detail 1 and not RUP as claimed. D-2230 Detail 1 states (E) sewers, MH(s) and CB(s) are to remain active until construction of (N) CDSM perimeter shoring wall along northern end of site.		
Noted during the last rain fall, surface water was directed to the decommissioned catch basin at the North East corner of Natoma Street and First Street intersection, BBII recorded approximately 6" of standing rain water accumulating at First Street and Natoma intersection. Please note that existing catch basin was decommissioned during the new sewer installation on First Street (see attached mark up drawing).					The decommissioned CB is within the excavation site. In accordance with the specifications referenced in the Recommendation section (i.e. 011560 STORMWATER POLLUTION PREVENTION, EROSION AND SEDIMENT CONTROL) submit for review storm water control plans indicating contractor's method of addressing storm water entering the site in accordance with 011560 1.4.		
BBII recommends 2 options to control rain water from outside the BSE work area: A) modify the flow line on Natoma Street to direct the flow toward CB # 305,

REQUEST: SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/>			See the attached TT response.				
Reference RFI#T-0251.1 and Specification Section 01 53 13							
BBII is in receipt of the drawings included in RFI T-251.1 that illustrate trestle pile "exclusion zones" where piles cannot penetrate the mat slab. Of the 24 piles that are currently in conflict with the pile exclusion zones, 20 of them can be relocated with relatively minor member changes. The other 4 as indicated in the attached drawings will require significant redesign and re-procurement, especially at the bridges. Can an exception be made at these four locations?							
T-0264.1	BSE - Beale St Bridge Pile Conflict (Follow up to RFI T-264)	Closed	01/26/2012	02/05/2012	02/03/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Shad Gardner To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/>			ARUP Response:				
Reference: BBI Marked-Up SKS-0135, SH-3103							
The previous response to RFI T-264 requested BBII move one of the Beale St. Bridge piles 3' west to avoid mat slab reinforcing congestion. BBII has investigated this request and found that the cap beam already has a significant cantilever on the east side of the pile in question. In order to comply with the request to move the pile, we would have to extend the cap beam and support it off the CDSM wall as shown on the attached sketch. Please advise if this is acceptable, otherwise the pile will need to remain in its current position.			This cannot be evaluated properly by Arup without more information regarding the loads on the shoring wall. Contractor shall submit calculations for review. Calculations shall include the load, if any, which will be imposed on the shoring wall due to settlement of the bridge supports.				
			Note that we have not yet seen the calculations and details for the bridge abutments at the north and south ends of the bridges.

Co-Author:**REQUEST:**

The response to RFI T-264.1 requested BBII provide the loading that would be placed onto the CDSM wall. This response leads us to believe that the option to leave the pile in the current location was unacceptable. Please confirm that the pile must be moved and provide a detailed location of where the pile placement would be accepted. Upon receipt of this information BBII can accurately determine the load to be placed on the Wall for Arup's review.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

The bridge pier near 35-E must be relocated. See attached SKS-0179 for acceptable range of pier shift.

T-0264.3**BSE -Bridge-Trestle Piles in Exclusion Zones Beale St****Closed****08/13/2012****08/23/2012****08/17/2012****Potentially****From:** Webcor Construction LP

Kirk Nielsen

To: Turner Construction Company Gary Kruttsch**Answered By:** Adamson Associates, Inc. George Metzger**Co-Author:****REQUEST:**

W/O in receipt of RFI response T-0264.2 (Exhibit-A). BBII is purporting any shift of the "bent-3" East pile West will cause excessive bridge cantilevering to the extent the Beale St. bridge must be reconfigured (less the sidewalk) and relocated (East) atop the CDSM wall.

Since the issuance of the TG03 package a third pit for an oil & sand interceptor appears to have been added in room B2761 reference:

1. TG06 4/P1-3006 (Exhibit-B) room B2761 floor plan
2. TG03 1/S1-2027 & C/S1-3004 (Exhibit-C) for original room configuration
3. TG06 1/S1-2057 & 2/S1-3007 (Exhibit-D) for revised room configuration

Please reference marked-up sheet S1-3007 (Exhibit-E). W/O is unaware of why the bridge pile could not be located 12" off the edge of the sump pit as depicted. The corner of the oil & sand interceptor pit which is shallow and could easily be formed, reinforced, and poured after the bridge pile is removed.

Please advise.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

TT will allow the proposed location of the "bent-3" East pile along grid E as depicted in Exhibit E (pile is east of the sump pit and the edge of pile is 12" from the east face of pit). Note that a pile in this location will require the pile to be cut off at a lower elevation than the typical detail, which will involve a larger block-out. The mat shall be re-braced at the block-out by TG03. Acceptance of this pile location will result in a Change Order for TG06.

T-0264.4	BSE - Inquiries with Regard to Proposed Beale St Bridge Atop East CDSM Wall	Closed	08/22/2012	09/01/2012	08/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Robert Kjome				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On 8/22/12 Beale St. bridge submittal #TG0300-206 was returned to W/O marked not reviewed (Exhibit-A). Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to the CDSM wall:				VOID - SEE RFI T-0305			
1. BBII's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont Streets, the length of the Beale St. bridge is resting atop the East CDSM wall.							
2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different soldier piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?							
3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the designer of the CDSM wall, does ARUP endorse further loading of the East CDSM wall with the forces imposed by the Beale St. bridge?

	<p>On 8/22/12 Beale St. Bridge submittal TG0300-206 was returned to W/O marked not reviewed. In lieu of piers the proposed bridge relies on the eastern shoring wall for structural support along the bridge. As a result, the design utilizes the additional capacity of the internal bracing to restrain lateral loads imposed by the bridge.</p> <p>Upon W/O's review of BBII's Beale St. bridge design W/O encountered the following inquiries relative to below grade structure:</p> <p>-Do the below grade foundation walls as designed have the additional capacity required to support the lateral loads imposed by the proposed Beale St. bridge?</p> <p>-Will the below grade foundation walls be required to achieve additional strength prior to removal of re-bracing as a result of the additional laterals loads in which they are subjected by the proposed Beale Street bridge?</p>

Reference: TG0300-221 BBI - Temp Bridges - Civil and Drainage Plan - Beale St				VOID - SEE RFI T-0306			
Contrary to specification section 01 53 13.1.2.A BBII's proposed Beale St. bridge utilizes an on-grade sidewalk for pedestrian travel though the parcel "Lot-N". Please confirm this is acceptable and that no other pedestrian connection across the construction excavation at Beale St. will be required for the entire required life of the bridge.

T-0266	BSE - Moratorium Conflict With Phase 2 Utilities In 1st Street	Closed	11/23/2011	11/23/2011	12/06/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Manuel Saldana To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Company Jack Adams					
Co-Author: Balfour Beatty Infrastructure, Inc. Jeff Molloy							
REQUEST: BBII is in receipt of the moratorium waiver expire date of 12-09-2011. BBII/PEC will not be able to complete the Phase II utility work by 12/9/11 without accelerating the schedule. Our original request for extension was December 19, 2011. A 12/9/11 completion date may be achievable if PEC is allowed to work 10 hr shifts during the day beginning 11/28 through 12/2 as well as working on 12/3 and 12/4. In addition, we propose to have a separate night crew to work near / around the Minna Street intersection to alleviate impacts to heavy demand of day traffic. The majority, if not all, of the demolition can occur during the dday to mitigate noise at night. The night work would need to begin on 11/28 and run through 12/2. Please keep in mind that implenting an accelerated schedule may also impact PG&E. We have no control over their work and the completion of the utility tie-ins and Mandral testing is contingent on PG&E's availability per the new adjusted completion date. In summary we are requesting direction for the following items to meet the 12/9/11 moratorium deadline: 1) W/O to permit BBII / PEC to work the extended hours, and night shift i.e. 10 Hours Days and Night work operations, 2) Permit from MTA to extend working hours (closure times) during the day 3) Permit from MTA and DPW to work at night within lane closures 4) Permit from TJPA to work in Zones 1 & 2 at night 5) Agreement / Approval for compensation of additional		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Holiday Moratorium waiver is extended to 12/21/11 by SFMTA. BBII/PEC work can continue on day shift Monday-Friday in accord with SFMTA Special Traffic Permit 11-7786 issued on 12/2/11.

<p>cost (premium time and or shift rate) BBII will have magnitude of cost for the Monday morning discussion</p> <p>We respectively request a meeting with W/O on Monday morning (11-28-2011) to discuss direction regarding the above items.</p>							
T-0269	BSE - Mass Excavation Pile Extraction Clarification	Closed	12/13/2011	12/23/2011	12/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		David Fields	To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Balfour Beatty Infrastructure, Inc.		Dean Wallahan					
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: 31 00 00 1.4 C.2 and Attached Sketch							
31 00 00 1.4.C.2 Pile Extraction - To occur in two (2) stages per Zone.		ARUP Response:					
Stage 1 extraction will remove the piles within the footprint of the trestle the middle 60' of the work zone, dewatering wells and piles that are in conflict with the bracing pin pile locations. Piles will be removed using a non ground deformation control method and be removed full length to be utilized for offsite LEED projects and to help achieve sustainability for this material.		The method described is not in accordance with the Contract Documents which require the existing piles to be removed using Ground Deformation Control Methods (as defined in 02 41 19) except where Non-Ground Deformation Control Methods are allowed and noted as such on the drawings.					
Trestle piles will be installed after Stage 1 pile extraction and concurrently with Stage 2 pile extraction.		The method described is acceptable with the following notes: this is acceptable for timber piles only, and if they are longer than 30 feet, Arup may re-evaluate the methods used. If the density of existing piles exceeds 30 piles per 1000 square feet, Arup may re-evaluate the methods used. If excessive ground movements are observed, the Contractor shall switch to using a Ground Deformation Control Method.					
Stage 2 extraction will remove the piles within the 50' +- area adjacent to the CDSM walls along A and J lines. Piles will be extracted using a ground deformation control method as per Section 02 41 19 - 3.1.B of the specifications utilizing both casing and backfilling of the void or removal by means of cutting the pile off at the grade of each level of excavation as the work proceeds.							
Please reference the attached drawing for details of the above procedure.							
The 80 Natoma shoring wall will be removed in stages coinciding with the stages of excavation.

T-0269.2	BSE - Zone 2 Free Pull Pile Extraction Test Section	Closed	05/01/2012	05/11/2012	05/04/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: BBII 4/30/12 Ground Deformation Control Drawing			The test set-up and monitoring are acceptable. Since they differ from that used in the area of the buttress, Arup will draw conclusions on the suitability of free pulling outside the trestle zone after we evaluate the test results.				
BBII are proposing to perform "free pull" pile extraction on a "test section" in Zone 2. The proposed piles will be extracted near GL14, close to CDSM wall on the north side using a "non ground deformation control method" by free pulling each pile without using steel casing. Inclinometer (I-011) located close to GL 14 will be monitored during the test. This test section will give the information needed to determine: 1) If free pulling the piles using a non ground deformation control method affects the CDSM wall by causing movement. 2) If it is a suitable method to adopt for removing the remainder of the piles in Zone 2 located outside the "trestle area". The attached drawing conveys the test section in green. Please advise on the suitability of this test to determine if free pulling can be used outside the trestle zone.							

T-0269.3	BSE - Zone 2 Pile Extraction Test Section	Closed	06/15/2012	06/25/2012	06/21/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
BBII completed the timber pile extraction test section in zone 2 on 06/12/2012. Based on the data recorded by ARUP inclinometers, please advise if BBII can continue with the timber pile extraction in Zone 2 using non ground deformation control methods ("free pull").			See attached memo for Arup's review of the Contractor's test program and proposed method of removing piles, and actions required by the Contractor going forward.

T-0269.4	BSE Zones 3/4 Pile Extraction Methodology	Closed	09/27/2012	10/07/2012	10/05/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please confirm ARUP's 9/25/12 verbal revision to RFI response T-0269.3, to employ the originally specified ground deformation control method (not free pull) when pulling timber piles between: Soldier piles 251 and 276 & between A-line and the north edge of the access trestle.					Accept Suggestion: <input type="checkbox"/>		
					Arup confirms this verbal revision.		
					The Contractor shall employ the originally specified ground deformation control method (not free pull) when pulling timber piles in the portion of Zone 3 and Zone 4 which is defined by soldier pile 251 to the west and soldier pile 276 to the east, and A-line to the north and the north edge of the trestle to the south.		
					Additionally, due to the excessive movements caused by the timber pile pulling in the southwest corner of Zone 3, the Contractor shall revert to using the original timber pile pulling as specified in the construction documents for removal of any piles within 30 feet of the CDSM shoring wall.		
T-0269.5	BSE Zone 3 & 4 Pile Extraction Methodology	Closed	10/10/2012	10/20/2012	10/12/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Dean Wallahan To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Specification Reference: 02 41 19 Drawing Reference: GT-2102 / GT-2103					Accept Suggestion: <input type="checkbox"/>		
The response to RFI # T-0269.4 says to revert to using timber pile pulling as specified in the contract documents.					Arup confirms this verbal revision.		
Per notes on GT-2102 and GT-2103, non-ground deformation control methods (free pull) can be used between Grid Lines 20 and 24.					The Contractor shall employ the originally specified ground deformation control method (not free pull) when pulling timber piles in the portion of Zone 3 and Zone 4 which is defined by soldier pile 251 to the west and soldier pile 276 to the east, and A-line to the north and the north edge of the trestle to the south.		
Upon field conversations, please confirm BBII's interpretation of the designer's intent is correctly shown on the attached drawing.					Additionally, due to the excessive movements caused by the timber pile pulling in the southwest corner of Zone 3, the Contractor shall revert to using the original timber pile pulling as specified in the construction documents for removal of any piles within 30 feet of the CDSM shoring wall.

REQUEST:			SUGGESTION:		ANSWER:		
Reference: 31-23-29 and Attached Document					Accept Suggestion: <input type="checkbox"/>		
As discussed during the meeting on 12/22/11, to help obtain an accurate dewatering model, BBII is requesting the recent piezometer data for Zones 1 and 2. In addition, BBII has reviewed the data for piezometers 1182, 1229 and 1255 located adjacent to 301 Mission St (see attachment) and would like to clarify the initial ground water level to use in the model for Zone 4. Based on our review, the existing natural groundwater condition fluctuates between 1.6 E.L and -8.1 E.L in this area. BBII would like to agree upon a starting groundwater elevation of -5.0 E.L for Zone 4.					ARUP Response:		
Also, BBII would like clarification as to the base					Available piezometer data for zone 1 and 2 has been recently transmitted through an email to Turner dated 12/28/2011.		
					The baseline water level for piezo P-06F (aka 1262) is +1.6 ft NAVD88.		
					The baseline water level for piezo P-06MS (aka 1182) is +1.1 ft NAVD88.		
					The baseline water level for piezo P-07MS (aka 1229) is +1.0 ft NAVD88.

BBII is requesting the following to complete its D1 casing retrieval plan:		ARUP Response:					
1. Condition specific engineering calculations to mitigate earth and water heave from the bottom of the casing.		Arup is in receipt of the Contractor's Buttress Shaft D1 Casing Retrieval Plan (Constructware Transmittal item 140-03134). Designing and executing the plan to retrieve the casing is the Contractor's responsibility. The Contractor shall provide calculations for Arup to review which demonstrate that the method does not lead to ground loss beneath and around the casing. Arup will not provide calculations in support of the Contractor's plan.					
2. Condition specific engineering calculations to substantiate no casing buckling.							
3. Condition specific plan engineering calculations for dewatering, specifically expected water quantity.							
Note - This RFI is high priority and an expedited review/response is necessary.

REQUEST:

Reference:
ASHTO/AWSS D1.5M/D1.5:2008
SH-0200

The Temporary Access Trestle Design submitted in December specified AWS 01.1 as the required welding code. During the review process the reviewers requested that the welding code be changed to AWS 01.5- Bridge Welding Code. This request was complied with by revising general note A5.2 on the conformed trestle drawings.

Since issuing these documents, BBII has been informed by both our shop and field welding inspectors that a compatibility discrepancy exists between the 01.5 welding code and base metals/ member shapes originally specified in the trestle design.

D1.5 is specifically intended for use on bridges and it is not intended for use on "structures composed of structural tubing" as noted in section 1.1.1 attached. This causes a discrepancy because unlike most bridges, our trestle contains a substructure completely comprised of structural steel tubing. (ie Pipe pile, lateral and longitudinal X-bracing).

In addition to the pipe incompatibility, there is also an incompatibility between the specified base metals. 01.5 requires base metals to be ASTM A709 and the trestle design specified a variety of different base metals depending on their structural shape as shown in general note 2.28 also attached. Since Article 1.1.1 of 01.5 permits the Engineer to choose to reference an alternate applicable welding standard when fabrication or structure components are not specifically addressed within its sections, BBII proposes keeping AWS 01.1 as the specified welding code because of its base metal compatibility, but adding a supplemental trestle specific welding specification written by the EOR that increases the quality control to a level equal to that of 01.5. This supplemental specification will include applicable portions of 01.5 section 3 "Workmanship" and section 3 "Inspection" when the requirements are greater than that of 01.1. (ie: fit-up tolerances, NOT frequency, etc).

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

URS Response to RFI No. T-0279 Trestle Welding Code Compatibility:

A series of typographic errors occur within the RFI, referencing the AWS documents D1.1 and D1.5 as 01.1 or 01.5. References to AWS documents should be correctly identified by the correct AWS document numbers to avoid any future confusion within the project documentation. This RFI should be corrected or annotated to reflect these typographic errors.

No exception has been taken to use tubular steel elements as components within the trestle structures.

Note AWS D1.5 section 1.2.2 Approved Base Metals: This AWS section provides a list of approved base metals, and prefaces this with Unless otherwise specified, and furthermore specifically states Other steels may be approved by the Engineer. We understand other steels have been recommended for approval by the Engineer (EOR = Pirooz Barar of PB&A) as they are included for use in the set of contract drawings for the Access Trestle. With the recommendation by the EOR and concurrence by the Peer Reviewer that the base metals proposed for use are suitable for the intended usage including an assessment of fatigue and potential for cracking of welding for the required service loading an service life, URS takes no exception to the use of the alternate base metals.

Use of AWS D1.5 is a requirement of the procurement specification, not simply a request made by technical reviewers. Reference 01 53 13 Rev 1.

Where materials within the trestle structure are not addressed by AWS D1.5, then use of AWS D1.1 is approved for connection of these elements where D1.5 is not applicable as follows:

Where preapproved joint geometry for welding is required, geometry in accordance with preapproved welding procedures per AWS D1.1 are approved for use;

T-0279.1	BSE - Trestle Welding Code Compatibility	Closed	03/28/2012	04/07/2012	04/09/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Shad Gardner			To: Turner Construction Company Gary Krutsch			Answered By: URS Corporation David Fyfe	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: BBII Demarcation Sketch PB&A Trestle Welding Inspection Plan			Use of AWS D1.1 and AWS D1.5 for superstructure and substructure as indicated on bridge cross section figure prepared by BBII and attached to this RFI No. T-0279.1 is acceptable.				
The response to RFI T-279 provided a method of dealing with the trestle welding code compatibility issues that would be difficult to enforce, track and document. BBII proposes making a clear demarcation line at the bottom the cap beam that will clearly differentiate the two welding codes.			Submission of the Trestle Welding Inspection Plan (by PB&A and attached to this RFI No. T-0279.1) for review and acceptance via the RFI process is not an acceptable method, therefore we have no comment on it.				
Additionally the RFI response appears to infer that the Temporary Bridge Specification 01-53-13 requires full compliance with AWS D1.5 as described in the third and last paragraph. 01-53-13 Paragraph 1.6.H (revB) only requires Welding Qualifications (procedures and personnel) to be performed in accordance with AWS D1.5.			For clarity we respond to the welding inspection plan with the following: All requirements, including inspection, of AWS D1.1 apply to AWS D1.1 areas. All requirements, including inspection, of AWS D1.5 apply to AWS D1.5 areas.				
Therefore in order to comply with the project specifications and the appropriate welding codes, BBII will Perform all welding below the demarcation line (substructure) with weld procedures and welder qualifications in conformance with AWS D1.1 since the members are predominately comprised of tubular material.							
Perform all welding above the demarcation line (superstructure) with weld procedures and welder qualifications conformance with AWS D1.5 since the main members are Wide flange beam.							
Inspection will be performed by the project special inspector in accordance with recommendations of the EOR attached.							
Please confirm this is acceptable.

T-0283	BSE - Backfill Material For Pre-Trench	Closed	03/15/2012	03/25/2012	03/20/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Jeff Molloy			To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jack Adams	
Co-Author:							
REQUEST: Reference: Proposed 1 sack sand mix design BBII is not able to achieve the required compaction per SFDPW requirements due to inclement weather conditions. We have been advised from suppliers that the sand backfill material is saturated, and from past experience will not achieve the required compaction. If the weather persists as forcasted BBII is proposing to backfill with 1 sack sand as a substitute to dry material. This will allow us to maintain the scheduled CDSM wall installation on 3/23/2012, and maintain the DPW compaction standards. Note sand slurry is only required in the street or public right of way. Note: According to BBII this will not impact DND/Malcolm in the installation of the CDSM wall.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> BBII has requested use of sack sand slurry mix design FOA100CX. This use of sand/slurry is specied in Section 31 23 10, 2.2, H of the utility relocation spec. See also RFI U-0156. This use is acceptable per SFDPW requirements due to inclement weather conditions. Also, this use of slurry is important for the upcoming CDSM wall at the pretrench locations. Per correspondence attached from Webcor-Obayashi the CM/GC, they state that their Trade Subcontractor "BBII has considered and coordinated with DND/Malcolm in this regard." (see uploaded document under 'Supporting Documents') Substituting this slurry versus soils compaction and testing is acceptable. However this sand slurry use is a Contractor scheduling decision and will be at no additional cost to the TJPA from WOJV, BBII, and/or Malcolm-DND.		
<hr/>

	REQUEST: As a supplement to RFI 283 regarding the use of a CDF mix for backfill of the pre-trench at A-line across First Street, BBII is submitting the attached mix design for review and acceptance. The previously submitted mix design was not pumpable and due to the nature of the pile extraction and backfill operation a pumpable mix is required so backfill compaction can be achieved. The attached mix will allow us to achieve the DPW compaction requirements and also allow for the installation of the CDSM wall. The use of this mix design is scheduled for this afternoon in order to maintain the CDSM installation schedule for this weekend. BBII would much appreciate an expedited review and acceptance of this mix design.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> CDF mix for backfill of the CDSM pre-trench locations is acceptable. CM/GC Webcor-Obayashi to confirm with their Trade Subcontractor such that "BBII has considered and coordinated with DND/Malcolm in this regard. Substituting this mix versus soils compaction and testing is acceptable for the upcoming CDSM walls at the pretrench locations First and Fremont Streets. However, again this use is a Contractor scheduling decision and will be at no additional cost to the TJPA from WOJV, BBII, and/or Malcolm-DND

T-0285	BSE - Buttress Rebar Cage Length Adjustment	Closed	03/21/2012	03/31/2012	03/26/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST: Please refer to RFI T-0252, where the Engineer accepted BBII's proposal of fabricating the buttress rebar cages to a pre-extended length of 260' in order to accommodate the buttress shafts that are deeper than 241'. In RFI T-0252, BBII had suggested to extend the overall length of all rebar cage assemblies to 260' by increasing the length of the top "setting cage" 19 feet more. In this proposal, the lengths of structural cage segments were to remain unchanged. BBII's proposal of extending the length of the setting cage by 19' got accepted with the added requirement of splicing vertical rebar extensions on the job site. BBII takes exception to the added requirement of splicing vertical rebar extensions on the job site, which would lead to an increase in durations of the rebar cage installations. In order to eliminate splicing, BBII now proposes to fabricate the setting cage segments up to 9 feet longer than shown on the plans. The structural rebar cage segment lengths will remain unchanged. The top of the structural cage sections will be within up to 9 feet proximity from the top of concrete. This proposal will accommodate the rebar cages with a maximum total length of 250' (241 '+9'=250'). If the rebar cage assembly needs to be longer than 250 feet, BBII will direct the rebar cage manufacturer to also extend the bottom structural cage segment by an added distance equal to the required total length of the rebar cage assembly less 250 feet.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 12/GT-5201 requires the reinforcing steel to be placed up to 1'-0" below the top of the concrete. The top of concrete is shown on GT-5201. Longitudinal bar extensions shall be spliced as needed to achieve this, or the cage shall be fabricated long to achieve this. However, if the top of the fabricated cage is within 9'-0" of the top of the concrete, no bar extensions nor extended cages are required.	

T-0286	BSE - Use of Actual Utility Weights	Closed	03/26/2012	04/05/2012	03/29/2012	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	Verizon Weights Email						
	Temporary Bridge specification 01-53-13 (1.3B) requires the bridge design to include a 3000 lb/lf allowance for hanging utilities below the bridge. Extensive coordination between the RUP designers and the utility owners, BBI has attained the exact location and actual weight of the utilities to be supported by the bridge structures. These weights are shown in the attached document and have been used in the design of the bridge structure as well as the utility hangers. Through our coordination efforts we also know that future utilities will not be added until the temporary bridges are removed. Please confirm that use of the actual utility weights in our design is acceptable.						
					utilities versus the nominal 3000 lb/lf required in Specification Section 01-53-13 Part 1.3.B (Temporary Bridges - Performance Requirements) first requires the correct actual weight of the utilities and the application to each of the streets, First, Fremont, and Beale respectively..		
					First Street Utility Unit Weights		
					The BBI/PBA temporary bridge design for First Street shows the following utilities suspended from the bridge:		
					Girder #3 & Girder #4 (Counting from left to right facing north)		
					PG&E (6) each 6" diameter steel ducts (17.7 lb/lf) + cable (8.2 lb/lf) @ 25.9lb/lf = 155.4 lb/lf under 2 girders #3 & #4 (counting left to right)		
					Girder #5 & Girder #6 (Counting from left to right facing north)		
					PG&E (9) each 6" diameter steel ducts @ 25.9lb/lf = 233.1 lb/lf under 2 girders #5 & #6)		
					PG&E (1) each 4" diameter steel duct @ 25.9lb/lf = 25.9 lb/lf under 2 girders #5 & #6)		
					Verizon (6) each 4" diameter steel duct @ 11.59lb/lf = 69.54 lb/lf under 2 girders #5 & #6		
					Subtotal utility load used by BBI/PBA for girders #3 & #4 = 155.4 lb/lf		
					Subtotal utility load used by BBI/PBA for girders #5 & #6 = 328.54 lb/lf		
					Total utility load used by BBI/PBA for all girders #3~#6 = 483.94 lb/lf		
					There are several slight errors in this BBI/PBA calculation:		
					Verizon has incorrectly used the weight of 4" diameter PVC duct rather than steel duct used in the temporary bridge crossing (4" diameter steel @ 10.3lb/lf duct + 3lb/lf fiber cable x 6 each lines = 6ea x 13.3 lb/lf = 79.8 lb/lf versus 69.54 lb/lf)

REQUEST:		SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Reference: TG0300-210.1 TG0300-205.2 City Planning/KCA Emails				Submission of the storm water inlet detail (attached to this RFI No. T-0287) for review and acceptance via the RFI process is not an acceptable method, therefore we have no comment on it.			
In order to comply with city standards BBII intended to install a standard city drain inlet on the north west corner of the Minna and First street intersection as required by our site civil drainage plan (submittal TG0300-205.2, TZ1030-01513A08.2 see also submittal TZ1030-015313A04.1 package TG0300-210.1 for product data). When potholing where this drain inlet is to be located, it was discovered that it would be in conflict with an existing gas line. BBII's design engineer KCA contacted the city planning department and got pre approval of the attached catch basin per the attached email and details. Please confirm that it is acceptable for us to install this catch basin in lieu of what was submitted in the aforementioned submittals.				In an effort to help expedite resolution of this conflict the following questions/requests are provided below: What is the location (depth of cover and horizontal offsets to existing and proposed features) of the existing gas line (and electrical conduits/conductors) relative to the proposed storm water inlet? The proposed storm water inlet appears to extend approximately 41" deep from top of rim/grade. From review of RUP sheets U-3409 and U-3410/Section T, it appears that there could be as little as 36" of cover over top of the existing PG&E gas line. If PG&E gas line is located within limits of proposed storm water inlet (plan view), there does not appear to be sufficient vertical clearance to install the proposed storm water inlet? Specify engineered base material that is to be placed beneath proposed storm water inlet. Provide a detailed sketch (plan and section) with submittal illustrating location of proposed storm water inlet and adjacent existing/proposed features. Has PG&E reviewed and approved the proposed storm water inlet location? Provide confirmation that the proposed storm water inlet is in compliance with PG&E separation requirements

Attached please find Becho's request to relocate existing rathole to Shaft D9 where it will remain until Buttress work is complete. Below is Becho's exact wording:			ARUP Response:				
"Due to the upcoming bridge construction on Fremont Street, Becho will be losing the existing location of the rathole. Becho requests that the existing rathole be relocated to Shaft D9 where it will remain for the duration of the Buttress Shaft Work. Becho proposes to pour Shaft D9 30 to 35 feet short from grade to accommodate the new rathole. Please advise if this is acceptable."			Arup understands there was no attachment, only the one page RFI.				
			Provided the hole remains cased at all times, or backfilled with CSLM (or an approved equal) whenever the casing is removed, this is acceptable.

T-0290	BSE - Stabilization of Unimproved Soil Conditions Along the Interior Face of the C	Closed	04/11/2012	04/21/2012	04/18/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch			Answered By:Webcor Construction LP David Fields	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: 31 56 13 3.7 C BBII Photo of CDSM Wall J-Line			The quality of the CDSM wall is dependent upon the Contractors' chosen means and methods. If the Contractor has concerns regarding the integrity of the wall, the Contractor shall provide a remedial plan to the TJPA for consideration.				
BBII is requesting direction for a method to stabilize the unimproved soil conditions along the interior face of the CDSM wall.			Conformance with the criteria within a sample does not relieve the Contractor of their responsibility that the entire wall meet the specifications.				
The current condition of the CDSM wall includes unimproved soil conditions that have the potential to become detached from the wall and create large voids at the face of the wall. Please reference attached photo for visual details.							
Based on our records, the CDSM wall met all the specification requirements for uniformity and improved soil as per section 31 56 13 of the contract specifications. Please note: Section 31 56 13 3.7 C's requirements (10% and 6") are satisfied by during the TJPA's Representative inspection of double-tube samples at the time of installation.							
<hr/>							
T-0290.1	BSE - Relevance of Unimproved Soil Pockets in CDSM Wall as it Relates to Waterp	Closed	05/28/2012	06/07/2012	06/05/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Neither section 31 00 003.8.L or 07 12 10.3.2.C anticipated +1" cavities in the surface of the CDSM wall. However there are +6" cavities in the surface of the CDSM wall the result of unimproved soil pockets although BBII would contend the CDSM wall was installed in accordance with section 31 56 13.3.7.C. On 5/25/12 W/O spoke with Jonathan Lawrence President of Laurenc Systems (888) 321-3338 specified per section 07 12 10.2.1. Sections 31 00 00.3.8.L and 07 12 10.3.2.C speak of "buckling" due to cavities of the face of the CDSM wall. Mr. Lawrence was not concerned over the cavities in the face of this project's CDSM wall for two reasons:			Per specification section 31 00 00 / 3.8 L: "On vertical surfaces of CDSM shoring walls, scarify high areas and fill in cavities exceeding 1" deep with patching cement to provide a reasonably uniform surface over which protection board, installed in a later contract, will span without buckling." Repair wall as required in the contract documents.				
1. Subsequent to his review of the bid documents the substrate for the waterproofing is the INS-1, depicted on 4/A1-8710, rather than the CDSM wall.

Per conversation in previous coordination meeting between Balfour Beatty Webcor, Turner, TJPA and 301 Mission's management. We are confirming direction to extend the sidewalk past the limits shown in our grading and drainage submittal through the limits of the 301 Mission drive way. It is also our understanding that we are directed to match the color of the existing black sidewalk in this area. Please confirm.				The work BBII has proceeded with at the 301 Mission driveway is in general conformance with the 6/8/12 TCCO, W/O, BBII, Millennium Mgmt. meeting. The direction however is from, to include however limited to, base contract specification section: 00 08 13.1.8.E, 0115 40.1.4, and or General Excavation Permit #12E-0181. The TJPA is not anticipating added cost the result of this issue.

T-0296	BSE - Clarification of Soil Segregation and Disposal per spec. section 01 13 50/SM	Closed	06/27/2012	07/07/2012	06/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Kruttsch			Answered By: Transbay PMPC Roger Rothenburger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
On 6/26/12 BBII clarified their desired method / location of disposing of the Zone-3 concrete rubble was to deliver it to Brisbane.					Accept Suggestion: <input type="checkbox"/>		
Section 01 13 50 / 5.2.1 of the SMP states:					Roger Rothenburger 6/28/2012 Section 01-13-50 Part 1.1.C (Hazardous Materials Procedures - Summary) references "Site Mitigation Plan, Transbay Transit Center, Treadwell & Rollo, March 24, 2010" report and states,		
"TJPA shall be provided documentation from the excavation contractor that the accepting landfill for the soil from Transbay Terminal project has been provided with and has reviewed all analytical data collected from the Site."					"Contractor's work shall include the management of existing soils in a manner consistent with the requirements of the Contract Document including the following reports, "Site Mitigation Plan, Transbay Transit Center, Treadwell & Rollo, March 24, 2010", appended to this Sectin as 01 13 50/APA, and Section 00 03 35 ..."		
Brisbane has refused to provide the aforementioned documentation.					Section 5.2.1 (Soil Segregation and Disposal) of the Treadwell & Rollo Site Mitigation Plan, 01-13-50/APA states, "Before any excavation activities begin at the Site, TJPA shall be provided documentation from the excavation contractor that the accepting landfill facility for the soil from Transbay Terminal project has been provided with and has reviewedall analytical data collected from the Site. TJPA shall approve all off-site disposal facilities and soil transportation contractors, including, without limitation, available insurable coverge, and prior to the shipment of any soil or other waste materials (emphasis added)."		
In order to facilitate BBII's desired method / location of disposing of the Zone-3 concrete rubble W/O requests that the TJPA clarify, exclusively for the subject Zone-3 rubble, that the documentation required by the TJPA consists only of standard shipping tags and invoices.					TJPA in the interest of facilitating disposal of material to Brisbane and other disposal sites removes from Site Mitigation Plan Section 5.2.1 by Treadwell & Rollo, the highlighted words, "with and has reviewed" .		
					The only requirement is that some documentation from BBI (the "excavation contractor" that the "analytical data collected from the Site" has been provided to the disposal site.

T-0299	Micropile Performance Testing	Closed	07/16/2012	07/26/2012	07/30/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal		To: Turner Construction Company Gary Krutsch		Answered By:Arup		Kevin Clinch	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference Part 3.2 "Performance And Proof Testing" of Specification Section 31 63 33				Specification section 31 63 33 3.2 A states: The contractor shall conduct performance tests and proof tests consisting of tension load testing on micropiles. The tests are to be done on piles installed from the bottom of the excavation.			
In order to expedite the Micropile Performance Testing review period, BBII is requesting to conduct the performance testing of micropiles prior to excavating Level 5, at approximately -32' Elevation, concurrent with the installation of Level "0" struts. See attached sketch for details.Please confirm that it is acceptable.				The Contractor's proposal is not acceptable as the testing methodology and the acceptance criteria in the Project Specifications have been developed assuming the piles used for the performance tests will be installed and tested in conditions matching those of the production piles. The performance of the piles installed and tested as proposed will differ due to the higher effective stresses in the soil.

T-0300	Micropile Performance Test Pile Relocations	Closed	07/17/2012	07/27/2012	07/26/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Yuriy Stryzheus		To: Turner Construction Company Gary Krutsch		Answered By:Arup		Kevin Clinch	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please refer to BBII's micropile layout submittal and RFI T-262 that references IFB- Below Grade package for coordination of micropile layouts.				Arup takes no exception to the proposed locations			
Based on the information provided within BBII's Micropile layout drawing and Below Grade package drawings S1-2023 through S1-2027, the four micropiles subjected to performance testing are labeled as: W411, W396, E383, and E401.							
BBII requests to conduct the performance test in Zone 1 at pile No. W604 instead of pile No. W411, which is located underneath Struts No. 6 & 7.							
Similarly, BBII requests to test the piles numbered as W473, E477, & E599, instead of the piles numbered as W396, E383, & E401, which are located underneath the trestle.							
Please confirm that it is acceptable.

T-0301	Trestle Piles in Exclusion Zones (Zone 4)	Closed	07/23/2012	08/02/2012	07/30/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Review comments on submittal package TG0300-284 directed BBII to shift two trestle piles (#69 & #72) out of pile exclusion zones (provided by Thornton Tomasetti in response to RFI T-0251.1). BBII worked to avoid these zones to the extent possible. However, in zone 4 the additional buttress shafts created further limitations on trestle pile locations and it was infeasible to completely avoid both the permanent structure and buttress. BBII is aware of the possibility of eliminating some of these additional buttress shafts but this will not resolve these specific conflicts. Due to the congestion in Zone 4 with both the pile exclusion zones and added buttress shafts, BBII requests an exception for trestle piles #69 and #72.					Requested exceptions will be granted for locations of trestle piles #69 and #72 in submittal TG0300-284. Prior to proceeding the GC is to confirm this has no cost impact to the TJPA or impact on other trades.

T-0302	ISI Low Compression Strength for CLSM	Closed	07/31/2012	08/10/2012	08/10/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Jack Adams	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please confirm the low compression strengths for the CLSM, in the ISI test results (attached), are acceptable. The CLSM was used for pre-trench backfill on Gridline A, First St. and Fremont St.			There is no compressive strength requirement for the pre-trench backfill Slurry(CLSM) chosen by the Trade Subcontractor in lieu of compaction of soils. This was confirmed with ARUP and per RFI 283/RFI 283.1.				
Please see attached ISI Test reports: 55606 Compression Test Report on A line between 18-19 lines, sampled 3/29/2012 55607 Compression Test Report on A line between 19-20 lines, sampled 3/30/2012 55608 Compressive Test Report on A line between 19-20 lines, sampled 4/4/2012 51399 Compression Test Report on A line between 19-20 lines, sampled 3/28/2012 56162 Compressive Test Report on A line between 25.2 - 25.5 lines, sampled 4/2/2012			1. TJPA Spec. 31-00-00 Earthwork requires pre-trenching to be backfilled and compaction with satisfactory materials, i.e., sand / soil. 2. These Slurry(CLSM) materials were allowed for backfill as a weak CLSM per RFI 283. 3. There is no project design/specification of ultimate compressive strength for these pre-trench backfill Slurry(CLSM). 4. The purpose of sampling the CLSM mix is to document the Slurry(CLSM) strength data only A review of the ultimate strengths (attached and below) are consistent with the strength of compacted soils used for temporary backfill areas prior to completing the CDSM wall processes. T-0303	BSE - Verizon Duct Bank at the First St Bridge	Closed	08/07/2012	08/17/2012	08/08/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Stacy Wilson				
Co-Author:							
REQUEST: Reference: Attached Photo Despite providing Verizon surveying, staking, and cutsheets, the Verizon duct bank at the North side of the First St. bridge was installed by others at the incorrect elevation (too low). Please confirm if additional utility supports will be required of TG03 or if others will be performing the additional utility supports required for the Verizon duct bank.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 8/8/2012 Per Steve Cunningham, TCCO - Review attached drawing provided by BBLi: 1. PB&A; First, Fremont, and Beale Street Temporary Bridges, Detail 1/SK 3105. Horizontal layout is provided, but not vertical layout for the PGE duct banks. 2. BBLi letter number 4225-000-0316, dated 1/9/12, provided bottom elevation for Verizon duct bank at 12.57' and 13.40'. Please provide as built elevations of all duct banks. Confirm PGE Phase 2 duct banks were installed with higher elevation at center of bridge.				
T-0304	BSE - Inquiries with Regard to Proposed Beale St Bridge Atop East CDSM Wall	Closed	08/23/2012	09/02/2012	08/27/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: On 8/22/12 Beale St. bridge submittal #TG0300-206 was returned to W/O marked not reviewed (Exhibit-A). Upon W/O's review of BBLi's Beale St. bridge design W/O encountered the following inquiries relative to the CDSM wall: 1. BBLi's bridge design relies on ARUP's RFI response #T-0209.3 (Exhibit-B). Please confirm ARUP's RFI response #T-0209.3 (Exhibit-C) is applicable as the basis of the design for the Beale St. bridge, given unlike First and Fremont Streets, the length of the Beale St. bridge is resting atop the East CDSM wall. 2. The decision to allow the North and South bridge abutments to be located atop the CDSM wall was predicated on the CR #T-025 load testing reference RFI #T-0209.4 (Exhibit-D). Given the testing was performed on different			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Arup's response to RFI T-0209.3 may be used as one part of the Contractor's basis of design. Arup will review the design for conformance with these recommendations. Note that our review is only for conformance with the geotechnical recommendations; review for constructability, pedestrian impact, OCS pole locations, impact (or lack of) on extension of the trainbox, etc. are by others. 2. Our design recommendations were not informed solely by the load testing results. 3. Arup does not endorse any design decisions made by the Contractor. We will review the design for conformance with our recommendations

	<p>soldier piles (by others) and differing soil conditions between Zone-1 and Zone-4, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?</p> <p>3. BBII's Beale St. bridge design relies on resting the length of the Beale St. bridge atop the East CDSM wall. As the designer of the CDSM wall, does ARUP endorse further loading of the East CDSM wall with the forces imposed by the Beale St. bridge?</p>						
T-0304.1	BSE - Inquiries with Regard to Proposed Beale St Bridge Follow-Up	Closed	08/29/2012	09/08/2012	08/31/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
In follow-up to RFI T-0304:				Arup's recommendations in RFI T-0209.3 may be applied to the east CDSM shoring wall.			
- From the response to question #2 of RFI T-0304 it is understood that ARUP's design recommendations were not informed solely by the load testing results. However the original question remains, is the load capacity derived from the CR #T-025 testing applicable given the different bridge location and configuration?				The CDSM wall was not designed to support vertical loads, but we have estimated its vertical load carrying capacity and outlined this in our response to RFI T-0209.3. If the bridge bears on the wall, we recommend that the Contractor monitor the wall for movements.			
- So the contractor can understand the parameters of what we are submitting, was the Shoring Wall Designed to withstand the loads imposed by the proposed Beale St. bridge?

T-0309	BSE - Traffic Control During the Construction of the Beale St. Bridge	Closed	08/27/2012	09/06/2012	08/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Fields To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jack Adams				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
At the 8/27/12 TJPA Traffic Coordination meeting Balfour Beatty presented a construction plan for the proposed Beale St. bridge. In violation of Specification Section 01 15 70-2 the construction plan included reducing Beale St. down to two available traffic lanes for an approximately six week duration. Please confirm if this is acceptable.					Accept Suggestion: <input type="checkbox"/>		
					Contractor can temporarily reduce traffic lanes (including up to a full street closure) if they comply with Spec and SFMTA Blue Book requirements. Per Spec 01-15-70 TRAFFIC ROUTING WORK the Contractor would have to:		
					1. Submit a traffic control and detour plan.		
					2. Submit a STP Request - Special Traffic permit Request.		
					SPEC Section 01 15 70 TRAFFIC ROUTING WORK		
					Paragraph 3.5 SPECIAL TRAFFIC PERMIT		
					A. Contractor shall apply for a Special Traffic Permit from the SFMTA, if any deviation from the traffic lane requirements (time, width, etc.), as shown in these Specifications, is required. If SFMTA approves the issue of the Special Traffic Permit, the Contractor shall pay the required fee to SFMTA, as specified in the Blue Book, and obtain the necessary permit.		
					The STP request would need to be reviewed and may be approved by TJPA Reps and SFMTA/MUNI.

T-0311	Subgrade French Drains Along CDSM Wall	Closed	08/31/2012	09/10/2012	09/07/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Spec. Reference: 31 00 00				Installation of these drains is acceptable with regards to geotechnical engineering as long as it does not incur any additional costs to the owner.			
In order to control surface water at final subgrade, Balfour Beatty would like the option of installing (a) trench drain(s) per the attached drawing as necessary around the perimeter of the excavation just prior to or once final subgrade is established. These trench drains will be filled with ¾" drain rock in accordance with specification section 31 00 00-3.16.A. These trench drains will be left in place during micro-pile installation and remain below the mud slab. Water will be pumped out of these trench drains using sump pumps and/or routed to dewatering wells in accordance with specification section 31 23 19. Please confirm that this is acceptable.				Installation of these drains is not an appropriate mitigation for CDSM walls which are not watertight as specified in Section 31 56 13 Chapter 3.12 ACCEPTANCE CRITERIA, Item F. "Watertight" is defined in this same specification section as "no continuous running or seeping water from the shoring wall."			
				We have not reviewed this with regards to conflicts with non-geotechnical subgrade features.			
<hr/>							
T-0311.1	Modified French Drains Zones 3 and 4	Closed	03/04/2014	03/14/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche			To: Turner Construction Company Phil Militello			Answered By:	
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Due to the varying dimensions between the edge of mud slab and the face of the CDSM wall, WOJV requests that the currently specified width (24 inches) of the French drain be maintained as a minimum at all locations for Zones 3 and 4. As a result, the width of the drain may be up to 30 inches at the widest locations.							
Please confirm this is acceptable.

REQUEST: BBII's sheet 1/SH-2105 (BBII submittal TZ1030-015313A31.1) calls for the 48" diameter CIDH column to be located 21'-6" off 35-line along E-line. As per sheet A1-2817 (TG06) the proposed location would obstruct, requiring redesign of the reinforcement, the construction of the structural wall separating the (2) deep pits depicted on 1/S1-3007 (TG06) in room B2761. The location of the pits and the wall separating the (2) pits were always depicted on S1-2027 (TG03). May the aforementioned CIDH column be located as proposed?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> RFI will not be responded to per submittal response TG0300-206 Temp Bridges- Beale Street Structural Drawings and Calculations.		
T-0313	Micropile Layout	Closed	09/13/2012	09/23/2012	09/20/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Documents Specification Section: 31 63 33 Drawings: ASI #0097 Per 9/12/12 Turner BSE Progress Meeting, Adamsons Associates(AA) requested BBII to submit a RFI requesting distance tolerances for the proposed micropile layout relocations. Please see BBII's verbage below in response. The response comments provided to submittal TA1020-316333A12.2 (TG0300-622.2) for micropile stated that the submitted micropile layout was unacceptable, but that the micropile locations shown in the TG0600 (ASI 0097) documents are acceptable. The attached marked up coordination drawings show the locations of the TG0600 documents micropile locations compared to various overhead horizontal and vertical obstructions. The obstructions considered in this comparison include trestle pile and bracing; internal bracing struts, supports, and pin piles; bridge piles; and the buttress walls. The submitted micropile locations are also shown. The equipment that will be used to install the micropiles require 2.5 feet clearance from the center of the micropile hole to surrounding obstructions. The circles and arrows on the attached drawing indicate which micropiles do not			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to use the first contractor-proposed approach (number 1), that of using the TG0600 documents for micropile layout and shifting the micropiles up to 4 feet, however such shifts will be subject to design verification and SEOR approval following our receipt of final proposed locations. Note that the shifting of micropiles shall adhere to submittal notes 2 and 3 on sheet ML-1 of Submittal TG0300-622.2 (TA1020-316333A12.2). Micropiles shall not be installed in the buttress shafts. The alternative contractor-proposed approach (number 2), that of using the submittal (TG0300-622.2) layout and applying submittal notes 2 & 3 is not acceptable as the approach does not consider submittal note 1 (which addresses the density of micropile layout).

REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Specification Reference: 02 41 01 Drawing Reference: D-2210			No. The excavation limits for BSE contractor 80 Natoma/Buttress prototype and CDSM prototype are to be demolished to a depth of -44'.5 in their entirety.				
Demolition of the prototype shafts and the 80 Natoma CDSM wall are required in order to allow clearance for the geothermal piping. BBII proposes to only demolish portions of these structures which would interfere with the geothermal piping. The prototype buttress shafts would be demolished to elevation -41.42 with depressions cut out where the piping crosses. The 80 Natoma CDSM wall would be demolished to allow the piping to be installed. The CDSM piles would be otherwise cut off 4" below mud slab subgrade. See attached sketches.			The demolition limits for BSE contractor are to be per contract. REF: BSE Drawing D-2210 and RFI 317.3 response.				
Please confirm this is acceptable.			CSM Prototype shoring wall -44'.5 +/- See D-2210 Note 10 for the entire length CDSM 80 Natoma shoring wall -44'.5 +/- See D-2210 Note 11 for the entire length 80 Natoma Piles -44'.5 +/- See D-2210 Note 11 for the entire length Buttress prototype shafts -44'.5 +/- See D-2210 Note 9: This is CHANGED from -41.5' (CR forthcoming) and is now to be demolished to a depth of -44'.5 for the entire length per this RFI series.				
			Additional Costs associated with ASI No. 0099 Field Order 08-04-CMGC-000-T-00014 which updated pit depths and locations impacting the Mat Slab (Transmitted to WOJV on 12/12/12) are a separate issue than this RFI.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
BBII would like to confirm the following direction received at TCCO's weekly meeting on October 10, 2012 in regards to the limits of the berm and sequence of work referenced in the response to RFI T-0321.					The sequencing of activities proposed by the Contractor adequately addresses our concerns regarding the Contractor's means and methods which in the other portions of Zone 3 have caused over 1.5 inches of lateral movement into the excavation at locations where excavation has not even progressed past the first level.		
The following work will take place between CDSM beams 251 and 276 along the A-Line and the southern edge of Zone 3's trestle.					Additionally, as discussed in the Movement Review Panel Meeting the morning of October 17, 2012, Arup asked the Contractor to consider excavation under the Fremont Street bridge to progress from south to north. The Contractor agreed that this would be beneficial and possible.		
Demolition: Upon completion of the demolition and removal of the basement walls and footings BBII is to place an earth berm to elevation +10.00, extending 25 feet from the face of the CDSM wall into the excavation and having a 3:1 slope at the southern hinge point of the berm.							
Bracing: Walers 24 and 48 as well as Struts 49 and 50 will be installed within a 6 working day window to address ARUP's concern of overexposure from the Millennium's Building's foundation pressure on the CDSM wall. During the installation of these walers and struts the berm as described in the demolition section above will remain between CDSM beams 260 and 271 until completion of the bracing of walers 24 and 48 and struts 49-50. The sequence will be repeated for installation of walers 25 and 49 as well as struts 51 and 52 with the exception of the earth berm easterly limit will be CDSM beam 276 (centerline of buttress A line pile).							
<hr/>							
T-0321.1R	Additional Excavation and Bracing Constraints at A Line and 301 Mission REVISIO	Closed	10/26/2012	11/05/2012	10/26/2012	Potentially	<input type="checkbox"/>

	Assuming the dewatering pipes will be cut and capped at 8" below Top of Mat Slab elevation: Is it acceptable to have a void space in the abandoned dewatering pipes between the grout terminating 36" below subgrade elevation to the Bentonite at 14" below top of mat slab?						
T-0322.1	BSE - Dewatering Pipe Termination at System Removal Follow-Up	Closed	10/08/2012	10/18/2012	10/10/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Fields		To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
In follow up to RFI T-0322:				Accept Suggestion: <input type="checkbox"/>			
Upon dewatering system removal BSE Specification 31 23 19 3.9 requires that abandoned piping be filled with grout to an elevation of 36" below subgrade elevation consistent with the originally specified cut and cap elevation. Below Grade Drawing A-8711 does not specify a grout requirement for the dewatering pipes.				No, a void space is not acceptable. The abandoned dewatering pipes are to be grout filled per specification 31 23 19. Follow detail 6/A1-8711 for dewatering pipe steel sleeve, waterproofing and mat slab block out. When the dewatering system is removed, the dewatering pipes are cut off, fully grouted to bottom of the block out and bentonite installed for the last 4" to the top of the sleeve. The a steel cap assembly is welded to the top of the sleeve and the mat slab block out grouted.			
Is it acceptable to have a void space in the abandoned dewatering pipes between the grout terminating 36" below subgrade elevation to the Bentonite at 14" below top of mat slab consistent with the current contract documents?

T-0327	GRD - Ground Rod Placement	Closed	10/16/2012	10/26/2012	10/31/2012	Potentially	<input type="checkbox"/>
From: BASS Electric Jerry Brys		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST: There are no dimensions shown for placement of the ground rods. Should we scale off the drawings or will a drawing be produced reflecting dimensions?				The placement of the ground rods and the ground ring does not require exact dimensioning. The ground rods are regularly spaced around the building perimeter at the building column lines approximately forty five feet on center. The rods are shown approximately two feet inside the foundation wall, but they can be closer to the foundation wall if the layout is coordinated with the geothermal system piping, micropiles and foundation wall supports.			
				Per Section 26 05 01, provide Contractor's Coordination drawings for review.

T-0328	BSE - Re-Bracing Elevations	Closed	10/17/2012	10/17/2012	11/01/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Fields		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>Drawing GT-1112 stage 13 shows a maximum of 16' or 17' between level B struts and the lower level of rebracing. For Case West, level B supports are at elevation -3 ', resulting in the lower level of rebracing supports at elevation -20'. Internal bracing drawing sheet SH-4000 shows W21 strut support members on the underside of level C bracing. In order to install the lower level rebracing and accommodate the existing level C bracing, the lower level bracing will need to be installed at elevation -22'.</p> <p>Similarly, the top level of rebracing is called out in stage 15 to be 3' below level A bracing. Top level rebracing will need to be 5' below level A bracing in order for struts to be clear of the overhead strut supports.</p> <p>Please confirm that the 17' and 16' maximum dimensions in stage 13 and 3' maximum dimension in stage 15 will not be required if the rebracing design calculations show that it is acceptable.</p>				<p>Constructructability issues shall be reviewed by Webcor / Obayashi. This is acceptable pending review of submittal.</p>			
<hr/>							
T-0329	BGP - Proposed Construction Joint Layout	Closed	10/24/2012	11/03/2012	10/31/2012	Potentially	<input type="checkbox"/>

T-0331	BGP - Geothermal Maximum Horizontal Loop or Ground Loop Zone Length	Closed	10/31/2012	11/10/2012	11/05/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Fields To: Turner Construction Company Gary Krutsch			Answered By:Turner Construction Comp Gary Krutsch				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: 23 57 34					Accept Suggestion: <input type="checkbox"/>		
Please confirm that there is no restriction on GHEX Horizontal Loop or Ground Loop Zone length.					There is no maximum length for the headers. Most headers should be roughly the same length, the headers are set up in reverse return fashion to allow for self-balancing of the loops. All headers will ultimately be balanced at the entrance to building allowing for some variation in header length to accommodate building entrance locations.		
					All loops on a single header should be the same length. The number of loops attached to a single header has been limited to 10.		
<hr/>							
T-0332	BSE - Micropile W203 Relocation	Closed	11/01/2012	11/11/2012	11/02/2012	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Micropile 203 as laid out is too close to a piezometer well. BBII proposes moving pile W203 East 4'-9.5" and South 1 '-.75". See attached sketch.					Accept Suggestion: <input type="checkbox"/>		
Please confirm this is acceptable.					Thornton Tomasetti does not object to moving Micropile 203 as proposed.		
<hr/>							
T-0333	BSE - Utilization of the Mat Slab for Re-Bracing Reactions	Closed	11/01/2012	11/11/2012	11/07/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Fields To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Is utilizing the mat slab for re-bracing reactions (via rackers) acceptable provided it meets the provisions set forth within 31 55 00 1.5 Q in regards to connections, penetrations, imbeds, and restoration?					Accept Suggestion: <input type="checkbox"/>		
					Structurally, it is acceptable to utilize the mat slab for re-bracing provided provisions in specification article 1.5.Q are met as well as specification article 1.5.R, which shall also apply for the mat (i.e. reactions shall not exceed capacity of mat). Submit re-bracing for review per submittal process, including calculations that show reactions onto permanent structure do not exceed capacity of permanent structure.		
					Contractor shall outline to TJPB if there will be a cost		

This statement implies that the utilization of the mat slab for rebracing reactions is a deviation from what is required by contract. Please identify the primary method the rebracing design is to employ in order resist gravity, seismic, or other additional loading to be resisted and/or provide restraint against buckling, torsion, or other function as necessary per the design to provide required capacities of elements.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
T-0333.2	BSE - Utilization of the Mat Slab for Re-Bracing Reactions Follow-Up	Closed	11/09/2012	11/19/2012	11/20/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Fields To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
RFI T-0333 inquired if utilizing the mat slab for re-bracing reactions was acceptable provided it meets the provisions set forth within 31 55 00 1.5 Q in regards to connections, penetrations, imbeds, and restoration.					TT Response: As stated in the original RFI T-0333 response, "...specification article 1.5, which shall also apply for the mat (i.e. reactions shall not exceed capacity of mat). Submit re-bracing for review per submittal process, including calculations that show reactions onto permanent structure do not exceed capacity of permanent structure."		
The response stated that structurally it was acceptable provided the contractor outline if there will be a cost and schedule reduction pursuant to the specification requirements for "Proposed Alternatives". W/O is unable to locate a specification provision for "Proposed Alternatives" in the TG03 or TG06 contract documents.					URS Response: If the load capacities to be provided by re-bracing elements are less than the design loading for bracing elements removed, then specifically identify this in the re-bracing submission. Any reduction of this loading requires specific explanation and specific review and approval.		
Is utilizing the mat slab for rebracing reactions acceptable pursuant to the TG03 or TG06 contract documents?							
If acceptable, please identify the specification section for "Proposed Alternatives" within the TG03 or TG06 documents so cost and schedule reduction proposals can be provided pursuant to the applicable requirements.							
Additionally, please identify the TG03 and/or TG06 contract requirements for secondary bracing (31 55 00 1.3D) geometry.							
T-0334	BGP - Catch Basin Elevation at Gridlines 14 and B.3.	Closed	11/01/2012	11/11/2012	11/02/2012	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification: 03 20 00 Reference Drawings: N/A				It will be acceptable to use contractor-proposed use of machine-welded holding wires to column ties and beam stirrups only provided the following conditions are met:			
Shimmick would like to request the use of the Schnell IDEA Machine. The IDEA Machine pre-assembles grade beam, columns or other "boundary" type elements by a process of resistance welding three (3) 1/4" ASTM 82 wires to the ASTM A706 reinforcing ties. This process provides a more secure and accurate tie configuration with				1. Column ties and beam stirrups must be ASTM A706.			
				2. Holding wire bars shall conform to ASTM A82 or			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	a more effective and timely installation. Attached is CRSI's engineering data report #53 which provides an in-depth explanation of the process as well as their acceptance of the same. Also attached is a reference list of recent projects where this process has been approved and utilized as well as a testing report from Christensen Materials Engineering. Please confirm if this is acceptable.						
			A496.				
			3. Holding wires are only allowed to be welded to column ties and beam stirrups #5 or smaller.				
			4. Holding wires are not to eliminate any longitudinal bars or interfere with flow and placement of concrete.				
			5. Verification tests: Contractor shall submit results of verification tests conducted during the month of tie/stirrup production from a Certified Testing Laboratory for review. Tests shall be performed on 3 samples of bar sizes to match project conditions. Samples shall have a gage length of 24 bar diameters with the holding wire weld located in the middle quarter of the length. Test the samples in tension and report elongation of the sample at fracture, the location of the fracture and the type of fracture. Test and production bars to be welded shall be ASTM A706.				
			6. Production tests: If verification tests are acceptable, production tests will be required only if there is deviation from the accepted process or if the inspector identifies potential defects.				
			7. Fabrication shall conform to the following:				
			a.) Holding wire welds shall be located a minimum of 2 tie/stirrup diameters away from bends and/or cold-worked regions of stirrups.				
			b.) Maintain a minimum clear cover from the face of the concrete to the ties/stirrups as noted on the drawings and maintain clear cover to holding wire as required by ACI 318.				
			c.) If field installation requires adjustment of tie/stirrup locations due to mis-coordination or mis-placement, adjustments/corrections shall be responsibility of Contractor.				
			d.) Holding wires shall be located a minimum of 2 inches clear from main longitudinal bars.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Shimmick would like to request the use of the "one-piece" or "serpentine" ties at this project. These ties are made by an automatic bender that bends a column or boundary element tie from one continuous piece of rebar. The end result is the same perimeter and cross tie configuration as the design in the contract documents. Please confirm if this procedure is acceptable.				The contractor-proposed approach to use "one-piece" / "serpentine" ties is acceptable as long as contract document rebar configuration is provided. Submit per reinforcement submittal process			
				e.) Longitudinal steel may NOT be welded to ties/stirrups.			
				8. Submit this weld procedure with applicable concrete reinforcement submittal.

T-0341.1	BGP - Type D8 Column Serpentine Ties	Closed	12/04/2013	12/11/2013	12/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please refer to drawing S1-3305 and RFI T-0341.			George Metzger 12/9/2013				
The response to RFI T-0341 accepted the use of one-piece/serpentine ties for the columns as proposed by Gerdau. Gerdau has found that the fabrication of a single piece serpentine tie for the type D8 column could pose safety risks. Therefore, Gerdau is proposing to fabricate the type D8 column ties with two pieces of serpentine ties. See the attached Gerdau sketch SK- T-0341.1 for details.			RESPONSE: Proposed serpentine tie configuration for Tie Type D8 will conflict with anchor bolts for the steel column above. Refer to Sheet S1-3305 for the design tie configuration for Column C7 (Tie Type D8). However, proposed Serpentine tie configuration can be used up to an elevation within the column where anchor bolts are not present. Where anchor bolts are present, loose ties that confirm with the design configuration shall be used to clear the anchor bolts. Note the following anchor bolt embedment lengths for different anchor bolt configurations: - For Column C7 with Type T anchor bolts, anchor bolts are embedded 3'-8" from the top of the Lower Concourse Moment Frame beam. - For Column C7 with Type TT anchor bolts, anchor bolts are embedded 6'-8" from the top of the Lower Concourse Moment Frame beam. - For Column C7 with Type TTT anchor bolts, anchor bolts are embedded 20' from the top of the Lower Concourse Moment Frame beam. See Sheet S1-5051 for further information on anchor bolts. Also, per RFI T-0924, it is acceptable to eliminate/lower column cross ties that interfere with the shear key block out. (Ties and hoops that do not interfere shall remain.) This information should also be considered in finalizing the detailing/fabrication of the column ties near the top of the concrete columns.				
Please confirm the alternate serpentine ties as shown in the attached sketch is acceptable.

T-0345	BSE - CDSM Wall Parallel Stiffness for Bridge Design	Closed	11/13/2012	11/23/2012	11/15/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Specification Reference: 01 53 13.1.3D		Refer to Note 5 on GT-1111 which requires the Contractor to analyze the soldier piles if the soldier piles are subjected to loads other than those shown on the drawings. Refer to the Contract Documents for the design strength of the CDSM material.					
BBII has recently received information in a non bridge design related correspondence that could impact the already designed, permitted, and constructed First and Fremont St. Bridges. In an ARUP memo dated October 5th, 2012 bullet #2 states:							
"The Contractor has verbally attested that they designed the diagonal corner braces using an interpretation of Note 11 on sheet GT-1111 which yielded a key assumption which is that the CDSM wall is infinitely strong and infinitely stiff. This assumption is an inaccurate and unreasonable interpretation of this note and in no way does the note infer this".							
Although this comment is in reference to the internal bracing design, it also relates to the temporary bridge design. As noted on page 156 of the First and Fremont St Bridge structural calculations (attached), this same interpretation of note 11 on GT-1111 was used for the abutment shear key design. The Bridges have been designed, reviewed and approved by DPW under with the assumption that no additional deformation occurs at the base of the abutments. If in fact the CDSM wall is truly NOT infinitely strong or infinitely stiff parallel to the wall, BBII requests a value from the CDSM engineer of record that can used in our re-evaluation of the First and Fremont Bridges to ensure the existing design remains in compliance with the design criteria. Additionally this value would be used in the re-design of the Beale St. Bridge.

T-0346	BGP - Mat Slab Maximum Aggregate Size	Closed	11/15/2012	11/25/2012	11/21/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Specification Reference 30 30 20 Shimmick is requesting approval of 1 inch nominal maximum aggregate size in lieu of the 3/4 inch nominal maximum aggregate size for the Mat Slab concrete. Shimmick's backup data indicates that concrete made with larger aggregate size (1 inch instead of 3/4 inch) produces lower drying shrinkage values mainly due to a reduction in the water consumption of the mix and a reduction in paste content.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor-proposed use of 1" nominal max aggregate size for the mat slab concrete is acceptable. Submit mix designs through submittal process. Jeff Thiel Per discussion at 11/16/12 VE meeting, a CR for VE items will be issued in the future.			
T-0347	Trim Steel Requirements for the Mud Slab	Closed	11/19/2012	11/29/2012	11/29/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Reference Specification: 03 20 01 Reference Drawing: S1-3003 Please confirm that trim steel will not be required. If trim steel is required, provide the details for trim in the 4" mudslab where the #4 bars @ 18" are interrupted. Please reference the attached sketch.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> RFI question is not clear and is inconsistent with the referenced documents. Revise and resubmit the RFI with a clear question. The mud slab is scope for Package TG03 in which the rebar shop drawing (TG0300-340.0, Item TZ1020-032001A06.0) has already been approved. The referenced specification does not apply to the mud slab.			
T-0347.1	BSE - Mud Slab Trim Rebar	Closed	12/12/2012	12/22/2012	12/18/2012	Potentially	<input type="checkbox"/>

top of the mud slab. Please review and advise as this does not match the as bid details.							
T-0350.1	BGP - Mat Slab Penetration Waterproofing	Closed	12/06/2012	12/16/2012	12/13/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Robert Kjome	To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification:07 12 10		For details 2, 3 and 5 on A1/8711 the butyl tape can extend 4" above the mud slab. However on details 4 and 6 on A1/8711 the butyl tape at the penetration does not 'tie off' on to the waterproofing membrane. For these details the waterproofing does not engage with the butyl tape at the mud slab penetration, the steel sleeve is in the same plane as the butyl tape, therefore the butyl tape cannot extend above the mud slab. The details will not be revised.					
Reference Documents: A1-8711							
Futher to the engineers response to RFI T-0350, the extension of the butyl tape conflicts with the casings that are required around the dewatering wells, trestle piles, bridge piles, and pin piles. Please provide revised details at each of the aforementioned locations to accommodate the extended butyl tape.							
		The Contractor's shop drawing submittal is to be revised to show the butyl tape's relationship to the waterproofing membrane and other elements of the assembly. Submit the revised shop drawing with manufacturer's recommended detail for the butyl tape for TJPA Representative review.

REQUEST: Reference Drawing: A1-8711 SCCI would like to confirm conversations concerning the Butyl tape and Mud Slab Penetrations. From the meeting held 12/19/2012, the design Engineer mentioned that the Butyl tape at the Mud Slab Penetrations does not serve as a waterproofing purpose, but rather a bond breaker between the concrete and the steel penetrating through the mud slab. Because of this, the Engineer stated the Butyl tape did not need to be extended above the Mud Slab and could stop at the penetration slab. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> With the exception of the tie down WP detail 2/A1-8711, the Butyl tape at the Mud Slab Penetrations does not serve a waterproofing purpose, but rather a bond breaker between the concrete and element penetrating through the mud slab. On 2/A1-8711 the butyl tape does engage the waterproofing and must extend above the mud slab.

T-0356.1	BGP - GEOTHERMAL - Loop Soil Compaction Conflict in Specifications	Closed	01/22/2013	02/01/2013	01/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Please refer to attached excerpts from spec section 23 57 34, 31 23 34 and RFI response to T-0356. The RFI response to T-0356 (SCI-017) requires the backfill of the trenches to meet specifications section 23 57 34 and 31 23 34. However, the two sections are in conflict with one another. Section 23 57 34-3.1, D, requires geothermal loop trenches to be filled with loose soil and then apply water to settle the loose soil. Section 31 23 34, notes that flooding or jetting with water is not allowed. Therefore, the work sequence directed in RFI T-0356 to meet "...spec section 23 57 34 loose soil shall be used by the geothermal contractor to backfill the trenches where the HDPE ground loops are located to avoid any damage to the pipes during the process. Once the trenches have been backfilled per section 23 57 34 and the piping is protected the soil can be compacted as required by section 31 23 34..." are not feasible. Please advise.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Wetting of backfill not required.

T-0358	BGP - Geothermal Ground Temperature Probe Sleeve	Closed	12/11/2012	12/21/2012	12/19/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Reference Drawings: M1-5002 Detail A on M1-5002 shows the 2" ground temperature probe sleeve terminating at grade. Detail 5 on M1-5002 shows the same pipe terminating at the same elevation as GLS/GLR piping. Please provide an elevation drawing for the temperature probe pipe sleeve.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Final elevation of 2" temperature probe sleeve is at same elevation as the GLS/R pipes in their final position as shown in detail #5 as shown on sheet M1-5002.			
T-0358.1	BGP - Geothermal Temperature Probe Elevations	Closed	02/25/2014	03/07/2014	03/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Per field conversations with the geothermal EOR(WSP) the elevation of the four(4) temperature probe stub outs has been revised. Please provide the revised elevations of these temperature probe stub outs. Note that two(2) of the temperature probes have already been installed to an elevation consistent with the response to seer RFI 18(T-0358).		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> RFI-0358 Response stated: "Final elevation of 2" temperature probe sleeve is at same elevation as the GLS/R pipes in their final position as shown in detail #5 as shown on sheet M1-5002." The header pipes were not installed tight to ground level the slab as shown on sheet M1-5002. Temperature probe piping shall be installed tight to the ground level slab as indicated on the design documents. Alternatively the probe piping may be installed at the elevation of the shut off valves in RFI-1167, RFI-1169 and RFI-1172.

T-0360	BSE - Mud Slab Welded Wire Reinforcement	Closed	12/21/2012	12/28/2012	01/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Joanne Filipas				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Specification Section: 03 20 01					Accept Suggestion: <input type="checkbox"/>		
Regarding the concrete reinforcement within the mud slab, BBII would like the option of using Deformed Welded Wire Reinforcement (DWR) in lieu of rebar reinforcement. DWR strictly conforms to ACI 318 and offers multiple advantages to rebar reinforcement. Particularly, DWR will help reduce the risk of inclement weather damage to the subgrade, due to a quicker installation which will leave the subgrade exposed for a shorter period of time. Please see attached supporting documentation.					Albeit after the specified 10 days, W/O will consider this substitution request only subsequent to receipt of a completed Request for Substitution form found in specification section 00 04 40.		
Please confirm this is acceptable.							
T-0361	BGP - Slab Penetration Sleeve Slipsheets	Closed	01/03/2013	01/13/2013	01/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference S1-3003:					Accept Suggestion: <input type="checkbox"/>		
The existing piles are to be wrapped with a 10 Mil polyethylene (for 30" & 36" sleeves) or 112" compressible material (for 48") slipsheet between the sleeve and the piles. Because of the minimal distance between the sleeve weld and the existing pile, the slipsheet at the weld locations will be damaged from the heat of the welding. Is this acceptable?					It is acceptable to provide a 4" vertical break in the slipsheet at the sleeve joint to avoid burn damage.		
If the slipsheets cannot be damaged by the heat of the welding, can the slipsheets have a 3" or 4" vertical break in them at the locations of the vertical welds to avoid the bum damage? This would create two slipsheet breaks or gaps per pile penetration. Is this acceptable?							
T-0362	BGP - Wall Vertical Reinforcement at 3rd Level Bracing	Closed	01/07/2013	01/17/2013	01/11/2013	Potentially	<input type="checkbox"/>

T-0364	BGP - WPM-1 ASTM 6769 & Blindside Waterproofing Application	Closed	01/15/2013	01/24/2013	01/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to Specification 07 12 10 3.3 and Drawing 1/A1-8710.				1. Paragraphs 11.4.1.1, 11.6 and 11.7 are not applicable to the blindside installation.			
Section 3.3 of the specifications require that all work be performed in accordance with ASTM D6769 (Application of Fully Adhered, Cold-Applied, Prefabricated Reinforced Modified Bituminous Membrane Waterproofing Systems). The WPM-1 vertical application (071210-1.1, A.2) is a blind-side WP application; however, the ASTM D6769 is written to address positive-side WP application.				2. Paragraphs 11.4 1.1 through 11.4.1.4 relating to a one ply application are not applicable to the 2 ply vertical installation specified and indicated on this Project.			
1. Please confirm the blind -side WP application is covered under the ASTM D6769 requirement or provide the applicable ASTM requiriment to perform the blind-side application.				3. Paragraph 11.4.1.1, 11.7 is not applicable to blindside installation.			
2. Please confirm which section of the ASTM D6769 requirement is applicable to blind-side WP application.				All other paragraphs apply where they do not conflict with the Project Specifications or the manufacturer's printed recommendations and specifications. In those cases, the Project and manufacturer's specifications are to be followed.			
3. The ASTM D6769 section 11.7 requirement to "backfill vertical waterproofing installation within 24 h of protective board installation..." isn't feasible due to the extensive work sequence to install concrete reinforcement, form and place the foundation wall. Please confirm this section of the ASTM requirement is not applicable to blind-side WP applications.							
<hr/>							
T-0365	BSE - Micropile W127 Relocation	Closed	01/15/2013	01/25/2013	01/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Kruttsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: Specification 31 63 33				The micropile shall not be eliminated. An acceptable relocation of micropile W127 is 13' to the north and 16' to the east (or contractor to propose a different relocation).			
Micropile W127 (5'-5 3/4" West of G.L. 3 and 74'-0 3/4" South of G.L. J) is located in an area that is not accessible to drilling equipment. BBII proposes to eliminate this micropile. Please confirm this is acceptable.

T-0366	BGP - WPM-1 - Adhesive Between Bottom Ply Waterproofing Membrane and Mud 3 Closed		01/22/2013	01/22/2013	01/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:			SUGGESTION:		ANSWER:		
Please refer to attached Specification Section 07 12 10, Article 3.3.					Accept Suggestion: <input type="checkbox"/>		
Per Specification Section 07 12 10-3.3, B, the bottom ply of the waterproofing membrane is to be installed dry with the polyethylene protection sheet facing the mud slab. Per Specification Section 07 12 10, 3.3, D, each polyethylene protection sheet is to be installed embedded in adhesive (wet) such that each sheet will have enough adhesive uniformly placed on it that it won't come into contact with the other sheet.					The bottom sheet is to be installed dry per 3.3, B.		
Is the bottom sheet to be installed dry per 3.3, B. or is it to be installed embedded in adhesive (wet) per 3.3, D? Please advise.							
T-0366.1	BGP - WPM-1 - Adhesive Between Bottom Ply Waterproofing Membrane and mud 3 Closed		02/01/2013	02/11/2013	02/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
The response to RFI T-0366 directs Shimmick to install the bottom waterproofing membrane without adhesive to the mud slab. If the membrane is installed dry or without adhesive, nothing will prohibit water from entering between the membrane and mud slab. This would cause the membranes to float or bubble. Per the manufacturer's recommendation, the waterproofing membrane is to be adhered to the mud slab with adhesive.					Accept Suggestion: <input type="checkbox"/>		
Please advise.					The specification is correct. The method of installation, installing the first ply with the polyethylene protection sheet facing the mud slab, without adhesive, was recommended by the manufacturer.

T-0369	BGP - REBAR - Headed Steel Bar Shear Conflict in Mat Slab	Closed	01/21/2013	01/31/2013	01/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to attached drawing S1-3005 and S1-2022. Detail 3 on sheet S1-3005 depicts the full size T-head bars as they interface with the mat reinforcement. The same detail includes additional reinforcement depicted at column locations. The reinforcement (open circles) is shown between the typical main mat reinforcement and others are aligned with above layers one and two of the main mat reinforcement as defined in note 4 and 6 on sheet S1-2002. As a result, the clearances created by the #10 main mat reinforcement being spaced at 8" O.C. and the 3" square heads at the ends of the #8 T-heads (refer 2/S1-3005) do not allow enough of a clearance to install the headed bars into position. Refer to the annotations in the attached drawings. Please advise.			SUGGESTION: Gerdau proposes to place the added reinforcement directly in line and above the main mat reinforcement in both directions as required. The suggested proposal may require several additional layers of steel to accommodate the total quantity of added bars at each column. Furthermore, it is unknown whether another conflict is created at the column dowel T-heads.			ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor-proposed placement of additional mat bottom rebar to an upper layer is not acceptable. Placement of the vertical headed bars is construction means and methods. However, it is acceptable to move the additional mat bottom rebar horizontally a maximum of 3/4", as required.

T-0370	BGP - WPM-1 - Mud Slab Finish for Waterproofing	Closed	01/22/2013	02/01/2013	01/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Specification Section 07 12 10, 3.2 The concrete surface profile (CSP) required by the waterproofing manufacturer Laurencos, ranges between a CSP level of 2 and 4 as defined by the International Concrete Repair Institute (ICRI) of technical guide "Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, and Polymer Overlays." The ICRI defines the levels of CSP as 1 (nearly flat) to CSP Level 9 (very rough). The Laurencos waterproofing system requires "a good wood screed or broom finish...often referred to as a 'sidewalk' finish..Do not use a steel trowel finish." See attached excerpt of the manufacturer specification. 1. Please confirm the ICRI CSP requirements as it relates to surface finish, flatness and levelness are to supersede the varying ASTM F-value requirements set forth in specification section 033000-3.6, B1 or provide a revised specification section 033000 incorporating the ICRI			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. ICRI CSP requirements are not appropriate for the mud slab. The mud slab in being poured, not repaired. The International Concrete Repair Institute CSP scale is used for existing concrete surfaces when they are being acid etched, ground or shotblasted. The appropriate finishing for the mud slab is described in the BGP Specification 03 30 00 Cast in Place Concrete 3.6 Concrete Finishes and calls for compliance with the American Concrete Institute concrete finish recommendations ACI 302.1R and ACI 304R, with dimensional tolerance limitations given by ACI 117. 2. Specification 03 30 00, 3.6 C stipulates: Finish for monolithic slab surfaces to be covered with membrane i.e. the entire mud slab is covered with membrane is to be a Float Finish. Note that 3.6 C. 1.d for Float Finish has the same finish surface values as 3.6 D. 3., which is the finish for Pedestrian Sidewalks and

T-0371.1	BSE - Micropile W154 & W236 Bent After Install	Closed	02/04/2013	02/14/2013	02/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Ref: Specification Section 31 63 33 3.2.L BBII is in receipt of reply to RFI T-0371, which suggests that piles which have experienced an impact be rejected and re-drilled. Acceptance of piles is based on specification 31 63 33 3.2.L. Per the recommendation of the Micropile Engineer (Drill Tech's Steve McCullough) and the anchor bar manufacturer (DSI), the piles were bent back to plumb and retested on 02/01/2013. Attached are the passing proof test results for the piles in question. Please confirm that these piles are accepted.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The piles are confirmed to be Rejected and shall be replaced with new piles. The concerns include, but not limited to, the following: * de-bonding of bars and grout * cracking of the grout that may compromise its ability to provide corrosion protection of the bar * the ULTIMATE uplift capacity of the pile might have been compromised, which cannot be verified by the proof test Unless the contractor can provide sufficient evidence that addresses the concerns listed above and approved by TJPA, the piles shall remain as Rejected. It should also be noted that the contract documents call for a coupler at the mud slab level to allow the projected portion of the bars be dissembled to avoid the exact problem. If BBI cannot prevent the micropile from being hit again, BBI shall install the coupler as shown and take down the portion of the bar above the coupler as soon as the pile is proof tested and re-install the bars above the coupler at a later time.		
<hr/>

REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference P1-2026			The invert elevation for drainage piping from the catch basins to sumps is -36'-10".				
Please reference attached contract drawing P 1-2026 and the drainage system at the SP B2-D-2. Referenced drawing shows 1% flow from the catch basin to the sump pit, however; the specified invert elevations call out the opposite. Please confirm that the invert elevations called out on P 1-2026 are correct, if not please specify new pipe invert elevations to be used for the drainage system specified herein.							
T-0376	BGP - Column Spiral Reinforcing in Lieu of Individual Ties	Closed	01/24/2013	02/03/2013	01/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference S1-3300 & S1-3304			The size/spacing proposed by the contractor does not meet the volumetric ratio of spiral or hoop reinforcement requirement in ACI 318 therefore the request is declined in current form. For columns C10 and C11, if the contractor prefers to use #6 spirals with the spacing specified for column ties in Sheet S1-3300, that is acceptable to the SER. The tightest spacing specified in S1-3300 along the column height shall govern.				
Gerdau is requesting the use of spiral reinforcing in lieu of the #6 individual stirrups/hoops that are shown on contract drawings SI-3300 and SI-3304 detail 1 for column types B1, B2 and B3. The spiral reinforcing would be #5 and maintain 3.5" pitch for the B1 column, 3" pitch for the B2 column and 4.5" pitch for the B3 column. Please confirm the use of spiral at the pitch indicated is acceptable.			If spiral reinforcement is used for Column C12, the size and pitch of the spiral shall be #5 and 3", respectively, for the full column height.				
			In addition, if spiral reinforcement is used, detailing requirements in ACI 318 Section 7.4 shall be fully met.

	Co-Author:						
	REQUEST: Reference P1-2022 There are two (clouded) sump pits attached that are not connected to any of the drainage system called out on PI-2022. Please confirm that there are no drainage lines connected to these two sump pits.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> There is no drainage piping connected to these two sump pits.		
T-0379	BGP - Geothermal Pipe Fusion Butt Weld	Closed	01/24/2013	01/24/2013	01/29/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Robert Kjome	To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author:						
	REQUEST: Reference Specification: 23 57 34 The response to Submittal TG0601-008 commented that only socket fittings and electrofusion fittings are allowed. This insinuates that Butt Fusion welds are not allowable. However, per Specification Section 23 57 34, Butt Fusion welding does not seem to be precluded. The butt fusion method is acceptable per the IGSHP A. Please confirm that butt fusion welding is acceptable under this contract for the geothermal piping.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Butt Fusion is an Acceptable method of heat fusing ground loop piping.

REQUEST: See attached RFI T-0379 Please confirm it is acceptable to repair the punctured geothermal piping in geofield 14R Area 16 by using a fusion butt weld. The butt fusion method of heat fusing ground loop piping is acceptable per the IGSHPA.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
T-0380	BSE - K9 Buttress shaft CSL Tubes	Closed	01/28/2013	02/07/2013	02/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Reference attached sketch and spreadsheet. We were informed by Harris-Salinas that they are short of CSL tubes for the last rebar cage K9. Since K8/K9 interface will not be CSL tested, per the agreed upon list of shaft interfaces (generated by Arup and BBII), it is in BBII's opinion that it would be more beneficial to the shaft if it is installed without CSL tubes. The benefits include the following: There would be no need to grout the holes; no voids; and there would be more concrete in the shaft. If CSL tubes are required, we are proposing to install them per the attached drawing. Please advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The Contractor's proposal is acceptable.

From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Specification: 22 13 01 Reference Drawing: P1-2022 & P1-2030 Please reference contract drawings P1-2022 thru P1-2030. There is a discrepancy between the called out elevations of the pipe inverts and the flow grades between the sump pits and catch basins. All pipe inverts at the catch basins are to be set to El. -36.83' and pipe inverts at the sump pits are at either El. -37.50' or -37'-25'. At the long pipe runs the flow grade matches to 1% as called out on the plans. However, on the short pipe runs, this grade is up to 18%. Please clarify which details governs, and whether the 18% slope is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The pipe invert elevations at sumps were established as uniformly as possible. An 18% slope is acceptable for short runs (approx. 4 ft.).

T-0389	BGP - Cast-in-place Concrete Shrinkage	Closed	02/11/2013	02/21/2013	02/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: Ref: Specification Section 03 30 20 1.7.F.3.i Please reference attached ACTM C 157, pages from SEONC San Francisco Bay Area Concrete Aggregate Report 2008, and Specification Section 03 30 20- 1.7.F.3.i. ASTM 157 section 4.3 states that if the condition of mixing, curing sampling and storage other than specified in the test method are required, they shall be reported but are not to be considered as standard conditions of this test method. In section 6. Sampling, it requires samples from batches made in the laboratory and the Note 2 states that field cast specimens can show up to twice as much drying shrinkage as laboratory cast specimens from the same materials and proportions. Furthermore, SEONC 2008 states that "actual shrinkage of the concrete in service and in field-cured tests will not necessarily correlate closely with the trial batch test results." For these reasons SCCI believes that shrinkage tests from samples at the job site can not verify the specified shrinkage limit and can not be compared with the laboratory tests. Please confirm that shrinkage results from the samples taken in the field will not be directly compared to laboratory tests, and consequently used as basis for rejection of material.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The project specification specified that the shrinkage tests shall be in accordance with ASTM C157 with modified SEONC Recommendations. It is recognized that the field sampled tests will not necessarily correlate closely with the trial batch test results, which should be anticipated before bidding. In accordance with SEONC, field sampled test will be used for the evaluation of the specified limits as specified. However, rejection of a concrete pour will not be based on shrinkage test of field samples alone.	

T-0390	BGP - Floor Drain FD-1 Clarification	Closed	02/12/2013	02/22/2013	02/20/2013	Potentially	<input type="checkbox"/>

T-0396.2	BGP - Drainage Pits Embedded Frame Grates	Closed	03/22/2013	04/01/2013	04/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Reference Specification: 23 13 01 Reference Drawings: P1-6001 Reference RFIs: T-0396, T-0396.1 Detail 8 on CD P1-6001 does not provide enough details for assembly and fabrication of the embedded frames. SCCI's drawing attachment in the RFI 396 series provides such details. As per our discussion with the SER (Structural Engineer of Record) on 3/21/2013, see attached revised SCCI's drawings of the embedded grate assemblies. As discussed SCCI has revised the weld detail between the two angles to be used to fabricate the embedded frames. Weld is changed to T-joint, PJP double bevel groove weld per AWS D1.1 (references 8-56, table 8-2 from AISC Steel Manual 13th ED.) Is it acceptable to construct the embedded grate frames per attached detail?			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The construction of the embedded frame is clearly shown in detail 8/P1-6001 as a formed frame. The proposed assembly including two angles with double bevel groove weld is acceptable. Contractor to provide submittal for frames and grates.				
T-0397	BGP - RCW Dimension Clarification	Closed	02/21/2013	03/03/2013	02/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference A1-2123 and attached. Between gridlines 12-13 and G-H there appears to be two conflicting dimensions. Please confirm the 7'3" dimension is from gridline H to the work the point.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> On A1-2123, between gridlines 12-13 and G-H, we confirm the 7'-3" dimension from gridline H to the work point is correct. The dimensions are not conflicting. The 7'-1 3/8" dimension from gridline H is to the South West corner of the train platform knee wall. The platform is curved, which accounts for the slight difference in dimension between the corner and the work point.				
T-0398	BGP - Vehicle Ramp Concrete Corbel Dimension	Closed	02/21/2013	03/03/2013	02/28/2013	Potentially	<input type="checkbox"/>

T-0400	BGP - Seismic Joint Detail	Closed	02/21/2013	03/03/2013	03/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas			To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Robert Kjome	
Co-Author:							
REQUEST: Reference S1-3010, A1-8881, & A1-8882 The detail 4/S1-3010 does not appear to be coordinated with the details shown on A1-8881 and A1-8882. Please revise accordingly.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> We have reviewed the structural and architectural details for the Seismic Joint on GL 35. Attached SKA-2594 and SKA-2595 show the coordination modifications made to drawings A1-8881 and A1-8882, which will be issued with the next Below Grade Package ASI. S1-3010 compared to A1-8881: 1. 4/S1-3010 does not include/detail part of the seismic joint below the 5' Mat Slab (these parts was shown on Architectural details). 2. 4/S1-3010 shows deformed bar anchors welded to the joint where as A1-8881 details shows different embeds. Embed anchors have been removed from the architectural drawings as anchoring / attachment is per the structural drawings. 3. 4/S1-3010 shows plate with hole to fully cover top of curb of gutter where as architectural details shows the plate with equal length same as other side of seismic joint, this has been adjusted. 4. Note that the water stop injection hose locations have been adjusted. S1-3010 compared to A1-8882: 1. Dimension on A1-8882 should be 3'-0" instead of 2'-11 5/8". I will adjust dimension on sheet.

REQUEST: Reference 4/S1-3210 and attached. Please provide dimension between the ground level slab and parapet wall footing.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The gap width dimension is specified on plan S1-2310.		
T-0403	BSE - Mud Slab Flatness and Levelness Testing	Closed	02/21/2013	03/03/2013	02/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference: 03 30 00 3.6.C.1.d In follow up to the Turner's request, please confirm this specification section does not apply to the mud slab and no flatness or level testing is required.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Though flatness or levelness of all concrete pours is expected, FF and FL testing of the mud and protection slabs using special inspectors is not required. The mud slab is to have falls to drain, as suggested by Webcor, for water management during construction. Also, it is important that the mud slab does not have step-offs or alignment issues between pours that would create voids or cause the waterproofing membrane to tent.		
T-0404	BGP - Replacement of Lap Splice with Mechanical Couplers	Closed	02/22/2013	03/04/2013	03/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Ref: S1/3201 Please verify that it is acceptable to replace a lap splice with an approved mechanical coupler (500 series coupler) as needed to support the means and methods of construction. The current location being considered is the outside face wall vertical lap splice between the dowel extending from the mat slab and the typical wall vertical reinforcing at the bottom of the wall. See attached plan sheet S1-3201 to reference the proposed location. Should this be acceptable please verify:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to replace the lap splice with an approved Type 2 mechanical coupler, however, the clear cover to the coupler shall not be less than 1.25" with a tolerance of minus 0".

T-0411	BGP - Welding for Penetration Sleeves	Closed	02/28/2013	03/10/2013	03/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Webcor Construction LP Robert Kjome				
REQUEST: Reference Specification: 05 50 10 Reference Submittal No: TG0600-036 Per the Submittal TG0600-036 comments, the intermediate ring, 3" horizontal weld must have a removable backer bar. Is it acceptable to have a double beveled groove weld replace the single bevel groove with a back bar? Eliminating the backer bar in this weld and having a double beveled groove instead is more efficient. Secondly, the Submittal TG0600-036 comments address the field welding of the penetration sleeve collars to be conducted after the trestle pile is to be removed. Is it acceptable to weld a full collar with cap in the shop? The assembly would arrive onsite to be welded in place as originally intended by the designer. Please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. At intermediate ring, for 3" horizontal weld, contractor may substitute double beveled groove weld to replace single bevel groove with back bar, as proposed. 2. However, the contractor's proposal to pre-assemble the collar ring and the cap plate in the shop is not acceptable. The contract documents indicate that the collar ring and cap plate are two separate pieces to be sequentially field-welded into place. The collar ring is first field welded to the sleeve, and then secondly the cap plate is field welded to the collar ring. The contractor's proposal to pre-assemble the collar and cap into one unit makes it impossible to field weld the collar/cap assembly onto the sleeve because there will be insufficient clearance for welding (mat rebar will already be placed and the mat concrete poured with only a small blockout surrounding each sleeve, making it impossible to weld any pre-assembled collar/cap onto the sleeve from the outside). While this construction sequence is ultimately a construction sequence and means and methods issue that should be commented by W/O, it is the opinion of the design team that contractor's proposal is not feasible.				
T-0412	BGP - Dewatering Well & Piezometer Penetration Sleeve Anchors	Closed	02/28/2013	03/10/2013	03/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Specification Section: 05 50 10 Specification Submittal: TG0600-036 Per the Metal Fabrication Submittal for the pipe/pile penetration sleeves, TG0600-36, the number of anchor holes per ring were arbitrary for the submittal. Is it acceptable to have 4 equally spaced 1/2" holes to fit 3/8" wedge anchors for the anchorage of the dewatering well & piezometer penetration sleeves? Please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Yes. It is acceptable to have 4 equally spaced 1/2" holes to fit 3/8" wedge anchors for anchorage of the dewatering well and piezometer penetration sleeves.

T-0419	BGP - Foundation Walls Formwork Ties	Closed	03/07/2013	03/17/2013	03/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Reference Specification: 03 10 00 2.2.B.7.E Reference Drawings: See attached sketches. Please reference attachments and Specifications Section 03 10 00 2.2 B.7.e: "when removed, ties shall not leave holes larger than one inch diameter in concrete surface". For the foundation walls formwork SCCI would like to utilize concrete inserts that will be used in subsequent concrete lifts. See attached sketches for conceptual/preliminary formwork design. Concrete inserts need to be rated for up to approximately 35 kips SWL (safe working load). As a result of this, the concrete ties need to have 1.5" to 2" outside diameter. For the formwork involved with the 3ft thick foundation walls SCCI requests variance from the specifications referenced above and be able to use these bigger form ties. For all other interior walls including the shear walls, SCCI will comply with the Specification referenced above. Is this acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The use of any type of form tie/insert for the foundation wall is prohibited per specification 03 10 00 B.5 and B.7.a.			

T-0419.1	BGP - Foundation Walls Formwork Anchors	Closed	03/14/2013	03/28/2013	03/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference RFI: T-0419 Reference Specification: 03 10 00-2.2 B.8.A, ACI Formwork Manual There has been a misinterpretation of the specifications that were used to classify the referenced RFI No. 419. Concrete inserts intended for use with wall formwork design depict Specification Section 03 1 0 00 2.2 B.8.A "Anchorages". Per ACI Formwork Manual: "A concrete form tie is a tensile unit adapted to holding concrete form secure		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It will be acceptable to use these contractor-proposed concrete formwork anchors. Form anchors are not to penetrate full depth of the concrete wall.

	<p>against the lateral pressure of unhardened concrete, with or without provisions for spacing the forms to a definite distance apart, and with or without provision for removal of metal to a specified distance back from the concrete surface." (ACI Formwork Manual 4-35)</p> <p>"Form anchors are devices used to secure formwork to previously placed concrete of adequate strength; they are normally embedded in concrete during placement." (ACI Formwork Manual 4-36)</p> <p>To reiterate, SCCI intends to utilize concrete inserts/anchors per attachments to secure and anchor the wall forms in place. Use of concrete inserts/anchors will leave 2" hole that will be patched once the form system is removed.</p> <p>Is this acceptable?</p>						
T-0420	BGP -Geothermal Loop Air Pockets	Closed	03/06/2013	03/17/2013	03/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Ref: M-0006		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> WSPFK Response: Air elimination devices are not feasible in a ground loop. Manual air vents will be provided inside the building in a future package.			
Per contract, the geothermal lines are to run below the elevator and sump pits. This will cause a difference in elevation across the a geothermal pipe loop. This will create high points in the loop for bodies of air to gather or get trapped. These air bodies or pockets can coalesce in stagnant water and potentially compromise the hydraulic stability. Typically air elimination systems are implimented at high points to remove these bodies of air after the initial flush/blowout.							
Please advise how to handles these bodies/pockets of air.

T-0423	BSE -Subgrade pit dimensions per comments to TG0300-340.1	Closed	03/07/2013	03/17/2013	03/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER:				
Reference Drawings: S1-2024,S1-2027, 7/S1-3010, A1-2817			Accept Suggestion: <input type="checkbox"/>				
Reference Specificaiton: 31 00 00			1) Confirmed that BBII shall use the revised 20'-3 3/4" dimension, enlarging the pit equally to the north and south as stated on the submittal.				
Reference Submittal: TG0300-340.1			2) The dimensions noted for the GL35/C pit in returned submittal TG0300-340.1 are not new dimensions. Rather, they are the same dimensions as communicated on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The sloping regions of the bottom surface of the thickened mat shall slope at a 1 to 1 slope, and remain 5'-0" MIN from the interior pit boundary as noted on 7/S1-3010. Thus, with these constraints the bottom of mat thickening dimension will be as marked up in the returned submittal (16'-9" from GL 35 to the western limit of the GL35/C depression). The 3'-0" dimension is the dimension from GL 35 to where the 1 to 1 slope turns vertical at the expansion joint/edge of mat. Returned submittal and contract documents do not conflict.				
The response to Mud Slab Rebar Shop Drawings Submittal TG0300-340.1/TA1020-32001A06.1 provided new dimensions for depressions in the trainbox subgrade. Per 00 07 00 Part 6.02.A, BBII would like to clarify which dimensions are to be used for construction.			3) Confirmed that BBII shall use the 3'-0" dimension to GL 35 as noted in returned submittal TG0300-340.1 for the eastern limit of the GL 34-35/E depression.				
1. Sheet MS-4 of submittal shows subgrade depression between Grid lines 18 & 19 between Gridlines B & C having dimension of 20 '-0' x 40'-4". This is consistent with the dimensions provided on sheet S1-2024 Revision 2 dated 11/27/2013. The review comment by TT revises the 20'-0" dimension to 20'-3". Please confirm which dimension is to be used.			4) The perpendicular dimension from the underside of the mat slab to the top of the mud slab is 4 1/2". This is 4" for the protection slab thickness, plus a 1/2" for the waterproofing zone.				
2. Sheet MS-7 of submittal shows subgrade depression at Gridline 35 between Gridlines B & C as having dimensions of 22'-1 3/4" x 18'-6 3/4". This geometry is base on the size of the pit shown on A1-2817 Revision 1 dated 11/27/2012 and 7/S1-3010 Revision 0 dated 08/30/2012. The Submittal response comments provided show a new overall dimension of 19' -9" and a specific offset to Gridline 35. Please confirm which dimensions are to be used.							
3. Sheet MS-7 of submittal shows subgrade depression between Gridlines 34 & 35 at Gridline E. TT comment calls out 3'-0" from eastern limit of depression to Gridline 35. This dimension was not provided on sheet S1-2027 Revision 2 dated 11/27/2012. Please confirm this dimension is to be used.							
4. BBII understands that dimensions provided on this submittal are to bottom of Mat Slab concrete, and that each dimension should be increased to account for thickness of protection slab and waterproofing. Please confirm that an additional 0'-7" is the correct dimension for this adjustment.

T-0424	BGP - Dewatering Wells / Monitoring Instrument	Closed	03/08/2013	03/18/2013	03/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Drawings: A1-8711 Reference Photo: Attached Per plan sheet A1-8711 , Detail 3 & 6, the dewatering well and monitoring instrument pipes are plumb coming out of the mud slab. Additionally, these details do not show couplers or varying diameters on the dewatering wells or monitoring instruments. Currently almost all of dewatering wells have varying diameters with couplers and are almost all out of plumb. The monitoring instruments also seem to be out of plumb. To avoid the plumbness and varying dewatering well pipe diameter issues, is it acceptable to cut the dewatering well pvc pipe at or close to the mud slab elevation to avoid conflict with the dewatering sleeves? How should SCCI handle the sleeves for the monitoring instruments that are out of plumb? Please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> No. It is not acceptable to cut the dewatering pvc pipe at or close to the mud slab elevation. The cut off must be well above the elevation of the waterproofing spiral wrap and ring plate. The varying diameters and plumbness of each of the penetrating devices / pipes will require field measurement and shop drawings prepared showing adaptation of the sleeve detail to each unique situation.				
T-0425	BGP -Geothermal Trench Methods	Closed	03/08/2013	03/18/2013	03/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Specification: 31 23 34 3.3 F Per Coordination Meeting March 6, 2013, S3H Inc. is looking to install the geothermal loop at a depth of 2' below the Mat slab. After the loop installation, the trenches will be back filled with 8" of loose native soil to protect the pipe. This 8" lift will be watered to settle the loose soil around the pipe. Upon watering and settling of the loose 8" lift, the remainder of the trench will be backfilled with native soil and compacted to the relative density of the surrounding soil per specification. Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Item 1. F+K response: Depth of trench for geothermal piping shall be per mechanical drawings and specifications. Item 2. Arup response: 8" of loose satisfactory soil material is per specification 23 57 34 paragraph 3.1.D. Item 3. Arup response: The remaining backfill shall be compacted to 95% as required in the specifications.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Drawing: S1-3206, S1-3201 Contract Drawing Sheet S1-3206 Section 4 depicts an elevation of the knockout walls along the West end of the structure. Within this elevation the bold limit line for the contract TG0600 is shown well above the top wall CJ which does not align with Note 1 and the typical wall section on sheet S1-3201. Please clarify the proper location of the contract package TG0600 limit line on sheet S1-3206 Section 4.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The bold scope delineation line on Section 4/S1-3206 shall be at the top of +7.0' slab and the associated CJ. The only exception to this delineation would be at the southwest corner where the delineated ramp slab meets and overhangs the foundation wall above the +7.0" elevation. Refer to 1/S1-2251 for this area			

T-0430	BGP - Trainbox Shear Wall STD Hook	Closed	03/11/2013	03/22/2013	03/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Andy Khuu							
REQUEST: Reference Drawings: S1-3260 Detail 2 of S1-3260 depicts standard hook reinforcement between the horizontal ties in the shearwall above the lower concourse; however, it is not clear if the standard hooks are required in the shearwall below the lower concourse. Please confirm if standard hook reinforcement is required in between the center shear wall ties. If		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The standard hook reinforcement is required only at the edge of wall condition, and therefore, not required below the lower concourse at the center shearwall ties. For the center location, the horizontal bars are continuous when you are below the lower concourse level.			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	standard hooks are required, please provide detail for the layout of the standard hooks in between the center shear wall ties.						
T-0431	BGP - Knockout Wall, Top of Wall T-Head	Closed	03/12/2013	03/26/2013	03/22/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Ian Corcorran	To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: Reference Drawing: S1-3206 Reference Specification: 03 20 00 Dwg. Sheet S1-3206 Section 4 depicts the vertical reinforcing at the top of wall without a T-headed bar. Please confirm that a T-headed bar is not required at the top of the vertical bars throughout the knockout wall area.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the T-head is not required at the top of the vertical bars throughout the knock-out wall area.				
T-0432	BGP - Shear Wall Layout	Closed	03/12/2013	03/26/2013	03/19/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Ian Corcorran	To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: Reference Drawings: S1-2250, S1-2030 The Northern-most shear wall when laid out based on the details (angle = 38.4 degrees from GL H) and dimensions (30'-5 7 /8") per contract drawing sheet S1-2030 do not conform with the dimensions provided on contract sheet S1-2250 Section 1. Please confirm which layout is correct and directions how to proceed.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The northernmost shearwall length is as defined by the edge of slab dimension on S1-2250. This wall does deviate from the typical length, however, note that a shearwall length is defined starting from the centerline of wall intersecting with the face of foundation wall and not as the RFI sketch has interpreted.

REQUEST: Ref: RFI T-0439, SKS-0184 Please reference attached drawing. The response to WOJV RFI T -0439 modifies the continuous embedded assemblies to be four L8" x 4" x W' x 1 '-2" elevator post bases as depicted on Contract Drawing S 1-7600 Detail 11. The RFI response does not show the location and spacing of the embedded assemblies. Please provide locations and spacing.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The embedded angles are centered under each elevator post. Final elevator post locations shall be coordinated with elevator manufacturer. If an elevator provider is not awarded a contract in time for construction, the following alternate may be used. In lieu of the L8x4x1/2 x1'-2" embedded angles, a continuous L8x4x1/2 angle with welded studs at 12" may be used. The HSS guiderail post will be welded to the embedded angle in the field after an elevator provider has been selected.

	glass guardrail embeds and openings. Detail 7 on drawing S1-3410 is the typical PL 3/8x7 glass guardrail embeds for escalator and stair openings. The detail states that the guardrail embeds are continuous. It is unclear what the boundaries of the guardrail embeds are. SCCI has determined that no guardrail embeds are necessary at the opening locations where future CMU or concrete walls shall be constructed flush with the opening. Also, the guardrail embeds can be terminated at the escalator openings where the opening is reduced. Attached drawings SI-2202 through SI-2207, SI -2210 and S1 -2211 show the limits SCCI has determined the glass guardrail embeds shall be installed. Please advise if these locations are accurate and the only locations the guardrail embeds shall be installed.						
	future wall and will require a guardrail embed.

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: Submittal TG0300-622.4 and TG0601-009.1		Thornton Tomasetti does not object to shifting Micropiles W390 and W393 as proposed.					
Micropiles W390 and W393 cannot be installed as laid out due an overhead obstruction. BBII proposes moving W390 West 16" to provide adequate clearance. BBII proposes moving W393 West either 10" or 2'-10" to provide adequate clearance. The proposed location for Micropile W390 will be South of the geothermal area. The proposed locations for Micropile W393 will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping and the 12" minimum clearance between pipe and piling will be maintained (Note 4 on Geothermal Submittal sheet GT-Zone-02). See attached sketch. Please confirm this is acceptable.							
T-0447	80 Natoma Shoring Beam in Sump Pit	Closed	03/18/2013	03/28/2013	03/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By: Turner Construction Company Jack Adams				
Co-Author: Balfour Beatty Infrastructure, Inc. Kelly Phariss							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI: T-0317.3 Reference Photo: attached		BBII IFC drawing D-2210 shows 80 Natoma Shoring wall to be removed to elevation -44'-6" also GT-2101 shows the Subgrade elevation of Pits to be -44'- 9" .					
BBII has confirmed that the 80 Natoma H pile (shown in attached photo) has been demolished to the -44.5 ft required per Sheet D-2210 and RFI T-0317.3. Please provide depth that BBII must demolish the attached 80 Natoma H pile so not to conflict with geothermal piping.		Deeper removal of the 80 Natoma wall beams are not required in order to allow clearance for the geothermal piping. The TG06 Contractor has taken these into account (Refer to Geothermal Loop Piping Submittals)

T-0448	CDSM Soldier Pile Encroachment	Closed	03/19/2013	03/29/2013	03/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen		To: Turner Construction Company Gary Kruttsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Documents: Exhibits A-H				It is acceptable to reduce the foundation wall thickness with reinforcement spacing reduction as proposed for the 5 inquired locations.			
In follow up to the 3/13/13 meeting with AAI and TT regarding the CDSM soldier pile (SP) encroachment WOJV's proposal for mat slab area #1 (Exhibit-A) is as follows:				Note that this is not a pre-approval for future conditions that may arise. W/O shall coordinate these approved modifications with shop drawing preparation.			
Marked up sheets SH-2000 (Exhibit-B) and SH-2001 (Exhibit-C) depict the location of the encroaching SPs and the degree in which they are encroaching.							
Predicated on SE stamped detail A/SLC.1 (Exhibit-D):							
A. At (4) SPs 753, 761, 765, & 787, WOJV is proposing to decrease the wall thickness to 34-1/2" with #11 rebar spacing to 6" o.c. between the centerline of the (2) adjacent piles. For example, as depicted in SK-T-0448.1 (Exhibit-E) SP #753 encroaches 1-1/4". WOJV would reduce the wall thickness while reducing the rebar spacing to compensate for the reduced wall thickness to clear the encroaching SP as depicted in SK-T-0448.2 (Exhibit-F).							
B. At SP 819 WOJV is proposing to decrease the wall thickness to 33 3/16" with #11 rebar spacing to 6" o.c. between the centerline of the (2) adjacent piles. Similar to above, as depicted in SK-T-0448.3 (Exhibit-G) SP #753 encroaches 2-3/16". WOJV would reduce the wall thickness while reducing the rebar spacing to compensate for the reduced wall thickness to clear the encroaching SP as depicted in SK-T-0448.4 (Exhibit-H).							
WOJV did review the possibility of cutting the W21x201 flanges to accommodate the encroachment however, this high risk remedy was ruled out as it could jeopardize the project shoring system.							
Please advise.

T-0448.4	CDSM Soldier Pile Enchroachment	Closed	05/09/2013	05/19/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference: Previous RFI #T-0448, Related RFI #T-0530. Previous RFI response #T-0448 only addressed the impact of the encroaching CDSM soldier piles (SPs) on the first or bottom wall segments. This RFI addresses the encroaching SPs in mat slab areas 1&2 at all levels of wall. This RFI shall supersede previous RFI response #T-0448. Please see attachment SK-1 for RFI T-0448.4 questions.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Foundation wall modification proposals 1-10 are not acceptable. Comments are as follows: A.) This RFI supersedes RFI #T-0448. The proposed rebar scheme in this RFI differs from previously suggested solution without providing calculations that show proposed additional rebar compensates for reduction in moment and shear capacity of the foundation wall cross-section due to shoring encroachment. B.) Reinforcement for knock-out walls (west of mat slab area #1) differ from those in typical foundation walls (e.g., see S1-2060 for section call out). Provide solutions for knock-out walls. C.) Provide an elevation sketch that shows the proposed vertical extent and detail of added rebar. D.) Lap splices are not allowed in additional rebar. Use Type 2 mechanical couplers. E.) Provided generic cross-section detail is insufficient to show the actual location of the added rebar in plan. The extent of the applied options should be shown on plan for clarity. F.) Reference SK1 is not included in this RFI. G.) Maximum encroachment dimension provided for SP(s) #737-739 does not match maximum dimension provided in SK-2 and SK-3, please reconcile. H.) Do not refer to a superseded RFI (in SK-3 comments column for pile 819). I.) Coordinate all modifications with future shop drawings for TG06.

Co-Author:

REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the South wall in slab area 1 & 2 as well as all levels of the encroachment into the foundation wall between CDSM piles 733 and 772. (Exhibit A)

Exhibit B & Exhibit C depict the location and degree in which the SPs are encroaching.

WOJV proposal: Between SPs 733 and 772 (which is the intersection of the South and West wall) WOJV is proposing to decrease the specified 36" wall thickness to 33 1/8" to clear all the encroaching SPs. WOJV would reduce the thickness while reducing the rebar spacing to compensating for the reduced wall thickness predicated on SE stamped Detail A/SLC.1 (Exhibit D) this modification would clear all the encroaching SP/steel plate issues between 733 & 772, See Exhibit E, F, & G.

This modification, if approved, would be incorporated into the TG06 shop drawings.

Please confirm if this is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The proposed modification to foundation wall reinforcement is acceptable. W/O to coordinate these changes with TG06 contractor, including previously-approved mat rebar shop drawings for this zone.

ANSWER:

Accept Suggestion: ☐

There is no conflict. The meeting minutes will be prepared and submitted by the Contractor within 3 days after the meeting per Spec. 07-12-10 Modified Bitumen Waterproofing. Preinstallation meeting minutes are the responsibility of the Contractor per Spec. 07-12-10 Para 1.3 Administrative Requirements which states; "The following requirements are in addition to the provisions of Spec. 01-12-00 and 01-14-00." "The minutes of the conference shall be submitted by the Contractor to all attendees and interested parties no less than 3 days after the

T-0450	BSE - Dewatering Casing Tolerances	Closed	03/19/2013	03/29/2013	03/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Specification Section: 31 23 19				Plumbness of the dewatering well is not explicitly mentioned in the specifications. However Dewatering Specification section 31 23 19 1.11 C states "Coordinate work to avoid clashes with....and other items to be installed as part of the permanent structure" and detail 6 / A1-8711 shows the Dewatering Pipe drawn plumb and fitting snug within the steel sleeve.			
Please confirm the TG03 contract documents tolerance for the plumbness of the dewatering well casings.

T-0451	BGP - Mat Slab Construction Joint Dimensions	Closed	03/19/2013	03/29/2013	03/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Reference Specification:031000 Reference Drawings:S1-3001 Please reference attached sketches of mat slab construction joint (CJ), and detail 2 on S1-3001. Detail No. 2 on CD S1-3001 shows CJ for the mat slab 5 thick section, however, the contract drawings do not provide details/dimensions for the thickened portion of the mat slab at the pits (sump pits, elevator pits, etc.), and the 3 ft chamfer. SCCI suggests maintaining mat slab keyway at 1'-8" wide and 10" deep (as shown on detail 2 on S1-3001) for all mat slab CJ's, and as shown on attached sketch.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to maintain the 1'-8" wide by 10" deep key for the mat slab construction joint at thickened mat and chamfer areas as shown on the RFI sketch. Although not inquired about, note the foundation wall key h/6 dimension on section c-c should be 6" and not 5" as detailed on sketch.

T-0452	BGP - Concrete Beam Under Slab	Closed	03/19/2013	03/29/2013	03/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Specification: 033020 Reference Drawing: S1-2251, S1-3205, S1-3400 Please reference the Vehicle/Bike ramp framing plans on S1-2251. Detail 1 calls for a 36" x 48"concrete beam below the ramp slab. However, this concrete beam is not indicated in section detail 7 on S1-3205. The beam size and specifications as described on S1-2251 does not match a beam listed in the beam schedule on sheet SI-3400. The plan on SI-2251 does not clearly show where this beam begins and ends. Please provide additional information and clarification regarding this 36" x 48" concrete beam.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 7/S1-3205 is not intended for the beam but for the ramp slab over foundation wall with corbel condition. The inquired concrete beam is cantilevered from the face of the foundation wall. Although this beam is not marked as a scheduled beam, the info required for detailing is provided. Longitudinal bars and stirrup info is called out. Typical detail 2/S1-3401 shall apply for a cantilever condition and the longitudinal top bars shall extend minimum LTE into the foundation wall.	
<hr/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to attached drawing S1-2251, S1-3411. A1-7401 and SCCI sketch SK-115.				George Metzger 10/14/2013			
Per RFI response T-0453.1, it is acceptable to weld two 1 1/8" plates together to create the (2) angles for the western most beam indicated on drawing A1-7401.				RESPONSE: Confirmed			
Please confirm the Vehicle/Bike Ramp end support acute angle is 56-degrees and obtuse angle is 124-degrees as shown in the attached SCCI sketch SK-115.							
T-0454	BGP - Steel Cap Collar Weld Location	Closed	03/19/2013	03/29/2013	03/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification: 055010 Reference Drawings: S1-3003, A1-8711, Submittal No. TG0600-036				Provided the sleeve and collar are welded together (in the shop) before the mat is poured, the location of weld in the shop drawing is acceptable. If instead the collar must be installed onto the sleeve in the field after the mat is poured, then weld access will be a limiting factor that will require the weld to occur as shown on S1-3003.			
Please reference attached Contract Drawing SI-3003 and AI-8711 along with approved as noted dewatering pipe sleeve shop drawing. The 3 dewatering sleeve drawings depict conflicting weld locations for the 5/16" fillet weld of the steel cap collar to sleeve connection (see highlighted drawings).							
Please clarify/confirm the location of this weld.

T-0455	BGP - Out of Plumb Dewatering Casing	Closed	03/19/2013	03/29/2013	03/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Specification: 055010-3.2.C Reference Drawings: S1-3003 Reference Photo: attached Please reference Sheet S1-3003 of the Contract Drawings and Spec Section 055010-3.2.C SCCI spot checked two of the existing dewatering wells for plumbness and found them both to be approximately 3/4" over 48" out of plumb (see attached photos). With this existing condition, SCCI can not adhere to the plumbness tolerance (1/16") for installation and maintain the required 1/2" maximum gap between sleeve and casing per Section 2 of Sheet S1-3003. SCCI suggests increasing the diameter of the sleeve and granting a variance on the 1/2" gap tolerance per Sheet S1-3003. SCCI will maintain adherence to the installation tolerances in Spec Section 05 50 10.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> For the existing dewatering wells, we will not object if the maximum gap between sleeve and dewatering well casing exceeds 1/2" for those dewatering wells found to be out of plumb.				
T-0455.1	BGP - Dewatering Well Above Grade PVC Pipe	Closed	03/29/2013	04/08/2013	04/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Drawings: A1-8711 Per discussion in the pre-installation and preparatory DFOW meetings for the metal fabrication penetration sleeves, the PVC dewatering casing above the mud slab can be cut just above or at top of mud slab elevation to avoid varying diameter issues. Without the dewatering casing present above mud slab grade, the varying casing diameter issues and plumbness issues are solved. The to avoid debris entering the dewatering casing, the casing would not be cut until the penetration sleeve is to be installed. Please confirm per the discussions in the meeting that cutting the casing is acceptable. Please note that the grouting back of the dewatering casing shortly after the decommissioning of the dewatering pump will be uniform (without segregation) for both below mudslab elevation and above.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The description contained in RFI T-0455.1 is acceptable. Note that dewatering casings that require to be cut, should be cut above the top of mud slab (not at the top of mud slab).

From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Specification: 03 30 20 (3.11.A & 1.3.A.8) Per Specifications 03 30 20 (3.11.A & 1.3.A.8), SCCI will install temperature monitoring devices at specified locations and depths. These instruments use RFID Tag technology for communication with the data logger. The RFID transmitter, which is wired to the temperature monitoring device, will be elevated out of the concrete. SCCI will tie a 1/4" diameter fiberglass, or similar non-corrosive, rod to the reinforcing mat. The temperature monitoring RFID transmitter will then be elevated clear of the Mat Slab. Once Thermal Monitoring activities are complete, this non-corrosive rod and cable will be cut flush with slab. Reference attached brochure and SCCI sketch. Is this method acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti does not object to proposed method presented in RFI. GC to coordinate waterproofing requirements with waterproofing subcontractor and submit proposed waterproofing details in the shop drawings.		
T-0457	BGP - Mat slab changes per Field Order 11 (Future ASI 102)	Closed	03/25/2013	04/04/2013	04/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Reference RFI: T-0415 Reference Field Order No. 11 (Future ASI 102) Field Order No.11 (Future ASI 102) is still in the design stage, and without the Contract Drawings incorporating the field orders SCCI cannot plan the work. More specifically, are there any changes to the foundation (Mat slab) resulting from Field Order 11 (Future ASI 102)? For example: If there are changed/added drainage pits in the SCCI's Area 3 (Mat slab pour # S103; GL A thru J, and 1 thru 3.5), geothermal work cannot begin until such changes are incorporated. Please confirm that Field Order No.11 (Future ASI 102), or any other forthcoming Field Order has no changes in the Mat slab drainage system (drainage pits, thickened sections, etc.), that would impact the subgrade work.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Regarding ASI 102 For the Mat slab GL A thru J and 1 thru 3.5 drainage pits are not expected change, with the exception of the small sump pit in the elevator pit GL 1.4 to 2, E.6 which was shown on the attachments responding to RFI T-0415 BGP. Within the mat slab (not affecting slab thickenings) floor drains and floor sinks have been relocated at the Fire Pump and Domestic Booster and Irrigation Pump Rooms and a floor drain will be added at the electrical room located GL 1.4 to 2, B to C.

	SCCI intends to Moist cure the Mat Foundation Slab using the above referenced method found in the contract specifications and discussed in the above mentioned Project meeting.						
	Please confirm this method is acceptable.						
T-0465	BGP - Relocation of Geothermal Risers Due to Leaking CDSM Wall	Closed	03/28/2013	04/07/2013	04/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference photo: Attached		Field 1 Risers should be located between east of soldier Pile 36 (between 36 and 37) as indicated in RFI T-0437 BGP. It is acceptable to locate Field 2 risers between 38 and 39.					
As seen in the picture attached, water is leaking through the surface of not only the CDSM panel that the geothermal riser is laid out on, but the various adjacent CDSM panels as well.							
Please confirm that SCCI can move the Field 1 risers location between Piles 35 & 36 and the Field 2 risers location between Piles 38 & 39. Both of these new locations appear to be leaking less than the original riser locations.

Co-Author: Webcor Construction LP Joanne Filipas							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
In follow up to the 3/28/2013 OAC, PCP informed us that the SF PUC requires a ground rod to be installed. Please provide all necessary information including but not limited to rod type, length, and location.				Add new ground rods and grounding electrode conductors for SFPUC utility requirements per the attached drawings. This grounding system shall not connect to the other building grounding systems except for the soldier pile connections. All other related details shall apply. Coordinate grounding conductors to rise in the foundation wall for extension into the Lower Concourse slab.			
				Jeff Thiel 4/10/2013 Pending TJPA approval, a CR for this work is forthcoming.

T-0466.1	BGP - Ground Rod for SFPUC	Closed	04/11/2013	04/21/2013	04/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Ref: RFI T-0466, RFI T-0442 SCCI is in receipt of the response to RFI T -0466 concerning the addition of SFPUC grounding rods/grids. In order to price this change SCCI and its electrical subcontractor need the following information: On Drawing SKE-021, Note 8, please provide a location on where to terminate each of the four 4/0 cables at the lower concourse slab. A revised SKE-024 drawing showing the exact stub up locations and dimensions is needed to accurately price and construct this change. On Drawing SKE-022, Note 3, please again advise where to terminate the four 4/0 cables at the lower concourse slab. A revised SKE-024 drawing showing the exact stub up locations and dimensions is needed to accurately price and construct this change. Please confirm that the details from the RFI T -442 response will apply to these penetrations. Please confirm that there only two areas (detailed on SKE-021 & SKE-022) that will require the additional SFPUC grounding.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Please find the attached drawings to clarify the ground rod locations. The ground rods are noted to be approximately ten feet on center. Coordinate the specific placement of the rods and GEC to avoid the geothermal piping. We have included Lower Concourse drawings to indicate the grounding electrode conductors that will route into the Lower Concourse slab. Exact dimensioning of these conductors in the foundation wall and slab are not required, Contractor to coordinate exact locations with underground piping in this area. The GEC will be extended to bond to a ground grid at the four corners of the new Electrical Rooms B1289 and B1441. Additional slab details for the mesh and GEC bonding will be provided in an upcoming drawing issue. 2. Yes, the details from RFI T-442 will apply to these and all grounding conductor penetrations of the waterproof membrane. See SKE-025 for the connection detail referenced on sheet E1-6006, detail 2. 3. Yes, the two locations are the only known new SFPUC grounding locations. Please note that the ten foot ground rod separation shown on SKE-021R1 at the transformer vaults has been increased.				
T-0466.2	BGP - Requesting Detail 2 on drawing E1-6006	Closed	04/19/2013	04/29/2013	04/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Ref: RFI T-0466, Drawing E1-6006 Reference is made to RFI T -0466 and the attached sketches. Note I on SKE-022, Note A on SKE-023 and the first note below (Top of Slab -35'-8") references a detail on Contract Drawing E1-6006 for the added SFPUC Ground Rods. The current drawing E1-6006 does not have the noted detail. SCCI requests an updated E1-6006 drawing with the new detail.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> SKE-025 issued with the RFI response indicates the specific referenced detail 2 on Sheet E1-6006. See attached for a duplicate copy.

T-0468	BGP - Geothermal Pipe Riser in CDSM Wall Excavation Specification	Closed	03/29/2013	04/08/2013	04/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Reference Specification: 23 57 34, 31 23 34 Per discussions with the designer (ARUP), the CDSM wall will continue to move until the mat slab has been placed. With the geothermal pipe riser being installed much ahead of the mat slab, there is a good chance that the riser chase pour back will be jeopardized by the wall movement. Per specification 31 23 34, 3.2, B, the geothermal riser pipe chase cannot remain open for longer than 10 calendar days. Is it acceptable to extend this duration to account for the wall movement until the mat slab is poured? Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is acceptable west of gridline 7.

	Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh						
	REQUEST: BBII has received COM1902 directing BBII to re-design the east end shoring utilizing similar waler connections provided in the attached sketches. Prior to commencing re-design, BBII requests the following information from the Shoring wall EOR so our Bracing EOR can properly evaluate the interaction between the Bracing system and wall. Will it be permissible to shed the bracing loads from the transverse end wall (line 35) into the longitudinal CDSM wall (A&J Lines)? If this is acceptable please indicate if there are any limitations, restrictions, or design assumptions regarding the amount of load that can be shed over a given length of wall.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Regarding permissibility, see Note 11 on Sheet GT-1111. Regarding the CDSM wall stiffness, see the response to RFI T-0345. Regarding the CDSM wall allowable friction, see the response to RFI T-0427. To evaluate horizontal stress, see the guidance provided on Sheet GT-1110

T-0477	BSE - Multiple Micropile Relocation (Below Grade Obstruction)	Closed	04/03/2013	04/13/2013	04/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller							
REQUEST: Ref: Submittal TG0300-622.4 While installing Micropile W454 as laid out in the approved submittal, BBII encountered a concrete obstruction 8' below grade and was unable to continue drilling at that location. Even though the micropile layout was approved in submittal TG0300-622.4, BBII suspects the drill rig encountered the CDSM Prototype wall as approximately shown in the attached drawing. BBII suggests relocating the micropiles as shown in the attached drawing to avoid the obstruction. The proposed locations for the micropile relocations will be within the geothermal area; however, the proposed locations do not appear to impact geothermal piping. See attached sketch. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti does not object to relocating micropiles W452, W454, W473, W475, W487, W488, and W500 as proposed.		
T-0478	BGP - Shear Reinforcement Clear Cover at Pits	Closed	04/03/2013	04/17/2013	04/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Andy Khuu							
REQUEST: Ref. Dwg. 2/S1-3005, 3/S1-3008, and S1-2063 Sheet S1-3005/Detail 2 specifies the typical top clear cover for the headed shear reinforcement to be 0.75" and for overall length of the headed shear reinforcement to be 57" long. It is not clear if the same clear cover of 0.75" applies to headed shear reinforcement that is within a pit as shown in Sheet S1-3008/Detail 3. Note that typical rebar around the pits are called out to be 3" as shown on sheet SI -2063. Please confirm top clear cover for headed shear reinforcement that is within a pit.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Top clear cover for headed shear reinforcement that is located within a pit shall be 2.25", such that total overall length of the headed shear reinforcement shall be 55.5" long at these locations.

T-0479.2	BGP - Trestle and Pin Pile in MAT Depression Clarification	Closed	07/18/2013	07/28/2013	07/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Reference RFI T-0479 & T-0479.1 Grace requires that there be a minimum 8" clear horizontal to allow for the waterproofing membrane transition. For trestle piles and pin piles located at slab depressions at the edge of the slope or on the face off the slope, please confirm that the flat mud slab can be lowered to provide 8" clear horizontal to allow waterproof membrane transition in lieu of the 18" described in RFI T-0479 and T-0479.1		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This RFI is for a substituted system that is not the system designed by the Architect, so the Architect cannot comment on design intent or other aspects of the substituted system. Per specification section 01 16 30 article 1.4/B and other associated specification sections the Contractor is to prepare all necessary documentation to support the contractor's substitution proposal which would include direction on the item noted in this RFI. The Contractor should have the design professional responsible for the substituted waterproofing design: (1) immediately prepare necessary design documentation for the substituted system including the impacts on adjacent trades as required by specification section 01 16 30 article 1.4/B.5, and stamp and certify that design to the Owner and the Architect; and (2) respond to Contractor submittals and manufacturer questions about the substituted system (with copies to the Owner and the Architect). Until that design professional's documentation, certification, and response process is in place, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the Owner and the Architect).

T-0480	BGP - Future Train Platform Wall Dimension Conflict	Closed	04/03/2013	04/17/2013	04/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Andy Khuu REQUEST: Ref. Dwg. S1-2054, S1-2055 Drawing S1-2054, at Grid line E/13 calls out Future Train Platform Room Walls to be 1'- 2" Typ, UNO. Drawing S1-2055, at Grid line C/22 calls out Future Train Platform RM Walls to be 1'- 0" Typ. UNO. Please clarify the proper dimension of the Future Train Platform RM Walls.							
SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The note for future train platform room wall thickness apply per zone sheet. Therefore the future train platform walls are confirmed to be 1'-2" typ UON on S1-2054 and confirmed to be 1'-0" typ UON on sheet S1-2055. Note that for S1-2055, there are 2 future train platform rooms - one at gridline C between 21 and 22 and the other at gridline E west of 19.9.				
T-0481	BGP - Concourse Slab Penetration Sleeves	Closed	04/08/2013	04/18/2013	04/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon REQUEST: Ref Dwg. A1-2842-2851 In SCCI's experience unanticipated modifications and adjustments to the plumbing system are inevitable. Because of this SCCI requests not installing vertical block out sleeves in the concourse level for plumbing prior to slab placement. SCCI shall core penetrations after the slab is placed. The slab shall be scanned for rebar prior to coring to avoid unnecessary rebar strikes. This will allow for any unforeseen modifications or adjustments and ensure there are no unnecessary or extra penetrations in the concourse slab. Please advise if this is acceptable.							
SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 4/11/2013 It is not acceptable to post-core (or post-drill) penetration into the lower concourse slab, except where specifically approved by the Structural Engineer of Record. Contractor shall coordinate penetrations with other trades and embedded assemblies in concrete as required by specifications. Post-installed modifications/adjustments shall be submitted for review.

T-0484	BGP - Water Welding Test	Closed	04/05/2013	04/15/2013	04/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Specification: 05 50 10- 2.5.C.2 Per the discussions held at the Metal Fabrications Preparatory DFOW meeting, SCCI is requesting a variance from Spec Section 05 50 10 - 2.5.C.2. This Spec. is feasible in a shop environment prior to galvanization and an effective means to dry and remove water upon completion of testing. These sleeves will be continuously welded in the field both before and after the horizontal waterproofing is installed (depending on the type of sleeve), therefore making it very difficult to seal and handle the water upon completion of the test. Discussions were held regarding leaving the water between the sleeve and pile and evaporating over time. SCCI sees this as a concern due to the backside of the weld and the heat-affected zone will not be galvanized and will potentially become a point of corrosion. SCCI requests 100% visual inspection on both the root and cover passes in lieu of filling the sleeve gap with water. Is this request and variance acceptable?			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The sleeve joints are to be water tight. Water testing of welds as required in the specification is to be executed. Please submit a test procedure description.				
T-0485	BGP - SCCI Issued Drawings	Closed	04/08/2013	04/18/2013	05/02/2013	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification: 033020							
Pursuant TJPA's response to RFI T-0486 please reference attached letter from SCCI's concrete supplier Cemex. Cemex has performed the set time test to evaluate the time at which at which the onset of hydration occurs for mixes 1556034 and 1558218. For the two mixes referenced herein, is it acceptable to extend the concrete delivery times to 2 hours?		Extending the concrete delivery to 2 hours is acceptable as proposed in RFI T-0486 provided that the tested mixes match approved mix designs.					
		It is not clear that the tested mixes were the approved mix designs for the mat and foundation wall (we assume the RFI means 3'-0" exterior foundation wall and not any other wall or shearwall and our response only applies to this item) as the mix numbers and/or the mix descriptions do not match any approved mix design.

	REQUEST: Ref Dwg. 2/A1-8711 Please reference Detail 2 of A1-8711 of the Contract Drawings and the attached letter from Deneef/Grace. Detail 2 of A1-8711 calls for a 6" diameter, 18 ga. galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Spec Section 07 12 10. The attached Deneef/Grace technical letter dated 04/05/13, states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and affect the curing capability. Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The manufacturer states that the waterproofing ability of the material in this configuration would not be compromised. Please review and advise.	SUGGESTION:					
			ANSWER:	Accept Suggestion: <input type="checkbox"/>			
				The design team does not object to your proposal.

T-0498	BGP - Waterproofing Mock Up	Closed	04/18/2013	04/18/2013	04/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Specification: 07 12 10 - 1.6.C.2 The waterproofing manufacturer's field representative/installer are to construct a 10'x10' on site mock up of the full waterproofing assembly. Upon completion of the mock up (excluding any major waterproofing deficiencies), SCCI intends to utilize it as part of the permanent structure. Is this acceptable?			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> It is suggested, but not a requirement, the mock-up is installed separate from the work to allow the mock-up to be referenced in the future. Installing the mock-up as part of the work has some benefits in uncovering additional site issues. 2. All shop drawings related to the waterproofing and the proposed materials to be used have not been submitted to the design team for review at this time. The mock-up shall utilize the materials confirmed in the shop drawing process. If the mock-up is constructed with the wrong materials, the mock-up may need to be reconstructed with the proper materials based on the TJPA Representative's determination as to the acceptability of the materials utilized in the mock-up. 3. The mock-up is scheduled to be constructed today. The overall waterproofing work may not happen immediately, in which case the mock-up may need to be replaced if it is not properly protected until the remainder of the work is installed.				
T-0499	BGP - Geothermal Manifold Location for Fields1 & 2	Closed	04/18/2013	04/28/2013	04/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Drawing: SK-3 Per the contract drawing, the manifold is to be located at an elevation no greater than 14' below finish grade (street) elevation. Per conversations in the preparatory DFOW meeting and other coordination meetings, the Engineer planned to have the manifold in a specific location. Attached is an elevation drawing for Field 1 & 2 Manifolds. Please confirm that the attached elevation details work with the designer's intent for the manifold locations for Field 1 & 2.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Height of vertical sleeve penetrations through the foundation wall is acceptable for loop fields 1 and 2. Please submit similar clarifications for all further ground loop riser penetrations.

T-0501	BGP - Slide Bearing Connection details	Closed	04/18/2013	04/28/2013	04/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper			To: Turner Construction Company Gary Krutsch				
Co-Author: Shimmick Construction Company, Inc. Jesse Dillon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Drawings: S1-3204 and S1-3205 The two drawings detail the slide bearing assemblies at the east wall and vehicle/bike ramp. Detail 9-A on S1-3204 does not detail how the 10 gauge carbon steel plate is connected to the bottom support. Similarly, Details 2,3,6 and 7 on S1-3205 do not detail how the assemblies are connected to the embedded plates. Please provide details on connections between slide bearing assemblies and support/embedded plates.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 9/S1-3204: Provide 1"@4"OC max 1/8" fillet weld with 1" min at each corner along each side of the 10 gauge carbon steel plate attachment to the bottom support. Details 2 & 3 on S1-3205: For 16ga plate to embed plate, weld shall be 1/8" fillet, 2" @3"OC all sides. For reinforced elastomeric backing to steel plate, bonded attachment per manufacturer. Details 6 & 7 on S1-3205: For 16ga plate to embed plate, weld shall be 1/8" fillet, 1"@3"OC all sides. For detail 6 only, reinforced elastomeric backing to steel plate, bonded attachment per manufacturer.		
<hr/>

	The details call for various pieces of the slide bearing assemblies to be continuously and tack welded to plates. See clouded callouts on attached drawings. No welding details are provided with the callouts. Please provide details for continuous welds and spacing for tack welds.						provide 1"@4"oc max 1/8" fillet weld with 1" min at each corner along each side of the 10 gauge plate.
T-0503	BGP - Geothermal Pipe Loop Bends	Closed	04/18/2013	04/18/2013	04/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Per the geothermal pipe manufacturer's (Performance Pipe) recommendations, the geothermal pipe should not be bent in a radius smaller than 25 times the pipe diameter. For the geothermal pipe loops, this equates to a bend radius of 41.5". However, the goethermal design drawings depict the loops to be 60" on center that would leave a large overlap (in theory) of almost 24"/2'. To achieve a 41.5" radius, the trench spacing will have to be increased to 83" between the supply and return trench. Please note, that the pipe manufacturer discourage "bulbing" the end of the loop and recommended resolving the issue away from bending or "bulbing" the end of the pipe loop. S3H Inc. is proposing to overlap half of a loop onto another such that the spacing between pipes remains at a 4' minimum (per RFI T-0493). This would create a 8' minimum distance between the supply side of a loop and the return side of a loop. In doing so, a portion of the two overlapping loops would be crossing. Is this acceptable? Please find attached drawing #1 as a reference of the proposed layout. Please note that this proposed method would change the reverse return self balancing configuration of piping. This proposed method also has the possibility of being impacted by various micropile conflicts. S3H Inc. is also proposing as a fix to field one to install 2 fused - 90 degree elbows at the end of each loop in a U-shape configuration using the current, as installed dimensions between the loops. Please find attached Drawing #2 depicting the 90 degree elbows on the loops		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> WSPFK Response: Maintain pipe manufacturers' minimum long term bend radius as required per specifications with loop arrangement as shown on contract documents. Large Radius bends following the manufacturers' minimum pipe bend radius are an acceptable practice per IGSHPA standards (IGSHPA Design Manual Section 7.6.2.1). James Bradshaw 4/19/2013				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
<p>This would eliminate the required 83" bend diameter. This is least impact proposal to rectify the already installed field 1, but would be an additional cost.</p> <p>Please advise as to how to proceed with Field 1 as well as the remaining 14 Fields.</p>							
T-0504	BGP - Radius Foundation Walls - R=637.63'	Closed	04/19/2013	04/29/2013	05/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Ref: Submittal Package T0600-030 SCCI's plan is to construct the R=637.63' foundation walls in 16' chords. Layout of the construction joints shall be per approved as noted CJ layout submittal. R=637.63' foundation wall runs along the Southwest portion of the project, from GL 3 thru GL 16, or SCCI's wall pours W160 thru W174A. See attached sketch of the wall detail for clarification. Is this acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposal to layout the wall in 16' chord segments is not acceptable. The foundation wall assembly is designed with a 2" zone for the waterproofing assembly and a 3' thick foundation wall. Providing chord segments instead of a curved radius will reduce the thickness of the foundation wall.			
<hr/>							
T-0504.1	BGP - Radius Foundation Wall Formwork	Closed	11/19/2013	11/29/2013	11/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Please reference RFI T-0504. SCCI plans to construct the south foundation walls from GL2.75 to GL 12.08 in 8' chords. See attached sketch for clarification. 8' chording of the walls will keep the wall faces within the construction tolerances. Is this acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/22/2013 RESPONSE: The 8' chording on the curved part of the foundation wall, as proposed in the RFI, is acceptable.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref. Dwg. A1-8710, A1 -8711, S1-3003 Please confirm that there is no protection board installed on top of the waterproofing membrane to receive protection slab. Drawing S1-3003 shows protection board, while A1-8710 & A1-8711 does not.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Protection board is not required on top of the waterproofing membrane which is to receive protection slab, as shown on the architectural drawings A1-8710 & A1-8711.		
T-0506	BGP - Continuous Horizontal Concrete Inserts	Closed	04/22/2013	05/02/2013	05/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Drawing: A1-6231 Please reference the attached sheets regarding continuous concrete inserts. On the enlarged detail C of A1-6231 SCCI is proposing the layout of the horizontal concrete inserts. Raising the bottom insert 1- 1/2" and lowering the top insert 1" will provide a greater clearance between the inserts and the construction joint. Achieving a greater clearance from the construction joint will reduce the risk of rock pockets or voids. Please confirm these dimensions as acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposal to raise the bottom insert 1 ½" and lower the top insert by 1" is acceptable.		
T-0507	BGP - Continuous Concrete dobie-mat slab	Closed	04/22/2013	05/02/2013	05/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please see attached sheets regarding mat slab bulkhead forms. SCCI is proposing the use of a continuous concrete dobie as part of the bulkhead design along the vertical construction joint. The continuous dobie will be installed with the reinforcement mats and will act as a cast-in portion of the formwork. The dobie will become a permanent member and will meet all specifications that the mat slab concrete mix design requires. Please confirm			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The use of a continuous dobbie acting as both reinforcement support and permanently cast-in construction joint form is not acceptable to Thornton Tomasetti. We are concerned that the continuous nature of the proposed dobbie will increase likelihood of introducing two cracks in the mat (one at each face of the dobbie). Per spec, bottom reinforcing bars in mat slab shall be supported by precast concrete bricks

T-0510	BGP - Internal Bracing Pin Pile #8 in conflict with Moment Beam BMATV	Closed	04/23/2013	05/03/2013	04/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Robert Kjome				
Co-Author: Webcor Construction LP Kirk Nielsen							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please reference attached marked up sheet S1-2202.			Per discussions during 04/25/2013 "W/OJV Assist Meeting", this pin pile is being re-visited by Contractor to consider being eliminated as well as to be coordinated with the in-progress re-bracing solution. Please close this RFI as currently presented.				
The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. WOJV is requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.							
Please advise.							

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0510.1	BGP - Internal Bracing Pin Pile #8 in conflict with Moment Beam BMATV	Closed	05/02/2013	05/14/2013	05/15/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please reference attached marked up sheet S1-2202.					At pin pile #8 location, we will allow contractor to block-out the Lower Concourse beam. Contractor shall limit the width of block-out to 1/3 the width of the beam and refer to GR-9 for other block-out info. Block-out reinforcement shall be included in rebar shop drawings.		
The location of internal bracing pin pile #8 conflicts with moment beam BMATV. General Note GR-9 on sheet S-0005 precludes blocking out moment frames. Upon submitting for the internal bracing system the TG03 BSE subcontractor was not aware of the location of beam BMATV to coordinate around. On 4/23/13 WOJV submitted RFI #T-0510 requesting a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8. During the 4/25/13 "WOJV SE Assist Meeting," when the issue was brought up, a PMPC employee suggested prematurely removing strut STA09 because it has diminished load. On 4/30/13 WOJV received RFI response #T-0510 stating pin pile #8 was going to be removed hence WOJV should close the RFI #T-0510. In addition to strut STA09 pin pile #8 supports strut #STB09 which is carrying a load, not that the internal bracing EOR would allow the premature removal of two strut levels. WOJV again requests a variance from note GR-9 and is requesting to block out beam BMATV around pin pile #8.					Note that the Lower Concourse structure acts as a brace for the foundation wall. Contractor is responsible for the stability of the structure per GR-4 as well as coordinating with other packages.		
Please advise.					Note that the RFI mis-quotes the reason why the original RFI #510.0 was commented to be closed		
T-0511	BGP - Deneef Swellseal at Electrical Grounding System Boots	Closed	04/23/2013	05/07/2013	05/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcoran To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please reference SCCI RFI #130, Detail 5/A1-8710, and the attached letter. Detail 5/A1-8710 calls for 2" diameter, 18 ga galvanized steel boot to be adhered with trowelable grade adhesive and filled with urethane sealant. Submittal #TG0600-024 approved the use of Deneef Swellseal WA which is the product called out in Specifications 07 12 10.					The manufacturer's recommendations are acceptable.		
The attached letter Deneef/Grace technical letter dated 04/05/13 states that filling the entire boot with Deneef Swellseal is excessive and state that filling the entire boot with Swellseal WA is more than necessary and may affect					The question on RFI T-0511 is very similar to the question on RFI T-0496 and could have been consolidated in to one RFI, or better yet, this installation method should have been researched and proposed on the Waterproofing shop drawing submittal		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>the curing capability.</p> <p>Deneef/Grace suggests that the material be installed 2-3" deep and topped with a non-shrink grout such as "Rapid Set CT Construction Grout" or "Rapid Set Cement All" to contain it in the boot. The Manufacturer states that the waterproofing ability of the material in this configuration would not be compromised.</p> <p>Please review and advise.</p>

T-0513	BSE - Steel plate at CDSM piles 738-739	Closed	04/24/2013	05/04/2013	05/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Lynn Kowallis	To: Turner Construction Company		Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Balfour Beatty Infrastructure, Inc.		Shad Gardner					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: Specification Section 31 56 13							
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 738-739 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 738-739 and injected grout behind it.		It is acceptable to leave the steel plate in place as proposed in the RFI. This will result in the waterproofing membrane encroaching in on the foundation wall at pile 738. The foundation wall at pile 738 may be reduced to 34 5/8" thickness and the foundation wall vertical reinforcement shall be modified per proposed solution presented in RFI 0448.0 for wall thickness reduction up to 3" and applied between piles 737 and 739.					
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #738, the face of plate is 3' 0-5/8" back from the inside face of concrete wall and at pile #739 the plate is 3' 1-7/8" back from inside face of concrete wall. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.		W/O Note: Acceptable provided BBII take a survey of the face of the plate and provide coordinates.					
Please confirm this is acceptable

T-0513.1	BGP - Steel plate (RFI #T-0513) encroachment between CDSM Piles No. 738 & 739	Closed	05/16/2013	05/26/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
As depicted in attached SK-0153.1, the encroachment of the steel plate is primarily in the mat slab pour. WOJV is proposing to locally adjust the reinforcement in the mat slab pour to achieve the required cover. There will be no change to the reinforcement on the wall width.					Accept Suggestion: <input type="checkbox"/>		
As a means of chamfering the offset the result of steel plates edges to the face of CDSM wall: WOJV is proposing to mechanically fasten expanded metal lath to the CDSM beams using powder activated fasteners. Rapid set mortar is then applied to the required depth ensuring all edges of the plates have a gradual slope back to match the existing face of the CDSM wall.					ARUP Response:		
Please confirm this is acceptable.					This is acceptable however this work should be coordinated with other disciplines.		
					Thornton Tomasetti Response:		
					It is not clear from the RFI when the Contractor proposes "...no change to the reinforcement..." if this means the unmodified wall contract bars stay in original location or if the bars will move inward. Based on the provided encroachment info, there is still encroachment in the wall. If the bars are proposed to move inward, the thickness of the wall is reduced and therefore the original response of T-0513 shall apply. If the Contractor proposes not to modify the wall reinforcement, please submit technical justification.		
T-0514	BGP - Mech Room Slab Finish Elevation and Grate Clarification	Closed	04/24/2013	05/04/2013	04/30/2013	Potentially	<input type="checkbox"/>

The TJPA Representative does not believe the Covers for SPG, SE, and OSI are included in TG06 scope of work.	
T-0515	BGP - Epoxy Coating for Form Saver Couplers	Closed	04/23/2013	05/07/2013	05/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: Shimmick Construction Company, Inc. Ben Gordon REQUEST: Ref. Dwg. 6/S1-3001 Please confirm the typical splice form saver couplers (for future const.) as called out in detail 6/S1-3001 are to be epoxy coated per ASTM A-775 specifications.			To: Turner Construction Company Gary Krutsch SUGGESTION:			Answered By: Adamson Associates, Inc. George Metzger ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that epoxy coating of splice form saver couplers (for future const.) as called out in detail 6/S1-3001 shall be per ASTM A-775. In compliance with manufacturer's requirements (IAPMO-ER #0129), all threads of the coupler are to be free of debris, including epoxy coating, at the time of coupling, thus epoxy coating is to be applied to the exterior surface only (not the thread area). Note that the epoxy coating for the form saver is only required for the case where the form savers are used for splicing bars for future construction as noted in the detail 6/S1-3001. Other couplers do not need to be epoxy coated.

Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
SCCI and S3H Inc. are looking to confirm conversations from the Geothermal Design Engineer from the 4/24/2013 progress meeting.					The Geothermal Piping can "bulb" eccentrically and concentrically to incorporate the minimum 25D bend radius. -WSPFK Response: 25 Times OUTSIDE DIAMETER of pipe required for bend radius. Eccentric and Concentric "bulbs" are acceptable to achieve the radius		
-The Geothermal Piping can "bulb" eccentrically and concentrically to incorporate the minimum 25D bend radius. -The bulbing of the geothermal loops can cause the loops to overlap and this is acceptable at the bulb locations. -Due to the bulbing, the geothermal loo[may become in conflict with the micropile locations, please confirm that the pipe loopspacing can be adjusted. -Please confirm that the staking of the geothermal loop pipe is acceptable to achieve the 25D bend radius requirement as long as the stakes are removed for backfill.							
					-The bulbing of the geothermal loops can cause the loops to overlap and this is acceptable at the bulb locations. WSPFK Response: This is acceptable. At the meeting S3H agreed to provide some backfill between the pipes to prevent kinking of the pipes when they cross over each other.		
					-Due to the bulbing, the geothermal loo[may become in conflict with the micropile locations, please confirm that the pipe loopspacing can be adjusted. WSPFK Response: Loop Spacing at the bulbs can be less than the 4'-0" from RFI 473 in the areas required to miss micro piles but should return to 4'-0" minimum spacing after the conflict is passed.		
					-Please confirm that the staking of the geothermal loop pipe is acceptable to achieve the 25D bend radius requirement as long as the stakes are removed for backfill. WSPFK response: Temporary supports to

maintain the 25 time OUSIDE DIAMETER bend radius are the means and methods of the contractor.							
T-0518	BGP - Differential Movement in Waterproofing Layers	Closed	04/25/2013	05/05/2013	05/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper To: Turner Construction Company Gary Krutsch			Answered By:Turner Construction Comç Jeff Thiel				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the Engineer's response to Submittal TG0600-023.2, the Contractor is to install the waterproofing system to incorporate "provisions for differential movement". Please reference the contract documents that specify the design criteria for the differential movement of the structure. Please advise to a specification or drawing note that details such.					RFI retracted as a request by W/O		
T-0518.1	BGP - Differential Movement in Waterproofing Layers	Closed	05/01/2013	05/10/2013	05/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the response to SCCI RFI #146 - Differential Movement in Waterproofing Layers, is movement expected and if so, how much movement is expected? If movement is expected, please provide Specification Section or Contract Drawing stating so.					As with all buildings there is expected to be movement due to settlement and at this site hydrostatic uplift on the building after the construction phase dewatering is turned off as well as movement from seismic events.		
					Please reference the geotechnical report for information regarding these issues.		
					W/O Note: The Geotechnical report was included in TG06 package as a reference document.

	REQUEST: Ref: Submittal TG0600-200.1 Please reference submittal TG0600-200.1 (cast-in-place concrete mix design - Protection Slab). Per the referenced submittal and submittal response, sent to SCCI April 12, 2013 and returned as "Make Corrections Noted," SCCI intends to use 1" aggregate in the above mentioned cast-in-place concrete mix. In addition, the above mentioned mix design was also reviewed at the TG06.0 Protection Slab Preparatory DFOW meeting, held April19, 2013. Please confirm the use of 1" aggregate in the Protection Slab is acceptable.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed: the use of 1" aggregate at the Protection Slab is acceptable.		
T-0522	BSE - Micropile Relocation- Performance Test Pile Zone 2 (Sequencing)	Closed					
	From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch				04/29/2013 05/09/2013 05/03/2013 Potentially <input type="checkbox"/>		
	Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller				Answered By: Turner Construction Comf Stacy Wilson		
	REQUEST: Ref: S1-2023 The primary performance test micropile is yet to be installed for Zone 2. Due to sequencing advantages, BBII proposes relocating this pile from the original location shown in S1-2023 to GL 15 between B&C. The relocated micropile location is within the geothermal area; however, it does not appear to impact geothermal piping. See attached sketch. Please confirm this is acceptable.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> At the request of W/O, this RFI will be pulled back from the design team, and superseded by RFI T-0522.1.

T-0522.1	BSE - Micropile Relocation- Performance Test Pile Zone 2 & 3 (Sequencing)	Closed	05/02/2013	05/12/2013	05/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller							
REQUEST:			SUGGESTION:		ANSWER:		
Ref: Specification Section 31 63 33 1.1B					Accept Suggestion: <input type="checkbox"/>		
This RFI supersedes RFI T-0522. DTDS proposes to reduce the design length of the Micropiles East of Gridline 17 (EG17) from 80 feet to 70 feet. DTDS has shown through testing and reduced post-grouting that a higher soil-grout bond than originally assumed in the design can be achieved in the field. DTDS will install two (2) performance test piles to verify the capacity of a 70 foot micropile EG17. One performance test pile will be installed in Zone 2 at gridline 17 between piles E005 and E008. The second performance test pile will be installed in Zone 3 at gridline 20 between piles E136 and E137. DTDS believes that 70 foot micropiles EG17 will still achieve the maximum required load capacity of 2.4 times Design Load (560 kip). The performance test piles will be installed with one (1) round of post-grout. Based on the results of the testing, additional post-grouting can be provided as necessary. Upon completion of the testing DTDS will submit revised micropile working drawings and calculation supplement. All production micropiles will continue to be proof tested per the Specifications. The performance test locations provided would supplant the performance test locations shown in the Contract plans for Zones 2 and 3. Please confirm this is acceptable.					The proposed relocation for the zone 2 performance test micropile is acceptable. The proposed relocation for the zone 3 performance test micropile is not acceptable. (The contract documents indicate the zone 3 performance test micropile to be located at GL E and to the east of GL 22. If the contractor desires to relocate the zone 3 performance test micropile, the proposed location will not be approved at locations west of GL 22.) Thornton Tomasetti does not object to the other aspects of the RFI except to note that the maximum required load capacity for the performance test remains at 2.8 times the Design Load (not 2.4), per the contract documents.		

T-0523	BGP - Floor Drain Elevation in Foot Traffic Areas	Closed	05/01/2013	05/09/2013	05/07/2013	Potentially	<input type="checkbox"/>

T-0524	subject to foot traffic. b. Set drain rims minus 1/8-inch to 1/4-inch from finish floor elevation, so as to provide positive drainage, where drain is not subject to foot traffic.	Closed	05/08/2013	05/18/2013	05/08/2013	Potentially	<input type="checkbox"/>							
	Please provide a map of areas which are to be subject to foot traffic.													
	From: Webcor Construction LP Robert Kjome							To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon													
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>								
Reference Drawing: S1-3201, A1-8710				Protection slab to be 4" thick typical throughout, but can locally reduce to 3".										
SCCI will set the top elevation of the protection slab at - 40.67' as shown on the attached contract drawing. Protection slab thickness may vary due to mudslab elevation, mudslab heaving or built-up waterproofing membrane, adhesive and flashings.														
Please provide minimum thickness for protection slab.														
T-0525	BGP - Asphalt Cement Specification	Closed	04/30/2013	05/10/2013	05/03/2013	Potentially	<input type="checkbox"/>							
	From: Webcor Construction LP Lynn Kowallis													
	To: Turner Construction Company Gary Krutsch													
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon							Answered By: Adamson Associates, Inc. George Metzger						
	REQUEST:							SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Ref: Specification Section 07 12 10 - 3.2.E.				The Asphalt Flashing Cement product should conform to ASTM D3747 for bituminous emulsions or D4586 Class I Type I for solvent bearing depending on how dry the substrate is. An example is Karnak's Perfectseal, Flashing Cement, Amphibikote or "Slaters Cement". The Contractor shall provide a shop drawings submittal with their proposed product for use on the project.										
Please reference Specification Section 07 12 10 - 3.2.E. Specification 3.2.E states "Install two plies of asphalt saturated felts over the protection board in walnut sized gobs of asphalt cement sufficiently spaced to hold felts in place." Spec Section 07 12 10 does not specify the type of asphalt cement to be used. SCCI submitted Roofxtender RX-100 Flashing Cement which was rejected. Shimmick is now proposing to use Laurenco recommended AIM # 340 Flashing Cement. Please confirm that this is acceptable.

T-0527.3	BGP - Revision to the top of the foundation wall Elevations TG06	Closed	10/25/2013	11/04/2013	10/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Gary Krutsch				
Co-Author:							
REQUEST: Due to the revision of the Zone 4 internal bracing and the use of the already procured steel sections the lookout installed for level A bracing were installed at a lower elevation than first planned resulting in the need to revise the finished elevation of the foundation wall downwards for the TG06 package. This scope reallocation will now be moved to the TG07.2 work package. See sketch SK01 attached for TG06 foundation wall finish elevations. Please confirm if this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Judy Long 10/25/2013 RESPONSE: This RFI involves the Contractor's Means and Methods. It is not the Design Team's role to define Scope of Work.		
T-0528	BSE - Zone 4 Level 2 Excavation	Closed	05/02/2013	05/12/2013	05/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kody Cooper To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh							
REQUEST: Per sheet GT-1111, excavation at each level is limited to 3' below the centerline of internal bracing struts. In zone 4, the spacing between Level A and B struts is only 8' O.C. (typically 12' to 14' elsewhere), which provides extremely limited clearance below Level A for excavation & demolition equipment at level 2 excavation. BBII requests the limit of level 2 excavation be extended to 7' below centerline of level B struts. (Note: the plans already allow for a +/- 2' variation in bracing elevation from those shown on sheet GT-1111. Therefore, BBII is only requesting two additional feet of excavation over what is allowed based on the contract drawings). Please advise if this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: It is acceptable to overexcavate the center of the excavation below the centerline of the level B struts in accordance with the illustration titled Stage 5 on sheet GT-1111 of the drawings. Berms along the shoring wall must be maintained.

The 3D database would be used for reference only and will not be used for construction. SCCI understands that the 3D Database is subject to change as the project design evolves. As a user of this 3D database, SCCI accepts the risk and acknowledge that the data is subject to change. SCCI also acknowledges the terms and conditions outlined in the Transbay Transit Specification Section 01 31 26.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The updated In-Progress Revit computer model will be issued to TJPA for review and comment on May 31, 2013. TJPA will forward this model to the Contractor for information, review, and comment. The Revit model is clearly clarified as not a Contract Document for use in construction. The documents issued on May 31, 2013 are not being issued for bid or construction. The Contractor shall determine when, for what purpose, and how the model is shared with their Sub-contractors.				
T-0535	BGP - Elevator Opening Encroachment at Concrete Beam B131	Closed	05/07/2013	05/16/2013	05/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Drawing: A1-2842, S1-2202, S1-3401 Please reference attached Contract Drawings A 1-2842, S 1-2202 and S 1-3401. Drawing S 1-2202 calls out concrete beam B131 running east to west between the elevator and Stair openings. The dimensions of concrete beam B131 are 22 inches wide and 36 inches high. See drawing S1-3401 for beam schedule. A1 -2842 calls out the spacing between openings to be 1'-9". This makes the elevator pit encroach 1 inch into concrete beam B131. Shall the elevator opening be relocated 1 inch to the south to accommodate the concrete beam? Please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The openings in the Lower Concourse slab shall remain as shown on A1-2842. The beam shall be modified to 21" wide by 36" deep. Longitudinal reinforcement for this beam shall be 2-#10 for continuous top bars, 3-#10 continuous for bottom bars, and 3-#10 additional short bottom bars (L=18'-0" centered at midspan). Stirrups shall be #4's, type 2, 12@8"OC from each end, balance at 12" OC. Top & bottom clear cover to the stirrup shall be 3" and 1.5", respectively.

T-0539	BGP - ASTM 123 Galvanizing Variance From: Webcor Construction LP Kody Cooper Co-Author: Shimmick Construction Company, Inc. Ben Gordon REQUEST: Reference Specification: 05 05 15.3.3.B and the attached letter from AZZ Galvanizing The steel pipe penetration sleeves are to be coated under the Structural Shapes and Plate Material Category with a grade of 100 and 3.9 mils thickness per Tables 1 & 2 of ASTM A123. The first 2 shipments of steel penetration sleeves (approximately 12 pin pile and 17 trestle pile) were coated under the pipe and tubing material category with a Grade 75 per Table 1 of ASTM A123. This coating grade requires 3.0 mils per Table 2 - Coating Thickness Grade. SCCI is requesting that the Grade 75 be allowed for the first two pin pile in Area 1 that are fit and welded to the intermetallic layers having still penetrated the material and per the attached letter, the process used will insure a long service life. The average thickness for the specified pin pile above is 3.2 mils. Is this acceptable? T-0541	BGP - Protection Board Installation at SW Corner	Closed	05/09/2013	05/23/2013	05/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref Spec. 07 12 10- 3.2.D Please reference Specifications Section 07 12 10- 3.2.D. This spec states the following: "Install protection board on vertical surfaces with long dimension vertical and the polyethylene film side facing the soil/cement surfaces. Secure 1 /4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c " At the SW corner of the project, the soldier beams are spaced greater than the width of the protection board. We suggest rotating the protection board 90-degrees so that the long dimension is horizontal instead of vertical. This would allow for attachment to the soldier piles and the inside corner of protection board to be heated and formed into the corner. We also suggest using this method where pile spacing exceeds 4' on center. Please review and advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The contactor's suggestion to rotate the protection board 90-degrees is acceptable where the soldier pile spacing and the waterproofing manufacturer require.				
T-0542	BGP - Drainage Mat Installation Clarification	Closed	05/09/2013	05/23/2013	05/13/2013	Potentially	<input type="checkbox"/>

T-0543	BGP - Galvanizing Varying Material Category Variance	Closed	05/09/2013	05/23/2013	05/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref. Spec. 05 05 15- 3.3.B.2 Reference is made to Specification Section 05 05 15- 3.3.B.2 and the attached 'Ask Dr. Galv' galvanizing article. Section 3.3.B.2 states "When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade." For the dewatering and piezometer mat slab penetration sleeves, A513 tube is being used, which has a Grade 75 designation per ASTM A123. Based on the above specification, Grade 100 must be followed because these sleeves have plate components. The reason Grade 75 is specified in ASTM A123 is that it is the minimum consistent attainable galvanizing coating for the thickness and chemistry of the material being coated. As an aluminum killed steel product, it is not a natural catalyst to galvanizing as silicon is per the attached article. To specify Grade 100 goes beyond A123 specifications. Therefore, SCCI requests Grade 75 be used, with a minimum coating thickness of 3.0 mils, for the dewatering wells and piezometer mat slab penetration sleeves. Please be advised if Grade 100 (3.9 mils) is required, the galvanizing process to attain the thicker coating can lead to embrittlement and delamination of the coating. Is Grade 75, with a minimum 3.0 mil coating thickness on the dewatering well and piezometer mat slab sleeve penetrations, acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per specification section 05 05 15 / 1.3 submit shop drawings of the galvanizing schedule, submit samples of the galvanizing, and submit monthly certificate signed by the galvanizer. If in the shop drawing process the Contractor submits a certificate signed by the galvanizer as required by specification section 05 05 15 / 1.3D stating the proposal above meets the recommendations of and is in compliance with the specified ASTM standard's minimum requirements, the Contractor's proposed galvanizing thickness will meet the design intent of the contract documents. The last galvanizer certificate received in the Transbay shop drawing process was dated January 4, 2013 and it is not clear if that shop drawing covers the item referenced in this RFI.

T-0550	BGP - Request to Revise Lower Concourse Elevation	Closed	05/14/2013	05/24/2013	05/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Exhibits: A - G			The contractor's suggestion to revise the Lower Concourse slab elevation is NOT acceptable. The contractor is to follow the elevations set out on the latest Below Grade Package documents.				
The BSE IFC drawing S1-3201 (Exhibit-A) depicted the Lower Concourse slab at an elevation of -8'-8" between grid lines 9-3 and West of grid 3 & North of grid E.6.							
Although specification section 01 13 00.1.3.H.3 precludes the TJPA from making scope changes in submittals, on 3/29/11 the TJPA returned submittal package ID TG0300-541/submittal ID TA2010-315500A10 (Exhibit-B) which included a note stating the Lower Concourse level slab varies as follows:							
T/Lower Concourse slab East of gridline 9 = -8'-2"							
T/Lower Concourse slab West of gridline 9 = -5'-5"							
Although specification section 00 07 00.1.01.37 stipulates a Field Order is not to involve a change in Contract Sum or Time, on 9/7/12 after the zone-1 level-B bracing and trestle was installed (Exhibit-C), the TJPA issued Field Order #T-00008 / ASI #0097 (Exhibit-D) which revised the top of the Lower Concourse slab elevation between grid lines 1-5.5 from -8'-8" to -5'-5" a difference of -3'-3" reference sheets S1-3201 (Exhibit-E) and S1-2202 (Exhibit-F).							
The latent elevation change of the Lower Concourse slab has created proximity conflicts with the previously installed internal bracing and trestle steel depicted on the attached marked-up drawings (Exhibit-G).							
WOJV has surveyed the internal bracing and trestle steel conflicting with the Lower Concourse slab and believes the most cost and schedule efficient solution would be to again revise the elevation of the Lower Concourse slab to -6'-6".							
Please advise if the proposed elevation revision is acceptable.

T-0551	BGP - CR T-069 Wall Penetration Link Seals	Closed	05/14/2013	05/28/2013	05/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Ref Dwg. 4/A1-8712 SCCI is in receipt of CR T-069 regarding the below grade modifications. On Plan Sheet A1-8712, Detail 4 was modified to relocate the second link seal to opposite end of the penetration sleeve. Originally, both link seals were located in series at the surface of the concrete wall. This relocation is not constructible in that the link seal cannot be installed or tightened properly when located 3ft into an embedded sleeve. In addition, this link seal cannot be installed prior to placing concrete due to access issues adjacent to the CDSM wall. Is it acceptable to return the relocated link seal to it's original location near the surface of the concrete wall? This would be per the original design shown on A1-8712, Detail 4.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to have the linkseals installed in the sleeves from the inside, with exception of the incoming electrical service ducts to the transformer vaults that are located inboard of the exterior walls. This applies to the sleeves serving electrical vaults B1322, B1325, B1561 and B1562. Because these sleeves must be concrete encased as they enter the building and cross the service corridor, the linkseals need to be provided at the exterior side of the foundation wall penetration to prevent migration of water through the sleeves across the corridor.				
T-0552	BGP - CR T -069 Electrical Scope	Closed	05/14/2013	05/28/2013	05/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcorran To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Chris Williams			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: SCCI is in receipt of CR T-069 regarding the below grade modifications. In the modifications, many of the mechanical, plumbing, and electrical rooms have been modified. In some cases, additional rooms had been added like that of the emergency electrical room. With theses changes, none of the electrical drawings pertaining to these rooms or additional rooms had been modified to account for these changes. Please confirm that there will be no electrical changes other than grounding as a result of CR T-069.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The electrical scope is identified with clouds and deltas on the drawings. For future reference please include specific drawing sheets and issue information (Sheet E1-2022 - ASI#0102 dated 04/29/2013) as we are not familiar with the CR T-069 reference used in this RFI.

T-0559	BGP - ASI 102 Change Clarification at Elevator Pit Near GL 2-E 2	Closed	05/14/2013	05/28/2013	05/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Ian Corcoran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref. Dwg. A1-2812, 1/A1-9214, 3/S1-3006 Revision 0 of A1-2812 previously contained dimensions for the elevator pit near gridlines 4-E.2; however, as a result of ASI 102 revision 1 of A1-2812 no longer contain the dimensions for the elevator pit and the referenced detail 1 of A1-9214 does not either. Please provide the dimensions of the elevator pit. Also, detail 3 of S1-3006 indicates that there is a change in the thickened section of the elevator but it does not appear that there were any changes made. Please confirm if there are changes to the thickened section.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The elevator dimensions have been revised and will be included in ASI 104. Please refer to the attached SKA 2709 (based on A1-9214) for revised dimensions. Thornton Tomasetti response: Detail 3 of S1-3006 is clouded because the pit depth and plan dimensions were revised in ASI 102. While the changes will require only minimal revision of the rebar lengths/bend locations/etc for rebar fabrication, and the structural intent of the rebar detailing remains unchanged, the mat depression region on 3/S1-3006 was clouded to alert the contractor to the need for these dimensional rebar detailing revisions due to the pit resizing. (We agree that on first glance there do not appear to be any revisions to the thickened section of the detail; the revisions are graphical only, and

T-0561	BSE - Standard for Determining Buttress Concrete Strength	Closed	05/16/2013	05/26/2013	05/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Kirk Nielsen To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Spec. section 31 63 29.3.9.D states,			ACI 301 is the standard.				
"Not less than 28 days after concreting is completed, perform HQ coring over the full depth of 10% of the shafts to verify the quality of concrete and test whether the shafts are free of defects. Provide these cores for inspection by the TJPA Representative. The TJPA's Representative will select the locations where coring shall be performed and will select the cores which will be tested for strength."							
The aforementioned language in addition to spec. section 31 63 29.1.6.A which states:							
"Perform work in accordance with ACI 301, except where otherwise specified. Specifications herein set minimum results required and references to procedures to establish minimum guidelines."							
reads as if ACI 301 would be the specified standard for determining the required buttress concrete strength (specifically ACI 301 section 1.6.6.2) hence acceptance.							
Please confirm what if not ACI 301 is the standard for determining the buttress concrete strength hence acceptance.

T-0571	BGP - New Waterproofing Install Instructions (Additional Adhesive)	Closed	05/28/2013	06/07/2013	05/31/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Robert Kjome	To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: Specifications Section 071210 We are in receipt of Laurencio Waterproofing Products, Inc.'s Installation Instructions revision dated 5/15/13 and have found several discrepancies with what is called out in Specifications Section 071210. Section 8, f, iv, 4, (d), vi calls for an additional layer of adhesive on walls prior to concrete. It calls for a coat of Laurencio Adhesive over COMPLETED membrane and cold joint reinforcement applied after wall ply adhesive has cured at least (3) days and (1) to (3) days in advance of reinforcement steel application for walls. This is added scope as this additional layer is to be applied over the completed membrane and is not called out in the Specifications. Please confirm that SCCI is to use the manufacturers installation instructions	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The Contractor is to follow specification section 07-12-10 Modified Bitumen waterproofing (WPM-1) where the Manufacturer involvement is specified. Questions on the proper installation of the system are to be directed to the waterproofing membrane manufacturer. Questions on the detailed installation procedure (Waterproofing Install Instructions) should be directed to Laurencio, not to the TJPAs Reps via RFI.

REQUEST: Reference Specification 26 05 34, 3.2 B.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
The exact locations of the electrical equipment are to be provided by the TJPA through the RFI process. With the electrical equipment provided and installed at a later date under a separate contract, please provide the dimensions of the electrical equipment, boxes, and cabinets to allow for accurate electrical riser locations in the concrete slabs. The equipment, boxes, and cabinet dimensions in Zone 1, Area 1 are needed first with the areas to the east to follow.					WSP Response: To address the specific information that is being requested, please identify which "equipment" is not sufficiently located in the drawings and requires clarification. Sheet E1-0006 notes specific requirements for coordinating the location of equipment and connections. Details on sheets E1-6001 and E1-6006 provide additional location requirements. Wireways have been indicated to position the conduits stubbing out of the slabs in the electrical rooms. Plans locate the embedded light fixture box layouts. Specifications 260502.3.4 require coordination of the work and contractor's coordination shop drawing layouts for review of the electrical room layouts.

Co-Author: Balfour Beatty Infrastructure, Inc. Brandon Miller							
REQUEST: Reference : Attached Sketch This RFI supersedes RFI 375. Micropile E038 as laid out cannot be installed due to an overhead strut obstruction. BBII now recommends relocating E038 east 3'4" to be in line with E037 and E039. See attached sketch. Please confirm this is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti does not object to moving micropile E038 as proposed.			
T-0576	Wall Alignment on Westside of Zone 1	Closed	05/31/2013	06/10/2013	06/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> For the pile encroachments at the Zone 1 West and South West CDSM walls, as described and illustrated in this RFI, the Design Team confirms it is acceptable to offset the alignment of the inside face of the Concrete Foundation Walls as the contractor proposes in RFI T-0576 BGP.			
REQUEST: Webcor is proposing to change the alignment of the Concrete Foundation wall on the west elevation along gridlines 1 & X1-1. The Concrete wall which runs along gridline 1 would be offset into the structure by 0.2656' (3-1/8") (proposed Face of concrete Foundation wall would now be 15-1/8" of gridline 1). Similarly along gridline X1-1 the wall would also be offset into the structure by 0.1575' (1 7/8") these offsets would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles. See sketch SK-1 showing Cross section of concrete Foundation wall between CDSM piles 818 - 822 GL 1 in proposed revised location. Please confirm if this is acceptable.

T-0579.1	secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. The inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing with the walls. In order to eliminate these potential problems Gerdau proposes to perform a grade 80 conversion of the cross-ties such that the size of the cross-tie remains as a #4 bar but the spacing of the cross-ties are installed with uniform spacing to the horizontal reinforcing at 8" O.C. within the designed 6" O.C. ranges or 16" O.C. within the designed 12" O.C. ranges.	Closed	06/19/2013	06/29/2013	06/20/2013	Potentially	<input type="checkbox"/>
	Please advise if this grade and spacing change is acceptable.						
	BGP - Horizontal Wall Reinforcing Equal Area Conversion						
	From: Webcor Construction LP Robert Kjome	To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author: Shimmick Construction Company, Inc. Ben Gordon						
	REQUEST: Reference: S1-3201, Spec Section 03 30 20 Gerdau (SCCI's subcontractor) has recently constructed a mock-up of the 1st lift of typical wall reinforcing and identified a potential problem with congestion and quality of the final designed product. The contract drawings on sheet S1-3201 depict the typical wall reinforcing details including #8 horizontal wall reinforcing which is designed at 8" O.C. E.F. Typical. Additionally, the #4 cross tie spacing has been designed at either 6" O.C. or 12" O.C depending on the location (elevation) within the wall. With the non-uniform spacing of the cross-ties and horizontal bars the cross-ties are secured only to the vertical bars and have the potential during concrete placement to shift or slide down the vertical bars until resting on the next adjacent horizontal bar. Additionally, the inconsistent spacing of the cross-ties and horizontal bars congests the reinforcing configuration which may lead to potential problems when interfacing the concourse level reinforcing	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> TT does not see slippage of the cross-ties will be a concern if they are properly tied, and we don't see reducing the spacing of the horizontal bar from 8" to 6" will help the congestion issue raised. However, we don't take exception to the proposed change as long as it does not affect the cost and schedule.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Ref: RFI #T-0563 and Submittal #TG0600-024 Please reference the response to RFI #T -0563 and Submittal #TG0600-024. The response to Part 3 of the RFI is unclear. Is it the designer's intent to deem temporary fasteners unacceptable with or without the certifications? Or are the temporary fasteners acceptable with the certifications? Please clarify. Please note, the certifications were submitted and approved on 2/11/13 as part of Submittal Package #TG0600-024.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The use of temporary fasteners are acceptable provided that the contractor and membrane manufacturer verify that their use does not restrict the design concept which is to maintain a shear plane.		
T-0583	BGP - BBII Monitoring Instruments/Piezometers	Closed	06/06/2013	06/06/2013	06/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference Drawings: 6/A1-8711, 3/A1-8711 Per coordination discussions with WOJV (email attached), SCCI is to install BBII Piezometer sleeves per Detail 6 of A 1-8711. In this detail, the sleeve is to be blocked out of the Mat Slab and poured back at a later date contrary to the piezometer/monitoring instrument detail 3 on A1-8711. Is it acceptable to eliminate the blockout portion of detail 3/ A 1-8711 and pour the BBII piezometers into the mat slab? The ARUP piezometers will remain operational (per Detail 3/ A1-8711) after the mat slab has been poured to monitor the water table levels.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The dewatering wells shall be capped and sealed in accordance with detail 6/A1-8711. The timing to decommission the dewatering wells is stated in the specifications and the structural drawings. The piezometers installed by Arup shall be protected as they will be used until further notice. Refer to detail 3/A1-8711 for detail at the mat slab. If BBI installed piezometers, these will be sleeved and waterproofed in accordance with detail 3/A1-8711 and shall be decommissioned when directed by BBI.

T-0584.1	BSE - Abandoning Dewatering Well #3 at Shearwall	Closed	07/25/2013	08/04/2013	07/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER:				
Reference RFI: T-0584 Reference SK-001 and SK-002			Accept Suggestion: <input type="checkbox"/>				
BBI is proposing to abandon the dewatering well #3 at the mudslab level. This will mitigate the impact of shear wall dowels and penetration sleeve in the vicinity of the mat slab penetration created by dewatering well #3, in lieu of creating a blackout in the shear wall and designing rebracing to address structural concerns.			It is acceptable to abandon dewatering well #3, however the Design Team is concerned that the contractor's proposed solution, to cut off the plugged well flush with the top of the mud slab, may expose the underside of the waterproof membrane to potential damage due to differential movement. All of the mat slab penetration sleeve details were developed as mitigation in case potential movement occurs e.g. buoyancy movement.				
BBI has discussed this with Viking Drillers and have confirmed they can abandon this well. BBI is proposing to cut the pvc casing flush with the top of mudslab, drill and epoxy #4 bars 2" down from top of casing with 3" embedment. The bars will be installed in the north, south, east, and west face through the casing and are installed to better ensure the dewatering well cement plug does not upheave. They will use Type II Portland Cement with a 5% bentonite content. Waterproofing will then be installed over the dewatering well, lapping as necessary to the adjacent waterproofing.			The Design Team proposes that the mud slab is to be broken out sufficiently to allow a 4" excavation below the underside of the mud slab. The dewatering well cut off and filled. Compressible material : 4" of Styrofoam installed into the excavation and over the plugged dewatering well. Then the opening in mud slab is to be repaired with reinforced concrete infill.				
Please confirm that this is acceptable.			Note that BBII is still solely responsible for maintaining the dewatering.

Co-Author:							
REQUEST: Reference: RFI T-0584, Attached sketch Please refer to RFI 584 and the attached sketch of the proposed block out in concrete partition walls as referenced in RFI 584. The 28" x 28" blockout in the mat slab will be transferred to the blockout of the wall and be 25" from the mat slab elevation to the top of blockout. This will create 3'-0" from top of penetration sleeve to top of wall blockout. We are proposing to use formsavers and the male ends will extend the length of the blockout. Please confirm this is acceptable or provide acceptable solution.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed block-out for the dewatering well & concrete partition conflicts is acceptable provided the following: 1. Confirm the vertical bar size for max height partition at these locations. 2. Extend the vertical bars in the block-out a min 4" into the top of mat.			
T-0585	BGP - Mass Concrete Specifications	Closed	06/05/2013	06/05/2013	06/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Specifications Section: 03 30 20 3.5 & 3.11 Reference attached letter from CTL Group SCCI is asking for variance to the temperature differential requirements for the mat slab concrete. If granted, this variance would be based on performance based temperature differential limit (PBTDL), which is tailored to both the Project's mass concrete mix design and the placement. Refer to the attached letter from CTL. The intent of this PBTDL is to prevent thermal cracking, and at the same time reduce duration of the thermal control requirement. Is this acceptable?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It will be acceptable to use the contractor-proposed performance-based temperature differential limit approach for spec section 3.11.B provided the following: 1. This approach shall be approved mix-specific. 3. The maximum temperature of 3.11.B as well as remaining mass concrete specification requirements shall still apply. 4. CTL shall provide the required measurements as well as field quality control. 4. Contractor shall still remain responsible for providing a mat foundation that meets requirements of the contract documents.

T-0586	BGP - Fire Management System and Concourse Slab Electrical Scope	Closed	06/05/2013	06/05/2013	06/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Drawing: E-0006, E-0000, 6/E-2202 Reference RFI: T-0567					WSPFK Response: Per sheet note J on Sheet E1-006, the scope for TG06.0 shall include fire alarm system conduits embedded in the Lower Concourse slab that are required to serve fire alarm equipment that is located at the Train Platform level. Note that conduits for fire alarm devices on the Lower Concourse level will be provided under a separate scope package.		
Per the response to RFI T-567, the fire management system conduit is to be installed into the concourse slab per Note on Sheet E-0006 . However, per Plan Sheet E-0000, only a small grounding portion of electrical drawings are in the TG06.0 concourse slab scope. The remaining concourse level electrical drawings are "For Reference Only" and for informational purposes only. Please confirm that the only TG06.0 electrical scopes in the concourse slab are the grounding wire extensions from the mud slab (per Detail 6/E 2202-TG06.2 scope), lighting conduit and boxes for Type "F15" and Exit Signs, and 4" 90 degree elbows per Details 1 & 2 on TE 1-8000. Please confirm that outside of those scopes, all other electrical scopes of work in the concourse slab are to be part of a later electrical scope package as indicated on the E-0000 index and the "for information only" plans.							
<hr/>							
T-0586.1	BGP - Fire Management System in the Concourse Slab Only	Closed	07/12/2013	07/22/2013	07/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the response to RFI T-567 (attached), please confirm that the only slab with embedded fire system conduit is the concourse slab. All stub ups or risers will either come up out of the concourse slab for the concourse level fire management system or drop down out of the concourse slab for the fire management system on the train platform level. Please confirm that the fire management system is not embedded in the mat slab.					This RFI gets into contractors' means and methods. The contractor can route the fire alarm conduit embedded in either the Lower Concourse slab or the Foundation Mat Slab as required to provide connectivity to the fire alarm devices shown on the electrical drawings.

T-0598	BGP - Fire Management System Class A vs. Class B	Closed	06/12/2013	06/22/2013	06/15/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference: Attached Documents, E1-5201 After consulting with Siemens on the fire management system a clarification is needed. The riser diagram on sheet EI-5201 shows Class A conduit routing for the train platform level and the lower concourse level. Using a Class A wiring layout limits the system to 3 or 4 strobe devices per circuit. Under the NFPA 130 6.3.3.2.8 specification, the embedded (note (1) of the specification) fire management conduit protects against the ASTM E119 fire conditions and Class A isn't required per NFP A specification. Is it acceptable to design the fire management conduit system to meet the NFP A 130 specification under Class B requirements and impliment 6 or 7 strobe devices per circuit instead of the 3 or 4 stobe devices per Class A. By implimenting a Class B system, the future fire management system (installed under a future contract) will be less costly all while meeting the the NFP A 130 requirements. Please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> WSP Response: We confirm the Specification requirements for Class A wiring shall apply. The design of the conduit systems shall be configured to achieve Class A wiring for the fire alarm communication circuits that will power the strobelights at the Train Platform Level and Lower Concourse Level. Although we have designed for embedded conduit where possible, we cannot assure in the future design that we can embed or provide approved fire rated cable from the source fire alarm panel to the end device, since the fire rated cable systems that were planned for extension of the circuits have had their listings voided. Embedment and layout for Class A wiring will provide the required protection to meet code and to provide the future flexibility for the life of the building.				
T-0599	BGP - Continuous Concrete Insert Elevations	Closed	06/13/2013	06/23/2013	06/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference: Attached Documents, Drawing A1-6231 Please reference the attached - clouded, Submittal TG0600- 110 BGP -Concrete Formwork Lift #1 sheet, comment regarding the elevation of the cast-in-place continuous concrete insert. The submittal comment requests an adjustment of the concrete insert elevations. In the attached RFI T-0506 the elevations of the concrete inserts were given to accomplish equal spacing as required by the drawings, as well as incorporate the agreed upon adjustments to the top and bottom insert. SCCI would like to verify that the given elevations of the cast-in members in the clouded section of RFI T-0506 are the correct elevations.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Please refer to the attached SKA -2745 which confirms the elevations of the continuous concrete inserts.

T-0599.1	BGP - Horizontal Cast-In Inserts at EFCO Form Panels	Closed	11/19/2013	11/29/2013	11/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Filip Filipic REQUEST: See attached photo and reference RFI 599. Interior rib of the EFCO form panels lines up with the cast-in insert at EL -27.08'. SCCI intention is to bolt the inserts to the forms and this makes it difficult to properly secure the cast-in insert prior to concrete placement. SCCI proposes to lower or raise this insert 2" in order to properly secure it to the form. Is this acceptable?							
SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/20/2013 RESPONSE: It is acceptable to lower the cast-in insert as indicated in the RFI. Cast-in insert at EL -27.08' can be lowered 2" to have a new elevation of EL -27.25' to coordinate with the formwork installation.

Co-Author:							
REQUEST: Reference Drawings: 3/A1-8711 and 6/A1-8711 BBII's dewatering wells and piezometers are installed per Detail 6 on Sheet A1-8711 which clearly shows how the wells and piezometers will be filled and capped after the dewatering has been decommissioned. Detail 3 on Sheet A1-8711 does not provide any indication that these piezometers will be plugged and/or filled. Does the design team intend on leaving these piezometer holes open after the dewatering is shut off? If not, please provide a revised 3/A1-8711 clarifying the design teams intent.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The monitoring instruments / piezometers will continue to function for a few years after the entire building has been completed, therefore will remain as shown on detail 3 / A1-8711. No additional detail is required at this time. The instrumentation cables are inside a 2" dia steel pipe. A seal between the sleeve and the pipe is provided by the two linkseals. When the instruments are decommissioned, the conduit is cut off and the opening sealed. Then a steel cap is fully welded to the ring flange at the top of the sleeve, which is flush to the top of the mat slab.

T-0604	#2 CPH Platform through Mat Slab in Zone 2	Closed	06/20/2013	06/30/2013	07/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please see the attached shop drawings and layout of the construction personnel hoist (CPH) to be installed in Zone 2. The CPH elevated steel PLATFORM to be installed and later removed and poured back such as the trestle pile penetrations.			The proposed Zone 2 personnel hoist installation described in the RFI is acceptable to the Design Team.				
All work dimensions have been coordinated with structure overhead into future bid packages as well as as-built information of internal bracing in the field.							
We propose to :							
1) Lower the geothermal piping an additional 12" to maintain the same 15" deep trench under all concrete. This will be performed the same way they install the piping in the sump pits with correct bend radius.							
2) Install at 19'-6" x 13'-0" x 16" thickened slab incorporated with the current 4" reinforced mudslab. The thickened slab will contain #5 bars 12" OC EW T&B and we have confirmed that the total load of thickened slab, CPH, and platform will not exceed 500 PSF.							
3) Install CPH elevated steel platform through the mat slab with 3'-0" of clearance between top of mat slab and bottom of platform deck and beams.							
4) Waterproof platform legs per detail 5/A1-8711 04/29/13 per ASI 0102 Issued for Construction, Below Grade Package, including galvanized penetration sleeves and waterproofing. Penetration sleeve will be 30" diameter.							
5) Reinforcing details will be the same as all other reinforcing at pin/trestle pile blockouts.							
Please confirm this is all acceptable.							
<hr/>

T-0607	BGP - Bracing Removal Sequence- Area 5-16	Closed	06/21/2013	07/01/2013	06/28/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Jackson Tukuafu	Answered By:Webcor/Obayashi Joint Vt Spencer Sayles			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that:</p> <p>* "Bracing Removal- Level D" (BGSOX-1120) is the driving predecessor to "Wall Waterproofing- 1st lift" (BGSOX-4000)- in each area.</p> <p>* "Bracing Removal- Level E" (BGSOX-41 00) is the predecessor to "Wall Waterproofing- 2nd lift" (BGSOX - 4110)- in each area</p> <p>* "Bracing Removal- Level B" (BGSOX-6000) is the predecessor to "Wall Waterproofing- 3rd lift" (BGSOX - 6010) in each area</p> <p>Based on the current schedule logic, the bracing will need to be modified to allow the removal of walers and struts in each area, separately and independently from each other. E.g: Any walers spanning two areas will need to be cut during removal ofbracing so seer can proceed with the waterproofing install in that area, without having to wait for the adjacent area. This is applicable to Bracing Removal level B, C and D.</p> <p>Please confirm.</p>				<p>As was discussed in yesterday's schedule meeting, please provide a detailed wall pour sequence schedule and indicate where specific waler conflicts are anticipated. We will be able to perform an analysis at that point in time.</p>

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please reference drawing S1-2061.				George Metzger 10/16/2013		RESPONSE:	
A 16-ft portion of the Area 2 wall vertical reinforcement, between GL 6 and 7, has been installed at 6" OC instead of the required WR1 spacing (8" OC).				As built vertical wall reinforcement spacing indicated in the RFI is acceptable. Please incorporate this change into as-built drawings.			
Please confirm the as-built vertical wall reinforcement spacing identified in the attached excerpt drawing sheet S1-2061 is acceptable.							
T-0609	BGP - Clear Cover to the Vertical Reinforcement on the Foundation Wall	Closed	07/03/2013	07/13/2013	07/10/2013	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LPMichael Spillane</div><div>To: Turner Construction Company Gary Krutsch</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div>							
<div>Co-Author:</div>							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: Exhibit A, Attached				Maximum acceptable clear cover between the waterproofing system and foundation wall vertical reinforcement is 6 inches. For clear cover larger than 6 inches, evaluation will be made on a case by case basis. Submit information for review where clear cover exceeds 6". For this calculation, waterproofing thickness can be assumed 2 inches and location of foundation wall reinforcement can be assumed as indicated in contract drawings.			
At some locations the clear cover to the vertical reinforcement on the foundation wall will be far in excess of the 2" shown on detail 1/S1-3201. Base on the RFI T-180.1 (see Exhibit - A) the clear cover could potentially be up 8" at the interface between the foundation wall at lower mat slab elevation and the waterproofing system.							
Existing grade elevation = +25' + (protection slab elevation = -42') = 67' X 1/200 (CDSM pile vertical tolerance) = 4"

T-0611	SSS - Grout Hole Diameter and Material	Closed	06/24/2013	07/04/2013	07/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference RFI: CN-005 Following up with the response to RFI CN-005 please clarify the following: 1. Please advise if steel pipes intend to be filled with grout or concrete. 2. If the filler is grout, a 1" hole for venting should work. We do not need a 3" hole for venting. 3. If the filler is grout please advise if locations of the grout holes in cast nodes have been reviewed in the 3D model for accessibility in the field after nodes are attached to structural steel. 4. If steel pipes are filled with concrete and 3" hole must be patched with partial penetration weld please provide proposed detail and procedure for PJP weld. 5. Please provide procedure for patching the node grout hole.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Steel pipe is to be filled with 4000 psi pea gravel concrete. 2. As noted in the response #1 to RFI CN-005, the 1" dia hole in the cast node will be remain to serve as a vent hole. 3. Hole in the cast node is to be used as vent hole, not as a grout port. W/O should review the constructability issue raised as this is a means and method issue. 4. As noted in item 2 of RFI CN-005 response, the 3" dia hole and patching details will be provided in a future ASI. 5. 1" dia hole in the node does not require patching.				
T-0611.1	SSS - Grout Hole Options	Closed	08/19/2013	08/29/2013	08/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Drawings: S1-4002 Reference RFI: T-0611 Reference Sketch: Sketch 1, Sketch 2 Design documents do not specify or provide procedures for filling the steel pipe column with 4,000psi pea gravel. The following two options are proposed, please review and advise. Option 1 (prefered) 1. Locate 3" grout hole at the back of the pipe to provide access from inside of the building. 2. Locate 3" grout hole about 6" below CJP weld.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted.				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

3. Fill out pipe with concrete up to the hole.
4. Use 1" vent / grout hole in the cast node to fill out the upper void with grout (not concrete). If it is not required leave the void to reduce added cost.

Option 2

1. Weld a pipe nozzle with threaded end with a valve to 3" grout port.
2. Pump up concrete to completely fill the pipe column including voids in cast nodes.
3. Shut down the valve and wait until concrete sets.
4. Cut the pipe nozzle off.
5. Clean up the nozzle weld, remove extra concrete, weld in the plug, grind to AESS requirements, touch up.
6. Note: this option will be very expensive.

T-0611.2	SSS - Grout Hole Options	Closed	08/28/2013	09/07/2013	09/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference RFI: T-0611.1			TT has previous responded to RFI 611.1. TT's original response is excerpted below:				
Reference Sketch: Attached							
The response to RFI T-0611.1 does not address the question. If grouting of the void in the cast node per Option 1 is not permitted, then Option 2 should be applied to completely fill the pipe column and the void in the cast node with concrete. Please confirm this is acceptable.			"This is a contractor's means and method issue. Arup fire/blast engineer indicated that the fill needs to be concrete with carbonate aggregate with strength from 4000 to 6000 psi. From the IFC document, a 3" dia grout hole is to be provided for concrete pumping. If the pea gravel cannot travel thru the 1" dia hole in the bus deck cast node, a second group hole is needed above the bus deck node for pumping concrete above the bus deck. Using grout (with siliceous aggregates) is not permitted."				
			TT is not in the position to give instruction to the contractor on how to fill the pipe with pea gravel concrete, as it is contractor's Means and Methods as stated in the original response. Some other possible options are discussed below for contractor's consideration:				
			Instead of using a 3" grout hole above the ground floor node as noted in Option 2, the contractor can pour the concrete through a 3" hole above the bus deck node and let the grout flowing through the 1" hole in the bus deck node to the pipe below, and the existing grout hole in the ground floor node can be used as a vent hole.				
			The Contractor may decide to grout the pipe by pouring concrete from the top of the lower pipe before the bus deck cast node is welded.				
			The Contractor may decide to grout the pipe by pouring concrete from the top of the upper pipe after the bus deck cast node is welded but before the roof node is welded (an external vibrator might be needed to facilitate the flow of the pea gravel concrete thru the 1" hole in the center of the bus deck node.

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3302			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Section 1 on sheet SI-3302 depicts a standard hook at the bottom of the #11 vertical for the embedded C21 column. Please confirm it's acceptable to replace the standard hook with an HRC 555 T-head similar to that of the typical vertical wall reinforcing.					It is not acceptable to replace the standard hooks with heads in Detail 1/S1-3302. The possibility of using heads in the second layer of vertical bars in this detail was previously discussed with Seismic and Structural Review Committee (SSRC). Citing minimum clear spacing requirements between headed bars, SSRC recommended use of hooks in the second layer of vertical bars as indicated in the construction drawings.		
T-0615	BGP - Clear Cover Notation Discrepancy with RFI 339 Response	Closed	06/24/2013	07/04/2013	06/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3302, S1-3201			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Section 1 on S1-3302 details 2-1 /4" clear cover from the face of concrete to the typical wall vertical reinforcing. Per the response to RFI T-0339, the clear cover to the vertical reinforcing was confirmed to be 2" and the cross-ties would encroach into the 2" clear cover. Please confirm the wall vertical reinforcing cover detail in 1/S 1-3302 is superseded by the response outlining the clear cover requirements in RFI T-0339.					The wall vertical reinforcing cover detail in 1/S1-3302 is not superseded by our response to RFI T-0339. RFI T-0339 was on detail 1/S1-3201. Detail 1/S1-3201 and detail 1/S1-3302 correspond to different sections through the foundation wall. Detail 1/S1-3201 is a typical section and detail 1/S1-3302 is embedded columns within the foundation wall. 2-1/4" cover to the vertical reinforcement is specified in Detail 1/S1-3302 because of the larger cross ties required in the embedded columns.

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Within the issued response to RFI 448.5 no details were provided to depict the reinforcing configuration at the point in which the wall steps from it's reduced width back to it's original contract width of 36". Please provide a detail depicting the acceptable configuration at both the typical wall section and of the concourse level which includes the spandrel beam/wall interface.				Please refer to RFI response T-0608. The WOJV generated RFI T-0608 anticipated these revisions and was submitted prior to RFI T-0619 (SCCI #236).			
T-0620	BGP - Strut Bracing Conflicts With Shear Walls and Columns	Closed	06/26/2013	07/06/2013	07/15/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Drawing S1-3260, S1-3301, S1-2030 Based on the layout of the shoring and diagonal struts in the West end of the job, shear wall reinforcement (as shown on CD S1-3260) and the diagonal struts are in conflict. CD S1-3260 shows continuous vertical shear wall reinforcement from top of the mat slab to top of concourse deck. To avoid constructability issues SCCI suggests for shear walls to be constructed with horizontal construction joints at the same elevation as the first level of foundation walls. Adding horizontal joints will require modification of the reinforcement. Please confirm this is acceptable.				Contractor-proposed addition of horizontal CJ's for the shearwalls is acceptable. Contractor to propose reinforcement changes for submittal review.

T-0621	CDSM Soldier Pile Encroachment Area 3	Closed	06/26/2013	07/06/2013	07/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

Reference Documents: Exhibits A - H

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north wall in slab area 3 as well as all levels of the encroachment into the foundation wall between CDSM piles 1 to 32 as well. Location Plan see exhibit - A

Exhibit - B , C & H depict the location and degree in which the SP are encroaching

Option A

Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)

The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - H

Option B

WOJV proposal: (See Exhibit - B) Between CDSM piles 1 to 20-21 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11@8"oc EF vertically) and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 see Exhibit - D.

Between CDSM piles 20-21 to 22 WOJV is proposing to decrease the specified 36" wall thickness again to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11@6"oc vertically and would change to #11@5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E)

Between CDSM piles 22 to 31 the reinforcement would remain unchanged as per the Contract Reinforcement.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Option A

For Option A the proposed revision is acceptable, with the following conditions:

The Train Box design is restricted at the B2 Train Platform Level by the Rail Vehicle Kinematic Envelopes (RVKE). The B1 Lower Concourse Level is strictly controlled by space planning constraints, particularly minimum requirements for Public Utility rooms, service rooms and associated structural and service coordination.

The CDSM wall zone described in this RFI is outside of the RVKE, therefore at the B2 level the foundation wall face can be offset as proposed. However, at B1 Level, the offset will affect Utility Room and Service configurations.

If Option A is adopted, either:

1) Provided the foundation wall configuration and structural design permit, the offset should only occur in this area at the B2 Level and transition back to the original alignment on Gridline A before reaching the B1 Level.

OR

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.

Note that all transitions are to be smooth and not stepped.

Our comments for proposed Option B are as follows:

1) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
T-0621.1	CDSM Soldier Pile Encroachment Area 3	Closed	07/12/2013	07/22/2013	07/23/2013	Potentially	<input type="checkbox"/>
<p>See Exhibit-G showing a detail of transition between modified reinforcement to contract reinforcement with a non-contact reinforcement lap detail. Either of these options if approved would be incorporated into the TG06 shop drawings Please confirm if either of these options would be acceptable</p>		<p>reinforcement is "WR2" or where there is an embedded column per construction documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions.</p> <p>2) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). Proposed changes to this spacing can negatively impact the constructability moment frame beam at the lower concourse level. As an example, see attached sketch which shows the rebar detail at the lower concourse moment frame beam and foundation wall. To assist in addressing these constructability issues it may be acceptable to move wall rebar a maximum of 3/4 inch as needed.</p> <p>3) Use of tighter foundation wall rebar spacing than those specified in the construction drawings will negatively impact the constructability at the ground floor, where moment frame beams join the foundation wall. To assist in addressing these constructability issues it may be acceptable to move wall rebar a maximum of 3/4 inch as needed.</p> <p>4) Min center-to-center spacing between two #11 foundation wall vertical rebar with heads cannot be less than 5" (3.5 times bar diameter). The rule does not apply for hooked rebar. This is a general comment provided as a reminder for future revision requests."</p> <p>The Design Team must be informed of the contractor's preferred approach prior to committing to shop drawings.</p>

T-0621.2	<p>REQUEST:</p> <p>Reference Documents: Exhibits A - C</p> <p>This RFI is an additional request based on the response to RFI T- 621 option A (see exhibit - A) The original RFI T- 621 option A addressed the impact of the encroaching CDSM soldier piles on the north wall in slab in areas 3 and 4 by proposing to offset the face of concrete foundation wall by 0.1979' (2-3/8") into the structure. WOJV note the original response where it was acceptable to offset the foundation wall between B2 and B1 elevations but would have to transition back to design alignment between B1 and ground elevation however this transition back would not be possible as there are CDSM piles encroaching the full high of the foundation wall, with that WOJV is proposing the following possible solution, to continue the revised offset alignment between B1 and ground elevation however limiting it to an area between GL 1 and 2-3 (CDSM piles 1 to 21)full wall height , WOJV acknowledge the fact the PG&E transformer room need to remain at its current size but feel there may be some scope to slightly change the dimensions of the main switchgear room or the service corridor or both see exhibit B and exhibit C.</p> <p>This proposal if acceptable to offset the foundation wall would enable the contract reinforcement to be installed without the need for further modifications due to encroachment.</p> <p>Please confirm if this option would be acceptable</p>	<p>SUGGESTION:</p>	<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>As discussed in the meeting with TJPA, WOJV, Turner, AAI and WSP (07/22/13), the proposed solution to maintain the offset of the foundation wall up through Level B1 is acceptable to the Design Team subject to the following adjustments:</p> <p>PG&E Transformer Vault (B1223/4) shall remain the same size and shift south by 2-3/8". Main Switchgear Room (B1222) will absorb the 2-3/8" wall shift south. Floor opening in NW corner of Main Switchgear Room will shift south 2-3/8" with wall. North Electrical Room (B1289) shall remain same size and shift down 2-3/8" (with electrical slab opening). Landscape Storage (B1288) will accommodate the 2-3/8" wall shift south. Fire Main POE (B1290) wall will move 2-3/8" south. Plumbing Intake Room (B1229) shall absorb the 2-3/8" foundation wall shift south.</p> <p>Please also note that RFI 621 was on Area 3, not on 3 and 4 as indicated in RFI 621.1</p>				
	<p>From: Webcor Construction LP Ryan Burke</p> <p>Co-Author:</p>	<p>To: Turner Construction Company Gary Krutsch</p>	<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>Moving the foundation wall vertical rebar more than 3/4 inch is not acceptable. Clashes between foundation wall vertical rebar and mat rebar, if any, can be addressed moving the mat rebar up to 1-3/8 inches.</p>

	<p>#10 (1 ½"), in the worst case a mat reinforcing bar will clash with the vertical bar when the layout ends up with both bars installed on the same centerline. Please confirm that in this case, the reinforcing can be moved the 1 3/8" to avoid the clash.</p>						
T-0621.3	BGP - Area 3 North Wall Verts Clearance Near GL 2	Closed	01/27/2014	02/06/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger					
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: RFI T-0621.1 and drawing S1-3201.				George Metzger			
Due to the CDSM soldier pile encroachment, the area 3 North foundation wall reinforcement was moved 2-3/8" towards the center of the structure per RFI T-0621.1. During placement of a 4'-6" section (8 vertical bars) of the first lift of the foundation wall exterior vertical steel approximately 2'-0" west of GL 2, it was discovered that there was 1/4" to 1" of clearance between the waterproofing and vertical bars. The concern is once the cross-ties are placed between the vertical bar and waterproofing, there would not be enough concrete coverage.				1/29/2014 It is acceptable to omit the cross ties in the region depicted in the RFI provided that additional ties be provided elsewhere as follows: Assume encroachment region measures L x h. For a distance equal to L/2 on both sides of the encroachment region, provide double the number ties over a height equal to 2 x h. Additionally, provide double the number of ties for a distance, L, and a height, h, directly above the encroachment. It is acceptable to secure the added ties to the wall horizontal reinforcing on the opposite side of the normally required ties, i.e. an even spacing increment is not required.			
Please confirm if it is acceptable to omit the first 3 rows of cross-ties (24 total) in the area as described.

T-0622	BGP- CDSM Soldier Pile Encroachment Area 4	Closed	06/26/2013	07/06/2013	07/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:**REQUEST:**

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north wall in slab area 4 as well as all levels of the encroachment into the foundation wall between CDSM piles 31 to 60 as well. Location Plan see exhibit - A

Exhibit - B ,C & J depict the location and degree in which the SP are encroaching

Option A

Webcor is proposing to change the alignment of the Concrete Foundation wall on the north elevation along gridlines A between gridlines 1 and 5 - 6 (CDSM piles 1 to 50)

The Concrete foundation wall which runs along gridline A between gridlines 1 and 5-6 would be offset into the structure by 0.1979' (2-3/8") the proposed Face of concrete Foundation wall would then be 2-3/8" off gridline A, this offset would enable the contract reinforcement to be installed without the need for further modifications to the reinforcement due to encroachment of the CDSM piles in concrete pour Areas 3 & 4. See Exhibit - J

Option B

WOJV proposal: (See Exhibit - B) Between CDSM piles 31-32 to 35 and 41-42 to 45-46 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP, originally this was a WR2 reinforcement area #11 @6"oc EF vertically and would change to #11 @5"OC the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit -E) Between CDSM piles 35 to 41-42 and 45-46 to 49 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear all the encroaching SP. This foundation wall area was originally a WR1 reinforcement area (#11 @8"oc EF vertically) and would change to #11 @6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 49 to 60 the reinforcement would remain unchanged as per the Contract drawings. See Exhibit-G, H & I showing details of transition between modified reinforcement to contract reinforcement.

SUGGESTION:**ANSWER:**

Accept Suggestion: ☐

Option A

For Option A the proposed revision is acceptable, with the following conditions:

The Train Box design is restricted at the B2 Train Platform Level by the Rail Vehicle Kinematic Envelopes (RVKE). The B1 Lower Concourse Level is strictly controlled by space planning constraints, particularly minimum requirements for Public Utility rooms, service rooms and associated structural and service coordination.

The CDSM wall zone described in this RFI is outside of the RVKE, therefore at the B2 level the foundation wall face can be offset as proposed. However, at B1 Level, the offset will affect Utility Room and Service configurations.

If Option A is adopted, either:

1) Provided the foundation wall configuration and structural design permit, the offset should only occur in this area at the B2 Level and transition back to the original alignment on Gridline A before reaching the B1 Level.

OR

2) Any offset to the foundation wall face at B1 Level will require adjustment to space planning, coupler layouts, structural / service opening coordination and potentially may need further negotiations with Public Utility Companies i.e. it is not acceptable to simply 'shave off' a couple of inches from a room at this level.

Note that all transitions are to be smooth and not stepped.

Option B

For Option B, proposed revision is acceptable however, we note the following:

Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: RFI T-0622 and RFI T-0622.1.							
The Area 4 wall vertical reinforcement has been installed different from the layout in RFI T-0622.1.							
Please confirm the revised vertical wall reinforcement spacing as shown in the attached sketch is acceptable.							
Note that the wall thicknesses remain the same as approved in RFI T-0622.1.		George Metzger 10/16/20013 RESPONSE: Revised vertical wall reinforcement spacing is acceptable as long as all vertical rebar have cross-ties. Please incorporate these changes into as-built drawings. Note that using tighter rebar spacing in foundation walls than required in construction drawings may negatively impact constructability at Lower Concourse and Ground Levels where beam and slab rebar is embedded into the foundation walls.

REQUEST:

Reference Documents: Exhibits A - J

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south walls in slab area 5 as well as all levels of the encroachment into the foundation wall between CDSM piles 60 to 81 on the north elevation and 702 to 732 on the south elevation. For Location Plan see exhibit - A.

Exhibit - B, & C depict the location and degree in which the SP are encroaching

For this RFI, the combined layers of the water proofing system had been assumed to be 2" thick, which is subject to change, this may increase or decrease the number of encroaching piles depending on the thickness of the system used.

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 60 to 62 and 69 to 71 WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 61 & 70, originally these were WR1 reinforcement area's #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D). Between CDSM piles 76 to 78-42, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 77. This foundation wall area was originally a WR2 reinforcement area (#11@6"oc EF vertically) and would change to #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.3 option 2 (Exhibit - E).

WOJV proposal on the South elevation: (See Exhibit - B & F) Between CDSM piles 704 to 706, WOJV is proposing to decrease the specified 36" wall thickness to 33 5/8" to clear the encroaching SP 705, originally this was a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on SE stamped Detail A/Sk.1 (Exhibit - D).

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1-) It is not acceptable to transition foundation reinforcement width and/or vertical rebar spacing within sections where specified foundation wall reinforcement is "WR2" or where there is an embedded column per contract documents. Provide uniform reinforcement width and rebar spacing within these regions. The transitions can be acceptable at the ends of (or just outside) these regions. In Area 5, this comment applies near GL 8, North Wall.

2-) Per Exhibit D, encroachments for some piles seem very small (for example, pile 61). For small encroachments, a 'no remedy' approach can be followed as long as the actual construction is executed within the tolerances specified in the contract documents (see specifications for information on construction tolerances).

3-) Mock up specimen is being developed for a location where an embedded column is used within the foundation wall. Embedded columns include two layers of #11 rebar with 6" spacing. The contractor proposes to use #11@5" in lieu of WR2 foundation wall reinforcement (#11@6") at a number of locations to remedy encroachment issues. If this option is adopted, the tightest foundation wall reinforcement will become #11@5". Revise the foundation wall mock up specimen shop drawings to include #11@5" single layer foundation wall vertical reinforcement.

4-) Foundation wall rebar WR2 and embedded columns are designed using vertical rebar spacing of 6" (see construction documents). We note that proposed changes to this spacing can negatively impact the constructability of the foundation wall joints at mat, lower concourse and ground levels (e.g. installing beam rebar, foundation wall dowels at the mat). An example was provided with our response to RFI T-0621.

Based on the response to the previous RFI the number of encroaching beams in area 6 north elevation has been reduced mainly due to the decreased thickness of the waterproofing system and the contractor willingness to use some of the construction tolerances in an effort to mitigate some of the smaller encroachments. This has resulted in no modifications now required to the contract reinforcement on the north elevation and changes have been made to the south elevation in line with response to the original RFI T-626.

See Exhibit-B & E which shows details of transition between modified reinforcement to contract reinforcement on the south elevations.

Please confirm if this solution is acceptable.

T-0627.2	BGP - CDSM Soldier Pile Encroachment: SP696 & SP104 in Area 6	Closed	10/10/2013	10/20/2013	10/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP	Jackson Tukuafu	To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							

REQUEST:

During Shimmick's (SCCI) field layout of the CDSM encroachment in Area 6, the following extent of encroachment has been moved:

-For encroachment at SP696, SCCI moved the East extent to SP694, this is due to SP695 encroaching during the buried bar layout. This accounts for 4' additional wall length with 33-5/8" due to CDSM encroachment.

- For encroachment at SP104, the west extent of encroachment was moved to SP102. The rebar option 1 for SK1 with #11 rebar @ 6" OC will be used from SK102 to the West Extent of WR2 at Gridline 11

Please confirm the deviation from RFI response to T-0627.1 is acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger

10/16/2013

RESPONSE:

The deviations indicated in this RFI from the RFI response T-627.1 are acceptable. Please incorporate these changes into as-built drawings.

T-0630	BGP - Mat Slab Key Way Waterstops Installation From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon REQUEST: Reference: Attached Photos, Spec Section 03 30 20 SCCI is proposing to leave the formed key surface in the mat slab as a formed finish to aid in the bonding of the hydrophilic waterstops to the concrete. With a specified 1/4" amplitude on the concrete surface, the bond between the concrete and the waterstop system decreases. The remainder of the construction joint will have stayform in place which generates a roughened surface. Please see attached photos that high light the area which will be formed finish. Please advise if this is acceptable?	Closed	06/28/2013	07/08/2013	07/04/2013	Potentially	<input type="checkbox"/>
			ANSWER: Accept Suggestion: <input type="checkbox"/> Specification section 03 20 00 2.5.C addresses this topic and requires a reasonably smooth finish at surfaces which are to receive waterstops. 2.5.C also requires roughened surface be leveled with 2-part epoxy per manufacturer's recommendations. Leaving the vertical surface indicated in the RFI as a formed finish will be acceptable provided the finish to receive the waterstop is reasonably smooth and meets the installation surface requirements of the hydrophilic waterstop manufacturer. The hydrophilic waterstop is to be installed on surfaces prepared in accordance with the manufacturer's instructions.

The typical mat slab reinforcing designed to be installed at 8" O.C.E.W. for the bottom and top mats. The micropile layout also consists of a uniformed spacing and at some locations has been adjusted for conflicts or for other purposes, example RFI 490. Should the typical mat slab reinforcing when laid out at 8" O.C.E.W. or some other reinforcing designed within the mat slab conflict with the micropile asbuilt, is it acceptable to displace the reinforcing from the designed spacing layout such that it is repositioned to either side of the micropile? Additionally, please confirm if reinforcing in direct contact with the micropile is acceptable? Should the displacement of the reinforcing to either side of a micropile not be acceptable please provide direction.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			Typical and additional mat reinforcing bars (flexural steel) and mat pit reinforcing bars may be shifted in plan up to +/- 4" from the typical spacing of 8" o.c.e.w. where the typical spacing would result in a conflict between the flexural steel and the micropile. Before making such a shift, the contractor shall verify that said shift will not cause unforeseen conflicts that impact the placement of column dowels, mat headed shear reinforcement, or any other mat or wall reinforcement detailing. Where such a shift will impact the placement of other reinforcement, contractor shall not shift the mat bar out of typical spacing, and instead may resolve the conflict by either of the following methods:				
			a) Treat the micropile obstruction sim to a typical opening per the Typical Slab Opening Detail found on 1/S1-3501 (i.e. add 2 bars of same dia and grade as the bar being interrupted, one to either side of the conflicting micropile).				
			b) Shift the conflicting bar only locally, up to +/- 4" from the typical as permitted above, splicing back to typical spacing (with non-contact splice either side of micropile) as required to avoid any conflicts with other mat reinforcement that may occur due to the shift.				
			Mat rebar shall not be in direct contact with the micropile or gage steel boot that functions as part of the waterproofing assembly, but rather achieve min 1.5" clear btwn rebar and micropile steel. Refer to 2/A1-8711 for waterproofing assembly info.

T-0632	BGP - Geothermal Field 7 & 8 Manifold Riser Layout	Closed	07/02/2013	07/12/2013	07/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Attached Photos			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
The initial geothermal riser/manifold layout for Fields 7 & 8 placed the field 7 & field 8 risers between soldier piles 176-177 and 177-178 respectively. To avoid conflicts with the riser install and the temporary 1st bridge, is it acceptable to move the field 7 riser to the CDSM wall panel between piles 172 and 173 and the field 8 riser to the CDSM wall panel between piles 173 and 174? See attached photos. Additionally, SCCI is looking to relocate the temperature probe to the CDSM wall panel between soldier pile beams 171 and 172. Is this acceptable? Please advise.					It is not acceptable to locate the risers for fields 7&8 as suggested between soldier piles 172-173-174. Riser for field 7 can be located between piles 174 and 175. Riser for field 8 can be located between piles 175 and 176. It is not acceptable to re-locate temperature probe pipe between 171 and 172. It is acceptable to locate the probe east of risers 7 and 8 between soldier piles 178 and 179.		
T-0633	BGP - ASI#104 Clarifications	Closed	07/03/2013	07/13/2013	07/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: ASI 104s			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
SCCI is in receipt of ASI #104 on June 25th, 2013 in CR#T-071. Please clarify the following: 1) Per Sheet S-2202 to S-2211, the additional internal walls at the concourse are shown to be in solid line, for Zone 2-7, 10-11. Note 7 on S1-2022 refers us to the architectural drawings for CMU and concrete partition layout dimensions, joint locations, and CMU thickness. However, the corresponding Architectural drawings issued in ASI #104 for wall at concourse (A-2222 and A-2223), only depicts changes in Zones 2 and 3. a) A-2222 and A-2223 depicts the revised concourse walls to be RCW- please confirm that the internal concourse walls are not in TG-06 scope and additional scope to TG-06 contract will only be the additional couplers for added wall. b) Please confirm that there are no internal walls to be constructed in TG06's scope at concours level.					See below GM/TT comments. WOJV comments included. 1. a. WOJV to confirm this item. JT/WOJV - Confirmed. b. WOJV to confirm this item. JT/WOJV - Confirmed, same as 1a. c. We assume the RFI means sheet range starting with S1-2202 and not S-2022. These lower concourse partition walls are supposed to be dashed. WOJV to confirm these are NOT part of the TG06 package. JT/WOJV - Price all internal walls below the concourse level. d. WOJV to confirm this item. JT/WOJV - Provide dowels for all CMU walls shown on the concourse level and below.		

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>c) Please confirm that the internal concourse walls shown as solid lines in drawing S-2022 to S-2211 are supposed to be shown as 'dotted' or 'ghost' lines in ASI #104.</p> <p>d) In multiple drawings (e.g: S1-2204), at the middle top of the page, the word "Future" has been deleted. Original drawings show "Future CMU walls, TYP". ASI #104 structural drawings deleted the word "Future". Please clarify if the CMU walls at the concourse are in TG06's scope.</p> <p>e) Please issue revised Architectural drawings for Zone 4-Zone 11 (A2224-2231, revised) with the additional RCWs layout for the wall plan at concourse</p> <p>2) Per S1-2210 revised, a new note states: "Coordinate w/ manufacturer shop drawings for extent of beams". Please clarify which manufacturer SCCI is to coordinate with, or provide dimensions</p> <p>3) ASI #104 issued new "Slab Edge Plan" A2842, A2843 and A2847 for Zone 2, 3 and 7. The new drawings depict the locations of MEP sleeves that were not shown in previous drawings.</p> <p>a) SCCI has not received any revisions to concourse plumbing drawings depicting these changes. The original plumbing drawings do not correspond to the location of the sleeves/blackouts shown in the new Architectural drawings A2842, 2843, 2847. Please verify which drawings SCCI needs to utilize to layout the sleeves/openings.</p> <p>b) Please issue Architectural drawings with sleeves/blackouts locations at the reminders of the zones.</p> <p>4) ASI #104 issued revised electrical drawings E1-2202 to E1-2204 that changes the layout of the electrical rooms. TG06 contract scope includes the installation F15 junction boxes to be terminated in designated electrical rooms.</p> <p>a) Please provide revised detailed drawings on the electrical room layout (E1-3201, 3202).</p>						<p>e. Sheets A1-2224 through A1-2231 have been issued with 100%CD Phase 1 documentation.</p> <p>2. "manufacturer" refers to cooling tower manufacturer as the support framing is labeled for the cooling tower. JT-WOJV - An MEP subcontractor is projected to awarded in March 2014. Please remit an RFI isolating the details of the cooling tower pier, dimensions, etc.</p> <p>3.</p> <p>a. Slab edge plans issued for ASI#104 are coordinated with updated plumbing background drawings.</p> <p>b. Slab edge plans for the remainder of the Lower Concourse Level have been issued with 100%CD Phase 1 documentation.</p> <p>4. Please refer to attached sketches SKE-01-3202,SKE-01-3201 and SKE-02-3201 for electrical room layouts.</p>

T-0633.1	BGP - 100% CD Phase 1 Documentation	Closed	08/27/2013	09/01/2013	09/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please reference CR T-071 - ASI 104 - Below Grade Modifications and RFI T-0633. As per coordination meeting on 08/26/2013, to discuss discrepancies in ASI #104, the architectural drawings for Zone 4 thru Zone 11 (A1-224-2231, A1-2844-2846, A1-2848-2851) are not included in ASI 104. The architectural drawings are critical for SCCI's coordination and pricing of interior wall layout on the concourse level in conjunction with the corresponding structural drawings released in CR T-071 - ASI #104. Although, the design team provided their response to these discrepancies in RFI T-0633 by referencing "100% CD Phase 1 Documentation," the drawings have yet to be released for construction. 1. As per request by the design team, please release the following most-up-to date drawing sheets via this RFI : A1-2224 - 2231, A1-2844 - 2846, A1-2848 - 2851. 2. Please confirm the aforementioned drawings are to supersede current drawings in trade group package TG06.0.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 9/11/2013 RESPONSE: The attached SKAs update the Architectural Drawings indicated on RFI T-0633.1 SKAs-2825 to 2830 based on A1-2224 to A1-2231 Wall Plans SKAs- 2831 to 2834 based on A1-2844 to A1 -2847 Slab Edge Plans SKA-2835 to 2836 based on A1-2850 to A1-2851 Slab Edge Plans Although requested in the RFI, drawing A1-2848 does not exist in the drawing set. The information contained in the above noted SKAs supersedes the above noted Wall Plans and Slab Edge plans.

T-0638	BGP - Mat Slab U Bars in Modified WR-2 Reinforcement Areas	Closed	07/16/2013	07/26/2013	07/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Documents: Exhibits A - E					Either of the options presented in this RFI are acceptable where the #11@5" rebar is used. The "candy cane shaped bar" should include 180-deg standard hook (refer to detail 4/S1-3001 in contract drawings). Note that this RFI seems to focus on the constructability of the U-bars. However, if the top mat rebar was projected on Exhibits D or E, clashes with the 5" spaced foundation wall vertical rebar (inner face) can also be seen."		
The contractor has highlighted a potential conflict with the uses of #11@5"OC vertically at the areas where CDSM piles at encroaching in WR-2 reinforcement areas.							
Exhibit - A is a vertical cross section through the modified WR-2 area							
Exhibit - B is a cross section showing the potential conflict with verts @ 5"OC							
Exhibit - C is a cross section showing the original design with verts @ 6"OC							
Exhibit - D & E depicts possible solutions							
One of the proposed solutions Exhibit - D is to have the "U" bars at the contract width of 7.41"(6"+#11 bar dia) and the vertically rebar @ 5" OC and the U bars moves horizontally to avoid any conflicts with the mat slab reinforcement.							
Another possible solution is to change the "U" bars to a bar with a standard hook "candy cane shaped bar" see Exhibit - E							
Please confirm if either of these options would be acceptable							
T-0639	BGP - Weld Access Hole repair	Closed	07/16/2013	07/26/2013	07/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: S1-3003, Spec Section 05 50 10					All contractor means and methods holes in all locations of the steel sleeve elements are to be welded watertight closed. The waterproofing details are to follow the waterproofing manufacturer's instructions.		
Please reference attached Pile Sleeve pictures, shop drawings, and product data/MSDS for Bituthene Liquid Membrane and Sikaflex Ia. Weld access holes (see photos) allow us to weld the penetration sleeves together in a continuous vertical weld (see shop drawings). SCCI proposes sealing access holes prior to pouring the mat slab.

T-0641	BGP - Level D Internal Bracing Removal	Closed	07/16/2013	07/26/2013	07/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST: Reference Document: Exhibit A Level D internal bracing removal in areas where walers are not connected together. Due to the curing requirements of the concrete in the mat slab, the contractor is proposing to have a "hopscotch" sequence to the mat slab pours, as an effort to mitigate delays. The removal of the level D bracing will follow the pour sequence, however as shown in Exhibit A which is a north wall elevation, what is the maximum clear distance horizontal between the construction joint in the mat pours and the next level D internal bracing strut/waler. This becomes an issue when trying to schedule the bracing removal with the mat and wall pours. WOJV understands that this is for areas where the walers are not connected together. Once the parameters for the bracing removal have been established the contractor will create a plan and sequence for each pour area on the removal of the internal bracing where the walers have being connected together.				This work should be coordinated between the internal bracing designer and the structural engineer.

T-0642	BSE - Steel Plates at CDSM Piles 167-168	Open	07/17/2013	07/27/2013	07/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Comp Stacy Wilson				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Spec Section 31 56 13					Accept Suggestion: <input type="checkbox"/>		
During leak grouting at level 5 excavation, a section of the CDSM wall panel between soldier piles 167-168 became dislodged, resulting in a high volume leak. In an effort to stabilize the damaged CDSM panel and stop the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it.					W/O to resubmit once the encroachment requirement is determined.		
BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII surveyed the face of the plate and found that at pile #167, the face of plate is 1/2" out from the theoretical face of pile, and at pile #168 the plate is 1-1/2" out from the theoretical face of pile. BBII proposes leaving the steel plate in place to maintain integrity of the CDSM panel. The edges of the plate may be grouted to provide a smooth transition to the CDSM wall for waterproofing.							
Please confirm this is acceptable.							
T-0643	BGP - ASI#104 - A1-2122 Added Line	Closed	07/17/2013	07/27/2013	07/19/2013	Potentially	<input type="checkbox"/>

	REQUEST: Reference: Drawing A1-9215, S1-9050, Spec Section 03 30 20 There appears to be conflicting dimensions for the concrete interior wall pier located near gridlines 3.5/C.3 as shown in the attached drawing A1-9215. Contract drawing A1-9215 details the pier to be 2'0" wide by 1 '4" thick. However, based on criteria for wall piers as shown on S1-9050, the wall pier should be 2'0" wide by 1 '6" thick. Please confirm if the two wall piers identified in the attached A 1-9215 should be 1 '4" thick or 1 '6" thick. If the wall is to be 1 '6" thick, please provide direction as to which side of the wall pier is to be maintained flush with adjacent wall.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The 2 piers identified in the RFI sketch are 1'-6" thick as per schedule on S1-9050. The north side of the piers along the corridor shall remain flush with adjacent walls. See attached SKA-2783. The pier thickness dimensions have been removed from this architectural drawing as the pier dimensions are obtained from S1-9050 as noted above.		
T-0647	BGP - Area 3 Clear Cover to the Vertical Reinforcement on the Foundation Wall	Closed

T-0651	BGP - Area 3 Partition Wall Clarification	Closed	07/19/2013	07/29/2013	07/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing A1-2122,S1-9050, Spec Section 03 20 00, Gerdau's RFI#58 Please clarify if the highlighted portions within the outline of the Partition Walls should be denoted as a different structural element i.e: a column, pilaster ,or a thickened wall that is different than the typical 12" thick partition wall per detail 3/S19050. If the answer is yes, please reference or provide the correct reinforcing detail that is to be applied at each location.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The intent for the partition wall at gridline C.3 to the right of gridline 1.4 is to apply the 9/S1-9050 pier reinforcement & pier thickness required for the door width and pier height at each end of the partition wall and extend to result in a uniform thickness wall to simplify construction. The intent for the partition wall at gridline E to the left of gridline 2 is to apply the 9/S1-9050 reinforcement & pier thickness required for the elevator door width and pier height and apply along the full length of this wall. The intent for the partition wall at gridline E.6 to the left of column at gridline 2 is to apply the 9/S1-9050 pier reinforcement for the 12" thick pier.

T-0655	BGP - Revised Attached Method of Nelson Studs to the Elevator Pit Embedded Angle	Closed	07/24/2013	08/03/2013	08/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Spec Section 05 50 10 While attaching the 3/4" diameter by 8" Nelson Studs to the 8" X 4" X 1/2" angle it was determined the studs were not fusing to the base metal (angle). To maintain the procurement schedule of this fabrication needed for the Zone 1 - Area 03 Mat Slab placement, our fabricator (Gerlinger Steel) used the fillet weld method performed under the attached Welding Procedure Specifications (WPS) to attach studs to the angle(s). The welding was witnessed by the dispatched (IR #001459) ISI Shop CWI. Attached for the readers information and use are the shop fabrication drawing, the employed WPS, and photographs of the finished fabrication. Is the alternate means of attaching the Nelson Studs to the angle, using the fillet weld method in lieu of the fusing method, acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The angled stud in the interior of the angle requires a different type of ferrule (heel) to address the angled condition. The alternate means used to attach Nelson studs for angles in this RFI is acceptable provided that at least 2 studs per angle have been verified by bend test per specification section 03 20 00 2.2.C.2, which references AWS D1.1-2010 (Paragraph 7.8 for testing requirements).		
T-0656	BGP - Shear Wall Dowel and Shoring Pipe Bracing Conflict	Closed	07/24/2013	08/03/2013	08/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Drawing S1-3001, Spec Section 03 30 20 A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. See attachment for locations of conflict. Based on Detail A shown in S1-3260, the typical shear wall verts will be lap spliced. Per the schedule in Detail 1-S1-3001, the #9 vertical shear wall reinforcement requires a 63" lap splice, which places the top of dowel at elevation -30'-5". The centerline of Level D diagonal bracing atop Area 1 is shown to be at EL -29'-0" and the bottom of the 36" OD pipe strut at level D is at EL -30'-6". The pipe strut will potentially encroach on the shear wall			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The contractor proposed lap splice length is acceptable only at locations where the conflict exists.

T-0661	BSE - Access trestle penetration sleeve	Closed	07/30/2013	08/09/2013	08/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Drawings: 4/A1-8711, Attached Sketch 2 bump outs have been installed onto the South side of the access trestle in Zone 2 (see attached sketch). Each bump out has 4 trestle piles identical to the trestle piles supporting the rest of the access trestle. Please confirm it is acceptable sleeve and waterproof the 8 piles (2 bump outs - 4 trestle piles ea.) per detail 4/A1-8711. The bump outs will be removed prior to the concourse slab.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to sleeve the 8 piles for the access trestle extensions (bump outs) as shown in detail 4/A1-8711. Part of this RFI is for a waterproofing system proposed by the Contractors, not the system designed by the Architect. The Contractors should have their engineer who prepared this waterproofing system design respond to this RFI. Until that is done, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the TJPA and its consultants and the Architect). Contractor shall submit dimensioned locations of bump out piers and size for review of introducing sleeved penetrations into the mat. Prior to submitting dimensioned locations, Contractor shall review for, including but not limited to, mat conflicts with other work and mat exclusion zones.				
T-0662	BGP - Clarification for the Response to RFI T-0631 Micropile Conflict	Closed	08/01/2013	08/11/2013	08/05/2013	Potentially	<input type="checkbox"/>

	<p>typical contract bar +/- 4" from the called out spacing as required to avoid clashes with the installed micropile. The displacement of the typical reinforcing may be either for the full length of the bar or weaved around the clashes depending on the specific condition. If this solution is incorporated and results in the typical reinforcing being displaced such that the end of the bar is not in the typical alignment a non-contact lap splice with the next adjacent designed/detailed bar is acceptable. Should the displacement of the typical contract bar to resolve the clash with the micropile result in another clash with another element of the reinforcing design this condition will be addressed through the RFI process upon recognition. See attached sketch #1 for reference.</p> <p>3. At the contractor's discretion, he/she may cut the typical contract bar creating a gap in the bar to allow for the clashing micropile. Should this be the selected method to resolve the clash a lap splice bar of the same grade and bar size will be required at either side of the gap. The splice bar may be a non-contact lap splice. See attached sketch #2 for reference.</p>						
T-0663	BSE - Micropile Tie-Down detail	Closed	08/05/2013	08/15/2013	08/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Drawing: S1-3003 Reference Submittal: TG0300-620.1				Confirmed that contractor-designed micropile without the plate is acceptable.			
Detail 1 on S1-3003 shows a 12"x12"x2" plate under the domed nut on top of the micropile. Note 1 on S1-3003 states that "the contractor is responsible for the design of the pile to meet the design load requirements ... as stated in the project specifications." Submittal No. TG0300-620.1 was returned "No Exceptions Taken" and did not include the plate under the domed nut as it was not a part of BBII's micropile design. Please confirm that it is acceptable to move forward with approved Submittal No. TG0300-620.1 without the 12"x12"x2" plate.

T-0664	BGP - Conflict Between Pit Reinforcing & Trestle/Pin Piles	Closed	08/05/2013	08/15/2013	08/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Drawing S1-2022, Attached Photos				The tails of pit reinforcement that are extending beyond limits of pits and are in conflict with trestle/pin piles may be trimmed for only the 4 of the 5 locations identified in the RFI.			
During the installation of the pit reinforcing between GL 1.4-2.3 and D.4-F a conflict was discovered between trestle/pile and the tail of the #11 pit reinforcing that extends beyond the limit of the pit out and into the main mat slab. Gerdau proposes to trim the tails of the conflicting rebar (Flame Cut) such that clearance can be maintained to the sleeve around the piles.				For the 5th location at trestle pile located at D.4-4.4 (which is within the pit depression), see attached SKS-0281.			
Please confirm this is acceptable or provide direction on how to proceed. This conflict is expected to occur at future pits too.				Note that flame-cutting that has been allowed is limited to applications of this RFI only.			
				For future pits within the remainder of the Project, when the tails of pit reinforcement that extend beyond the limits of the pits that conflict with trestle/pin piles/bridge piers, Contractor shall coordinate with as-built locations and apply detail similar to 1/S1-3007 (where bars interrupted by trestle/pin/bridge pier shall turn up).

T-0666.1	BGP - Mat Slab Clarification to Elevator Pit and Slab Opening Dimensions	Closed	08/21/2013	09/03/2013	08/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Webcor/Obayashi (W/O) is in receipt of attached Adamson Associates, Inc. (AAI) response to RFI T-0666 - BSE - Elevator Pit Dimensions Between GL1.4 and GL 2.					Accept Suggestion: <input type="checkbox"/>		
This response is unacceptable. The Architect has sole responsibility for confirming that the pit dimensions of all elevators and escalators will accommodate the Architect's proposed elevator and escalator systems.					The design team believes the elevator pit dimensions noted in the contract documents are coordinated with the requirements of the alternate elevator manufacturers noted in the specification. The CMGC shall confirm the work of adjacent trades have been coordinated between shop drawings and existing field conditions. The CMGC shall coordinate with the TJPA to hire Sub-contractors at the required times to ensure that construction work and shop drawings of adjacent trades are completed in time to coordinate between trades.		
Until a 100% IFC set is completed by the Architect, W/O has no definite knowledge of the Architect's proposed elevator and escalator systems. This issue has been discussed verbally for over 2 years, during which the Architect has maintained that they have full responsibility for designing all pits and openings to fit their proposed elevator and escalator systems. W/O is unable to even start the RFQ/Bidding process for hiring sub-contractors until the 100% IFC Contract Drawings are finalized by the Architect and approved by the owner; therefore, it is impossible for W/O to hire/coordinate sub-contractors prior to pouring of the elevator pit in the mat slab.							
The same applies to all pits and openings throughout the design documents, only the Architect is capable of confirming that these dimensions are acceptable for all of the Architect's proposed elevator/escalator systems.							
Please confirm all elvator pits and slab openings are acceptable as currently shown on the contract documents.

	<p>SCCi is aware of the CDSM wall excavation required for the geothermal field risers, but is not aware of a geothermal specification requiring buttress shaft demolition for the geothermal loop trenches. Specification 31 23 34, Section 3.2 is very clear in the full scope of the ground excavation in soil and wall riser excavation in the CDSM, but it does not cover trenching in buttress shaft concrete.</p> <p>Please provide a design defining the geothermal fields within the buttress shafts. Please include slot excavation, back-fill and compaction requirements in the the affected buttress'.</p>						
T-0668	BGP - CIDH Temporary Bridge Pier Sleeve Detail	Closed	08/05/2013	08/04/2013	08/08/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:	SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>				
<p>Please refer to drawing S1-3003, A1-8711, SCCI RFI #269 with asbuilt information of CIDH Piles at First Street, and ACI 117-90 section 3.4.1.2</p> <p>The typical 48" diameter bridge pier detail (6/S1-3003) and waterproofing detail (4/A1-8711, 5/A1-8711 and 6//A1-8711) are designed for a steel assembly i.e. bridge pier, piles for shoring, bracing and trestle columns, pin piles and dewatering wells. As a result, the means of achieving the shown steel pipe sleeve is attainable.</p> <p>As per submittal package TG0300-201.3, the 48" temporary bridge piers are designed as CIDH (cast-in-drilled piles) piles and not steel. Specifications for concrete construction tolerances in ACI 117, section 3.4.1.2 allow for horizontal dimension of unformed members cast against soil for greater than 2 ft. but less than 6 ft. allow for +6" and -1/2".</p> <p>The penetration sleeves for these piles have been fabricated.</p> <p>Proposed Solutions:</p>				<p>Utilization of concrete piles for the bridge piers was chosen by the contractor to suit their means and methods. The sleeve shown on the architectural and structural drawings provide details of sleeving penetrations to permit expected movement and provide a waterproofing interface. Sleeves at bridge piers were indicated on the Bridge shop drawings and the requirements for field measurements before fabrication were indicated on the metal sleeve shop drawings.</p> <p>New details will not be provided. CM/CG to provide means and methods of adapting concrete pier to suit mat slab waterproofing metal sleeve details.</p>			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<div>1. Remove extra concrete from the outside diameter of the CIDH pile to allow the fabricated 48" penetrations to fit through means of bushing or grinding the concrete as necessary and utilize sleeves as originally intended.</div> <div>2. Please provide a detail drawing with the 48" temporary bridge pier condition as CIDH pile. Please include a sleeve detail allowing for the aforementioned tolerances and waterproofing. Please note, as typical of CIDH piles, the surface profile varies much greater than the 1/2" gap tolerance required for steel assemblies shown in 6/S1-3003.</div>

REQUEST:		Option 2 will be acceptable (reduce the depth of the foundation wall vertical construction joint to 1.5").					
Reference: Spec Section 033020, Attached Drawings							
See attached sketch of the vertical foundation wall CJ.							
During construction of the high congestion mockup SCCI has discovered a constructibility issue with the construction of the foundation walls, more particularly, the vertical construction joints. Vertical construction joints are to be constructed as prescribed on Detail 2 of the S 1-3001 CD.							
The designed vertical reinforcement consists of the following:							
a. WR-1 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.							
b. WR-2 with #11 vertical bars 8" OC, haunch #10 bars 8" OC, and #4 cross ties 6" or 12" OC.							
c. WR-2MOD (CDSM Encroachments) with #11 vertical bars 5" OC, haunch #10 bars 8" OC, and #4 cross ties 5".							
When rebar configurations noted above are implemented, even with ACI allowed tolerances included, it will conflict							

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>with construction of the waterstops, hydrophilic hoses and forming of the vertical CJ.</p> <p>As a possible solution to this issue SCCI suggests the following:</p> <ol style="list-style-type: none"> 1. Eliminate a column of cross ties at the construction joints to allow construction of the vertical CJs per Det. 2 on SI-3001 2. Reduce the depth of the vertical construction joint to 1.5" (similar to horizontal CJ). <p>Please advise.</p>						
T-0670	BGP - Mat Slab Control Joints 2	Closed	08/06/2013	08/16/2013	08/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Turner Construction Company Stacy Wilson			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST: Reference: Attached Drawing Please see attached drawing of Zone 1 control joints. SCCI would like to move the green clouded control joint around the pit with a typical 2' offset. Please verify this change to be acceptable.				Reference RFI T-0670.1 for response. Contractor submitted RFI T-0670.1 while RFI T-0670.0 was still in review and the Rev 1 RFI contains the same request included in Rev 0 along with an additional location.

T-0670.1	BGP - Mat Slab Construction Joint Conflicts	Closed	08/19/2013	08/29/2013	08/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon ANSWERED By: Adamson Associates, Inc. George Metzger							
REQUEST: Reference: Spec Section 03 30 20, Attached Sketches Please see attached sketches of mat slab CJ layout. SCCI has discovered conflicts between the CJ formwork and reinforcing steel, pin pile. SCCI proposes to modify the mat slab construction joint to clear the conflicting reinforcing steel and pin pile, as shown on the attached sketches. Is this acceptable?		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor-proposed CJ layout as presented in the RFI is acceptable. Although the contractor has not inquired yet, one N-S line of shear reinforcement for the column at F-4 will conflict with the joint key. Contractor may shift this one conflicting line of shear reinforcement max of 3" to clear the key.				
T-0671	BGP - Control Joint Amplitude	Closed	08/08/2013	08/18/2013	08/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon ANSWERED By: Adamson Associates, Inc. George Metzger							
REQUEST: Reference: Drawing S1-3001 See attached contract drawing S1-3001 regarding vertical and horizontal control joints of the foundation walls. SCCI is requesting acceptance to eliminate amplitude on the face of the control joint keyway where hydrophilic waterstop and injection hose is to be installed. Amplitude will remain on the diagonal portions of the CJ. This RFI is intended to clarify the use of this procedure for foundation walls only.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> For vertical and horizontal control joints at the foundation wall, see response to RFI T-0630.				
T-0672	BGP - Fire Management Device Layout	Closed	08/08/2013	08/18/2013	08/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon ANSWERED By: Turner Construction Company Jeff Thiel							
REQUEST: As discussed in the fire management coordination meeting on Monday 8/5, the contract plan device layout does not meet code for current draw. The stub ups from the mat slab to the devices shown on the contract plans at every other column will not be sufficient enough to meet code requirements for the future fully occupied space. If stubbed up at every other column, the consequences are		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The fire management system of design is a performance based design as per Section 28 30 01-1.1C of the contract documents. The contractor is responsible for the design of the system, including stub ups and device layout, as required to adhere to all applicable code requirements.

T-0675	BGP - 400 Series HRC Couplers Assembly Procedure	Closed	08/12/2013	08/22/2013	08/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Spec Section 03 30 20 SCCI is in receipt of the approval to SCCI's Request for Substitution TG0600-077 .1 to approve the use of HRC 400 Series Couplers at Vertical Walls. The comment on the approved Request for Substitution noted that assembly of the couplers is to be completed using strict adherence to the manufacturer's installation procedures. HRC, the manufacturer of the couplers has provided installation instructions, video footage of performance testing, test result and an operator qualification procedure, all supporting the assembly of the of the 400 serious couplers installation is acceptable with "hand tightened" procedure. Please confirm that the assembly of the 410/420 couplers "hand tight" is acceptable based on this manufacturer's recommendation as it was not directly addressed in the returned submittal comments. Video of the performance testing can be viewed : http://youtu.be/M5pFkjOgdN8			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> As previously stated in response to the Request for Substitution, the assembly of the couplers shall be per manufacturer's installation procedures. The manufacturer has stated that hand tightening is allowed with the use of qualified operators, therefore it is confirmed that hand tightened procedure is acceptable. Contractor shall submit operator qualifications for personnel that will be performing the hand tightened procedure.

T-0679	BGP - CDSM Wall leaks	Closed	08/13/2013	08/23/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Jackson Tukuafu	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: Attached Photo, Spec Section 07 12 10 Please reference the attached photo. CDSM wall leaks above Level D bracing have created standing water on top of the Area 3 protection slab in multiple areas. The ponding water is triggering the Ad cor ES Waterstop (see photo) along the perimeter of the excavation. SCCI has had minimal success shimming the areas of high leakage to help mitigate the water. Please review and provide direction as to how the leaks will be mitigated. As for the repair of the Adcor Waterstop, SCCI suggests cutting and removing the activated waterstop and installing a new strip with a 4" overlap on both sides. Is this acceptable?			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The suggested remedial work by SCCI is recommended as to adhere to Article 3.07, Section D of the general conditions; SCCI to protect installed materials to prevent damage. As per the approved product data, proper confinement time restrictions are required for any premature swelling or remove and replace damaged material. Please coordinate accordingly with WOJV for specific locations where areas of high leakage occur. As currently coordinated, SCCI is performing mitigation efforts on force account where applicable.

T-0684	BGP - Couplers for Future Construction	Closed	08/19/2013	08/29/2013	08/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Drawing S1-3206, Spec Section 03 30 20		Thornton Tomasetti does not object to the contractor's proposal, contained in RFI T-0684 BGP, regarding couplers for future construction.					
See attached photo of the form savers that are going to be used for the coupler for future construction as depicted on Detail 4 of S1-3206, and Detail 6 of S1-3001.		The proposal contained in this RFI also concerns a waterproofing system proposed by the Contractors, not the system designed by the Architect. The Contractors should have their engineer who prepared this waterproofing system design respond to this RFI. Until that is done, the Contractor should confirm all waterproofing system questions and details with the waterproofing manufacturer (with copies to the TJPA and its consultants and the Architect).					
SCCI believes that Detail 6 on S1-3001 is not applicable due to the following:							
1. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into the coupler body. This tin cap will protect the rebar until the future construction.							
2. Whatever tar is intended to be used with form savers in not compatible with the Grace waterproofing.							
3. Detail 6 on S1-3001 is a detail for the slabs, where future walls are to be constructed.							
SCCI proposed to install the coupler for future construction as shown on Detail 4 S1-3206 with form savers set against the waterproofing membrane. Care shall be taken to ensure that waterproofing is not damaged.							
Is this acceptable?

T-0685	BGP - North Shear Wall Concrete Mix	Open	08/09/2013	08/23/2013	08/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: See attached drawing regarding the North shear wall. Due to the monolithic pours at the intersection of the shear wall, foundation wall and mat slab chamfer, there will be differentiating concrete mix uses. The attached drawing assigns the portions of this intersection with its corresponding concrete mix. Please verify the use of these concrete mixes at this location as acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor-proposed concrete mix use at north shearwall is acceptable.		
T-0686	BGP - Drain Line Conflict with Micro Piles	Closed	08/22/2013	09/01/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: See attached photo and CD PI-2030. After performed layout of the drainage line system around GL K5 SCCI has discovered that a row of micro piles is in conflict with the 4" cast iron pipe drain line. SCCI suggest shifting the drain line run to clear the micro piles. Is this acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> In order to avoid the conflict between micropiles and drainage piping, the catch basin indicated in RFI T-0686 BGP has been relocated slightly north. The drainage piping will run straight from the catch based as it did before. Refer to the attached PSK-2030 and SKA-2822.		
T-0687	BGP - Drain Line Conflict with Reinforcement	Closed	08/22/2013	09/01/2013	09/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: See attached photos and CD P 1-2030. Tails of the bottom rebar mat at the drainage pit are interfering with the construction of drainage lines and catch basin. SCCI proposes following: 1. Shift the catch basin to where it clears the reinforcement tails.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Option 2 will be allowed. Rebar tail ends that conflict with the catch basin for this location may be cut to clear the catch basin. 12" max may be cut off.

T-0688	BGP - Pin Pile No 6 Conflict with Future Walls	Closed	08/23/2013	09/02/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please refer to attached drawing S1-2052 (ASI 102), S1-3205 (ASI 100) and attached photos.				Note that the wall reinforcement for this RFI is #7 @12" OC each face per S1-9050 as it is labeled as a partition wall on plan as well as reflected in rebar submittal TG0600-301.2.			
Drawing S1-2052, shows pin pile No. 6 (43"x43 block-out) at GL D.8/4 encroaching the future reinforced concrete wall (RCW). As a result, the couplers shown in detail drawing 5/S1-3205 cannot be installed in the area where the pin pile 43"x43" block-out is located.				The OC spacing of the vertical dowels shall be 6" OC each face for a distance of 3'-0" on either side of the inquired block-out. For vertical bars within the block-out embed min 4" into concrete.			
Please confirm it is acceptable to reduce the distance between the mechanical coupler for the future 12" RCW from 8" O.C. to 4" O.C. as shown in detail drawing 5/S1-3205, The revised coupler spacing would only span a distance of three feet on either side of the block-out to compensate for the coupler that cannot be installed due to the block-out/pin pile location.

T-0690	SSS - Stainless steel welded to cast iron	Closed	08/23/2013	09/02/2013	09/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST: Reference Drawing: 1/S1-6056 A number of details throughout structural steel drawings indicate stainless steel welded to cast iron or mild steel, see detail 1, 2/S1-6056 as one example. If two metals are fused, cast iron welded to stainless steel results in carbon migration. The chromium in the stainless and carbon in the steel have affinity for each other at elevated temperatures that results in carbon and chromium combining to form chromium carbide. This turns the welded area into hard and brittle material with a potential for rust that overtime has a high possibility to crack and fail. For Det. 1 and 2 on S1-6056 the added tension from cables may contribute to failure. The proposed solutions include: 1.Use stainless steel instead of mild steel for the bottom connection plate thus welding stainless steel to stainless steel. Where the bottom plate has to connect to structural steel use bolted connection with thin dielectric isolator between two surfaces. 2.Replace welded connection to bolted connection with an isolator. 3.Use galvanized and painted plate instead of stainless			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The inquired connection can be executed in the way shown. Welding stainless steel to carbon steel is an established method, which can be done using an appropriate welding method. As with all welding methods, there are certain points to be considered, such as: - The fabricator to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals) - The welder to be approved for welding stainless steel to carbon steel and/or cast steel (qualification submittals) - Surface preparation before welding necessary (welding procedure submittals) - Selection of weld filler material (welding procedure submittals in combination with structural design verification) - Surface preparation after welding (welding procedure submittals) - Coating of weld and stainless steel member 30mm beyond weld (welding procedure submittals)

T-0692	BGP - Rebar Configuration at Moment Beam with Incorporation of S-3 vs T-9 Ties	Closed	08/23/2013	09/03/2013	08/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to attached detail 3 on drawing S1-3603 and attached Gerdau Sketch SK-Gerdau RFI 070. Please confirm it is acceptable to install S-3 stirrups and one T-9 tie as shown in the attached sketch for the vertical ties in the moment frame beam in lieu of installing all T-9 ties as depicted in detail 3/S1-3603. The proposed concrete reinforcement configuration is needed to avoid the constructability issues associated with alternating the hooks under the 1.5" of clear cover beneath the bottom beam bars.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor proposed reinforcement configuration for the lower concourse moment frame beam transverse reinforcement is acceptable.		
T-0693	BGP - Conduits in Columns	Closed	08/23/2013	09/02/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: From discussions with the Design Team, we have been informed that a number of columns will have post installed steel jackets. Columns with Fire Management and steel jackets will require the conduits and j-boxes to be embedded. It is noted that the jackets will not be full height, so the j-boxes will be flush with the concrete face. Please provide the locations of the affected columns and a height for the boxes.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> AAI response: Refer to the attached sketches SKA-2808R1, SKA-2809R1, SKA-2811R1 showing the locations of the West End B2 level concrete columns which will receive post installed steel jackets and embedded conduits. The attached SKA-2817R2 shows the mounting height of the surface mounted electrical boxes for these columns. WSP response: On the steel jacketed columns, backboxes will be surface mounted with conduit routed within the column. Conduit will exit the column terminating into the back of the surface mounted box. Contractor shall lay out and route the embedded conduits such that the number of bends between boxes does not exceed code (360 degrees between boxes). These embedded conduits shall not be required to follow building column lines, and direct runs between devices shall be acceptable to avoid intermediate junction boxes.

T-0693.1	BGP - Embedded Conduits in Columns	Closed	09/04/2013	09/14/2013	09/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: In the MEP meeting on 9/4/13, the response to RFI T-0693 was clarified. To confirm conversations with the WSP Electrical Design representative, the only conduits to be embedded in columns per the RFI T-0693 response are to be fire management conduits per the locations depicted in the response. All other conduits (power recepticals etc) are to be stubbed up on the face of the columns and are not to be embedded in the column.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			With reference to RFI T-0693, all other conduits (power receptacles etc.) are to be stubbed up adjacent to the face of the columns and are not to be embedded in the columns. The conduits and receptacles will be surface mounted on the post-installed steel jackets. Note that the conduits are to be stubbed up with 5" between the conduit face and the concrete column face, to allow for the post-installation of the steel jackets. There are also plumbing risers on a number of the steel jacketed columns. The pipe risers should be positioned relative to the columns in accordance with the plumbing documents, but should not be closer than 5" to the concrete column, to permit post installation of the steel jackets.

T-0694	Additional Rebar Conflict for Plumbing Trim at GL2/D.4	Closed	08/26/2013	09/03/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawings 1/A1-2122, 1/S1-3501 and attached Gerdau sketch SKS-1 Due to the density or the typical N-S top mat bars (#10) and additional bars (#11) near the elevator pit at Gridlines 2 and D.4, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed to the East of the plumbing opening within 3" of the opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to proximity of the piping to the steel the bars cannot be placed below the top mat. Gerdau proposes the folloing options: A. Omit the additional trim bars to the East of the trimmed opening. B. Relocate the additional trim bars approximately 3'-0" East of the opening where the rebar spacing would allow for additional steel. Please advise if proposed options are acceptable.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			Contractor-proposed option to omit additional trim bars to the east of the trimmed opening is acceptable for the cut plumbing opening at Grid 2/D.4. Added trim bars to the west of the opening will remain as placed.

T-0695	BGP - Additional Rebar Conflict for Floor Sink Trim GL B.7/2.7	Closed	08/26/2013	09/02/2013	08/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached Gerdau's RFI #72, 1/S1-3501, A1-2122, attached Gerdau sketch SKS-1		Per SKS-0282 (attached),					
Due to the density of the typical N-S top mat bars (#10), additional N-S top mat bars (#11) and pin pile trim steel (#11 with lap splices directly over floor sink) near the floor sink at Gridlines 2.7 and B.7, the additional trim rebar per 1/S1-3501 for interrupting the bars over the plumbing opening cannot be installed on either side of the plumbing opening. The alternative solution would be to install the additional steel in a new layer below the top mat; however, due to the proximity of the plumbing piping to the steel the additional bars cannot be placed below the top mat. Also, the additional bar to the East of the opening would conflict with the pin pile. Gerdau proposes to cut top mat bars to allow for the floor sink installation and omit the additional trim bars.		Pin pile add bars will be calculated as ½ the number of interrupted bars each side in lieu of ½+1 bars. This eliminates (2) pin-pile add bars being interrupted by the drain.					
Please advise if the proposed solution is acceptable.		One wall add bar interrupted by the drain will be cut short at the northern limit of the drain and not be considered interrupted by the drain.					
		Reinforcing west of the drain centerline, but within the cut zone, will be jockeyed west so that no bars are required to be cut.					
		Reinforcing east of the drain centerline, but within the cut zone, will be jockeyed east so that no bars are required to be cut.					
		A single typical mat bar will remain within the cut zone and may be cut.					
		Congested reinforcing east of the cut zone will be jockeyed east aided by the partial (or complete) removal of a plumbing add bar.					
		Clear spacing of 1db to be maintained between all bars except where lap spliced.					
		In displacing bars to achieve the configuration shown in the SKS, resulting non-contact lap splices will be tolerated up to 6".

T-0696	SSS - Type 1 Drag Connection Angles	Closed	08/26/2013	09/05/2013	08/29/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Drawings: S1-2502, S1-2503, S1-2504, S1-2505, S1-2506, S1-2507					Accept Suggestion: <input type="checkbox"/>		
The angles shown in the bus deck plan views (drawings S1-2502 through S1-2507) for the Type 1 drag connections to the bus deck cast nodes do not appear to match with the corresponding angles shown on the casting drawings (drawings S1-5121 through S1-5125).					Beam plan angles (Sheets S1-2502 through S1-2507) and Bus Deck casting angles (S1-5121 through S1-5125) will not match in all cases because some casting types are used at multiple locations as indicated in Sheet S1-5120. The design intent was to minimize the number of unique castings in the structure which is more cost effective than developing unique casting geometry for every joint. For example, as indicated Sheet S1-5120, Casting 21A is used at various different joints at which joining beam angles vary in a certain range. The pad widths on the castings have been designed to be wide enough so that beams with different plan angles can be connected to the casting.		
The attached mark-ups show our fabricator's (Oregon Iron Works) attempt to calculate the angles on the bus deck plan views and compare them to the corresponding angles of the castings.					In some other cases, the casting angles were revised during cast node shop drawing review. For example, for Casting 35B one of the plan angles was changed from 42.25 to 26.14 degrees to match the beam angle. Contractor shall coordinate the information in the drawings with those in cast node shop drawings.		
Please clarify.							
T-0697	BGP - Moment and Spandrel Beams 180 Degree Hooks Versus 135 Degree Hooks	Closed	08/26/2013	09/06/2013	08/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER:		
See attached Gerdau's RFI#068, S1-3600, S1-3410					Accept Suggestion: <input type="checkbox"/>		
At the contractor's option, Gerdau is requesting to change the 135 degree hooks on the Moment Frame and the Spandrel Beam stirrups to 180 degree hooks.					Contractors proposal to replace the 135 degree hooks with 180 degree hooks on the Lower Concourse Moment Frame Beam and Spandrel Beam Perimeter Stirrups is acceptable.		
Please confirm this is acceptable.

	REQUEST: Reference Drawings: A1-2863, S1-2303, S1-5000 Reference Sketch: attached There are many conflicts in the plans where the top of concrete and the top of the transfer girder in that given area does not leave the amount of space required under the Metal Deck Schedule on 2/S1-5000. For Example: Using the Top Of Concrete (TOC) and Top Of Steel (TOS) elevation from sheet S1-2303 a clash occurs between the slab (S3 - TOC: 19.00') and Transfer Girder TR9 (TR9 - TOS: 18.37'). The 10" that the S3 deck requires in the Metal Deck Schedule on 2/S1-5000 cannot be maintained over the Transfer Girder. Please clarify.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to details that have been cut on plan across the transfer girders as applicable in the Superstructure IFC/ASI 105 issue. Example: See section detail 8/S1-3705 that is cut at gridline 9 & D.4 on S1-2303 (included in the RFI).		
T-0699	BGP - Catch Basin Requirements	Closed	08/27/2013	09/06/2013	09/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
	REQUEST: See attached page from DBI's standard catch basin detail, and reference drawings P1-6001 and P1-2022 thru 2030. On 08/26/2013 during pressure testing inspection of the drainage lines in mat slab areas 1 and 2, the SFDBI Plumbing Inspector pointed out that all catch basins in the mat slab should be constructed per city standard catch basin details. However, the contract drawings do not show catch basins details with cleanouts, vents and trap primer connections per the City Standard details. Please confirm the attached SFDBI city standard catch basin detail is to supersede all catch basin details currently shown in trade group package TG06.0 drawing set. Please include revised plumbing drawings incorporating the City Standard details.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> As discussed in our review meeting with the SFDBI Plumbing Inspectors, the catch basin which are actually points of collection, will be installed as shown on contract documents.

T-0705	BGP - Haunch Reinforcement at Double Waler Condition	Closed	08/29/2013	09/08/2013	09/02/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. John Berggren							
REQUEST: Please refer to attached drawing 1/S1-3201 attached Photo SCCI-RFI 305. As per field coordination, the double shoring waler condition, where the waler web is lower than that of a single waler, the tail of the #10@8" (reference attached excerpt drawing BM-3t of submittal package TG0600-301.1) haunch reinforcement interferes with the web of the shoring waler. The condition was observed at Grid 2/ A and will likely repeat at other double waler locations. The typical resolution to the condition shall be to adjust the position, where required, so that the interfering tail clears the double waler web. As a result the 1-1/2" clear cover will deviate up to 4-112" of clear cover. The plan location of the tail shall remain as close as possible per the placement drawings. See the attached Photo for further details. The 1-1/2" clear spacing shall remain at locations unaffected by the reduced clearance of the double-wlaer. For pieces not yet fabricated and delivered, please refer to RFI T-0603 as the proposed solution to conform to the 1-1/2" clear cover. Plases confirm the revised haunch reinforcement clear clover as coordinated in the field is acceptable.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The revised haunch reinforcement clear cover as described in the RFI per field coordination is confirmed.

	RFI T - 621.1 shows the revised location of the foundation wall on the north elevation of area 3 due CDSM pile encroachment.						
	RFI T - 576 shows the revised location of the foundation wall on the west elevation of area 3 again due CDSM pile encroachment.						
	Please confirm that this modification as outlined at these locations is acceptable.						
T-0709	BGP - Mat Slab Added Steel Interference	Closed	09/03/2013	09/16/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Drawing S1-3003 and Spec Section 03 20 00 See attached Gerdau Sketch SK-77, BM-3b, BM-3t							
Due to the location of select trestle and pin piles, the #9@16" (bottom mat) and #11@16" (top mat) added North-South layer reinforcement cannot be installed at the desired spacing. The proposed solution is to cut the added #9 or #11 bars, where interrupted by a pile, and add a hook of equal size or greater (#11 hook max) with a lap splice similar to the hooks used for the trestle and pin pile trim steel.		The rebar conditions for bars at pin/trestle piles are addressed in typical details 2 & 3 on S1-3003 as well as details 4 & 7 on S1-3009 - these also apply to the inquired add bars in the RFI. The contractor-proposed use of spliced hook at these locations is acceptable.					
Please confirm if this is acceptable.

T-0710	BGP - Haunch Reinforcement Alternative Detail at Dewatering Well in Area 3	Closed	09/03/2013	09/16/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Reference Drawing: S1 -3201 Reference Spec: 03 20 00 Attached Gerdau Sketch: SKS-76.1, SKS-76.2, SKS-76.3 A portion of the #10 @ 8" haunch bars cannot be installed as fabricated due to conflicts with overhead obstructions (shoring walers and struts) and the dewatering well sleeves. Per discussions with Sean McNeil where bars cannot be installed due to the obstructions, a modified #10 haunch bar with an HRC 555 head can be installed in place of the typical haunch bar. The attached sketches (SKS-76.1 and SKS-76.2) depict the magnitude of the obstructions at the dewatering wells in Area 3. Please confirm if this is acceptable. Additionally, please provide the required embedment length for the headed tail of the modified haunch bar.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> At conflicts with dewatering wells, the tail of the haunch bar may be terminated as shown in Gerdau SKS-76.3 contained in the RFI. The embedment length for #10 headed bar shall be 18". Alternatively, the embedment may be a straight development, either inclined or vertical, of 42". The 180 degree hook at the top of the bar shall comply with the RFI T-702 BGP response regarding the location of the radius point.		

T-0711	SSS - Radius Change Request for LC301	Closed	09/03/2013	09/13/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: A design change on the light column critical type LC301 (CN0058) node has changed the radius between the body and the lifting bracket from the original two inches to one inch. We would like to formally request a change to a minimum of a two inch radius in this location. A one inch radius on the 301 bracket creates the following manufacturing challenges: A. The sand in the 1 inch radius in the mold will superheat and cause burn in/on sand adherence to the casting causing additional grinding and work in the finishing department to meet visual acceptance criteria. B. The sharper radius will create a hot spot and solidification challenges - liquid metal contracts % inch per foot and silica sand expands 1.2% during solidification and as cast hot tear potential in the radius may occur causing welding, grinding and blending. This again will be to meet			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Proposed 2" fillet radius between the main body of casting LC301 and its side fin is acceptable.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>the visual acceptance criteria.</p> <p>C. With a 2 inch radius the appendage (lifting bracket) will be much closer to thermally neutral reducing solidification stresses and potential shrinkage in the section radius.</p> <p>D. Cosmetically a 2 inch radius will look much more presentable in the as cast state.</p> <p>E. The 1 inch radius will require either chill sand in the radius, a metal chill made in the mold, or solidification cracking brackets as heat sinks to equalize the solidification temperatures and add strength to prevent hot tearing during solidification. Additional grinding of these areas will be necessary to meet visual acceptance criteria.</p> <p>F. Items A, B, and E will add costs to the manufacturing process of the casting.</p> <p>Our purpose is to point out the effects of the 1 inch radius design request and make sure that the designers are aware of the potential impact of having the smaller radius versus the 2 inch radius in the original designs that were reviewed. Bradken Atchison can certainly produce the 1 inch radius and manage the effects the 1 inch radius causes, but producing that design will have cost impacts to the casting process.</p>						
T-0712	BGP - Jitter Bug Finish on Mat Slab Surface	Open	09/03/2013	09/13/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Spec Section 033020.3.6.B.I.c. See attached photos for a visual reference.				The proposed ¿Jitter Bug¿ finish is not acceptable. Future requirements for the train bed are unknown and the proposed finish may not be acceptable in some instances. Use the stiff broom finish per specification section: 03 30 20.3.6.B.1.c			
Please reference TG06.0, BGP contract specifications 033020.3.6.B.I.c. SCCI is proposing to finish the top surface of the Mat foundation Slab, as a "Jitter Bug" finish. All other finishing requirements will remain the same.							
Is this acceptable?

REQUEST: Reference Documents: Exhibits A - B Further to response to RFI T-637 please find attached proposed changes to the spandrel beams in pour Area 4 for location plan see exhibit - A. Exhibit - B shows the plan view of the modification necessary to the spandrel beam due to the revised reinforcement width of the foundation wall as well as typical cross sections. RFI T - 622.1 shows the extent of the modification to the foundation wall on the north elevation of area 4. Please confirm that this modification as outlined at this location is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 9/13/2013 RESPONSE: Contractor proposed modification to the Lower Concourse spandrel beam within Area 4 is acceptable. Proper lap splices shall be provided where the beam rebar is transitioned from 7-1/16 inch spacing to 6-1/2 inch at each side of the encroached wall region.				
T-0714	BGP - Area 3- Partition Wall Pier Rebar Conflict With Plumbing Near GL3/C.3	Closed	09/03/2013	09/13/2013	09/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: See attached Gerdau's RFI #078. Near Gridlines 3/C.3, there is a conflict between the partition wall pier dowels and the installed 6" plumbing pipe (8" with insulation). The wall pier currently overlaps with the plumbing pipe by approximately 6". Gerdau proposes to move the wall pier to the East, or West to allow the dowels to clear the pipe. Please provide the acceptable direction (East or West) to shift the wall pier. Please note that there are conduits stub up on the East side that would need to be moved, should the opening is shifted towards the East.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The 2 corner bar dowels of the pier that are in conflict with the pipe may be minimally bent to clear the pipe. Non-corner vertical bar dowels within the pier that are in conflict with the pipe may be shifted to clear the pipe.

REQUEST: We understand from Design Team small adjustment to the locations of CBs at GL 1.8, J ; GL 7.2, C.3 and GL 10.2, B.5 are required. Please provide dimensions for the modified locations.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to the attached SKA-2820 and SKA-2821 for the modified locations of the CBs indicated in RFI T-0715 BGP.	
<hr/>							
T-0715.1	BGP - Adjustment to CB location	Closed	09/04/2013	09/14/2013	09/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Spencer Sayles			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST: Please refer to attached drawing SKA-2820 and A1-2812 dated 04/29/2013. As per design coordination meeting between SCCI, WOJV, AAI and TT, please confirm it is acceptable to omit SKA-2820 provided in RFI T-0715. Due to the timing of the issuance of this change, the Area 3 mat slab pour would be delayed by at least a week because the catch basin is already installed per drawing A1-2812, tested and inspected by DBI.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to omit SKA-2820 provided in RFI T-0715.	
<hr/>							
T-0716	BGP - Haunch Reinforcement Alternative Detail	Closed	09/03/2013	09/13/2013	09/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Marina Rosso			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Webcor Construction LP Jackson Tukuafu							
REQUEST: See attached Gerdau's RFI #79. The RFI Response to RFI T -0702 stated that the 180 degree hook chamfer bars are acceptable where the bars conflict with the double shoring walers. The intent of the RFI was to request the use of the 180- degree hook for the chamfer bars throughout the structure regardless of whether or not the bars were below a double or single walers. Please confirm that this is acceptable.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Per RFI 702 response, contractor-proposed 180 degree hook for the chamfer bars that are in conflict with double shoring walers is acceptable for bars that have not been fabricated. The radius point for the bend shall remain located as originally detailed on 1/S1-3201. At contractor's option, the same bars may be used at any haunch location and are not restricted to the double walers.

T-0725	BGP- CDSM Soldier Pile Cut-Off	Closed	09/06/2013	09/16/2013	09/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>In Detail 2/A1-8710 (see attached) it's not clear as to the final cut-off elevation for the CDSM wall shoring piles. Currently CDSM shoring piles extend up past the existing grade and future TG12.1 Civil Site Work Trade Contractor will be responsible for cutting off the CDSM wall shoring steel piles to the final elevation. WOJV propose that the cut-off elevations for the shoring piles be established at 3" above the train box lid i.e. at the top of concrete protection slab. See attached sketch SK -1.</p>					<p>George Metzger 9/17/2013 RESPONSE: The soldier piles are within the City Public Right of Way. Obstructions either have to be at least 4' below the surface or be protected with 1" thick steel plates (similar to the Train Box Lid). Leaving the soldier piles in this Public Right of Way may compromise agreements that have been established with the City.</p>		
<p>If the shoring piles are to be cut off below the train box lid as currently shown in detail 2/A-8710, the waterproofing membrane could be compromised by the heat generated by the cutting torches which will have to be used to cut these large steel piles, also this detail does not address the instances where the shoring wall is shared with further new projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.</p>					<p>Either the piles will need to be cut down below the 4' depth entirely or the vertical flange adjacent to the Train box is left in place and the opposite (outside) flange and the web are cut down to 4' below the finished surface. Leaving the inside flange in place to the top of the Train Box Lid could facilitate support for the vertical waterproofing assembly.</p>		
<p>It is preferable that the shoring piles be cut-off 3" above the top of the train box lid to ensure that the waterproofing system isn't compromised and omits the need to pothole around 861 CDSM piles which are in close proximity to adjacent property and live traffic.</p>							
<p>Please confirm this is acceptable.</p>							
T-0725.1	BGP- CDSM Soldier Pile Cut-Off	Closed	09/30/2013	10/10/2013	10/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Further, in response to RFI T-725, WOJV requires the cut-off elevations for the 861 CDSM piles around the perimeter of the train box taking into account but not limited to, San Francisco city requirements for beam cut off in a public right of way, the elevation of utilities entering the train box structure, bridge structures and ramps as well as pedestrian stair towers 201A and 201 B and passenger elevator 201 foundations on the west side of Zone 1.</p>					<p>RESPONSE: RFI T-0725.1 BGP- CDSM Soldier Pile cut-off</p> <p>George Metzger 10/11/2013 RESPONSE: Per Design Review Meeting discussion on 10/09/2013, TJPA (ES) stated to reject the RFI as it is not construction related and will be addressed with W/O</p>

T-0725.2	BGP - CDSM Soldier Pile Cut-off	Closed	06/30/2014	07/10/2014	07/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company Phil Militello		Answered By:Turner Construction Company Jack Adams			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Further to response to RFI T-725.1 TG07.2 trade package requires the cut off elevations for the 861 CDSM pile around the perimeter or the train box taking into account but not limited to, San Francisco city requirements for beam cut off in a public right of way, the elevation of utility/s entering the train box structure, bridge structures and ramps as well as pedestrian stair towers 201A and 201B and passenger elevator 201 foundations on the west side of zone 1, Another item which will also need to be take into account is where the CDSM shoring wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and 101 1st street in Zone 3.				As discussed with the design team and the TJPA, Tabular format a list of the final cut-off elevations for each individual CDSM pile does not exist. The CDSM Wall cut-off elevations are by contractor means and methods with the elevation determined by the contractor based on the various components of the Transit Center building construction for example; contractor formwork, waterproofing and re-construction of adjacent streets/sidewalks.			
Please provide in Tabular format a list of the final cut-off elevations for each individual CDSM pile.				Where CDSM wall is shared with adjoining Projects i.e. 181 Fremont street in Zone 4 and (Salesforce Tower) 101 First street again the CDSM Wall cut-off elevations are a contractor means and methods with the elevation determined by the contractor to construct the Transbay Transit Center.			
				For future bid packages, the Construction Manager can coordinate with the City of San Francisco for the requirement for removal. For example the City DPW states sheet piling and laggin"shall be cut off at least 3 feet below pavement subgrade with the upper part removed."			
				Jack Adams, Turner Construction		Dated 7/16/14

T-0726	BGP- Trestle pile No 6 in conflict with beam at Lower Concourse Level	Open	09/09/2013	09/19/2013	09/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Kruttsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Webcor Construction LP Michael Spillane							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Following a review and discussion on the trestle pile location, it has been noted that trestle pile number 6 (see sketch attached) is in conflict with a beam (B45) at the lower concourse slab elevation between gridline 5-6, E-F. The contractor is proposing to blockout a section of slab as shown on the sketch, this blockout section would then be infilled once the trestle pile has been removed.				George Metzger 9/20/2013 RESPONSE: This approach is acceptable. Please submit detailing in reinforcement submittal for review.

T-0728	BGP - Column Shear Reinforcement and Bump-Out Pile Interference at GL G/15 in	Closed	09/10/2013	09/20/2013	09/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Webcor/Obayashi Joint Venture Bob Garcia							
REQUEST: Please refer to attached drawing S1-2024 (dated 11/27/12), S1-3005 (dated 08/3012) and attached Shimmick sketch SK-SCCI 316. Per field measurements, the 36" bump-out trestle pile near gridlines F.7/15 interferes with the nearby column shear reinforcement at gridlines G/15. Due to the size of trestle pile, the adjustment of the shear head locations, as provided in RFI T-0703, cannot be achieved. Please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Per SKS-0283 (Attached): To avoid the trestle pile interference with the column shear heads at Grid G/15, the heads layout shall be rotated 45 degrees about the column center. The layout of heads in an arm shall be modified such that each of the arms contains 9 lines of heads extending to 16' from the column center. Heads in an arm shall be placed approximately at each 8' reinforcing module intersection, such that each adjacent line radiating from the column is staggered. The minimum number of total heads shall be 508.				
T-0729	BGP - Typical Trim Steel Requirements for Mat Slab per Field Coordination	Closed	09/10/2013	09/20/2013	09/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to attached drawing S1-3009 and S1-3501. As per field coordination between SCCI, Gerdau, WOJV and TT on 09/09/2013, to help alleviate congestion in the mat reinforcing, and in particular, congestion resulting from add bars due to openings and penetrations, please confirm the following items are acceptable: 1. Details 4 and 7 on Sheet S1-3009 in so far as they apply to trestle piles, pin piles, dewatering wells and piezometric pipes can be relaxed in terms of additional bars. For an even number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2. 2. Detail 1 on Sheet S1-3501, which applies to sinks, can be relaxed in terms of additional bars. For an even number			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 9/11/2013 RESPONSE: The measures to reduce congestion described in the RFI are confirmed.				

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2. The minimum requirement of 2 bars on either side of the opening need not apply.</p> <p>3. The number of bars and maintenance of clear spacing will take precedence over 8" or 4" module spacing as to minimize the number of potential bar interruptions (and minimize resulting add bars). Any bar may be displaced to avoid conflict. The maximum center-to-center spacing of any two adjacent bars may be as large as 16". Clear spacing of 1 bar diameter shall be maintained between bars where bar relocation necessarily reduces spacing in the vicinity of relocation. Where bar relocation affects a lap splice, noncontact lap splices will be allowed up to 6" for #10 and #11 bars. This remedy shall apply in particular when seeking to avoid interruptions at small penetrations such as risers, vents, sinks and conduits.</p> <p>4. Clear spacing of 1db minimum shall be maintained in all mat reinforcing except for contact lap splices.</p> <p>5. Measures to reduce congestion at other locations such as catch basins, sump pits, elevator pits, shoring bracing and bridge piers will be considered on a case-by-case basis during field coordination with Thornton Tomasetti's field representative.</p>

T-0738	SSS - Drag Connection to Bus Deck Castings	Closed	09/17/2013	09/27/2013	10/01/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference Drawings: S1-5016 and S1-5017			In concept, TT take no exception with standardizing the bolt and pin lengths, but offer the following comments:				
The spacing of the shear plates on the bus deck cast nodes varies in conjunction with the thickness of the web of each connecting beam. See 1c/S1-5016 and 1b/S1-5017 for reference.			1.The bus deck cast nodes are in the process being fabricated, so the proposed change shall not affect the cast node pad width. The pad on the cast node has sufficient width to accommodate the connection plates as shown on the contract documents.				
In order to avoid customizing the cast nodes, connection pins and/or the bolt lengths, our fabricator, Oregon Iron Works, proposes to standardize the spacing on the cast node shear connection plates and customize the thickness of the web reinforcing plates. See the attached mark-ups of S1-5016 & S1-5017 depicting the proposed detail.			2.For Type I drag connection, the tabulated plate thicknesses do not include the ones for W40 x327 (near Grid 9.9, 10.1, & 19.9) and W40x392 (near Grid 20.1).				
Please confirm that this proposal is acceptable.

T-0738.1	SSS - Nominal Gap Dimensions for Cast Node Drag Connections	Closed	01/14/2014	01/24/2014	01/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: WOJV RFI T-0738 (SK RFI 004.1) was submitted to the EOR proposing a 1/2" gap for Type 1 and Type 2M drag connections at the Bus Deck Level Cast Nodes. These ½" gaps were not explicitly called out, but were indicated on the supporting documents attached for your reference. Subsequent conversations with Thornton Tomasetti and Webcor/Obayashi have revealed that a 1/8" nominal gap is preferred in lieu of the noted ½" gap. Please advise if a 1/2" or 1/8" nominal gap is required for the Type 1 drag connection on 1/S1-5016 and Type 2M drag connection on 1/S1-5017.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The 1/2" gap was proposed initially in RFI T-0738 to allow for 1/4" gap at each side of the beam web. We propose a 1/8" gap each side to mitigate the potential joint movement in an earthquake. We believe that the 1/8" gap is sufficient for erection tolerance. If Skanska prefer the 1/4" gap, please provide justification for the Design Team to review.			
T-0739	BGP - Column C16 and Knock-Out Corbel at West Throat	Closed	09/17/2013	09/27/2013	09/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch Co-Author: Shimmick Construction Company, Inc. Ben Gordon ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Please refer to attached drawing detail 1/S1-2022 and 4/S1-3260. Per previous discussion with TT field engineer, in the West throat shearwalls which contain integrated C16 columns and vertical corbels to restrain the knock-out walls, only the C16 column ties are required to penetrate the mat at the designated spacing for a distance of at least 12" below the lowest top mat elevation. The ties associated with the corbel are not required to penetrate the mat slab. This RFI confirms that the column and corbel ties, as placed, are acceptable based on the observation by the TT field engineer.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 9/17/2013 RESPONSE: Column C16 is a boundary element in the West Throat Shearwall. Integral to the column (and the wall) is a vertical corbel that restrains the knock-out wall. Ties are indicated for both the column and the corbel. Only the column ties are required to penetrate the mat at the designated spacing for a distance of at least 12" below the lowest top mat elevation. The ties associated with the vertical corbel are not. As the corbel ties are not required below the mat, the corbel ties observed in the field are necessarily confirmed as acceptable. The column ties, which are required to penetrate the mat, shall be placed per the contract drawings. This RFI response does NOT confirm the placement or spacing of the column ties observed in the field.

T-0740	BGP - Mat Slab Rebar Alternate to Grade 75 #11 in Area 6 & 7	Closed	09/17/2013	09/27/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:				
Due to mill shortages of grade 75 #10 reinforcing please confirm that at no cost to the Owner, the implementation of grade 75 #11 reinforcing where required will be acceptable for use within the typical mat reinforcing installed at 8" O.C.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
The use of the grade 75 # 11 rebar is expected to supplement the typical #1 0 bar in the following locations, 3rd and 4th layer of Area 6, and 4th layer of Area 7.			George Metzger 9/25/2013 RESPONSE: GR75 #11 bars as proposed in and limited to the scope of the RFI is acceptable. Note that the lap splice length for #11 GR75 bars to #11 GR75 bars will increase over than of the previous #10 GR75 to #10 GR75 bars. Other combinations of spliced bars will be governed by the larger of LTE or the larger (or stronger) bar and the tension lap splice length of the smaller (or weaker) bar per Note 4 of Detail 1/S1-3001. Clear documentation of these bars shall be made available from time of delivery. Submit as-built or marked-up submittal that reflects these bars for record.				
T-0741	BGP - Pile Location Discrepancy at GL E/34.5 in Zone 4	Closed	09/17/2013	09/27/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:				
Please reference attached drawing S1-2057 and S1-3007.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
The bridge pier pile (4'-0" diameter) near grid E/34.5 is shown in SI-2057 to be offset from the typical row of piles shown along gridline 34.7. In addition, detail 1/SI-3007 depicts the pile being located within the pit that is located at gridline E/34.5. However, as per BBI's Beale Street Bridge drawings and as-built conditions, the aforementioned bridge pile is installed in line with the other piles on gridline 34.7.			George Metzger 9/25/2013 RESPONSE: This topic has already been addressed in past RFI's. Please refer to responses for RFI T-0264.7 BSE as well as RFI-0264.3 BSE.				
Please confirm the as-built location of the bridge pier is acceptable and the sump pit detail shown in 1/S1-3007 is no longer applicable.

T-0742	BGP- CDSM Soldier Pile Encroachment Area 9	Closed	09/20/2013	09/30/2013	09/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

Reference Documents: Exhibits A - G

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) and steel plate on the north & south wall in mat slab pour Area 9 as well as all levels of the encroachment into the foundation wall between CDSM piles 164 to 188 on the north elevation and 595 to 618 on the south elevation for Location Plan see exhibit - A Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) Between CDSM piles 167 to 168 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching Steel plate attached to SP 167 & 168, originally this was a WR1 reinforcement area #11@8" oc EF vertically and would change to #11@6" OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 611-612 to 613-614, WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 612. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6" OC EF vertically and would change to #11@5" OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option1 (Exhibit -E).

In all other areas without CDSM pile encroachment issues the reinforcement will remain unchanged as per the Contract drawings.

See Exhibit - F & G showing details of transition between modified reinforcement to contract reinforcement.

These solutions if approved would be incorporated into the TG06 shop drawings.

Please confirm if these solutions would be acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger

9/25/2013

RESPONSE:

The contractor proposed revisions to foundation wall reinforcement due to encroaching CDSM Piles (and added steel plates) in Area 9 are acceptable. Note that reducing the spacing of embedded column vertical reinforcement from 6 inch to 5 inch may negatively impact the installation of embedded column cross-ties which are #5 per construction drawings.

T-0742.1	BGP - U-Bar at CDSM Encroachment Near GL 16.9/J in Area 9	Closed	10/17/2013	10/27/2013	10/23/2013	Potentially	<input type="checkbox"/>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:	SUGGESTION:		ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Please refer to drawing S1-2024, S1-3302 and response to RFI T-0742 - CDSM Soldier Pile Encroachment Area 9.			George Metzger 10/22/2013				
Per the response to RFI T-0742, the spacing of the verticals in the C21 embedded column at Gridlines 16.9/J was changed from 6" OC to 5" OC due to the CDSM soldier pile encroachment. As a result, there is an odd number (19) of verticals per layer which would leave one row of verticals to not be straddled by a U-bar. Gerdau proposes to widen the final U-bar in the embedded column and straddle 3 rows of vertical bars as depicted in the attached Gerdau sketch SK-97.			RESPONSE: All exterior wall bars at their penetration into the mat shall have lateral support perpendicular to the edge of the mat. In Gerdau Sketch SK-97, provide a single leg tie with a 180 hook on the odd exterior vertical wall bar. Alternatively, normal u-shaped ties can be placed either side of an odd bar and a 180 hook added to the odd bar. The embedment length of the single leg tie shall be that of the u-shaped bars.				
Please confirm it is acceptable to proceed as shown in SK-97.

T-0756	BGP - Structural Slurry Primer in Mat Slab	Closed	09/24/2013	10/04/2013	09/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to the attached letter, authored by Rober Foley (CEMEX QC), dated September 17, 2013.			SUGGESTION:		ANSWER: George Metzger 9/24/2012		
With limited site access, many Mat Slab pours will require a larger than normal amount of slick-line. To ensure that no slick-line gets plugged, SCCI is proposing to prime the slick-line with a structural slurry that will reach and exceed the specified design strength for the Mat Slab. A miniscule percentage of this primer will be deposited into the mat slab. This percentage would amount to .01 to .02 percent by volume.					RESPONSE: Any material that is not the approved mix design for the mat slab, including slick-line primer, shall not be placed in the mat slab.		
Please confirm the proposed SCCI method of slick-line priming is acceptable.					Accept Suggestion: <input type="checkbox"/>		
T-0757	SSS - HSS Vertical Post Size at Roof Park Level	Closed	09/25/2013	10/05/2013	09/26/2013	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Please verify the following in reference to Detail 5B on S1-5051 and the sketches attached (SD RFI 029 SK1, SK2, & SK3)					1) The Grout hole in the shear key is to be centered at the 10" deep shear key (5" from the bottom of the base plate).			
1) For type 2 column base plates at the lower concourse please confirm the grout hole indicated is to be 7" below the base plate in order to place it 5" below the top of concrete as appears to be shown in detail 5B/S1-5051.					2) The location of the shear key shall be as shown on 3/S1-5051. Location of the shear key is controlled by the concrete beam top bars below. Where the base plate is only 26" wide, the shear key may be located 10" from center of column (instead of 10- 3/4" shown on 3/S1-5051) to fit within the width of the 26" wide base plate.			
2) For the 26" by 30" type 2 base plates as shown in 2/S1-5051 please confirm the shear key plates may be located 10" from center of column to fit within the width of the 26" wide as shown on SK3 base plates.

T-0764	SSS - Built-Up Beams - Plate Yield Strength	Closed	09/26/2013	10/06/2013	09/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference contract sheet S-0007, specifically structural steel note SS-1, which indicates that plates used for flanges in built up beams shall meet the criteria of ASTM Designation A572-50 (UNO) and have a maximum yield point of 58ksi.					Accept Suggestion: <input type="checkbox"/>		
The plate mills will not guarantee material that meets the A572-50 criteria and further restricts the yield to a maximum of 58ksi. The plate mills will guarantee material that will yield within the range of 50ksi - 65ksi. Attached you will find correspondence with two major US steel mills for reference.					The maximum yield strength specified on General Note SS-1 is to ensure the strong column/weak beam condition is met. Hence, this requirement may be relaxed to applicable to steel plates for seismic moment frame beams only.		
Please confirm, for the plates used for flanges in built-up members produced from A572-50 material, that a yield range of 50ksi - 65ksi is acceptable.					From our past experience, the maximum yield of 58 ksi is a very reasonable target. Also, the lab tensile tests commonly show a lower yield than what is provided on the mill certifications (around 2- 6 ksi lower).		
					However, we understand that this is still a risk to the steel contractor even though it is only applicable to the seismic moment frame beams. We agree to relax this requirement further accepting the yield strength up to 65 ksi as requested

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
The response to Webcor/Obayashi RFI T-0767 (SK RFI 013) confirmed that equivalent built-up sections can be provided in lieu of W shapes not available domestically. All W40 X 503 and W40 X 593 at the Ground level (reference S1-2302 thru S1-2311) will be built-up sections.			1) For web to flange welding of built-up sections equivalent to W40x503, refer to response provided for RFI T-0704.1.				
Please provide fillet weld sizes accordingly for the sections noted in the attached sketch.			2) For built-up sections equivalent to W40x593, web to flange welding shall be with double 7/8" fillet welds for 4 ft from each end of each flange plate and double 5/8" fillet welds in between.				
			Note that W40X503 and W40x593 are also used at Bus Deck and Roof Levels. W/O to coordinate RFI T-0767.1 response with other sub-contractors, as needed.

REQUEST:			ANSWER: <div>Accept Suggestion: <input type="checkbox"/></div>				
Please reference Drawing S1-5051 and confirm the following in regards to the column base details:			The numbering of the response below matches with the numbering of the RFI.				
1) Confirm it is acceptable to oversize the holes for anchor bolt penetrations through base plate per AISC's 13th Edition Table 14-2 (reference CD RFI 016 SK2 attached).			1. Confirmed the holes may be oversized per AISC's 13th edition, Table 14-2.				
2) Confirm the hole sizes indicated in Part 1 are acceptable for anchor bolt penetrations through the horizontal column stiffener.			2. Confirmed.				
3) Confirm it is acceptable to supply a ½" x 4" x 4" (A36) plate washer above the column stiffener with a 1/16" oversize hole.			3. Washer thickness shall be in accordance with AISC's 13th edition, Table 14-2.				
4) Confirm it is acceptable to locate the grout holes typically as shown on CD RFI 016 SK3.			4. Grout hole locations and procedure shall be confirmed by the mock-up.				
5) To aid in the alignment of the thread bar anchor rods during concrete operations, please confirm it is acceptable to provide one ½" thick anchor plate at the base of the thread bars with size to match the base plate in lieu of four separate ½" x 4" x 4" anchor plates.			5. 1/2" anchor plate matching the base plate at the bottom of the anchor bolt is not acceptable as it will affect the consolidation of the concrete.				
6) Confirm the thickness of the stiffener for Type II and Type III column bases is to be 2".			6. Confirmed, the stiffener is 2" thick.				
7) Confirm an anchor bolt projection of 2.5 x AB dia. above the plate washer on top of the column stiffener is acceptable. See CD RFI 030 SK3 for reference.			7. Contractor to verify with the anchor rod suppliers for the length of the hex nut. Recommend projection = washer thickness + hex nut length + 1.5x d Minimum to account for construction tolerance				
8) Confirm the thickness of the stiffener for Type II and Type III column bases is to be 2".			8. See response to question #7.				
9) Confirm an anchor bolt extension of 2.5 x AB dia. below the bottom plate washer is acceptable. See CD RFI 030 SK3 for reference.			9. Confirmed the 1" clear is acceptable.				
10) Confirm that the 1" cover as shown on CD RFI 030 SK3 is acceptable.			10. Confirmed that wrench tight is adequate.				
10) Confirm that the anchor bolts shall be installed wrench tight.

T-0774	BGP-Pre-cutting of CDSM Soldier Pile	Closed	09/30/2013	10/10/2013	10/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: Turner Construction Company Gary Krutsch				

REQUEST:

Further, in response to RFI T-725, WOJV is proposing to pre-cut the inside flange of the CDSM beams at the required cut off elevations prior to the installation of the waterproofing system see exhibit A for details, This pre-cutting of the CDSM beams would minimize the possibility of heat damage to the waterproofing system. The remainder of the CDSM beam cutting and top section removal will be completed by the TG012.1 Civil Sitework contractor.
Please confirm if this would be acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Judy Long
10/18/2013
RESPONSE:
This is a means and method item. Contractor to comply with manufacturer's requirements and recommendations to ensure proper installations and warranties while performing work per contract documents.

T-0775	BGP-Concrete strength requirement for bracing Removal	Closed	09/30/2013	10/10/2013	10/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane			To: Turner Construction Company Gary Krutsch				
Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				

REQUEST:

In accordance with Spec section 31-55-00 1.4 J the contractor is to submit concrete strength results to the design team prior to the removal of internal bracing. In order to fulfill this requirement the contractor has asked the following questions.

1. What is the criteria for bracing removal for instant if the average strength of the concrete cylinders tested is calculated to be above the design strength can the internal bracing be removed?

2. Is there any tolerance on the design strength requirement for bracing removal, for example if the concrete has reached 90% of design strength could the bracing be removed? Obviously this could have a positive effect on the construction schedule.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger
10/9/2013
RESPONSE:
The response of this RFI is limited to the scope of the removal of the lowest level D temporary shoring struts:

1. The criteria for removing the shoring struts is defined in general note FO-5 on sheet S-0005 of the TG03 BSE documents: " F0-5 Do not remove temporary shoring struts against foundation walls until the foundation wall and mat concrete has attained 100% of its design strength."

For consideration of bracing removal prior to 56 day concrete cylinder tests, design strength may be considered achieved when all earlier tested cylinders meet ACI 318 acceptance criteria. For this purpose, "test" in ACI will not be required to be the average of multiple test results of a particular batch.

If the results of the concrete cylinders meet ACI criteria and averages (as defined by ACI) exhibit values above design strength, the element may be considered to have attained its design strength.

T-0775.1	BGP-Concrete strength requirement for level D bracing removal	Closed	10/09/2013	10/19/2013	10/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: To clarify question 2 in RFI T-0775 WOJV is requesting that the level D bracing be removed once the concrete in the mat slab beneath has reached 75% of its design strength. Please confirm if this would be acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/15/2013 RESPONSE: RFI T-0775 already allowed a relaxation of the original contract document requirement. To consider the criteria of 75% design strength, the Contractor shall produce all necessary calculations to justify that the 75% strength and the reduced stiffness at 75% strength is sufficient.				
T-0775.2	BGP-Concrete strength requirement for the level D bracing removal	Closed	11/15/2013	11/25/2013	11/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Further to response to RFI T-0775.1, Please find attached supporting calculations to justify that the concrete in the mat slab is sufficient at 3000 psi to removal the level D bracing. Please confirm that this is acceptable			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/19/2013 RESPONSE: A submittal is required to address the contents of this RFI.

T-0776	BGP - Mat Slab Construction Joint Between Area 2 and Area 4	Closed	10/01/2013	10/11/2013	10/03/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Please refer to attached excerpt drawing CJ-04 from submittal package TG0600-030.3, Item ID #033000-003.3. As discussed and coordinated in various Progress Meetings, SCCI plans to combine slab pours S102 and S104 into one pour without bulkhead forms in between. The specificaitons do not restict SCCI from using bulkheads in the east and west directions. The returned construction joint layout shop drawing review comments do not reflect the coordinated revised construction joint. Please confirm it is acceptable to combine slab placement areas S102 and S104 into one pour without bulkhead forms in between.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/3/2013 RESPONSE: The construction joints submitted and approved in Submittal TG0600-030.2 (Item 033000-003.2) dated May 29, 2013 were acceptable to the design team and formed the basis for CTL's Submittal TG0600-201.1 (Item 033020-011). CTL (Shimmick's consultant) indicates that slab cracking becomes increasingly likely when aspect ratios exceed 1.5:1. TT notes that the revised construction joint layout creates an additional high aspect ratio pour. While TT does not recommend the elimination of the joint, the contractor may at their own risk eliminate the joint between Area S102 and S104 per the revised joint layout contained in Submittal TG0600-030.3 (Item 033000-003.3) dated September 17, 2013. Further, the contractor shall verify that the new geometry does not change the previously issued CTL submittals.

T-0777	BGP - FF & FL Values for Concourse Slab	Closed	10/02/2013	10/12/2013	10/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to attached RFI T-0691. This RFI is being submitted in response to RFI response T-0691. As per contract specification section 033020, Section 3.6.B the concrete finish of the lower concourse slab notes an FF value of 20. Table 8.15.3b of ACI 302.1R (page 46) states that to achieve a surface with an FF value of 20, it must be a smooth floated surface. ACI 302.1R does not provide any recommendations of "F" numbers for broomed surfaces. Please confirm the design intent for the concourse slab finish: 1. To have a rough broom/rake finish or 2. To have			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/16/2013 RESPONSE: The Lower Concourse shall be finished to the FF and FL numbers contained in the Specification 03 30 20, Section 3.6B-1a. Section 3.6B-1a will take precedence over Section 3.6B-1c.

	5160 STEEL, OIL QUENCHED FROM 830C, 650C TEMPER OR DIN 34 CRNIMO 6 + QT CODE EN 10083". The pin manufacturer, Dyson Corp., indicates this material is not available and suggests a substitution to ASTM-A540 grade 823, class 5 (see attachment).					A540 grade B23, class 4.	
T-0787	SSS - Charpy V-Notch Impact Testing Requirements	Closed	10/04/2013	10/14/2013	10/10/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please confirm the following regarding the Charpy V-Notch (CVN) testing requirements for the project:				1-) In elevation sheets S1-4101 through S1-4116; moment frame columns, transfer girders and tapered roof girders are part of Seismic Framing (SFRS). In this RFI, only moment frame beams are highlighted by the Contractor as SFRS in these sheets. As indicated in Sheet S1-2302 (see Sheet Notes), Sheets S1-4101 through S1-4116 include "superstructure transverse seismic frame elevations".			
<ul style="list-style-type: none">The members identified on the attached sketches (SFRS - SK) are the only members that are part of the Seismic Force Resisting System (SFRS/SLRS/MF/BF) and are CVN tested in accordance with AISC 341-10 "Heavy Section" definition.<ul style="list-style-type: none">Except from AISC 341-10: "For structural steel in the SFRS, hot rolled shapes with flanges 1-1/2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, tested in the alternate core location as described in ASTM A6 Supplementary Requirement S30. Plates 2" thick and thicker shall have a minimum CVN toughness of 20 ft-lb at 70°F, measured at any location permitted by ASTM A673, Frequency P, where the plates is used for the following:"<ul style="list-style-type: none">Members built up form plateThe steel core of buckling restrained bracesSFRS/SLRS/MF material will use the "Heavy Section" definition from AISC 341-10: hot rolled shapes with flanges 1-1/2" thick and thicker and plate 2" thick and thicker.Non SFRS/SLRS/MF material will use the project specification, Section 05 10 00, Part 1, 1.2, C.6, "Heavy Section" definition: hot rolled shapes with flanges exceeding 1-1/2" thick and plates exceeding 2" thick.				2-) RFI correctly highlighted all the members in the "longitudinal seismic framing elevations" as SFRS. This was also indicated in Sheet S1-2302 (Sheet Notes).			
				3-) Buckling Restrained Braces are part of SFRS. If core plates within the BRBs 2" or thicker (unlikely since the specified BRB steel core area is relatively small), AISC 341-10 Heavy Section CVN requirements will apply.			
				4-) Ground Level Gridline G beams between Gridlines 12 and 16.9 are SFRS. Note that RFI correctly highlights these beams as SFRS in longitudinal seismic framing elevation views. However, they were not shown as SFRS in the plans.			
				5-) 2nd Floor Gridline D beam between Gridlines 16 and 16.9 is SFRS as indicated in construction drawings.			
				6-) For pipe columns (large diameter tubular sections),

T-0788	BGP - Areas 5 and 6 EW Top Mat Reinforcing at South Wall Radius	Closed	10/04/2013	10/14/2013	10/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Refer to the attached sketch 131003_S105-S106 South Radius. In Areas S105 and S106, EW top mat reinforcing makes an increasingly acute angle with the south wall. This eventually prevents the reinforcing from penetrating the haunch and wall reinforcing curtains to reach the edge of the mat. Per field coordination, please confirm it is acceptable to terminate EW top mat reinforcing in a hook prior to reaching the edge of the mat slab provided the following provisions are as followed: - All terminating EW top mat reinforcing shall be hooked - Where the angle becomes such that the mat reinforcing cannot penetrate the inner wall reinforcing. The reinforcing may terminate immediately in front of the wall reinforcing inside the haunch. This is labeled Zone 1 in the sketch. - In Zone 1, single haunch bars that interfere with penetration of mat reinforcing into the haunch shall be relocated to allow penetration. Relocation will be to the nearest adjacent placement opportunity without regard to the 8" spacing module. Clear spacing, however, between haunch bars shall be maintained. - The total number of haunch bars will remain unchanged. - In Zone 1, provide a curved band of reinforcing at the typical size and spacing of the mat within the wall. - Where the angle becomes such that the mat reinforcing cannot penetrate the haunch without relocating more than one haunch bar, reinforcing may terminate at the toe of the haunch. This is labeled Zone 2 in the sketch. - In Zone 2, provide a curved band of reinforcing at the typical size and spacing of the mat within the haunch. - Zone 1 and Zone 2 bands will overlap typical reinforcing by the distance LTS.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/4/2013 RESPONSE: It is acceptable to terminate EW top mat reinforcing of Areas S105 and S106 prior to reaching the edge of the mat as described in the RFI.

T-0792	SSS - Anchor Bolt Detail Clarification	Closed	10/07/2013	10/17/2013	10/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Drawing: S1-5051				In the direction parallel to column web, moving the anchor bolts to 5-1/2" from column center line as proposed in RFI will cause washer plates to clash with column flange (or welds). To alleviate this problem, suggest locating the 2 1/2" anchor bolts 4" from column center line (in direction parallel to web). The plate washer for the lower nut may be deleted.			
1) The plate washer will clear the fillet weld by 3/16". This is not sufficient to accommodate the maximum anchor bolt as-built tolerance based on the maximum oversize holes per A.I.S.C. Please advise.							
2) The plate washer will clear the fillet weld by 1/4". This is not sufficient to accommodate the maximum anchor bolt as-built tolerance based on the maximum oversize holes per A.I.S.C. Confirm it is acceptable to locate the anchor bolts 5 1/2" from the center of the column.				In the direction perpendicular to column web, moving the anchor bolts as proposed in this RFI is acceptable.			
T-0793	SSS - Connection Plates at Type 2 Drag Connections	Closed	10/07/2013	10/17/2013	10/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On S1-5017 for the Type 2 Drag connections there are finger type connections where the carrying plates on the beams slide between the framing plates. In order for the beams to side down between these shop attached plates during erection please confirm a 1/8" clearance is acceptable.				Confirmed that the proposed 1/8" gap is acceptable.			
T-0795	SSS - Transfer Girder Stiffener Configuration	Closed	10/07/2013	10/17/2013	10/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch Answered By: Webcor Construction LP Robert Kjome							
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Drawings: S1-4302 & S1-5052				Trimming not required. Interference for this case can be avoided moving the below grade column stiffener 1/2" towards the center of the column.			
Stiffeners required on TR9 transfer girder (A/ S1-4302) at line F are fouling. Stiffeners were detailed as per 2/ S1-5052 and 4/ S1-5052. See attached sketch CD RFI 040 SK1 for clarification. We propose to trim the stiffeners by ½" to avoid fouling.							
Please advise if this proposal is acceptable.

T-0796	SSS - Transfer Girder Stiffener Thickness	Closed	10/07/2013	10/17/2013	10/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Drawings: S1-4300, S1-4308, S1-5052 For columns above transfer girders Detail 1/ S1-5052 calls out thicknesses of "X=1 1/2" for tfc <2 or tfc=2" and "X=2" for tfc >2"). For columns that are below transfer girders 4/ S1-5052 calls out "2 1/2" thk stiffener PL ea side, typ. (see note 3)". Note 3 states "Stiffeners required UON in transfer girder elevations". Where columns are directly above and below a transfer girder and full height stiffeners are shown per transfer girder elevations, please advise on what thickness these full height stiffeners should be. *Please note that 1/S1-5052 is also referred to on 2 and 6/S1-5052.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> When a below grade column is present immediately below an above grade column, full depth stiffeners that line up with the flanges of the column above are used within the transfer girder. Therefore, Details 1, 2 or 6/S1-5052, which are for above grade columns, govern the thickness of the full height stiffeners. This condition is indicated by Note 4 of Detail 1/S1-5052 which states, the stiffeners are half-depth UON in transfer girder elevations. For information not shown in Detail 2 and 6/S1-5052 (see Note 2 in these details), Detail 1/S1-5052 is referred to as correctly understood by the contractor. Note that where the above grade columns are connected to the transfer girders via castings, different details apply and stiffener requirements are different. Refer to corresponding details from Transfer Girder elevations.	
T-0797	BGP - Mat Slab Construction Joint Conflicts in Area 8	Closed	10/08/2013	10/18/2013	10/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Filip Filipic							
REQUEST: Please refer to attached photos, excerpt drawing CJ-05 from submittal package TG0600-030.3 and SCCI sketch SK-0341. The east side of the mat slab construction joint of Area 8 (S108) has several constructability issues with the mat keyway and other project structure elements. The following are identified conflicts and SCCI proposed remediation: 1. The current east construction joint layout in Area 8 falls within the row of micropiles as shown in attached Photo-1 and Photo-2. SCCI intends to jog the joint an addition 12" +/- to the East of GL 16.6 to clear the micropile conflict 2. The east construction joint of area 8 currently jogs thru the thickened slab section at GL 16.6/G.3. SCCI intends to shift the joint Eastward to capture the thickened section			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/15/2013 RESPONSE: 1. We assume the RFI means to state the proposed shift is "... 12" +/- to the East towards GL 16.6..." (and not "...12" +/- to the East of GL 16.6...") as graphically depicted in the RFI sketch SK-341. This is acceptable. 2. The proposed jog around the pit/thickened slab is not acceptable as proposed. However, an acceptable alternative would be to turn the CJ westward along (or parallel) to GL F.7 within S108 and then turn 90 degrees south to align with the CJ on the west side of wall W160.

	REQUEST: Please refer to attached SCCI sketch SK-345 and drawing (CJ-05) excerpt from submittal package TG0600-30.2. The east side of the mat slab construction joint of Area 10 (S110) has several constructability issues wih the mat keyway and other project structure elements. SCCI proposed to install the CJ between area 10 and 11 as shown on the attached sketches. Please confirm the revised construction joint layout as shown in the attached SCCI sketch SK-345 is acceptable.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/15/2013 RESPONSE: The proposed mat joint between S110 and S111 is acceptable. Refer to RFI T-0798 for the joint on west side of area 10 between S110 and S111.			
T-0803	SSS - 2nd Level Revit Model Dimension Verification		Closed	10/08/2013	10/18/2013	10/09/2013	Potentially <input type="checkbox"/>

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On the response to Webcor RFI # T-0769 (SK RFI # SK 050) & T-0803 SK RFI # 067) we have reviewed and located most of the beam locations in question using the nearest gridlines, architectural dwg's, partial plans, equal spacing, etc per the noted guidelines in the response. However on drawings S1-2402, S1-2403, S1-2404, S1-2406 & S1-2407 there are still some beam locations that cannot be located and require verification therefore on sketches CD RFI 048.1 SK1 to SK5 please verify all clouded dimensions in RED as noted to close this RFI.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Responses to the queries on dimensions for locating beams on floor plans have been noted on the attached sketches SKS-0307 through SKS-0311 and SKA-2970.		
T-0804	SSS - W21 Beam Substitution	Closed	10/08/2013	10/18/2013	10/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: With reference to the W21x44 and W21x50 beams shown on Dwgs S1-2302 to S1-2307 (Ground Level), S1-2402 to S1-2407 (Second Level), Dwgs S1-2502 to S1-2507 (Bus Level) and Dwgs S1-2602 to S1-2607 (Roof Park Level), these beams have relatively narrow flanges. These beams sizes are problematic with regard to stability during erection for spans over 30 feet in length. The substitution of the W21x48 for the W21x44 and W21x55 for the W21x50 would resolve the stability issue. Please advise if these substitutions are acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> In general, where there is no shaft opening or recess on either one or both sides of the W21, the proposed substitutions for temporary erection stability are acceptable as long as there is no additional cost to TJPA. However, where there is an opening or recess on either one or both sides of the W21, substituting W21x44 or W50 with a beam with wider flange might negatively affect the edge clearance. Skanska may decide to move the beam to gain the same edge distance and submit the revised framing plan (with dimensions) as a RFI.		
T-0805	BGP-Area 7 level D bracing removal	Closed	10/08/2013	10/18/2013	10/21/2013	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
For the typical shear plate connections per detail 1/S1-5011 see sketches CD RFI 060 SK1 & SK2 for items 1, 2 & 3 noted below.			1. Confirmed. It is typically acceptable to provide a distance of 2 3/4" between face of the beam web and the bolt centerline.				
1. Confirm it is acceptable to locate the bolts 2 3/4" from face of beam web as shown for duplication of shear plate marks.			2. It is acceptable to typically cope the supported beam by a distance of k - e while maintaining a 1/2" minimum clearance as noted wherever detail 1/S1-5011 applies. k is the "k" distance of the supported beam and e is the fillet encroachment allowed per Figure 10-3 of the AISC Steel Manual 14th Edition. For the instance highlighted in the RFI, see response to 3.				
2. Confirm it is acceptable to cope the beam to match the "k" distance of the supported beam (W24) while maintaining a 1/2" minimum clearance to avoid cutting inside the "k" in lieu of the 1/2" max. shown in detail 1/S1-5011.			3. The shear plate connection shown in SK1 and SK2 occurs at 4 locations between GL 12 and 14. W16 beams at these four locations are going to be upsized in a future ASI.				
3. Confirm the shear plate thickness and weld size at a W16x31 to W24x68 connection as per Note 3 in 1/S1-5011 is 3/8" shear plate and 1/4" weld.

	<p>1.Please clarify which stiffeners are fitted stiffeners as this terminology does not appear to be noted in the structural drawings.</p> <p>2. Confirm it is acceptable to provide the shear plate height as d-2tf minus 1/16" for fabrication tolerance.</p>			<p>disregarded and stiffeners can be constructed using standard AISC fabrication tolerances: a-) When stiffeners are welded to beam/column flanges using CJP welding. b-) In Sheets S1-8001, S1-8002, S1-8003. c-) In Detail 1/S1-5013.</p> <p>2.) If a stiffener is not called out as "fitted", use of standard AISC fabrication tolerances for construction is acceptable.</p>			
T-0812	SSS - Pipe Column Connections to Cast Nodes	Closed	10/10/2013	10/20/2013	10/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>Please review attached sketches with details on S1-4020 and cast node details for pipe connections to cast nodes.</p> <p>1. Work points for 32" diameter basket column to cast node connections have been offset from the theoretical work line as noted on design sheet S1-4020. Verify ends of 32" pipe will need to be bevel cut to match face of cast node geometry.</p> <p>2. Where necessary bevel cuts are required at each end of the 32" diameter pipe we propose to add a scribe line along the top surface on centerline of the pipe to facilitate matching the cut surface to the cast node face. Please verify a corresponding scribe line will be added to the face of Cast Nodes.</p>				<p>1. As noted on details on Sheet S1-4020, the center line of the pipe is not in line with the center line of the cast node. Since the cast node ears are casted to be perpendicular to the cast node axis, the pipe end need to be bevel cut to match face of the case node geometry.</p> <p>2. Scribe line if needed shall be laid out and scored into the casting by Skanska as a part of means and methods. The depth and thickness of the scribe line shall be submitted for review. Scribe line if added, shall not affect the appearance of the cast node nor pipe after painting.</p>

Please refer to drawing S1-2052 and ACI 117.				George Metzger			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Please confirm it is acceptable to increase the top mat slab reinforcement placement tolerance from +/-1/2" to +1/2" and -1" as discussed and coordinated with TT field representative. This would also change the concrete cover tolerance from -1/2" to +/-1/2".</p>		10/18/2013				
			RESPONSE:				
			Minimum acceptable concrete cover over top reinforcing stands at 1" per ACI 117 Section 2.2.2 (+1/2 proposed in RFI). Minimum acceptable concrete cover over headed reinforcing stands at ½" per ACI 117 Section 2.2.2.				
			Maximum acceptable concrete cover may be increased to as much as 3" provided that the distance from the top of reinforcing to the protection slab is no less than 58" (Relaxation of proposed -1" tolerance in RFI to -1.5" with stipulation).				
T-0817	BGP -Compressible material between concrete structure & CDSM wall	Closed	10/11/2013	10/21/2013	10/23/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Michael Spillane	To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
	Co-Author:						
	REQUEST:	SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>		
	The contractor has raised a concern see letter in exhibit A attached.		George Metzger				
	Does the design team envisage any possible issues with the CDSM wall if the waterproofing substrate becomes compressed between the permanent structure and the CDSM wall once the level D bracing is removed? The same question applies when the re-bracing is installed against the permanent foundation walls.		10/21/2013				
			RESPONSE:				
			We do not envisage any problems with the CDSM wall due to the compressible layer. The performance of the CDSM wall with regards to meeting the specified deflection criteria is the responsibility of the internal bracing designer.				
			WOJV shall coordinate between the Waterproofing and shoring Sub-contractor and provide requested information to BBI.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
RFI T-0822 (attached for reference) confirmed the use of details 6 and 7/S1-5015 at the 16 highlighted areas. Please refer to CD RFI 062.1 SK1 and confirm that the weld dimension "A" indicated on 7/S1-5015 applies to skewed angle connections as indicated on the sketch attached. Otherwise, please provide the required welding information.			Confirmed.

T-0823	SSS - Bolted Beam Connections	Closed	10/11/2013	10/21/2013	10/14/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per S1-5012 for the typical bolt beam connections please refer to sketches CD RFI # 079 SK1 to SK3 for items 1 to 7:					1) Confirmed. Vertical bolt edge distance 2db can be changed to 1 3/4" in details 1 and 2/S1-5012 if the bolt diameter is not more than 7/8".		
1) Confirm the noted dimension may be 1 3/4" in details 1 & 2/S1-5012 to match 3/S1-5012.					2) Confirmed. The noted dimensions are acceptable for details 1, 2 and 3/S1-5012. Note that the distance between the centerline of the bolts and the face of the column is 3".		
2) Confirm the noted dimensions are acceptable for details 1, 2 & 3/S1-5012.					3) Plate thickness is 3/4" as noted on Superstructure ASI 106 drawings.		
3) Supply plate thickness.					4) Welds between shear plate and column are double sided 5/16" fillet welds as noted on ASI 106 drawings.		
4) Supply welding for shear plate to column.					5) Confirmed. Noted dimensions are acceptable.		
5) Confirm dimensions are acceptable.					6) Confirmed. Noted dimensions are acceptable.		
6) Confirm dimensions are acceptable.					7) Plate thickness is 1" as noted on Superstructure ASI 106 drawings.		
7) Supply plate thickness.

T-0824	SSS - Bottom Flange Connection Plate	Closed	10/11/2013	10/21/2013	10/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per detail 6/S1-5015 for the bottom flange connection plate please refer to sketches CD RFI # 069 SK1, SK2 & SK3.					Access for field welding of the web extension plate per 6/S1-5015 is a problem at the following locations:		
1) Access for field welding the web extension plate per 6/S1-5015 is a problem at the noted location as well as other similar locations.					1) Location highlighted in SK1 in the RFI		
					2) At GLs 6/C.3 and 6/F.7		
					3) At GLs 9.9/C.3 and 9.9/F.7		
					4) At GLs 20.1/C.3 and 20.1/F.7		
					5) At W40x149 beams framing into moment frame beams between GL 32.4 and 33.2 (Total 8 brace locations).		
Confirm the web extension plate may be typically omitted when the dimension shown as 1 3/4" is 3" or less.					Provide brace detail per sketch SKS-0290 (attached) at locations listed in 1, 3 and 4 above. Braces at locations listed in 2 and 5 are not required.		
T-0825	SSS - W30 Beam to Girder where bf exceeds 22	Closed	10/11/2013	10/21/2013	10/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
On S1-2505 along grid line 20.1/E.6 where the W30x108 beam frames into the MF girder please refer to sketches CD RFI # 076 SK1 & SK2 for items 1 & 2 noted below.					1) Provide double angle connection per 1/S1-5010 at the two W30x108 beams that frame into the Moment Frame beam at GL 20.1. For the four shear plate connections at the W30x108 and W40x149 beams on GL 21, provide connections per 1/S1-5011. There are no other locations where a shear plate connection per 1/S1-5011 is specified and where support beam flange width is greater than 22".		
1) The noted "MF" beam is a BU-44x24x1.25x2.75. Detail 1/S1-5011 does not apply as "bf" exceeds 22". Please supply a typical connection for a round circle on plans when the "bf" exceeds 22 (work with item 2 on SK2)							
2) Please note that if a full depth shear plate is used it will foul the beam extension plate per 6/S1-5015. Please clarify.					2) See response to 1.		
T-0826	SSS - Oversized Hole Size in Web Stiffeners	Closed	10/14/2013	10/24/2013	10/22/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:	Request:	Suggestion:	Answer:
	<p>Reference the response to W/O RFI # T-0826 (SK 114 & CD 055D), attached for reference.</p> <p>W/O RFI T-0826 response states that "Use of oversize bolt holes in this drag connection is not acceptable." Confirm that the response above applies only to conditions when the web stiffener plate is the outside plate in a connection and that the 3/16" oversize holes for the web stiffener plates are acceptable in details 1 & 2/S1-5016 when the web stiffener plate is not the outside plate in the connection.</p>		<p>Accept Suggestion: <input type="checkbox"/></p> <p>RESPONSE: Use of oversize hole is not allowed for drag connections, neither at the shear plates nor at the web stiffener plates, and regardless of whether the web stiffener plate is the inside plate in the connection or not.</p>

T-0827	BGP - Clarification to Galvanized Steel Plate at Seismic Joint in Area 16	Closed	10/14/2013	10/24/2013	10/28/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST: Please refer to attached drawing detail 7/A1-8881 and 4/S1-3010. Detail 7/A1-8881 (and other details on A1-8881) call for a 5/8" x 6' galvanized steel plate secured to the mud slab and soldier piles. This plate does not appear on the structural details for the seismic joint in drawing S1-3010. 1. Please explain the functionality and purpose of the galvanized steel plate shown in 7/A1-8881 and 1/A1-8881 in relation to the seismic joint assembly. 2. Please provide revised structural drawings showing all welding and design criteria required to attach and secure the "5/8" THK x 6' wide galv steel plate" to the mud slab and soldier beam, respectively.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/24/2013 RESPONSE: AAI Response: 1. The 5/8" thk x 6' wide plates were provided at the mat slab (horizontal) and at the shoring wall (vertical) to serve as relatively smooth backing for the seismic joint assembly as the train box moves against the mud slab and shoring wall. It also provides a flat surface for the neoprene gasket seal when pressed against it. 2. The horizontal plates are mechanically anchored to the 4" thk reinforced mud slab with 3/8" expansion anchors (with the shortest minimum embed 2 5/8" or 3" depending on the manufacturer) spaced at 8" min. The vertical plates are either seam/slot welded to the soldier piles or are 2 plates (with total width of 6')- plate panels welded to the soldier piles, depending on the field location of installed adjacent soldier piles. Welds ground to a smooth finish. TT Response: This plate is not intended to show on the structural drawings.				
T-0828	SSS - Locations for Scratch Plate for BRBs	Closed	10/14/2013	10/14/2013	10/17/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Please reference the sketch attached and verify the proposed scratch plate end locations and surface locations are acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The locations of the BRB scratch plates are acceptable with following modification: Move the scratch plate from the BRB in Detail H/S1-4150 to one of the BRBs in Detail F/S1-4150. Mount scratch plate near the top of the brace, on near side.				
T-0829	BSE - Voids Across Top of CDSM Wall on the West side of Zone 1	Closed	10/15/2013	10/25/2013	10/21/2013	Potentially	<input type="checkbox"/>

T-0834	BGP - Structural Steel Embeds in Concourse Slab/Columns	Closed	10/17/2013	10/27/2013	10/24/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Chris Williams							
REQUEST: Attached is a rebar congestion model of the concourse slab and column C2 at C/24.9. As is apparent, the structural steel shear lug portion of the plate embed is in conflict with the reinforcing steel and will not fit with required rebar spacing. The rebar conflicts with the shear lug and blockout that are present, include but are not limited to: <ul style="list-style-type: none">- Typical MFB Beam at C/24.9 (blue colored bars in model)- B-68 Beam (yellow colored bars in model)- Main concourse slab (pink colored bars in model)- Column C-2 vertical T-Heads (purple colored bars in model) Please provide a solution that will provide a constructible blockout and embedment of the structural steel plate.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The 3-D images provided seems to orient the base plate/shear key in the wrong direction. The long face of the shear keys are to be in parallel to the web of the steel column as shown in details on Sheet S1-5051. Spacing for the slab rebars and the top rebars for the misc. beams (e.g., B71 at Grid C/2, B68 @ Grid C/24.9) shall be adjusted slightly to clear the shear keys.

From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please reference RFI T-0835, RFI T-0453.1 and attached SKA-2863. RFI Response T-0453.1, stated that in lieu of bending the L8x8x1-1/8" member, it was acceptable to weld two 1-1/8" thick plates together in order to achieve desired obtuse and acute angles. 1. Please confirm that additional embeds per detail 1 S1-3411, not reference in RFI T-0453.1, can be welded to create the specified angles per RFI response T-0853 (this will be an additional 2 angles). Please reference attached SKA-2863 for specified angles and locations of embeds in question.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/17/2013 RESPONSE: Contractor proposal as presented in the RFI is acceptable. Include in forthcoming shop drawings that is referenced in RFI T-0881. (Note that we assume the RFI is intending to reference "T-0835" and not "T-0853".				
T-0836	BGP - Sump Pit Rebar Tail and Trestle Pile @ GL 18.5/E - Area 9	Closed	10/17/2013	10/27/2013	10/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Reference: RFI T-0644 Three of the sump pit lower mat #11 tails near grid line 18.5/E are in conflict with the nearby trestle pile. The bars have been trimmed to clear the trestle pile and provide an LTE of 34" instead of 60" as required per plans. Typically, a bent bar would be spliced to the interrupted bar as required in SKS-0281 in the response to RFI T-066; however, the trimmed bars have a 70" length which would not meet the 78" LTS requirement. Gerdau propose to leave the 3 ea trimmed bars as-is and not incorporate an additional spliced bent bar. Please confirm if this is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/22/2013 RESPONSE: Provide spliced bent bar as indicated in RFI T-0664 and that RFI's accompanying Sketch SKS0281. Lap length may be reduced to 69". The total length of bent bar extending beyond the intersection with the bottom mat reinforcing shall be 60". The bent bar may be rotated so that the tail clears the layer of mat top reinforcing.

T-0839	SSS - Bolt Specifications	Closed	10/18/2013	10/28/2013	10/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: As per the Contract Drawings and Specifications all high strength bolts shall be A325, A490 & A354 BD. All TC bolts shall additionally conform to ASTM F1852 & F2280. 1. We propose to use TC bolts for all connections (shop & field) 1-1/8" diameter or less (unless galvanized). All galvanized bolts to be standard A325. 2. All bolts 1-1/4" to 1-1/2" diameter to be standard A490. 3. All bolts larger than 1-1/2" diameter to be standard A354 BD Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> We assume the term "Standard AXXX" used in this RFI refers to high-strength bolts with Hex Heads that will be pre-tensioned using acceptable methods per Specification Section 05 10 00 - 3.2.K (other than TC). If this is not the case, please resubmit the RFI with additional clarification. Responses to individual items in RFI as follows: 1.) As indicated in Specification Section 05 10 00 - 3.2.K.1, it is acceptable to use TC bolts. Bolt specification shall be as indicated in the construction drawings. Standard A325 is acceptable for galvanized bolts. 2.) Standard A490 is acceptable in this diameter range. 3.) Standard A354BD is acceptable in this diameter range.		
T-0840	SSS - Means & Methods - Erection Devices	Closed	10/21/2013	10/31/2013	10/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Stacy Wilson				
Co-Author:							
REQUEST: As per OSHA Standards Sub Part R Steel Erection 1926.756 (C)(1) When two structural members are sharing common connection holes, at least one bolt shall remain connected to the first member unless a shop or field attached seat or equivalent connection device is supplied with the member to prevent displacement. We propose the Means & Methods depicted in the attached sketch SK-1A to meet these OSHA requirements. Please advise if this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per 01 10 40 1.6 C 2 - TJPA will not reply and will reject the RFI: "Questions relating to construction means, methods, techniques, sequences, procedures or safety precautions. (These are the Contractor's responsibilities exclusively.)"

T-0842	SSS - Full Height Columns	Closed	10/18/2013	10/28/2013	10/24/2013	Potentially	<input type="checkbox"/>
REQUEST: As noted on sketches CD RFI 075 SK1 through SK8, there are several instances where the clip angle at the beam to transfer girder connection is in conflict with the transfer girder web splice. This condition occurs at TR7, TR8, TR11, TR19.1, TR19.9, TR21, and TR24. Please reference the sketches attached and confirm the modified transfer girder web splice locations are acceptable to avoid conflict with the beam clip angle connection.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Transfer girder splice locations may be moved as shown in sketches SK1 through SK7 in this RFI. There is no splice specified on the structural drawings (D/S1-4305) at TR24 between gridlines E.2 and D.8. Additional splice shown on SK8 is not acceptable.			
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> At moment frames where the column sections above and below the splice point are identical, it is acceptable to eliminate the column field splice.			
REQUEST: Please refer to the attached drawing, S1-4104. The columns shown in the transverse frame elevation that extend from the ground level to the roof level typically have a field splice located 4' above the bus deck slab. Please confirm that this field splice may be eliminated and that it is acceptable to provide full height columns. The detail is shown at GL 7 & GL 8. Other locations are similar. Note that a shop splice may be required due to limitations in mill rolling lengths.

T-0842.1	SSS - Moment Frame Column Splice	Closed	01/27/2014	02/06/2014	02/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: In reference to W/O RFI T-0842, in which permission was given to eliminate field splices in the built-up columns, please see the following: At certain column locations (see S1-4102 at GL4, for example) the thickness of the flange is constant throughout the height of the column. The fabricator will seek to provide single piece flanges when material availability permits. In instances where the availability of certain plate sizes does not permit the fabricator to provide a single piece / full height flange plate, a shop splice will need to be introduced. Please identify any locations or areas along the height of the column flange that a shop splice is not permissible so that these limitations may be considered while finalizing our shop details and plate purchases.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to use single plate flanges where column depth is the same throughout the column height (refer to Sheets S1-4101 through S1-4116 Moment Frame Elevations). However, where column depth changes at the splice locations (for example, at GL2/E.6 and GL2/D.4), splices will be needed since flange thicknesses change. It is acceptable to have these splices done in the shop at Contractor's option.				
T-0843	SSS - PJP Welds at Roof Node to Brace Beam	Closed	10/18/2013	10/28/2013	10/25/2013	Potentially	<input type="checkbox"/>

T-0849	BGP - Mat Slab Layer 3 Lap Splice Relocation in Area 11 thru 16	Closed	10/21/2013	10/31/2013	10/23/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing S1-2052. Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached Gerdau sketch SK-99. Please confirm the revised lap splice detail shown in Gerdau sketch SK-99 is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/22/2013 RESPONSE: It is acceptable to move the reinforcing splice from the center of the column line as indicated in the RFI.		
T-0850	BGP - Request for 14 day Concrete Compressive Strength test on future mat slab	Closed	10/22/2013	11/01/2013	10/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Per discussion with TT field Engineer and TJPA representatives, WOJV is asking for all future mat slab pours that one of the two concrete test cylinders allotted for the 28 day compressive strength test could be tested at 14 days instead, This information will be used to assess the concrete strength for the level D bracing removal. Please confirm if this would be acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 10/24/2013 RESPONSE: At 14 days it is acceptable to test (1) of the (2) concrete test cylinders allotted for 28 day compressive strength testing by the Specifications. All future mat slab pours will have a sample set for testing consisting of (1) cylinder for 7, 14, and 28 days followed by (3) cylinders for 56 days. (1) additional cylinder per set shall be retained in reserve for later testing if required. The total number of cylinders taken per sample set shall remain at (7).

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
For Type 4 Drag connection (Y) per detail 1/S1-5019 please refer to sketches CD RFI # 082 SK1 to SK3 for items 1 & 2 noted below. Note sample location is on S1-2402 near grids 2/C.3 shown on SK2.			1a) At Ground Level: Provide b = 18" per schedule in 1/S1-5019 for all Type 4-(Y) drag connections.				
1) See SK2 & SK3 and confirm this 18" applies at all locations noted as "Y" on plans as this will place the bolts exceedingly outside the supporting beam profile.			2b) At Second Level: There are 14 locations between GL 2 and GL 3 where Type 4-(Y) drag connections per Detail 1/S1-5019 are to be provided. At 8 of these 14 locations the supporting girder is a W30x99. At these 8 locations, provide b such that the beam end is 1" outside of the W30x99 flange as indicated in SK3 of the RFI. Provide b = 2" at the remaining 6 locations.				
2) Please clarify which plan drawings this note applies to.			2) Note applies to Ground Level plans.				
T-0855	SSS - Double Angled Connection	Closed	10/25/2013	11/04/2013	10/29/2013	Potentially	<input type="checkbox"/>

T-0861	BGP - Interior Wall Thickness Change Clarification in Area 8 & 11	Closed	10/28/2013	11/07/2013	11/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing S1-2054, S1-2055 and attached excerpt drawings from submittal package T0600-0103. Per the submittal review notes found on drawing sheet S108.2 and S111.1 from submittal package TG0600-0103, the train platform future interior wall thicknesses have been increased from 10" to 1'-0" and 1'-2" to 1'-4", respectively. In addition to the revised wall thicknesses, the following noted was included: "For 1'-4" walls use same coupler reinf as 14" walls. Coordinate with RFI T-0587." The note does not include 12" walls which were previously 10". Please confirm the now 12" wall is to use the same coupler reinforcing as the 10" walls.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/6/2013 RESPONSE: Bars for 12" thick walls are per contract detail 5/S1-3205.		
T-0861.1	BGP - GL 15.4/E Partition Wall Formsavers in Area 8	Closed	11/07/2013	11/17/2013	11/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing S1-2054, TG0600-103 and RFI T-0861. The response to RFI T-0861 confirms that the train platform future interior wall near GL 15.4/E which was changed from 10" thick to 12" thick requires the bars to be #6 @ 8" O.C. E.F. per detail 5/S1- 3205; however, the # 6 epoxy coated formsavers are not available for the Area 8 pour. Please confirm it is acceptable to use # 5 @ 8" O.C. E.F. in lieu of the # 6 @ 8" O.C. E. F. in Area 8 as shown in 5/S1-3205.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/12/2013 RESPONSE: Contractor-proposed use of #5 bar couplers/dowels is acceptable for the scope of this RFI only.

T-0862	SSS -Full Height Stiffener Detail Clarifications	Closed	10/28/2013	10/28/2013	11/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Webcor Construction LP Robert Kjome				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference detail 1/S1-5013 regarding the full height fitted stiffener detail and confirm the following:					Accept Suggestion: <input type="checkbox"/>		
1) Confirm it is acceptable to provide a 2" end distance typically at beams with 7/8" dia. bolts in lieu of the 1 3/4" end distance noted by the "2db" dimension.					1.) Acceptable.		
2) Confirm the stiffener width is to equal the beam "a" dimension, defined as [bf - tw]/2, thus the noted dimension should read "2db min."					2.) Confirmed.		
T-0863	SSS - Double Angled Connections at TPG1 & TPG3	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
For the double angle beam connections per detail 1/S1-5010 into the TPG1 & TPG3 roof girders on detail 1/S1-4200 are problematic due to the thick flanges. See sketches CD RFI 091 SK1 & SK2 for items 1 & 2 below for proposed modified connection.					Accept Suggestion: <input type="checkbox"/>		
1) Confirm it is acceptable to reduce the end distance on the connection angles to 1 1/4" per A.I.S.C.13th Edition Table J3.4 in order to fit the connection angles inside the beams at the TPG1 & TPG3 girders.					For connections to TPG1:		
2) Confirm it is acceptable to cut the beam flanges flush as shown when the connection angles encroach into the beam "k" area beyond A.I.S.C. allowable limits.					1) a) W14x22: Provide one less bolt than that required by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010. b) For all other beam sizes noted on SK1, our response is "Acceptable".		
					2) a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts per (see 1a). b) W24x68, W27x84, W30x90, W33x118, W36x135, W40x297: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable. c) W40x149, W40x183, W40x199: Acceptable.		
					For connections to TPG3:		
					1) a) W14x22: Provide one less bolt than that required

				by 1/S1-5010. All other connection parameters including edge distance on the connection angles shall be per 1/S1-5010. b) W24x68: Acceptable. c) W27x84: There is no W27x84 framing into a TPG3. d) W40x392: The connection is per detail 8/S1-5032 as noted on Sheet S1-2604 near GL 14/D. In addition, gravity moment connection is shown at the ends of these beams where they connect TPG3. Therefore, flanges of the W40X392s are to be welded to TPG3 per detail 4D/S1-5010.			
				2) a) W14x22: Cutting the beam bottom flange is not required with the reduction in number of bolts (see 1a). b) W24x68: The encroachment of the angle into the "k" region is less than the maximum allowed per AISC 360-05, Figure 10-3. Cutting the bottom flange flush as shown in the RFI is not required and not acceptable. c) W27x84: See 1c. d) W40x392: See 1d.			
T-0864	SSS - Beam to Column Connection at Roof Level	Closed	10/28/2013	11/07/2013	11/04/2013	Potentially	<input type="checkbox"/>

T-0865	SSS - Clarifications for Kicker Brace at Ground Level	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please refer to detail 6/S1-5022 and verify the kicker brace requirements at ground level as noted on CD RFI 093 SK1 to SK3 and in the items below:			1) Locate the top gusset plate such that the centerline of kicker angle divides the gusset plate into a 1:3 ratio (3":9") at the top of the plate.				
1) Confirm the alternate bracing connection proposed in CD RFI 093 SK1 is acceptable.			2) Provide a weld size of 5/16" with a minimum length of 4" on each side of the kicker angles.				
2) Supply the weld size and length for brace angles to ½" plate.			3) Confirmed.				
3) Confirm the work point location indicated is acceptable (intended to match S1-5015 details).			4) Correct references are S1-2304 and S1-2306 (updated in ASI 106 drawings).				
4) Confirm the reference to S1-2304 should be added to the referenced detail and the reference to S1-2307 should be deleted.			5) Detail 6/S1-5022 is applicable at Gridlines 16.9 and 27.1 at Ground Level. Detail 9/S1-5022 is applicable at Gridlines 19.1 and 24.9.				
5) Confirm detail 6/S1-5022 applies only to grid lines 16.9, 19.1, 24.9 & 27.1 on the Ground Level as referenced on plans.			6) Refer to SKS-0297 (attached) that shows applicable bracing type along GL 16.9 transfer girder. As indicated in the sketch, the bracing along GL16.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 6/S1-5022. Same sketch can be used to identify the bracing type along 19.1 transfer girder by replacing 6/S1-5022 with 9/S1-5022.				
6) Confirm detail 6/S1-5022 is typical for all braces along grid line 16.9, similar to grid line 19.1.			7) Refer to SKS-0298 (attached) that shows applicable bracing type along GL 24.9 and GL 27.1 transfer girders. As indicated in the sketch, the bracing along GL 27.1 is either transfer girder brace per 5/S1-5015 or kicker brace per 6/S1-5022. Similarly, the bracing along GL 24.9 is either transfer girder brace per 5/S1-5015 or kicker brace per 9/S1-5022.				
7) Confirm detail 6/S1-5022 is typical for all braces along grid line 27.1, similar to grid line 19.1.

T-0866	SSS - Bending Radius at Skewed Beam Connections	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Robert Kjome</div><div>To: Turner Construction Company Gary Krutsch</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div>							
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Refer to details 7 & 8/S1-5010 regarding bending radius requirements for skewed beam connections. The radius indicated in CD RFI 095 SK2 is per A.I.S.C. (2.5t for A572 GR50 material). Please confirm it is acceptable to proceed per this criteria.			The minimum inside bending radius for a A572 GR 50 plate up to t = 1" is 1.5t per AISC 360-10 Table 10-13, if the bend line is perpendicular to final direction of rolling. These values need to be increased 50% if the bend lines are parallel to the final direction of rolling. 2.5t inside bending radius proposed by the contractor is acceptable for the condition presented in SK2, where t = 1/2". In general, it is acceptable to proceed with the minimum bending radii specified in AISC 360-10 Table 10-13.				
T-0867	SSS - W24 Skewed Beam Connections at Grid 6.C.3	Closed	10/28/2013	11/07/2013	11/07/2013	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Refer to the areas indicated on S1-2303 between grids 10.1 & 11 and D & F (CD RFI 097 SK1). Please confirm the noted W21x50 beams are at top of steel elevation 19'-1 5/8" and the BU-WT's are not required.			The noted W21x50 beams support the depressed escalator pit slab (Slab S4). T/Slab for Slab S4 is 17.44' as indicated in Sheet S1-2303 and T/Steel for these two beams is 6 1/4" below the T/Slab for S4 as indicated in Sheet Note 2 on S1-2302. Therefore, these two beams support slabs with different elevations and BU-WTs are required.

T-0868.1	SSS - Framing Clarification for W21 Beams at Ground Level	Closed	11/25/2013	12/05/2013	12/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Per the response to W/O RFI T-0868 (SK RFI 135), the TOS for the W21 should be at 16'-11" and the BU-WTs are required to support the slab at 19'-9 1/8". Based on this response, please confirm the following: 1) The difference between the TOS elevations per the response to SK RFI 135 requires a BU-WT with a total height of 2'-2 5/8", exceeding the maximum height dimension indicated on 5/S1-5002. Please confirm it is acceptable to proceed with detail 5/S1-5002 and the required BU-WT height of 2'-2 5/8" at this location. 2) Please confirm it is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange to allow for erection clearance or advise if the BU-WTs are required to extend to the face of the transfer girder web for deck support. (Reference CD RFI 097.1 SK1) 3) The W21 connection to the transfer girder at grid line 11 fouls the bottom flange of the girder and cap plate of the train box columns as indicated on CD RFI 097.1 SK1. Please provide an alternate connection detail at this location. 4) As indicated on CD RFI 097.1 SK2, there is no support down for the escalator slab perpendicular to the W21 near the edge of the knock-out slab and the W21 supporting the S4 escalator slab. Please advise if deck support is required at this location and, if so, please provide details as required.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) It is acceptable to stop the BU-WTs 1" clear from the edge of the transfer girder flange. 3) Cope the top of the W21 beam and provide a double angle connection per 1/S1-7604 with 3 bolts. The connection plates shown in 1/S1-7604 are to be welded to bottom of the trainbox column cap plate. In addition, provide web stiffener plates on each side of the beam web at the coped section per 12/S1-5010. Extend the stiffener plate beyond the coped section a distance equal to the depth of the cope. 4) There is no deck at the highlighted location. The pit slab edge is the same as the knock-out slab edge only it is lower. Refer to detail 4/A1-7550 that shows the slab and escalator enclosure assembly at this location. Note that detail 6/S-7660 is called out on 1/S1-7302 (partial plan of this location). Detail 6/S-7660 applies at the north and east edges of the E305 escalator pit but not at the knock-out slab edge. Similarly detail 6/S-7660 applies at the south and east edges of the E304 escalator pit but not at the knock-out slab edge.

REQUEST: Further to response to RFI T-637 please find attached proposed changes to the spandrel beams in pour Area 8 for location plan see exhibit - A Exhibit - B shows the plan view of the modification necessary to the spandrel beam on the north and south elevations due to the revised reinforcement width of the foundation wall due to encroachment of the CDSM beams as well as typical cross sections of the revised spandrel beams. RFI T - 742 shows the extent of the modification to the foundation wall on the north and south elevations of Area 9. Please confirm that this modification as outlined at these locations is acceptable.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/11/2013 RESPONSE: Contractor proposed modifications to the Lower Concourse spandrel beams within Area 9 are acceptable. Proper lap splices shall be provided where the beam rebar is transitioned from the spacing in the construction drawings to the modified spacing at the encroached wall sections. Note that Area 9 foundation wall thinning shown in RFI T-0874 (2-3/8") and RFI T-0742 (2") are not consistent. Contractor to reconcile the discrepancy and prepare/update shop drawings accordingly.

T-0875	BGP- Trestle piles No 20 & 21 in conflict with beams at Lower Concourse level	Closed	11/01/2013	11/11/2013	11/07/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it has been noted that trestle pile numbers 20 and 21 (see sketches attached) are in conflict with beams (B4A) at the escalator pits on the lower concourse slab elevation between gridline 11-12, D-F. The contractor is proposing to blackout a section of slab as shown on the sketch, this blackout section would then be infilled once the trestle pile has been removed. The contractor is to insure that the appropriate reinforcement lap splices are present between these concrete pours. Please confirm if this option would be acceptable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/7/2013 RESPONSE: Contractor proposed approach is acceptable. Note that the trestle pile also encroaches on the pit slab as well and will have to be addressed. Include proposed reinforcement in rebar submittal for review.		
T-0876	RFI T-0876 BGP- Trestle piles No 10,12 & 14 are in conflict with a step in the slab a	Closed	11/01/2013	11/11/2013	11/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Following a review and discussion with Thornton Tomasetti on the trestle pile locations, it was noted that trestle pile numbers 10, 12 and 14 (see sketches attached) are in conflict with a step in the slab on the lower concourse elevation between gridline 06-08, E-F. Thornton Tomasetti noted it may be possible to move this step clear of the trestle pile blackout locations. Please confirm if this option on moving the step location is still possible.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/26/2013 RESPONSE: The plan location of the drop shall remain. In order facilitate temporary conditions, such as support of the slab transition without shoring, Detail 2/S1-3501 may be modified increasing the distance "6D" to allow additional reinforcing bars to replace bars interrupted by the blackout in the temporary condition. Additional simplifications to the temperature steel continuity may be allowed. The specific details of the blackout shall be provided by the contractor in accordance with General Note GR-9 on S-0005 and shall provide continuity of longitudinal and temperature steel in the final condition.

T-0879.1	BGP - Conflict of Elevator Opening Embed and Future Walls	Closed	11/25/2013	12/05/2013	12/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: SCCI is in receipt of RFI response T-0879. TT's response does not fully address the conflict brought up in the original RFI. TG06.0 contract drawings do not show a curb at the edge of the elevator openings at the lower concourse level. Please address and provide details regarding the embed in question in RFI T-0879.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 12/6/2013 RESPONSE: As indicated in the response to RFI T-0879, the end of the beam and the embed will be cast into the wall curb. The sketches provided with the response to RFI T-0879.1 illustrate the relationship of the beam and the future wall curb. The concrete curb on the elevator shaft walls in Phase 1 will be extended under the future W-5 cladding and its supporting walls in Phase 2. The HSS rail support embed is within the concrete curb zone for both phases. Refer to the following attached SKAs: 1. SKA-2958 to SKA-2962 - Lower Concourse Zone Plans showing locations of the Service and Passenger Elevators. 2. SKA-2963 to SKA-2967 - Enlarged Plans of Service and Passenger Elevators showing Partition Types with Concrete Curbs. 3. SKA-2968 - Section Detail at Service Elevator Shaft at Pit showing HSS elevator rail support beam. 4. SKA-2969 - Concrete Curb Schedule.

T-0880	BGP - Receptacle Requirements at Elevator Pits Near GL 19/E and 20/G	Closed	11/04/2013	11/14/2013	11/13/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please refer to drawing E1-2024 and E1-2025 There are elevator pits in the mat slab at approximate grid lines 19/E and 20/G. The drawings E1-2024 and E1-2025 do not show any receptacles being supplied to these pits. Please confirm this is correct.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/13/2013 RESPONSE: These receptacles are not required within the BGP package. The only active elevator in Phase 1 is PE203 at the west end. The elevator pits in question will be provided with power in Phase 2. Provisions have been made to run conduit at that time.				
T-0881	BGP - Vehicle Ramp Wall Embedded Supports	Closed	11/05/2013	11/15/2013	11/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please reference attached detail6 S1-3203, attached detail10 S1-3204, RFI Response T-0453.1, RFI Response T-0835 and attached SKA-2863. RFI Response T-0835 confirmed that the vehicle bike ramp wall intersects the foundation wall at a 97 degree angle. Where this ramp wall intersects the foundation wall, embeds per detail 6 on S 1-3203 and detail 10 S 1-3204 are required. SCCI and its embed supplier has a constructability concern with these embeds. A similar constructability concern was brought up in RFI T -0453.1, stating that if an angle member of such thickness is bent to achieve an angle other than that member's stock angle, it will structurally stress that member. 1. Please confirm it is acceptable to weld two (2) 8"x24"x1" plates together in order to achieve angle prescribed in RFI Response T-0835. Reference SKA-2863 for the acute and obtuse angles required. Forthcoming shop drawings will show all welds.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/17/2013 RESPONSE: Contractor proposal to weld 2 plates to create an angle is acceptable as presented in the RFI.

	REQUEST: Please refer to drawing S1-3304 to S1-3306. Please confirm if it is acceptable to replace the typical T9 column ties (90° or 135° bend on either end) with T12 ties (135° bends on both ends). See the attached SCCI sketch SK-101 for further details.	SUGGESTION:	ANSWER: George Metzger 11/12/2013 RESPONSE: It is acceptable to replace T9 column ties with T12 for Column Types C1 and C2. Note that the location of the second cross-tie from each end is not shown correctly in SK-101. In SK-101, these two cross-ties shall be flipped to clear the shear plates for the steel column base plate at Lower Concourse Level. Refer to Sheet S1-3304 of the construction drawings where the column reinforcement details Type A1 (for Column C1) and Type A2 (for Column C2) are shown. Refer to Sheet S1-5051 of the construction drawings for information on steel column base plate details.	Accept Suggestion: <input type="checkbox"/>			
T-0883	SSS - Brace Beam Connection Details	Closed	11/05/2013	11/15/2013	11/18/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Kruttsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: RESPONSE: 1) Acceptable. See response to RFI T-0869 for the extents of the bottom flange cope. 2) Moving the web connection plate on the other side of the beam is acceptable however, the shear plate shall still be welded to the north-south girder not the east-west running beams as shown in SK1 of this RFI. With this modification, the diagonal beam centerline will not coincide with the connection work point. This eccentricity shall be minimized as permitted by the connection geometry and shall not exceed 1". The question regarding flange coping is not clear, please provide a sketch that shows the intended coping. Note that there are bolted flange plates top and bottom. 3) Use of PJP welding (full web thickness) is acceptable where the shear plates are welded to the girder web. See also response to 2nd question.			
REQUEST: Please review sketch CD RFI 059 SK1 and details 1/S1-5016 and 1/S1-5018 for type 1 - drag connection details on brace beams at the Bus Deck Level framing plan. 1). Please verify the bottom flange of brace beams noted in detail 1/S1-5016 can be cut flush to the beam web on both sides of web allowing beam to be erected between the shop welded connection plates on the cast node. 2). Verify the diagonal bracing beam web connection plate noted in detail 1/S1-5018 can be shifted to the acute angle side of the connection as indicated in the attached sketch and bottom flange cut flush to the web to allow beam to be dropped into location in the field. 3). Please provide welding details for the relocated web connection plate to the supporting grid beam as connection plates will overlap at these locations. 4). Please verify if additional bolts are required connecting the flange plate where the dimension to the plate edge and		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please refer to drawing E-0006.				George Metzger 11/12/2013				
General Note N on DWG E-0006 states in part: "Allocate a maximum of three dimmable lighting branch circuits (multiwire) per conduit home run. Allocate a maximum of six non-dimmed lighting circuits per conduit home run." The type F15 fixtures used throughout the job on the train platform level are fed from, Panels designated "EDMH," which are dimming panels.				RESPONSE: Confirmed, circuits feeding type F15 fixtures are dimmable circuits. Provide separate neutral for each branch circuit per requirements of specifications 26 05 19 par. 3.1.I.				
Are the circuits feeding these lights considered dimmable lighting branch circuits? Please advise.

REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
Reference CD RFI SK1 to SK3 indicating the plate on the transfer girder which typically fouls the beam to transfer girder connections along grid lines C.3 and F.7. This is typical at the following locations at Ground Level: 2/C.3; 4/C.3; 5/F.7; 6/C.3; 8/C.3; 9.9/C.3 (see SK2 & SK3); 10.1/C.3 (see SK2 & SK3); 12/C.3; 14/C.3; 16/C.3; 19.9/C.3; 20.1/C.3; 21/C.3; 23/C.3; 23/F.7; 24/C.3 & 24/F.7					Confirmed. Shear plate connection details provided in the response to the RFI T-0820 may be used in lieu of double angle connections at the locations noted in the RFI where the intermediate transfer girder plate fouls the double angle connection. For W16 and deeper beams, the total number of bolts at a shear plate connection shall be per schedule on 2/S1-5011. Provide two bolts in the top shear plate and remaining bolts in the bottom shear plate. For W14 and shallower beams provide two bolts with only the top shear plate. Bolt edge distances, shear plate thickness and welds shall be per 2/S1-5011 with the exception of W40 beams where the vertical bolt edge distance may be reduced to 1 3/4".			
Please confirm that the response and details provided in W/O RFI T-0820 can be applied at these locations, thus shear plates may be used in lieu of double angle connections. (W/O RFI T-08020 response is attached for reference.)

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Reference is made to drawing C-0100, "TTC Grid and Alignment Control." The northing and easting coordinates are provided with only two decimal places, producing a considerable amount of calculated error between the coordinates and the gridline dimensions. Please provide the N/E coordinates with at least four decimal places to reduce the calculated error from the gridline dimensions. Additionally, the N/E coordinates provided at Grid 2/W appear to intersect with Grid 2/G. Please advise if these grid lines intersect and if the N/E coordinates provided also apply to 2/G.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> RESPONSE: Two decimal places are adequate. Assume there are an infinite number of zeros after the two decimal digits. The N/E at the intersection of grids 2/W also apply to the intersection of grids 2/G.			
T-0898	SSS - Weld Access Hole and Weld Tab Sizes at CJP	Closed	11/12/2013	11/22/2013	11/22/2013	Potentially	<input type="checkbox"/>

T-0899	BGP - Electrical Room Dimensions in RFI 778.1,780.1,781.1 & 782.1	Closed	11/12/2013	11/19/2013	11/15/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: The AAI mark ups included in the responses to RFI 778.1, RFI 780.1, RFI 781.1 and RFI 782.1 do not reflect dimensions in the latest ASI 107 documents or submittal review comments in the Comprehensive Mat Slab Drawings in submittal drawings package TG0600-0103. For example, the face of wall of Electrical Room B2460 per Response to RFI 780.1 is shown as 4'-0" from GL 15, however the latest drawing issued in ASI 107 A1-2124 shows the face of wall to this room as 3'-7 5/8" from GL 15. Shimmick has poured this area(Area 8) per ASI 104 which shows this dimension to be 3'-8". The next area to be impacted by these discrepancies will be placed on 11/24/2013. This discrepancy is present in all of the dimensions issued in the mark-ups included in the RFI responses (attached) and the rooms shown in RFI 781.1 and 782.1 are scheduled to pour on 11/24/13. Please provide a conformed drawing that shows the current layout for the following Electrical Rooms: B2640, B2461, B2441, B2560.			SUGGESTION:		ANSWER: George Metzger 11/14/2013 RESPONSE: The attached SKAs clarify and confirm current layouts/dimensions of Electrical Rooms mentioned in RFI T-0899 as well as setting out of all other PH1 walls at the Train Platform Level. 1. For setting out of PH1 walls above the Train Platform Matt Slab Level, refer to the Zone Plans (SKA-2871 to SKA-2878) and Enlarged Plans (SKA-2893 to SKA-2894). 2. For Setting out of knee walls under the Train Platform Level, refer to the Train Platform Level Slab edge plans (SKA-2885 to SKA-2892) and Detail Section (SKA-2895). 3. For setting out of couplers for PH2 walls, refer to the Train Platform Level Wall Plans (SKA-2879 to SKA-2884). Note that Detail Section 1 on SKA-2895 shows that for the platform MEP rooms, the edge of slab, dimensioned on the Train Platform Level Slab Edge Plans, aligns with the face of wall for the room. However, the face of the knee wall below is set 4"

T-0900	SSS - Weld Test Requirements for Castings	Closed	11/13/2013	11/23/2013	11/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The cast node material is not a prequalified base material, thus a PQR test for all welds to the cast material is required. The cast node manufacturer, Bradken, has indicated that all test materials will be supplied in flat plate form only. While AWS D1.1 Table 4.1, Note b qualifies that pipe diameters greater than or equal to 24" may be tested on flat plate, AWS D1.1 Table 4.1 requires that all pipes under 24" must be tested in tubular form. Please confirm it is acceptable to perform all PQR testing for castings less than 24" in diameter, including the 16" diameter castings at the Light Column, on flat cast plate material.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			Ground, Bus Deck and Roof Castings are welded to 32" diameter pipes therefore per Table 4.1 of AWS, PQR can be performed with flat cast plate material. For the light column upper cast node which connects a 28inch tube with a 16inch tube, we confirm that the PQR can be performed with flat cast plate material.

T-0902.1	BSE - Repair of Damaged Column Rebar at Area 7 south of the Trestle	Closed	11/18/2013	11/28/2013	11/21/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
During level D bracing removal at area 7,a column rebar dowel was bent, as shown in the attached photograph.		Option 3 is acceptable with the following notes:					
Please see below repair options:		1. Damaged rebar shall be cut off at slab level.					
1. Abandon the bent rebar leave it in its current position projecting 5' above the mat slab, place and additional equal size bar alongside the damaged bar as a replacement with possibly a 90 degrees hook at the base		2. New starter bar to be doweled with approved adhesive.					
2. Leave the dowel as is, couple the upper section of the bar onto it and bring it back in line as the bar continues vertically		3. New starter bar shall be placed as close as possible to original bar location and bar location to be approved by SEOR.					
3. Drill and epoxy in a new same sized bar beside the damaged one, the slab would have to be scanned for rebar location and new location pick to avoid damaging the existing reinforcement.		4. Remaining column starter bars and mat reinforcing shall be avoided.					
4. Concrete around the rebar to be removed the bar would then be cut and a new bar welded to it.		5. Mat cover concrete may be removed locally to abandoned bar.					
5. Concrete around the rebar to be removed .The bar would be cut and a barlock would be used to couple the rebar this could be difficult to achieve due to congestion with the top mat reinforcement and the depth required for the bar lock to be fitted		6. Minimum embedment shall be 45".					
Please advise on which option is acceptable.		7. Starter bar to be shop bent no greater than 1:6 (sim 4/S1-3001) so that column reinforcing geometry is resumed per S1-3304.

T-0906	BGP - Omitting the Grout Port at all Applicable Column Base Plates	Closed	11/15/2013	11/25/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference column base plate details on Sheet S1-5051. SCCI proposes to permanently remove the grout ports used to grout the column base plate as shown in A/S1-5051 . SCCI believes the 2" grout holes and 3" perimeter clearance is sufficient to grout voids underneath and around the base plate and shear keys. The blockouts will be grouted from the holes and/or perimeter and the hose removed as the voids are filled up. Please confirm it is acceptable to remove the grout port depicted in A/S1-5051, typical at applicable column base plates.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/19/2013 RESPONSE: Contractor proposed grout procedure is acceptable, pending on the successful grout procedure mock up.		
T-0907	BGP - Haunch Reinforcement Embedment Detail in Area 9	Closed	11/15/2013	11/25/2013	11/20/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST: Please refer to drawing S1-3201 and attached SCCI sketch SK-RFI-383. The haunch bars in Area 9 were fabricated to a shorter length than required. Per discussions with TT Engineer in the field, Gerdau proposes to raise the lowest point of the haunch bar 6" from the designed location. As a result, the haunch would have a 64" embedment into the mat slab and 29" minimum embedment into the foundation wall. Refer to attached sketch for further details. Please confirm the revised haunch reinforcement detail in Area 9 as depicted in the attached sketch is acceptable .			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/18/2013 RESPONSE: The reduction in length is acceptable for use in Area 9 with the following conditions: 1. The top of bar embedment into the wall shall comply with RFI T-0702 and T-0716. 2. The bottom of the bar shall be chaired as required above the lower mat. 3. Embedment into the mat shall conform to RFI T-0710 and T-0762.

	<p>Please refe to attached detail A on sheet S1-5051.</p> <p>Please confirm it is acceptable to reduce the overall 14" shear key block-out dimension to 10"; therfore, allowing for 2-inches of clearance all around the shear key as discused and coordinated during the 11/12/2013 mock-up review. See attached detail A/S1-5051 for mark-ups.</p> <p>Please note the revised column base plate block-out is typical for Type I and II.</p>						
T-0908.1	<p>BGP - Concrete Beam Top Bar Spacing and Layering</p> <p>From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch</p> <p>Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto</p> <p>REQUEST:</p> <p>Please refer to drawing S1-3400 and RFI T-0908.</p> <p>In order to clear the 10" shear key block-out as approved in RFI T-908, please confirm it is acceptable to place the additional short bars in a typical concrete beam in a second layer. Also, please confirm it is acceptable to increase the space between the top and short bars near the center of the beam to 10".</p> <p>Please reference the attached photo for more details.</p>	Closed	11/22/2013	12/02/2013	12/04/2013	Potentially	<input type="checkbox"/>
	<p>SUGGESTION:</p>						
			<p>ANSWER:</p> <p>George Metzger 12/3/2013 RESPONSE:</p> <p>- This response addresses Lower Concourse Level concrete beams framed to concrete columns with steel columns above only. Reinforcement information for these beams is provided in Sheet S1-3400.</p> <p>- Where the beam has more than 6 top bars over the column, place the top bars in 2 layers. A minimum of 6 bars (long bars placed first) shall be placed in the top layer and the remaining bars shall be placed in the 2nd layer. When the concrete beam and the steel column centerlines coincide or slightly offset from each other, It is acceptable to increase the space between concrete beam top bars to 10" to clear the shear key block out.</p> <p>- For beams B30, B66, B71 and B76 provide 6-#11 Right End Top LONG Bars and 6-#11 Right End Top SHORT Bars. Place short bars in second layer, with a clear distance of 1" or db, whichever is greater.</p> <p>- All other conditions shall be reviewed separately.</p>

T-0918	SSS - Connection Clarifications for Offset Beams	Closed	11/18/2013	11/18/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2503 along line 9 between grids E & F refer to sketches CD RFI 124 SK1 & SK2. With the beam spacing per S1-2503 (SK1), there will be a 3" offset between the noted beams. The double angle connection per S1-5010 will not work as the bolts will foul the beam web on the opposite side. We propose to relocate the beam per the proposed dimensions shown or connect these beams with shear plates per S1-5011. Please review and advise how to proceed.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The W21x50 beam between GL E.2 and E.6 may be moved to align with the W24x68 on other side of GL 9 as shown on SK2. However note that the location of the W24x68 beam east of GL 9 and between E.6 and F is incorrectly shown on SK2. The W24x68 beam is 7' 6" from GL F and is aligned with the W21x50 on the west side of GL 9. Similarly, the W24x68 and W24x55 beams on the two sides of GL 9 between GL D.4 and D are aligned.		
T-0919	SSS - Beam Bottom Flange Bracing Connection	Closed	11/18/2013	11/28/2013	12/04/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Refer to the beam bottom flange bracing connection detailed on 8/S1-5015 and CD RFI 127 SK1 & SK2 for the following items: 1) In order to support erection requirements, please confirm it is acceptable to: a. Typically locate the bolts shown 3" from the underside of the top flange and 3" from the face of the beam web as indicated in CD RFI 127 SK2. b. Typically locate the bolt 3" from the top of the flange indicated. c. Typically locate the bolt outside the beam profile as shown to make the brace erectable. 2) Confirm the stitch plates should be ½" thick to match the ½" thick gusset plates at each end. 3) Please confirm that it is acceptable to provide slotted holes in the brace at the end connections.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) It is acceptable to typically locate bolts as shown in SK2. However, the slope of the kicker angle shall be such that the centerline of the angle should pass through the centerlines of the beam web and flange similar to that shown in 7/S1-5015 at both top and bottom ends. 2) Confirmed. 3) Slotted holes are not acceptable. Bottom flange bracing detail 8/S1-5015 applies only at beams with the "dashed arrow" symbol (See Note 1 on 8/S1-5015). Bottom flange bracing of 2nd floor and bus deck level spandrel beams is to be provided per S1-8020 as noted on typical sheet notes on S1-2402 and S1-2502 (See Note 3).

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
This is a follow-up to Webcor RFI # T-0919.1 (SK RFI # 173.1 & CD RFI # 127.1)		Confirmed that the work points shown on CD RFI 127.2 SK1 and SK2 are the design intent. The work points shown on CD RFI 127.2 SK3 previous submitted are also acceptable. There shall be no cost and time increase for this one.					
Per the conference call discussion on 1/16/14 with Webcor, Skanska & Thornton Tomasetti, Candraft was to layout the bracing work points to the underside of the top beam flange superseding the response to locate the work at the top of the beam. Please review the attached two sketches CD RFI 127.2 SK1 & SK2 showing the revised work point locations and confirm this is the intent of the design parameters. Note that the bracing work points are not indicated on 8/S1-5015 and we feel that the original sketch CD RFI 127 SK2 (Relabeled CD RFI 127.2 SK3) conforms to the design with the bolt closer to the inside profile of the beam members and would like to use as modeled.

From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Refer to sketches CD RFI 126 SK1 to SK3 for items 1 to 4:				1) Acceptable. 2) Acceptable. 3) Acceptable. 4) Acceptable. One general comment that is applicable to all sketches include in this RFI is that where shallower beams are supported by deeper girders. Coping the bottom flange of the shallow beam is not allowed per details 1/S1-5010 and 1/S1-5011.			
1) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015.							
2) Confirm it is acceptable to locate the brace at the bevel shown to fit the steel framing in lieu of the 2:1 bevel per 5/S1-5015.							
3) Confirm it is acceptable to increase the thickness of the full depth shear plate to 1" per 5/S1-5015 and connect the kicker brace to the full depth shear plate as shown.							
4) Confirm that it is acceptable to typically apply item 3 at other similar conditions.							
T-0920.1	SSS - Kicker Connection Clarifications	Closed	12/11/2013	12/21/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Per the response to Webcor RFI T-0920 (SK RFI # 172) it was confirmed acceptable to increase the full depth shear plate from 3/8" to 1". Upon further review of this location there would be an issue where a 1" thick shear plate would foul the bolts connecting the top flange of the Transfer Girder to the Cruciform column base plate.				1) Confirmed. 2) Confirmed. 3) Confirmed. 4) Confirmed. 5) See responses to 1) through 4). Further comments may be provided on a case by case basis during shop drawings review			
1). Please confirm it is acceptable to center the 3/8" shear between the bolts and move the beam 5/8" south from its original location.							
2). Please confirm the 1" gusset plate welded to the bottom flange of the beam can be moved off the center line of the beam to line up with the 3/8" full depth shear plate. The gusset would move 7/16" from the centerline at this location.							
3). If it is acceptable to line up the gusset with the full depth shear plate, there will be a 5/8" discrepancy between the two plates. Please confirm if stitch plates with varying thicknesses can be used to make up the difference.

	4). Confirm that it is acceptable to typically apply the above items at other similar conditions.						
	5). If any of the above suggestions will not work, please provide an alternate detail for these conditions.						
T-0920.2	SSS - Kicker Connection Clarifications	Closed	12/16/2013	12/26/2013	01/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Per the response to Webcor RFI T-0920 (SK RFI # 172) clarification is required regarding the last statement where "Coping the bottom flange of the shallow beam is not allowed" and also per the response to Webcor RFI T-0934 (SK RFI # 187) clarification is required regarding the last statement where coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.				1). Coping the bottom flange 4- 4 1/2" long will affect the block shear of the connection design in some cases. Contractor shall prepared the shop drawings satisfying the require tightening clearance and cloud the coped area requesting approval by the Engineer on a case by case basis.			
1). Per detail 1/S1-5010 where there is a double sided beam connection, the bottom flange is required to be coped in the shallow beam in order to allow for installation of the bolts from the shallow beam side. Note the bolts cannot be torqued if erected from the other side and would also foul the shallow bottom beam flange in question. On the attached sketches CD RFI # 126.1 SK1 to SK4 show some typical sample conditions illustrating the clearance required. The beam flange cope lengths required will range from 4" long in most cases to 4 1/2" at larger web thicknesses. Please verify the shallow bottom beam flanges can be coped for bolt clearance and erection of the beams as noted on SK2 to SK4.				2) Confirmed.			
2). Per detail 9/S1-5010 where the WT on the top of the beam flange is required to extend to the end of the beam please verify the beam flange can be coped back to the "k1" of the beam in order to get full bearing and weld for the WT and to clear bolts as noted on SK2.

REQUEST:			SUGGESTION:		ANSWER:		
Per details 8 & 10/S1-5001, refer to sketches CD RFI 121 SK1 for items 1 & 2:					Accept Suggestion: <input type="checkbox"/>		
1) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.					The noted area does require concrete slab. Note that this detail is for the slab reinforcement at an edge column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 2/S1-5001 for additional info regarding edge of deck at exterior columns.		
2) Confirm the noted area indicates that the concrete slab is not required and the edge plates may be terminated as shown.					The noted corner area does require concrete slab. Note that this detail is for slab reinforcement at a corner column condition and the detail note references to ¿see typical slab edge details for additional information¿. Refer to detail 3/S1-5001 for additional info regarding edge of deck at exterior corner columns.		
T-0922	SSS - W-1 Support Connection Clarifications at Bus Deck	Closed	11/18/2013	11/28/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
Refer to CK RFI 125 SK1, SK2A, SK2B, SK3, and SK4 requesting clarification at the Bus Deck level on the following:					Accept Suggestion: <input type="checkbox"/>		
1) Confirm the noted connection should be a moment connection.					1. Yes, the connections shall be a moment connection as shown on Detail 1/S1-8003 and as denoted on the plans.		
2) At the noted location, two supports for CP5 connections are required adjacent to Grid 9. Based on the CP5 detail requirements, a 1 ¼" horizontal stiffener should span from shear plate to shear plate per 1B/S1-8003; however, because these two connection points span the same beam, the horizontal stiffener would foul the incoming beam to shear plate connection, as there is a horizontal stiffener welded on both sides of the shear plate. Please provide a solution for this condition.					2. The horizontal plates shown on 1B/S1-8003 are eliminated (see ASI 109).		
3) Confirm the vertical spacing of the 1 ¼" horizontal stiffeners is acceptable to accommodate the connection bolts on the incoming beams.					3. See response to item 2)		
4) In the beam connection shown in detail 1/S1-8003, the required shear plate will foul the 2" web reinforcement plate required per 1/S1-5017. Please confirm the shear plate is to be welded to the 2" web reinforcement plate with a ½" double fillet weld per 1/S1-8003 or provide an					4. Is this question related to the vertical shear plate? If so, Confirmed that the shear plate may be welded to the 2" web reinforcement plate with 1/2" double fillet weld as shown.		
					5. 3/4" partial pen weld at the bottom flange called out may be replaced by a partial penetration weld with an 3/4" fillet weld overlay built-up.		
					6. Confirmed.		
					7. Confirmed.		
					8. Confirmed.		
					9. See ASI 109 for bolt hole dimensions.		
					10. Use 2 1/16" holes for 1 ½" bolts to allow for ½" field tolerance.

REQUEST: Refer to CD RFI 128 SK1 through SK4 in response to the following regarding the W-1 glazing system connection "CP6" at the bus deck level: 1) The indicated CP6 connections foul the beam connections as indicated in SK3A and SK3B. Please provide a solution to this condition. 2) Confirm the holes for the "CP6" connections may be typically located as shown in SK4 along Grids B & H. 3) Confirm the connection holes for "CP6" are 1 9/16" diameter or provide the required hole diameter.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The double stiffeners (1" thick) shown on 4/S1-8003 will be revised to single 1 ½" thick stiffener (centered to the W1 support). If the connection for the beam supporting crash rail posts fouls the stiffener and kicker for W1 support, adjust the beam supporting the crash rail post slightly (less than 3") so it is in line with the W1 support. In this case, the kicker is no longer needed. 2. The center line of the bolt shall be 2'-0 1/8" from the top of the beam (2'-0 ¼" shown on SK4). The vertical spacing of the bolt shall be 10 ½"(10" shown on SK4) and the horizontal spacing of the bolt shall be 5 ½"(4 1/2" shown on SK4). 3. Confirmed that 1 9/16" dia. hole is fine for 1" bolt to allow for field tolerance.

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

See attached CD RFI # 128.2 SK1 & SK2 for items 1 & 2:

1) The 1 1/2" thick plate per 4/S1-8003 with the 1/2" fillet welds will interfere with the "CP6" bolts if the beam is placed on the center of the CP6 connection per RFI T-0923 (SK1). Confirm it is acceptable to place the 1 1/2" thick plate on the center of the "CP6" connection and off-set the beam accordingly.

2) Detail 4/S1-8003 calls for the PL 1 1/2" to be 9" wide. Confirm it is acceptable to make the PL 5 1/2" wide as shown to avoid interference with the bolts for the safety handrail post.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1. Confirmed.

2. Proposed change of the stiffener is not acceptable. The stiffener shall be welded to the beam web and flange as shown on the contract document. Adjust safety handrail post as needed to avoid conflict.

T-0924 **BGP - Column Stirrups and Ties at Top of Concourse (Mock-Up Review)** **Closed**

From: Webcor Construction LP Jackson Tukuafu

To: Turner Construction Company Gary Krutsch

11/19/2013 **11/19/2013** **11/22/2013** **Potentially** ☐

Answered By: Adamson Associates, Inc. George Metzger

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

Please refer to drawing S1-3304, 3305 and 5051.

Please confirm that it is acceptable to install the top column stirrups and tie at 12.5" from the top of concrete at concourse level for the concrete columns with anchor base plates.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

George Metzger
11/22/2013

RESPONSE:

Installing all column stirrups and tie starting at 12.5" from the top of concrete is not acceptable. It is acceptable to eliminate/lower the column ties that interfere with the key blockout. Note that proposed 12.5" would not be sufficient to clear column stirrups/ties from the key blockout at some locations (Base Plate Types 1B and 1C in Sheet S1-5051, base plates embedded within the concrete).

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>TG0600-0025 states that "each section of INJECTO should be pressure tested with water to a minimum pressure of 1 00 psi, to insure migration of water through the entire joint. If excessive water leakage out of joint is observed, this may indicate the presence of honeycombs or voids and should be noted on job report..."</p> <p>In addition, the attached Grace/DeNeef Technical Letter also notes that the INJECTO should be tested with water (not air).</p> <p>Please confirm that it is acceptable to test the integrity of the INJECTO hoses with water as required by the manufacturer.</p>						
T-0927.1	BGP - Injection Hose Testing Criteria	Closed	01/06/2014	01/16/2014	01/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference attached Grace/DeneefTechnical Letter and RFI #T-0927 response.				George Metzger 1/17/2014			
RFI T-0927 response states that "contractor shall use air to test hoses as specified," but the specifications call out several different types of injection hoses. Although, air testing may be suitable for other products specified, Grace/Deneef requires water testing for the INJECTO Tube system. The attached technical letter from Grace/Deneef states that "INJECTO is an open system, and any air pumped in will begin to flow immediately through the 35 micron filter and polypropylene mesh out into the concrete."				RESPONSE: H&B does not disagree with deNeef that air will flow into the concrete. We also assume that water will also flow as readily into the concrete as air. What is the water test intended to demonstrate? The requirement in the specifications was in response to a Webcor comment during the design phase on the system and specification.			
Please review and confirm that water testing is acceptable for the Deneef INJECTO Tube system on the TTC project.				The reason air was specified, rather than water is that the injection hose is flanked with hydrophilic water stops. If the hose leaks, it will activate the water stops and the leaks in the hose will go undetected.

T-0934	SSS - Beam Connection Clarifications	Closed	11/22/2013	12/02/2013	12/06/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer sketches CD RFI 141 SK1 to SK7 for beam to beam connection clarifications required per items 1 to 4 below: 1) On S1-2505 between grids 1.4 & 2, the required (9) bolts per 1/S1-5010 will not fit in the W33 due to the size of the supporting BU beam. Confirm (8) bolts as shown are acceptable or supply an alternate solution. See SK1 & SK2. 2) On S1-2505 near grids 24.9/E, the required (9) bolts per 1/S1-5010 will not fit in the W33 due to the size of the supporting BU beam. Confirm (8) bolts as shown are acceptable or supply an alternate solution. See SK3 & SK4. 3) On S1-2507 near grids 33.2/E, the required (10) bolts per 1/S1-5010 will not fit in the W36 due to the size of the supporting BU beam. Confirm (8) bolts as shown are acceptable or supply an alternate solution. See SK5 & SK6. 4) On S1-2403 at grids 8/D.8, the required (8) bolts per 1/S1-5010 will not fit in the W30 due to the size of the supporting BU beam. Confirm (7) bolts as shown are acceptable or supply an alternate solution. See SK7.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Acceptable. 2) Acceptable. 3) Acceptable. 4) Acceptable. One general comment that applies to all sketches included in this RFI is that where shallower beams are supported by deeper girders, coping the bottom flange of the shallow beam shall not exceed 1" from the end of the beam.

T-0935	BGP - Lower Concourse Typical Moment Frame Beam Dimensions	Closed	11/22/2013	12/02/2013	11/25/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to drawing S1-2204 and S1-2205. Plan sheets S1-2204 and S1-2205 show 8 Moment Frame Beams (MFB) from GL 14 to GL 20.1 designated as typical. There are no section views of these beams which show the dimensions, as the other MFB have. Please provide both the Width and Depth of the typical MFB in the lower concourse level.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 11/22/2013 RESPONSE: Typical lower concourse moment frame beam details are in Sheet 1/S1-3600. Corresponding cross-section detail is in Detail 2 of the same sheet. Beam width and depth info are provided in the cross-section detail.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Refer to CD RFI 132 SK1 to SK4 requiring clarification on the moment beam to beam connections per the following.				1) Acceptable. 2) Confirmed. 3) Confirmed. 4) Acceptable. 5) Confirmed. 6) Confirmed. 7) Acceptable. 8) It is acceptable to use a single plate with a slot, however, coping of the beam bottom flange is not allowed at this (or similar) location(s) since there is bottom flange bracing (see 6/S1-5015). It is acceptable to locally cope the beam web for the slotted continuity plate. 9) Confirmed. 10) It is acceptable to apply solutions provided in 1 through 9 at similar locations at Bus Deck Level along GLs 9.9, 10.1, 19.9 and 20.1 only. For all other locations submit a separate RFI for each case.			
1) At the location indicated on CD RFI 132 SK1, the continuity plate will foul the bolts if (8) are provided per 1/S15010. Please confirm it is acceptable to provide (6) bolts in the W30x99 as shown on CD RFI 132 SK2.							
2) Confirm the continuity plate detailed on CD RFI 132 SK2 is correct as shown with tf and bf per W24x68.							
3) Please confirm it is acceptable to provide one continuity plate with a slot 1/8" larger than the beam web and the 3 1/2" beam cope as indicated on CD RFI 132 SK2 to allow for a continuous CJP weld of the continuity plate.							
4) At the location indicated on CD RFI 132 SK1, the continuity plate will foul the bolts if (11) are provided per 1/S1-5010. Please confirm it is acceptable to provide (8) bolts in the W40x277 as shown on CD RFI 132 SK3.							
5) Confirm the continuity plate detailed on CD RFI 132 SK3 is correct as shown with tf and bf per W30x99.							
6) Please confirm it is acceptable to provide one continuity plate with a slot 1/8" larger than the beam web and the 3 1/2" beam cope as indicated on CD RFI 132 SK3 to allow for a continuous CJP weld of the continuity plate.							
7) At the location indicated on CD RFI 132 SK1, the continuity plate will foul the bolts if (9) are provided per

	<div>1/S15010. Please confirm it is acceptable to provide (8) bolts in the W33x118 as shown on CD RFI 132 SK4. 8) Please confirm it is acceptable to provide one continuity plate with a slot 1/8" larger than the beam web and the 3 ½" beam cope as indicated on CD RFI 132 SK4 to allow for a continuous CJP weld of the continuity plate. 9) Confirm the continuity plate detailed on CD RFI 132 SK4 is correct as shown with tf and bf per W30x99. 10) Confirm the response to items 1 to 9 may be typically applied at other similar conditions/locations or provide a typical solution for the condition where the required continuity plate extends into the double angle connection of a deeper beam.</div>						
T-0939.1	SSS - Connection Clarifications at Moment Beams	Closed	12/19/2013	12/29/2013	12/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: At beam to beam moment connections as noted in RFI # T-0939 and other similar locations please confirm if the continuity plate is required when the nominal depth of the beam shown as dimension "X" is 3" or less as per CD RFI 132.1 SK1.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the continuity plate is required as shown on Detail 4G/S1-5010.		
T-0940	SSS - Shear Plate Dimension	Closed	11/25/2013	12/05/2013	11/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please confirm that the dimension indicated on CD RFI 130 SK1 at the Type 1 Drag Connection per detail 1/S1-5016 is to be taken from the Thornton Tomasetti Tekla Model.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> No, the distance in question as shown on CD RFI 130 SK1 is to be determined based on the contract document Detail 1/S1-5016 (not based on the TEKLA model). The first row of bolt is to be 6 1/2' min (1 1/2" MIN+1" + 4") from the bottom of the connection pad as detailed. The contactor shall also note that the cast node work point was incorrectly shown on RFI 130 SK1. It shall be at the same elevation as the center of the beam.

Refer to S1-2403 near grid 9/E for slab edge support connections as indicated on CD RFI 170 SK1 and SK2. The backup kicker brace detailed on 9/S1-5000 will fit in condition # 1 as indicated, but it will not fit in conditions #2 and #3 due to the limited difference in beam depth.			1) For condition #2, provide back-up brace per 6/S1-5015 except: a) Use 1/2" plate, instead of 1 1/2" plate shown on 6/S1-5015. b) Weld size for double sided fillet weld is 5/16" instead of 3/4" shown in 6/S1-5015.				
Please confirm it is acceptable to omit the kicker braces at conditions #2 and #3 or provide an alternate detail for these conditions.			2) For condition #3 provide a back-up brace per SKS-0290 submitted with response to RFI T-0824 except: a) Provide a 1'-0" long WT 4x10.5 CJP welded to the bottom as shown on SKS-0290. b) Double sided 3/16" fillet weld between the WT stem and bottom flange of the W21 beam .

REQUEST:			SUGGESTION:		ANSWER:		
Further to discussion with Thornton Tomasetti field personnel.					Accept Suggestion: <input type="checkbox"/>		
WOJV is asking for the remainder of the Mat slab pour, that the requirements per specification Section 31 55 00 1.4J may be deemed satisfied after 14 days to start removing the level D bracing based on historical data of the 284 concrete strength test results completed to date.					George Metzger 12/4/2013		
Please confirm if this would be acceptable					RESPONSE: The RFI does not stand as written. The historical mat slab break data is sufficient only to waive the specification requirement that the TJPA Representative review and approve strength test results prior to removal of bracing (Section 31 55 00 1.4J). It is permissible that Webcor-Obayashi review the 14 day results to determine early brace removal provided they establish and submit acceptance criteria. SEOR is awaiting documentation of the procedure and acceptance criteria, which may take the form of an RFI. Language for this RFI has already been discussed with WO and TCCO.

REQUEST:			SUGGESTION:		ANSWER:		
On S1-2505 at grids 21 & 22 refer to sketches CD RFI 149 SK1 to SK5 for items 1 to 3:					Accept Suggestion: <input type="checkbox"/>		
1) The plates for the pin connection per 5/S1-5017 foul the beam connections. See SK5 and confirm it is acceptable to modify the pin location as shown to avoid fouling the beam connections.					1) Do not modify the pin connection. Move the beams away the pin connection slightly to clear the pin connection.		
2) The pipe with connections per 5/S1-5017 at both ends will not be erectable without cutting the flanges on the beam stubs. Confirm it is acceptable to cut the bottom flanges as shown on SK5 or supply an alternate solution.					2) Do not cut the beam bottom flange. The erection issue can be resolved by field welding the bottom flange to beam web as noted in the detail.		
3) The pipe with connections per 5/S1-5017 at both ends will not be erectable without cutting the flanges on the beam stubs. Confirm it is acceptable to cut the bottom flanges as shown on SK5 or supply an alternate solution.					3) See response to item 2)

T-0967	Procedure for the removal of the level D bracing	Closed	12/05/2013	12/15/2013	12/09/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Procedure for the removal of the level D bracing: Webcor-Obayashi will review the 14 day compressive strength reports issued by the independent test lab (ISI) for the applicable pour area. In the review WOJV is to ensure that the "lower-bound" concrete strength exceeds 3000psi at 14 days. "Lower-bound" will be understood as the mean minus one standard deviation. If the calculated lower-bound strength <3000 psi, the bracing removal would not continue until results are received satisfying the lower bound criteria. Further, If any single compressive strength test is < 2500 psi, the bracing removal would not continue until results are received satisfying the minimum strength criteria. Please confirm if this would be acceptable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 12/6/2013 RESPONSE: Confirmed

PROJECT MANAGEMENT - REQUEST AND ANSWERS LOG

30100 - Transbay Transit Center Project

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Concern: ASTM A709GR 70W material hardening during welding (alloying up) as each weld layer is deposited (in 2" to 4" material thickness). An increased hardness value is expected and the actual concern is that, in this instance, the E91XX specified will create an overmatching filler metal condition during the welding process.</p> <p>Review: The AWS D1.1 2008 edition in table 3.1 for ASTM A709 Grade HPS70W specified a minimum of 70 ksi Yield Point and 90-110 ksi Tensile Range. In comparison, the AWS D1.1 2010 edition, a revision was made on this same material and the Tensile Range was dropped to 85 ksi minimum and maximum to remain at 110 (85-110).</p> <p>Research: Currently for seismic application, the filler metal companies have seismic testing certificates for E81XX and F8XX electrodes. The Tensile test range for AWS D1.8 requirements is 80ksi minimum, but the manufacturers' test results consistently come in at 88 to 95 ksi, which would meet the 85-110 ksi range for the material. The two manufacturers contacted, ESAB and Lincoln, are willing to do seismic testing (test data) for the purpose of supplying AWS D1.8 seismic certificates to meet the E91XX requirements. However, when reviewing the current test data from the manufacturer, the test tensile range is 90-110 ksi, but the results are 97-110 ksi.</p> <p>Conclusion: TMF and their welding consultants believe that starting with a near Minimum Tension ksi (under match in classification/specification) that allows the use of E81TXX or F8XX electrodes with current seismic certificates would be best for the welding of the A709 HPS70W material due to the 2-4" thickness in this application.</p> <p>Please confirm this proposal is acceptable.</p>

T-0970.1	SSS - Pretensioned Rods at Moment Columns	Closed	01/16/2014	01/26/2014	01/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Following the response to RFI T-0970 and after further review of #3 & 10, we agree the rods can be pretensioned from the bottom. Candraft have run a sanity check at several locations to confirm there is adequate clearance for the tensioning device and will continue to do so as other locations are detailed. Any interference will be addressed in future RFIs. Please confirm it is acceptable to use a standard flat washer in lieu of the plate washer as the holes are not oversized and this will also allow for easier workability during the pretensioning operation from the bottom (see Dyson catalog cut attached). If this is acceptable the 24" dimension indicated from bottom continuity plate to top of built up T & TT (on 3/S1-5050) and the 6x6x2" plate washer under the top nut will not require to be changed (as per #3, 10 & 14 RFI T-0970). Please confirm this proposal is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Acceptable to use standard flat washer at the bottom of the pretension rod.		
T-0971	SSS - Column Side Plates Dimension Increase	Closed	12/09/2013	12/09/2013	12/11/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Arup Rich Coffin							
REQUEST: Please refer to drawing S1-2203 and S1-5050. On S1-2203 at grids 9/C refer to sketches CD RFI 161 SK1 & SK2 regarding anchor bolts at column side plates. For the column side plates per detail 4/S1-5050 and anchor bolts it is not possible to insert the nuts & plate washers for the anchor bolts with the 3'-0" side plate dimension. Confirm it is acceptable to increase the noted dimension to 3'-5" or supply an alternate solution.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The detail referred in the RFI (4/S1-5050) is for column W14X730-SP, which is constructed using a rolled W14X730 as a base and welding side plates on it. However, the decision was that the below grade steel columns will be constructed using plates (built-up shapes), they won't be rolled shapes. Equivalent built up shapes for all rolled shape column types shown on Lower Concourse Plans are provided in Detail 6/S1-5050. These equivalent built up shapes do not require the side plates shown in Detail 4/S1-5050.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
For Drag connections per detail 1/S1-5017 refer to sketches CD RFI 123 SK1 & SK2 for the following items noted:		TT's response (the original RFI does not use #2, the responses are in the same order as the original RFI):					
1) Confirm the size of the hole required thru the beam web, web stiffeners and shear plates is the diameter of pin +1/32". Confirm if any additional tolerance is allowed for hot dipped galvanized pins.		Tolerance shall be 1/32" per Specification 05 10 00, paragraph 3.2.B.2.					
3) Confirm flanges can be cut flush to the beam web. Note that the flanges need to be cut flush only to the web stiffeners for erection access purposes.		It is contractor's option to either cut the flange flush with beam web or flush with the web reinforcement plate for erection purpose.					
4) Confirm if a radius is required when cutting the flange flush to the beam. If required confirm a radius of 1-1/2" is acceptable.		Confirmed.					
5) On RFI T-0737 Skanska requested to provide a cotter pin to further secure the nuts from backing off. Please confirm it is acceptable to provide one nut with the cotter pin as detailed on SK2.		2 nuts shall be provided as detailed in the contract documents.					
6) Confirm the material grade for the pins and nuts is A668 Class M.		Confirmed.					
7) Confirm all pins and nuts are to be hot dipped galvanized.		Confirmed.					
T-0974.1	SSS - Nut Material Grade	Closed	03/05/2014	03/15/2014	03/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Skanska USA Civil West California Dis		Ryan Clayton					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The contract documents do not contain a specific material grade for the nuts for large diameter pin connections (6, 7 and 8" diameter pins). In SK RFI 169A (T-0974), our detailer asked for clarification on the material grade for these nuts. It was confirmed that A668 Cl. M would be acceptable. Given the function of these nuts are to hold the pin in place and not apply a clamping force to the assembly, we do not consider that these nuts need to be a high strength forged material. Please refer to AISC Table 15-8 which shows a thin cap plates for pins overs 10" in diameter which reinforces this position.							
Please confirm it is acceptable to use A572 Gr.50 plate to fabricate these nuts.

T-0975	SSS - Vertical Clearances at Tapered Girder Kicker Connections in S1-5015	Closed	12/09/2013	12/19/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: Arup			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Please refer to drawing 4/S1-5015, S1-2602 Please refer to sketch CD RFI # 071 SK1 - SK3 for items 1 & 2: 1) As shown, 11-3/8" is the minimum vertical clearance required to provide the kicker brace connection per 4/S1-5015. Please confirm criteria as shown is acceptable. 2) Per item 1 on CD RFI 071 SK1, detail 4/S1-5015 cannot be applied in the noted case on SK3 and other similar cases when the vertical clearance is less than 11-3/8". Please confirm if bracing is required at these locations, if so supply a typical alternate detail.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Providing a 3' clear distance between the gusset plate shown on SK-1 may be reduced to 1", hence the minimum clearance (11 3/8") required to provide the kicker brace per 4/S1-5015 may be reduced further. 2) Brace is required. The vertical clearance shown on SK3 corresponding to the location shown on SK2 is not correctly determined. The tapered girder is much deeper (about 54" deep) at the brace location shown on SK2. Note that the tapered girder depth increases from 40" at the ends to 60" at the mid span per S1-4200.	
T-0976	SSS - Transfer Girder Kicker Connection Conflicts	Closed	12/09/2013	12/19/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Co-Author: Arup			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Please refer to drawing 5/S1-5015. For the Transfer Girder angle connections see sketches CD RFI 063 SK1 to SK4 for items 1, 2, 3 & 4 noted below. 1) The kicker angle fouls the vertical stiffener, this is typical at similar locations. We propose notching the leg of the fouling angle and using a two bolt connection in lieu of welding or provide a typical solution. 2) Due to welding access issues we propose to use a two bolt connection, typical at similar locations. Confirm this is acceptable. 3) The kicker fouls the stiffener and the kicker gusset is too close to the stiffener for welding access. Similar conditions occur at other locations on the Ground Level. Please provide a typical solution. 4) The kicker gusset fouls the stiffener plate. Similar conditions occur at other locations on the Ground Level. Confirm it is acceptable to use the stiffener as the kicker gusset and increase the gusset thickness at the other end to match or provide an alternative detail.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) It is acceptable to typically notch the leg of the fouling angle and provide (2)- 1 1/2" A490X bolts to connect the kicker angle to the bottom gusset plate at the location highlighted in the RFI on SK3 and at other similar locations. Provide a spacing of 3" between the bolts and a bolt edge distance of 2.5". The bolts shall be centered on the kicker angle legs. 2) Submittal shall address all access issues for field welding. It is acceptable to typically provide (2)- 1 1/2" A490X bolts to connect the kicker angle to the bottom gusset plate at the location highlighted in the RFI on SK3 and at similar locations where weld access is not possible. Bolt apacing and edge distance shall meet the requirements in AISC. The bolts shall be in line with the centroid of the kicker angles. 3) Shift the beam to the south so that the same solution in 4) could be applied. 4) Confirmed.

Should this read 6/S1-7601 and not 3/S1-7601? Please clarify.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 3/S1-7601 shall apply as called out on 3/S1-7008. Detail 3/S1-7601 has been updated in ASI 109 drawings to reflect the condition at that location.		
T-1000	SSS - Machine Lower Nozzles Perpendicular to Pipe	Closed	12/10/2013	12/10/2013	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Stacy Wilson				
Co-Author: Arup Rich Coffin							
REQUEST: Please refer to drawing S1-5111 thru S1-5133. In recent meetings, Webcor/Obayashi has made it clear that the same Bus Deck Cast Node geometry will be used at multiple locations even though the angle of the lower Basket Columns changes at each Node. This adds a level of complexity and cost to the joint between the Cast Node and Basket Column Pipe due to the kink imposed on that joint as a result of the following: - The Lower Pipe Columns will be required to be "miter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states "Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.") - Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node. - Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field. This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node. Since this joint on the Cast Node is already being machined, Skanska/OIW believes that the more desirable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The contract drawings at bid time clearly showed that the centerline of the pipe is not in line with the centerline of the cast node nozzle, that the same cast node is to be used at multiple locations, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not \angle bearing \angle connections, they are a fully welded connections as shown on the contract documents. This \angle kink \angle between the topside of the ground floor basket column and the bottom-side of the bus deck cast node \angle resulting from the building's geometry and the use of the same cast node type in multiple locations \angle can be accommodated by either miter cutting the pipe or the cast node. However, the contract documents, including those available during bid, clearly show that the bus deck cast nodes were not going to be miter cut, and so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building's geometry. The specified miter angle does not exceed 1.5-degrees in any location. Miter cutting a 32-inch diameter steel pipe by 1.5 degrees results in an elliptical cross-section having a major diameter of $32 / \cos (1.5^\circ) = 32.011$ -inches and a minor diameter of 32-inches. This results in a minimal mismatch in cross-sectional dimension / shape between the		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe . As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change .</p> <p>Skanska/OIW requests that the lower nozzle of each Bus Deck Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe. A negative response will result in a cost increase and a time increase.</p>						
						<p>outside and inside faces of a mitred pipe member and the cast node. Based on this geometry, a two-inch wide backer bar sized properly would only show a gap of about 2/100ths of an inch, nominally. A split-ring backer bar could also be employed, which would provide some additional adjustability for this joint in the field.</p> <p>There is no objection structurally or architecturally for the miter machining of either the nozzle of the bus deck cast node to be perpendicular to the pipe, or miter machining the pipe end at an angle to match the Cast Node. However, if Skanska seeks this additional miter machining of the bus deck lower nozzles on the Cast Nodes, all related costs and schedule will be the responsibility of Skanska. Skanska would need to provide the requested miter angle for each Cast Node for incorporation into the casting machining drawings. Additional costs including drawing time would need to be paid for by Skanska.</p> <p>Skanska will be responsible for all costs associated with the miter machining of either the nozzle of the Cast Node or the pipe to be perpendicular or coplanar. If Skanska opts to have the lower nozzle ends of the bus deck nodes mitered, Skanska will need to coordinate with the CM/GC to make an agreement with Bradken for this change to Bradken's scope of machining work for the bus deck cast nodes. Skanska will also be responsible to absorb any schedule impact without delaying the overall project schedule. NOTE: If miter cutting the bus deck cast node nozzle is selected, machining would need to be performed by a third party as Bradken does not have this capability. Be aware that those costs for machining, trucking, and for handling the cast nodes would be Skanska's. Custom miter cutting each nozzle end would also require additional geometric inspection of the cast nodes, the cost for which would be borne by Skanska.</p>

Co-Author: Arup Rich Coffin							
REQUEST: Please refer to drawing S1-4205. Please see Plan Sheet S1-4205 Detail 1 for typical details at EBF Link Beams. The typical arrangement specifies a transition from CJP weld to fillet welds and incorporates a weld access hole to separate the 2 welds. In an effort to reduce the number of weld access holes and the inherent issues that can arise with them, Oregon Iron Works is proposing to extend the CJP welds to the end of the girders thus removing the weld access holes at the weld transition point. Please see attached OIW sketch 2770-SK-TH02 representing a typical EBF Blank Beam Fabrication. It is Skanska/OIW's intent to extend the UT testing 1'-0" beyond the specified CJP weld zone. The balance of the weld will be MT/VT tested as required by Contract Documents. Please confirm that the proposed welding and NDE is acceptable for all EBF link Beams at the roof perimeter. There is no cost or time impact with this change.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the proposed welding and NDE is acceptable for all EBF link beams at the roof perimeter. Also, please note the special CVN requirements for the weld materials for this EBF link beam CJP weld noted in Specification 05 12 10, paragraph 2.1.C.2.

	REQUEST: At a sample location on S1-2503 at grids 9/F refer to sketches CD RFI 150 SK1 & SK2 as noted below. As the sloping BU beam rises 1/2" above the opposite BU beam, the thickness of the top continuity plate will be increased to 3-1/4". Confirm this is the design intent and should be applied typically at similar conditions.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
					For the conditions described in the RFI, continuity plate thickness shall be per construction drawings (no need to increase thickness). At the condition described in the RFI (1/2" difference between the top of flange elevations), line the continuity plate up with the non-sloping MF beam. At Bus Deck Level joints at GL 2/D.4, 2/E.6, 3/D.4 and 3/D.6, the difference in elevation of MF beams on each side of the column is 2". At these joints, slope the continuity plate between the top flanges of the two beams (no need to increase thickness).		
T-1004	SSS - Pins at Roof Clevises and Perimeter Bus Deck	Closed	12/10/2013	12/20/2013	12/12/2013	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch				Answered By: Adamson Associates, Inc. George Metzger		
	Co-Author: Skanska USA Civil West California DisRyan Clayton						
	REQUEST: Please refer to the the following: S1-5017, S1-5131, S1-5132, S1-5133, 05 10 00 - 2.3.J & 3.2.B.2. Paragraph 3.2.B.2 specifies the holes for the pins shall be no more than 1/32" over the diameter of the pin. Paragraph 2.3.J specifies the pins to be Hot Dip Galvanized (HDG). This combination will lead to interference at assembly due to the following factors: 1) Tolerance in bored hole diameter of 0.010 (+0/-0.010) 2) Tolerance of Pin diameter of 0.010 (+/-0.005) 3) Tolerance of galvanize thickness at pin of 0.012 (+/-0.006/side x 2) 4) Tolerance in thickness of primer at pin holes of 0.002 (+/-0.001/side x 2) The stack-up of tolerances is 0.034" which is greater than the specified 1/32" maximum clearance. Skanska/Oregon Iron Works is requesting approval to supply the pins and bored holes to the following nominal values and within the tolerance identified above. These values are measured after machining and prior to coating. 1. 7" diameter pins: a. Pin diameter = 6.906" (bored holes -1/8") b. Bored holes = 7.032" 2. 8" diameter pins:	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>		
					Per Specification 05 10 00, the pin is to be measured by a ring gage after galvanizing. The 1/32" tolerance is for pin after galvanizing. We don't feel a chrome coating is equal to the specified galvanized coating. Chrome coatings do not have the construction industry track record that galvanizing has. Skanska has not provided a substitution request with technical data showing a chrome coating has the same performance as galvanizing.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<div>a. Pin diameter = 7.906 (bored holes -1/8") b. Bored holes = 8.032" Note that zinc coating is not a hardened material, and the coating on the pins will be prone to galling while attempting to install in a horizontal position. Skanska/OIW suggests investigating alternate pin coatings; for example, a hardened chrome coating has tightly controlled thickness tolerance and will not gall.</div>						
T-1004.1	SSS - Pin Diameter	Closed	01/29/2014	02/08/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: We have identified a fit-up issue with the basket column pin connections at roof node and Type 2M drag connections. Spec section 05 10 00-13 3.2B states that the diameter of the pin hole shall not be more than 0.03125" greater than the diameter of the pin. The response to SK RFI 293 (T-1004) clarifies that the 0.03125" erection tolerance is for the pin after galvanizing. Therefore, to make this pin connection work, the pin must be machined below the 8" nominal dimension stated in the contract drawings (Ref S1-5133). We have determined the maximum allowable pin diameter as follows; Data: Min Bored Hole Diameter: 8.0313 - 0.01 = 8.0213"..... Source: Ref 1 Max Roof Node Bored Holes Concentric Offset: 0.0156"..... Source: Ref 2 Max Galvanizing Thickness: 0.010" (each side)..... Source: Ref 3 Erection Tolerance: 0.03125".....Source: Ref 4		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to machine the pin to 7.953" (+0, - 0.01"), i.e., 0.047" less than the nominal diameter of the pin diameter specified, however, the specified 1/32" tolerance for the pin hole shall not be exceeded.

	<p>Maximum Allowable Pin Diameter: X (pin must be machined and so we have applied a reasonable industry standard machining tolerance of +0,-0.010")</p> <p>Calc (inches): (8.0213-0.0156) - (X+2(0.01)) = 0.03125 X = 7.953" (+0,-0.010") Data used above is for 8" diameter pin. Similar for 7" pin (i.e 6.953"). Please confirm it is acceptable to machine the pins to the diameters specified above.</p> <p>References; 1 - CN-0126 and CN-0127 2 - CN-0126 and CN-0127 3 - The maximum galvanizing thickness was provided by the galvanizing shop that will be coating these pins. Based on their experience they estimate a minimum of 0.008" and a maximum of 0.02" on the diameter of the pin. 4 - Section 05 10 00-13</p> <p>Please also note that A153 1.2 states that this specification is intended to be applicable to hardware items that are centrifuged or otherwise handled to remove excess galvanizing bath metal. This is not practical with an 8" diameter pin and should be taken into consideration.</p>						
T-1005	SSS - Relocate Beam to Suit Double Angle Connection	Closed	12/10/2013	12/20/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
On S1-2303 near grids 10.1/F refer to sketch CD RFI 151 SK1 and confirm it is acceptable to relocate the W16x26 per dimensions shown to align the beam with the W21x50 as the double angle connection per S1-5010 will not work with the offset if the EQ/EQ dimensions are maintained as the bolts will foul the beam web on the opposite side. If			Confirmed

not, supply an alternate solution.							
T-1006	SSS - Re-Align Beam for Double Angle Connection	Closed	12/10/2013	12/20/2013	12/31/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to drawing S1-2603. On S1-2603 near grids 9/F refer to sketch CD RFI 153 SK1 and confirm it is acceptable to align the noted W30x108 with the W30x90 on the south side of PE302. This will give us an off-set of 6 3/4" on the east end between the W30x108 & W24x76, which will allow a double angle connection per S1-5010. If not, supply an alternate solution as a double angle connection cannot be applied with the current beam locations because the bolts will foul the beam web on the opposite side.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed that the W 24x 76 may be moved to be in line with the W30x108 (moving W24, not W30, note that there is a typo in text description of this RFI).				
T-1007	SSS - Framing & Connection Clarifications	Closed	12/10/2013	12/20/2013	12/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch	Answered By: Turner Construction Company Gary Krutsch				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2303 near grids 12/C refer to sketches CD RFI 221 SK1 & SK2 for items 1 to 4: 1) It appears the plan shows diagonal braces similar to 12/S1-3703 but details 3/S1-3705 & 5/S1-3705 do not show the bracing. Are braces required? If braces are required, please see items 2, 3 & 4. 2) Supply the location of the braces from grid 'C' considering the dimensions on TR12 shown on SK2 and the connection to the girder per 8/S1-5005. 3) Supply the underside of slab elevation at the brace located per dimension supplied in item 2. 4) Supply the underside of slab elevation at the brace located per dimension supplied in item 2.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Yes, braces are required per 12/S1-3703. 2) Braces may be located at one of the stiffener plate shown on 9/S1-3702. 3) Underside of the slab elevation is 18.24 (T/Slab 19.07 minus 10" slab thickness). 4) see response #3.

REQUEST:			SUGGESTION:				
This is a follow-up RFI to RFI T-1007: Per the response to item #1 a dimension of 40' 4-3/4" was provided that differed to the dimension indicated on the Revit model. Candraft & Skanska have reviewed the Structural and Architectural drawings provided and cannot come up with this dimension. This is typical at every location where we are required to calculate the slope of the slab to locate the kicker angles connected to the underside of the slab. Please provide the dimensions indicated on SK1 thru SK4 or clearly direct Skanska as to where to find this information.			ANSWER: <input type="checkbox"/> Accept Suggestion:				
			1) The T/slab elevation is called out at the slab step just north of GL G and west of GL 1. A slope of 1.7% and the direction of the slope is called out on A1-2862. From this information, the T/Concrete elevation can be calculated at the highlighted location.				
			2) The T/slab elevation is called out at the slab step at GL 2 and south of GL G. A slope of 1.7% and the direction of the slope is called out on A1-2862. From this information, the T/Concrete elevation can be calculated at the highlighted location.				
			3) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location. Note that the slope changes from 1.7% to 2% across the step along GL X.				
			4) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			5) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			6) Confirmed.				
			7) Confirmed.				
			8) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			9) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			10) The method described in 2) can be applied to get the T/Concrete elevation at the highlighted location.				
			11) The method described in 2) can be applied to get the T/Concrete elevation along the B88 beam.				
			12) There is no perimeter concrete beam. The MFB beams frame into the foundation wall. See 1/S1-3201 for reference. Yes, the foundation wall slopes between GLs. The T/slab elevations at the foundation wall edge between gridlines can be obtained by the method described in 2) or can be interpolated between the				

<i><u>Number</u></i>	<i><u>Subject</u></i>	<i><u>Status</u></i>	<i><u>Date Created</u></i>	<i><u>Date Required</u></i>	<i><u>Date Answered</u></i>	<i><u>Cost Impact</u></i>	<i><u>Proceed</u></i>
							values shown at gridlines.
							<p>13) Three work points are noted on plans along foundation wall edge and offset from gridlines are shown on A1-2110, A1-2103 and A1-2104. The foundation wall curves between the first two work points with a radius of curvature of 637' - 7 1/2" and is a straight line between the second and third work points. From this information the coordinates of the foundation wall edge can be established along the portion of the wall that is not aligned to gridline J and the requested dimension can be calculated. The T/slab elevations are shown on plans at two ends of the MFB beams i.e. at edge of the foundation wall and at the slab step south of GL G. The slab step is dimensioned from GL G on architectural drawing A1-2863. The slope of the MFB beams can be calculated based on the T/slab elevations at these two points and the distance between them.</p> <p>14) See response to 13).</p> <p>15) See response to 13).</p> <p>16) See response to 13).</p> <p>17) See response to 13).</p> <p>18) See response to 13).</p> <p>19) RCS 16 slab is 10" thick. See reinforced concrete slab schedule on S1-3500.</p>

T-1014	BGP - Moment Frame Beam Tie Configuration	Closed	12/11/2013	12/21/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER:			
Please refer to detail 2/S1-3600.				Accept Suggestion: <input type="checkbox"/>			
Due to the possibility of limited access during the installation of the individual moment frame hairpins as detailed in 2/S1-3600, SCCI/Gerdau proposes to modify the typical moment frame beam tie configuration to what is shown in the attached SCCI sketch SK-RFI-399.				George Metzger 12/12/2013			
Please confirm if this is acceptable.				RESPONSE: The proposed configuration containing hairpins with 555 t-heads is acceptable for the 48" deep moment frame beams only in regions further than 96" from the face of supporting vertical elements. For locations within 96", the stirrup configuration may remain as proposed; however, the 555 t-heads shall be replaced with hairpins conforming to those of Detail 2/S1-3600. Note that all ties (including cap ties) which contain both 90 and 135 hooks shall have their hooks alternated for all locations.

T-1017	SSS - Location Clarification for Lateral Bracing	Closed	12/11/2013	12/21/2013	12/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2303 (S1-2302 sim.) at the lateral bracing south of line G, the concrete locations cannot be determined using the structural and architectural drawings. Please refer to CD RFI 216 SK1 & SK2 requesting clarification on the following: 1) Provide the requested dimensions X1, X2, X3, X4, and X5 to determine the length and bevel of braces. 2) Provide the requested elevations to the underside of the slab edge to determine the length and bevel of braces X1, X2, X3, X4, and X5. 3) Supply the elevation to the underside of slab at the edge of concrete beam for each brace to determine the length and bevel of the braces between grids 1.4-9 south of grid G. 4) Supply the information to determine the slope of the slab at each steel to concrete beam brace.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Braces are equally spaced between Grids 9 & 9.9. 2) The bottom of the slab is equal to the top of slab elevation minus the slab thickness (10"). Top of the slab elevations may be determined assuming that the slab has a constant slope between the elevation points noted on the plan. 3) See response to item 2) 4) See response to item 2)				
T-1018	SSS - Perimeter Protection Detail	Closed	12/11/2013	12/21/2013	12/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: In order to comply with OSHA regulation 1926.501 - 'Duty to Have Fall Protection', Skanska has directed our modeling contractor, Candraft, to incorporate holes in new framing members to facilitate installation of the guard rail systems and life lines. Please see the attached sketches, SK 6 A-F, SK 7-8 and SK R-4, which are consistent with the National Institute of Steel Detailing standards for safety holes on beams and columns, and confirm that the EOR takes no exceptions to our proposal. Particular attention is drawn to the note on our proposal that states 'No Holes or Welded Tabs will be located in the protected zones of the new members.' All open holes will be filled with high strength bolts upon removal of the safety systems.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The holes for erection safety railing are acceptable in concept. The holes shall be detailed on the shop drawings submitted for review as a part of review process. The holes shall not be in any steel exposed to view in the completed design and there may be other areas that are not acceptable once the holes are shown on the shop drawings. Any holes in galvanized steel shall have the galvanized finish repaired.

REQUEST: In orThe web to flange T-joint CJP welds for the transfer girders shown on drawings S1-4300 to S1-4308 do not indicate that a reinforcing fillet weld is required. Note 1 on 4/S1-4202 calls for reinforcing fillets to T-joint groove welds of SLRS members. Please confirm that a reinforcing fillet weld in not required for the transfer girder web to flange T-joint CJP welds.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			The T-joint CJP welds for the transfer girders shown on drawings S1-4300 to S1-4308 are double side CJP weld, not requiring reinforcing fillet weld. Detail 4/S1-4202 is for single side CJP weld at beam flange to column moment connection, therefore, Note 1 in Detail 4/S1-4202 does not apply.				
<hr/>							
T-1020	SSS - Type 2 Drag Connection Clarifications	Closed	12/11/2013	12/21/2013	12/16/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: For Type 2 Drag Connection Clarifications refer to sketches CD RFI 148 SK1 to SK2 for items 1 to 5: 1) Supply erection gap between web reinforcement plate and shear plate on column. 2) Supply erection gap between 2" plate and shear plate on column. 3) Supply erection gap between 1 1/2" web doubler plate and 2" thick plate. 4) Supply erection gap between beam web and shear plate on column. 5) Supply erection gap between 2.5" plate and shear plate on column.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			Erecting gaps between plates should be typically 1/16" If wider gap is required at certain locations, submit the gap width for approval.				
<hr/>							
T-1021	SSS - Rebar Holes and Headed Stud Details at Ground Level	Closed	12/12/2013	12/22/2013	12/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Refer to sketch CD RFI 105.1 SK1. The 2 1/2 x 14 x 2'-6" plate has been set per the elevation given in RFI # T-0888 item 3 and the 3" dia. rebar holes have been set at 1 3/4" above the underside of MFB 6 per RFI # T0888 item 8. This results in the plate fouling the rebar holes as shown.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
			First rebar hole fouling the 2 ½" plate may be deleted. This response applies at Grid 10.1 as well.

This is a follow-up RFI to Webcor RFI #T-0890 (SK RFI # 150 & CD RFI # 109) Refer to sketches CD RFI 109.1 SK1 to SK3. The response in Webcor RFI # T-0890 has been applied at grid 11 as shown on SK2 but the response to T-0890 with the information shown in details 6/S1-3702 & 2/S1-3705 cannot be applied at grid 9 as shown on SK3. There insufficient space to fit the (50) headed studs as requested.				For the condition at Grid 9, change the vertical spacing of the studs to 4" so the 3rd row can clear the holes for stirrups. Move the 4th and 5th rows studs to the beam top flange (4" on center in the direction perpendicular to the beam axis, 6" on center spacing in the direction parallel to the beam axis).			
Please supply a new detail for the TR9 location.							

T-1023	SSS - Deck Support Angle Spacing	Closed	12/12/2013	12/22/2013	12/26/2013	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
At a sample location on S1-2403 between grids D & F west of line 10 refer to sketches CD RFI 155 SK1 & SK2 for angle spacing question below.				Confirmed that the framing as shown on S1-2403 is acceptable. No need to add more deck support outrigger and bracing.			
Detail 9/S1-5000 (see SK2) states that the maximum spacing for the deck support angles and bracing is 8'-0. As shown, the spacing of the steel framing on S1-2403 (SK1) exceeds 8'-0. Confirm the framing as shown on S1-2403 is acceptable and no further action is required or supply a revised partial plan to show the revised framing to meet the criteria in detail 9/S1-5000.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
At TR8 near grid line G refer to sketches CD RFI 220 SK1 to SK3 for items 1 to 3:		1) Confirmed.					
1) Confirm the headed studs as shown are correct (work with item 2).		2) Head studs placement shall be based on detail shown on SK-2.					
2) Detail 2/S1-5023 is referenced with a "SIM" designation and it is not clear what is required on grid 8 for the additional headed studs shown in detail 2/S1-5023.		3a) Confirmed					
Confirm the headed studs as shown on SK3 are acceptable or supply a clarifying detail specifically for this location showing the stud locations.		3b) Holes are to be on 6" spacing as shown in detail 7/S1-3701					
3a) Confirm the 2" dia. hole locations as shown on SK3 are acceptable to clear the bolts in the bottom flange and the stiffeners.		3c) 3" holes for concrete beam B57 bottom bars are needed per section 52/S1-5023.					
3b) Detail 2/S1-5023 shows the holes at 5" OC but this contradicts the 6" OC shown in detail 7/S1-3701. Confirm the spacing shown in item 3a above is acceptable.							
3c) Confirm the 3" dia holes are not required at grid 8 as they are not shown in detail 7/S1-3701. Supply location dimensions if they are required.							
<hr/>

T-1034	SSS - Material Grade and CVN Requirements	Closed	12/12/2013	12/22/2013	12/12/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: 1. At 1/S1-4205 EBF LINK BEAM DETAIL, there is a section 4/S1-4205 that cuts an EBF LINK BEAM CROSS SECTION. The same section 4/S1-4205 is cut on 2/S1-4205 BRACE DETAIL. Please confirm that EBF link beams are where the 4/S1-4205 section is shown, and that they will be ASTM A709 grade 50 and other built-up beams at the roof park perimeter will be ASTM A572 grade 50 per SS-1/S-0007. 2. Please verify if bus deck built-up plates that are ASTM A709 grade 50 plates less than 2" thick part of the SLRS should be CVN tested 25 ft.-lb @ 70 degrees F. 3. Please supply CVN testing requirements, if any, for secondary material steel (i.e. stiffeners, connection plate, continuity plates, etc.).			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The requirements for ASTM A709 Grade 50 material for the link beam is for the region between the diagonal work point as shown in Detail 1/ S1-4205. At the contractor's option, steel plate beyond the splice point outside of the A709 grade 50 plate may be ASTM A572, grade 50. 2. CVN should be per requirements in the respective ASTM specification and Specification 05 10 00. For a member that is a part of SLRS (or SFRS), see 05 12 10 for additional requirement for CVN testing. Also, the testing temperature for weld metal is not 70 deg F, it should be in accordance with AWS D1.1 and 1.8 (for SLRS), assuming LAST=25 deg F per specification 05 12 10, paragraph 2.1.C.3. 3. CVN requirement for stiffeners, connection plate, continuity plates shall be in accordance with their respective ASTM specification.

T-1037	SSS - Typical Kicker Brace Detail	Closed	12/12/2013	12/22/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Reference the bracing connection details provided on S1-5015. At conditions where a full depth shear plate and bracing are required, there is consistently a conflict between the bottom gusset plate and shear plate. Based on the weld requirements for the kicker brace connection, the following is proposed to avoid this conflict: 1) Connect the kicker directly to the shear plate 2) Eliminate the bottom gusset 3) Offset the top gusset (below the beam) by the width of the beam web to align with the shear plate 4) Match the thickness of the gusset and stitch plates to the shear plate thickness 5) Shape the bottom of the shear plate, where necessary, to achieve the required angle brace weld Please confirm this is an acceptable typical solution for the conditions shown in the sketches attached and at other typical locations where bracing and a full depth shear plate are required.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Acceptable. 2) Acceptable. 3) Acceptable. 4) Reducing the top gusset plate thickness to match the full depth shear plate thickness is not acceptable. See response to RFI T-0920.1 where stitch plates with varying thickness were allowed to be used when the full depth shear plate and gusset plate thickness did not match. The same solution can be applied at all similar locations. Alternatively, the full depth shear plate thickness can be increased to match the gusset plate thickness. 5) Acceptable. It is typically acceptable to apply solutions 1) through 5) at locations where there is a conflict between the bottom gusset plate and full depth shear plate at the transfer girders.

T-1039	SSS - Stitch Bolts on Kicker Braces	Closed	12/16/2013	12/26/2013	12/30/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Details 4, 5 & 7/S1-5015 do not show a stitch bolt requirement for the kicker braces. At a sample location and detail shown on sketches CD RFI 066 SK1 & SK2 please confirm none are required or supply the necessary information.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to Section 3/S1-3703 that is just above the SK2 section cut, where the Section RFI 066-SK2 was cut. In addition to Section 3/S1-3703 refer to Section 6/S1-5022, which provides information on the stitch plate.		
T-1039.1	SSS - Stitch Bolts on Kicker Braces	Closed	02/03/2014	02/13/2014	02/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The response to T-1039 references details 3/S1-3703 & 6/S1-5022 for stitch plate information although these sections are only cut at Ground Level at Fremont & First Street. Ple ase confirm the response is intended to indicate stitch plat es are required at all kicker brace locations including detail s 4, 5 & 7/S1-5015 as per details 3/S1-3703 & 6/S1-5022. If so pleases confirm detail 8/S1-5015 can also be used for the stitch plate detail.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Stitch plates are required for kickers where Details 4, 5 and 7/S1-5015 are applicable, except where the kicker is shorter than 1.5'. Stitch plate details provided in 8/S1-5015 can be used at locations where kickers are required except that the stitch plate thicknesses shall match those of the gusset plates in the details. Stitch plates can be either welded (as shown in 8/S1-5015) or bolted (as shown in 6/S1-5022) to the kicker angles. For kickers shorter than 3' but longer than 1.5', provide a single stitch plate centered on the kicker angles.		
T-1040	BGP - Width and Depth of Intermediate Beam in Lower Concourse at GL E.6/7	Closed	12/17/2013	12/27/2013	12/19/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference contract drawing S1-2203. Plan sheet S1-2203 shows an intermediate beam at gridline E.6 from gridline 6 to gridline 8 (see highlighted area attached). The Section 2/S1-3400 does not give the specific dimensions for a beam with change in slab elevation. Please provide both width and depth of the beam at this location in the lower concourse.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 12/19/2013 RESPONSE: There is no beam at Grid E.6 between Grids 6 and 8 of the Lower Concourse. The hidden line shown on S1-2203 is a step in the soffit that corresponds to a change in top of slab elevation. Refer to Detail 2/S1-3501 for dimensions and reinforcing. Detail 2/S1-3400 does not apply at this location. See RFI T-876 response for additional information.

T-1041	SSS - CJP Weld Prep between Ground Level Cast Node and Transfer Girder	Closed	12/17/2013	12/27/2013	12/26/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Compy Stacy Wilson				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Our fabricator Thompson Metal Fab has requested a 2" 45° bevel be incorporated into the ground level cast node machining drawings. This weld is detailed on 6/S1-4350. See attached sketch for bevel detail. Please confirm approval for weld prep detailed in attached sketches.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The 2" 45 degree bevel to the ground cast nodes is acceptable to incorporate into the machined drawings per CCX. The additional Cast Connex detailing, Bradken additional machining, and any other follow on expenses or schedule delays due to this change will be borne by Skanska and not the TJPA. George Metzger 12/18/2013 RESPONSE: Cast Connex, It makes sense to have Bradken to put in this bevel as detailed on the structural drawings. Please coordinate with Bradken for this work.		
<hr/>							
T-1042	BGP - Geothermal Manifold Locations for Fields 3, 4, 5, 6, 7, 8, 9, and 10	Closed	12/17/2013	12/27/2013	01/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Per the drawings, the manifold is to be located at an elevation no greater than 14' below finish grade (street) elevation. Per conversations in the preparatory DFOV meeting and other coordination meetings, the Engineer planned to have the manifold in a specific location. Attached are elevation drawings for Field 3, 4, 5, 6, 7, 8, 9 and 10 Manifolds. Please confirm that the attached elevation details work with the desgner's intent for the manifold locations for said Fields. Note that Riser 10 has been relocated approximately 4' East between piles 231 and 232 to allow for the required 10' minimum spacing for future column installation.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/7/2014 RESPONSE: Riser penetrations into the building must occur within the beam space of the ceiling of the lower concourse level. The elevations shown on the sketches fall below the beam pockets and conflict with future emergency ventilation ducts within the building. Elevations shall be modified and resubmitted to verify that the pipes enter the building within the beam space. Risers 7 & 8 may be greater than 14'-0" below finished grade and should be reviewed by ARUP for confirmation.

T-1045	BSE - Micropile Relocations -Zone 3	Closed	12/17/2013	12/27/2013	01/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Webcor Construction LP Robert Kjome			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Fourteen (14) micropiles located under Span 3.7 and 3.8 in Zone 3 have to be relocated in the field due to their proximity to the Trestle Deck. Micropiles E343/E354/E363/E375/E390/ E401/E411 have to be relocated 5' to the North and micropiles E340/E353/E362/E371/E386/ E400/E410 5' to the South. See attached sketch of micropiles in question.				TT field engineer's observation of pile layout staking and trestle configuration does not support that micropiles have to be relocated as stated in the RFI. The low-overhead rig appears very capable of installing piles per plan.			
Please confirm these relocations are acceptable.				The proposed relocations are not acceptable.			
<hr/>							
T-1045.1	Micropile Relocations -Zone 3 & 4	Closed	12/30/2013	01/09/2014	01/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
BBII is proposing to move 49 micropiles located within Zone 3 & 4 due to their close proximity to the Trestle/bridge Deck. Micropiles E375/E390/ E401/E411/E654/E670/E704/E738/E769/E800/E815/E826 would all be relocated 5' to the North, micropiles E492/E512/E537/E564/E587/E610/E630 would also relocated 3' north. The micropiles E371/E386/E400/E410/E488/E526/E534/E559/E578/E605 /E622/E650/E666/E700/E734 /E765/E796/E811/E825 would also be relocated 5' to the South. Micropiles E416/E417/E418/E419/E420/E426/E427/E428/E429/E430 /E431 would also be relocated 3' to the West. See attached sketch of micro piles in question.				Based on a reanalysis of the mat slab with the proposed micropile relocations contained in the RFI, the proposed relocations are determined to be acceptable. No modifications to the mat slab are required to accommodate the proposed micropile layout.			
Please confirm this is acceptable

T-1049	BGP - Column Base Plate Clearance Lower Concourse Slab	Closed	01/14/2014		01/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Adib Sassine To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Ref: 1 and 3/S1-5051, S1-3600, S1-2205 To erect and plumb Lower Concourse Column with base plates Types I as shown on schedule 1/S1-5051 and II at 7/F.8 shown on detail 5A/S1-5051, erection aids will be required at the base plate. However, due to the depression, rebar running thru the depression and based on our experience with the grouting at column base plate mock-up, allowable clearances to set these base plates may not be adequate. As an example, column at GL C/24.9, the bottom of type I C base plate is within 1" from the top of rebar and does not have adequate area for shim packs. Question # 1: To provide adequate erection aids, please review the following options and advise as to which one is acceptable: Option 1: Lower rebar around the base plate area by 1" to allow for 2" clear between rebar and bottom of base plate. Install 4 shim packs for erection purposes under each corner of the base plate on top of level concrete surface.		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/> Question 1, Option 1: Lowering the MF Beam reinforcing is not acceptable. Erection aids are contractor's means and methods. Question 1, Option 2: The reinforcing adjustments allowed are contained in RFIs 908.1, 917, 924, 925 and 1015. Erection aids are contractor's means and methods. Question 1, Option 3: Raising the column base plates is not acceptable. Erection aids are contractor's means and methods. Question 2: Increasing the plan dimension of the column base plate block-out to 6" all around is acceptable.

T-1053	SSS - Roof Park Level W40 to BU Girder Connections	Closed	12/19/2013	12/29/2013	12/31/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: On S1-2602 to S1-2607 along lines B & H the bottom flanges of the sloping W40x264 moment beams are deeper than the BU 40 girders by 5/16" of an inch as noted on sketch CD RFI # 217 SK1. 1). To accommodate for the depth discrepancy verify a 1/2" plate can be added to the bottom of the BU 40 girders and the welds as noted on sketch SK1. 2). Also for the top & bottom flange welds for the W40x264 sloping beams verify the CJP weld noted on the sketch SK1. 3). Option # 2 is to move the work points of the W40x264 beams up 5/16" thus flanges would then be flush for both W40 & BU 40 members.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The top of steel for the slope W40 may be set to match the BU40 girder at the tip of the flange, thus, avoid the need for the 1/2" connection plate. 2) 1 3/4" bevel for 1 1/2" effective PJP weld is acceptable. 3) See response to Item 1).

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
See attached CD RFI # 352 SK1: 1) S1-8008 ~ Sequence 'CS2' approval drawings 4769, 4770, 4815, 4816 & 4919 request that the slab edge plate be extended up to the 1st concrete pour but 'CS2' approval drawings 4777 & 4823 do not have the comment. Note that the details on S1-8008 do not show the edge plate extending up to the concrete construction joint (1st concrete pour). Detail 9/S1-8008 does not show the concrete construction joint. RFI T-1056 (SK 210, CD 159) confirmed that the details on S1-8008 remain as shown and that the edge plate terminates at the top of slab. Please clarify the designer's requirement for this edge of slab bent plate. 2) S1-8006 ~ Detail 1 shows the edge plate extending up to the top of slab and not to the 1st concrete pour. Please review RFI T-1056 (SK 210, CD 159) and confirm that remains the intent. If not, issue a revised detail showing the vertical dimension locating the construction joint (1st concrete pour). 3) S1-8016 ~ RFI T-1056 (SK 210, CD 159) confirmed that the edge plate terminates on top of the slab as shown in details 1,3,4/S1-8016. Confirm this remains the intent. If not, issue a revised detail showing the vertical dimension				1) The vertical leg of the bent plate shall extend only up to the top of the slab per response to RFI T-1056. Comments on CS2 shop drawing sheets regarding length of vertical leg of the bent plate may be ignored. 2) Confirmed. 3) Confirmed.

T-1058	SSS - Brace Detail Clarifications at Spandrel Beams	Closed	12/20/2013	12/30/2013	01/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: At 2nd level & Bus deck level Spandrel beams refer to sketches CD RFI 235 SK1 & SK2 for items 1 to 8: 1) Detail 1/S1-8020 is not referenced on the structural Bus Deck Level plans. Please clarify where this detail applies. 2) Detail 4/S1-8020 is not referenced on the structural Second Level plans. Please clarify where this detail applies. 3) Supply the information showing the W-2 mullion locations to help locate the angle braces in details 1 & 4/S1-8020. 4) Confirm the work point for the brace is on beam center at top of bottom flange in details 1 & 4/S1-8020. 5) Supply the work point location for the brace from top of beam in details 1 & 4/S1-8020. 6) Confirm the noted plate size in details 1 & 4/S1-8020 is a minimum size and may be increased to facilitate the connection. 7) Supply stitch plate requirements in details 1 & 4/S1-8020. 8) Confirm the brace in detail 1/S1-8020 may be connected beyond the beam flange as shown in 4/S1-8020 (SK2) to facilitate the erection of the brace.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Detail 1/S1-8020 was referenced in the Plan Note #3, Sheet S1-2402. See architectural drawings A1-2302 thru A1-2304 for the locations of W-2 system. 2). Detail 4/S1-8020 was referenced in the Plan Note #3, Sheet S1-2402. See architectural drawings A1-2302 thru A1-2304 for the locations of W-2 system. 3). The W-2 design documents are in-progress and have not been issued for bid. The dimensions requested should be obtained from the W-2 Shop Drawings as the exact final mullion placement will be determined by the W-2 trade subcontractor. 4). Confirmed. 5). Work point to be located at the intersection of the beam centerline and bottom face of the flange. 6). Confirmed. 7). Stitch plates shall not be spaced more than 4'-0" on center with 1 -3/4" dia A-325 bolt. 8). Confirmed.

REQUEST: Specification section 05 10 003.2 P.3b specifically excludes shop paint from areas to be enclosed in concrete and cementitious fireproofing. Drawing A-8662 matrix shows 3 different types of fireproofing, SFRM, IFRM-1 and IFRM-2. Please confirm which of these are cement based so we can determine shop painting limits.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Prep and prime all steel that is to receive fireproofing per the fireproofing manufacturer's recommendations. Fireproofing type SFRM-1 is cementitious fireproofing. For reference only, see the attached in-progress specification sections 07 81 00 (SFRM-1) and 07 81 23 (IFRM-1 & IFRM-2).				
T-1060.1	SSS - Shop Primer Coat Exclusion Areas	Closed	01/06/2014	01/16/2014	01/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: While specification section 05 10 00-3.2 .P.3b excludes shop paint from areas to receive cementitious fireproofing, the response to SK RFI 319 (WOJV T-1060) indicates that all steel is to be prepped per the manufacturer's recommendations. The response to WOJV T-1060 provided three potential manufacturers for the SFRM-1 per the preliminary specification section 07 81 00-2.3.A. 1.) Based on the product data sheets published for the Grace Monokote Z-146 and Cafco Fendolite M-II products, Skanska understands that these products are recommended to be applied to bare steel that is free of oil, grease, excess rolling compounds, lubricants, loose mill scale, excess rust,..., or any other substance that will impair proper adhesion. Please confirm this interpretation is acceptable and the potential use of these products is intended for application on bare steel. 2.) The Carboline Pyrocrete 40 product does not require the use of a primer, however the published data sheets state that "Pyrocrete 40 neither promotes nor prevents corrosion". It is understood that the manufacturer finds application of Pyrocrete 40 to bare steel to be acceptable on the building interior, but recommends the Owner's consideration of a primer on steel exposed to corrosion. Please advise which areas, if any, are required to be primed prior to application of the Carboline Pyrocrete 40 product. Please note that application of a primer for areas receiving		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) Confirmed. 2.) The two manufacturers described in item 1 above meet the technical performance requirements specified. The third product on item 2 should match the technical performance requirements specified in section 07 81 00 without requiring additional treatments to meet the specified requirements. If the manufacturer of this product deems it necessary to add corrosion protection for meeting the requirements, they should add this to their bid. As an additional measure prior to issuing specification section 07 81 00 for bid, we will add "or equal" to the Materials listing of Specification Section 07 81 00.

Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:				
Details 5, 6, and 7/A1-8662 indicate "12 inches of fireproofing required on stiffener fins, typical."			Accept Suggestion: <input type="checkbox"/>				
1) Please provide a UL assembly # and details for conditions where cruciform columns are enclosed with exterior wall cladding or interior furred-out walls.			1) Refer to 'Fire Protection Matrix & Schedule' per attached A1-8662 for UL Assembly listings. Refer to drawings A1-9317, A1-9351 and A1-9354 for related details.				
2) Structural drawings reference cruciform columns while A1-8662 references "stiffener fins." Please advise if the A1-8662 drawings are intended to show the cruciform columns, and provide revised drawings as necessary. Please provide the applicable UL assembly for cruciform columns with any revised details.			2) The 'stiffener fins' as noted on sheet A1-8662 are added to the Ground Level columns to increase weak axis bending stiffness of what are known as the cruciform columns on the Structural drawings. These stiffeners are provided for vibration control and being non-load carrying elements they do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-load carrying attachments be fire proofed to the same level as the protected structural elements to mitigate 'thermal bridging'.				
3) Please advise if the cruciform columns are to be fireproofed SFRM-1 per spec section 07 81 00			3) Confirmed

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Per the response to Webcor's RFI # T-1061 (SK RFI # 180B.1) we have complied with the geometry for the weld access hole size per AWS D1.8, section 6.10. Using this formula we have shown the connection on CD RFI # 134.2 SK1 for a BU column with a 3 1/2" thick web. Please confirm the remaining 5 1/2" web material as shown on SK1 is acceptable.				Confirmed that it is acceptable to use AWS D1.8 for WAH geometry and confirmed that the 5 1/2" remaining web material for the column with 3 1/2" web thickness is acceptable.			
T-1062	BSE - Timber Pile Removal from CDSM Wall	Closed	01/03/2014	01/02/2014	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome		To: Turner Construction Company Gary Krutsch		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Balfour Beatty Infrastructure, Inc. Danny Walsh							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
BBII has located portions of timber piles in several CDSM wall panels along gridline A in zone 3 at excavation levels 4 and 5, between soldier piles 255-257 and 259-261. BBII believes any attempt to remove the piles has the potential to damage the CDSM wall. Given that there is no issue with water intrusion at the pile locations and the CDSM material is in good condition, BBII believes the best course of action is to leave them in place. To ensure a smooth surface for waterproofing, the piles have been ground down so that they are recessed from the face of wall. BBII will then patch over the panel to bring it flush with the CDSM piles. (Patching has already occurred on a portion of the affected areas - see attached photos of panels before and after the above procedure.)				ARUP Response: We take no exception. Adamson Associates, Inc. Response: The CM/GC shall confirm the waterproofing subcontractor/manufacturer and the contractor's waterproofing system designer accept the site conditions			
Please confirm this is acceptable

REQUEST: Micropiles E335 cannot be installed as laid out due to a dewatering well. BBII proposes moving E335 North 3' and West 2'. See attached sketch. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			Confirmed.				
T-1064	BGP - Fire Alarm Conduits at Column D.8/12	Closed	12/30/2013	01/09/2014	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu			To: Turner Construction Company Gary Krutsch				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please refer to drawing A1-9204. Detail A on A1-9204 calls for embedded junction boxes on GL D.8 from GL 13 to GL 33.2. A set of (3) 1" fire alarm conduits were erroneously installed embedded at the column on D.8/12 rather than stubbing up outside the column. An embedded junction box was installed flush with the face of the column at a height of 13'-9" to center per Detail A. If future devices are to be installed on that column at a different height, then an extension box can be installed, and conduit can be run from the extension box on the surface of the column. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
			George Metzger 1/9/2014 RESPONSE: 1) For the condition described in the RFI, the Contractor should include an extension box with blank faceplate, box depth of 2-3/4" (which will be flush with the finished face of the future column cladding). 2) Extension box shall have knockout provisions for the conduit extension to the strobe to be concealed within the finished column wrap. 3) The as-built condition and detail shall be documented on the as-built drawings.				
T-1065	BGP - Elevation Discrepancy at Escalator Pit near GL 21/E.2	Closed	12/30/2013	01/09/2014	01/02/2014	Potentially	<input type="checkbox"/>

REQUEST: As per the response to T-1067.1 Skanska confirms these details will require field adjustment and proposes the following as per SK1: 1) Confirm it is acceptable to (a) field weld the bottom connection after aligning the top connection to center of low flutes when deck flutes are parallel to kicker and (b) field drill the top connection after aligning the L6 to center of low flutes when deck flutes are perpendicular to the kicker. 2) Confirm the diameter of expansion bolt required. 3) Confirm the field drilled top connection is acceptable at deck flutes perpendicular to the kicker as this will vary from the direction in T-1067 #5.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1a, 1b) We don't take any exception to the erection approach outlined by the Contractor. Regarding SK1 of the RFI, it is acceptable to field align braces with the closest deck flutes. 2) Confirmed. 3) It is unclear how the 2" bolt edge distance requirement to the edge of the angle brace per response to item 5 of RFI T-1067 affects the distances noted as "6 inch" and "varies" on SK1. Please add this item to the agenda of an upcoming structural coordination meeting.			
T-1068	SSS - Perimeter Connections at GL C&G	Closed	12/30/2013	01/09/2014	01/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Krutsch Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Details 7 & 8/S1-3703 are shown on sheet S1-2305 as typical sections for beams connecting perpendicular to the perimeter BU & WF beams at grid lines C & G. These sections reflect the varying elevation differences between the two members. In most conditions, the remaining depth of the beam framing into the perimeter BU or WF will only allow for a two bolt connection as shown in details 7 & 8/S1-3703. 1) Please confirm it is acceptable to use a two bolt shear plate connection for any beam size where the remaining depth of the connecting beam will only allow for two bolts. The shear plate thickness and welding will be per the schedule on 1/S1-5011. 2) Please confirm at some locations it is acceptable to cut the flange flush on one side of the beam to maintain edge distance. 3) Please confirm edge distance can be reduced where needed to complete connection. 4) Please confirm a double angle connection should be used when the varying elevations will allow for more than a two bolt connection. The angle size & thickness will be per		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Details 7 & 8 /S1-3703 showing 2 bolt shear connection are applicable to the condition where the sections are cut and similar condition. 2). Confirmed. Specific application of this detail will be reviewed on a case by case basis during shop drawing review. 3). AISC minimum edge distance shall be maintained. 4). Confirmed. 5). Confirmed. Specific application of the approach stated will be reviewed on a case by case basis during shop drawing review.

REQUEST: At the Bus deck level (S1-2503) @ grids D/9.9 & 10.1 and F/9.9 & 10.1 the 3/8" edge of slab bent plate protrudes 3'-4" & 2'-3" from grid lines 9.9 & 10.1 respectively as shown on sketch CD RFI 244 SK1. Due to the 5'-0 protected zone at these lo cations the angle supports per detail 9/S1-5000 cannot be attached due to no welding is allowed in this area. Please advise on this non supported area and other similar type areas where no welding is allowed in the protected zones.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> At grids D/9.9 & 10.1 and F/9.9 & 10.1, run an L5x5X3/8 parallel to the moment frame beam between the two outriggers, namely, the cantilever W30x90 (gravity moment connected to the MF beam) and the support angle at the moment frame column. Attach the angle legs to each support using fillet welds (1/4" thk, 2" long), cope the angle as needed. Note that seam welding to be provided where the bent plate width changes.				
T-1071.1	SSS - Edge of slab support @ protected zones	Closed	02/11/2014	02/21/2014	02/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company Phil Militello					
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: 1). Per the response to Webcor RFI # T-1071 (SK RFI # 313) please verify the bolted end connections for the new L5x5x3/8 angle now required as shown on sketch CD RFI # 244.1 SK1. 2). To eliminate any overhead field welding confirm the bent plate required will be shop attached to the angle.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The intent for the RFI T-1071.0 is further clarified on the attached sketch. Either bolted or welded connection is acceptable. 2). Skanska should verify whether the bent plate is to be shop welded. Shop welded bent plate might affect the weld access of the moment connection at the beam bottom flange if a "wild cat" position is to be used.				
<hr/>							
T-1072	SSS - Clarify Beam Connections at Protected Zones	Closed	12/30/2013	01/09/2014	01/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Gary Krutsch					
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: At the Bus deck level near grids 10.1/F & 10.1/D please verify the double angle connections for the W16 beams can partially connect into the protected zones for the BU moment girders as shown on sketch CD RFI 247 SK1. If not please supply an alternate connection.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The encroachments into the protected zones by the double angle connections at the two locations indicated the RFI are acceptable. Note that the W16X26s indicated in the RFI have been revised to W21X50s in 12/13/13 package (TG 7.2 IFB, Addendum #1 package).

T-1073	SSS - North Exit Mezzanine Support	Closed	12/30/2013	01/09/2014	01/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please refer to detail 1/S1-2252 in regards to the following clarifications for the North Exit Mezzanine: 1.) Please provide connection details for MC4x13.8 channels framing into the W12x40 beam, CMU wall, and adjacent MC4x13.8 members. 2.) Please confirm how MC4x13.8 channel, east of GL 24, is supported at east end. 3.) Please provide the required dimension to locate the east end of the W12x40 member. 4.) Bracing for the W12x40 appears to be located slightly west of CL 23. Please provide the indicated dimension to locate bracing. Verify that this is the only location to receive bracing along the length of the W12x40. 5.) a. Please confirm the splice locations indicated on SK1 for the W12x40 beam are acceptable. Note that the splice just west of CL 23 may need to be shifted slightly depending on the response to item #3. b. Please provide a splice detail for the W12x40. Note that bolted splice connections are preferred.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1. For MC4 to W12, weld channel with 5/16 fillet weld to 3/8" thick plate welded to underside of W12 beam (use 1/4" fillet weld, NS/FS). See 4/S1-5032 for graphic reference. For MC4 to CMU wall refer to updated version of sheet dated 12/13/2013 Issued for Bid Addendum #1. For MC4 to perpendicular MC4, use 1/4" fillet weld all around. 2. Refer to 12/S1-9001. 3. End of W12 is at EOS. Refer to architectural drawings for EOS. 4. Dimension to locate bracing in SK1 is 2'-9" west of gridline 23. Locate second set of bracing at 6'-9" west of gridline 24. 5a. Acceptable, however adjust as necessary for brace locations identified in response 4. Locate splice in middle third of spans between hanger locations and avoid locations 3 ft within brace locations. 5b. Refer to T-0979 SSS RFI response for splice information.

REQUEST: Bracing removal/re-bracing sequence on the west end of Zone 1			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed method is not acceptable. Both sets of diagonal bracing, on the north side and the south side,		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

WOJV is proposing the following sequence for the re-bracing/ Bracing removal for the west side of Zone 1 See sketches SK-1, 2 & 3 attached.

For level C strut removal see sequence on attached sketch SK1. WOJV is proposing to remove level C bracing in three defined areas.

1. Remove level C Cross lot struts and walers from east to west direction once the walls and RB re-bracing is installed and stressed.
2. Remove level C struts and walers from south west corner once the walls and RB re-bracing rakers beneath are installed.
3. Remove level C struts and walers from north west corner once the walls and RB rakers beneath have been installed.

For level B strut removal see sequence and defined areas on attached sketch SK2

1. Remove level B struts and walers from east to west direction once the lower concourse slab beneath has been place, cured and reached the required design strength.
2. Remove level B struts and walers from south west and north west corner once the lower concourse slab beneath has been place, cured and reached the required design strength.

For level A strut removal see sequence on attached sketch SK3

1. Remove level A cross lot struts and walers from east to west direction once the RA re-bracing is installed and stressed.
2. Remove level A struts and walers from south west corner once all the RA re-bracing rakers and +7.00' diaphragm slab beneath have been installed.
3. Remove level A struts and walers from north west corner once the RA re-bracing rakers beneath have been installed.

Please confirm if this sequence would be acceptable

and the first few cross lot braces work in conjunction as a group. Any one part cannot be removed until the rebracing is complete for the entire group.

T-1081	BGP - Shear Wall Horizontal Hooks Near GL 1.4-K	Closed	01/03/2014	01/13/2014	01/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
At the shear wall (first lift) near grids 1.4/K, the tails to the horizontal hooks which terminate at the columns were erroneously cut in the field and no longer provide the proper development length. See the attached sketch for specific portions of the shear wall affected. Per field discussions with the TT engineer on site, Gerdau proposes to leave the hooks that have been cut "as-is" and to add a standard 180° #9 hook to allow for proper development of the horizontal bar. Please confirm if this is acceptable					Accept Suggestion: <input type="checkbox"/>		
					George Metzger 1/6/2014 RESPONSE: Confirmed		
T-1083	BGP - Geothermal Riser Pressure Gauge Location	Closed	01/06/2014	12/30/2013	01/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER:		
Previous geothermal fields and risers had a "cat walk" behind the risers at grade. Additional pipe and 90s were added to bring the gauges up to grade to allow for pressure monitoring from this "catwalk." At fields 09-15 no cat walk exists, thus no location to access these gauges from.					Accept Suggestion: <input type="checkbox"/>		
Please provide the location for the geothermal riser gauges for inspection from Field 09 through Field 15.					George Metzger 1/15/2014 RESPONSE: Gauges shall be located at the top of the risers. Monitoring of the gauges to confirm that the piping system has not been damaged is the means and methods of the contractor.

T-1087	SSS - Connection Clarifications for Skewed Beams	Closed	01/07/2014	01/17/2014	01/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Gary Kruttsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:				
Reference details 7 & 8/S1-5010 and CD RFI 094 SK1 to SK7 for clarifications required on skewed beam connections as noted below.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
1.) Refer to S1-2303 and CD RFI SK1 indicating an example location where a skewed beam and standard beam connection occur at the same location on the support beam. As noted on CD RFI 094 SK4, the connections foul at this typical condition. Please confirm it is typically acceptable to replace one of the connections with a shear plate connection per detail 1/S1-5011 or supply an alternate typical solution.			1) No, it is not typically acceptable to replace one of the double angle connection with a shear plate connection. Shear plate connection might be able to use for some short span beam if specifically approved during the shop drawings review. The conflict shown on CD RFI 094 SK4 might be resolved by using an bent plate with longer leg.				
2.) Refer to S1-2303 and CD RFI SK1 indicating an example location for two-sided skewed beam connections. As noted on CD RFI 094 SK5, the non -symmetrical bolt locations in detail 7/S1-5050 will not work at two-sided connections. Please confirm it is typically acceptable to locate the bolts as shown at two-sided connections or provide an alternate detail for this condition.			2) Confirmed.				
3.) Refer to S1-2305 and CD RFI SK2 indicating an example location of a two-sided skewed beam connection. As noted on CD RFI 094 SK 6, the non-symmetrical bolt location in detail 8/S1-5010 will not work at two-sided connections. Please supply a typical alternate detail for these conditions.			3) At this specific location, A single shear plate connection per Detail 1/S1-5011 may be used for W16 x 26 beam.				
4.) Detail 8/S1-5010 shows the shear plate on the obtuse side. Confirm it is acceptable to locate the shear plate on the acute side for beam erection access purposes as noted on CD RFI 094 SK 6.			4) Confirmed.				
5.) Refer to S1-2303 and CD RFI 094 SK3 indicating an example location where details 7 & 8/S1-5010 occur at the same location based on the angles of the skewed beams. Please confirm that one of the connections may be typically replaced with a skewed shear plate per 1/S1-5011 to avoid the conflict shown on CD RFI 094 SK7, or supply a new typical alternate detail.			5) It is not typically acceptable to replace one of the double angle connection with a shear plate connection. Shear plate connection might be able to use for some short span beam if specifically approved during the shop drawings review.

T-1087.1	SSS - Connection Clarifications for Skewed Beams	Closed	09/10/2014	09/20/2014	09/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 094.1 SK1: The response in RFI T-1087 (SK 122, CD 094) item 3 does not work as the bolts/shear plate foul each other as shown. Supply an alternate typical detail for skewed 2 sided beam to beam connections.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The W24x55 beam shall be moved by a few inches towards GL F to clear the bolts of the W21x44 connection. This solution may be applied at three other similar instances around the light column. TT: We disagree with the reason for RFI request. We categorize this as a no cost clarification.				
T-1088	BGP - Shear Wall Corbel Tie Spacing at W190C, D and E	Closed	01/07/2014	01/17/2014	01/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: In the first lift (up to EL -20.56) of the 190C to 190E shear walls, the #6 ties were installed at 5-inches O.C. instead 4-inches O.C. Please confirm if it is acceptable to leave the corbels as-installed. If not acceptable, Gerdau proposes to install additional T9 (hairpin) ties between every 4ea - #6 ties on the Western face of the corbel. See attached SCCI sketch SK-RFI 410 for details. Please confirm if this is acceptable.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to leave the corbels as installed (5" tie spacing) without adding additional hairpins.				
T-1089	BGP - Concourse Beam Added Bar Congestion at GL 10.1 to 12	Closed	01/07/2014	01/17/2014	01/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Webcor Construction LP Robert Kjome				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to drawing S1-2203, S1-3400. In the lower concourse, where four beam pairs consisting of C68 and C69 between GL 10.1 and 12, the added short bars at the top and bottom intrude into the laps of typical bars. This would mean per plans, SCCI would have 14 bars at the top location and 18 bars at the bottom location. Gerdau proposes to move the additional short bars into their own layer to alleviate congestion. Please confirm if this is acceptable.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor proposal to place additional short bars at B68 and B69 beams between GL10.1 and 12 in a second layer is acceptable. Place bars in second layer with 1.5" clear distance between the 1st layer.

	<p>- The Lower Pipe Columns will be required to be limiter cut" instead of a traditional square cut end. (Please note Spec Section OS 10 00, paragraph 3.2.M.1 states 11Bearing ends of columns shall be milled or sawn square perpendicular to axis of the column.")</p> <p>-Miter cut Pipe will have an ellipse cross section and will not match the circular Casting Node.</p> <p>- Backing bars used to full pen weld the Pipe Column to the Cast Node would need to be custom machined to match the ellipse Pipe and circular Node to eliminate weld gaps. This significantly increases the complexity and risk for successfully welding the joint, and reduces the adjustability for fit up of these joints in the shop and the field.</p> <p>This kink can be accommodated either by machining the nozzle of the Cast Node to be perpendicular to the pipe, or by machining the pipe end at a mitered angle to match the Cast Node.</p> <p>Since this joint on the Cast Node is already being machined, OIW believes that the more desirable and less expensive option is to machine the nozzle of the Cast Node perpendicular to the axis of the Basket Column Pipe. As the nozzles will each be custom machined regardless, machining them to match the pipe axis should be a relatively low cost change.</p> <p>OIW requests that the nozzles of each Ground Level Cast Nodes to be machined perpendicular to the axis of the adjoining lower Basket Column Pipe.</p> <p>A negative response will result in a cost increase and a time increase.</p>						
T-1093	BGP - Foundation Wall Mix Placed in Shear Wall	Closed	01/09/2014	01/19/2014	01/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please reference TG06.0 technical specs section				Contractor-proposed mix design variance for			
				the centerline of the pipe is not in line with the centerline of the cast node nozzle, and that the cast nodes were not miter cut to be perpendicular to the incoming pipe. The reference to Spec section 05 10 00 noted in this RFI regarding bearing ends does not apply for this condition as the pipe to cast node connections are not "bearing" connections, they are a fully welded connections as shown on the contract documents.			
				This "kink" between the bottom-side of the ground floor basket column and the top-side of the ground floor cast node - resulting from the building's geometry and the use of the same cast node type in multiple locations - can be accommodated by miter cutting either the pipe or the cast node. However, the contract documents, including those cast node shop drawings available during bid, clearly show that the ground floor cast nodes were not going to be miter cut, so miter cutting of the basket column pipe members by the Steel Contractor is necessary to accommodate the building's geometry.			
				Miter cut of the cast node is not acceptable architecturally. The specified miter angle of the pipe does not exceed 1.5-degrees in any location.. Even though Miter cut Pipe will have an ellipse cross section, the lips created by the ellipse cross section is very small (1/160"), which can be ground smooth as a part of weld grinding for meeting AESS requirements. Weld assist devices like backing bars, a contractor means and methods for joints fit up in the shop and the field, are the responsibility of Skanska.

T-1097.1	SSS - End Transfer Girder Details at GL19.9 & 20.1G	Closed	03/12/2014	03/22/2014	03/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 264.1 SK1 to SK3 for items 1 to 4: At GL 22/G detail 9/S1-3702 is noted as typical at Grids 19.9 & 20.1 on S1-2305. However, TR19.9 & TR20.1 do not match the information as shown in detail 9/S1-3702 due to the MFB1 concrete beam & BU girder depth. See SK3 for the outline of the MFB1 and please provide direction for the following items at Grids 19.9 & 20.1. 1) The number of headed studs requested in detail 9/S1-3702 will not fit TR19.9 & TR20.1. Supply the number of headed studs required with location dimensions. 2) The PL 2 1/2 x 9 x 2'-6 cannot be welded as shown in detail 9/S1-3702. Please advise. 3) The 2" diameter holes at the bottom of MFB1 thru the webs of TR19.9 & TR20.1 cannot be supplied as requested. Please advise. 4) The L8x4x1/2x2'-0 cannot be supplied as shown. Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
		The top of the beam is at 16.07', and the bottom of the concrete beam is at 12.07'. The top of Transfer Girder is at 17.60', which allows 5.3' high region for 5 rows of studs at 6" spacing (out to out distance of 2'-0"). Lower the stud group so that that top row is 6" below the top of concrete beam. 2). The 2 1/2" plate is incorrectly shown graphically. The end of the plate is to flush with the end of the transfer girder web. 3). 2" dia holes are to be provided. The center of the hole is to be 2" above the bottom of the concrete beam. 4). The angle may be deleted.

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached letter Authored by Robert Foley, CEMEX QC Manager, dated 1/2/2014 and TG06.0 technical spec section 033020.2.3.F.1.b. SCCI and CEMEX are proposing the following guidelines regarding slump of cast-in-place mix designs that contain 30% or higher fly-ash (CM) and HRWR: 1. Maximum 8-inch slump will continue to be the target slump for delivery of concrete mixes with HRWR. 2. 9-inch and higher slump will be considered an action limit. Whenever slump of consecutive loads exceeds 9 inches, actions will be taken to reduce subsequent slump measurements. 3. Batches with slump as high as 10.5 inches will be accepted provided the batch weights are evaluated to verify the batch did not include water content that exceeds mix design w/c ratio; and the concrete is not visibly segregating. Are these revised guidelines acceptable?			SUGGESTION:		ANSWER: George Metzger 1/15/2014 RESPONSE: The revised guidelines are not acceptable. Acceptability is governed by the limits in the approved mix design submittals and the project Specification within ACI 117 tolerances.		
					Accept Suggestion: <input type="checkbox"/>		

T-1104.1	BGP - Increase Concourse Construction Joint Spacing	Closed	12/15/2014	12/25/2014	12/18/2014	Potentially

With reference to detail 6/S1-5052 (attached) please review the following:				Contractor proposed use of anchor bolt hole sizes per Table 14-2 of AISC Manual for the pre-tensioned rods in SLRS columns is not acceptable.			
Due to the limited access at the top of the built-up TT please confirm it is acceptable to increase the diameter of the hole in the 4" bearing plate to the maximum allowable size of 3-3/4" as per ASIC table 14-2 (attached) to allow for additional tolerance and workability when installing the 2-1/2" diameter 18' rod. The oversized side hole will only be required at the 17 built-up TT locations and the 6x6x2" plate washer hole will remain the major diameter of the rod + 1/16".							
Please confirm this proposal is acceptable.

	1) Please provide the UL assembly for the rod fireproofing. 2) Please confirm that the rods will be Sprayed Fire Resistive Materials SFRM-1 to match the column fireproofing system.					do not require fire protection from a code perspective. As typically recommended by the fire protection manufacturer, non-gravity load carrying attachments be fire proofed to the same level as the protected structural elements.	
						Confirmed.	
T-1110	SSS - Welded Reinforcement at Light Column Tendons	Closed	01/14/2014	01/24/2014	02/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference details 1 and 5 on S1-6008 which indicate that welded reinforcement bars are "to be determined by post-tensioning system supplier." Per detail 4/S1-6008, the PT anchor bolt supplier is Dywidag.				TT has confirmed that the mat slab has a concrete strength of 5 ksi. As per the anchor plate size specified by Bryan Lampe of DSI USA, only 4 ksi concrete strength is required for the anchor plate without additional reinforcing bars. Therefore, we agree that the helical reinforcement can be eliminated at the Light Column anchor rods.			
Per the email attached, Dywidag's representative states that additional reinforcing bars are not required provided the concrete strength is sufficient and that the anchorages are not located particularly close to an exterior concrete face.							
Based on the maximum permissible jacking load and associated maximum bearing stress of 3.8ksi, please confirm the concrete strength is sufficient and that the reinforcing bars can be eliminated at the Light Column tendons.

T-1114	BGP - Concrete Samples for Columns	Closed	01/15/2014	01/25/2014	01/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Robert Kjome			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Spec: 03 30 20-3.a.					Accept Suggestion: <input type="checkbox"/>		
"The TJPA Representative shall conduct tests of concrete as follows:					George Metzger 1/17/2014 RESPONSE:		
a. Testing frequency: Sample sets for all tests listed below of each concrete design mix placed each day shall be taken not less than once a day, nor less than once for each 100 cubic yards of concrete, nor less than once for each 5000 square feet of surface area for the mat, cast-in-place formed concrete slabs or walls. Additional tests shall be performed if deemed necessary by the TJPA Representative. Sample each column, regardless of other frequencies listed above."					The requirement that samples be taken for every column may be relaxed to a single sample set for every two columns placed contemporaneously with the same pump.		
We request that the last sentence "Sample each column, regardless of other frequencies listed above", be deleted. The current testing of columns would fall under the statement to test "..not less than once a day, nor less than once for each 100 cubic yards". As the current schedule shows two columns to be poured per day, this will produce one set per day for testing.							
<hr/>							
T-1115	BSE -Alternate Micropile Method in Buttress Area	Closed	01/16/2014	01/26/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Kelly Phariss			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
DTDS is concerned about delays and extra costs resulting from drilling Micropiles adjacent to buttress piles from Gridlines 26.5 to 30. As stated in our Contract Change Order request (CCO #04) regarding "Final Micropile Layout - Additional Micropiles" (attached for reference), drilling for the micropiles may encounter overbreak pile concrete and grout placed during buttress pile remediation. The current drilling system cannot be used to drill through the pile overbreak and/or remediation grout.					Accept Suggestion: <input type="checkbox"/>		
					This is not an acceptable alternate at this time. If serious delays begin to be encountered, the design team, Turner, Webcor and their subcontractors should meet to discuss this issue immediately.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>The reduced pile spacing from 10 feet on center to 5 feet and less may also cause problems such as communication between piles.</p> <p>Significant additional costs and schedule delays will result should DTDS have to change our procedure and/or equipment to drill through buttress pile concrete and/or remediation grout. Delays will also be realized should DTDS have to change our drilling sequence to mitigate problems that may arise from the reduced pile spacing.</p> <p>Should detrimental issues arise, DTDS proposes to drill, install, and grout micropile dowels in the center of the existing buttress piles as an alternative to drilling adjacent to buttress piles. A micropile dowel could take the place of a micropile as necessary. A dowel would consist of the same #20 Gr. 80 reinforcing bar used for the micropiles. A six- inch diameter, 20 foot long hole would be drilled in the center of the buttress pile. An additional drill rig will be required to perform the drilling. A 25' bar would be set with centralizers and tremie grouted with the same grout used for the micropiles. Based on an assumed minimum Buttress pile concrete and grout strength of 3,000 psi, the developmental length (ld) of a #20 bar is 182.5 inches (15.2 feet). 20 feet embedded would develop the yield strength of the #20 bar (393 kip) and exceed the design micropile load of 308 kips.</p> <p>ld = (80,000 psi/ (20 * sqrt(3000 psi))*2.5 in = 182.5 in.</p> <p>Accepting this alternative would mitigate delays and extra costs that will result should buttress pile concrete and/or grout be encountered while drilling adjacent to these piles.</p> <p>Please confirm that this alternative micropile procedure is acceptable.</p>

T-1118	BGP - Knockout Wall Neoprene Pad Width Clarification	Closed	01/17/2014	01/27/2014	01/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to attached drawing S1-3204. Details 1, 2, and 4 on S1-3204 call out a 1/4-inch x 8-inch continuous neoprene pad to be placed between the shear wall pilaster and the knockout wall. The bearing surface of the pilaster is 12-inches, so the 8-inch pad will no adequately cover the bearing surface. Please confirm that this is the designer's intent. If not, SCCI proposes using a 1/4-inch x 12-inch continuous neoprene pad to provide more adequate coverage of the bearing surface.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The following options are acceptable: 1. As per design documents, an 8" continuous neoprene pad may be used. Center the pad on the supporting corbel. The Knockout wall concrete shall not be permitted to directly contact the supporting corbel concrete. As part of contractor's means and methods, 2" foam (or equivalent) strips may be used on either side of the neoprene pad to prevent concrete to concrete contact. 2. A 12" continuous neoprene pad may be used.				
T-1119	BGP - Column Steel Jacket Details	Closed	01/17/2014	01/27/2014	01/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to submittal package TG0600-905 and RFI T-0693 regarding the "steel jackets" that certain columns are to receive. 1. Please clarify "Coordination" notes shown on attached excerpt drawing S101.0 of TG0600-905 by providing applicable details that show the steel jackets. The applicable architectural drawings currently in the Construction Drawing Set dated 07/17/2013 - Issued for Construction do not show steel column jackets. However, similar drawings issued in Issued For Bid - Addendum #1 dated 12/13/13 (not issued to construction) appear to show column jacket and details. See attached drawing A1-2103 from each drawing update set. 2. Please provide further details that SCCI should be aware of when it comes to these steel jackets and columns to be constructed, including but not limited to, items embedded in the columns that will utilized for steel jacket construction			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 1/27/2014 RESPONSE: 1. Contractor to coordinate surface mounted boxes and embedded conduit routing for columns that receive steel jacketing (ref to TG0600-905 and RFI T-0693). 2. Refer to detail 6/S1-3503 for structural details pertaining to steel jackets issued with ASI 106 dated 09/20/2013. Refer to the following SKA-2922 to SKA-3003 for locations and details of columns with steel jacketing.

T-1120	BGP - Horizontal Hooks in Shear Walls 2nd Lift and Above	Closed	01/17/2014	01/27/2014	01/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please refer to attached drawing 4/S1-3261. Please confirm if it is acceptable to replace the shear wall horizontal bars which have a 90-degree hook with a 180-degree hook. See attached drawing for more details. This change will only be applied to the second lift of shear walls and above (approx. EL. -20.56 and above).			SUGGESTION:		ANSWER: George Metzger 1/20/2014 RESPONSE: Contractor proposal of 180deg hooks for shear wall horizontal bars is acceptable.		
			Accept Suggestion:		<input type="checkbox"/>		
T-1121	SSS - Bus Deck Level Edge of Slab Plate Clarification	Closed	01/17/2014	01/27/2014	01/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI 233 SK1 to SK3 for reference. After reviewing the structural steel documents for TG 07.1R, a detail is not provided for deck support around the bus deck level cast nodes. Please confirm that the intent is to utilize, 12 gauge sheet metal, in these areas as shown on 1/S1-5001. The sheet metal will follow the contour of the cast node, providing a 1" gap per A1-2893 (SK2).			SUGGESTION:		ANSWER: Architectural slab edge plans A1-2892 to A1-2897 layout all the locations and provide the slab edge heights of the slab edge plate. Additionally detail 4/A1-8376 shows the typical cast node slab edge plan detail and it references section details 4/A1-8675, 3/A1-8376 and 2/A1-8376, which show the conditions around the cast node and gap required - see markup on enclosed CD RFI 233 SK3. Closure plate (curved at the back of the cast node) may be a 12 gage sheet metal, but it should be welded to the end of edge angle at the seam. The edge angle shall be extended to meet with the curved closure plate.		
			Accept Suggestion:		<input type="checkbox"/>

T-1122	SSS - Edge Plate Detail at Steel Drag Beam	Closed	01/17/2014	01/27/2014	02/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Reference detail 4 on S1-5022 which indicates that where "S" is less than or equal to 3", a double bent plate is to be used. Based on the information provided in SK RFI 266.1 SK2, this cannot be achieved, as the minimum overall height for a Z angle is 4" and the minimum thickness for a Z angle is ½". 1.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at all locations where "S" is less than 4". 2.) Please advise if it is acceptable to use a Z angle at all locations where the "S" dimension is greater than or equal to 4" and the required thickness is ½", in lieu of the bolted connection. 3.) Please advise if it is acceptable to use the detail approved in RFI T-1032 (for sloping conditions), shown on SK RFI 266.1 SK1, at locations where "S" is greater than or equal to 4" and the required thickness is 3/8", in lieu of the bolted connection. 4.) Note that based on the bending radius and edge distances shown in 4/S1-5022, the minimum height for bolted connections is 4 ¾" as indicated on CD RFI 215.1 SK1 attached. If the bolted connection is required, please verify the maximum height "S" for the bent plate detail in 4A/S1-5022 may be increased to 4 ¾".			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Yes, it is acceptable, however, the weld shall be a continuous 1/4" double fillet weld, not a 3" long weld at 12" on center. Note that the lower horizontal plate needs to be welded according to the weld shown on detail 4B/S1-5022. 2). Z section is acceptable, but it limits any field adjustment that the bolted connection can provide. It is Skanska's decision which way is preferable. 3). See Response to #2. 4). Angles can be used in lieu of bent plates to address the clearance issue raised. Also see response to #2 & #3.	
T-1122.1	SSS - Edge Plate Detail at Steel Drag Beam	Closed	02/05/2014	02/15/2014	02/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Detail 4 on S1-5022 calls for a double bent plate for slab support where "S" is less than or equal to 3". However, the minimum overall height for a double bent angle of the required thicknesses is 4" and the minimum overall height for the bolted connections is 4 ¾". Further, it has been determined that the minimum overall height for the detail proposed for sloping conditions is 2". For instances where the difference between the underside of the slab and top of beam is less than 2", please confirm			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1). As noted in the response to RFI T-1122.0, the weld of the bent plate to the horizontal plate shall be a continuous 1/4" double fillet weld, not a 3" long weld at 12" on center. 2). For the instance where the difference between the underside of the slab and top of beam is less than 2", follow the detail in the attached sketch.

T-1124.1	SSS - Plate Grade Substitution	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LPStephanie Azzolino</div><div>To: Turner Construction Company Phil Militello</div><div>Answered By: Adamson Associates, Inc. George Metzger</div></div>							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
In response to RFI T-1124 & the Structural Coordination Meeting on February 6, 2014:				Acceptable to use ASTM A572 GR42 with 50 ksi min yield strength for moment frame columns. The light column base plate was already called out as ASTM 572 GR42, therefore 42 ksi yield is acceptable as indicated in contract drawings.			
The moment frame columns and light column base plates are identified on the structural drawings for TG07.1R as material grade ASTM A572 Grade 50. Please confirm that it is acceptable to use ASTM A572 Grade 42 modified to achieve a minimum specified yield strength of 50 ksi for all plate exceeding 4 1/2 in thickness at these locations.							
Please note that the mill certification will read ASTM A572-Gr 42 but the reports will indicate a yield strength of 50 ksi.							
T-1125	BGP - Glass Guard Rail Embed A529 Grade 55 Steel in Lieu of A36	Closed	01/21/2014	01/31/2014	01/30/2014	Potentially	<input type="checkbox"/>

T-1139	SSS - WT Deck Support Requirements	Closed	01/24/2014	02/03/2014	02/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
See attached CD RFI # 282 SK1 to SK4 for items 1 to 5:			a) The WT does not need to extend beyond the curb that runs north-south (N-S). It should stop short of the N-S curb as shown in detail 6/S1-5002. Note that this also applies to the BU-WT over the W24x76 beam on the east of GL 13 shown in SK1.				
1) The noted WT is shown as stopping short of the concrete curb on S1-2304 (SK1).			1b) The WT will not interfere with the rebar as it stops short of the curb.				
a) Confirm the WT is to extend as shown.			2) See attached sketch SKS-0329 that shows deck support above the W12x14 beam. Provide closure plates at the end of the deck as shown in the sketch.				
b) It appears the WT will interfere with the rebars below the curb per 6/S1-5002 (SK2). Confirm the WT is located as shown and the rebars will be modified.			3) See response to 2).				
2) It is not clear from S1-2304 (SK1) what the deck support requirements are above the noted beam are. Please supply a detail.			4) See responses to 1a) and 1b).				
3) It is not clear from S1-2304 (SK1) what the deck support requirements are above the noted beam are. Please supply a detail.			5) Confirmed.				
4) It appears the WT will interfere with the rebars below the curb per 6/S1-5002 (SK2). Confirm the WT is located as shown and the rebars will be modified.							
5) The items below have been identified at specific locations on S1-2304 but similar conditions appear repeatedly on the Ground Level. Confirm the responses to items 1 to 4 may be applied typically on the Ground Floor at similar conditions.

Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
See attached CD RFI # 285 SK1:			Confirmed.				
The flange of the sloping W40x277 is 1/8" below the flange of the flange of the W40x297 at the top and 1/16" below at the bottom, making the requested CJP weld not achievable.							
Confirm the welds with the flange alignments as shown are acceptable.							
Note: moving the sloping W40x277 up to align with the top edge of the W40x297 is not an option as this will move the							
sloping W40x277 out of the normal sloping plane.

T-1141	SSS - AESS at Grand Hall and Shaw Alley Bridge	Closed	01/27/2014	02/06/2014	02/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Stephanie Azzolino	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Skanska USA Civil West California Dis		Ryan Clayton					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
1. Reference drawing A1-8661, issued for construction, which appears to have information missing for the Grand Hall AESS requirements. Please reference details E, F, and G on A1-8661 attached and clarify the AESS requirements at the noted locations.				1. Refer to attached drawing A1-8661. Details E, F, and G are not used, there are no additional AESS requirements.			
2. Detail C on drawing A1-8661 indicates that the HSS 16x16x5/8" member supporting the Shaw Alley Bridge is AESS. However, details C and D on A1-8662 indicate that the HSS 16x16x5/8" member, BU girder, and HSS 5x1/2" posts at the Shaw Alley Bridge are to receive IFRM-				2. Correct, Detail C on drawing A1-8661 identifies AESS requirements for the Shaw Alley Bridge. To clarify, IFRM-1 coating as indicated on details C and D of sheet A1-8662 for the HSS member, BU girder and HSS posts are the required coatings on these structural members.			
1. Please clarify the coating requirements at the Shaw Alley Bridge.

T-1142	BGP - Grounding Rod at Buttress Pile in Zone 4	Closed	01/27/2014	02/06/2014	02/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			ANSWER:				
Please refer to drawing E1-2026.			Accept Suggestion: <input type="checkbox"/>				
In Zone 4, an overlapping series of concrete buttress piles were poured along the North Wall of the excavation, extending towards the south wall.			RESPONSE				
In this area, the final grade of the excavation will be the concrete buttress piles. The attached photo shows the buttress pile layout with the grounding ring/ground rods overlayed on it. The ground rods need to be driven 10' deep. Please confirm that the rods which conflict with the buttress piles could be moved away from the north CDSM wall and to the void area of the buttress piles as shown in the attached SCCI sketch SK-SCCI_RFI421.			George Metzger				
			1/31/2014				
			WSP does not object to moving ground rods inward; however, contractor shall maintain separation between ground loop and geothermal piping. The photo submitted does indicate this separation.

T-1143	BSE - Reduced Micropile Testing Requirement in Unsuitable Material Areas	Closed	01/27/2014	02/06/2014	01/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Turner Construction Company Jack Adams				
Co-Author: Webcor Construction LP John Reynolds							
REQUEST:			ANSWER:				
Balfour Beatty Infrastructure Inc. (BBII) has experienced complications with micropile testing in geothermal field 11 due to unsuitable material. In an effort to minimize additional cost and maintain schedule, Webcor/Obayashi Joint Venture (WOJV) requests the testing requirement be reduced in unsuitable areas to test one (1) in five (5) micropiles. To date, all micropiles have passed the testing requirement. WOJV proposes to test seven (7) of the remaining 31 micropiles in geothermal field 11. The micropiles selected to be tested will be approved by a TJPA representative.			Accept Suggestion: <input type="checkbox"/>				
SUGGESTION:			No. Per discussions with TJPA, AAI and T-T the following response is provided.				
			The contract Specification Section 31-63-33 Drilled Micropiles is clear; All Micropiles shall be proof tested. Paragraph 3.2H Proof and performance Testing in accordance with ASTM D3689 "Standard Test Method for Individual Piles Under Static Axial Tensile Load" SubParagraph 8 states "Proof tensile load testing shall be performed against reaction piles or cribbing in accordance with ASTM-D3689. Existing footings, piles, or other structures shall not be used as reaction points for load testing. An adjacent production micropile in a group may be used as reaction pile. If cribbing is used, the contractor's attention is drawn to the presence of poor bearing soils and underground utilities, which may require special measures to protect against settlement and damage."				
			Also; Requests such as these should be accompanied by the [Drilltech] Pile Test Engineer's written recommendation.				
			1. Pile Test Engineer: A Contractor's engineer who is a registered civil engineer in the State of California.				
			2. The Pile Test Engineer supervises Performance and Proof Testing.				
			3. The working drawings and supplement shall be stamped and signed by the engineer who is licensed as a Civil Engineer in the State of California.				
			4. Micropile Proof Test Plans working drawings and supplement shall be stamped and signed by the engineer who is licensed as a Civil Engineer in the State of California.				
			NOTE: The RFI statement "In an effort to minimize additional cost and maintain schedule" is not an acceptable justification for changing the testing requirements. Per Contract, RFI's shall not be used as a vehicle for requesting cost and schedule increases which appears to be the purpose of this

T-1144	BGP - Lower Concourse Electric Rooms & Lighting Feeds	Closed	01/27/2014	01/27/2014	02/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: <p>ASI 104 changed the feeds for the embedded (Type F15 fixture) lighting boxes in the lower concourse slab. Previously they were to be fed from Electric Rooms in the Train Platform level; as per ASI 104, they are now to be fed from Electric Rooms in the Lower Concourse Level. Some discrepancies have been noted as to electrical panel location, and room locations.</p> <p>DWG E1-4102, Sheet Note J, and E1-4110, Sheet Note I, specify that the type F15 fixtures in Zones 2 and 10 are to be fed from Panel EDMH-B1-A-EMG located in Electric Room B1253. DWG EI-2202 identifies Room B 1253 as Emergency Equipment Storage.</p> <p>DWG EI-4103 indicates the F15 fixtures in Zone 3 up to Gridline 9 are to be fed from Panel EDMH-B1-A-EMG in Electric Room B1496. This is the same panel as indicated in Zones 1 and 10, but a different room is specified. Room B 1496 is not shown on the drawings.</p> <p>DWG EI-4103 and DWG E1-4104 indicate the F15 fixtures in Zone 3 past Grid Line 9, and the F15 fixtures in Zone 4 are to be fed from Panel EDMH-B1-B-EMG in Electric Room B1322. SKE-02-3201 issued with ASI 104 does not have a Panel EDMH-B1-B-EMG in Rm B1322.</p> <p>DWG E1-4105 and DWG E1-4106 indicate the F15 fixtures in Zone 5 and Zone 6 are to be fed from Panel EDMH-B1-C-EMG in Electric Room B1541. Plan sheet E1-3204 Detail 6 referenced does not seem to be included in the contract drawings.</p> <p>DWG E1-4107 indicates the F15 fixtures in zone 7 are to be fed from EDMH-B2-D-EMG in Electric Room in Electric Room B1644 in Lower Concourse. Per the "Equipment Naming" char on DWG E1-0010, the B2 in the panel name indicates that it is on the Train Platform Level. However, the room number indicates that it is indeed on the Lower Concourse level.</p> <p>1. Please provide an enlarged room plan showing the location of each of the following panels: EDMH-B1-A-EMG, EDMH-B1-B-EMG and EDMH-B1-C-EMG</p> <p>2. Please confirm that panel EDMH-B1-D-EMG is in</p>			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			RESPONSE George Metzger 2/5/2014				
			1. Sheets E1-4102 and E1-4110 have been revised. Refer to attached sheets dated 01/23/2014 for revisions. Per Sheet Note J on E1-4102 and Sheet Note I on E1-4110, the type F15 fixtures in Zones 2 and 10 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.				
			2. Sheet E1-4103 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Per circuiting note on E1-4103, the type F15 fixtures up to gridline 9 on the Train Platform Level are to be fed from Panel EDMH-B2-A-EMG-1 located in Electric Room B2280 on Train Platform Level.				
			3. Sheets E1-4103 and E1-4104 have been revised. Refer to attached drawings E1-4103 and E1-4104 dated 01/23/2014 for revisions. Type F15 fixtures in Zone 3 and Zone 4 are to be fed from Panel EDMH-B1-B-EMG located in Electric Room B1325 on Lower Concourse Level.				
			4. Sheets E1-4105 and E1-4106 have been revised. Refer to attached sheets E1-4105, E1-4106, and E1-3204, Detail 6 dated 01/23/2014 for revisions. F15 fixtures in Zones 5 and 6 are to be fed from EDMH-B1-C-EMG in Electric Room B1563 on Lower Concourse Level.				
			5. Sheet E1-4107 has been revised. Refer to attached sheet dated 01/23/2014 for revisions. Type F15 fixtures are to be fed from Panel EDMH-B1-D-EMG located in Electric Room B1644 on Lower Concourse Level.				
			6. Refer to attached drawings dated 01/23/2014 for enlarged plans requested (Panels clouded in blue). EDMH-B1-A-EMG is now EDMH-B2-A-EMG-1.				
			7. Refer to revised sheets E1-3203 and E1-4107. Revised sheets dated 01/23/2014 are attached

T-1145.3	BGP - Plumbing and Floor Drain Drawing Details	Closed	03/24/2014	04/03/2014	03/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
As discussed in the 3.24.2014 submittal TG0600-121 comment review meeting, please issue current design drawings P1-2202 through P1-2211 so that the size of plumbing pipes that pass through the concourse slab can be ascertained for the purposes of sizing the plumbing penetration sleeves per PSK-0051 (issued in RFI 1145rev0). The -8.30.2012 Issued for Construction - Below Grade Package- P1-2202 through P1-2211 pipe plans do not match up to the current sleeve layout as shown in sheets A1-2842, A1-2843, A1-2844, A1-2845, A1-2846, A1-2850 & A1-2851.					Accept Suggestion: <input type="checkbox"/>		
The size of the Concourse level slab sleeves required in the above mentioned A1-2800 series drawings cannot be determined without the current coordinated plumbing design.					Refer to ASI 112, ASI 113 and Addendum #2 for the most current plumbing drawings as of this date.		
					RESPONSE: 3-28-14 Judy Long: Refer to the attached ASI 112, ASI 113 and Addendum #2 plumbing drawings for the most current plumbing drawings as of this date. These drawings will be issued on April 1, 2013 as "Issued for Construction" documents.		
T-1146	SSS - W16 connection fouls W33 connection at grid 14F	Closed	01/27/2014	02/06/2014	02/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
On S1-2304 there are W16's centered under CMU wall connecting into a W40 along grid F near grid 14. The drag connection for the W33 connecting into the Transfer Girder and the W16 connections will foul each other. Please verify the following: 1. Per the schedule on 1/S1-5010 the W16 connections should be three bolts. Please verify it is acceptable to reduce the bolts from three to two bolts? 2. Please verify it is acceptable to move the drag connection down to clear the two bolt W16 connection? 3. Please verify coping the bottom flange of the W16's to clear the W40 drag connection is acceptable?					Accept Suggestion: <input type="checkbox"/>		
					1) Acceptable. 2) Acceptable. 3) Acceptable.

REQUEST:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
There are some discrepancies between the Train Platform Level Lighting Plans(E Drawings) and the Lower Concourse Level Slab Edge Plans(A Drawings). Please provide direction and revised drawings for the following instances.			Please refer the following SKAs, ESKs and TE1 pdfs:				
1) The Lighting Plans show two exit signs in close proximity, yet on the Slab Edge Plan only one EJB layout is shown: AI-2844/EI-4104 at approximate Grid Lines: -14.5/F -16.6/A.6 -16.7/F AI-2850/EI-4110 at approximate Grid Lines: -2.8/V.8			SKA-3059 to SKA-3066 for Lower Concourse Slab Edge Plans ESK-026 to ESK-033 for Train Platform Level Electrical Lighting Plans TE1-2202 - Lower Concourse Zone 2 Floor Plan TE1-8014 - Telcom Closet Details				
2) The Slab Edge Plan shows EJB layout, yet there are no fixtures on the Lighting Plan: AI-2842/EI-4102 at approximate Grid Lines: -1.6/C.5 -2.7-3.5/C.3 (Three EJBs in a row) -4.5/C.3 (Two EJBs) AI-2846/EI-4106 at approximate Grid Lines: -25.7/F.I -26.6/C.5 -26.7/A.6			1. EJBs on the Lower Concourse slab edge plan A1-2844 were updated and coordinated with Train Platform Level Electrical Lighting Plan E1-4101: see SKA-3061 and ESK-028				
3) The Lighting Plan shows fixtures, yet there is no layout on the Slab Edge Plan: AI-2845/EI-4105 at approximate Grid Lines: -19.2/A.6 -21.2/C.6 -21.2/F			2. EJBs on the Lower Concourse slab edge plan A1-2842 were removed and coordinated with Train Platform Level Electrical Lighting Plan E1-4102: see SKA-3059 and ESK-026 Same with A1-2846, EJBs were coordinated with E1-4106: see SKA-3063 and ESK-030				
4) There was no Train Platform Level Zone 11 Lighting Plan (EI-4111) included with the contract documents, but there is an EJB layout on Lower Concourse Level Zone 11 Slab Edge Plan(AI-2851).			3. EJBs on the Lower Concourse slab edge plan A1-2845 were updated and coordinated with Train Platform Level Electrical Lighting Plan E1-4105: see SKA-3062 and ESK-029				
5) Telecommunications Drawing Lower Concourse Level Zone 2 Floor Plan(TEI-2202) has six(6) 4" conduit sleeves on Grid Line I between GL E and F. the Slab Edge Plan(AI-2842) does not have a layout for these sleeves.			4. For Train Platform Level Zone 11 Lighting Plan: see ESK-033 and SKA-3066				
			5. There are no Telcom conduit penetrations for TELCOM closets along GL 1 between E & F. Please refer to attached TE1-2202 and Detail 1 of TE1-8014

T-1156.1	BGP - Telecom Drawing Discrepancies	Closed	02/25/2014	03/07/2014	03/13/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: The response to RFI T-1156 provided a number of drawings which were not previously provided. Only TE1 drawings TE1-0000, TE1-2202, TE12203 and TE12207 were issued with the TG06 scope of work. The telecom sleeve locations on SKA-3060, SKA-3063 and SKA-3064 do not match the TE1 contract drawings. The discrepancies between the telecom drawings and the slab edge drawings are: 1) GL 5/A - Telecom sleeves indicated on TEI-2202, no layout dimensions on SKA-3059 2) GL 10/J - Telecom sleeves on TEI-2203 are not shown in the same location as on SKA-3060 3) GL 29.5/A - No TEI drawing provided, however SKA-3063 has layout for three(3) sleeves 4) GL 33/A - Telecom sleeves indicated on TEI-2207, but no layout dimensions on SKA-3064 Please provide an up to date set of ALL TE1 drawings which show telecom sleeves and are consistent with the Lower Concourse Level Slab Edge Drawings.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> AAI Response: For updated Slab Edge Plans coordinated with updated TE1 Plans showing telecom enclosure penetrations at the Lower Concourse Slab. Refer to the following sketches: SKA-3095 to SKA-3102 Lower Concourse Level Slab Edge Plans See also for reference: SKA-3079 to SKA-3086 Lower Concourse Level Zone Plans SKA-3087 to SKA-3094 Lower Concourse Level Wall Plans SMW Response: The attached sketches are based on coordination with updated Lower Concourse Level Slab Edge Drawing provided by AAI. We have adjusted Telecom sleeve locations to match Lower Concourse Level Slab Edge Drawings as well as adjusted Telecom enclosure quantities and locations as needed to match. See attached SMW Response which includes TSK-008, TSK-009, TSK-010, TSK-012, TSK-013.

T-1161.1	BSE - Replacement and Removal of Waler Lookouts GL 9.5 West	Closed	02/20/2014	03/02/2014	03/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Claude Titché	To: Turner Construction Company		Phil Militello	Answered By: Turner Construction Company	
Co-Author:						Stacy Wilson	
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Due to a revision in the concourse slab elevation, waler lookouts from gridline 9.5 West must be removed to allow for construction of the slab. BBII's EOR for the internal bracing has approved the use of additional 6x6x3/8" angle braces to replace the lookouts in conflict. Reference the attached RFI response, supplemental calculations, and details from PB&A.				See attached URS response.			
See URS comments 1-3 below on RFI T-1161 also see PB & A response and additional drawing to these comments							
1. The drawings do not show the sequence of installing new items and removing existing items. The construction sequence is required to ensure proper load transfer from removing elements to new load-carrying elements. Information provided for construction must clearly identify details and sequencing. There should be nothing left to interpretation by field personnel. This includes all detailing as well as full identification of what is to be installed and where, and what is to be removed, with clear identification of what is required prior to removal, and when (relative to installation of new bracing elements). The specific degree							

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>of finalization for installation of the new installed bracing elements prior to removal of lookouts is required. This includes identification of the specific inspections required to be complete prior to allowing any removal of existing lookouts to occur.</p> <p>PB & A response :The replacement WF beam or angle shall be installed and special inspections shall be performed on the welding connections prior to the removal of the existing WF lookouts underneath the waler. As per sketch attached</p> <p>2. For welding of an angle brace to a waler, please show clarification of welding to provide full compliance AWS prequalified procedures (weld geometry). For the bottom welding, please verify the weld is accessible with waler beam flange being close to welds. Welding is to include detailing that provides access for performance of welding. All welding must have clearly defined geometry allowing calculation of weld capacities. If this is not achieved, the welding provided cannot be relied upon for transmission of loads. If an angle brace needs to move away from waler beam flange for accessibility, the distance shall be indicated.</p> <p>PB & A response :The replacement WF beams or angles shall be installed on each side of the pipe strut. If an existing angle brace has been installed on the soldier beam on the side of the pipe strut, the replacement WF beam or the angle shall be installed on the adjacent soldier beam away from the pipe strut. The angle brace is move from the waler beam flange for accessibility per sketch SK-1 attached.</p> <p>3. Either an identical WF beam or an angle brace as proposed for a replacement element of the existing lookouts is to be attached to WF soldier pile beams above a waler according to the RFI. However, a number of soldier piles already connect angle braces, and those soldier piles with an existing brace may have a difficulty to accommodate an additional WF beam or angle. Lookouts were placed at least 4 per waler and one on each side of a strut per the drawings and calculations, and the same number and locations of replacement</p>						

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>elements are required.</p> <p>Please verify the existing angle braces are to be used as a part of the lookout replacements or the same number of new angle braces as the existing lookout beams are to be added in addition to the existing angle braces. Please verify the proposed replacement elements can be installed without a conflict of existing angle braces.</p> <p>PB & A response: At least the same number of replacement WF beams as that of the existing lookouts shall be installed. For the replacement angle option, minimum 4 additional angle braces excluding the existing ones are required.</p> <p>Please confirm it is acceptable to proceed with removal of the lookouts per PB&A's RFI response. Note that the RFI response provided by PB&A has been amended to address comments from urs in response to RFU T-1161.</p>

REQUEST:			SUGGESTION:		ANSWER:		
Please see attached Roof Girder Blank drawing submittal returned by WOJV on 1/27/14 "Approved as Noted". The Engineer's directive to change the configuration of the "stub beam" is inconsistent with the current Plan Sheets. Upon further discussions held in the Structural Coordination meeting on 2/6/14, OIW has been directed to proceed with the 2.25" T&B flange at the stub beam, as detailed on 10/S1-8001, and modify the web of the stub beam to align with grid lines 1 and 33.5.					Accept Suggestion: <input type="checkbox"/>		
Please see attached "preliminary" shop drawings representing the requested changes to the stub beam detail.					Confirmed		
Please confirm the changes to this drawing are consistent with the Engineer's intent. Upon confirmation, OIW will make the appropriate changes to drawings GB107 through GB110 and resubmit for record.							
Please also note that the weld prep in detail 5 on GB107-2 has been modified per the 2/6/14 coordination meeting.							
T-1165	BSE - Relocate Micropiles E872 and E874	Closed	02/12/2014	02/22/2014	02/21/2014	Potentially	<input type="checkbox"/>

T-1170	SSS - Light Column Base Plate and Corrosion Protection	Closed	02/13/2014	02/23/2014	02/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: As a follow up to review comments provided in Submittal Package TG0701-023.1 SSS - Light Column Anchor Bolts (#1.5E), please review and respond to the following items: 1) Base plate hole oversize and subsequent sizing of the top plate washer As a follow up to the conference call held 1/29/14 for the Light Column anchor bolts, Dywidag provided the following information via the email attached: "If we spec a 50ksi plate and use the full width of the spherical washer, the plate works as-is. Leaving the plate design alone (with the assumed actual contact width of the washer) the plate still works at a 6" hole diameter. This is designing for 95% of the ultimate capacity of the bar." The maximum outside diameter of the HSS tube inside the base plate is 3.5". Within a 6" hole, this allows for 1.25" of clearance all around the tube, which is more than adequate clearance based on the AISC allowable tolerances for installations of anchor-rod groups. Reference AISC Steel Construction Manual, Section 16.7.5.1 attached, which does not allow for any more than ¼" variation between anchor rod groups nor between anchor rod group and column lines. Please confirm it is acceptable to proceed with a 6" base plate hole size to avoid modifications to the top anchor plate grade and geometry.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> We have reviewed Dywidag's statement for the top plate washer as well as the corrosion protection of the bar within the galvanized tube and based on this guarantee by Dywidag we find these solutions acceptable.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Detail B/A1-8662 indicates that BRBs at Ground Level between GL D.4/28 and D.4/31 are to receive IFRM-2 fire protection. All other BRBs are to receive SFRM fire protection. Please refer to SK RFI 397 SK1 attached and clarify the following finish requirements for the BRBs:				Item 1. Confirmed and as indicated on the documents referenced.			
1) Details 1, 3, and 5 on S1-4206 indicate that bottom gusset plates are to be galvanized. Please confirm that only the bottom gusset plates are to be galvanized.				Item 2.			
2) For BRBs to receive SFRM fire protection:				a. Extent of SFRM and shop prep as indicated in the documents referenced.			
a. Please confirm the extent of the SFRM at the braces as indicated by the red outline in details 2, 3, and 6. Note that all materials indicated to receive SFRM will be bare steel. Steel will be prepped in accordance with 07 81 00-3.2.B.				b. Extent of SFRM and shop prep as indicated in the documents referenced.			
b. Please confirm the pin, bolts, plates, and top gussets shown in details 2 and 6 are to be bare steel in anticipation of receiving SFRM by others.				Item 3.			
3) For BRBs to receive IFRM fire protection:				a. Extent of IFRM and shop prep as indicated in the documents referenced.			
a. Please confirm the extent of the IFRM at the braces as indicated by the blue outline in details 2, 3, and 6. Materials indicated to receive IFRM will be prepped and primed in accordance with 07 81 23.				b. Confirmed and as indicated on the documents referenced.			
b. Detail B/A1-8662 graphically indicates that only the braces and not the gussets are to receive IFRM. Please confirm the final finish of the bottom gusset plates is to be galvanized and provide the finish requirements for the top gussets.				c. Finish requirements are indicated in referenced drawings and specifications.			
c. Please provide the finish requirements for the pins and 1" thick plates indicated on 6/S1-4206.				d. Finish requirements are indicated in referenced drawings and specifications.			
d. Provide the finish requirements for the bolts indicated in detail 6/S1-4206.

T-1176.1	SSS - Finish Requirements at BRBs	Closed	03/18/2014	03/28/2014	03/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello	Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Skanska is proceeding as follows for BRBs based on the response to WOJV T-1176:				1. No exception taken.			
1) Bottom gusset plates shall be galvanized.				2.			
2) For BRBs scheduled to receive SFRM fire protection:				a. No exception taken.			
a. Materials in red indicated to receive SFRM will be bare steel. Steel will be prepped in accordance with 07 81 00-3.2.B.				b. No exception taken.			
b. The pins, bolts, plates, and top gussets shown in details 2 and 6 shall be bare steel to receive SFRM.				3.			
3) For BRBs to receive IFRM fire protection:				a. Confirmed			
a. Prime coat for IFRM will be provided to the extent indicated by the blue outline in details 2, 3, and 6.				b. Confirmed			
Materials indicated to receive IFRM will be prepped and primed in accordance with 07 81 23.				c. Confirmed			
b. The response to WOJV T-1176 indicates finishes for top gusset plates shall be per the documents.							
Note that the contract documents and specifications do not indicate whether top gusset plates are to be galvanized, bare steel to receive SFRM, or IFRM.							
Based on the interface between gussets, bracing, and pinned components, it appears that the top gusset plate shall be prepped and primed to receive IFRM. Please confirm.							
c. The response to WOJV T-1176 indicates finishes for the pins, bolts, and 1" thick plates shall be per the documents. Note that the contract documents and specifications do not indicate whether these components are to be galvanized, bare steel to receive SFRM, or IFRM. Based on the interface between gussets, bracing, and pinned components, it appears that the pins, bolts, and 1" thick plates shall be prepped and primed to receive IFRM. Please confirm.							
Please advise if exception is taken to any of the noted finishes.

T-1182	BGP - Mat Slab - Top Rebar Splice Location at Light Tower Anchor Bolt	Closed	02/21/2014	03/03/2014	03/28/2014	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Claude Titché</div><div>To: Turner Construction Company Phil Militello</div></div> <div>Answered By: Adamson Associates, Inc. George Metzger</div>							
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
See attached sketches.				Accept Suggestion: <input type="checkbox"/>			
To accomodate the installation of Light Column Anchor Bolt assemblies, SCCI proposes to locally move the splice location of the top mat slab rebar towards the West.				It is acceptable to locally move the top reinforcing lap splice west as described in the RFI. Along the bars affected it is also acceptable to maintain a lap splice in the original plan location to avoid excessive lengths of bar to the east.			
Please confirm that this is acceptable.							
T-1183	SSS - Interference at GL15	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div><div>To: Turner Construction Company Phil Militello</div></div> <div>Answered By: Adamson Associates, Inc. George Metzger</div>							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER:			
On the attached sketches CD RFI # 298 SK1 & SK2 the double angle connections per S1-5010 are not possible at the noted location as the W16 & W24 are off-set 2 7/16" from each other.				Accept Suggestion: <input type="checkbox"/>			
Confirm it is acceptable to supply full depth shear plates as shown with plate thickness, welding and bolts per S1-5011				Not acceptable. Provide double angle connection per 9/S1-5010 at the W24 beam. Provide shear plate connection at the W16 beam per 2/S1-5011 with 6 bolts (2 vertical rows of 3 bolts each).			
T-1184	SSS - Steel Connection Interference GL 15D	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Stephanie Azzolino</div><div>To: Turner Construction Company Phil Militello</div></div> <div>Answered By: Adamson Associates, Inc. George Metzger</div>							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER:			
At grid line D/15, the W40 to column connection will conflict with the W16 connection to the W40 (SK2). Please confirm it is acceptable to connect the W40 (SK1 & SK2) to the indicated column as shown, using 3 rows of 4 bolts in lieu of the 2 rows of 6 bolts per 5/S1-4206.				Accept Suggestion: <input type="checkbox"/>			
				Not acceptable. Provide a shear plate connection per 1/S1-5011 at the W16 beams that are next to the W40 drag connection on both sides of GL D. Drag connection at the W40 beam shall be per 5/S1-4206 as noted on construction drawings. Note that the W40 beam is framed into the transfer girder and not a column as stated in the RFI.

T-1187	SSS - W16 Connection Detail Between 19.9 & 20.1	Closed	02/21/2014	03/03/2014	03/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached sketches CD RFI # 302 SK1 & SK2 for items 1 to 3: 1) The line for the noted W16x26 is not shown. Confirm the beam is centered on the wall. 2) Confirm the connection for the W16 to the Transfer Girder is acceptable as shown with plate thickness, welding and bolts per 1/S1-5011. If not, supply a new detail. 3) Confirm the same connection may be used for the W16 to the Transfer Girder on Grid 20.1.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			1) Confirmed. 2) Connection detail proposed for W16 shown on SK2 is acceptable. Provide plate thickness, welding, bolt size and bolt edge distances per Detail 2/S1-5011. 3) Confirmed.				
T-1188	SSS - Finish Requirements at Basket Columns	Closed	02/21/2014	03/03/2014	03/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: A1-8660 conceptually indicates the boundaries of Category 2 and Category 3 AESS requirements for the basket columns. Based on this information and the documents provided for the TG07.1R trade package, SK1 has been provided to depict Skanska's understanding of the basket column finish requirements. Please review the following and confirm the various finish boundaries associated with the basket columns: 1) Confirm the Category 2 AESS boundary is from the Ground Level cast node to the end of the pipe column from the Ground Level to the Bus Deck Level as indicated in SK1. 2) Confirm the Category 3 AESS begins at the Bus Deck level cast node and extends through the pipe column to the Roof Level cast node as indicated in SK1. 3) Confirm the AESS boundary ends at the Roof Level cast nodes and that the Roof Level connection plates are to be delivered on site in the bare steel condition to receive SFRM. 4) Confirm the AESS boundary at the Bus Deck cast nodes extends to the cast node pad, with all shear plates, reinforcement plates, and perimeter beams to receive SFRM as indicated in SK1. 5) Confirm these boundaries can be typically applied to all perimeter basket columns at North, South, East, and West			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/>				
			1. Boundaries indicated on SK RFI 418 SK1 generally appear to be OK. However, this information should be confirmed by the CM/GC, as this RFI states "by others", which is information for the CM/GC. All this information should be clearly submitted for review in shop drawing submittal per drawings and specification 05 12 14 Paragraph 1.4. Additionally, see added notes on your SK RFI 418 SK1 attached. The elements currently highlighted in cyan color in the enclosed sketch should be AESS category 3 per A1-8660 and finished per specification section 09 97 16. 2. See response to item 1) above. 3. This statement is incorrect. Cast node connecting plates are AESS members that should be prepped and finished per specification section 09 97 16. SFRM fireproofing should be applied to perimeter beam per A1-8662 and details in sheets A1-8611 and A1-8612. 4. Please submit shop drawings submittals per specification 05 12 14 Paragraph 1.4 and as noted on item 1) above.

Provide a connection detail. 3) Supply the missing dimensions.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Missing dimensions have been provided on the attached sketch SKS-0332. 2) Beams shall be centered on the highlighted posts and detail 10/S1-7600 shall apply as noted on the drawings. See SKS-0332 for reference. 3) See response to 1).				
T-1190	16" Slab Negative Moments at North-South Walls	Closed	02/24/2014	03/06/2014	02/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Please reference attached Memo from seers consulting Engineer. There is a certain concern that once the LL= 150 PSF is imposed on the LCL deck there will be excess negative moments generated at the interface between weak axis of the supported slab and wall-spandrel beam. This may require additional top reinforcement in the weak axis of the one-way slab. Please confirm that there are no additional bars neded at the LCL spandrel/wall interface, and that loading Table from S-1002 applies.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> No additional bars are required at the LCL spandrel/wall interface. Loading on S-1002 applies.

REQUEST: During level 4 and 5 excavation, a high volume leak occurred in zone 4 between CDSM pile 450 and 451. In an effort to stabilize the CDSM panel and repair the leak, BBII installed a steel road plate between soldier piles 167-168 and injected grout behind it. BBII is concerned that removing the plate will likely cause the panel to become destabilized and could reopen the flow of water. BBII survey of the plate indicates that the plate is behind the theoretical face of CDSM wall and does not encroach into the permanent structure - reference the attached drawing. Please confirm it is acceptable to leave this plate in place. The edges of the plate may be grinded to provide a smooth transition to the CDSM wall for waterproofing.		SUGGESTION:		ANSWER: Confirmed, it is acceptable to leave the steel plate in place, provided, as stated in the RFI, it does not encroach into the permanent structure and the edges of the plate are ground smooth. This location should be reviewed by the waterproofing manufacturer and details developed for the waterproofing and cushioning layers between the CDSM wall and foundation wall, to ensure a smooth transition for the CDSM wall waterproofing at this condition.			
T-1193	BGP - Gridline Offset Discrepancies	Closed	02/24/2014	03/06/2014	03/03/2014	Potentially	<input type="checkbox"/>

REQUEST: The perimeter support steel at large slab openings as detailed on 12/S1-5003 will not work at GL 16.9/D as indicated on SK1 due to the 12" top of slab elevation changes around these openings. Please provide details for the support steel required at this location including all connection details.			SUGGESTION:		ANSWER: The W33 beam is 1'-0" higher than the W24 as shown on the plan. The metal deck for the slab where those 2 openings occur is set by the low slab (similar to Typical Detail 10/S1-5002). The Typical Detail 12/S1-5003 applies. C8 channel shall have a shear connection per typical detail 1/S1-5011 (2 bolts).	Accept Suggestion: <input type="checkbox"/>	
T-1205	BGP - Lower Concourse Blockouts to Pour Train Level Partition Walls	Closed	02/26/2014	03/08/2014	03/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: SCCI is planning on pouring as much of the Train Level Partition Walls in Area 3 and 4 prior to the Lower Concourse Deck being poured (see attached Structural Drawings for reference). However, some of the partition walls conflict with the Rakers used for bracing. Additionally, there are some partition walls in Areas 6-16 that are added in ASI #110 that is now included in TG06 scope. Since the Rakers will not be removed until after the Lower Concourse Deck is poured, SCCI proposes installing blockouts in the Lower Concourse above the walls in order to complete the concrete pours for the partition walls in Areas 3 and 4. The same blockouts will be installed for the partition walls on the mat slab level in Areas 6-16, added as part of ASI 110. The blockouts will be 6"x 12" for RCS 1 reinforcement and 9"x 12" for RCS8 reinforcement, both at 4' O.C. The blockouts would be positioned in the space			SUGGESTION:		ANSWER: Conceptually, it is acceptable to provide blockouts in the Lower Concourse slab for the purpose of pouring the concrete partition walls below. It is noted that the RFI does not address the following conditions: <ul style="list-style-type: none">Cases where a partition wall is below or partially below a parallel Lower Concourse beamCases where a blockout coincides with features above, such as a CMU wallMeans of preparing and pouring back the blockout Contractor shall give due consideration to the above and revise the plan as required. Consideration shall be given to the differing heights of wall pours due to changes in the Lower Concourse soffit such as for perpendicular beams, particularly with regard to consolidation. Minimum separation gaps between top	Accept Suggestion: <input type="checkbox"/>

T-1208	SSS - Verify no Bent Plate Welds at Protected Zones	Closed	02/28/2014	03/10/2014	03/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Per the approval comment on A2647 and RFI T-1071 occurs North of line D and South of line F along line 10.1 for loose bent plate conditions and does not apply at this location. This beam is between greids D and F. Please verify for the continuous shop attached bent plate condition no weld will occur within the noted protected zones. Note this is the same for A2659 and other similar conditions.					Where the bent plate cross-section is continuous between the two outriggers on each side of the protected zone, it is confirmed that the bent plate shall not be welded to the beam along the protected zone and no additional revision is necessary to brace the bent plate. Response to RFI T-1071 applies where the bent plate cross-section changes within the protected zone for example at Bus Deck Level, south of GL 10.1/F and north of GL 10.1/D.		
T-1209	BGP - Plumbing Sleeve Manufacturer	Closed	02/28/2014	03/10/2014	03/10/2014	Potentially	<input type="checkbox"/>

REQUEST:

Reference Documents: Exhibits A - H

This RFI addresses the impact of the encroaching CDSM soldier piles (SP) on the north & south wall in mat slab pour Area 13 as well as all levels of the encroachment into the foundation wall between CDSM piles 265 to 288 on the north elevation and 495 to 517 to on the south elevation for location Plan see exhibit - A

Exhibit - B, & C depict the location and degree in which the SP are encroaching

WOJV proposal North elevation on gridline A: (See Exhibit - B) between CDSM pile 262-263 to 270, 272-273 to 276 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear the encroaching SP 266 to 270, 274 & 275. Originally these were WR1 reinforcement areas #11@8"oc EF vertically and would change to #11@6"OC, the reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.1 (Exhibit - D).

Between CDSM piles 280 to 281-282 & 284 to 290, WOJV is proposing to decrease the specified 36" wall thickness to 33" to clear the encroaching SP 281, 284, 285, 286, 288-290. This foundation wall area was originally a WR1 reinforcement area #11@8"oc EF vertically and would change to #11@6"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on detail A/Sk.1 (Exhibit -D).

Between CDSM piles 270 to 272-273 & 281-282 to 283-284, WOJV is proposing to decrease the specified 36" wall thickness to 32" & 33" respectively to clear the encroaching SP 271, 272 & 282. This foundation wall area was originally a embedment column with reinforcement in this area was a double layer of #11@6"oc EF vertically and would change to double layer of #11@5"OC this reduction in foundation wall thickness would be compensated by reducing the rebar spacing predicated on Detail A/Sk.4 option 1 (Exhibit -F).

WOJV proposal on the South elevation: (See Exhibit - B) Between CDSM piles 503 to 506 WOJV is proposing to decrease the specified 36" wall thickness to 34" to clear

T-1221	BGP - 36" Pile Sleeve Joint	Closed	03/06/2014	03/16/2014	03/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Scott Bunnell			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please reference attached sketch, photo, and Contract Drawings SI-3003 and SI-2025. SCCI welded the 36" pile sleeve (see S 1-2025) vertical CJP as depicted in the attached sketch due to a shop fabrication error (see attached photo). Per AWS DI .1, the pre-qualified joint designation B-U2a-GF for FCAW allows a 65 degree groove angle with detail and fit up tolerances. The welded joint is approximately 15 degrees out of tolerance and is on one side of the sleeve only (2 joints per sleeve). Due to the member considered as non-structural, SCCI requests this joint to be acceptable as welded at this location only. SCCI will adhere to Spec Section 05 50 10 - 2.5.C.2 - "Weld mat foundation sleeve components continuously and test their water tightness by filling with water. Monitor water level for 48 hours minimum. Dry and correct faulty welds and re-test until proven watertight." Is this acceptable?			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> The proposed method and testing described in this RFI is acceptable at this location only.				
T-1222	SSS - Filler plate weld access at CP2 connection	Closed	03/07/2014	03/17/2014	03/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please reference Details 4 and 7 on sheet S1-8001. Detail 7 specifies a 1" thick filler plate between the beam web and the 2 1/2" thick backing plate. Detail 4 Section E notes 1" typical from the edge of the fill plate to the adjoining stiffener or beam web. 1" opening does not allow for adequate access to perform the welding. Oregon Iron Works(OIW) is requesting that all filler plates for CP2 connections have a minimum clearance of 1 1/2" from any adjoining edges. Additionally, OIW is requesting that this minimum clearance be applied to any similar areas that exhibit this limited access for welding.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Welding of the vertical stiffener should be done prior to installing the filler plate, hence there should be no weld access issue. The proposal to increase the 1" gap to 1 1/2" gap is acceptable.

T-1223	SSS - Elevator Edge of Slab Clarifications	Closed	03/07/2014	03/17/2014	03/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
At SE401 see attached CD RFI # 317 SK1 to SK5 for items 1 to 7:					Accept Suggestion: <input type="checkbox"/>		
1) It is not clear what is meant by the noted slope designation.					1) The roof slab does not slope. T/Slab of the elevator shaft roof slab is 56' - 11" as noted on A1-2894.		
Confirm the roof slab slopes and the top of pad slab is EL 56'-11 per A1-2894 (SK3).					2) Confirmed.		
2) Confirm the noted dimension is 1'-2 3/4 per 8/S1-5004 (SK4).					3) The note is pointing to the horizontal steel beams shown on 8/S1-5004 and notes the T/steel of these members.		
3) This note is pointing to the edge of slab and giving a top of steel elevation. Work with SK5 and clarify.					4) No. The 10'- 3" and 1'-3" dimensions noted on A1-2894 are correct. The edge of slab for SE 401 at the top of the elevator shaft size increases at the top of the elevator shaft. Also see revised dimensions in the attached sketch SKS-0333.		
4) Confirm the noted dimensions should read 1'-9 & 9'-2 per 1/S1-7113 & RFI T-0965 (SK251, CD 200). If not, clarify.					5a) Yes, beams are required at these locations. These members shall be W18x50 beams. Refer to attached sketch SKS-0333. Note that there are four beams ,one on each side of the shaft.		
5) The noted HSS members are not shown on S1-2504 (SK1) or 3/S1-7113 (SK2) but this detail is referenced on both plans noted above.					5b) See response to 5a).		
a) Please confirm the HSS members are required.					5c) Centerlines of the W18 beams shall be 3 3/4" from the edge of the elevator shaft opening (see note on sketch SKS-0333) .		
b) If yes, supply the size.					5d) Elevation is 54' - 5" as noted on 3/S1-7113 (see note on sketch SKS-0333). Also see response to 3).		
c) Supply the horizontal locations on plan					5e) Connection at the elevator machine support beams is shown in the attached sketch SKS-0333.		
d) Supply the elevation					5f) See response to 7.		
e) Supply connection details					6) Confirmed.		
f) NOTE: the elevator post connections per 1/S1-7600 may foul the HSS members (work with SK5)					7) The elevator rail posts shall be connected to the depressed W18x50 beams per 1/S1-7600. See detail in attached sketch SKS-0333.		
6) Confirm the slab edge plate terminates below the 10" raised slab as shown.							
7) Confirm detail 1/S1-7600 with the full depth stiffener and kicker brace applies in the noted cases with no elevator post on top of the beam.

using a shear plate per 1/S1-5011.							
T-1224	BGP - Concourse Top Bars at Column Embedded Plates	Closed	03/10/2014	03/20/2014	03/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Reference: SKS-0324 and SKS-0325 Per SKS-0324 and SKS-0325, where the top bars for the concourse slab intersect type 1 B and 1 C embedded base plates, the bars are to be trimmed and supplemented with a matching slab dowel in MF beam layer 1. The typical deck top reinforcing consists of a continuous run of #9 bars @ 12" and alternates with a #9 x 28'-0" long bars@ 12". See attached sketch for details. To avoid trimming a 28'-0" bar and splicing it with a 17'-0" bar, please confirm if it is acceptable to relocate the #9 x 28'-0" top bars@ 12" to the MF beam layer 1. The continuous #9 bars@ 12" will remain at 3/4" from the top of concrete and trimmed according to SKS-0324 and SKS-0325.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It is acceptable to relocate the discontinuous T2 bars to the lower layer with the typical continuous T1 bars remaining in the top layer. We note that the RFI mentions the matching dowel length as being 17'-0". For RCS1, this would be a #9 bar with a splice length of 122" for Top Bar, Category II. Given a 42" base plate and either a 3" or 6" oversized block-out, the minimum length of the dowel would be 292" (24'-4") or 298" (24'-10"). The appropriate splice category and block-out size shall be considered when determining the length of the matching dowel. Alternatively, the Contractor may place the T2 bars that conflict with the base plate in the lower layer.

REQUEST: Per field conversation with ARUP, SCCI was directed to locate the riser for Geothermal Field 12 between Soldier Piles 317 and 318 because of a leak in the CDSM wall between piles 316 and 317. Please confirm this location is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Location is acceptable to WSP.			
T-1229	BGP - As-Built Location of Sump Pit Near GL 14/G	Closed	03/12/2014	03/22/2014	03/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached sketch that show as-built location of sump pit near GL 14/G. Please confirm this as-built location is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The RFI and as-built sketch refers to a sump pit at west of Gridline 14-G. However, on comparing with the slab edge and reviewed matt slab submittal drawings, the location reference for the subject sump pit should be west of Gridline 16-G. The sump pit is to serve an escalator which will be installed in Phase 2. The as-built location is not acceptable as the sump pit will not be accessible under the landing for clean-out once the escalator is installed. Please provide a solution to revise the sump location to its correct position.

T-1230	SSS - Machined Cap Plate Surface Finish	Closed	03/12/2014	03/22/2014	03/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
Please confirm it is acceptable to provide the machined surface of the train box column cap plates with a prime coat finish in lieu of the rust inhibiting coating. The surface prep will be SSPC-SP6 commercial blast cleaning with International Interzinc 315B primer (attached).					Accept Suggestion: <input type="checkbox"/>		
					The specified product (Interzinc 315) calls out for a zinc load in the dried film of 83%, where as the proposed product (Interzinc 315B) has only 80%.		
					The Design Team does not object to this substitution as long as the application meets the performance requirements; it meets the SSPC Paint 20 standard for organic zinc rich primers; it is acceptable to the manufacturer and the entire work receives the specified warranty.		
T-1230.1	SSS - Machined Cap Plate Surface Finish	Closed	03/24/2014	04/03/2014	04/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
To clarify, the specifications section 05 10 00 - 3.2.P.2 requires finished bearing surfaces to be protected with a rust-inhibiting coating (which is typically a petroleum/grease or wax based product) which is to be removed immediately prior to erection. The Train Box Column Cap Plate is a finished bearing surface.					Accept Suggestion: <input type="checkbox"/>		
					It is acceptable to use the Interzinc 315B coating at the cap plate bearing surface in lieu of a temporary rust-inhibiting coating.		
The Interzinc 315 product referenced in the response to RFI T-1230 is specific to the IFRM Coating System. Skanska/TMF proposed an organic zinc rich primer (Interzinc 315B) as the rust inhibiting coating, which would not need to be removed prior to placement of the TG atop the cap plate. The proposed product meets or exceeds the primer specified in the 05 10 00 - 2.2.A spec section as noted in the attached manufacturer's letter. Please confirm this is acceptable.							
T-1231	BGP - Zone 2 Lower Concourse Openings	Closed	03/13/2014	03/23/2014	03/21/2014	Potentially	<input type="checkbox"/>

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	REQUEST: There are multiple discrepancies between Zone 2 Lower Concourse Drawings, recently issued in ASI #112 and ASI #113. See attached drawings. The discrepancies have been highlighted in yellow. AI-2842 (Lower Concourse Slab Edge Plan) generally does not show openings at these highlighted areas, while AI-2222 (Lower Concourse Wall Plan) do show openings. Please clarify whether the highlighted areas are openings or plumbing penetration. If they are plumbing penetrations, please provide sizes and sleeve sizes	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> For the updated slab edge plans, please refer to the Architectural Sketches (SKAs) attached to the response for RFI T-1156.1 BGP.		
T-1232	BGP - CDSM Wall Movement in Area 3 and Area 1 - West Wall	Closed	03/13/2014	03/23/2014	03/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
	REQUEST: SCCI performed a survey of the CDSM Soldier Piles approximately March 2013 for the North of Area 3 and West of Area 3 and Area 1. SCCI re-surveyed the soldier piles again this year (March 2014) and have found that the Soldier Piles in the area have displaced into the structure by approximately 1.5" at both the North Wall and the West wall. Please find attached survey information and the changes noticed in the past year. 1. Please confirm that the additional encroachment and future potential movement of wall into the structure will not cause conflict with current and future rebar installation. 2. Please confirm and demonstrate that the future potential movement will not cause additional stress to the Wall Lift 1, which will be poured in the next week. 3. Please confirm that future potential CDSM movement in this area will not impact any of SCCI's future permanent work.	SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> It is requested this RFI be withdrawn as discussed with Turner. WOJV - 4/23/14 In addition to this WOJV request more information and request that each CDSM wall pile is resurveyed after the level C bracing is removed prior to waterproofing . Two points per pile one at top elevation (similar elevation of the previous surveys) and the other at an elevation of approximately -16'. This survey information should then be then sent to both WOJV and the design team highlighting any additional encroachment which has not been already taken in to account with the current RFI for the relevant area.

From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Filip Filipic			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference attached contract drawings. Latest CDs S1-2203, S1-2210, and S1-2211 have added curved CB16 and CB&B7 downturned beams which appear to be concentric to South spandrel beam B65. However, no dimensions have been provided, i.e. radius, offset etc. Furthermore, CD s1-2211 shows that CB16 and CB&B7 do not follow the same radius. There appears to be an offset between the CB16 and CB/B7 at the MFB at GL 6, and the offset dimensions are not shown. If architectural drawings are used to find the missing radius (reference SKA-3017 and SKA-3026), one can find that the future partition walls at the South corridor have R=647' - 7 1/2" on both East and West side of MFB at GL6. This implies that the partition walls in this area would			SUGGESTION:		ANSWER: Confirmed, there is an offset between CB16 Curved beam and CB7 Curved beam. Please see the attached SKA-3105~SKA-3111 for clouded dimensions. CB16 Curved beam between gridline 5 and 6 to follow radius of curved beam CB16/partition to the west.

T-1258	SSS - Stair and Elevator SFRM Clarification		Closed	03/18/2014	03/28/2014	03/27/2014	Potentially <input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
Reference is made to the Fire Proofing Schedule on A1-8662 where Note 2 indicates that all elevator and stair structures are to use SFRM. It appears that architectural drawings, issued for reference, indicate various HSS posts are to receive alternate coating systems or finishes. For example:					Accept Suggestion: <input type="checkbox"/>		
- Detail 3 on A1-7576 indicates two HSS "Divider Beams" to be painted to match shaft walls			Not all stair and elevator steel members are to receive SFRM, it is only when a steel member interrupts a rated wall assembly that a fire resistance rating is required for the steel. The various HSS members referenced are not part of the building structural frame nor do they interrupt a rated wall assembly, therefore no fire resistance rating is required at these locations.				
- Detail 1 on A1-7870 indicates HSS outriggers are to be galvanized							
Please confirm that all stair and elevator members are to

From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 364 SK1 to SK3 for items 1 to 4: 1) Confirm the (4) W10x22 beams are located on the center of the supporting posts. If not, supply the location dimensions. 2) Supply the clouded dimensions (4 total). 3a) Confirm the stair stringers do not connect to the W12x14. 3b) If yes, supply a connection detail as 1 or 3/S1-7601 will not work with the 5" offset dimension. 3c) If yes, please supply east/west location dimensions for the stair stringers. 4) Confirm it is acceptable to prep the flanges of the WT5x15 for the 1/4" PJP weld in lieu of the beam flange as shown.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The stair framing is a design/build item and comes under the stair contractor's scope (W/O to verify). The W10 x 22 is to be provided by stair supplier. 2) See response to 1). 3a) Stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to W12x14. 3b) See response to 1). 3c) See response to 1). 4) Confirmed.	

T-1266.1	SSS - ST304 Framing Details	Closed	04/04/2014	04/14/2014	04/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Gregory Kemerer	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Webcor Construction LP		Jeff Galoyan					
REQUEST: Reference RFI T-1266 (attached) and the associated SK1 & SK2 for the following: 1) The (4) W10x22 beams are in Skanska's scope. Only the stringers are design built and provided by the stair supplier. Please confirm these beams are located on the center of the supporting posts or supply the location dimensions. 2) The (6) W10x22 beams in question are also in Skanska's scope. Please supply the requested dimensions (4 total). 3a) W/O agrees that the stringer is to be designed by the stair supplier, however, we anticipate that it is to be connected to the W12x14. Typically the stringer is connected to the bent plate that is part of the W12x14. This member would also include web stiffeners. If a typical detail is not available, please provide stiffener details and leave the stringer connection to be designed by the stair supplier. 3b) See above, the offset dimension for bent plate should work with 3a.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) The east-west dimensions to locate the posts have been noted on 1/S1-7008. The outer north-south W10x22 beams at the landings shall be 8" 7/8" from the centerline of the posts typically. The intermediate moment connected W10x22 beam shall be aligned with the stringer coming from above at the landing per 10/S1-7601. 3a) Stiffener plates are not required at the W12x14 beam. 3b) The W12x14 beam centerline to the edge of slab distance shall be 4". We anticipate that the stringer will be connected to the bent plate. 3c) Refer to Architectural drawings A1-7007, A1-7501, A1-7502, & A1-7503 for stair 304 stringer locations.

REQUEST: See attached CD RFI # 344 SK1 to SK3 for items 1 to 5: 1) RFI T-1111 (SK 327, CD 254) confirmed the edge plate to match the thickness of the slab but the approval comment of CS2 drawing 4714 requests a bent plate as shown in SK3. Which is correct? 2) The detail on SK3 is per approval mark-ups on CS2 drawings 4766 & 4767 (noted with an arrow) with references to detail 2/S1-7661 but the approval comments do not occur on the other beams at the yellow walls. Confirm the detail on SK3 applies at all (8) beams next to the concrete walls noted in yellow. 3) Confirm the wall terminates at the lower slab. 4) This detail is per approval mark-ups on CS2 drawings 4766 & 4767 with references to detail 2/S1-7661. Detail 2/S-7661 is not referenced on S1-2403 or 2/S1-7302. Confirm the detail as shown is acceptable. 5) Confirm edge plate per 8/S1-5000 is not required.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Provide edge closure plate per typical detail 8/S1-5000 as noted in response to RFI T-1111. The tall bent plate and 3/8" stiffener plate per comment and markups on CS2 shop drawings are not required. 2) Response in 1) also applies at the 8 beams highlighted in yellow on SK1. 3) Confirmed. 4) See responses to 1) and 2). 5) Confirmed. The edge closure plate is required per typical detail 8/S1-5000, hence, there should be no cost and schedule increase.				
T-1269	SSS - GL 15 Dimension Clarifications	Closed	03/21/2014	03/31/2014	03/31/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 346 SK1 to SK3 for items 1, 2 & 3: 1) The noted dimension should be 4'-7 1/2 per A1-2904 (SK2) but 4'-6 is shown in the Revit model which appears to be supported by 1/S1-7010 (SK1) which shows this beam off center from the wall. Confirm 4'-6 is acceptable. 2) The noted beam should be 9" from Grid D per A1-2904 (SK2) but it will foul the W44x290 on Grid D. Confirm the location of the W27x84 is acceptable as shown. 3) The noted W44x290 is to be located 3'-10 1/2 north of Grid D per A1-2904 as shown. However, the shear plate connection fouls the web stiffener plates per 2/S1-5016 on TPG2. Confirm it is acceptable to locate the W44x290 4'-0 1/2 from Grid D to avoid the fouling. NOTE: Items 1, 2 & 3 are symmetrical about Grid E and also occur at Grid F.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) The noted dimension shall be 4' - 7 1/2" so that the beam is centered on the wall. 2) Confirmed. 3) Confirmed. Note that per contract document the W44x290 should have a double angle connection. However, to avoid conflict at the tapered girder drag connection plate, it is acceptable to provide a shear plate connection. Provide 3 equally spaced bottom flange braces per 8/S1-5015 at the W44x290 beam from the north side (south side for W44 beam near GL F).

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: This is a follow-up RFI to RFI T-1269 (SK 461, CD 346) See attached CD RFI # 346.1 SK1 & SK2: It is not possible to supply 3 equally spaced bottom flange braces per 8/S1-5015 as requested in the above noted RFI item 3 due to the existing framing. Confirm it is acceptable to supply a brace per 4/S1-5015 at each W27x84 and 1 brace per 8/S1-5015 as shown.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Provide 3 equally spaced bottom flange braces per response to RFI T-1269. When there is a conflict with the parallel W16 as shown in SK2, provide brace from the other side of the W44 beam.				
T-1270	SSS - ST401 Geometry Clarification	Closed	03/21/2014	03/31/2014	04/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: See attached CD RFI # 347 SK1 to SK3 for items 1 & 2: 1) Shown are two versions of the slope geometry for ST401 with the variations noted. Please clarify which geometry is to be used. 2) Confirm a bent deck support plate per 9/S1-5012 will not be required on top of the W12x14 with the beams aligned as shown.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Provide the geometry shown on the top half of SK1. Note that the starting point of slope at the top of the slab which is noted to be 2-7/16" on SK1 has been revised to 5-1/8" in the TG 7.02 IFB Addendum #1 (See A1-2904). Consequently, the slope angle changed to 32.552 degrees with the end of the slope at the bottom terminating at GL D.4. With the new geometry, the S4 slab does not foul the beam flange at GL D. 2) We confirm that bent plate is not required per 9/S1-5012 at the top of W12x14 on GL D.4.

REQUEST:

See attached CD RFI # 350.2 SK1:

1). The dimensions provided in 1/S1-6043 and 6/S1-6040 are not the same. Provide the clouded dimensions to the posts from the grids as shown.

2). In conjunction with question # 1 and the response to RFI # T-1281.1, the drawings from TG08.10 DB IFB Addenda # 11 (5/16/14) have not been issued for construction. Please issue these drawings for construction or supply them as sketches in response to this RFI.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

1). CD RFI # 350.2 SK1 is OLD information that was correctly answered in previous RFI.

2. All drawings previously issued with DB Addendum 11, which are in the hands of the CM/GC are being issued "for construction" dated 07/11/14 in ASI 0120.

From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger		
Co-Author: Skanska USA Civil West California DisRyan Clayton								
REQUEST: Please refer to sketches SK1, SK2, SK3, and SKS-0422, and attached drawings provided in response to RFI T-1281.3 1) S1-6030 does not show the noted dimensions as shown on SK2. Please supply the dimensions to locate the beam/post on center of the curb above. Supply the requested dimensions or confirm that posts are not required between 22-23. 2) The model and the drawings match the clouded dimensions on drawings A1-2905 included with the response in RFI T-1281.3. Clarify the reason why this drawing was included in the response. 3) "Refer to sheet S1-6032 for W-8 shear key dimensions" on the cover sheet of RFI T-1281.3 is confusing. Confirm W8should read W-12 as S1-6032 shows only W-12 details. 4) Confirm the revisions to 4/S1-8016 on SK-0422 apply only to Grid 23. Note that 4/S1-8016 is not shown on the current S1-2605. 5) 4/S1-8016 does not reflect what is occurring on Grid 23. Please review and clarify the discrepancy. 6) 4/S1-8016 on SK-0422 shows insufficient information to provide shop drawings: a) How is the solid 12" x 12" bar welded to the base beam? b) Does the solid 12" x 12" bar extend the full height of the HSS14x14? c) Supply dimensions to locate the rebar holes in the HSS14x14. d) Supply the size of the rebar holes. 7) Currently the HSS10x10 posts per 1 & 3/S1-8016 have been located on the center of the 1'-6 thick curb per RFI T1281 (SK467, CD 350) item 5. Note that the revised dimensions were not marked on the CS10, ES1, or ES2 returned approval submittals. Confirm the posts locations must be revised as noted in RFI T-1281.3. 8) Supply the post locations in 1/S1-8008. Refer to SK3			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed, no post required between GL 22-23, as per S1-6030 workpoints. [SBP] The W30X90 beam should align with the concrete counterfort wall above, which can be located by Architectural Slab Edge Plan A1-2905. See the attached sketch SKA-4328. [AAI] 2) SK1 in RFI T-1281.3 highlighted all posts between GL 19.1 to GL 24. The contractor appeared to be asking for these dimensions, the drawing was included to indicate them. [AAI] 3) Confirmed. W-8 is a typo, as S1-6032 applies to W-12 details only. [AAI] 4) Revisions to 4/S1-8016 apply at three locations; two along GL 23 and one at GL 24/E. Detail 4/S1-8016 is called out near GL 24/E on S1-2605. Detail callouts at the two locations along GL 23 will be added in ASI 128. [TT] 5) Intent of 4/S1-8016 is to show details in the concrete wall and curbs. Rebar details in the concrete wall and curbs are the same at the 3 locations noted in 4). [TT] 6a) The HSS post is welded to the base beam not the solid bar shear key. [TT] The solid 12" x 12" shear key is welded to the 2" base plate, as shown in details 2 and 4 on S1-6025 (to be issued in ASI 128), which is part of the W-4 & W-12 design-build glazing systems. [SBP] 6b) No, the solid bar does not extend the full height of the HSS14x14. Solid bar shear key embedment depth = 8 inches. [SBP] 6c) Horizontal rebar in the wall is spaced at 12¿ OC. Place first horizontal bar 1¿ above the construction joint in the wall. Holes in the HSS wall can be located accordingly. Coordinate location of construction joint in the wall with Shimmick. [TT] 6d) Holes in the HSS shall be d + 1/4¿ in diameter where, d is the rebar diameter. [TT]

Co-Author:

REQUEST:

Per the meeting between TCCO, WOJV, SCCI, and AAI on Monday 3/24/14, it was made clear that AAI believes that all documents have been issued to WOJV in order for construction of the lower concourse deck. WOJV stated that there are currently drawings out to bidders (for TG 07.2 /TG10 MEPS Series) and in Pre-Construction, but that WOJV has not been provided direction by TJPA/TCCO to proceed with construction in the field, nor to utilize the most current drawing sets. Prior to this meeting, WOJV requested that all IFB drawings be issued as an ASI's in order to coordinate with current and continuing construction. ASI's 112 and 113 drawings were issued, however they are not complete per our initial request. AAI has responded to RFI's and submittals referring to sheets that have yet to be issued for construction. This has caused confusion and frustration for all parties. Therefore, in lieu of continuing to request ASI's to address this specific issue at the lower concourse, WOJV/Turner have agreed to utilize the RFI process to construct the lower concourse deck.

For the list of series of drawings below, please note and/or provide the latest drawings or ASI(s) that should be used to construct the lower concourse deck. We understand that there are drawings issued for pre-construction, that will not be issued for construction for multiple bid packages. For those cases, TJPA/TCCO needs to inform and provide WOJV with the set of the most current and coordinated drawings to be used for construction of the lower concourse, including (but not limited to) blockouts, deck penetrations (such as MEPS), beams, dowel/formsaver locations, and electrical conduit locations.

- Architectural Drawings : A1-2200 Series
- Architectural Drawings : A1-2800 Series
- Architectural Drawings : All sheets providing complete wall dimensions whether floor plan/wall plan/ or enlarged details
- Structural Drawings : S1-2200 Series
- Plumbing Drawings : P1-2200 Series
- Electrical Drawings : E1-2200 Series and E1-3200 Series
- TE Drawings : TE-2200 Series

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

See the "Issued for Construction" drawings dated April 1, 2014 for the most current drawings.

RESPONSE:

Judy Long 3/28/14
The drawings, some issued with ASI 115, forthcoming CR-104, are attached for your use and coordination with construction.

T-1283	SSS - Drag Beam Double Connection	Closed	03/25/2014	04/04/2014	04/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:			SUGGESTION:		ANSWER:		
See attached CD RFI # 354 SK1 to SK3 for items 1 & 2:					Accept Suggestion: <input type="checkbox"/>		
1) Confirm the double angle connection per 5v/S1-5026 (SK2) occurs at all locations noted with an arrow on SK1 (16 total).					1) Confirmed.		
2) The double angle connection per 5v/S1-5026 & 6/S1-5026 does not allow access to install the threaded rod nuts (4-3/4" long x 4-1/2" wide) and washers in the field. Please confirm it is acceptable to provide two elongated hand holes (6" wide x 10" long) in each full height shear plate either side of the beam. Due to the restricted access, the post tensioning operation will need to be done from the top of the rod, contrary to the response to RFI T-0970.1. This will require the 6x6" oversized washer to be installed at the bottom and the standard flat washer to be installed at the top. Please confirm this is acceptable					2) Providing a hole in the stiffener plates for access to threaded rod nuts is acceptable in concept. Hole shall not be located near the top of the stiffener plate. Final review of the hole location to be done with review of shop drawings. Cloud the hole locations on shop drawings to call the attention of the reviewer. Post tensioning from the top of the rod is acceptable at these locations.		
T-1284	SSS - Erection of Drag Beam at Double Connection	Closed	03/25/2014	04/04/2014	04/04/2014	Potentially	<input type="checkbox"/>

T-1285	BGP - Anchor Bolt Placement Tolerance	Closed	03/26/2014	04/05/2014	03/26/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher			To: Shimmick Construction Comp Sylvia Hartanto				
Co-Author:			Answered By: Webcor/Obayashi Joint Venture Spencer Sayles				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Under the Below Grade Concrete TG-06 Contract, SCCI is bound by concrete standard for Anchor Bolt placement. Concrete industry standard, ASI 117-90, Section 2.3 allows a tolerance of vertical, lateral and level alignment of +/- 1".</p> <p>Per Anchor Bolt DFOW meeting on 11/29/2014, SCCI proposed to use ASCC (American Society of Concrete Contractors) "Anchor Bolt Tolerances" Position Statement #14 (attached) with the following tolerance for each bolt location:</p> <p>- 3/4 and 7/8 diameter bolts : +/- 1/4in - 1-, 1-1/4, and 1-1/2in diameter bolts: +/- 3/8in ; and - 1-3/4, 2-, and 2-1/2-in diameter bolts: +/- 1/2in</p> <p>Please confirm that the proposed anchor bolt placement tolerance as prescribed by ASCC "Anchor Bolt Tolerances" Position Statement #14 is acceptable. Please note that this tolerance is more stringent than ACI Concrete Standard ACI 17-90, Section 2.3.</p>					<p>Under TG06 contract SCCI is required to place all light column and steel column anchor bolts supplied by TG07.1 in accordance with the contract documents.</p> <p>- 03 20 00 Concrete Reinforcement and Embedded Assemblies - Section 3.2 A. 1 States: "Set and secure embedments, including embedded plates, bearing plates, and anchor bolts per approved setting drawings and in such a manner to prevent movement during placement of concrete and to allow removal of formwork without damage." - 03 10 00 Concrete Formwork - Section 3.1 B. 1. a. States: "Use setting drawings, diagrams, instructions and directions by suppliers of items to be attached." - Structural Drawing Sheet S-0005, GR-2 lists both ACI and AISC reference standards for this project. At the bottom of GR-2 it states: "THE MORE STRINGENT REQUIREMENT IN THE CODES LISTED ABOVE GOVERNS". - 01 10 90 References - ASCC reference standard discussed in SCCI RFI 452 is not listed in project standards. - ACI 117-10 - 1.1.2 States: "Tolerances in this specification are for typical concrete construction and construction procedures and are applicable to exposed concrete and to architectural concrete. Materials that interface with or connect to concrete elements may have tolerance requirements that are not compatible with those contained in this document." - AISC requirements for anchor bolts are more stringent and govern. - 1.1.3 States: "A series of preconstruction tolerance coordination meetings shall be scheduled and held prior to the commencement of the work. The Contractor, subcontractors, material suppliers, and other key parties shall attend. All parties shall be given the opportunity to identify any tolerance questions and conflicts that are applicable to the work with materials, prefabricated elements, and Work assembled/installed in the field by the contractor."</p> <p>At the 3.5.2014 meeting Skanska stated that the ASCC Position Paper would not be acceptable for the installation of their structural elements over the anchor</p>

T-1288	BGP - Lower Concourse Testing and Curing Conflict	Closed	03/26/2014	04/05/2014	04/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER:		
Please reference Specification Section 03 30 20 - Cast-In-Place Concrete.					Accept Suggestion: <input type="checkbox"/>		
Spec Section 03 30 20 - 3.6.A.3 states "For shored floor construction: Floor flatness/floor levelness tolerance compliance testing is to be performed prior to the removal of shores and forms but not later than 72 hours of concrete placement by the TJP A Representative." SCCI intends on providing a moist cure on the concourse slab per Spec Section 03 30 20 - 3.7.A.5.b.3 - cover concrete surface with specified absorptive cover, thoroughly saturate cover with water, and keep continuously wet. The absorptive cover is to remain for 10 days for type II cement (Mix #1558218) per Spec Section 03 30 20 - 3.7.A.2 and is to be installed as soon as free water has disappeared from concrete surface and finishing has been completed. The FF/FL 72 hour testing requirement is in conflict with the immediate installation of the moist cure cover requirement.					Neither request is acceptable. FF/FL testing within the 72 hour time limit and curing are not mutually exclusive.		
SCCI requests either of the following:							
1. Waiving the FF /FL requirement on the lower concourse slab due to the later installation of the 5" topping slab it will receive. SCCI will maintain its adherence to dimensional tolerances per ACI 117 and flatness variance per ACI 318 and provide a stiff broom finish per Spec Section 03 30 20 -3.6.B.1.c. (similar to mat slab).							
2. Extending the FF/FL 72 hour requirement out past the 10 day cure time requirement. SCCI does not want to compromise the immediate moist cure cover installation due to the sensitivity for potential shrinkage cracking in the slab.							
Are either of these requests acceptable?

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST: See attached CD RFI # 367 SK1 to SK6 for items 1 to 13: 1) Review all the east/west post location dimensions on SK1 to SK6 and confirm they are correct as RFI T-1189 (SK419, CD 313) does not show the dimensions at all Levels. 2) The 18'-6 dimension to the edge of slab minus the 6" set-back dimension per S1-2304 locates the beam 18'-0 from Grid 15. This does not match the 18'-8 supplied in RFI T-1189 (SK 419, CD 313). Please clarify the discrepancy in beam and edge of slab location. 3) Confirm the noted section reference is correct. 4) The actual condition does not reflect what is requested in detail 3/S1-7601. Please clarify what is required. 5) Supply the missing clouded dimensions at (4) locations shown. 6) The detail shows the minimum offset dimension from the center of posts to the W10x22's in order to make the requested connections. Please review this with the actual dimensions and supply revised connection details as necessary. 7) Supply the missing clouded dimensions at (8) locations shown. 8) Supply the missing clouded dimensions at (8) locations shown. 9) Supply the missing clouded dimensions at (8) locations shown. 10) Connection section references are missing. Confirm they are correct as shown. 11) Supply the missing clouded dimensions at (8) locations shown. 12) Connection section references are missing. Confirm they are correct as shown. 13) Supply the missing clouded dimensions at (8) locations shown.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) All East/West post location dimensions are correct as noted on SK1 through SK4. On SK5 and SK6, the dimensions noted as 2' - 1" and 8' - 7 1/8" shall be 1' - 10" and 8' - 10 1/8", respectively. 2) The 18' - 8" dimension was specified in response to RFI T-1189 for the HSS 12x6x5/8 posts and the W12x14 and W14x22 beams only. The W12x26 beam shall be 18' - 2 3/4" from GL 15 so that the flange edge aligns with the edge of slab at the opening. 3) The detail reference shall be 11/S1-7601. 4) See response to 2). Detail 3/S1-7601 will reflect the actual condition at the location. 5) See attached sketch SKS-0341 for dimensions. Refer to Architectural drawings A1-7011, A1-7012, & A1-7013 for locations of all stair stringers. 6) Shear plate connections may be provided at the W10 beams and at similar locations at this stair if the double angle connection cannot fit within the available distance. 7) See attached sketch SKS-0341 for dimensions. 8) See attached sketch SKS-0342 for dimensions. 9) See attached sketch SKS-0342 for dimensions. 10) Confirmed. 11) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions. 12) Confirmed. 13) Dimensions are the same as those at the level below. See attached sketch SKS-0342 for dimensions

REQUEST:

See attached Contract Documents, A1-2202 and S1-2202.

An inconsistency was discovered between drawing A1-2202 and drawing S1-2202 regarding the West Throat Shear wall above the Lower Concourse. Sheet A1-2202 shows the shear wall stopping at the corridor, sheet S1-2202 shows the shear wall penetrating the corridor.

Please confirm which drawing, A1-2202 or S1-2202 governs.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Wall to be located per A1-2202. Please see attached SKS-0339 and SKS-0340 updates to the west throat shear wall above the lower concourse level.

T-1293.1	BGP - Lower Concourse Shearwall Inconsistency	Closed	05/19/2014	05/29/2014	05/20/2014	Potentially	<input type="checkbox"/>

T-1296	BGP - Concrete Plant Recertification Test Batch From: Webcor Construction LP Claude Titche To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto REQUEST: The 4th review comment to SUBM TG0600-095 (document enclosed as reference) states after plant recertification a "test batch" will be prepared and tested for accuracy. Attached is SCCI's concrete supplier (CEMEX) responses to the submittal review comments. Regarding the test batch, is it acceptable to either: 1) Have an Owner's representative perform a plant visit during production operations to observe batching tolerance during normal business hours? or 2) Neither perform the test barch nor plant visit?	Closed	03/31/2014	04/10/2014	04/02/2014	Potentially	<input type="checkbox"/>
			Answered By: Adamson Associates, Inc. George Metzger				
			ANSWER: Accept Suggestion: <input type="checkbox"/> After further discussion with Bob Foley of CEMEX, we are satisfied with the corrective actions CEMEX has already taken. The proposed plant visit and batch constituent verification are not required.				
T-1297	SSS - EoS Bent Plate at Knock-out Slab GL11-12 From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton REQUEST: See attached CD RFI # 378 SK1 & SK2: The knock-out slab extends 1 1/4" onto the flange as shown. Confirm that is acceptable or provide alternate direction.	Closed	03/31/2014	04/10/2014	04/11/2014	Potentially	<input type="checkbox"/>
			Answered By: Adamson Associates, Inc. George Metzger				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Move the East-West direction W21x50 beams to GLs D.8 and E.2 so that the slab will overhang the beam flange.

T-1298	SSS - Lift Eyes on Ground Cast Nodes	Closed	03/31/2014	04/10/2014	04/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The contract drawings indicate that lift eyes will be provided for shop handling: "Provide picking eye(s) as required for the handling of the cast node in the foundry AND the shop of the steel fabricator. Picking eye(s) to be located withing the interior of the casting's nozzle(s)" The lift eyes that were cast into the back side of the ground level cast nodes have now been machined off by Bradken, leaving only the lift eyes inside the nozzles. In order to safely handle these castings, new lift features need to be added to the back side to replace those that were machined off. OIW notes that if the castings are picked using only the lift eyes inside the nozzle, the center of gravity causes the castings to rotate into an unworkable position. Some other manner of rigging must be employed in order to manipulate the castings into positions required for shop fabrication work. CastConnex noted exactly the same issue in their Release 1 Pre Shipping Inspection Summary, even noting that the improvised and awkward handling was causing damage to the castings: "The lifting lugs are located inside the nozzle-end on these parts making the machined nodes difficult to manipulate. Often the parts have to be lifted using straps thru the pin hole causing some broken edges on the radius of the pin hole." To facilitate handling the cast nodes in the shop in a way that is safe and that avoids damaging the castings, OIW proposes that drilled and tapped holes be added. The attached sketches (2773-SK-401 and 2773-SK-402) show a proposed arrangment of these holes. Note that the proposed locations are in areas that will not be visable in the final product, and also are in areas of minimal stress. OIW requests that the engineer of record review the attached drawings and determine if the proposed modifications to the cast node are acceptable.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger 4/9/2014 Taping holes at the back side of the cast node for erection is a means and methods issue. Stacy Wilson 4/9/2014 To note, the referenced Cast Connex report was in regards to the roof nodes, not the ground floor nodes. In addition, the contract drawings never called for eyes on the backside of the ground floor nodes, therefore at the contractor's option, the addition of drilled and tapped holes shall come at no cost to the TJPA.

T-1299	SSS - Off-Set Beam Connection Modification at PE 403/404	Closed	04/02/2014	04/12/2014	04/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED By: Adamson Associates, Inc. George Metzger							
REQUEST: See attached CD RFI # 377 SK1 & SK2 for items 1 & 2: 1) Confirm the connections as shown are acceptable at the noted off-set beam locations. If not, supply an alternate connection detail. 2) Confirm the details shown on SK2 may be applied typically at future similar cases. If not, supply the missing detail for off-set beam connections with double angles per 1/S1-5010.		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Confirmed.			
T-1300	SSS - Carboline AESS Primer	Closed	04/02/2014	04/12/2014	04/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED By: Turner Construction Comp Stacy Wilson							
REQUEST: Specification section 05 10 00-2.2.B.2.b indicates that Carboline Carbozinc 621 is to be used for non-galvanized steel to receive high performance coating. Reference is made to the letter provided by Carboline attached, which publishes that this (nearly obsolete) product has a recoat window of only 2-3 hours, which cannot be achieved on the Transbay project since subsequent overcoats will be installed in the field by others. Carboline has provided information and validation for use of the Carbozinc 859 Organic Zinc Rich Epoxy as a replacement for Carbozinc 621, which provides protection and performance equal to or greater than Carbozinc 621. The Carbozinc 859 product provides an unlimited recoat window, allowing for intermediate and top coats to be applied by others in the field, in accordance with the project's schedule and contractual requirements. Please confirm the Carbozinc 859 product is acceptable for use as the AESS primer. Note: Specification section 09 97 16-2.2.A states that the		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/> RFI is rejected per Specification Section 01 10 40 1.6 C 2 a. "RFIs shall not be used for the following; the TJPA will not reply and will reject the RFI: Product or material Substitution".

From: Webcor Construction LP Stephanie Azzolino		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Detail 1/S1-8003 shows a corner to corner joint between the 2.5" mounting plate and the two supporting vertical stiffeners and the single horizontal stiffener on top.				Confirmed.			
Please confirm the two vertical stiffeners can be repositioned 1/4" in towards the center of the connection as well as lowering the horizontal stiffener. These adjustments will provide a land for the specified fillet weld and minimize melt through and weld splatter at the corners of each plate. Backside stiffeners will be repositioned to match as required.

T-1303	Wall Rebar in conflict with raker base plate 13 (GL1.5,D.8)	Closed	04/03/2014	04/03/2014	04/08/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Due to a conflict between the rebar dowels and the raker base plate 13. WOJV is proposing to cut the existing rebar dowels flush with the mat slab and drill and epoxy in a new same sized bar beside the existing one once the re-bracing raker is removed. Please confirm if this would be acceptable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed for this location.		
T-1304	SSS - Follow-up to CS3 Approval Comments	Closed	04/04/2014	04/14/2014	04/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Please review and confirm the items below regarding the TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13 approval comments: 1) Drawing 2669 ~ the noted beam is not sloping per S1-4004. Confirm the drawing is correct as submitted and no action is required. 2) Drawing 2707 ~ the noted beam is not sloping per S1-4015 (S1-4004 is not the correct drawing reference). Confirm the drawing is correct as submitted and no action is required. 3) Drawings 2706, 2710, 2713AB ~ the 3 1/16" dimensions are necessary as the beam webs vary in thickness. The 3" dimension on the angles has been used at the thickest beam web. Confirm the drawings are correct as submitted and no action is required. 4) Drawings 3792, 3793 & 3794, 4933, 4935, 4994, 4995, 4998 ~ The top cope on the right end is correct as shown. The Approver's reference to a 2" flange is incorrect as the TPG1 on Grid 13 has a 3 1/2" thick flange per S1-4200. We have limited the clearance at the top to 1/4" be able to fit the number of bolts per S1-5010. Confirm the drawings are correct as submitted and no action is required.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Confirmed. 2) Confirmed. 3) Confirmed. Note that there is another comment on sheet 2706 for which the sheet needs to resubmitted for record. 4) Confirmed. 5) Confirmed.		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	5) Drawings 4832 & 4924 ~ RFI T-0857 (SK 117, CD 089) asked for permission to cope the beam as shown on the submitted drawings on SK2 item 1 and the cope was approved in the response. Cutting one side of the flange is not sufficient to clear the brace. Confirm the drawings are correct as submitted and no action is required.						
T-1306	BGP - Geothermal Field 11 Mud Slab Rebar	Closed	04/07/2014	04/17/2014	04/13/2014	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 387 SK1 to SK6 for items 1 to 15: 1) Supply all clouded dimensions on SK1 thru SK6. 2) [Issue has been resolved, no further action necessary] 3) Supply the top of concrete elevation for the (4) posts. 4) This detail shows horizontal HSS beam but the beam is not shown here or on S1-2202. Please clarify. 5) This detail does not allow for any horizontal adjustment for concrete +/- location variances. Please review and advise. 6) [This item is to be resolved by Skanska] 7) Confirm these posts are continuous from 1/S1-7400 (SK1) to here. 8) Clarify the noted landing steel and supply the member sizes, elevations & dimensions. 9) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S15012 and 1/S1-5010. Supply alternate connection details if the dimension is less. This is a typical occurrence on all stairs. 10) Confirm all stair landing beams are centered on the posts or supply offset dimensions. 11) Supply a connection detail. 12) The noted 2 braces per 1/S1-7600 will span across the slab opening. Confirm that is acceptable or give direction. 13) Do the posts starting above the Lower Concourse Level in detail 2/S1-7400 (SK2) extend to the underside of the HSS beams? Please clarify. 14) Clarify what supports the noted steel. 15) Supply a corner connection detail.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Refer to attached sketch SKS-0347 for missing dimensions. 3) Refer to 1/A1-7004 for top of concrete elevations. 4) Detail 4/S1-7600 does not apply and is incorrectly called out at the highlighted location. 5) The statement "this detail does not allow any adjustment for concrete +/- location variances" is not entirely clear. Up to a 1" gap is allowed between the end of steel beam and concrete wall therefore there should be enough tolerance for placing steel as long as concrete walls are constructed within tolerances. If the intent of the question was different, please clarify, or alternatively add this item to the next structural coordination meeting agenda for further discussion. 7) Confirmed. The guide rail posts are continuous in between floor levels. 8) Detail 3/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing. 9) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically for such instances. 10) Confirmed. Refer to latest architectural issued A1-7XXX series sheets for correct post locations. 11) Provide connection detail per 3/S1-7600 except, The W10 beam connects to the HSS post per 3/S1-5012. 12) Provide full depth stiffeners on both sides of the beam web in lieu of the braces per detail 1/S1-7600. 13) Yes. See attached sketch SKS-0347 that shows the HSS posts. 14) Detail 6/S1-7004 was updated in IFC Main Package dated 3/31/2014. See attached sketch SKS-0347 that shows the updated framing.

REQUEST:			SUGGESTION:		ANSWER:		
See attached CD RFI # 374 SK1 & SK2 for items 2 to 4, as a follow up to the review comments provided in Submittal Package TG0701-075 SSS - Structural Steel Shop DWG (CS3) GL 12-13:					Accept Suggestion: <input type="checkbox"/>		
1) [Item 1 has been responded to internally by Skanska. No further action is required]					2a) We confirm that the RFI response to T-0923.1 remains valid..		
2a) The approver's reference to T-0923 has been superseded by follow-up RFI T-0923.1. This RFI confirmed 2'-0 1/4 to match the W-1 Rhino model. Please confirm the RFI response to T-0923.1 remains valid.					2b) We confirm that the dimensions provided in the Rhino model are to be followed.		
2b) Not all CP6 connections are located 2'-0 1/4 below the top of steel on the Bus Deck Level. The dimensions shown on this drawing match the W-1 Rhino model. Please confirm that the dimensions provided in the Rhino model are to be followed and that no further action is required.					3) Confirmed no further action required.		
3) Refer to RFI T-0738, which confirmed modifications to the plate thicknesses. Confirm no further action is required.					4) The requested cope dimensions as shown cannot be confirmed by the Design Team. Please provide a 3D model of the entire connections, so that the Design Team can coordinate with the Rhino 3D model. Specifically, we would like to have the beam flange coping and cast node perimeter beam drag connection tabs with all other connection elements, so that we may confirm it fits with the W-18 and W-9 cladding Rhino model.		
4) The requested cope dimensions are shown. Confirm no further action is required.

T-1313	SSS - Deck Support Detail at Column	Closed	04/09/2014	04/19/2014	04/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Please reference detail 1/S1-5001. The L3x3x12ga deck support angle is shown coping into the web of the girder. At the majority of the conditions where this may occur the girders have thick and wide flanges. After the angle is coped as detailed we will have very little material to work with and it is unlikely to have much structural integrity. Please see attached alternative sketch. In this condition the angle is lapped on top of the girder and connected with fillet welds. The depth of the girder has no impact on the detail. This is a common detail in the metal decking industry. Please confirm the proposed column angle support sketch is acceptable.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Alternative deck support detail shown in the RFI can be used at the Contractor's option.				
T-1314	SSS - Basket Column Grout Hole Clarifications	Closed	04/09/2014	04/19/2014	04/16/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Transformer Vaults detail drawings A1-3001 & A1-9235 (for vaults on A1-2222); A1-3002 & A1-9236 (for vaults on A1-2223); A1-3003 & A1-9237 (for vaults on A1-2225), and pad details S-3002 of the IFC 3.31.2014 drawing set.			It is acceptable to provide mechanical couplers or drilled and bonded dowels for detail 4, 5 and 6 on S1-3002 at contractor's option. Contractor to ensure that the drilling does not expose or damage the existing rebars in the slab.				
The IFC set curb & pad details 4, 5 & 6/S1-3002 appear to require #4 rebar dowels to be cast into the Concourse slab. Please confirm if this is the designer's intent or if details similar to 2&3/S1-3002 can be applied at the Contractor's option for the concourse level transformer pads and curbs, i.e. couplers or drilled & bonded dowels.

	REQUEST: See attached CD RFI # 388 SK1 to SK6 for items 1 to 6: 1) Supply all clouded dimensions on SK1 thru SK6. 2) Confirm all landings have 1/4" checker plate. 3) Please clarify which stringers go up and which stringers go down and add stair to landing connection references as was done on S1-7004. 4) How are the (3) W10x22's supported/connected? 5) How are the noted (2) W10x22's supported/connected? 6) The noted 6" dimension does not work with detail 3/S1-7601 which shows the stringer attaching at the toe of the beam flange. Please clarify.	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> 1) Refer to attached sketches SKS-346 and SKS-349 for missing dimensions. SKS-349 shows how the stair landing beams that are perpendicular to the stringers can be located based on architectural drawings. 2) Refer to Specification "Steel Stairs and Railings 05 51 00" under 2.2 Materials -B Checker Plate Treads and Landings. 3) See attached sketch SKS-0346 for clarification of stringer direction. Also refer to architectural drawings A1-7005 and A1-7104. 4) The W10 beams frame into CMU walls and are shown on S1-7005 that was updated in IFC Main Package dated 3/31/2013. See attached sketch SKS-0346. 5) See response to 4). 6) Move the W16 beam closer to the edge of slab for detail 3/S1-7601 to work at the location.

T-1320	BGP - Dewatering Sleeve at Mat Slab Depression	Open	04/14/2014	04/24/2014	04/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Grace requires that there be a minimum 8" clear horizontal plane to allow for the waterproofing membrane transition. Dewatering sleeve #38 is located on the edge of a sloped mat slab depression. Please confirm it is acceptable to lower the flat the mud slab to provide a sufficient horizontal plane to accommodate waterproofing. Sides of depressions will be sloped at 45deg.					The TJPA Representative does not object to the Contractor's proposal to adjusting the mud slab as described at Dewatering sleeve #38 to suit the waterproofing manufacturer's requirements.		

T-1321	BGP - Geothermal Riser Location Field 14	Closed	04/14/2014	04/24/2014	04/22/2014	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 383 SK1 to SK3 for items 1 to 3: Drawings A1-2502 (SK1), A1-2892 (SK2), A1-2951 (SK4), and 1/A1-2951 (SK5) show a valley. A valley is not shown on S1-2502 and S1-2602 and it is not clear what the intent is for the structural framing: 1) In order to keep the diagonal brace framing along Grid H in one plane (shown in blue), it is necessary to introduce a valley as indicated by the red line. If not, twisting will be introduced into the framing and connection details 3/S15025 at Grid 1.4 and 1/S1-5018 at Grid 2. Per Note 6 on S1-2602 the beams are canted to match the slope of TPG1 on Grid 2 but the BU-40 on Grid 1 is horizontal. This will result in the beams having to twist. To avoid this a valley as shown on the architectural drawings is required. Please confirm a valley as indicated by the red line is required or clarify/supply the top of steel elevations between grids 1-2. 2) If a valley is introduced, all beams crossing the red valley line will need to be broken-back/bent beams. Please supply a detail showing the splice at the bend lines. 3) If the valley is to occur, please clarify the location of the valley as drawings A1-2502 (SK1) and A1-2892 (SK2) show conflicting information. The same condition shown here also occurs between Grids 1-2/B-D, 32.4-33.5/B-D & 32.433.5/F-H. The same condition except opposite shown here occurs between Grids 1-2/F-H on the roof park level. 4) It is not clear on S1-2606/S1-2607 where the east-west slopes start east of Grid 31.7. Please clarify the framing.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> 1.) A valley is not required. See specific comments for Bus Deck and Roof Park Levels below: At Bus Deck Level, an additional top of steel elevation is provided within the deck zone bounded by Gridlines 1&2 and E.6&H. Top of Steel at Gridline 2/G can be calculated as 55' 10 3/8" by linear interpolation using the top of steel information provided at Gridlines 2/E.6 (at column face) and 2/H. At GL 1.4/G top of steel can be assumed the same as 2/G therefore the diaphragm truss is in single plane. Metal deck will need to be slightly warped at other parts of this zone, where two way slopes are present. Ultimately, thickness of the structural topping slab can be adjusted locally to achieve the slab slopes per architectural drawings. At the Roof Level, following info is provided for the deck zone bounded by Gridlines 1&2 and E.6&H. East-west running beams are to be set perpendicular to TPG1. These beams will land on the Gridline 1 slightly rotated however rotation is small resulting in an approximately +/- 1/8" vertical deviation at the tips of the east west running beams' flanges with respect to the GL 1 beam. Metal deck will be slightly warped at this zone. Per our estimations, metal deck steel beam gap/clash is in +/- 1/16" range which can be addressed by small amount of warping in the metal deck. 2.) See response to (1). 3.) A valley is not required. Information provided in item 1 is applicable to the locations noted in this question at the Bus Deck and Roof Levels. 4.) In Sheet S1-2607, East-West slope starts at GL 32.4 as indicated Sheet S1-2607 (between gridlines 32.4/D4 & 32.4/E.6). As indicated in item 1, metal deck will be slightly warped in this area where two way slopes are present.				
T-1322.1	SSS - West Zone Bus Level and Roof Level Grade Clarifications	Closed	05/16/2014	05/26/2014	06/02/2014	Potentially	<input type="checkbox"/>

REQUEST: See attached CD RFI # 383.1 SK1 to SK6 for items 1 to 10: The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces. This means that the noted W40x149 & W36x231 will not align with the top of the W40x297 on Grid 1. 1) Please advise how to make the moment weld for the for the W40x149 to the W40x297 with the flanges not aligned. 2) Please supply a detail showing how the deck will be supported at the (2) lowered beams. 3) Due to the beams not being aligned, confirm it is acceptable to connect these beams with shear plates per 1/S1-5011 4) Confirm it is typically acceptable to lower the beams to align the corner of the flange with the top of the supporting beams as some connections are moment connections. 5) Review all items on SK2 and confirm they meet the design intent. 6) The noted (2) skewed W40x277 form part of the bracing system and must remain in the same as the other braces. This means that the (4) noted beams will not align with the top of the W40x297 on Grid 33.5. Please supply a detail showing how the deck will be supported at the (4) lowered beams. 7) Confirm the T/Steel elevation at this location is EL. 55'-8 9/16 based on the north/south slope to keep the diagonal bracing in the same plane. 8) Confirm the noted (2) beams will be canted to match the other beams based on the slope on TPG1 on Grid 2. 9) Review all items on SK5 and confirm they meet the design intent. 10) This is to confirm the response in RFI SK515 item 4: All beams within the blue boundaries on SK6 will slope as needed the have the top of beams flush with the top of the supporting beams per the noted T/Steel elevations. The east/west beams between Grids 32.4-33.2 will be canted to match the canted beams west of Grid 32.4. The east/west beams between Grids 33.2-33.5 will be canted to match the slope of the beams on Grid 33.2. Please confirm.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> 1). The W40x149 (0.83" thick flange) may be lowered so that the complete penetration weld can be made for the top flange because W40 x 297 has a 1.65" thick flange. For the bottom flange weld, a plate might need to be added in order to achieve the complete penetration weld. 2). The T/STL for W40 x 149 is not necessarily controlled by the diagonal brace, as the type G drag connection detail (1C/S1-5018) has called for shim plates as required. W 36 does not need to support the metal deck. 3). Yes, the E/W beams between Grids 1 & 2 may be changed to a single shear plate connection as shown on 1/S1-5011 with the following 2 conditions: a) Type X bolts should be used for W21 and W24 beams. b). One row of bottom flange bracing should be provided for the W21 and W24 beams between Grid 1.4 & 2 per detail 8/S1-5015. 4). Confirmed 5). Confirmed. 6). See responses #1 & 2 7). Confirmed 8). Confirmed 9). Confirmed, Also see response to items 1 & 2. 10). Confirmed.

T-1323	SSS - Bus Deck Level Slab Clarification	Closed	04/14/2014	04/24/2014	04/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Bus Deck Level drawings S1-2502 thru S1-2507 indicate an S8 type slab, as per metal deck schedule 2/S1-5000, S8 is a 10" structural slab with 4" second pour topping slab. Sheet note #6 on S1-2502 indicates "shear studs are to extend a minimum of 2" into the second pour UON. See detail 9/S1-9004 for perimeter EoS conditions" (S1-9004 has not been provided). Drawings A1-2892 thru 2987 show a 1" topping slab typically between 10' north of GL D and 10' south of GL F. The slab outside of that region is typically shown as structural slab only. Confirm that decking drawings will be modeled as per the information provided on the structural contract drawings unless otherwise directed.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Note that the 4" second pour topping slab is part of the structural slab and studs are to be extended 2" into this 4" topping slab as shown on 4/S1-5003. Studs do not extend into the architectural topping slab. Also, the correct detail reference for perimeter EOS condition is 9/S1-5004.			
T-1324	SSS - BRB Clevis Plate Detail	Closed	04/14/2014	04/24/2014	04/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED BY: Adamson Associates, Inc. George Metzger							
REQUEST: Skanska is the process of incorporating the AAN BRB Shop Drawings from Star Seismic into the Tekla model. During the integration process we have identified a deviation from certain dimensions shown in the contract documents. Specifically, the 2" dimension shown from edge of clevis to top of concrete at the ground level connection and the 5" dimension shown from edge of clevis to the bottom flange of W section above. Below, is a table showing the "As Detailed" dimensions at each BRB. Please confirm that the 2" & 5" dimensions shown on S1-4206 are not controlling dimensions and the lengths of the BRB's from WP-WP as designed, detailed and approved, control.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Provided dimensional deviations from contract documents are acceptable at all locations except for BRBs at GL 4-5/F; 28-29/D.4, 29-30/D4 and 30-31/D.4. At GL 4-5/F, provide bottom clearance between 2" and 3" (2" ideal) and a top clearance between 5" and 6" (5" ideal). At East Building BRBs (28-29/D.4, 29-30/D4 and 30-31/D.4), it is not clear from the RFI that the contractor understood the design intent at the bottom clevis plates. At the bottom, 2" clearance to the clevis plate applies from the top of the finished floor (not the top of structural concrete slab) since these braces are exposed. See BRB elevations (S1-4150) and the corresponding detail (1/S1-4206) for this info. Note that the finished floor at this location slopes down to East and this information shall be coordinated per

T-1324.1	SSS - BRB Clevis Plate Detail From: Webcor Construction LP Co-Author: Skanska USA Civil West California DisRyan Clayton REQUEST: Skanska has incorporated the response to RFI T-1324 into the drawings and made the necessary adjustments, while maintaining the required stiffness factor, at gridlines 28-29/D.4, 29-30/D4 and 30-31/D.4. These adjustments have been submitted under submittal package TG0701-415.4. However, after discussions with Star Seismic, at GL 4-5/F the stiffness factor plays a limiting role into modifying the length of the brace. Please see the attached stiffness and over strength analysis, provided by Star Seismic, and confirm that the brace lengths may stay the same as previously approved in TG0701-415.2.	Closed To: Turner Construction Company Phil Militello	05/08/2014	05/18/2014	05/21/2014	Potentially	<input type="checkbox"/>
			ANSWER: civil/landscape drawings as applicable. For these BRBs, top clearances indicated in the RFI are acceptable in current form. Accept Suggestion: <input type="checkbox"/>				
			GL 4-5/F dimensions shall be as indicated in RFI T-1324. It is acceptable to have a stiffness ratio of 11% as shown in the calculation submitted by the Contractor. We also note that there may also be other ways to achieve the required pin-to-pin dimension and the required stiffness multiplier called out on the contract drawings. Also, it is not clear why the yield zone length is reduced by 16" whereas the pin-to-pin dimension is reduced by 6" in the calculation. With a longer yield zone length a lower stiffness multiplier can be achieved.				
T-1325	BGP - Partition Wall Details From ASI 110 From: Shimmick Construction Company, Inc. Sylvia Hartanto Co-Author:	Accepted To: Webcor Construction LP Claude Titche	04/15/2014	04/25/2014	04/15/2014	Potentially	<input type="checkbox"/>
			ANSWER: Please refer to Field Order 00027, 100% Main Package Drawings, "Issued for Construction" dated 3/31/14 Accept Suggestion: <input type="checkbox"/>				
			Please provide elevation and reinforcement details for partition walls on the Train Level added to TG0600's scope as part of ASI 110. Additionally the dimensions for the partition walls were deleted between ASI 107 and 110. Please confirm ASI 107 dimensions or provide new dimensions for ASI 110 drawings. The ASI 110 drawings in question are AI-2122-2127, AI-2222-2227, and AI-2230.

REQUEST: Please reference AI-7401 rev 4 and SI-2251 rev 5. Please also reference RFI T-0835 1. S1-2251 shows additional beams added to vehicle ramp that intersect the South and West foundation walls. A 1-7401 does not appear to show the same quantity of beams intersecting the south perimeter wall. Please supply a revised architectural drawing or detail that shows any/all beams that are added from S1-2251, and that shows the angles at which those beams intersect walls. 2. Please confirm AI-7401 revises the beam intersecting angles that were provided in RFI T-0835.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. A1-7401 has been updated to show beams, including angles at which they intersect the foundation wall. Refer to SKA-3138 attached. 2. The intersecting angles for Beam B142 (previous beam mark B43), B125 and the 16" wall are confirmed. B132 has been removed.		

T-1327	BGP - Lower Concourse Beam Locations	Closed	04/16/2014	04/26/2014	04/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché			To: Turner Construction Company Phil Militello				
Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Please confirm the bellow structural beam updates should be incorporated into the TG06 Scope of work. 1. CB24 is required between Grids 4 and 5. Beam centerline to be located 12'-3" south of Grid C.3. 2. B1 shown west of Grid 5 at approximately Grid B.6 is not required and can be deleted from scope. 3. The pair of B4's shown east of Grid 5 near Grid B are not required (opening has been removed). Beams can be deleted from scope. 4. B24 is required between Grids 6 and 7. B23 is required between Grids 7 and 8. South face of both beams shall be located approximately 27" north of Grid E.6 and align with the northern most face of trestle pile blockouts in order that they not be interrupted by the blockouts. The coordinated location of the beam with blockouts will be submitted on the comprehensive layout drawings. RFI T-1040 response is superseded as is RFI T-876. Section 2/S1-3501 does not apply. SKS-0343(attached) will detail the section across drop. 5. B25 is required between Grids 7 and 8 near Grid B.6. Beam will align with B29 to the west. 6. CB15 is required between Grids 10.1 and 11 near Grid			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Confirmed. 2. Confirmed. 3. Confirmed. 4. Confirmed. 5. Confirmed. 6. Confirmed. 7. Confirmed. 8. Confirmed. 9. Confirmed. 10. Confirmed. Stacy Wilson 4/21/2014 Pending TJPA approval, a CR will be issued seeking a credit for the deleted beams

T-1330	BGP - Glass Guardrail Embeds at B1 Beams	Closed	04/17/2014	04/27/2014	04/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:				
Please reference RFI #T-0440 and #T-0440.1 responses and the attached Contract Drawings S1-3410, SI -2203, and SI-2204.			ANSWER: Accept Suggestion: <input type="checkbox"/>				
The detail for the glass guardrail embed depicted in 7/SI-3410 calls for a 3/8"x7" embed with an 8" minimum coverage for the top embed and a 6 1/2" minimum coverage for the bottom embed. The guardrail embeds located at B1 beams on the east side of openings between GL 11/12 and D.8/E.2 (SI-2203) and GL 18/19 and B/C (SI-2204) will not have minimum sufficient coverage due to the 18" beam depth of BI beams (see attached photo).			Bottom embed plate at B1 members not required. Additional supporting member to be included as part of Phase 2 scope. Top embed plate at B1 to be placed with 8" min coverage and align with top embed at supporting concrete girders.				
Please provide a detail for glass gaurdrail embeds at the B1 beams. Please note, these specific embeds have been fabricated and are onsite

From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello				
Co-Author: Skanska USA Civil West California DisRyan Clayton			Answered By:Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
See attached CD RFI # 389 SK1 to SK7 for items 1 to 12:			1) Not acceptable. Provide a W16x26 beam centered on the two HSS posts as shown in the attached sketch SKS-0350. Provide shear plate connections per 1/S1-5011 at the ends of this beam. The W16x26 beam will be added on the structural drawings in the next ASI.				
1) The noted W16x26 beams are centered below the concrete wall on S1-2303. Confirm the lower beam may be moved below the stair post or supply an alternate solution.			2) See response to 1).				
2) The noted W16x26 beam is centered below the concrete wall on S1-2303. Confirm it may be moved below the stair post or supply an alternate solution.			3) Refer to architectural drawings A1-7006, A1-7501, A1-7502 and 3/A1-7506 for the stringer and landing beam locations.				
3) Supply all clouded dimensions on SK2 thru SK7.			4) Align the intermediate W10 beams to the stringers.				
4) Confirm equal spacing.			5) Correct detail reference at the 8 locations should be 6/S1-5012.				
5) It appears the noted stair stringer connects to the HSS post. Please supply the missing connection detail.			7) Detail at the highlighted location is similar to 3/S1-7601 except the stringer shall be welded to the bent plate at the edge of slab and not the WT.				
6) The plan shows a moment connection but detail 3/S1-5012 does not. Please clarify the intent for the beam to post connections at (8) locations.			8) Confirmed.				
7) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 7" from beam center.			9) Confirmed.				
8) This dimension is 7" per S1-2403. Confirm 7" is correct.			10) Provide shear plate connection per 1/S1-5011 at the W10 stair beams typically at such locations where double angle connection is not possible.				
9) Confirm the "CB" notation should be removed.			11) Refer to architectural drawing A1-7006 for correct post locations.				
10) The minimum distance between the center of post and the W10x22 must be 1'-1 3/4 in order to connect per 3/S1-5012 and 1/S1-5010. Supply alternate connection details if the dimension is less.			12) See response to 7).				
This is a typical occurrence on all stairs.							
11) The red dimensions match the dimensions shown in detail 3/S1-7006 (SK3). Please clarify the discrepancy in dimensions.							
12) 9/S1-7601 is not the correct detail because it shows an HSS beam and we have a W21x50 at this location. Please clarify and note that detail 3/S1-7601 will not work as the edge of slab is 6" from beam center.

	<p>2-3, 3-4, 8-9 & 9-9.9 (16 locations).</p> <p>Item #1 added a 3/8" bent plate to support the upper level deck and can be applied at two locations between grid 2-3 as indicated on SK1. At the other 14 locations the step is similar to item #2 of T-1339 which added an 18 gauge Z closure. At grid 12-14 the perpendicular support beam is located within 1'-9" of the step, at the 14 locations listed above the support beam varies from 2'-0" to 6'-0" and at two locations at grid 2-3 no support beam is provided. Refer to SK3 for clarification.</p> <p>Please confirm the 18 gauge Z is sufficient to carry the load of the deck at the 14 locations or provide an alternative detail.</p>						
T-1339.2	SSS - Deck Support Steel at Step in Slab	Closed	06/18/2014	06/28/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The response to RFI T-1339.1 indicated the zee closure was incorrectly shown on SK-3 and shall be supported on the lower beam, not on top of the deck. We agree the closure would be best supported on the lower beam, however the closure was placed on top of the deck so that the lower deck could bear 3" on the beam as is required for a type 3 deck as per 2/S1-5000.				Option 1 is not acceptable.			
SSK-0355 revises the closure so that the bottom leg is underneath the lower deck and the top leg is above the upper deck. This creates several problems for installation. The most significant being that the closure now needs to be installed before the deck. Typically closures are installed after the deck so that the deck can be used as a working platform. SSK-0355 would require the installation of the closure on open iron, which while possible is not a safe working practice.				Option 2 is acceptable. The 3" minimum bearing requirement may be waived and a bearing of 1-3/4" is acceptable at locations where detail B on SK-1 is applicable.			
Option 1: As a proposed solution to the issues indicated

T-1341	BGP - Plumbing Opening in Mechanical Room B2203	Closed	04/18/2014	04/28/2014	04/28/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please see attached drawing for clarification regarding dimension of the plumbing opening above the door in Room B2203. In AI-9215, the door opening and distance between piers is scaled to be 3' -5" and was submitted as a 3 '-5" opening per approved submittal TG0600-102. However in A1-9217 a plumbing opening with a dimensioned width of 3' -11" is shown to span the distance between the piers. If the 3 '-11 " opening dimension is correct as shown, the blockout would cut into the piers. Please confirm the dimension of the plumbing opening and whether or not it is intended to cut into the piers. Please note that the pier dowels have already been installed with the 3'-5" span per approved submittal TG0600-102.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The 3'-5" width dimension for the door opening in between piers, described in this RFI, is correct. For updated plumbing opening above the door at Stair 203 (Room B2203), refer to the attached SKA-3142 and SKA-3143.

T-1342	BGP - Partition Wall Thickness Above Door Openings	Closed	04/21/2014	05/01/2014	05/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titche			To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Both the Architectural and Structural Drawings of the partition walls show the plan view at the base of the wall and do not indicate the thickness of the wall above the door openings. Please clarify wall thickness above door openings in partition walls.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> For door openings in Reinforced Concrete and CMU partition walls, the wall above the doorway is the same thickness as the adjacent run of wall. To clarify, for example, where the wall is 10" thick CMU and there are 1'-4" thick piers on both sides of the doorway, the wall above the doorway will be 10" thick CMU.

T-1348	BGP - SFPUC Electric Room Copper Mesh	Closed	04/23/2014	05/03/2014	04/29/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Claude Titché	To: Turner Construction Company Phil Militello	Answered By: Adamson Associates, Inc. George Metzger				
	Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto						
	REQUEST: <p>The response to RFI 1220.1 included E1-3212 which details the embedded grounding required for the SFPUC Electric Rooms. Note 5 indicates that a #6 copper mesh is to be installed.</p> <p>Please provide the following information:</p> <p>1) Type of mesh (Pure Copper or Copper Coated Steel)</p> <p>2) Required spacing for grid of mesh</p> <p>In addition, please provide a drawing with the dimensions to the location of the #2/0 copper pigtails which stub up into the future switchgear enclosures.</p>	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
			REVISED RESPONSE				
			1) Mesh shall be copper. Copper coated steel is not acceptable. Erico or equal.				
			2) Required spacing shall be 8" x 8"				
			The copper pigtails may be stubbed up anywhere within the switchgear footprint/elevated pad area.

T-1348.1	BGP - SFPUC Electric Room Copper Mesh	Closed	05/29/2014	06/08/2014	06/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please reference plan sheet EI-3212.					1) The #6 mesh is to be interconnected to the grounding grid in several locations. Where the #4/0 grid crosses or contacts the mesh, it could be directly connected. Additional connections to the #4/0 grid are required from remote parts of the mesh. These interconnections shall be made with #1 bare CU connections.		
1) Note 4 on plan sheet EI-3212 states, "Cadweld main #4/0 grid to #6 mesh with #1 stranded Cu conductor (typical). Refer to Detail 1/EI-3212." Detail 1/EI-3212 does not show a #1 copper conductor connecting the grid to the mesh. Please confirm the 4/0 grounding grid is to be connected directly to the grounding mesh.					2) The Detail 5/ E1-3212 did not convey a numbered note for this connection. Similar to the response to question 1, this connection refers to additional bond points (using #1 bare CU conductors) between the #4/0 ground grid and the grounding mesh.		
2) Please see the attached Detail 5/EI-3212. Please identify which part of the grounding grid system the highlighted portion belongs to and provide the proper wire size.					3) Yes, the callout refers to using #2 AWG bare CU to the battery racks. The pigtail in Detail 4/E1-3212 is also required to be #2 AWG bare CU to the battery rack.		
3) Detail 5/EI/3212 designates the embedded conductors going to the battery rack as #2. Please confirm this means #2 AWG copper conductors. In addition, no designation is provided on Detail 4/EI-3212 at the pigtail which appears to be for the battery rack in B1289. Please confirm this is pigtail is to be #2 A WG conductor as well.

T-1348.2	BGP - SFPUC Electric Room Copper Mesh	Closed	06/09/2014	06/09/2014	06/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Turner Construction Comp Judith Long			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: The response to RFI T-1348.1 stated the #6 mesh shown on E1-3212/Detail 1 is to be interconnected to the grounding grid at "several locations" and that the #4/0 grid could be "directly connected" where it crosses or contacts the mesh. This response also stated that all other connections are to be #1bare CU connections. 1) Please provide the exact quantity of connections which are required from the #4/0 grid to the #6 mesh. 2) Please provide the interval distance between required direct connections from the #4/0 grid to the #6 mesh. 3) Plan sheet shows six (6) total #1 "remote connections" in each room. Please confirm this is the proper quantity required.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> George Metzger: 6/13/14 Per TJPA(Guy HOLLINS) direction, this RFI shall be redirected to the TJPA to forward to SFPUC for response. Matt Ho 6/17/14: 1) RESPONSE: Referring to Details 4 and 5 on Sheet E1-3212 for the West and East Switchgear Rooms, we count 16 locations in the West room and 17 locations in the East room that offer an opportunity to connect the #6 mesh to the #4/0 grid. These locations include all interconnections of the #4/0 grid to ground riser conductors, grid cross connections, grid to pigtails (for equipment grounds), and grid to ground test bar connections. 2) RESPONSE: As noted above, the recommended connections to the mesh do not need to be evenly spaced. The connections can be made by including the mesh in the various connections to the #4/0 grid. 3) RESPONSE: The quantity noted should be adequate. Response by: Matt Ho, SFPUC dated 6/17/14			

T-1349	BGP - Beam B52 Trestle Pile Conflict	Closed	04/23/2014	05/03/2014	04/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: See attached CD S 1-2202 and sketches. Trestle pile No. 88 at GL F5 encroaches into the B52 beam by approximateley 6". In liue of creating the blockout in this beam SCCI proposes to shift the beam 8" to the North. Whith the approval of the beam moving concept, following items will be taken into consideration: 1. Adjacent beam B51 , to the West, has long bars and short bars. these will be placed in to layers.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Ethan Heinrich 4/24/14 Response to RFI comes at no cost to TJPA.

REQUEST:		SUGGESTION:		ANSWER:			
See attached CD RFI # 401 SK1 & SK2:				Accept Suggestion: <input type="checkbox"/>			
The Scougal Rubber Bearing Pads (Package Number TG0701-95.1) foul the flange of the W40x327 as shown.				The 2 - 3/4" clearance between the W12x65 beam and the W24x68 beam shown on 1A/S1-5021 may be increased and the bearing assembly may be lowered so that the bearing pads clear the W40x327 flange. Adjust the hanger length accordingly. A minimum clear horizontal clearance of 3/4" shall be provided between the pads and adjacent structure.			
Please provide a solution.

<p>See attached submittal sheet D2.28 and sheet E1-2204. Response comment to Submittal Package TG0600-121.1 on sheet D2.28 between gridlines 12-13 B-C, calls out "conduits are now embedded in the lower concourse slab". Per the TG0600-121.1 submittal review comment meeting held on 4/30/14, please confirm that embedded conduits FE045,FE051,FE052,FE058 incorporated on sheet E1-2204 dated 03/31/14 will continue to be surface mounted and blockout will be left in place for penetrating the slab.</p> <p>Please confirm attached sketch SKA-3148 showing the coupler setting out dimensions for the future corridor wall at B1 level, GL 10, B-C as reviewed with AAI in our slab edge workshop held April 30, 2014</p> <p>Please confirm rebar for Lower Concourse Floor drains marked "Future" are to be trimmed as detailed on 1/S1-3501 but not blocked out.</p> <p>For door openings not dimensioned on architectural slab, floor or wall plans, please confirm it is acceptable to size door rough openings in the lower concourse partition walls to be 4.5" larger than doors scheduled on sheets A1-9700, A1-9701, A1-9702. If not please provide a door jamb detail for these openings.</p> <p>Please confirm that Lower Concourse telecom penetrations shown on slab edge plans A1-2841 through A1-2851 to be 4" x 90 GRS elbows with a factory 30" radius as shown on 6/TE1-8014.</p>					<p>1. Embedded conduits:</p> <p>WSP Response: WSP does not object to the proposal of surface mounting conduits and retaining the slab blockout in these specific referenced zones. For other areas where embedded conduits are indicated, WSP recommends the embedment in this phase.</p> <p>2. SKA-3148 showing coupler setting out dimensions for future corridor walls at B1 Level, GL10/B-C:</p> <p>AAI Response: Confirmed.</p> <p>3. Future Floor Drains:</p> <p>WSP/MDS Response: It is confirmed that the lower concourse floor drains marked "Future" will be trimmed as detailed on 1/S1-3501 but not blocked out.</p> <p>TT Response: The reinforcement for the Lower Concourse slab at Floor Drains marked as "Future" are to follow detail 1/S1-3501. It is acceptable to trim bars.</p> <p>4. Door Rough Opening:</p> <p>AAI Response: As stated in workshop meeting April 30th, 2014, AAI cannot provide rough opening dimensions, as the rough openings may vary between manufacturers. It was agreed that WO will check on specified door manufacturers for the appropriate door rough opening requirements and provide this information to sub-contractor.</p> <p>5. B1 Level Telcom Conduit Penetrations on slab edge plans:</p> <p>SMW response: 4"x 90 GRS Elbow with factory 36" min - 42" desired radius cast into concrete beam as shown on 6/TE1-8014.</p>

			REQUEST:	SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>
			See attached RFI T-1362 Response.				
T-1362.1	BGP - Telecom Cast-In Elbow Radius - Lower Concourse	Closed	The response to RFI T-1362 states that 4"x90 elbows with factory 36" min - 42" radius are to be cast into concrete beam as shown on 6/TE1-8014. This contradicts with the 30" radius called out on sheet 6/TE1-8014 and 30" radius confirmed in the comprehensive layout drawings, TG0600-121.1. Please confirm if the 30" radius elbows currently installed per TG0600-121.1 will need to be swapped out for 4"x90 GRS ELBOW with Factory 36" min - 42", as stated in the response to RFI T-1362.				
			SM&W Response: NO, 30" bend radius is not confirmed or approved, the minimum bend radius shall be 10 times conduit trade size (internal diameter), this means SM&W will accept commercially available factory bends of minimum 36", with 42" preferred.				
			See attached updated detail TSK-0040, which supersedes TE1-8014

T-1365	SSS - Train Box Column Cap Plate Hole	Closed	05/06/2014	05/16/2014	05/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: With reference to the Train Box Column cap plate, our machine shop has drilled (1) non-standard hole in (1) p395 cap plate due to a broken tool. See attached inspection report and photos. The hole is dimensionally in the correct position but has an internal spiral cut. The minimum diameter is 1-9/16" (1.563) and the max diameter is 1-49/64" (1.770). Please confirm if one of the following is acceptable: Option 1 - Proceed with the as-built condition, no further action required. Option 2 - Reem out the hole to 1-13/16 and use a 1-1/2" bolt. AISC Table J3.3 page 16.1-121 allows oversize hole in slip critical connections, a hardened washer will be installed over the oversized hole. (see attached) Option 3 - Drill the hole to 1-13/16 and use a 1-3/4" diameter bolt.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Both option 2 and option 3 are acceptable. This approval does not set a precedent, evaluation will be made case by case for similar issues in future.

30100 - Transbay Transit Center Project

Page: 1658 of 3091
Date: 06/17/2015
Time: 02:27 PM
Job: 30100

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	Refer to attached CD RFI 410.1 SK1: 1) The response in RFI T-1366 (SK 551, CD 410) does not address rectangular slab openings where one side is less than 2'-0 and the other side is over 2'-0. See the example slab openings and clarify the perimeter steel requirement for all rectangular slab openings where one side is over 2'-0 and the other side is less than 2'-0. 2) The noted slab openings along with other slab openings shown on the Architectural Slab Edge Plans are NOT shown on S1-2302 and other structural plans. Confirm the slab openings on the Architectural Slab Edge Plans supersede the structural plans with updated structural drawings to follow.				1) The 2' dimension limit stated in the response to RFI T-1366 is the larger of the dimensions of the rectangular openings. So for a rectangular opening where one side is over 2' and the other side is less than 2', detail 12/S1-5003 shall apply. 2) Confirmed.		
T-1366.2	SSS - Slab Opening Clarifications	Closed	07/01/2014	07/11/2014	07/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Following up on RFIs T-1366 and T-1366.1, please find attached table and exhibits of small slab openings with at least one side that is 2'-0" long. For each of the minor slab openings included in the following table, please confirm that the direction provided in the aforementioned RFI response is to install framing channels per 12/S1-5003. In some cases, the slab openings are only between 8"-12" wide. Otherwise, please indicate that it is acceptable to provide rebar as shown in SKS-0354 per RFI T1366 instead.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Provide perimeter steel per response to RFI 1366.1 around openings where the side of the opening that is perpendicular to the deck span is greater than 2'. For openings highlighted in green, the perimeter steel per detail 12/S1-5003 is not shown on floor plans because 12/S1-5003 is a typical detail. We disagree with the claim that the perimeter steel for these openings constitutes a change order. Some of the openings highlighted in red are shown on both architectural and structural drawings. These openings are noted in the schedule shown on attached sketch SKS-0369. Other openings that are missing from the structural drawings will be added in a future ASI.

T-1367	SSS - IFRM Prime Coat Requirement	Closed	05/06/2014	05/16/2014	05/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By: Turner Construction Comp Stacy Wilson			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Specification section 07 81 23 (Intumescent Fire Resistive Materials), issued with Field Order 00027, lists three acceptable basis of design manufacturers for IFRM systems. Additionally, specification section 07 81 23, 1.7.C.2 states that the intumescent fire protection system is to be from a single source, indicating that the prime coat Skanska shop applies must be from the same manufacturer as the subsequent coats that are field applied. Per the monthly schedule delivered to TJPA, the IFRM contractor is not to be selected until 10/16/14. Skanska requires direction as to which of the three approved basis of design manufacturers will be used on subsequent coats in order to obtain a recommendation from that intumescent coating manufacturer as to the appropriate primer to be utilized. Alternatively, priming of IFRM steel can be removed from Skanska's scope and added to the scope of the IFRM contractor. This will result in a cost increase. Please provide direction.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> TJPA has rejected this RFI per 01 10 40 1.6 C 2 c.			
<hr/>							
T-1368	BGP - Moment Frame Beam Perimeter Stirrup at Column Supports	Closed	05/06/2014	05/16/2014	05/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Due to the construction sequence, where the moment frame beams intersect a column support, the single-piece moment frame beam perimeter stirrups cannot be installed as shown in 2/S1-3600. Please confirm that it is acceptable to use an alternate 3-piece perimeter stirrup configuration where the moment frame beams intersect a column support. See the attached sketch for details		SUGGESTION:		ANSWER: Confirmed Accept Suggestion: <input type="checkbox"/>

T-1369	SSS - Weld Electrode Subcomponents	Closed	05/07/2014	05/17/2014	05/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer			To: Turner Construction Company Phil Militello			Answered By: Turner Construction Company Jack Adams	

Co-Author: Skanska USA Civil West California DisRyan Clayton

REQUEST:

During a Quality Control review, performed by Thompson Metal Fab for compliance with the "Buy America" clause of the Contract, a question was noted regarding the proposed use of ESAB Spoolarc F9A4-ENi4 Submerged Arc Welding (SAW) Electrode for the welding of the HPS70W steel in the Train Box Columns. The attached letter from ESAB, dated April 22, 2014, describes the process that ESAB employs in the manufacture of the referenced product. It notes the fact that the tensile and yield properties of the specific filler metal alloy required to meet the Contract specifications of 90XX are not offered or produced by any mills within the United States. The alloy is provided as a "Greenrod" and is acquired outside of the States. The cold drawing, proprietary processing and packaging of the product is done, by ESAB, wholly within the United States and uses, other than the alloy itself, domestically produced and acquired materials. The Certificate of Conformance from ESAB states that the product is manufactured in the United States (attached).

An inquiry was made, by Skanska, to Lincoln Electric regarding a similar product classification that met the Contract requirement (F9A4-ENi5). Lincoln Electric advised Skanska that they also receive "Greenrod" and strip from sources outside of the United States for this product.

A subsequent Quality Control review by The Herrick Corporation revealed a similar condition for the use of the Lincoln Electric product Outershield XLH-70, AWS classification E70T-1C-H8, FCAW process weld electrode. Once again, Lincoln has indicated that "Greenrod" for weld electrode products may not be domestically available and may be sourced from throughout the world. However, the manufacturing process, like ESAB, is done wholly within the United States. The Certificate of Conformance from Lincoln also states that the product is manufactured in the United States (see attached certificate and letter dated 04/28/2014).

The CFR Part 661.5 of the Clause gives the following definitions:

c) The steel and iron requirements apply to all construction materials made primarily of steel or iron and used in

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The Contract Documents are clear, and Buy America requirements can reasonably be derived from a review of the Contract Documents. RFI are not an appropriate request to the TJPA for interpretation if products meet Buy America Certification.

The Contractor shall submit the Buy America Certification and the Prime Contractor is responsible for ensuring that lower tier subcontractors are in compliance.

Contract Doc Ref: S1-3300, S1-3306 Locatoion: Zone 4, Train Box Gridline: J/34.8 Add'l Doc Ref's: Gerdau's RFI#147, RFI T-1372			Provided that (48) embedded column reinforcing bars are present within the 72" embedded column width, the condition is acceptable for the first wall lift.				
The Area 16 East End Seismic Joint on the South Wall (W140) does not allow for the placement of all 56ea #11 vertical bars @5" OC as called out in RFI T-1372.			RFI T-1372 indicates that the CDSM wall encroachment is near the base of the wall. Additional reinforcing (reduced spacing) within the embedded column per RFI T-1372 will not be required in subsequent lifts provided that the wall vertical reinforcing is spread back to that of the non-encroached 36" wall by the top of the wall second lift. Contractor shall plan for transitioning wall tie lengths accordingly.				
Instead, only 48ea #11 vertical bars can be installed at 5" OC before the vertical bars interfere with the seismic joint.							
Note that C-23 embedded column only requires 48ea #11 vertical bars.							
Please confirm that it is acceptable to eliminate 2ea vertical bars on each face (4 faces for a total of 8 vertical bars) out at the eastern most end of Wall W140 at East			In the event that contract embedded column width cannot be restored to the non-encroaching condition within the second lift or that additional encroachments are found going up, contractor shall propose method of providing additional reinforcing similar to that

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached letter dated 5/2/2014, authored by Robert Foley, CEMEX QC Manager. On March 20, 2014 the column mix was modified to increase average compressive strength due to low test results for laboratory cured cylinders. The changes that were made to mix #1557205 to increase strength are having an effect on the slump variability. SCCI and CEMEX propose the design slump range be increased to 6 to 9 inches. Is this proposed change acceptable?		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/> Acceptable for Mix 1557205.

T-1379.1	BGP - Pit and Pile Discrepancy at GL 27-E	Void	05/21/2014	05/31/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By:				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: SCCI is in receipt of RFI T-1379. SCCI disagrees with the response provided in the aforementioned RFI. S1-2026 illustrates a 30" wide pile in a 30" wide pit at gridline 27/E. However, Submittal #TG0300- 284.4, which was reviewed and approved by the design team, shows the previously mentioned trestle pile as a 36" wide pile. It has also been confirmed in the field this pile is 36" wide pile. Please provide applicable details (similar to D4 on SI-3009 & D2 on SI-3007) for permanent elements in the mat slab construction, including but not limited to galvanized sleeves and structural steel reinforcing, for the pit at GL 27/E which contains a 36" wide pile, not 30" as shown on the design drawing S 1-2026.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
T-1379.2	BGP - Pit and Pile Discrepancy at GL 27/E	Closed	06/10/2014	06/20/2014	06/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference attached SI-2026, SI-3007, SI-3009, SCCI Mat Slab Comprehensive Drawing S113.0, Gerdau Mat Slab Rebar Shop Drawing, and Sketch 113-001. For constructability reasons, SCCI proposes to enlarge the pit at GL 27/E in order to facilitate the installation of the trestle pile sleeve and cap. Please see sketch 113-001 for details and dimensions. Rebar would be altered to accommodate enlarged pit dimensions. See sketch 113-001 for rebar details for pour-back portion of pit once pile is removed. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed for dimensions assumed. Notify design team field representative(s) of any changes resulting from as-built pile survey.

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>REQUEST:</p> <p>Refer to 1/S1-3701 for deck support angle welded to Transfer Girder web detail.</p> <p>Due to restricted access the decker cannot make the required field welds when the top of deck to underside of Transfer Girder flange is less than 12". See attached SK1 for clarification.</p> <p>1) Confirm a 3/8" bent plate can be welded to the toe of the top flange.</p> <p>2) Confirm the weld indicated on SK1 is acceptable.</p> <p>3) Confirm the deformed anchor rods can be welded to the bent plate.</p> <p>Where deck to underside of girder exceeds 12" the deck support angle will be detailed as per 1/S1-3701.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>1). Welding of the deck to the support angle may be performed from the underside, using 1/8" fillet weld, 3" long at 12" on center</p> <p>2) See response #1</p> <p>3) See response #1.</p>		
T-1380.1	<p>SSS - Field Weld Access at Deck Support Angles</p> <p>From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello</p> <p>Co-Author: Skanska USA Civil West California DisRyan Clayton</p>	Closed	06/10/2014	06/20/2014	06/24/2014	Potentially <input type="checkbox"/>	
	<p>REQUEST:</p> <p>After reviewing the response to T-1380 there are several items of concern:</p> <p>A. Access from the underside will not always be possible. At certain locations the perimeter wall bracing and rebracing that will remain in place during the deck installation on operation at Ground Level is in close proximity to the transfer girder and will restrict the mobility of a scissor or lift required for a welder to reach the work point from the lower concourse slab, approximately 30' below.</p> <p>B. To provide an effective weld from the underside, the deck lower flange is required to overhang the toe of the angle. In order to achieve this, shifting the deck may result in the loss of bearing at other locations. If the deck can't be shifted a 12ga minimum flashing plate will be required, see details 3 & 4 on SK1.</p> <p>C.</p>	<p>SUGGESTION:</p>			<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>1. Confirmed.</p> <p>2. Confirmed.</p>

	<p>Effective concrete placement will be an issue if adequate clearance from the top of deck flute to bottom of girder flange is not established.</p> <p>To move forward we propose the following:</p> <p>1. Where d<7" we will use stock angle sizes up to 8x4x1/2" (LLV) welded to the toe of the flange, see detail 1.</p> <p>2. Where d>7" but <15" we will use an overhead 1/8" fillet from the underside as per the response to T-1380 (where accessible), see detail 2. This will allow a minimum of 4" clearance from top of deck flute to underside of flange for placement of concrete.</p> <p>Where the bottom flute does not overhang the toe of the angle and shifting the deck creates a loss of bearing at another location, a 12ga min flashing will be welded to the angle and deck bottom flute, see detail 3 & 4.</p> <p>Please confirm items 1 & 2 are acceptable.</p>						
T-1381	SSS - CVN Testing For Secondary Material	Closed	05/12/2014	05/22/2014	05/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: The response to RFI T-1034 indicates that secondary steel components (stiffeners, connection plates, continuity plates, etc.) are to be CVN tested in accordance with their respective ASTM specification. In the CS05 (TG0701-077) and CS07 (TG0701-079) submittal packages, Skanska's detailer inadvertently tagged the spandrel shear plates and web reinforcement plates at the Bus Deck level to receive CVN, Frequency P testing. These same components were not tagged for CVN testing in the CS1, CS2, CS3, CS4, and CS6 packages and the drawings were approved with no comment on the CVN requirements.		SUGGESTION:		ANSWER: Confirmed.		Accept Suggestion: <input type="checkbox"/>	
For the subject material, the governing ASTM 572 specification indicates that supplementary CVN, Frequency P testing is not required unless specifically indicated in the contract documents. In accordance with

During a recent structural issues coordination meeting, Skanska raised a concern regarding a submittal response received with package TG0701-29. Specifically, Skanska flagged a comment that indicated our temporary erection aids at the exterior moment frame columns needed to be located 36" below the moment frame beam to column connection at the bus deck level and also 36" away from the weld joint between the column and cast node/transfer girder at ground level. See attached drawings for ease of reference.				Confirmed.			
As discussed during the meeting, please confirm that this is not mandatory; and, if Skanska opts to leave the lugs as shown on the attached documents, it is acceptable.

T-1390	SSS - Stiffener Details at Roof Spandrel GL 1.4-B	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED By: Adamson Associates, Inc. George Metzger							
REQUEST: Detail 4 on S1-8002 indicates the stiffener requirements at grid line 1.4/B at the perimeter roof girder. Please confirm the following (reference CD RFI 407 SK1 through SK3): 1. Confirm the stiffener plates and welding are per detail 2/S1-4205. 2. Detail 4E/S1-4205 graphically indicates a beam framing into the perimeter roof girder, however there is no beam on Grid 1.4 at Grid B per S1-2602. Please confirm it is acceptable to provide a stiffener per 2/S1-4205 on each side.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		1) Confirmed. 2) Confirmed.	
T-1391	SSS - Approval Comment Clarifications, Beams at Stiffener Locations (GL 15-16)	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Co-Author: Skanska USA Civil West California DisRyan Clayton ANSWERED By: Adamson Associates, Inc. George Metzger							
REQUEST: See attached CD RFI # 418 SK1 & SK2 for items 1 & 2: 1) Please confirm the welding as shown is correct. 2) The added stiffeners per 11/S1-7630 at (8) locations will result in the (4) beams connecting at these locations not being erectable. Confirm the connection may be changed to a shear plate per 1/S1-5011 except with the bolts pulled outside the profile of the beams to allow access to the bolts. If not, supply an alternate solution.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		1) Confirmed. 2) The 5/8" stiffeners are not required. Provide full depth shear plate connections per 1/S1-5013 at beams that are perpendicular to the beams supporting the posts.	
T-1392	SSS - Missing Brace Locations (GL 3)	Closed	05/13/2014	05/23/2014	05/27/2014	Potentially	<input type="checkbox"/>

	referenced Section 9/S1-3702 at the south ends of TR19.9 and TR20.1 doesn't correlate with the slab elevation in relation to the top of structural steel.						
	Please clarify the detail for the welded couplers at the south end of TR19.9 and TR20.1.						
T-1409	TR1.4 Transfer Girder 72" X 40" CBM Welded Couplers/Bars	Closed	05/19/2014	05/29/2014	05/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please clarify the designer's intent:				As noted on the plan, the slab west of Grid 1.4 has a step at Grid E.			
Sheet S1-2302 indicates that the 2 northerm 72"x40" CBM beams east of Grid 1.4 are sloping and references Section 1/S1-3700 which indicates that the CBM beams are level. The 2 southern 72 "x40" CBM beams east of Grid 1.4 are not indicated as sloping and reference Section 1 /S1- 5023 that indicates that the beams are sloping. Please clarify the details for the welded couplers and #11 bars for the 72"x40" CBM beams at east side of TR1 .4. Section 2/S1-7605 indicates 17-#11 bars top and bottom, one added set of 17-#11 bars 3" below the top bars, and 4-#11 side bars.The details shown in Sections 1/SI-5023 and 9/SI-3700 indicate that the top and bottom 17-# 11 bars are connected to the transfer girder by welded couplers or bars. Please verify that only the top and bottom #11 bars connect to the transfer girder by welded couplers or bars.				As noted on the plan, along Grid 1.4 , top of slab is at 20.23 north of Grid E and at 21.21 south of Grid E. As noted on the plan, along Grid 1 (top of concrete wall), top of slab is at 20.03 north of Grid E and 21.00 south of Grid E. The 72x40 concrete beams are to have a slope per elevation noted on plan.

On May 20, 2014 WOJV received an email from Adamson-Associates containing 28 SKA's with the request that WOJV incorporate the SKA's into the TCB construction documents via the RFI Process.					Accept Suggestion: <input type="checkbox"/>		
Reference attached sketches: - SKA-3322 TO SKA-3325 (CONC WALL ELEVATIONS) - SKA-3326 TO SKA-3329 (CONC WALL ELEVATIONS) - ZONE 2- SKA-3330, SKA-3334, SKA-3338, SKA-3357 - ZONE 3 - SKA-3331, SKA-3335, SKA-3339 - ZONE 4 - SKA-3359, SKA-3360, SKA-3361 - ZONE 5 - SKA-3322, SKA-3336, SKA-3340 - ZONE 10 - SKA-3333, SKA-3337, SKA-3341					The following SKAs, included with this RFI response, are current and shall be incorporated in the construction documents. B2 and B1 Level Concrete Wall Elevations: SKA-3322 TO SKA-3329 Zone 2: SKA-3330, SKA-3334, SKA-3338, SKA-3357_R1 Zone 3: SKA-3331_R1, SKA-3335_R1, SKA-3339_R1 Zone 4: SKA-3359_R1, SKA-3360_R1, SKA-3361_R1 Zone 5: SKA-3332, SKA-3336, SKA-3340 Zone 10: SKA-3333, SKA-3337, SKA-3341		
Please confirm the attached architectural SKA's shall be incorporated in the TCB construction documents. Please note these unissued SKA's have been referred to in submittal package "TG0600-341 - REBAR - Shop Drawings - Partition Walls" returned to WOJV 5/21/2014.					For updated enlarged plans and details as discussed during the June 4, 2014 coordination workshop - Refer to the following SKAs SKA-3416 (A1-3007) SKA-3417 (A1-7426)		
Also, in the attached, there are two versions of the SKA's. Please clarify which shall be deemed "current" for use in the project.					For Future Washroom plumbing layouts, refer to the following sketches: PSK2-3001, PSK2-3002 Note that the Design Team did not receive RFI T-1410 until yesterday, June 4, 2014, even though Shimmick indicated it had been submitted at least a week ago. The RFI was issued with a large volume of attachments and consequently did not reach the design team from Constructware. In future, please limit Constructware email attachments to less than 5 megabytes.		
					WOJV: WOJV submitted RFI 5/23/14		
T-1411	SSS - Missing dimensions PE403 and PE404	Closed	05/23/2014	06/02/2014	05/30/2014	Potentially	<input type="checkbox"/>

					Accept Suggestion: <input type="checkbox"/>		

Please confirm that wall thickness tolerance noted in spec 05 15 22 is intended to apply to the ends only, and that the wall thickness throughout the remainder of the pipe may be greater by as much as is allowed by API5L, but shall be no less than the nominal wall thickness.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
This is a follow-up to RFI T-1417.1 (SK 399.3A, CD 296.3)		Item 7 - information has been provided. Skanska should review with WOJV and TJPA.					
Skanska: The responses to items 7, 12, 14 & 17 require further clarification. Please review the items below. Item 7 ~ the response and reference to A1-8550 does not provide the requested dimensions. Please provide the dimensions to locate the posts. Item 12 ~ the response tells us that the Universal Spacer Bar is to be 18'-0 above the ultimate constructed sloping grade with the bottom of the post being +/- 4" above that per 3/A1-8151. Several unknowns remain: a) What does "ultimate constructed sloping grade" mean? b) The top of slab information on drawings S1-2306, A1-2306 & A1-2866 is not clear c) What does the +/- 4" in detail 3/A1-8151 mean? Item 14 ~ same as item 12 Item 17 ~ same as item 12		Item 12 - a) It means field dimension must be determined from the constructed grading by the CM/GC and coordinated between trade subcontractors and the SFMTA (the transportation agency). The design team cannot provide the as-built field dimensions that are required for this item. b) The reviewer should be using civil (grading) information - not structural information. Refer to sheets L1-3306, L1-3307, C1-4007 and C1-4009. c) This dimension is incorrect - It is 1'-0" +/-4". This will be corrected in VE Round #4 submission.					
		Item 14 - This question is the same as in Item 12, so the response is the same.					
		Item 17 - This question is the same as in Item 12, so the response is the same.					
		AAI recommends that WOJV schedule a coordination meeting with SKANSKA, TJPA, SFMTA the Design Team to review This RFI and the previous sub-number.

T-1418.1	SSS - PE403 & PE404 Erection Aid Seat Angle	Closed	05/21/2015	05/31/2015	06/01/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Quang Le To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Contract Doc Ref: 3/S1-7107 Location: Zone 2, PE403/404 Add'l Doc Ref's: SSK-0355 This is a follow up RFI to T-1418. RFI T-1418 provided direction to install and remove a temporary seat angle onto the HSS columns PE403 & PE404 within the roof level headhouse. Although the RFI specifies that the 4x4 angles are to be removed after welding the MC flanges, Skanska inadvertently, in the course of connecting the members, welded continuously around both the MC channel and the 4x4 angle. Removing the angle at this point would disturb the permanent weld on the MC. Therefore, please confirm leaving the 4x4 angles in place and not removing them after erection is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Reason for RFI (TT): We agree with the reason for request, alternate proposal. We categorize this RFI as request for substitution. Answered by design team: 5/29/15 Closed by WOJV: 6/1/15				
T-1419	SSS - Bus Deck Cast Node Dimension Confirmation	Closed	05/23/2014	06/02/2014	06/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Turner Construction Comp Jack Adams				
Co-Author: Webcor Construction LP Jeff Galoyan							
REQUEST: The structural issues meeting on 5/15/2014 reviewed potential changes to the cast node machine shop drawings. Due to the sand inclusions in the 35A and 35B cast nodes, further machining of the pad surfaces is required. This will result in a dimension of 16" from the W0 work point in lieu of the initial dimension of 17" (see attached sketch). Cast Connex has proceeded to make the 16" revision to the cast node machine shop drawings. Please confirm this is acceptable, and update the structural drawings to match.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Acceptable to TT. Machining of these cast node pads was not indicated on the design drawings (nor Skanska or Bradken shop drawings). Design Team has no issues with the resulting dimension of 16" from the W0 work point in lieu of the initial dimension of 17" . The machining of these pads < 1 1/2 deep to remove sand inclusions found in as cast surface is a Contractor means and methods. Webcor to communicate/coordinate with Shimmick as the TG18.1 Bus Ramp Contractor to coordinate if shop machining versus field grinding is preferred for weld prep. This weld prep work is at no cost to the TJPA.

T-1425.1	SSS - Edge of Slab Angle at Seismic Joint GL10 & 20	Closed	06/30/2014	07/10/2014	07/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 433.1 SK1 & SK2 for items 1 & 2: 1) Confirm the outline of top of slab/edge plate at grids B & H at the expansion joints. 2) Confirm the edge plate support detail at the 1/1/4" connection plate is acceptable as shown or supply an alternate detail. 3) The 10" on SK2 indicates top of roof floor slab. Confirm the bent plate will stop at top of slab OR is an additional 8" required to the concrete key location. 4) For detail 9/S1-5000 now required at the Seismic joints, verify the 8'-0 Max spacing for the angles can be increased to 8'-6 in order to line up with the back span beam spacing per design.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1). Confirmed. However, the requirement for the closure plate and other misc. steel per Detail 9/S1-5000 noted in TT's previous responses to RFI 1425.0 may be waived to negate SKANSKA's claim of added scope. If the closure plate is not provided by SKANSKA, the concrete contractor shall provide proper forming/shoring for supporting wet weight of the concrete while pouring slab concrete. How to support the wet weight of the concrete when placing the slab is the contractor's means and methods. 2). Confirmed, also see the response to comment #1. 3). It is W/O's option to stop the vertical leg of the closure plate at the top of slab (additional forming is required to retain the concrete while placing the slab), or stop the vertical leg of the closure plate at the concrete key location (additional forming not required). 4). Confirmed that the outrigger spacing may be increased to 8'-6" to be in line with the back span beam spacing.

T-1430	BGP - Lower Concourse E/W Bottom Deck Bar at GL 9 MFB	Closed	05/30/2014	06/09/2014	06/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please confirm per field conversation between structural EOR and Gerdau that it is acceptable to install the concourse slab bottom East-West reinforcing at GL 9 per the attached sketch.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Proposal is acceptable provided: 1. Tail of slab bottom bar is fully developed within the confined joint 2. Tail of slab bottom bar runs over the top of the lowest MFB longitudinal bar and is no longer located below it 3. Field bends conform to ACI minimum radii limitations 4. Within the joint, bottom MFB bars are brought to their lowest possible position above (and in contact with) the MFB exterior hoop bottom legs 5. All hooks of MFB vertical ties shall be made to fully engage the MFB longitudinal reinforcing outside the joint and at the sides of the joint 6. Proposal is implemented at all Grid 9 columns where the overpour results in slab bottom reinforcing being out of tolerance (3/4 clear plus 1/2" tolerance) It is also acceptable to cut the bottom slab bars at the face of the MFB-column joint and splice in an equivalent z-bar.

REQUEST: The reviewer's comment on Linden Shop drawing D3 detail 49, requests the contractor to coordinate the change of steel deck height with RFI T-0803.1 and with W2 roof assembly components (see SK1). After further review of the available information, detail 1/A1-8171 provides conflicting information to what is indicated on 1/S1-5032, the W-2 retail façade roofing assembly build-up indicates a 1-1/2" metal deck (see SK1). Please confirm the steel framing and 1-1/2" metal deck as currently detailed is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This item was already confirmed by RFI T-1413.			
T-1437	BGP - Shear Wall Column Vertical Splice at 3rd Lift	Open	06/03/2014	06/13/2014	06/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Reference: RFI T-0620 For constructability purposes, the shearwalls require horizontal construction joints at the same elevations as the foundation wall construction joints. All vertical reinforcing has been detailed with HRC mechanical couplers with the exception of the 3rd lift of the shear wall column located adjacent to the knockout wall. Please confirm that it is acceptable to splice the verticals in the shear wall column with a Dayton Superior Barlock D250SCA coupler		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Acceptable provided that the coupler is a Type II coupler, such as Dayton Superior Barlock L-Series. The coupler proposed in the RFI does not qualify. The contractor shall plan for the installation of the coupler by taking into account the length of the coupler, the length of the reinforcing stub to be spliced, and the available clearance. The coupler may need to be preinstalled with the stub or a blockout created depending on the proximity of the obstruction to the planned construction joint. The detailer shall account for the increase in effective bar diameter at the mechanical coupler with respect to ties and clear cover.

T-1438	SSS - Kicker Brace at Slab Opening	Closed	06/04/2014	06/14/2014	06/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: See attached CD RFI # 449 SK1 & SK2: Please confirm the location of the slab opening on SK1 as it is currently located over a kicker brace and not indicated on the structural drawings. Please provide revised structural drawings indicating all slab openings required.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Slab opening locations per A1-2862 govern. Move the kicker brace so that it is in between the two openings. Structural drawings will be updated in a future ASI to show the two openings. Note: Small openings in slabs are to be coordinated between sub-contractors by GC and included in the contract as defined in Contract Documents.			
T-1439	SSS - Oversized Holes in Cruciform Column Base Plate	Closed	06/04/2014	06/14/2014	06/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: Due to the thickness of the cruciform column base plate and the transfer girder top flange connection (7-1/2" to 9-1/2" thick). Please confirm it is acceptable to provide oversized holes in the base plate only at the slip critical connection as per AISC (see SK1). This will allow additional tolerance for threading the 2-1/2" diameter post tensioned rods varying from 14' to 38' long through the 7-1/2" to 9-1/2" thick steel. Note: The transfer girder top flange will remain a standard size hole (d+1/16").		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Using oversized holes in the SFRS bolted connection indicated in the RFI is not acceptable. It is acceptable to achieve additional tolerance for the post-tensioned rods by using oversized holes for these rods within the base plate.			
T-1440	SSS - Moment Frame Column Protected Zone	Closed	06/04/2014	06/14/2014	06/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST: After reviewing the contract documents for the moment frame protected zones, please reference attached SK1/SK2 and note the following: For the built-up moment frame beams, details 1, 3/S1-4201 have a note that directs Skanska to detail 10/S1-4202, which depicts the yellow striping and warning signage to be installed. However, the protected zone detail for the moment frame columns, 2/S1-4201, does not have		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 10/S1-4202 is a typical detail that applies for all moment frame protected zones (beams & columns).

T-1443	Re-Install Dewatering Well Pump #34 per Field Coordination	Closed	06/06/2014	06/16/2014	06/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>On Thursday, May 22, 2014, there was slurry intrusion through dewatering well #34, from the Transbay Tower Project. After the Transbay Tower Project placed a lean mix to plug the slurry intrusion, only water has come out of the well at a pressurized rate, not yet experienced on this project prior to the event.</p> <p>The water in this well has been confirmed acceptable by the SFPUC to discharge into the City's combined sewer system, on 6/5/14. A plug has been placed in this well in order to keep the jobsite from flooding due to the volume of water pushing through the well. We want to replace the dewatering pump in this well, but are concerned that we may end up dewatering the Transbay Tower Project and possibly draw the water table on their project outside of the requirements of our specification.</p> <p>1) Please confirm that it is acceptable to re-install the dewatering pump in well #34.</p> <p>2) Please let us know if there are certain steps or durations that you want us to pump in an effort for ARUP to monitor the water table on Transbay Tower's Project and/or other adjacent properties.</p> <p>3) Please confirm that in performing this activity, we are not held to the requirement of Spec Section 31 56 13-13.F.1. in regards to "The performance of the shoring wall shall be such that the groundwater levels around the excavation are maintained within 3 feet from the pre-excavation levels" since there is the potential of us drawing their groundwater through our well.</p>					<p>1. It is acceptable to reinstall the dewatering pump in well #34.</p> <p>2. Access has been provided to the global analyzer. Please watch carefully the affects from dewatering in wells P-03DS and P-6MS. These have currently not shown any change in the piezometric elevation since May 22.</p> <p>3. The specification will not be relaxed at this time.</p>

	covered by the column base plate. See SK1 for clarification.						
	Please provide a layout detail for the 42 shear studs if they are to be welded to the column base plate.						
T-1449	SSS - North Exit Mezzanine Hanger Detail	Closed	06/10/2014	06/20/2014	06/25/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer	To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
	Co-Author: Skanska USA Civil West California DisRyan Clayton						
	REQUEST:	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
	See attached sketches CD RFI # 456 SK1 to SK3 which reference the hanger and brace location that clashes with the lower concourse column at grid C/21. The hanger and brace per 1/S1-2252 are directly in line with the cap plate bolts at grid C/21. Please provide an alternative connection detail.		The hanger shall be connected to the cap plate similar to the detail at the bottom of the hanger as shown in detail 9/S1-5028. The 2" distance between the ends of the gusset plate and angle may be increased to clear the bolts at the cap plate. The V-shaped angle braces at the location highlighted in the RFI may be deleted.				
T-1449.1	SSS - North Exit Mezzanine Hanger Detail	Closed	08/14/2014	08/24/2014	08/27/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Gregory Kemerer	To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
	Co-Author: Skanska USA Civil West California DisRyan Clayton						
	REQUEST:	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
	See attached CD RFI # 456.1 SK1: The response to T-1449 does not work. The hanger connection per 9/S1-5028 fouls the column cap plate connection. Please supply a solution.		Change the orientation of the hangers and the gusset plates at the top and bottom so that the gusset plates are parallel to the transfer girder. Provide 3/8" thick full depth stiffeners at the W12x40 beam on each side of the beam web and aligned to the bottom gusset plate. Stiffeners shall have double-sided 1/4" fillet welds on 3 sides.

REQUEST: 1) Please reference sheet S1-2302, grid E.2. 5-6. At this location detail 10/S1-5002 is cut. The W33x118 beam is located 1' 1-7/8" from line E.2 as per S1-2303. Per A1-2862 the face of the slab is 1' 6-3/4" from line E.2. The face of the step to the center of the beam is 4-7/8" and the width of the flange is 11-1/2" resulting in the beam flange projecting 7/8" beyond the face of the step. Please advise if the structural steel or decking is to be modified to avoid this occurrence. 2) Please reference sheet S1-2303, grid E.2, 6-7. If item #1 requires changes, confirm if changes are required at this location also. Note: the face of the step does not meet the minimum 2" from the beam flange required as per detail 10/S1-5002. See attached sketch 20 for clarification.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1) See response to RFI T-1415. 2) No changes are required at the location noted in item 2. The 2" min requirement per 10/S1-5002 can be waived at the location posed in the question 2 of this RFI

	<p>the fourth lift and the ground level slab is to be poured monolithically. Pouring the fourth lift monolithically with the ground slab causes problems with access, staging space and formwork. SCCI proposes to add a construction joint on the fourth lift as shown in the attached marked up reference drawings to remediate these issues.</p> <p>Please confirm this is acceptable.</p>						<p>not take an exception to the new construction joint proposed by the contractor at the location indicated in the RFI.</p>
T-1468	<p>SCS - WPS Qualification - Lenton Weldable Couplers</p> <p>From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello</p> <p>Co-Author: Shimmick Construction Company, Inc. Ben Gordon</p> <p>REQUEST:</p> <p>The Lenton welding information provides guidance for qualification of processes; however there are inconsistencies when trying to fulfill AWS D1.1 (2010) requirements. The materials used for manufacturing weldable couplers size #9-11 are Grade 1030/1035. These grades of material are not listed in AWS D1.1 (2010) Table 3. 1, although Grade 1030 is listed in AWS B 2.1 Table D.1 as a Group 2 material (table attached). In order to move forward with welding the Lenton weldable couplers to the Transfer Girders, TMF proposes that FCA W Grade 70 filler material to be used manufacturer ESAB 7100 Ultra, Classification E71 T-9, AWS Specification AWS 5.20"D". One mockup of the actual coupler welded to a Group 2 plate and macro etched would be provided as a supplement.</p> <p>Please confirm this is acceptable.</p>	Closed	06/23/2014	07/03/2014	07/03/2014	Potentially	<input type="checkbox"/>

	<p>Detail 4 on S1-3010 includes a scaled dimension of 5'-0" from face of CDSM wall to the inside face of the west half of the seismic embed (See S1-3010 attached). Therefore, the bottom embed plate will need to extend 2'-6" beyond the 5' dimension per Detail 7 of AI -8881 (attached).</p> <p>Since the as-built dimensions of the edge of pits range from 5'-0" to 5'-11" from face of CDSM wall, the bottom embed plate will overhang the pit depression 2'-6" to 1'-7". The plate could be reduced up to 1'-11" (2'-6" minus the 8" for clamping detail) to accommodate the edge of pits and allow for waterproofing clamping detail. Is this acceptable?</p> <p>Please provide further details at locations where encroaching pits do not allow for sufficient room for bottom embed plate and clamping assembly.</p>						
T-1471.1	BGP - Seismic Joint Bottom Embed Plate at Pits	Closed	07/28/2014	08/07/2014	08/06/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Further to the response to 1471 please find attached embed plate layout with cross-sections at the pit locations. It will be necessary at the pit locations to also infill and adjust the mud slab vertical/sloped face in order to accommodate the embed plate and clamping detail of the SJ embed.			AAI Response: The dimensions provided in SK-1, SK-2, and SK-3 for the SJ bottom embed plate are confirmed. The high strength grout or concrete infill should be compatible with the WPM and should be approved by the WPM manufacturer.				
Please confirm if this is acceptable.			TT Response: The proposed dowels are sufficient to keep in place the 2" minimum high strength grout or concrete infill during construction.				
Note: all infill material used is to be approved by the WPM manufacturer			WOJV 8/1/14: Confirmed, proceed with work.

T-1472	BGP - Pier and Opening Sizes on Deck D207-D209	Closed	06/24/2014	07/04/2014	07/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Because the specific sizes are not noted on the Contract Drawings provided, and wall heights are not shown on the Contract Drawing (Refer to RFI T-1472), please confirm Pier and Opening Sizes for Deck D207 to D209 are per the attached drawings.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Pier and opening sizes without mark ups for Deck D207 to D209 are confirmed. Refer to attached PDF (AAI Response) for AAI notes and mark ups.		
T-1473	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	06/25/2014	07/05/2014	07/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: Please reference RFI T-0576 regarding the offset of the West Foundation Walls to account for the CDSM Encroachment. The west wall (GL 1) was offset 3 1/8" to the east while the southwest wall (GL XI-1) was offset 1 7/8" to the northeast. Currently there are no dimensions explicitly shown in the contract drawings for the width of the service corridor that runs along the very western edge of the Lower Concourse in Area 1 and 3. However there is a dimension shown on A1-3006 & A1-7004 that shows the eastern face of the service corridor at 5' to the west of GL 1.4 which translates into a service corridor width of 9' -8 7/8". Is it the designers intent to offset the service corridor walls similar to the foundation walls to maintain the 10' corridor width, or is it the designers intent to shrink the width of the service corridor and keep the interior walls in place? Please provide dimensions for the service corridor width.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The location of interior walls of rooms along the west and southwest service corridors shall be maintained. The service corridor widths shall be reduced by 3 1/8" on the west and 1 7/8" on the southwest.		
T-1473.1	BGP - Lower Concourse Service Corridor Dimensions on West Wall	Closed	07/07/2014	07/17/2014	07/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto							
REQUEST: With the response from RFI T-1473 and the contract drawings, SCCI has enough dimensions to model the service corridor running north-south in Area 3. However			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> For the alignment of the service corridor that runs along the west side of the Lower Concourse, as requested in this RFI, please refer to the work points
