0001	SCS - Transfer Girder Clarification	Void	05/15/2014	05/25/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello	Answered By:				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Please clarify the designer's intent: Sheet SI-2303 indicates that the south end of Transfer Girder TR9 extends beyond the B87 and B88 beams southern edge and partially into the intersecting MFBI beam which is angular to the B87 beam. Section 8/S 1-3701 indicates that there are welded rebar couplers at the top flange of the TR9 girder to match the B78 beam reinforcing, but the B78 beam ends at the B87/B88 intersection prior to the southern end of the TR9 girder. REQUEST:			SUGGESTION:		ANSWER:		
Bracing removal sequence on the East end of Zone 4 WOJV is proposing the following sequence for the bracing removal for the east side of Zone 4. See sketch SK1, attached.					Accept Suggestion: <input type="checkbox"/>		
Sequence 1. Remove level D struts and walers from within the green clouded area up to GL- 32.2 once the mat slab beneath has reached adequate strength. 2. Remove level D struts within the Blue clouded area STD-65 to 74, 82 & 83 and all corresponding walers once the mat slab beneath has reached adequate strength, the sequence for de-stressing will be the diagonals struts should be all de-stressing prior to the 4 remaining cross lot struts (STD-65,66,67 & 68).							
For the remaining levels A, B and C WOJV is proposing to follow a similar removal sequence as Level D							
Please confirm if this sequence would be acceptable.

0010	BRP - Number of Barrette Pile Tremies	Void	09/18/2014	09/28/2014		Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Claude Titche</div><div>To: Turner Construction Company Phil Militello</div><div>Answered By:</div></div>							
<div>Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent</div>							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<p>Contract drawing S-3191 indicates two openings (for two tremies) in each Barrette's rebar cage. This drawing is in conflict with Contract Specification 31 63 32 3.4 D 3 that indicates that three tremies are needed for each Barrette (one tremie for each 7 feet of wall length). Please note that the Response to RFI-0050 allowed for the length of the barrette piles to be increased from 20'-0" to 21 '-0".</p> <p>The European Standard EN 1538 indicates two tremies (properly spaced so that the concrete does not have to travel more than 8 feet) is sufficient for each Barrette. Additionally, in reference to RFI BRP-0055 and, in an effort to reduce rebar congestion, 2 tremies are preferred.</p> <p>Please confirm that two tremie pipes per Barrette are acceptable.</p>							
0011	Unit Pricing	Void	09/23/2014	10/03/2014		Potentially	<input type="checkbox"/>

1205.1	BGP - Lower Concourse Blockouts to Pour Train Level Partition Walls	Closed	03/22/2014	04/01/2014	04/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Claude Titcher	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author: Transbay Joint Powers Authority		Sylvia Wong					
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Please see attached drawing for the general layout of Lower Concourse blockouts taking into account the response to RFI T-1205. Due to limited site access to the Train Level once the Lower Concourse is poured, the partition walls will have to be poured in 2 lifts, except for the tank walls which will be poured monolithically. In the case where a blockout coincides with features above or below (ie beam below or future partition wall above) the blockout will be offset and the train level partition wall be poured using the "Bird's Mouth" method (see Detail 3 on attached drawings). To ensure consolidation in differing height wall pours, SCCI will install top bulkheads on walls with lower heights due to overhead beams. SCCI will maintain minimum separation gap between the top of partition wall and Lower Concourse elements as detailed. The blockouts will be installed with styrofoam per Detail 4 in the attached drawings, prior to the Lower Concourse being poured. The blackouts will have a keyway on each side with top and bottom rebar dissecting the blockouts per Details 1 and 2 in the attached drawings. Once the partition walls have been poured, the blockouts will be poured back with the same grout that will be used to pour back the trestle pile blockouts. Please confirm this is acceptable.				Where the RFI states that walls will be poured in "two lifts", this is interpreted to mean "two phases". Blockouts shall be poured back with concrete or product approved through the submittal process. Coordinate layouts and phasing plan with comments noted on Submittal TG0600-907.0 BGP - Construction Joint Layout - Partition Walls Area 3 and 4. RFI is confirmed in other regards.

Note 58 on Contract Drawing C-0005 gives a project start location of Alignment BBTT as 1722.28 feet at bearing S67°27'21"E from DPW Survey Control Point No. 54. Though the entire BBTT alignment could be calculated from this information, there would be no check tie at the end of the alignment and significant errors could result. Shimmick Construction Company Inc. (SCCI) requests that the coordinates of the begin curve (BC) and end curve (EC) be supplied to supplement the given curve data. Additionally, SCCI requests that the coordinates for the BC and EC locations for the curves of all alignments be supplied.		The distance and bearing from DPW Control Point No. 54 to Station 29+88.82 is 403.97 feet at N16°26'45"W. Contractor to verify.

30100 - Transbay Transit Center Project

<i>Number</i>	<i>Subject</i>	<i>Status</i>	<i>Date Created</i>	<i>Date Required</i>	<i>Date Answered</i>	<i>Cost Impact</i>	<i>Proceed</i>
	<p>SCCI has received the response to RFI #0001 which provided a way to determine coordinates of the end of the "BBTT" alignment. However, no begin of curve (BC) or end of curve (EC) coordinates were given as requested. In order to properly lay out the alignments, SCCI will have to rely on CAD drawings provided in Transmittal No. 150-00268 from Jon Valencia (PMPC). SCCI would like to confirm that the CAD drawings provided in this transmittal are warranted to be used for construction.</p> <p>Please confirm.</p>						<p>Coordinates of the begin and end of curves (BC and EC) can be calculated with the alignment data presented in the drawing. The distance and bearing to and from the survey control points can be used for checking the alignment layout.</p>
B-0002	BRP - Hazardous and Contaminated Materials Location	Closed	05/29/2014	06/08/2014	06/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By: Transbay PMPC Phil Sandri				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Bid Items 40,41, and 42 cover contaminated soils and debris off-haul and disposal. Contract drawings and specifications do not provide information regarding the specific expected locations of this material and the expected quantities at these locations. Please provide an explanation of how these bid item quantities were determined and a map indicating where contaminated materials should be encountered on the project.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
				Bid items were estimated based on data from "Transbay Transit Center Program Limited Phase II Soil and Groundwater Invetsigation Report Transbay Terminal West Loop Bus Ramps and Future Transit Center Site East of Beale St." (ERM-West, December 2008) as well as "Transbay Program Site Management Plan Addendum Transbay Transit Center Bus Ramps" (Treadwell & Rollo, February 2013).

	documents (provided as an attachment to this RFI).						
	Please confirm that all contaminated soils identification, testing, and analytics shall be provided by the TJPA and/or the prime contractor.						
B-0007.2	BRP - Hazardous Materials - Class I/II Locations	Closed	07/03/2014	07/13/2014	07/07/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Turner Construction Company Judith Long			
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
In Figure 1 of "Site Plan of Preliminary Limits of State of California Class I Non-RCRA and Class II Non-Hazardous Fill Material", provided by Treadwell Rollo, the locations of the Class I and Class II materials are labeled incorrectly. The data provided in "Transbay Transit Center Program Limited Phase II Soil and Groundwater Investigation Report Transbay Terminal West Loop Bus Ramps and Future Transit Center Site East of Beale St." (ERM-West, December 2008), "Transbay Program Site Management Plan Addendum Transbay Transit Center Bus Ramps" (Treadwell & Rollo, February 2013) and per our meeting on 6/20/14, indicate that the Class I material was found in borings SB-04 through SB-09 as well as S-3 through S-5. These borings are identified as Class II material on the map provided. Borings SB-10 through SB-12 and S-1 /2 contained Class II material. It appears the colors in the legend are reversed. Please provide map with a revised legend.				See attached corrected site plan.

B-0007.3	BRP - Hazardous Materials Location Follow Up	Closed	07/22/2014	08/01/2014		Potentially	<input type="checkbox"/>
<div><div><div>From: Webcor Construction LP</div><div>Claude Titcher</div><div>To: Turner Construction Company Phil Militello</div></div><div>Answered By:</div></div>							
<div>Co-Author: Shimmick Construction Company, Inc. Ben Gordon</div>							
<div>REQUEST:</div> <p>Per RFI-0007.2 Response, a map of locations of Class I and Class II contaminated soils located on the Bus Ramps site was provided by Treadwell & Rollo for use by SCCI. During the meeting held 6/20/2014 at the Webcor Offices to discuss the hazardous materials on site and development of a hazardous materials location map, it was indicated that there would be no federal RCRA material encountered on the site and that Class I and Class II contamination depths would vary between 1' and 2' below grade.</p> <p>During waste profiling with our disposal site, SCCI has encountered the following discrepancies:</p> <p>Per the T &R map, the area around sample SB-05 should be Class I material. Per the soil test analytics provided in the Bus Ramps Site Mitigation Plan and the ERM-West Phase II Soils Report, samples SB- 5-3 and SB-5-6 test over the Class I limit for Lead and Barium, respectively. Without the STLC (Soluble Threshold Limit Concentration) and TCLP (Toxicity Characteristic Leaching Procedure) test results to confirm otherwise, material with these TTL (Total Threshold Limit Concentration) results would have to be classified and disposed of as a federal RCRA material which is in conflict with the direction provided by the T &R map and the 6/20 meeting discussion.</p> <p>Per the T&R map and meeting discussion, areas approximately north of Folsom Street would be contaminated with Class I material to a depth of 2' below grade, and areas approximately south of Folsom Street would be contaminated with Class II material to a depth of 1' below grade. A small portion of the area east of the Sterling substation would be contaminated with Class I material to a depth of 1 '. Per the soil test analytics provided in the Bus Ramps Site Mitigation Plan and the ERM-West Phase II Soils Report, samples SB-5-3 and SB-5-6 are both potentially contaminated to a Class I or federal RCRA classification level at depths below 2', which is in conflict with the direction provided by the T &R map and the 6/20 meeting discussion.</p> <p>The following is a list of possible soil samples provided which may be in conflict with the T &R map and 6/20 meeting discussion direction and may require additional</p>		<div>SUGGESTION:</div>		<div>ANSWER: Accept Suggestion: <input type="checkbox"/></div> <p>Peter Cusak 8/12/14:</p> <p>As requested, additional samples were taken at deeper depths and tested including STLC and TCLP. The test results show soils locations and depths below 2' are Class II and as Class I Non-RCRA (See attached map dated 8/5/14).</p> <p>Based on the recent samples taken at various location mentioned in the tables 1 & 2, and recent analytical report (copies attached), the results confirmed presence of Class I & Class II contaminations, and no Federal RCRA material encountered on site (map provided)</p> <p>The abovementioned information is consistent with the Bid documents.</p>

B-0009	BRP - Exist Bent 20 Demolition	Closed	06/18/2014	06/18/2014	06/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: <p>As shown in Contract Drawing D-1005, the entire existing Bent 20 foundation is to be removed. However, USA North ticket #219688 located two ATT duct banks 3' away from, and running parallel to, the property line on the south sidewalk of Clementina St. This utility is not shown on the Contract Drawings. The utility is located directly on top of the Bent 20 foundation as shown on the attached sketch.</p> <p>Per SCCI's understanding, the reason to remove Bent 20 is to facilitate the installation of CIDH B4-3 and the drainage system shown on Contract Drawings U-1005 and C-4102. Shimmick proposes to remove the Bent 20 foundation only to the extent needed to enable the installation of CIDH B4-3 and the drainage system (the catch basin and sewer manhole will still be protected and supported in place). The extent of demolition should end roughly 4'-8" north of the CIDH pile to allow sufficient room for shoring yet not intrude on the utility. See attached drawing for proposed limits of demolition. Is this acceptable?</p>		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
			SCCI's proposal is acceptable.

B-0017	BRP - Frame 5 Dimension Discrepancy	Closed	REQUEST: Can the TJPA provide SCCI with ARUP's Frame 5 design calculations? This will allow OPAC to ensure that Frame 5 redesign will provide the same response characteristics, at the cable-stayed bridge and Transbay Terminal building interfaces, as were intended.				
			SUGGESTION:				
B-0017	BRP - Frame 5 Dimension Discrepancy	Closed	ANSWER: Accept Suggestion: <input type="checkbox"/> Calculations for Frame 5 (the drop-in span) are attached.				
B-0017	BRP - Frame 5 Dimension Discrepancy	Closed	07/11/2014	07/21/2014	07/24/2014	Potentially	<input type="checkbox"/>
			From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello Co-Author: Shimmick Construction Company, Inc. Ben Gordon ANSWERED By: Arup Kevin Clinch				
B-0017	BRP - Frame 5 Dimension Discrepancy	Closed	REQUEST: 1) Distance from RDS line to centerline bearing is shown to be 1'-3". Distance from centerline bearing to "TTBB" STA 29+07.235 is shown to be 3'-0". So the distance from RD5 to "TTBB" STA 29+07.235 should be 4'-3". However RD5 is shown to be at "TTBB" STA 29+03.000 which is only 4.235' or 4'-2 13/16" from "TTBB" STA 29+07.235. Please explain why there is a discrepancy of 0.015' or 3/16". 2) LD5 is shown to intersect the left edge of deck at "BBTT" STA 29+02.21, 10.51' left. LD5 is shown to intersect the right edge of deck at "BBTT" STA 29+02.67, 13.00' right. SCCI took the "BBTT" and "TTBB" alignments shown on sheet C-2101 and drew in the RD5 line at "TTBB" STA 29+03.00. SCCI then extended the RD5 line to create the LD5 line. When doing so, SCCI found that the LD5 line intersects the left edge of deck at "BBTT" STA 29+03.135, 10.51' left and intersects the right edge of deck at "BBTT" STA 29+02.594, 13.00' right. Please clarify whether the LD5 stations shown at edge of deck are correct.				
			SUGGESTION:				
B-0017	BRP - Frame 5 Dimension Discrepancy	Closed	ANSWER: Accept Suggestion: <input type="checkbox"/> Please see attached design sketch for clarification.

REQUEST:

SCCI bid and planned the shoring necessary for demolition of the existing footings per the response to Question TG18.1-037 of IFB Questions & Answers TG18.1 Set #3 which included the statement that the bents north of Folsom Street were similar to Section P on Contract Drawing D-1106. This section shows a footing that is immediately below existing grade and is eight feet thick.

Additionally, SCCI reviewed the reference documents to confirm the bottom of footing elevations for these footings. Supplemental Drawing Nos. 7A and 8A of the San Francisco-Oakland Bay Bridge Railway Facilities drawings show the elevations of the bottom of footings. The first note on the Supplemental Drawing No. F-112 of the SFO Bay Bridge Railway Facilities drawings states to subtract 11 . 71' from these elevations to correct them to the city datum. SCCI has done this and compiled these elevations below.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Arup does not have any more information than the Contractor has. We could not find a datum correction on the 1937 Contract R2 drawings, only on the 1939 Contract R3 drawings. For the purpose of proceeding with the work, we recommend that the contractor apply the datum correction from the Contract R3 drawings to the Contract R2 drawings and determine the existing foundation elevations based on this. Note the datum correction on Contract R3 drawing F-112 is from San Francisco-Oakland Bay Bridge Datum to City Datum. Refer to the survey drawings prepared by Martin M. Ron (specifically sheet 1 of 10) in the Contract Documents for the datum correction from NAVD88 to City datum.

This RFI will use the Bent 5 footing for example to show why SCCI does not believe that this is the correct datum correction to use. Section P on Contract Drawing D-1106 shows the Bent 5 footing immediately below grade and eight feet thick with a bottom of footing elevation of 53'-8". As shown in the table above, the elevation shown for this bottom of footing elevation on Supplemental Drawing 8A and correcting it to the city datum would provide an elevation of 29.29'. The same issue is easily seen using the section views on Bent 2 and 3 on the same Contract

B-0019	BRP - Selective Demolition of Foundations for CIDH Piles	Closed	07/17/2014	07/27/2014	07/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
On July 11, SCCI performed potholing for the existing foundations to be demolished and discovered that the depths of these foundations are significantly deeper than expected due to contradictory information provided in the responses to Bidder Questions and Reference Documents at bid time. The results of the potholing has allowed SCCI to eliminate certain information from these documents and is now proceeding under the assumption that the elevations provided in the San Francisco-Oakland Bay Bridge Railway Facilities and SFO Bay Bridge Railway Facilities are correct. These drawings indicate that these foundations are at depths as great as 34.5' from grade. SCCI requested that these elevations be confirmed in RFI B-0018 - Bottom of Existing Footing Elevations, submitted July 14.				This is acceptable. The extent of existing footing to be removed shall equal the radius of the CIDH plus 1'-0" plus the maximum allowed tolerance (alignment and verticality) for the CIDH installation. Following removal, the excavation shall be backfilled and compacted in accordance with the requirements in Specification Section 31 00 06.			
The foundations to be removed are located adjacent to major San Francisco thoroughfares and buildings of up to ten stories. SCCI believes that large excavations next to these structures could potentially undermine these streets and the foundations of these buildings. SCCI also believes that it is possible to reduce the number of these large excavations by reducing the volume of concrete to be removed from these foundations.							
SCCI has reviewed Contract Drawings D 1000 through D 1106 and has determined that the existing foundations Bent 5, 7 and 11 need only to be partially removed to facilitate the installation of CIDH piles. Additionally, SCCI

B-0020	BRP - Building Foundations at Pylon 9	Closed	07/17/2014	07/27/2014	07/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER:		
Contract Drawing D-1006 has a callout pointed at the Pylon 9 foundation that states "Remove existing building foundation and basement slab to place new foundation". SCCI found drawings in the Reference Document Transbay Transit Center Program Existing Terminal & Ramps Demo Plans - REVISIONS that show that the foundations under 564 Howard and 568 Howard, the buildings with foundation conflicts with Pylon 9, had been removed in a previous contract. SCCI, therefore, engineered and planned the work as if these foundations did not exist.					Accept Suggestion: <input type="checkbox"/>		
This reference drawing set also shows that the Bent 17 foundation on the south side of Howard was also removed in this same previous contract. Recent potholing for this foundation has led SCCI to believe that this foundation has not been removed. If the Bent 17 foundation was not removed, it is possible that building foundations in conflict with Pylon 9 may also not have been removed.			It is Arup's understanding that the drawings attached to the RFI which show the extent of demolition of 564 Howard and 568 Howard are correct.				
Please confirm that the foundations of 564 Howard and 568 Howard have been removed per the Reference Drawings.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
<p>Based on discussion in Tuesday's (7/15/2014) meeting (Movement Review Committee), the following heavy equipment is required to install the barrettes at the Pylon 9 foundation:</p> <p>1. 'Manitowoc 888 crawler crane: Maximum total load when holding full length barrette rebar cage = 705± kips. As shown on Figure 1, the crane will be set back a minimum of about 40' clear from the back of the TTC shoring wall when it is working. The "footprint" of the crane (defined as a rectangle with a length equal to the bearing length of the tracks and a width equal to the outto-out track dimension) is 24.6'x23.2', which has a total area of 571 sqft. The average vertical surcharge load acting over the machine footprint is 705,000/571 = 1235 psf.</p> <p>2. Bauer MC128 Foundation Crane with a BC40 Trench Cutter (Hydromill): Maximum total load when working = 540± kips (includes pull force when retrieving mill from trench). As shown on Figure 2, the hydromill will be set back a minimum of about 13' from the back side of the TTC shoring wall when it is working. The "footprint" of the hydromill is 23.0'x20.5' = 472 sqft. The average vertical surcharge load acting over the machine footprint is 540,000/472 = 1144 psf.</p> <p>3. Liebherr HS855HD crawler crane with clam. Maximum total load when working = 260± kips. As shown on Figure 3, the clam will be set back a minimum of about 10' from the back side of the TTC shoring wall when it is working. The "footprint" of the clam is 17.6'x16.2' = 285 sqft. The average vertical surcharge load acting over the machine footprint is 260,000/285 = 912 psf.</p> <p>Please confirm whether the TTC shoring system is capable of resisting the surcharge identified above.</p>					<p>This is a Contractor's means and methods issue. The Contractor shall provide estimates for additional horizontal loading on the internal bracing system for evaluation by the TG06 trade subcontractor. This shall include a horizontal pressure diagram which can be added to the plots shown on TG06 drawing GT-1110 and additional kips per linear foot of wall values which can be added to Table 1 and Table 2 on TG06 drawing GT-1110.</p>

	<p>SCCI has found a conflict between demolition drawing D-1005 and specification section 011570 3.2G.</p> <p>According to drawing D-1005, existing Bent 22 extends underneath the entire south Clementina sidewalk width and 3' into the street. The shoring required to remove this footing along with the water barriers will extend another 5' into the street totaling to 8' intrusion into the street. The street is 18' wide at this bent location leaving a 10' for vehicle traffic as noted in approved traffic control plan 002 (TG 1801-036.1).</p> <p>Specification section 011570 3.2G requires a 5' pedestrian walkway on the north and south side of Clementina. This is not possible due to the demolition of Bent 22 described above. SCCI proposes to keep the sidewalk on the south side of Clementina closed during demolition and re-open it to pedestrians once the footing and shoring has been removed.</p> <p>Please confirm this is acceptable.</p>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
SCCI has received the rejection of Traffic Control Plan numbers 007 (Folsom) and 008 (Harrison) and has attempted to design the falsework to span the entire width of the roads. Upon review by SCCI and VAK Construction Engineering Services, this design does not comply with the project specifications.		WOJV to confirm the spans that are reported in the RFI as they are considerably longer than those listed in the August 10, 2012 memo from Sandis to WOJV.					
Please see our concerns with spanning the full length below: - In order to cross Harrison without a center falsework support, our required span is 79'-6". Per specification section 03 11 14 1.7-A4, the maximum allowable falsework span is 60'-9". -In order to cross Folsom without a center falsework support, our required span is 76'-8". Per specification section 03 11 14 1.7-A4, the maximum allowable falsework span is 50'. - The minimum possible depth of the falsework is 3'6" (36" beam + 4x4s + plywood). The vertical clearance would be 14'-2" which is under the required 15' clearance. - Reference VAK's memo and Folsom Falsework Schematics attached		Please provide all dimensions including sidewalks and parking lanes which may be able to be used for Falsework.					
Due to these design issues, SCCI proposes to use traffic islands to give the falsework a center support. This will divert traffic into the parking and maintain the same number of open lanes as shown in Traffic Control Plans 007 and 008. Is this acceptable?

B-0032	BRP - Barrette Acceptance Criteria	Closed	07/30/2014	08/09/2014	08/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please see attached Memo from Bencor, SCCI's Barrette subcontractor. In light of the recent issues they have encountered at a nearby project with similar design and specifications and the fact that we only have two production barrettes, restricting us having test barrettes, SCCI asks the following questions:		Specification Section 31 63 32 1.7 A requires the Contractor to submit qualifications for the contractor / subcontractors performing the barrette foundation work. Arup has not yet received this.					
1. Can the drill core verification process be substituted for the Crosshole Sonic Logging as the post installation acceptance criteria?		In response to the questions listed in the RFI:					
2. If not, please provide actual acceptance criteria for the Crosshole Sonic Logging. 31 63 32 does not provide any criteria for what defines a rejected pile. The specification only references ASTM 06760, which SCCI understands only provides how to do the test and provide results, but not acceptance criteria.		1. No. Specification Section 31 63 32 1.8 D 1 a states "Crosshole sonic logging will be used to test the concrete density of the pile for homogeneity."					
3. Can the #6 cross-tie rebar spacing be opened up? Possibly even increasing the rebar size, as remediation for the increased spacing.		2. The test results will be reviewed for anomalies. An anomaly will be indicated by the CSL test if the first arrival time increases significantly, or if the energy reduces significantly, relative to a moving baseline. The evaluation of the test results will include the location, extent and quantity of anomalies. Acceptance or rejection of a pile will be based on the evaluation of the CSL test results, pile construction reports (see Specification Section 31 63 32 1.5 E), the results of additional testing if deemed necessary by the TJPA (see Specification Section 31 63 32 1.8 D 4) and any other information or observations which indicate conformance / nonconformance of the installed work with the Contract Documents.					
		3. The Contractor may propose alternate reinforcing steel arrangements for review. The capacity of the reinforced concrete section shall be the same as or greater than that shown on the Drawings and each longitudinal bar along the long faces of the pile shall be confined with a stirrup or tie as shown on the Drawings.					
		Arup will not comment on the July 29, 2014 Bencor memo attached to the RFI. This is internal correspondence between SCCI and their subcontractor. The Contractor's requests for interpretation or clarification of the Contract Documents are the three questions listed on the Webcor Obayashi Joint Venture letterhead.					
		Arup has not yet received the Comprehensive Construction Work Plan required by Specification Section 31 63 32 1.5 D.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Shimmick Construction (SCCI) has verified the BBTT alignment per the beginning bearing and distance from the contract drawings, and the End bearing and distance per RFI B-001. The pylon center at Pylon 9 is listed per the alignment stations of BBTT & TTBB on S-2261. SCCI has noted a discrepancy in this position of .16 feet between the alignment position of the pylon and the center position of the pylon as shown in CAD drawing S-2261. SCCI has checked/verified the BBTT alignment positions of other CIDH centers as shown on the CAD S-2261 drawing. SCC realizes that CAD drawings are not for record, but this may indicate a possible issue of the pylon location. SCCI also noted that the pylon centerline coordinate on S-6079 (Cable stay drawing) is different from these values. Supporting documents are attached.		See attached SK-S-0004 for the correct location of the pylon. Drawing S-6079 will be revised and issued in a forthcoming ASI.					
Please confirm the center coordinate for the bent 9 pylon.							
B-0034	BRP - Folsom Falsework Vertical Clearance	Closed	08/06/2014	08/16/2014	08/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello	Answered By: Turner Construction Company Jack Adams

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Per the traffic coordination meeting between SCCI, Turner and SFMT A on 8/4/14, a traffic island for the falsework on Folsom Street will be avoided. The lane widths and striping will be changed in order to meet the falsework width requirements.		SFMTA has stated they would allow a formwork vertical clearance of 14'2" or greater at Folsom Street overcrossing with an approved Traffic Control Plan. The Traffic Control Plan (TCP) for this street overcrossing shall be submitted via Constructware by the Contractor's licensed traffic engineer in accord with Spec. 01-15-70 and include the details (proper lane striping and 14-2" signage etc.) that are required					
The falsework doesn't meet the 15 foot vertical clearance requirements per specification section 01 15 70 3.2H.

B-0040	BRP - Existing Column Foundation Removal for CIDH C1	Closed	08/15/2014	08/25/2014	09/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Drawing D-1005 calls for the removal of an existing column foundation at the location of new CIDH C1. The detail on this drawing shows a column coming up from a spread footing. Therefore, SCCI expected this bottom of this spread footing to be at a reasonable depth similar to other foundation to be removed. No as-builts of this footing have been provided. Potholing performed by SCCI on August 14 determined that no spread footing exists within 40 feet from grade. Without additional drawings or information about this footing, SCCI believes it is possible that this foundation is actually a CIDH installed in a retrofit contract. If this foundation is indeed a CIDH pile and extends as deep as to bedrock, its removal would be both cost and time intensive if it is possible at all. As shown on the attached picture, the edge of CIDH C1 is in conflict with the existing foundation at grade. This condition will prevent the installation of CIDH C1. Possible solutions include decreasing the diameter of the CIDH or moving the CIDH and column away from the existing foundation. Please advise on how to proceed.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Demolish the existing CIDH to an elevation of +14.00 (NAVD88). The location of column C1 will shift to clear the remaining portion of the existing CIDH. This will be issued in an upcoming ASI.	

B-0040.1	BRP - Additional Foundation Adjacent to Exisitng Bent 5 CIDH	Closed	08/27/2014	09/06/2014	09/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: SCCI previously submitted Rfl B- 040 which stated that the footing to be demolished adjacent to new CIDH C1 appeared to be a CIDH pile. SCCI has since received Reference Drawings SFOBB - San Francisco Approach Replace which appears to confirm that this footing is actually the CIDH at Bent 5 installed in this 2004 retrofit. While doing hazardous material removal for new CIDH C1 on August 27, SCCI encountered an additional footing adjacent to the Bent 5 CIDH. Pictures of this footing are attached. Also attached are sketches for clarification that show the footing as currently exposed.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> See attached sketch SK-S-0007 for zone of removal.

B-0042	BRP - Existing Bent 16 Retrofit Anchor Tiedown Length	Closed	08/19/2014	08/29/2014	09/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché		To: Turner Construction Company Phil Militello	Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Drawing D-1005 calls for the existing Bent 16 foundation to be removed to allow for the installation of the new Bent 8 CIDH piles and pile cap. The response to RFI B-0019.1 Selective Demolition - Additional Foundations stated that it was acceptable to demolish the Bent 16 foundation one foot plus the maximum tolerance outside of the CIDH footprint.				See enclosed Requested Tie-Back As-Built.			
After reviewing the Reference Drawings Seismic Retrofit No. 14B, TT Ramps, SCCI has determined that CIDH B8-3 is in direct conflict with one of the anchor tiedowns installed at the Bent 16 retrofit as shown on the attached drawing. Sheet 23 of this Reference Drawing set shows the minimum unbonded length of this anchor tiedown to be 20 feet but does not specify the bonded length. SCCI needs to know the bonded length used for this tiedown to determine the appropriate removal method.							
Please provide complete as-builts of this retrofit that show the total depth of these anchor tiedowns.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
SCCI proposes to use corrugated metal pipe (CMP) as permanent steel casing for the CIDHs when using the optional construction joint, is this acceptable? The specifications are confusing on this subject.				The use of corrugated metal pipe (CMP) as permanent steel casing for the CIDHs when using the optional construction joint is acceptable provided the following:			
Per Specification Section 31 63 30 3.5-B, " ... The permanent casing must:" then in section 3.5-B-5 " ... must comply with article 3.3." Per 31 63 30 3.3-C,"Temporary casings must be:" then in section 3.3- C-2; "noncorrugated with smooth surfaces." Since we are discussing a permanent casing and this section applies to temporary casings, does the noncorrugated rule apply?				- The casing complies with Specification Section 31 63 30 3.5-B. In regard to paragraph 5 in Section 31 63 30 3.5-B, casings placed in a drilled hole must comply with Caltrans Standard Specifications section 49-3.02C(5) "Permanent Steel Casing Installation".			
Project Specification 31 63 30 appears to be based on the Caltrans Standard Specification. Using the 2010 version of				- Contractor submits for record stamped calculations demonstrating that the CMP is capable of withstanding loads from installation, lateral concrete pressures and earth pressures, and will support personnel working

B-0048	BRP - Changes to Barrette Pile Slurry Parameters	Closed	09/08/2014	09/18/2014	09/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Stephanie Azzolino			To: Turner Construction Company Phil Militello		Answered By: Arup Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Part 2.4.A of Specification Section 31 63 31 - Barrette Piles - Bus Ramps provides the design criteria for the sodium bentonite slurry to be used at the Pylon 9 barrette piles. Based on their experience and their knowledge of constructability, SCCI's barrette pile subcontractor, Nicholson Construction Company (NCC), would like to propose the following changes. 1. 2.4.A.4.b.1 and 2: A mix of water and bentonite at the minimum 5.5% per unit weight of water produces a slurry density of 65 pounds per cubic foot (62.4 pcf + 0.055 x (bulk density of bentonite around 50 pct)= 65 pcf). A 3.5 - 4% per unit weight of water is required in order to produce an initial slurry density of 64 pounds per cubic foot as required in §2.4 A 4. Please confirm that a mix of water and bentonite at the minimum 4% per unit weight of water is acceptable. 2. 2.4.A.4.c.3: The maximum fluid loss, by filter press, is the same for in-trench as it is for initial slurry. This is not attainable in field conditions as the slurry fluid loss increases as the slurry is being reused. The widely utilized European standard (EN 1538) specifies the maximum fluid loss values of 50 cc (for in-trench slurry) and 30 cc (for initial slurry). As these are more attainable values based on experience, please confirm 50 cc (for in-trench slurry) and 30 cc (for initial slurry) is acceptable. 3. A significant part of the Barrettes will be excavated in clay and, when mixed with the bentonite slurry, the viscosity will increase. If the initial and in-trench slurry viscosity minimum is 40 seconds as specified, there is very little tolerance available on the slurry viscosity before it causes excess stress on the desanding pumps. The widely utilized European standard (EN 1538) specifies 32 seconds as a recommended minimum. Please confirm 32 seconds is acceptable as a minimum for slurry viscosity.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The changes proposed by the Contractor are acceptable provided all of the slurry test requirements and acceptance criteria, not just those listed in the RFI, follow Tables 1 and 2 from EN 1538.

B-0051	BRP - Intumescent For Frame 5	Closed	09/08/2014	09/18/2014	09/11/2014	Potentially	<input type="checkbox"/>		
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch			
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent									
REQUEST: SCCI is actively pricing and re-designing the frame 5, drop-in span as part of CR B-005 and needs to better understand the original design intent for this bridge section as it relates to the intumescent paint. 1. The only drawings SCCI see reference to intumescent are S-5068, S-6111 Detail B, S-6112 Detail D, S-6113 Detail H and K, and S-6114 Detail N. Per these it appears the design intent is to install intumescent on the underside of the "tub" (S-5068), the additional "Tub" piece (N/S-6114), and all of the exposed steel on the frame 4 side, except the lowest horizontal steel (B/S-6111 and C/S6-112). At the building side, it is confusing as only H/S-6113 shows intumescent similar to the frame 5 side. K/S-6113 only shows the intumescent on the bottom of the restraining rod steel box. J/S-6113 and L/S-6114 do not show intumescent. Also of note, the steel link beam on details D and B of S-6115 do not show intumescent. Please confirm design intent of intumescent coverage. 2. Per specification 09 96 46 Intumescent Paint 2 Bus Ramps, SCCI is to "provide the specified fire resistance classification approved by Authorities having Jurisdiction" Who are the authorities having jurisdiction? What is the fire resistance classification for frame 5? SCCI assumed during bid time and currently a 1- hour rating.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The response to this question contains Sensitive Security Information and is available only to individuals who have been granted access to the document that is the basis for the question.

B-0054	BRP - Barrette Pile Concrete Cover	Closed	09/12/2014	09/22/2014	09/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
REQUEST: Section A and B of Contract Drawings S-3191 call for 6" concrete cover around the reinforcing cage in the barrette piles. Per Nicholson Construction Company's experience, given the rebar congestion of the reinforcement cage, the 6" concrete cover allows for a path of least resistance for the concrete to rise faster on the outside of the cage and increase the risks of having bentonite being trapped inside the cage during the concreteting operation. Nicholson believes that reducing the concrete cover to 3" will decrease the risk of this happening. SCCI's proposal will not change the width of the barrette pile, it will increase the width of the rebar cage by 6". Please note that the response to RFI B-0050 allowed for the barrette pile to be on foot longer in length. These changes will be shown on the shop drawings, to be submitted in a forthcoming submittal.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Arup does not believe that the 6" clearance will allow for a path of least resistance for the concrete to rise faster on the outside of the cage and, therefore, increase the risk of bentonite being trapped inside the cage during the concreteting operation as posited in the RFI. The rate of placement of concrete, i.e., the velocity, is very low at the perimeter. If anything, fresh concrete tends to flow around the tremie annulus. However, if SCCI believes that reducing the clearance will reduce the risk of defects, then Arup takes no exception to reducing the clearance to 4" provided there is no additional cost to the TJPA.			
Is this acceptable?

B-0055	BRP - Barrette Pile Reinforcement Cage	Closed	09/15/2014	09/25/2014	09/25/2014	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Claude Titcher	To: Turner Construction Company Phil Militello		Answered By:Arup			Kevin Clinch
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent								
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>				
<p>Contract Drawing S-3191 details the reinforcement needed for the Barrettes. The current reinforcement details indicate a clear space between rebar as low as 3.75" in some areas. Per Nicholson's experience and several codes (such as EN 1534 and US FHW A), a larger clear space is recommended as small clear spaces may impede the flow of concrete inside the cage and increase the risks of concrete anomalies.</p> <p>As a result, Nicholson proposes to increase the bar sizes and use anchor heads (in lieu of hooks) in order to increase the clear space between rebar. Please see attached sketches SD-02 and SD-03. Note that the section of steel remains similar in any direction in order to avoid impacting the structural capacity of the Barrette.</p> <p>Furthermore, due to space constraints at the site the cage will be built in two (2) 10ft wide by three (3) 60ft long sections approximately (the length will vary depending on the reinforcement requirement by elevation). Each 10ft x 60ft section will be prefabricated and transported to the site. Two 10ft sections will be joined together to form a 20ft section. Our sketches include the required horizontal reinforcement to join the sections. The three 20ft by 60ft sections will be lifted and installed in the trench.</p> <p>Please confirm the reinforcement cage proposed is acceptable.</p>				<p>SCCI's proposed reinforcement layout included with this RFI is not acceptable as it does not satisfy the requirements of AASHTO LRFD Bridge Design Specifications, Fourth Edition (2007) with 2008 Interim Revisions which is the governing Code for this project as noted on drawing S-0005. According to AASHTO 5.10.6.3, #11 bars shall be tied at a maximum 6" o.c.. The proposed layout shows spacing of the ties as 10.5" and 5'-0" o.c. .</p> <p>Additionally, the horizontal bars which link the two cages, as proposed by SCCI, must have hooks to develop their capacity to make them effective in resisting the applied load.</p> <p>The clear spacing between reinforcement is measured and codified along a distance normal to the length of the bar, not at hooks and not at two bars crossing perpendicular to each other, which is presumably where the quoted distance of 3.75" is measured. The clear spacing between bars in the reinforcement layout on Contract Drawing S-3191 is as follows:</p> <p>Horizontal distance between ties: 8.9"</p> <p>Vertical distance between ties: 5.4"</p> <p>Horizontal distance between longitudinal bars: 6.4"</p> <p>SCCI's proposed layout included with the RFI increases the horizontal clearances by only 0.48 inches.</p> <p>The reinforcement layout on Contract Drawing S-3191 satisfies the requirements of EN-1538 (we believe the standard quoted in the RFI, EN 1534, is incorrect as this standard pertains to parquet flooring) which is a reference document, not a Code that applies to this project.</p> <p>Arup has worked with the Nicholson, SCCI's subcontractor, in recent days to develop alternates to their proposal which satisfy the Code, which provide the same structural capacity as the layout shown on Contract Drawing S-3191, and which increase the</p>

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Ironton-Russell Bridge project in Ironton, Ohio (ongoing) Audubon Bridge project in St. Francisville, Louisiana (recent) A25 Bridge project near Montreal, Quebec, Canada (recent)</p> <p>In addition to being more widely utilized on recent stay cable projects than its 0.6" diameter counterpart, the 0.62" diameter strand has a slightly larger cross-sectional steel area (0.2325 sq in vs. 0.217 sq in for the 0.6" diameter strand). Using the larger individual strand steel area allows for the overall steel area in a particular stay cable to be achieved using fewer strands. Using fewer strands in a stay cable allows for extra unused holes in the cable anchorages, which allows for future expansion of load capacity within the stay. VSL's stay cable anchorages are designed to use either 0.6" or 0.62" diameter strand.</p> <p>To illustrate the principle described above on the Transbay project, the currently project parameters specify that VSL's 109-strand anchorages be utilized with 109 EA, 0.6" diameter strands. In this configuration, the anchorages are completely filled with strand and thus cannot allow for future expansion of load capacity within the stays. The total required steel area for each cable is: 0.217 sq in x 109 = 23.653 sq in. By using 0.62" diameter strands, the strand count for each anchorage could be reduced to 102 EA (0.2325 sq in x 102 = 23.715 sq in > 23.653 sq in). Using 102 EA strands in each cable leaves seven open holes in each anchorage, allowing for a significant expansion of load capacity should the need arise in the future. As noted above, VSL's stay cable anchorages are designed to be used with either strand size, and therefore the anchorages could sustain the extra loading that would come with any future addition of 0.62" diameter strands.</p> <p>As one can see from the list above, 0.62" diameter strand has also become the norm for current and recent projects that VSL has worked on here in the USA. As such, it is more readily available from domestic strand suppliers.</p> <p>VSL therefore proposes to use 0.62" diameter strands on the Transbay Transit Center Bus Ramp project stay cables in lieu of 0.6" diameter strands. The 0.62" diameter strand</p>

B-0059	BRP - Hangers for Slurry Lines off Of Fremont St. Off-Ramp	Closed	09/18/2014	09/28/2014	09/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titché			To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Claude Titché	
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: As shown on the Site Logistics Plan, Submittal TG 1801-81.1 , Case Pacific's mud plant and baker tank will be staged in Lot H, North of Clementina St. In order to provide slurry and water to the CIDH locations in Lots G and I, SCCI has installed trenches across Clementina St. and Tehama St. for piping. However, due to the number and type of utilities (shown on the attached excerpt from SCCI Transmittal WOJV-0001 - Utility Locates per USA North) below Folsom Street, SCCI would like to avoid trenching at this location by hanging two 4" slurry pipes from the Fremont Street Off-Ramp. Based on this, SCCI has two questions: 1. Will Cal trans allow SCCI to install hangers of any sort from the Fremont Street Off-Ramp to facilitate this work? 2. If yes, is the attached detail provided by Case Pacific (SK-I) acceptable? SCCI will work to prevent damage to the existing structure and would be responsible for any repairs caused by these hangers.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Bashar Dayoub 9/23/14 This is SCCI & Sub Means and Methods WO need to facilitate approval from Caltrans and City We recommend to pursue this method as a last resort

VSL is proposing to use non-domestic wedges for the stay cable system to be supplied on the Transbay Bus Ramp Project. This request is based on the following:				TJPA please respond.			
-The wedges make up a very small portion of the total steel quantity on the project, yet serve a critical role in anchoring the cables of the stay cable system.				See attached			
- VSL has used the same proprietary stay wedges (VSL Switzerland) on all US stay cable projects for more than a decade, including projects that were governed by the "Buy America" provisions.							
- All VSL stay cable projects worldwide utilize stay wedges supplied by VSL Switzerland.							
- Stay cable wedges are a specialty item, and at the present time are produced solely by VSL Switzerland exclusively for use with the VSL Stay Cable System.							
- 100% of the wedges are inspected and approved by VSL Switzerland as part of our quality process prior to shipment to the projects.							
- All fatigue and static strength tests on VSL's stay cable systems have utilized wedges produced by VSL Switzerland.							
- The wedges cannot be produced in sufficient and reasonable quantities in the USA and there is no domestic product that is equal in quality to the wedges VSL is proposing.							
Pursuant to the "Buy American Provisions" as well as the guidelines in Subpart 25.3 of the "Federal Acquisition Regulation," a waiver for non-domestic materials may be

REQUEST: Based on Section A of Contract Drawing S-6400, the 732 Mod Concrete Barrier has indentations in the concrete, with the bottom line of the indentation showing to have a ½" draft. The same detail shows the other indentation lines being square which would not be able to be stripped. Attached is a drawing for a proposed form liner for the Barrier that is to be installed showing the same ½" draft, which is on the bottom of the indentation, all the way around the recess opening. This 1/2" draft around will allow the form liner to be stripped. Is this acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is acceptable.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Section 3.4-B-1 of Contract Specification Section 31 63 32, States:				The survey targets on the tops of the soldier piles are currently not being read by an AMTS due to the unexpected request to remove the AMTS from the top of 545 Mission. The inclinometer I-40 is not accessible because it is beneath the crane mat. Therefor, Contractor shall perform an optical survey of the survey targets on the tops of the soldier piles to obtain a baseline reading. The survey targets on the tops of the soldier piles shall again be read following the installation of the barrettes.			
"Do not begin excavation of the barrette piles until geotechnical instrumentation for monitoring ground movements, other than that to be installed within the barrette pile itself, is installed and stabilized baseline reading sets have been taken."							
Please provide clarification as to what geotechnical instrumentation outside of the barrette pile has been installed and who is monitoring it. If baseline readings have been established, please provide them.							
Additionally, please provide clarification as to what geotechnical instrumentation is to be installed within the barrette pile to monitor ground movement.

B-0078	BRP - Correct PTI Edition	Closed	10/23/2014	11/02/2014	11/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher To: Turner Construction Company Phil Militello			Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: VSL is requesting clarification on the correct edition of the "Recommendations for Stay Cable Design, Testing, and Installation" published by the Post Tensioning Institute (PTI) to be used on this project. On drawings S-0005 (71 of 470) dated October 1, 2013, the contract drawing refers to the "Recommendations for Stay Cable Design, Testing, and Installation" Fifth Edition (2007) by the Post Tensioning Institute (PTI) as the basis for design of the bridge. On page 05-16-33-1, section 05-16-1.2-C-1, of the project specification, dated October 1, 2013, the specifications specify the "Latest edition issued" be the standard for the project. The latest edition of the "Recommendations for Stay Cable Design, Testing, and Installation" published by PTI is the Sixth Edition dated May 2012. Please clarify which edition of the "Recommendations for Stay Cable Design, Testing, and Installation" as published by PTI should be used on this project.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The latest edition shall be used. Therefor, use the Sixth Edition dated May 2012.

REQUEST: As confirmed by SFDPW at the AWSS meeting, on 10/23/14, with Synergy Project Management (AWSS subcontractor), SCCI, WOJV, TCCO and SFDPW, submittals are not required for the following items: AWSS Dewatering Plan AWSS Valves and Fittings (also see attached email) Please confirm.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Submittals are not required for the valves and fittings. A submittal for the dewatering plan is not required at this time unless water is encountered at the site.				
B-0080	BRP - Anti Ram Barrier Specification	Closed	10/28/2014	11/07/2014	11/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By: Arup Kevin Clinch			
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: SENSITIVE SECURITY INFORMATION Please see below questions from Shimmick's Anti-Ram Barrier subcontractor, FutureNet. Question 1 Spec Section 28 16 34, 2.1 A 3 states "the design and structural materials of the vehicle barrier shall be the same as those used in the crash test." Discrepancy: The original crash tested barriers are installed in dirt for a permanent in-ground installation. This project requires the barrier be installed into a bridge section. The barrier foundation will need to be modified to fit into and react with the bridge section. Dirt reacts differently than a concrete bridge section during impact and the bridge section has space restrictions. Therefore we need to provide a foundation design that varies from the original crash tested design for both fit and function. Proposed Solution: Allow a modified foundation design, proven to absorb the minimum force via engineering calculations. Is this acceptable?		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The response to this question contains Sensitive Security Information and is available only to individuals who have been granted access to the document that is the basis for the question.

B-0090	BRP - Fremont Off Ramp Overhead Sign Pedestal Removal	Closed	11/05/2014	11/15/2014	11/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Contract Drawing D-1007 states that the removal of the overhead sign truss on the Fremont Street Off Ramp is to be removed, including the "square pedestal post foundation". SCCI interprets the square pedestal post foundation to be the square block of concrete on top of the larger beam that extends from the bridge deck, as shown on the attached drawing. SCCI believes that this beam is intended to remain as Evans Brothers' experience has shown that these beams are tied into the bridge structure. Is this correct?			See attached Sketch SK-D-0001 for reduced limits of demolition.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
A Quality Control inspection was performed by Nicholson on the reinforcement cage of Barrette Pl. During the inspection, it was observed that 2 ea. 3"x3"x0.25" angles (which are part of the assembly to pick the cage) are welded to a total of 4 ea. #10 structural bars (2 bars on each angle).					This is acceptable. If the coupler option is chosen, stagger the splices.		
After a discussion with ARUP, Nicholson proposes to install 4 ea. additional #10 bars 13' long to lap splice the structural bars affected by the weld. Those additional #10 bars will be centered on the weld location and installed before the Barrette is poured (see attached sketch).							
Alternatively, if the additional #10 bars cannot be supplied in time, Nicholson proposes to install Lenton mechanical couplers at the weld location.							
Please confirm this modification is acceptable.

Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Per section 03 15 16, the Convex Plates for the PTFE Bearings must comply with ASTM A240, Type 304 stainless steel. The maximum thickness of convex plates at Hinge 9 and Hinge H are 3" and 3.5" respectively. This thickness is not available in Domestic ASTM A240 Type 304 stainless steel plates. Please advise if another specification is acceptable for the convex plates at Hinge 9 and Hinge H (ie ASTM A276 stainless steel). Please note: If ASTM A240 is required for the convex plates at Hinge 9		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> We understand ASTM A240 Type 304 stainless steel plates are available in the thicknesses required from Samuel Plates Sales. If not, submit a copy of the ASTM A276 standard for review.			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	and Hinge H, WOJV will issue a 'Buy America' substitution request.						
B-0104	BRP - Stay Cable Forces	Closed	11/17/2014	11/27/2014	12/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Per the conference call between OPAC and Arup on 11/13/2014 to discuss OPAC's current stage-bystage time dependent erection analysis, OPAC finds slightly higher final stay cable forces than shown on drawing S-6097, about 10% to 15% higher. Please advise on which of the following cable tuning options is preferable?			Arup and OPAC had a conference call on 12/1/14. Arup understands that OPAC has prepared an erection analysis and an erection plan that provides more detail and would assist us in evaluating the question in this RFI. Contractor to forward the erection analysis to Arup for our review.				
1. The cables tuned such that, although the forces are higher, they result in a similar pattern as S-6097. 2. The cables tuned such that they all have approximately the same force, say approximately 12% of the ultimate strength.			Note: Specification Section 34 80 06 requires the Contractor to submit a conceptual erection plan prior to submitting a final erection plan. Arup has not yet received this.				
B-0105	BRP-Pylon 9 Footing	Closed	11/18/2014	11/28/2014	11/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
See attached marked up drawings of the Pylon 9 footing shoring. SCCI is proposing to pour the (N) Pylon 9 footing against the temporary shoring wall, as shown on the attached drawings. A plastic sheet (visqueen) will be attached to the temporary shoring wall to provide a bond breaker for easier extraction of the shoring system.			This is acceptable for the removal of steel plates.				
Is this acceptable?			Regarding the soldier piles, the portion of the soldier pile below the bottom of the pile cap may not be removed by pulling.

B-0119	BRP - Protection of Transverse Rebar in Fremont Off Ramp	Closed	11/24/2014	12/04/2014	12/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Per Contract Drawing D-1007, a 3'-0" section of the Fremont Street Off-Ramp is to be demolished. Per Contract Drawing S-5000, the transverse reinforcement in the 3'-0" section is to remain with no damage. SCCI and its demolition subcontractor, Evans Brothers, plan to take measures to satisfy this requirement and protect this reinforcement in place. However, it is possible that reinforcement is damaged during the demolition process. In the case of a transverse rebar being damaged, SCCI proposes to install a #6 dowel with 1 O" embedment with Hilti RE-500 epoxy adjacent to the damaged rebar ensuring that the necessary 2'-0" lap splice is provided.			This is acceptable provided non-destructive testing methods are utilized to locate in-situ reinforcement prior to drilling and provided the number of damaged bars does not exceed 10% of the total number of bars exposed. If, as the work progresses, the total number of damaged bars exceeds 5% of the bars exposed to that point, the work shall stop and demolition methods re-evaluated.				
Is this acceptable?

B-0121	BRP - Guard Booth Equipment Cabinet	Closed	12/01/2014	12/11/2014	12/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By:Arup		Kevin Clinch		
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Please see below RFI from WPCS, SCCI's security and communication subcontractor.			See attached response from SMW.				
Specification 27 1117 3.1.C. I , requests a Cabinet to be a minimum of I 8RU with a usable depth of 32" and sized to fit within the footprint of the guard booth. Upon looking into the B-line wall mount cabinet WPCS submitting on as an "or equal ", WPCS have looked into all the other manufactures listed as well as additional manufactures, and have found that no manufacture offers a half size wall mount cabinet with 32" of usable depth. The only way the specification can be met is if a full size 7' minimum cabinet were to be installed, however taking into account that this cabinet is being located in a fairly small guard shack, a full size cabinet will require a larger foot print and may not be the designer's intent.							
1. Please confirm the specification requirements are correct. If not, please provide new cabinet dimension criteria.							
2. If specification is confirmed, please confirm a full size

B-0122	BRP - Seat Extender at Hinge 9	Closed	12/09/2014	12/19/2014	01/06/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
1. During the December 1, 2014 conference call to discuss the seat extender/vertical restrainer, Arup stated that the seat extender/vertical restrainer was initially intended to perform as only a vertical restrainer. As shown on the bid drawings and incorporated into OPAC's redesign, if the bridge falls off of its bearing, any deflection of the seat extender/vertical restrainer pipe would prevent the bridge from reseating on the bearing. An alternative to the seat extender would be to follow Caltrans MTD 20-22, "Seismic Design of Bridges with Isolation Bearings", which recommends that isolation bearings, such as PTFE sliding spherical bearings, have adequate sliding surface to permit 1.25 times the MCE displacement and that unseating be prevented through the use of catcher blocks at displacements higher than 1.25 time the MCE displacement. Is it acceptable to replace the seat extender component of the seat extender/vertical restrainer with bearings designed according to Caltrans MTD 20-22?				1. This is not acceptable as the proposed solution does not provide a restraint against uplift.			
2. As discussed and agreed upon, during the December 1, 2014 conference call, the Hinge 9 pipe vertical restrainer shown in the bid drawings and incorporated into OPAC's redesign prevents the Hinge 9 bearings from rotating as intended. Arup proposed providing a gap between the restrainer pipe and vertical restrainer assembly to allow the Hinge 9 bearings to rotate as intended. OP AC commented that a gap would allow for some uplift at Hinge 9. Arup agreed and said that some uplift maybe acceptable. We find that the vertical restrainer assembly requires a 2.5" gap top and bottom for the Hinge 9 bearings to be able to rotate the 2 degrees as specified. Is a 2.5" gap acceptable for the vertical restrainer assembly to perform as intended?				2. A 2.5" gap is acceptable for the vertical restrainer assembly. Related to this, the "WSP" dimension at the top sliding plate shown on S-6252 shall change to 30".

Per approved CIDH shop drawings in Submittal TG 1801-345.1, the "C1" bars in the Bent 4 CIDH's were shown to be two bars mechanically coupled together to reach the design length of 84'-0". RFI 0126 allowed these bars to be substituted with a single bar that is 84'-0" long in the CIDH 4-1 reinforcement cage. Please confirm that this is also acceptable for the "C1" bars in CIDH 4-2 and 4-3.			This is acceptable				
B-0127	BRP - Traffic Signal Conflict at Essex and Harrison	Closed	12/04/2014	12/14/2014	12/12/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Please see the attached sktech. The traffic signal at the intersection of Harrison and Essex may potentially conflict with the Harrison right bridge overcrossing falsework. In addition, the falsework supporting the new Fremont Off-ramp structure will obstruct the view of the signal. SCCI is still designing the falsework and the attached sketch is conceptual, but illustrates the issue. This traffic signal is not shown on the contract utility drawings and SCCI cannot erect falsework without creating a public safety hazard in the present condition. Survey information is attached for your reference. Please provide direction.			See CMO comments and Photo attached

REQUEST: SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/>			Following discussion during the Wednesday weekly progress meeting on 12/10/14. The approach to address the existing 12kv ductbank at Harrison Street Abutment #1 is as follow:				
Please see attached visual interpretation of the survey notes from RFI#132 of the (E) electrical duct bank at (N) Abutment 1. As noted in previously submitted SCCI's RFI # 132, per contract drawing U-1003, note 5, the existing electrical line is to be relocated by PG&E. Per Turner's direction, a survey was performed to see if removal was necessary (survey attached). SCCI believes this duct bank is above the sidewalk grade if the structure is to remain. Please confirm this line is to be relocated.			Shimmick to evaluate if they can complete demolition and install new work while protecting the existing 12kv ductbank in place? SCCI will submit their plan and cost impact for review?				
			SCCI plan will be submitted to PG&E to gain their approval.				
			Arup have confirmed that the existing ductbank does not appear to have significant impact on the structural components at Abutment #1.

	<p>Add'l Doc Ref: B-0133 Location: Bus Ramp</p> <p>Per RFI Response B-0133, SCCI is not allowed to remove or trim trees on private property. SCCI has looked into available options and had certified arborists from The Professional Tree Care Company and Bartlett Tree Experts visit the site. They both refused to trim the trees at the property line due to stability concerns. They stated that these are Lombardy Poplars with soft wood, a short life span, and a tendency to drop limbs and have trunk or branch failures if the weight of the tree is shifted by significantly trimming them. The bridge cannot be built with these trees remaining in place as significant amount of branches directly conflict with the bridge structure. Please see the attached schematic and photo for reference. Please advise if the trees can be removed.</p>						<p>TJPA Representatives met again with 303 Second Street 1/13/14 and again on 1/22/15 and explained the Contractor's request.</p> <p>Further information is needed from the Contractor.</p> <p>Please provide:</p> <p>1.A survey of the property line and the drip line of the concrete viaduct - at the Folsom trees (including staking or ribbon on the perimeter fence at Folsom and walkdown with the TJPA)</p> <p>2. A survey of the property line and the drip line of the concrete viaduct - at the Abutment trees (including staking and walkdown with the TJPA)</p> <p>3.A survey of the Abutment adjacent to these trees - not the excavation, but the footing/abutment (including staking the corners of the footing/abutment and walkdown with the TJPA)</p>
B-0135	BRP - Deck Drain Column Pipe Outlet	Closed	12/15/2014	12/25/2014	01/06/2015	Potentially	<input type="checkbox"/>

B-0139.1	BRP - AWSS Demolition and Sequence of Work	Closed	12/23/2014	01/02/2015	01/12/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Turner Construction Company Jack Adams				
Co-Author:							
REQUEST:			ANSWER:				
Contract Doc Ref: Sheet MA-0 Specification Section 02723			Accept Suggestion: <input type="checkbox"/>				
Location: Bus Ramp			RFI B-0139.1 Revised Response - updated 1/12/2015				
Add'l Doc Ref's: RFI B-0139 Response			Comments on the (3) proposed item work described in the original RFI				
Further to WOJV's response to RFI 0139, SCCI would request to proceed with the work as follows:			1. Acceptable.				
1. Excavate and begin demolition of the upper abutment at the Caltrans lot. This Abutment is well clear of the AWSS line based upon the as-built drawings, USA markings, and a surface field investigation, where trench lines in the pavement are clearly visible.			2. Acceptable.				
2. As demolition of the upper abutment is ongoing, SCCI will pothole the AWSS near the lower abutment and sidewalk. The information gathered from this potholing will be transmitted to WOJV at this time.			3. Acceptable.				
3. Once it has been determined if the AWDD is far enough from the demolition work to safely remain in service, SCCI will proceed with the excavation and demolition of the lower abutment and sidewalk. If AWSS is in conflict with the excavation and demo work, SCCI will proceed with excavation and demo to the extent that is safe and practical to do so with the line remaining in service. The remainder of the excavation and demo will occur after the AWSS phase 1 removal and cap installation is complete.			This sequence is at the contractor's risk and at no cost to the TJPA. This sequence will require mitigating measures by the Contractor to ensure the AWSS piping materials required to safely restore AWSS are on-site. Also, welders, qualifications etc. are all approved and ready, if during excavation and demo AWSS damage occurs. If AWSS excavation and demo damage occurs, the start AWSS phase 1 removal and cap installation may then start with AWSS phasing as detailed on the drawings including the duration must be adhered to.				
SSi believes the intent of the drawings and notes to state that the AWSS system can only be disconnected for a maximum of 6 months to facilitate construction. By proceeding with the demolition and excavation work that does not affect the AWSS, SSi will be able to leave the AWSS in service longer than originally anticipated and reduce the downtime that this line must be sent out to service, which serves both the project and public interest.			*****				
Please advise if the above sequence of work is acceptable.			This is a work sequence request and is an inappropriate use of an RFI. RFI's shall not be used for "Questions relating to construction means, methods, techniques, sequences, procedures or safety precautions."				
			The sequence of both demolition of the upper abutment, excavation and demolition and potholing near the AWSS at the lower abutment and sidewalk is a contractor sequence question. The sequence and scheduling of excavation and demolition of footing and the AWSS relocation is contractor responsibility. The AWSS phasing is clearly detailed on the drawings including the duration of AWSS line remaining in or out of service.				
			If there are questions on sequence or scheduling, this is to be coordinated by the CM/GC and Trade Subcontractor outside of the RFI process. The AWSS

REQUEST: Please provide the location of the signal face from the top of the SP-2 & SP-3 truss (see attached).		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to Caltrans RSP ES-14C for signal face placement.			
B-0140.1	BRP - Overhead Sign Signal Face Dimension SP-2 & SP-3	Closed	01/29/2015	02/08/2015	02/11/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Doc Ref: RFI B-0140 Location: Bus Ramp The RFI B-0140 response directs us to the Cal trans Standard Plans ES-14C. The details on ES-14C pertain to a light weight sign structure with a 4'-0" tall EMS panel. The drawings for ES-14C appear to have the signal in the center of the EMS panel. The sign structure we are fabricating (SP-2 & SP-3) will have an aluminum sign panel that is 6'-8" tall. It appears from the project plans that the signals are located near the top of the panel, which is contradictory to Caltrans ES-14C. Based on the project plans and our experiences we would assume the centerline of the signals would be located approximately 12" to 24" below the top of the sign panel. Please provide the location of the signal face from the top of truss or from the top of the sign panel.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The location of the top edge of signal indication and associated backplate shall be placed below the top truss member and clear it. There is no exact dimension, the location of the signal backplate just needs to be clear of this member.

B-0141	BRP - CIDH Pile Slurry Testing Requirements	Closed	12/22/2014	01/01/2015	01/16/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup Kevin Clinch				
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Doc Ref: 31 63 30 Location: Bus Ramp Contract Specification Section 31 63 30 - Cast-In-Drilled-Hole Piles details the material and testing requirements for the bentonite slurry used in the CIDH piles. This specification states that slurry testing should be performed every two hours. Per Case Pacific's experience, the slurry in the shaft during the drilling operation will not meet the specifications per the Mineral Slurry Requirement table in Section 2.4-A-6 because suspended material created by drilling will make the slurry thicker. Therefore, SCCI and Case Pacific propose to only test the bentonite slurry in drilled CIDH shafts once the slurry has been recirculated before the concrete placement. Per Arup's previous request, slurry testing will be possible after periods of 48 hours of no drilling operation. Please confirm that this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is not acceptable. The slurry shall be re-circulated, de sanded or replaced as necessary to maintain the pH, density and viscosity requirements in the specifications. Exceptions to this will be evaluated on a case-by-case basis.		
B-0142	BRP - Overhead Sign Structure Post Height	Closed	12/18/2014	12/28/2014	12/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup Kevin Clinch				
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract drawing C-7004 states the overhead sign posts must be a minimum of 18' 6" from top of deck to bottom of sign frame. SCCI's subcontractor, Midstate Barrier, is proposing a 19' post (from top of deck to bottom of sign frame). Please confirm this height is acceptable for all 4 overhead sign posts.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is acceptable.

	subcontractor, Midstate Barrier, have used the 2006 CalTrans design reference sheets for these dimensions.						
	Please confirm these dimensions are correct or please provide the correct dimensions.						
B-0144	BRP - Rebar Splices in Pylon 9 Vertical Reinforcement	Closed	12/18/2014	12/28/2014	01/06/2015	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello		Answered By:Arup		Kevin Clinch		
	Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent						
	REQUEST: Please reference S-3177, S-3180, attached sketch of the pylon 9 reinforcement and draft drawing of the cable stayed bridge saddle assembly. In order to efficiently utilize the splices in the pylon 9 vertical reinforcement, SCCI proposes to shift the splice locations as shown on the attached sketch: Lower splice (near EL 64.80') will be shifted up approximately 6', and the upper splice (near EL 102.80) would be shifted up approximately 12".	SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>		
	Is this acceptable?		The splice locations as shown on the sketch included with the RFI are acceptable. Contractor to verify that no construction joints are located at the saddles as shown on S-3177.

Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Doc Ref: 34 71 06 Location: Bus Ramp Per contract specification section 03 30 06 2.1 A, barriers require 3,600 psi with minimum 590 lb/cu yd concrete. However, per the 2010 CalTrans Standard Specifications Type 60 series barriers are considered minor concrete. SCCI is proposing to use the attached approved minor concrete mix design (from TG1801-367 Minor Concrete Mix Design, Agg Grading and Cert of Compliance) for Type 60 and Type 60C concrete barriers. Is this acceptable? Please note: The Type 60 and Type 60C barriers fall under the CalTrans ROW.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Type 60 and Type 60C barriers may be constructed using minor concrete.			
B-0147	BRP - Type 732 and 732MOD Concrete Barrier Mix Design	Closed	12/22/2014	01/01/2015	01/09/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: Arup Kevin Clinch			
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Doc Ref: 03 30 06 Location: Bus Ramp SCCI is proposing to use the approved mix design from submittal TG1801-303 - Pile Cap Concrete Mix Design, Gradation and Certificates, for the Type 732 and Type 732MOD concrete barriers, as it meets the concrete barrier mix design specifications in 03 30 06. Please confirm this mix design can be used for Type 732 and Type 732MOD concrete barriers.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is not acceptable. Specification Section 03 05 15 requires that bridge superstructure concrete to have a maximum length change of laboratory cast specimens at 28 days drying of 0.038%.

B-0148	BRP - Bent 8 CIDH Reinforcement Cage Headed Rebar	Closed	12/22/2014	01/01/2015	01/09/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Contract Doc Ref: 03 20 56, TG1801-345.1 Location: Bus Ramp			Use HRC-120 heads.				
Drawing P2R1 in Submittal TG1801-345.1 - CIDH Reinforcement Cage Shop Drawing shows that the headed rebar on the Bent 8 CIDH reinforcement cages are to be HRC-555 T-Heads. Upon further review of the Contract Specifications, CMC Rebar noted that Contract Specification 03 20 45 - Headed Bar Reinforcement, Section 1.4 B states that "headed bar reinforcement must have full size heads and must be on the Caltrans Authorized Material List". HRC-555 T-Heads are on the Caltrans Authorized Material List but under the reduced size heads not the full size heads. Please confirm that the HRC-555 T-Heads are acceptable. An alternative to the HRC-555 is the HRC-120 which is on the Caltrans list and has full size heads.							
<hr/>							
B-0149	BRP - Bent 8 CIDH Reinforcement Cage C2 Splices	Closed	12/23/2014	01/01/2015	01/20/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Contract Doc Ref: 31 63 30, S-3190 Location: Bus Ramp			C2 bars are main reinforcement. If splices are needed in the C2 bars, use ultimate splice couplers.				
Note 3 on Contract Drawing S-3 190 states that there is a "No splice zone at top 60'-0" of shaft cage for main reinforcement. Ultimate splice coupler shall be used for reinforcement C1". CMC Rebar assumes that the C2 bars are also considered main reinforcement but no splice requirement is provided in this note. If splices are needed in the C2 bars, is it acceptable to use a 6-3 stagger lap splice and can it encroach the 60'-0" no splice zone.

B-0150	BRP - Grout For Inspection Tubes	Closed	12/19/2014	12/29/2014	01/06/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Per communications with ARUP, grout consisting of Portland cement mixed at a ratio of no more than 5 gallons of water per 94 lb. bag can be used to fill the inspection tubes in the CIDH and Barrette piles, provided the mix is pumped from the bottom up. Please confirm this is acceptable.				This is acceptable for shafts 5-2, 6-1 and 6-2.			
				For all other shafts, comply with Specification Section 03 38 06 2.5 B. thru F. and the following:			
				Mix the grout as follows:			
				1. Add water to the mixer followed by cement and any admixture.			
				2. Mix the grout with mechanical mixing equipment that produces a uniform and thoroughly mixed grout.			
				3. Do not exceed 5 gallons of water per 94 lb of cement. Retempering of grout is not allowed.			
				4. Agitate the grout continuously until the grout is pumped.			
				Mixing and placing of grout shall be observed by the TJPA Representative.

B-0169	BRP - CalTrans Lot Landscaping and Irrigation As Built with WOJV Comments	Closed	01/06/2015	01/16/2015	02/12/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Location: Bus Ramp Add'l Doc Ref's: WOJV email with attachments (Attached) WOJV has provided three plan sheets for the landscaping and irrigation of the Caltrans lot. SCCI requires a full set of the as-builts and specifications for this work in order to replace any disturbed landscape in kind. The sheets currently provided are mostly noted in abbreviations and diagrams, of which no key or legend is provided. Please provide a full set of as-builts and specifications for this work. WOJV Comment: The three plan sheets were provided by TJPA on 8/22/14. See attached email and drawings.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Caltrans will not submit as-built and specifications for this work in order to replace any disturbed landscape in kind. However; per the numerous meetings and discussions regarding Bus Ramp TG 18.1 Landscape walk at the Sterling Substation area, including meetings Cal Trans, WOJV, SCCI and Turner, the following landscape actions were agreed to by Shimmick (all in accord with the Contract): 1.Existing plantings - Shimmick will have to purchase and replace/replant all plants damaged by the work (qty. of 84 new plants). K Rail protection is to be provided where practical , in an attempt to preserve as much of the hillside planting as possible. 2.Existing Trees - Shimmick will have to purchase and replace/replant all trees damaged by the work (qty. of 6 new trees) 3.Existing Irrigation lines - Shimmick will have to repair any irrigation lines damaged by the work immediately as these lines are feeding water to other areas. Caltrans landscaping will work closely with SCCI when the landscaping restoration is scheduled to assist with any concerns with specifics or details	

B-0170	BRP - Bent 8 Reinforcement Footing Vertical Ties	Closed	01/08/2015	01/18/2015	02/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Doc Ref: 31 63 32 Location: Bus Ramp The footing section calls for #6 @6 each way vertical ties with a 90 degree at bottom. With the spacing of the typical (main) reinforcement at 6" OC and the hook length being 1'-0" long this presents a congestion and constructability issue. One solution would be to use an HRC-555 head at the			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> This is acceptable provided there is no additional cost to the TJPA.

B-0174	BRP - Fremont St. Off Ramp CIDH Permanent Casing Material	Closed	01/12/2015	01/22/2015	02/23/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Contract Doc Ref: 31 63 30 Location: Bus Ramp				See Arup comments below			
The Elevation View on Contract Drawing S-3100 shows that 12'-0" permanent casings are to be installed below the cut-off elevation. Section F on Contract Drawing S-3102 calls for this to be a "permanent steel casing". Case Pacific is proposing to use 12 gage corrugated metal pipe as this permanent steel casing. CMP meets the requirements for Permanent Steel Casing in the Caltrans Standard Specifications Section 49-3.02C(5).				As discussed and highlighted in Arup response to RFI B-174, Caltrans review and approval is required, be sure to allow sufficient time for Caltrans review. We recommended expediting submission of the plan; to date we have not received. (Refer to CMO email sent 2/18/2015)			
Please confirm if this is acceptable.				Please note, In the event proposed modifications potentially delay the schedule of work, contractors always have the option to proceed per contract plan.			
				ARUP COMMENTS:			
				Subject to acceptance by Caltrans:			
				It is acceptable to use 12 gage corrugated metal pipe for the permanent casing provided all the requirements of Caltrans Standard Specifications Section 49-3.02C(5) are met.			
				It is acceptable to use "Class R Steel Pipe Piling" as described in Caltrans Standard Specifications section 49-2.02B(3) for both the permanent casing and the isolation casing.			
				It is acceptable for the permanent casing and the isolation casing to be one continuous pipe.			
				Specification Section 09 97 06 3.6 A. requires that all steel be painted. It is acceptable to not paint the length of the pipe defined as permanent casing.			
				It is acceptable to increase the inside diameter of the permanent casing and the isolation casing to facilitate drilling of hole. The maximum inside diameter shall be 88".			
				It is acceptable to install the permanent casing in an oversized hole (maximum 8 ft diameter) then grout the annular space in accordance with the requirements in Caltrans Standard Specification section 49-3.02C(5).			
				Contractor to submit a plan that indicates the

B-0176.1	BRP - AWSS Reinforced Concrete Pad	Closed	01/20/2015	01/30/2015	01/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: City and County of San Fr Michael Smith			
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: AWSS 03200, MA-4, B-0176.1 Location: Bus Ramp				Please find Design details enclosed			
Further to the response to RFI B-0176, the AWSS contract drawings do not specify a design criteria for the 10' x 10' by 1' thick pad; an engineer will need to know what type of loading will be encountered in order to design the pad. Is this pad to be traffic rated for H-20 loading or just for pedestrian usage {seeing as there are x4 bollards surrounding the concrete pad).				WOJV Note: Due to a difference in calendar month between date answered and date received, there was a delay in posting this RFI			
Please provide the design criteria for the concrete pad and what type of loading will be placed on the concrete pad that is surrounded by the x4 bollards OR approve the city standard detail for bus pads as these pads are designed for traffic rating and are reinforced.

B-0177	BRP - Bent 8 Tiedown Clarification	Closed	01/15/2015	01/25/2015	02/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST: Contract Doc Ref: S-6067, 03 30 06 Location: Bus Ramp Data table on referenced drawings depicts a temporary tiedown at hinge 8 on the ζseatζ portion of the hinge. Based on the construction sequence shown in the contract drawings and current TG18.1 schedule, SCCI believes that this tiedown at Hinge 8 is not needed. It's SCCI interpretation that temporary tiedown at hinge 8 would be needed only if the frame 4 is constructed independently without frame 3 and hinge 8 to counter the "curling" effect of the frame 4 on bent 8, once falsework on frame 4 is removed. If frame 3/hinge 8 is constructed prior to completion of frame 4, as currently shown on the schedule, the tiedown at hinge 8 would not be required. Please confirm.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> If frame 3/hinge 8 is constructed prior to completion of frame 4, the temporary tiedown at hinge 8 is not required.			
B-0178	BRP - Pylon 9 Rebar Cage Support	Closed	01/21/2015	01/31/2015	02/10/2015	Potentially	<input type="checkbox"/>

B-0179	BRP - Columns 3-2 and 5-1 Drain Outlets	Closed	01/19/2015	01/29/2015	02/10/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Contract Doc Ref: S-2160, C-4102 Location: Bus Ramp							
Per contract drawing S-2160, the deck drain pipe flows to the top of columns 3-1, 3-2, 5-1, and 5-2. Per contract drawing C-4102 the deck drain pipe only exits from columns 3-1 and 5-2.							
Please clarify where the deck drain pipes flow to from the tops of columns 3-2 and 5-1.						Deck Drain Outlet to be added to columns 3-2 and 5-1. See attached sketches (SK-C-0006 and SK-C-0007) for location and details of added outlet drains and associated connections. Note the slight shift in location of CB #15 to allow installation of column 5-1 outlet drain connection. CB #15, as approved in submittal TG1801-600.2, is still sized appropriately for adjusted invert level. No change in CB manufacturer details required.	
<hr/>							
B-0180	BRP - Pylon 9 Hoop Testing Requirements	Closed	01/16/2015	01/26/2015	02/02/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Location: Bus Ramp Add'l Doc Ref: Attached CMC Rebar Shop Drawing P3, attached email							
Due to the taper of Pylon 9 (see attached drawing), there are 59 sets of varying diameter hoops (both resistance welded and coupled). Whereas the specifications define a Lot as 150 count or fraction thereof, of each hoop diameter, CMC Rebar's experience has been that when the design is such as to require minimal quantity of hoops in varying diameters (as in Pylon 9, quantities of 5 to 10 per diameter) each set would not be treated as an individual lot. It is CMC Rebar's position that the intent of the specifications is not necessarily based on quantity per size, rather than a means of quality control which would meet good engineering perspective. Fifty nine lots (59) on 236 hoops is clearly not the intent.							
CMC Rebar proposes propose the following: Welded Hoops - 140 Required - Provide sets 1 QA (4 samples), 1 QC (4 samples) Coupled Hoops - 129 Required - Provide sets 1 QA (4 samples), 2 QC (8 samples) Coupled Hoops - 117 Required - Provide sets 1 QA (4 samples), 2 QC (8 samples)						Consider each section view on drawings S-3178 and S-3179 as representative of one lot each provided the bars within a given section are from the same heat.

Co-Author: Shimmick Construction Company, Inc. Jeremiah Kent							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Contract Doc Ref: E-5007 Detail A Location: Bus Ramp							
CD A/E-5007 calls out for 6 ea (5x4" and 1x2" dia.), and 5 ea. (3x4" and 2x2" dia.) conduits coming out of West and East side of the pylon column, respectively. These conduits are coming from the racks that runs down the bridge girders, which implies that conduits will have 3 ea. 90 degree bends in them between bridge girders and exit point at the base of pylon 9. Due to the code requirements and coordination with the other trade packages, SCCI believes that these conduits need to be stubbed out at a specific elevation and orientation. Reference documents provided to SCCI do not have necessary information to establish these parameters.						See attached sketch SK-E-0001 for alignment between the Bus Ramp contract drawings and TTC drawing A1-7432 revision date 12/16/14. As noted in the sketch, two of the telecom conduit route to the future light trench at the base of the pylon rather than to the vaults.	
Please provide details with specific elevation and orientation for each conduit coming out of the pylon 9. These conduits are depicted on noted A/E-5007.

Contract Doc Ref: A/S-3076, S-5067			See attached mark-ups to sketches included with the RFI, and sketches SK-S-0033, SK-S-0034 and SK-S-0035.				
Location: Lot F							
Please provide clearances to the reinforcement in the referenced sections. Section A/S-3176 shows the #10 soffit longitudinal bars passing over the # 11 bottom link beam longitudinals. If 2" clear is used on the link beam stirrups the location of the # 10 would be 4 1 /8" from the soffit. Also the clearances in the typical section on drawing S-5067 come into play. The deck thickness is 6" and the thickness of the bars called out is 4 1/4" (2#5, 2#7, #10).							
B-0195	BRP - Link Beam Tendon Anchorages Layout	Closed	02/17/2015	02/27/2015	03/11/2015	Potentially	<input type="checkbox"/>

B-0198	BRP - Drain Pipe Conflicts	Closed	02/20/2015	03/02/2015	03/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: S-6501, S-6502, S-6503 Location: Around Harrison St.				Use 4" diameter HDPE slotted pipe at the Harrison Street Overcrossing abutments and at retaining walls 1 through 7.			
Details on contract drawings S-6501 - S-6503 have the following pipe size/type conflicts:							
-Detail A/S-6503 calls out 4" slotted plastic pipe, and references Detail 1/S-6501, which calls out 3" slotted plastic pipe.							
-Detail C/S-6501 calls out 3" slotted plastic pipe, and references D/S-6501, which calls for "Drainage Pipe." Detail B/S-6503 calls out 4" unslotted plastic pipe, and references C/S-6503, which calls for "drainage pipe." S-6501 shows that C/S-6503 and D/S-6501 are the same detail, but it appears that they references two different types/sizes of pipe.							
-S-6502 calls for 4" Drainage Pipe, but gives no details to show the type of pipe.							
Upon contact with multiple PVC pipe suppliers, 4" slotted PVC pipe is not available (see attached product data). Suggestions were made to use either 4" perforated PVC pipe or 3" slotted PVC pipe.							
SCCI proposes to use either 4" perforated PVC pipe or 3" slotted PVC pipe. Please confirm the pipe sizes and types shown in Drawings S-6501 - S-6503.

From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup Kevin Clinch				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Contract Doc Ref: S-1200 and S-1201 Location: Lot F SCCI and OPAC are following the Designer's (Arup) erection sequence shown on sheets S-1200 and S-1201. This sequence has been analyzed for seismic demands during construction by Arup as part of their design. Therefore, OPAC need not check the structure for seismic during construction. Please confirm and provide any limiting conditions from your analysis. WOJV Comment: See Specification 34 80 06 1.3.B.1.a: "Contractor shall submit erection plans and structural analysis calculations for each major erection stage including the completed structure under applicable loads at each stage. The erection plan and structural analysis calculations shall demonstrate the Contractor's means and methods to ensure the stability of the structure under the applicable loads at each stage and shall make a stage construction seismic analysis of the partially completed structure per the Construction Evaluation Earthquake indicated on the plans." Also see comment on TG1801-520 Section 5 "Seismic analysis is also required for bridge during construction according to the erection specifications."			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> The Contractor is responsible for checking the structure for seismic loads during construction. How the Contractor divides this responsibility to their subs and / or engineers is at their discretion.	
B-0204	BRP - Frame 5 Supports Scope Clarification at TTC	Closed	02/20/2015	03/02/2015	03/10/2015	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: 32 39 06 2.1A Location: Lot H/ Above Clementina St				The basis of design product, SecureUSA K4 Removable Model RSSB3608-4 requires a 6" foundation			
The bollards for this project require a large footing in order to meet the K4 rating per specification section 32 39 06 2.1.A. The minimum depth for the bollard foundation is 13" which is thicker than the 9" bridge deck depth available to set it in. Plans do not show detail of the installation of the bollards.				Date answered in Constructware: 5/4/2015 Date closed by WOJV: 5/5/2015			
Please provide a detail showing how the bollard foundation is incorporated into the ramp in order to ensure it will meet the K4 rating.							
WOJV Comment: WOJV has researched this and it seems that none of the approved manufacturers carry a product that can be embedded less than 9"							
B-0229	BRP - Link Beam PT Design	Closed	03/20/2015	03/30/2015	05/08/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: ASI 006 Location: Lot F				The prestress jacking forces and cable arrangement has been revised. Refer to ASI150-007 dated 05/05/2015.			
Attached are sketches for the Link Beams post-tension tendons. As shown in ASI 006 Drawings of the link beams, the Pjack of 1,500 kips requires a tendons size of 32-0.6" with 37-0.6" anchorage. The beam cannot accommodate a 37-0.6" anchorage due to the size of bearing plate (20 dia. With 22 diam. spiral) and the size of the blockout to stress the tendon. We propose (see sketches): 1. For the top Pjack of 1,500 kips , use two 16-0.6" tendons. 2. Place the two tendons side by side. 3. Increase the width of beam at the last two exterior cells to 4'-0" 4. Stress the two top tendons from left end and stress the bottom tendon from the right end. 5. Revise the C.G. of the Prestressing force at the end. If				Date Closed in Constructware: 5/6/2015 Date closed by WOJV: 5/8/2015			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	revising the C.G. requires additional force, up to 280 kips of additional force can be added to the top tendons by adding 3 strands on each tendons. Is this acceptable?						
B-0230	BRP - Retaining Wall 2 Footing Step Location	Closed	03/23/2015	04/02/2015	04/01/2015	Potentially	<input type="checkbox"/>

B-0231	BRP - Confirmation RFI for HRC Coupler Repairs at Pylon 9	Closed	03/23/2015	04/02/2015	03/27/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Contract Doc Ref: N/A Location: Lot F			The described method of repair is acceptable.				
<p>CMC Rebar (CMC) is moving forward with the option of field installing HRC 500/510 couplers to the Barrette vertical bars which were originally repaired with Lenton Lock couplers (that failed during QC/QA testing). CMC was onsite on Saturday March 21, 2015, and brought the head forging tool for the HRC type couplers, as well as sample bars and coupler halves.</p>							
<p>CMC will proceed as follows:</p>							
<p>Using the installation method described in the HRC 500/510 coupler product data, CMC will make up 4 QC samples, 4 QA samples and 2 operator qualification samples. CMC will also make themselves access into the Mat, and remove all of the Lenton couplers from the barrettes in Pylon 9. This will be done by cutting through the bars below the couplers. At that point CMC will stop. On Monday March 23, 2015, SCCI will send off the QC samples to MRT and the QA samples to ISI, so they can get pull tested by noon. If everything passes testing, CMC will proceed to make the full repairs in the field, installing couplers and forging heads on the in place Barrette Verticals and new T-heads they have supplied using the same methods and operators used for making the test samples. They will then splice the bars and repair any bars they had to shift or move to make access to the repair areas.</p>							
<p>Attached is information on the HRC coupler with fabrication information/instructions.</p>							
<p>Please confirm the described method of repair is allowable.</p>

B-0240	BRP - Folsom Falsework Final Vertical Clearance	Closed	04/08/2015	04/18/2015	05/05/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Webcor Construction LP Andrew Kitchen				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Contract Doc Ref: RFI B-0034 Location: Folsom St. Add'l Doc Ref: Attached sketches Please see attached sketch of the falsework vertical clearance at Folsom Street. The vertical clearance will be approximately 14'-0" at the crest of the road. Per RFI Response B-0034, SFMTA will allow a vertical clearance of 14'-2" or greater with proper signage. Per communication with V AK, this is not possible without a center median to reduce the spans. This option was not allowed per RFI responses and traffic coordination meetings with SFMTA. SCCI proposes to have a 14'-0" clearance at Folsom Street for the duration of the falsework set up at Folsom Street. SCCI will transmit a Traffic Control Plan detailing the signage for the street and will submit this for a Special Traffic Permit upon falsework erection. Is this acceptable?			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> No. Design Drawing S-2060 requires 15' MIN TEMP VERT CLR"" and Spec Section 03-11-14 Falsework requires the Contractor to meet Cal Trans standard for Falsework 15' minimum height. 1.Folsom Street Falsework vertical clearance of 15'-0" was Submitted by the Contractor (WOJV/SCCI/VAK) in both Submittal Package TG1801-310 Rev. 0 and Rev 1. VAK Drawing sheet 31. 2.Folsom Street Falsework vertical clearance of 15'-0" is required by SFDPW with " assurance that the minimum vertical clearance at traffic openings will be a minimum of 15'-0" when accounting for falsework deflection and roadway crown (or superelevation - if any)." 3.Per RFI Response B-0034, "SFMTA may allow less vertical clearance if justification can be provided. What was discussed with WOJV/SCCI was that these spans perhaps can be reduced if the temporary falsework pads are placed in parking lanes and or one sidewalk was closed as was allowed per specification and as was discussed last year with SFMTA. NOTE: The response to RFI B-0034 was issued on 8/14/14. Subsequently both Falsework Submittal Package TG1801-310 Rev. 0 and Rev 1. VAK Drawing sheet 31 detailed a 15' clearance at Folsom Street . 4.Since justification was never provided, meetings and were completed and a final Folsom Street walkdown occurred Friday 4/30/15 with SFMTA, SCCI and WOJV. Falsework design is able achieve the required minimum vertical clearance of 15'-0". REF: Spec Section 03-11-14 Falsework Spec Section 01-15-70 Traffic Routing Work Rev 3 Date answered in Constructware: 5/4/2015 Date closed by WOJV: 5/5/2015

B-0242	BRP - As Built Location of Fremont Off Ramp CIDH Piles	Closed	04/17/2015	04/27/2015	05/13/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By:Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: S-2200 Location: Caltrans Substation, Lot A The survey calculations and layout for the bents 20A, 21,22 and 23 was incorrect. The centers were set radial to FMT-1 and not at the bearings noted on S-2200. The theoretical out of position (not the as built position) is as follows, all South parallel to the alignment from the plan position. Bent 23 is 0.58 to the South, Bent 22 is 0.21 to the South so the span over Harrison is 0.37 shorter. This is the longest FMT bridge span in frame 1. The connection to abutment 24 would be a 0.58 longer. Bents 20A-22 as built position would result in the span 22 to 21 being 0.25 longer and 21 to 20A being .25 shorter. Bent 20A - 0.19 & Permanent cage set Bent 21 - 0.46 & Hole drilled and cage set Bent 22 - 0.21 & Permanent cage set Bent 23 - 0.58 & As Built of column cage See attached survey sheets for reference. Please confirm if it is acceptable that the column cages are to be set in the as built location (concentric to the as built CIDH cage)?				It is acceptable to set the column cages concentric to the as built CIDH cages. Contractor to make all necessary adjustments to reinforcing steel lengths / bents, and prestressing layout.			

B-0243	BRP - Viaduct Soffit - Grade Break	Closed	04/17/2015	04/27/2015	04/29/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By: Arup		Kevin Clinch	
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Contract Doc Ref: S-5064 Location: Frame 2 Please see attached marked up contract drawing. As discussed in the falsework DFOW meeting on 4/10/15. SCCI proposes to construct viaduct soffits without the grade brake shown on BBTT line. The bottom plane of the soffit would be flat single plane. The stem heights would be adjusted to accommodate top slab construction per deck grading Contract drawings. The depth of the girders will be as designed, at a minimum. Is this acceptable?		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/> This is acceptable provided there is no additional cost to the TJPA. The difference in depth between any web at a given cross section shall not exceed 2.5". Date Closed in Constructware: 4/27/2015 Date closed by WOJV: 4/29/2015

B-0245	BRP - Grouting of Mass Thermal Cooling Pipes	Closed	04/21/2015	05/01/2015	04/30/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Thomas Barni		To: Turner Construction Company Phil Militello	Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Contract Doc Ref: 03 70 06 Location: Lot F Section 3.1 F of Specification Section 03 70 06 Mass Concrete - Bus Ramps details the requirements for the grout to be used in the mass thermal cooling pipes once thermal cooling is complete. Following this specification, SCCI attempted to pressure grout the pipes with Dayton Superior 1107 Advantage Grout. However, the grout is unable to be pumped through the pipes, probably due to the viscous consistency and the loops in the cooling pipes. To ensure complete grouting of the tubes, SCCI proposes to fill the cooling pipes with a Type II/V Portland cement and water mixed at a ratio of 5 gallons of water per 94 lb bag of cement. The product will be the same as specified in Submittal TG1801-449. Is this acceptable?				This is acceptable. Date answered in constructware: 4/23/2015 Date closed by WOJV: 4/30/2015

B-0246	BRP - Prestressing Draing Pipe Conflict at Bent 8	Closed	04/27/2015	05/07/2015	05/04/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup Kevin Clinch				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Contract Doc Ref: S-2160, S-3170, S-6300 Location: Lot G Per details on contract drawings S-2161 and S-6300, the deck drain pipe running vertically through the columns is to be centered at the column and bent centerline. Per Section A on contract Drawing S-3170, the prestressing duct at Bent 8 also runs vertically centered at the column and Bent 8 centerline. Please advise.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See attached sketch SK-S-0043 for positions of drain pipes at columns B8-1 and B8-2.		
B-0247	BRP - Pylon 9 Column Dimension Change	Closed	04/29/2015	05/09/2015	05/05/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By:Arup Kevin Clinch				
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Contract Doc Ref: S-3173 Location: Lot F Contract Drawing S-3173 shows the dimensions of the Pylon 9 column to be 9'-0"x 11 '-0" at the top of the pile cap, 8'-2"x8'-4" at the bottom of the Link Beam and 8'-0"x8'-0" at the top of the Link Beam. The shop drawings for the Symons form work for the first lift (from top of pile cap to bottom of link beam) of the column match these dimensions. However, the forms were fabricated so that the dimensions of the column at the bottom of the link beam are 8'-0"x8'-0". SCCI proposes to raise the Symons formwork the thickness of the link beam (5'-0") and field build 5'-0" tall forms with dimensions that match those of the Pylon 9 column at the top of pile elevation. See the attached SK-1 for details. SCCI will use the same steel forms as previously approved and may cut the top 5' of Symons form work if conflicts with protruding conduits exist. Is this acceptable?			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is acceptable.

B-0250	BRP - MSE Underdrain Drainage System Connection Clarification	Closed	05/05/2015	05/15/2015	06/03/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello	Answered By: Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Contract Doc Ref: S-6504 Location: Lot A Per sheet S-6504, the MSE Underdrains are supposed to connect from the end of the pipe run to the drainage system. The invert elevation at the end of the MSE drain pipe is approximately 50.29'. The civil drawings have no detail of this connection and the nearest manhole is MH #1 with invert out elevation of 62.00' per sheet C-4302. Therefore, this connection will be going uphill from invert elevation 50.29' to 62.00'. See attached drawings and sketch. Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See attached sketch SK-C-0010 for connection of MSE underdrain to the storm drain system. Note: This RFI was received by Arup on 5/5/15. Arup understands the forms at the abutment were closed on 5/5/15. Drawing S-6504 calls for 2'-0" blockout at the base of the abutment wall. This blockout was not placed. Date Closed on Constructware: 6/3/2015 Date Closed by WOJV: 6/4/2015

B-0265	BRP - Falsework Inspection Qualification Requirements	Closed	05/19/2015	05/29/2015	06/01/2015	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Thomas Barni To: Turner Construction Company Phil Militello			Answered By:Arup		Kevin Clinch		
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Sub-section 1.5.C of Specification Section 03 11 14 - Falsework - Bus Ramps requires the Falsework Trade Contractor to employ a Registered Professional Engineer in the State of California with 10 years of comparable experience including 3 similar falsework projects to be present on the site on a daily basis. SCCI proposes to satisfy this requirement through the following:			ARUP recommends that the TJPA reject this proposal as it does not meet the requirements of the specifications.				
-Chad Hummel, a Registered Professional Engineer in the State of California, will be on site on a daily basis and will be responsible for ensuring that all construction confirms to approved drawings, only sound materials are used and quality workmanship employed and that all specifications are met. He will perform inspection of each bent and sign off on it before it is tripped. Chad's resume as well as a memo from the Falsework EOR designating Chad as the qualified onsite inspector are attached to this RFI.			Date Closed on Constructware: 6/1/2015 Date Closed by WOJV: 6/2/2015				
-Filip Filipic, Construction Manager, and John Harry, Falsework Superintendent, both have ten years of comparable experience and will be on site daily to perform secondary inspections.							
-Nathan Jaques, A Registered Professional Engineer in the State of California and the Falsework Engineer of Record, will perform a final inspection of the falsework prior to each concrete pour. Inspections will be scheduled at least five days before the concrete pour to ensure that there is sufficient time to correct any deficiencies.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Contract Doc Ref: 03 11 14 Location: Fremont Off Ramp			Specification Section 03 11 14 1.7-A.4 is a Caltrans requirement, but it is Arup's understanding that this provision does not apply to box girders. The Contractor need not comply with the span limits in Specification Section 03 11 14 1.7-A.4				
Please see attached RFI from V AK regarding the span of the Fremont Off Ramp Falsework. The Fremont Off Ramp span over Harrison St needs to be increased to accommodate an existing traffic signal pole. The required 80' span for lengthening, exceeds the permitted 65' maximum span per spec section 03 11 14 1.7-A.4. Please advise if this acceptable? And if so, please advise the allowable maximum deflection permitted on the longer span?			Date closed on Constructware: 6/1/2015 Date closed by WOJV: 6/2/2015

B-0290	BRP - Link Beam 8 Sequence	Open	06/12/2015	06/22/2015		Potentially	<input type="checkbox"/>
<div><div>From: Webcor Construction LP</div><div>Thomas Barni</div><div>To: Turner Construction Company Phil Militello</div><div>Answered By:</div></div>							
Co-Author: Shimmick Construction Company, Inc. Ben Gordon							
REQUEST: Location: Lot F		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<p>During latest analysis, which includes the revised link beams and updated jacking forces, OPAC found that Link Beam 8 (at the pylon) experiences high tensile stresses at the bottom face while supported on falsework. This is due to the PT that is provided to resist load under a cantilever condition which is present after the falsework is removed. A possible solution would be to sequence the installation of the PT at Link Beam 8 in 2 stages. The 1st stage would stress 1 or no tendon when all the other link beams are stressed as per the design sequence. The 2nd stage would stress the remaining tendons when the falsework is removed. This sequence would deviate from the sequence shown on the bid drawings, is this acceptable?</p>							
B-0291	BRP - RW3 LOL Checks	Open	06/17/2015	06/27/2015		Potentially	<input type="checkbox"/>

	<p>WOJV, and Turner, Schwager Davis proposes to make the following revisions to the prestressing design per ASI 007:</p> <p>1) Bottom tendons: Keep the C.G. of the PT forces at all locations vertically and horizontally as per contract plans, except anchorage location at the end is off by 3" at horizontal direction.</p> <p>2) Top tendons: C.G. at the center of cable not changed but the anchorage location are off by 3" at both directions.</p> <p>3) Fit all tendons (T1 ,T2,T3) side by side 1'-5" from the top.</p> <p>4) If item no. 3 acceptable, the 3'-6" blockout will be reduced to 2'-3"</p> <p>5) Add 4 more strands in order to stay with a comfortable Pjack of 75% ultimate. Pjack (1, 735+890) = 2,625 kips/(0.75x58.59) = 60 strands, use 20 strands for each tendon.</p> <p>Please see attached preliminary design drawings and confirm that these changes are acceptable.</p>						
BALFO900-0001	BSE Natoma Street Trestle Access	Closed	04/18/2011	05/02/2011	04/20/2011	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification Section 31 56 13				The Trade Subcontractor is responsible for the necessary means and methods to install the CDSM Shoring Wall within the tolerances specified in Specification section 31 56 13.			
In reference to the CDSM Shoring Wall DFOV QC meeting held in BBII's office on June 1, 2011, please find below the following RFI submitted by BBII's sub-contractor DND Construction:							
"The reference specifications for tolerance relative to centerline of wall for both the CDSM and steel soldier beams are extremely strict compared to what is common for this nature of work, particularly given the depth of the work. It is also more strict than if the verticality tolerance (1:150 CDSM/1:200 pile) is applied at a conservative excavation depth of 60 feet. Can the tolerance be changed from 0" in/2" out (CDSM) & 0" in/3" out (piles) to a uniform 0" in/4" out"?

Reference Specification Section 01 13 50 and Sheet D-1002				The area of archaeological investigation dig approx. D-3 was released to BBII 10/5/2011. Per Ural Yal BBII would perform the backfill of the archaeological investigation dig at no cost to W/O or the TJPA in consideration of CR(s) T-020 & T-005.			
Due to the recent Archeological Investigation at dig site D-3, at the depth of 10-25 feet, BBII request confirmation that the excavation, observation, and all the investigations at that depth have been completed.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification Section 31 55 00				This RFI was superseded by RFI T-251.1 and the answer is no longer required.			
BBII received additional comments on the internal bracing from Thornton Tomasetti on 10/17/11, after the 100% submittal had already been reviewed and approved by DBI. The comments provided include revised column locations and sizes that differ from our BSE drawings.							
The attached drawings highlight conflicts and reduced clearances presented by these revisions to the trainbox columns. As trainbox drawings are not available to BBII, please provide direction on where to locate bracing elements to resolve these conflicts.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference CR T-018				This RFI was covered by the response for RFI T-256 and the answer is no longer required.			
CR T-018 issued to BBII indicates that the gates need to be installed at the fire lane access of 540-580 Howard. The gates will prevent access to the rear of the building from Howard and Natoma Street.							
Please advise if the gates specified in CR T-018 are due to be installed by BBII.							
If BBII is requested to install the gates under CR T-018, please provide a specification and detail for the gate system that will be in meet fire regulation and standards.

Reference RFI #T-0251.1 and Specification Section 01 53 13				Please consider the following the response to BBII's RFI(s) 243 & 251.			
In order to avoid conflicts with both the Thornton Tomasetti "pile exclusion zones" provided in response to RFI T-0251.1, the first trestle pier near gridline 3 must be relocated. BBII Proposes two options:				Please refer to marked-up sheets SH-2202 & SH-2200 for the revised trestle configuration. The depicted configuration is to be effective immediate.			
Option A - Move the last pier East to clear the pile exclusion zones and adjacent bracing struts, resulting in a trestle deck that ends approximately 15' East of gridline 3. The capacity of this end span would be increased to allow for the additional reach.							
Option B - Move the last pier West and extend the end span to clear the pile exclusion zones and adjacent bracing struts, resulting in a trestle deck that ends approximately 20' West of gridline 3.							
Please advise how BBII should proceed.

BALFO900-0024	BSE - Relocate Zone 3 Dewatering and Electrical Equipment	Closed	02/27/2013	03/09/2013	02/27/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Lynn Kowallis To: Turner Construction Company Gary Kruttsch			Answered By: Webcor Construction LP Kirk Nielsen				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
BBII will be relocating equipment along the North perimeter wall in Zone 3 per W/O and TCCO direction. Items to be relocated include but are not limited to dewatering header pipe, dewatering control boxes, site electrical, monitoring equipment, etc. Please see the attached photos and sketches and for approval to proceed with relocation of said equipment.					Accept Suggestion: <input type="checkbox"/>		
Please confirm the utility locations shown herein do not conflict with other trade subcontractors and can remain for the duration of the dewatering system.					1. The direction to evacuate the Muni Hump was provided by QBD #TG0300-0162. 2. WOJV recommends relocating the utilities consistent with BBII's RFI #352 SK(s) 1/2 & 2/2. 3. While WOJV will coordinate as necessary to avoid utility relocation(s) WOJV cannot confirm the utilities may remain the duration of the dewatering system, nor is WOJV obligated to: a. Specification section 31 23 19.1.3.C instructed bidders to "Locate system components to allow continuous dewatering operations without interfering with installation of permanent Work and existing public right-of-way, sidewalks, and adjacent buildings, structures, improvements and construction operations performed under this Contract or other contracts." b. Exhibit-A. Section IV.C.15 instructed bidders to "he design and the installation sequence shall be coordinated with Permanent Structure construction, Temporary Structures / Equipment by other Trade Subcontractors, Internal Bracings, Access Trestle, Temporary Bridges and other structures." BBII was instructed as what to anticipate as it pertains to the permanent structure reference the BSE A-series drawings.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: Attached SKA-0488 to SKA-0494, SKA-sheets A-2207, A-2307, TTCSF - OA Phasing Narrative, TTC-MEP Phasing						Passenger elevators PE703 & PE704 are affected by Phase 1 and 2. See the attached revised B1 Level Phasing Drawing. These elevators are now shown as green i.e. constructed in Phase 2. The elevators are located under the east end temporary mechanical compound and therefore serve no useful function in Phase 1. However for Phase 1 the pits should be constructed and provided with a guardrail at the B1 level as well as the ground floor opening framed and provided with a temporary, waterproofed, concrete infill over the opening. The shaft, cabs, roping, associated ME / controls and finishes would be provided in Phase 2.	
Passenger elevators PE703 & PE704 (sheets A-2207 & A2307) at gridlines 35.7/E.6 are indicated as Phase 1 (Red) scope at the Lower Concourse Level (SKA-0489) and as Phase 2 (Green) scope at Ground Level (SKA-0490) on the Phasing Sketches dated 9/8/09. Please confirm of what the planned operation of these elevators will be if they will not go to the ground level.							
In addition, please provide the following pertaining to Phase 1 & 2 Definition:							
1.) Above Grade, Paragraph 4 - Please provide the temporary landscaping information that is to be included in the 50% DD Budget Estimate.						Response to additional questions 1 thru 12:	
2.) Above Grade, Paragraph 5 - Please provide the temporary mechanical and electrical service information that is to be included in the 50% DD Budget Estimate, or note which items on the MEP Phasing PDF provide this information.						see attachment (file too large)	
3.) Below Grade, Paragraph 3 - All four (4) stairs shown on SKA-0488 are shown in orange, which indicates they are temporary, however the narrative indicates differently. Please indicate in plan, which stairs are temporary and which are permanent.							
4.) B2 Train Platform Level, Paragraph - All four (4) stairs shown on SKA-0489 are shown in orange, which indicates they are temporary, however the narrative							

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	indicates differently. Please indicate in plan, which stairs are temporary and which are permanent.						
	5.) B1 Train Platform, Paragraph 2 - Please confirm which option of "temporary rated floor assemblies" or "rated GWB on metal stud enclosures" is to be included in the 50% DD Estimate.						
	6.) B1 Train Platform, Paragraph 3 - Please provide the dimensions and rating for the "temporary closure wall" to be provided at the entry.						
	7.) B1 Train Platform, Paragraph 6 - Please provide the location of the "temporary stud and drywall wall" at the glass skylight. Is this to be constructed at the Concourse Level?						
	8.) SKA-0488 - Please provide the general details of what the "temporary" train box East and West end walls will consist of, so this can be included in the 50% DD Budget Estimate.						
	9.) SKA-0488 - Per Thornton Tomasetti (as indicated in DL's Alternate & Phasing document, dated 9/3/09), the "Trainbox of Phase 1 extends to 1/3 bay past grid-line 36 as basis for estimate", this is not consistent with the SKA-0488. Please confirm which is correct.						
	10.) SKA-0489 / Detail 2 - Please provide the general details for the "temporary" train box East end wall will consist of, so this can be included in the 50% DD Budget Estimate.						
	11.) SKA-0490 / Detail 1 - Please provide the general details for the "temporary construction" will consist of at the circular vent structure.						
	12.) SKA-0490 / Detail 2 - Please provide the general wall and roof type details for the "temporary mechanical compound" will consist of at the East end. Is it anticipated that this structure will be completely removed and replaced by the permanent Phase 2 construction?

P-0010	TC1: Structural Steel Design Allowance Calculation Clarification	Closed	09/21/2009	09/28/2009	09/30/2009	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture		To: Transbay PMPC	Mark O'Dell		Answered By:Transbay PMPC		Mark O'Dell
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: S-2302 thru S-2507				The allowances noted on the plans (additional steel for design contingencies and misc steel not shown) should be applied to the steel framed areas.			
Structural sheets S-2302 thru S-2507 identifies a 3 lb/sf allowance for design contingencies associated with structural steel and miscellaneous steel not shown and sheets S-2601 thru S-2607 identifies a 4 lb/sf allowance for the same.				Mark O'Dell - TJPA 9/30/2009			
Please clarify how these lb/sf allowances should be calculated. Should these allowances be applied to the steel framed areas of the overall GSF?							

P-0011	TC1: 50% DD Phasing Sketch Inconsistency - Temporary Stair on Lower Concourses Closed		09/24/2009	10/01/2009	09/29/2009	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture		To: Transbay PMPC	Mark O'Dell		Answered By:Pelli Clarke Pelli Architect: Randy Volenec		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: Attached SKA-0488, SKA-0489, SKA-0490				The Stair indicated at gridlines 36-37 / F-G is actually two escalators and a stair. These are E705, E706 and Stair 701. In Phase 2 these provide a vertical connection between the Train Concourse Level and the Ground Level. They are indicated on SKA-0490 (Ground) and SKA-0489 (B1 Train Concourse) in green and are not installed in Phase 1. They do not go down to the Train Platform level.			
Phasing sketch SKA-0489 (Lower concourse level) indicates a temporary Phase 1 stair (enclosed in Red and Orange) by gridlines 36-37/ F-G. Phasing sketches SKA-0488 (Train Platform level) and SKA-0490 (Ground level) do not indicate of a stair or enclosure at the referenced grid location.				In Phase 1, escalator pits are to be provided at the B1 Train Concourse Level and installed with temporary concrete on metal deck on steel framing infill. At the Ground Floor Level, i.e. Train Box lid, in the area to the west of the foundation wall at gridline 36-37, an opening is to be framed to suit the future stair and escalators. This opening will be provided with a temporary concrete on metal deck on steel framing infill and shall be covered with waterproofing similar to the rest of the slab in this area forming the floor of Temporary Mechanical Compound. This will be removed and replaced as part of the Phase 2 Intercity Bus Facility.			
Please advise if the stair identified is to go up to the Ground level or down to the Train Platform level.				Paul McPhail - Adamson Associates 9-29-2009

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Ref: GT-1302, Draft 90% Shoring CD's,37 Line; GT-2114, Draft 90% Shoring CD's, Wall Segment 37-1. Please locate from gridline the East shoring wall between Phase 1 and Phase 2 trainbox.				Accept Suggestion: <input type="checkbox"/>			
				As we discussed in the Below Grade Structure Workshop on Tuesday Janurary 12th, 2010, the location of the east shoring wall is still in flux. Current indications are that the wall will be located closet to column line 35 than column line 37. Since the location of the wall will coincide with the location of the future seismic joint, PCPA indicated yesterday (January 13th) in a conference call @ 3:00PM that the final design team recommendation is awaiting feedback from Thornton Tomasetti. We expect this decision will be made this week. The final dimensioned location will be documented in the 100% Shoring Construction Documents however it is likely that the final dimensioned location will be available sooner. The exact dimension is indicated on sheet GT-2013 of the 100% Buttress/Shoring/Excavation Submittal dated 2/26/10. The centerline of the shoring wall is 9'-7 1/2" east of Column Line 35.

1) S-2103 2) S-5301 3) SE-4000 4) SE-4001 5) SE-5010 6) SE-5020 7) SE-5030 8) SE-5040 9) SE-5050					Constructware DRQ #000022		
P-0023	UR - Existing Water Line At Fremont Street	Closed	03/11/2010	03/25/2010	04/05/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana		To: Transbay PMPC	Mark O'Dell		Answered By: AECOM Technical Service Eric Zagol		
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:		Accept Suggestion: <input type="checkbox"/>		
Reference: AECOM Early Release Package dated 1-15-10; U-1122, Note 13; U-2023					Sheet U-1123 Note ER10 calls for the demolition of the existing water line between the limits of early release as shown (between STA ~3+80 and ~4+60) due to the existing water line affected by the hammer head portion of the temporary shoring wall.		
Sheet U-1122, Note 13 calls for the water line in Fremont Street to be demolished, but not in the early package. Sheet U-2023 of the early package does call for the relocation of a small portion of that waterline between stations 4+00 and 4+50 to accommodate the shoring wall.					Sheets U-1122 and U-1123 show the temporary shoring wall for Transbay Terminal footing demolition labeled as "TEMPORARY SHORING WALL BY OTHERS". The wall is based on information included in the Buttress/Shoring/Excavation package.		
After review of the demolition drawings as provided by TJPA to Webcor/Obayashi for reference only, and a field review taking into account the extent of the footings we see a conflict with the (E) water line based on the location of the water line provided thru U.S.A. The footings are extensive and demolition will require shoring that will be very close to the existing water line if not on top of the line.					Based on the temporary shoring wall as shown in the Buttress/Shoring/Excavation package, the location of the existing water line as shown in the Program Topographic and Underground Utility Survey, and as shown on U-1122, appears not in conflict with the existing water line south of STA ~3+80.		
Please review and provide a solution. Webcor/Obayashi JV believes that a temporary relocation of that water line from station 2+50 and 4+50 is a potential solution.					AECOM believes that the water line may be improperly marked by CDD in response to USA ticket recently activated. Blue water line markings in the field show the water in the same alignment as the

P-0026	Shoring Wall And Buttress Comment Log Clarification Request	Closed	03/19/2010	04/02/2010	04/15/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Transbay PMPC		Mark O'Dell	Answered By:Transbay PMPC		Mark O'Dell		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Below is a list of questions that provide an overview of information Webcor / Obayashi needs clarified for the Comment Logs provided with the 100% CD Shoring. These are not the only questions we have or will have.				These comments will be addressed along with the remainder of Webcor / Obayashi Comments dated April 6th 2010 regarding the review of the 100% CD: Buttress / Shoring / Excavation - Issued for Structural Design Review.			
1) The "Design Team Response" comments do not appear to be final answers. For example, the Shoring comments #2 and #5 say items "will" be submitted / provided. What date will they be provided?				Constructware DRQ #00026			
2) What date can Webcor / Obayashi expect the final response / answer for items that are unresolved (i.e. #5 on the Shoring Comment Log- "TJPA to respond", and #329 on the Buttress Comment Log - "PMPC to respond.")?							
3) What is Webcor / Obayashi expected to do with response comments like Shoring comment #5.10 - "Alternate solutions to the buttress scheme should be considered"; and #5.12 - "Needs further discussion"?							
P-0027	100%DD Specification Section 07 18 23 & 09 27 13 Discrepancies	Closed	03/23/2010	04/06/2010	03/31/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Transbay PMPC		Mark O'Dell	Answered By:Transbay PMPC		Mark O'Dell

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
In Volumes 1 & 2 of the 100% DD specifications, sections 07 18 23 and 09 27 13 have the following discrepancies:				1. Confirmed - Vehicular Traffic Coatings are specified in 07 18 00. Spec Section 07 18 23 no longer exists.			
1) Spec. section 07 18 23 - Vehicular Traffic Coating (02/16/10) is missing from Volume 1 of the 100%DD specifications, but is marked as issued in the Table of Contents. Please confirm spec. section 07 18 23 no longer exists, it's corresponding information has been inputted / consolidated with spec. section 07 18 00 - Traffic Coatings (02.16.10), and update contract documents accordingly.				2. Section 09 27 13 is correct. There is a typographical error in the Table of Contents.			
2) In Volume 2 of the 100%DD specifications, section 09 27 13 - Glass-Fiber Reinforced Plaster-GFRP-Fabrications (02.16.10) is labeled as 09 27 16 in the Table of Contents. Please confirm whether spec. section #09 27 13 or 09 26 16 is correct for the Glass-Fiber Reinforced Plaster-GFRP-				Constructware DRQ #00027

P-0029	Length Of Concrete Mat Slab Pour	Closed	04/01/2010	04/15/2010	04/05/2010	Potentially	<input type="checkbox"/>
From: Webcor/Obayashi Joint Venture Manuel Saldana To: Transbay PMPC Mark O'Dell			Answered By:Thornton Tomasetti Albert Chen				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
As discussed in previous meetings, please confirm it is acceptable to pour the concrete mat slab in the full width of the project and in up to 400' in length.				The 100%DD specification, paragraph 3.2.2A limit the maximum length of the concrete pour for mat slab and train box wall to 60ft. This requirement is to minimize heat gain due to cement hydration during the pour and reduce shrinkage induced cracking and plastic settlement. This practice is very common in the construction of large water containment structures that require good quality concrete for water tightness.			
(Note: Webcor / Obayashi needs this response for 100%DD estimating purposes.)				Please follow the DD Spec.

P-0034	TC1 Control Points per U-0010	Closed	08/12/2010	08/19/2010	11/17/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Michael Constable	To: Transbay PMPC	Mark O'Dell			
Co-Author:		Answered By: Webcor Construction LP Joanne Filipas					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: U-0010 (dated 7/9/10) The referenced drawing shows four control point locations: 1. Point #101 NE Corner of Second St. & Mission St. 2. Point #105 NE Corner of Beale St. & Mission St. 3. Point #106 SW Corner of Beale St. & Howard St. 4. Project Benchmark at SE Corner of Second St. & Howard St.				Response was never provided by PMPC but work was completed.			
Webcor/Obayashi field engineers have located Point #101 and the Project Benchmark on Second St. However, control Points #105 & #106 on Beale St. are missing. These control points are required for Webcor/Obayashi field surveying. Please physically place points #105 & #106 per U-0010 (dated 7/9/10).							
In addition, please physically place a minimum of two clear Line-of-Sight Survey Control Points on Second, First and Fremont Streets at the Natoma and Minna intersections. This allows Webcor/Obayashi to survey PG&E utility work and additional existing utility As-Built information in PG&E excavations.							
P-0035	P - Steel Basket Column Strut Connection at Glazing	Closed	07/12/2012	07/12/2012	07/18/2012	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Jeff Heath	To: Turner Construction Company	Gary Krutsch			
Co-Author:		Answered By: Turner Construction Company Gary Krutsch					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Ref: 14/SI-6092 1. The strut connecting the basket columns to the glazing sub framing is currently shown as part of the TG08.1 package. Because of structural steel tolerances of the basket columns, the length of the strut will vary depending on the final location of the basket column. The discussions have been going on for months about speeding up the fabrication and installation of the glazing system, therefore we would like to incorporate the strut as part of the TG07.1 Structural Steel package. Please confirm it is acceptable to incorporate the strut into the Structural Steel package.				This request is neither an RFI nor QBD. If W/O would like to pursue this issue, please formalize a letter addressed to PMPC and route through the proper venue.

Reference: A1-2306, A1-2307, A1-2310			Accept Suggestion: <input type="checkbox"/>				
Provide traffic light details and locations for all wedge barriers.			No indicator lights are required at the wedge barriers in the Bus Plaza (sheets A1-2306 and A1-2307). Indicator lights for the wedge barriers at the Vehicle Ramp are now shown on A1-7402 and A1-7418 delivered with MEPTSc Addendum # 4 to be issued on 06/20/2014.				
P1-0013.1	Traffic Light Details for Wedge Barriers	Closed	07/25/2014	08/04/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore		To: Turner Construction Company Phil Militello	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:				
Reference: A1-7402, A1-2306, A1-2307, A1-2310, 28 16 44, P1-0013			Accept Suggestion: <input type="checkbox"/>				
RFI response P1-0013: "No indicator lights are required at the wedge barriers in the Bus Plaza (sheets A1-2306 and A1-2307). Indicator lights for the wedge barriers at the Vehicle Ramp are now shown on A1-7402 and A1-7418 delivered with MEPTSc Addendum # 4 to be issued on 06/20/2014."			1. Wedge barrier controller to provide two (2) dry contact relay outputs to the traffic control system, one per barrier set.				
Original comment remains. 28 16 44, 3.5.I. indicates that wedge barriers provide an output to the traffic control system. Provide details and output requirements. A1-7402 shows one indicator light for two wedge barriers, while 28 16 44 2.3.H. states that each wedge barrier shall have their own light. Clarify what is required.			2. Custom pylons shown on A1-7402 and A1-7418 should have indicator lights in front and rear sides of same pylon (one set of lights per barrier/traffic direction).

REQUEST: Reference: Secondary Mitigation Provide updated details for wedge barriers and retractable bollards showing removal of topping slab with proper elevations, etc., as they are impacted by the following secondary mitigation measure: Delete 87K sf topping slab in the west end of the Lower Concourse at the SOC, Engineering and Vehicle & Bike Ramps.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> It has been agreed that deletion of the topping slab is no longer a secondary mitigation measure. Topping slab will remain on Lower Concourse at the SOC, Engineering and Vehicle and Bike Ramps. Details for wedge barriers and retractable bollards will not be revised to accommodate removal of topping slab.

	7418 (SKA-3526), RFI response P1-0016: "Locations of indicator light pylons and other devices shown on updated sheets A1-7402 and A1-7418 delivered with MEPTSc Addendum # 4, to be issued 06/20/2014." A1-7402 is not related to retractable bollards, just to wedge barriers. Sheet A1-7418 from ASI 118 has been superseded by sheet A1-7418 (SKA-3526) issued in ASI 119 which does not show any indicator lights. Clarify which sheet is meant to be the most current version.						
P1-0017	Incorrect Details on A1-8168	Closed	06/09/2014	06/09/2014	06/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Reference: A1-8168 Detail 3 - Bollard placement is missing on 3/A1-8168. Section cut B/A1-8168 needs to be verified. Section B/A1-8168 and plan view on A1-2502 don't match. Confirm which placement is correct and update details accordingly.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Bollard placement is not shown on A1-8168. However, the issue of bollard placement is dependent on the final layout of the Pre-fabricated Supervisor Booth, which will be delivered with VE Round 4 documentation, at which point the locations of bollards will be finalized.			
P1-0018	Design Build Bollards	Closed	06/09/2014	06/09/2014	06/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Reference: 05 50 00 2.3.E through H - Bollards are indicated as being design build in this specification. Confirm that they are design build.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Bollard scope has been removed from section 05 50 00, and consolidated into section 28 16 44. Bollards are performance specification - design/build.

P1-0032	Photoelectric Beam for Operable Barriers	Closed	06/09/2014	06/19/2014	06/23/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference: 28 16 44 (SSI)			Equipment and detail to be provided by the Operable Barrier manufacturer/supplier. Locations for photoelectric beam pylons identified on updated sheets A1-2302, A1-2303, A1-7402 and A1-7418 included with MEPTSc Addendum # 4, to be issued 06/20/2014.				
1.2.I - Provide detail for the photoelectric beam required to detect people or vehicles on or near the operable barriers. Locate and dimension on drawings. They are not indicated in the drawings and quantities are not provided.							
P1-0032.1	Additional Information Photoelectric Beam for Operable Barriers	Closed	07/25/2014	08/04/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference: 28 16 44 (SSI), A1-2304, A1-2306, A1-2307, A1-2302, A1-2303, A1-7402, A1-7418 from ASI 118, A1-7418 (SKA-3526) issued in ASI 119			1. Location of photoelectric beams are not called out on sheets A1-2302, A1-2303 and A1-2304. However, location of indicator light pylons and/or knox box and key switch + indicator light is clearly shown, (see attached). Per section 28 16 44.2.7.C, Custom Pylons describe two configurations of the pylon matching the annotations on plans. Design of custom pylon, complete with photoelectric beams and other equipment shall be provided by the Bollard Manufacturer.				
RFI response P1-0032: "Equipment and detail to be provided by the Operable Barrier manufacturer/supplier. Locations for photoelectric beam pylons identified on updated sheets A1-2302, A1-2303, A1-7402 and A1-7418 included with MEPTSc Addendum # 4, to be issued 06/20/2014."			Additionally, photoelectric beams are not shown on sheets A1-2306 and A1-2307, which describe the wedge barriers at West and East ends of the MUNI Bus Plaza, because they are not required at those locations.				
- Locations of photoelectric beams are not called out on sheet A1-2302, A1-2303. Provide updated details. Also provide details for sheets A1-2304, A1-2306, A1-2307.			2. Photoelectric beam shown on sheet A1-7402 does not require full width coverage of the entire wedge because of the limited accessibility by the general public and saturated video area coverage.				
- Confirm that photoelectric beam on A1-7402 is wide enough to cover the entire wedge barrier if someone is standing on it.			3. Sheets included with this response include [A1-2302, A1-2303, A1-2304 from ASI 0119], [A1-3100, A1-3105 from ASI 0123], [A1-7402 and A1-7418 from ASI 0121].

REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference: 28 16 44 (SSI)			Final location of road loops provided by the Barrier System manufacturer/fabricator. Locations of road loops currently shown on C1-7xxx series. Road loop locations for Howard Street Vehicle Ramp and West Natoma Street barrier to be provided in a future Civil package. Contractor shall obtain quantities from Contract Documents.				
2.2.H - Provide details and location of road loops. They are not indicated in the drawings. Provide quantities.							
P1-0036.1	Road loop Location	Closed	07/25/2014	08/04/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference: 28 16 44/APA (section 2.6.B),			Road loop sensors to be located at every operable barrier, both on the secure side and the non-secure side.				
RFI response P1-0036: "Final location of road loops provided by the Barrier System manufacturer/fabricator. Locations of road loops currently shown on C1-7xxx series. Road loop locations for Howard Street Vehicle Ramp and West Natoma Street barrier to be provided in a future Civil package. Contractor shall obtain quantities from Contract Documents."							
This states that loop detectors are located on both the secure and non-secure side of an operable barrier. The current Civil drawings do not show loops on both sides of the operable barriers, for example on sheet C1-7001. Clarify this requirement.

reference: 12 93 30 A1-3190				Section 12 93 30 has been consolidated into Section 28 16 44. Refer to 06/18/2014 Secondary Mitigation VE Round 2 package.			
Bollard 3 is not showing as removable on A1-3190 or in spec 05 50 00, where it is completely filled with concrete. Provide details for a removable concrete filled bollard or revise accordingly.							
<hr/>							
P1-0044.1	Conflicting Details Bollard 3	Closed	07/25/2014	08/04/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: 12 93 30, A1-3190, 28 16 44				Bollard type BOL-3 is a design-build product. Sheet A1-3190 has been updated; refer to attached SKA-3912.			
RFI P1-0044 response: "Section 12 93 30 has been consolidated into Section 28 16 44. Refer to 06/18/2014 Secondary Mitigation VE Round 2 package."							
A1-3190 still refers to 05 50 00 in detail 7. Detail 2 and 4 are also in conflict with specification 28 16 44 regarding BOL-3 details. Detail 2 also refers to structural drawings, yet there are no structural drawings for any bollards. Clarify the conflicting details and requirements. Provide what the correct details and requirements are for BOL-3.							
<hr/>							
P1-0045	Slab Plate at Bollard	Closed	06/09/2014	06/19/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: 05 50 00 2.5.F.1				Reference 05 50 00 / 2.5.F.1 has been deleted from specifications and incorporated into consolidated section 28 16 44 "Perimeter Security Systems" issued as an ASI with Secondary Mitigation VE Round 2 package.			
Through slab plate is not detailed in the drawings, but the specifications say that this is part of the bollard. Coordinate documents and revise accordingly.

REQUEST: REFERENCE: RFI Response P1-0062 As stated in RFI Response P1-0062, "The system will be changed to portland cement plaster. Details will be revised in a forthcoming ASI. See the work plan distributed to WOJV for the date of this ASI issue." Per RFI Response P1-0062, revised details using cement plaster in lieu of GFRC are to be issued. No revised details have been received. Please provide the revised detail referenced in RFI Response P1-0062.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> System W-18 Portland Cement Plaster work and associated drawings will be issued in VE Round #4 August 18, 2014. WOJV helped determine when this package would be issued.

P1-0063	Detail 2/A1-9228 Similar Condition	Closed	06/09/2014	06/19/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Reference: 2/A1-9228 4/A-0026 is called out to be similar to the detail shown. 4/A-0026 does not appear to be a similar condition. Please provide detail reference for the condition shown.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 2/A1-9228 has been updated. Detail reference 4/A-0026 SIM has been removed. Refer to the attached SKA-3667.			
P1-0063.1	Details for Embedded Plate per Detail 2/A1-9228	Void	07/01/2014	07/11/2014		Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello Answered By:							
Co-Author:							
REQUEST: REFERENCE: RFI P1-0063 Response, Detail 2/A1-9228, Sheet SKA-3667 (IFC Drawings for Main Package dated 3/31/2014) Per RFI P1-0063 response, "Detail 2/A1-9228 has been updated. Detail reference 4/A-0026 SIM has been removed. Refer to the attached SKA-3667." The revised detail shows an embedded plate at the B.O. Lower Concourse Deck. No information is provided for the embedded plate. Please provide information on embedded plate.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
P1-0064	Continuous Seal at Interior Side of Exterior Concrete Wall	Closed	06/09/2014	06/19/2014	06/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Reference: 4/A1-9211 Detail 4/A1-9211 shows a continuous seal between the structural steel, and the interior side of the exterior concrete wall. Is cont. seal required at the int. side of ext. wall? If so, please provide detail.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. On the exterior side of concrete wall/topping slab ¿ Separation is required between concrete wall and topping slab, which will consists of typical sealant/compressible material joint fill. 2. On the interior side of concrete wall/column base plate ¿ Physical Separation between column plate and concrete wall is still required, but sealant is not necessary.

From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Reference: 4/A1-9228 Detail 4/A1-9228 shows a fully grouted beam pocket, but does not show details on securing grout to the steel beam, or specify a grout to be used. Please provide details and specs.		SUGGESTION: Webcor recommends SAFP at the steel, cutting CMU around the beam and installation of a UL rated fireproofing assembly at the penetration		ANSWER: Accept Suggestion: <input type="checkbox"/> Detail on 4/A1-9228 has been updated and will be issued in a future Addendum. The Lower Concourse Exit Passageway B1567 composite slab and CMU wall changed to concrete slab and RCW. Refer to the attached SKA-3368. Also, refer to previously issued S1-2252 and S1-3504. In addition, see the attached SKA-3669 for updated composite slab with steel beam, hangers and bracing interface with CMU Wall at the STAIR 502A.			
P1-0070	Steel Flashing at Column	Closed	06/09/2014	06/09/2014	06/09/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: Reference: 3/A1-3190 Detail calls out for a 12 ga. steel flashing closure plate within the web of interior cruciform columns, but does not provide details for attachment, or where material is to flow from the flashing (there is a checker plate cap at the top of the column to deflect material from entering the enclosure). Is the 12 ga steel flashing required? If so, please provide details on attachment and draining. If not, please revise detail.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The 12ga steel flashing is supported using metal Z-Grits. Please refer to detail 5/A1-3190 for a cross section through the flashing. Any water the gets past the flashing cap will drain down the flashing closure to the drainage layer beneath the floor finish topping. Refer to the attached SKA-3703.

P1-0080	Gantry Crane Support at Transformer Vaults	Closed	06/11/2014	06/21/2014	07/16/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: 2/L1-7317					Accept Suggestion: <input type="checkbox"/>		
Detail indicates that the architect and structural engineer are to confirm the detail. A1-8717 refers back to Landscape, and structural does not appear to address the issue. Please coordinate landscape, architectural and structural.					TT Response:		
					The gantry equipment is to be supported by concrete blocks over the concrete MFB beams. See attached sketch SKS-0360 for concrete block details at the gantry supports. These details will be added to the structural drawings in a future ASI.		
					PWP Response:		
					1. The concrete block (by structural) which is exposed to the sidewalk should be specified as integral color to match landscape cast in place concrete. Refer to attached SKLA-304.		
					2. TT's sketch SKS-0360 reflects a notch in the concrete block at manhole covers. It should be clarified that in order to avoid cracking and failure of the paving at the notch, that the notch in concrete to occur adjacent to metal lined frame of lift out lids. Metal frame and tray by others. Refer to attached SKLA-304.		
					AAI Response:		
					Gantry support concrete blocks are not a part of TG07.2 except for cast-in dowels as identified by structure. Refer to attached sketches SKA-3694, SKA-3700, SKA-3701 and SKA-3702.		
P1-0080.1	Concrete Block Placement for Gantry Crane Support at Transformer Vaults	Closed	07/18/2014	07/28/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: RFI Response P1-0080, Sketch SKA-0360, Sketch SKA-3694					Accept Suggestion: <input type="checkbox"/>		
Per RFI Response P1-0080, Sketch SKS-0360 shows the reinforced concrete block is to be placed directly on top of the structural MFB Beam.					The reinforced concrete block supporting the gantry rails shall be cast on top of the protection board. Refer to details 8 and 9 of A1-9255 issued with ASI-0121.		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>Per RFI Response P1-0080, Sketch SKA-3694, the reinforced concrete block is placed directly on top of all the following components: the drainage composite and protection board, WPM-1A flashing, and structural MFB.</p> <p>Please clarify if the reinforced concrete block is to be placed directly over the structucal MFB, or on top of drainage composite and protection board. Please revise details to match.</p>						
P1-0080.2	Concrete Mix for Concrete Block at Gantry Crane Support	Closed	07/18/2014	07/28/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
REFERENCE: RFI Response P1-0080, Sketch SKS-0360				Confirmed.			
<p>Per RFI Response P1-0080, the gantry equipment is to be supported by a reinforced concrete block as detailed on Sketch SKS-0360, but does not call out the type of concrete mix to use.</p> <p>Specification Section 03 30 02 2.1 does not specifically note a mix for "Concrete Blocks".</p> <p>Please confirm the "All other concrete" mix called out in Specification Section 03 30 02 2.1 is to be used to furnish and install the concrete block referenced in RFI Response P1-0080.</p>

REQUEST: Reference: Specification Section 07 54 19 3.2A 07 54 19 3.2A requires "the general contractor shall examine substrates, areas, and conditions" with the installer for compliance with the contract documents. Please remove the requirement for the general contractor to verify existing conditions with subcontractor. Subcontractor is solely responsible to verify and accept existing conditions prior to commencing work.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The Contract Documents refer to the Contractor defined as the General Contractor/Construction Manager (CMGC) in the TJPA/CMGC Agreement for responsibility to complete the Work and for coordination of the Work, not to individual subcontractors that are contracted to the CMGC. The specification is correct.		
P1-0083.1	Additional Review of PVC Substrate Requirement	Closed	07/01/2014	07/11/2014	09/01/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST: REFERENCE: RFI Response P1-0083, Specification Section 07 54 19 3.2A As stated in RFI Response P1-0083, "The Contract Documents refer to the Contractor defined as the General Contractor/Construction Manager (CMGC) in the TJPA/CMGC Agreement for responsibility to complete the Work and for coordination of the Work, not to individual subcontractors that are contracted to the CMGC. The specification is correct." Per the contract, the CMGC verifies compliance of the work with the contract documents via the QA/QC process at the time of installation. Additional review of the work to reverify conformance with the contract documents as set forth in Specification Section 07 54 19 3.2A is an added service. Please confirm TJPA intends to have this added service to CM/GC's contract incorporated into the work.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The TJPA does not agree that what is required in this specification section is an added service. The CM/GC is ultimately responsible for the quality of the entire project. If the CM/GC wishes to assign or delegate any responsibility to a subcontractor related to quality control, that is your prerogative.

REFERENCE: Detail 1/S1-2252 (Attached), Detail 10/S1-9001, Details 2 & 3/A1-9229, Sheet A1-8662 Fire Protection Matrix & Schedule (All from IFC Drawings for Main Package dated 3/31/14)				TT Response:			
Per Detail 1/S1-2252 (Attached), Composite Deck Type S1 extends through the face of the northerly CMU wall, and is supported by this wall (see attached). This condition is shown on Detail 10/S1-9001 (direction to this detail is given on 4/S1-5032).				For the exit passageway composite deck structural steel framing, refer to response to RFI P1-0103. Updated detail 10 of S1-9001 was issued with ASI-0121.			
Details 2 & 3/A1-9229 show this condition as being supported by structural steel framing which does not show on structural drawings and fireproofed which would not be required per Sheet A1-8662 Fire Protection Matrix and Schedule. Please coordinate architectural and structural drawings to match.				AAI Response:			
				Fireproofing is required for the exit passageway composite deck structural steel framing, beams, and hangers. Refer to attached SKA-3905. Refer also to A1-9229 and A1-9230 issued with ASI-0121.

From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: RFI Response P1-0110, SG1 Drawings, Division 10 Specifications					Accept Suggestion: <input type="checkbox"/>		
Please refer to SG1-6202, "General Sheet Notes, Item 'D' - "SIGN SUB-CONTRACTOR TO PROVIDE SIGN MOUNTING LOCATIONS/SURFACE CONDITION REQUIREMENTS AND METHOD OF ATTACHMENTS TO TJPA REPRESENTATIVE". Sub-Contractor's proposed anchoring details (proposed 'methods of attachment') are to be included as a component of the required signage submittal/shop drawing package."					Please reject and void this RFI as it is too vague and not possible to address.		
SG1 Drawings and Division 10 Specifications do not appear to provide mounting design requirements (i.e. allowable point loads, mounting into concrete over geosynthetic fill, mounting into waterproofing, etc.). Please provide design requirements for mounting all signage.					The previous response to P1-0110 makes it clear that mounting of the sign is the contractor's responsibility for this performance based item. In addition, the Contract Documents show signage mounting for many signs in various locations. If the contractor has a question about a particular location, the RFI should refer to a specific location and detail.		
P1-0111	Callout on L1-9612	Closed	06/11/2014	06/21/2014	07/01/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST: Reference: 07 13 55 2.1 07 13 55 2.1 does not provide a specific manufacturer for thermoplastic water tank liners. Webcor intends to require all manufactures be approved via QBD prior to bid. If this is not acceptable, please provide specific manufacturers and products which are acceptable to use.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Manufactures that meet the Performance requirements specified in the referenced specification section are acceptable. The successful bidder shall submit the product the meets the specification requirements as a shop drawing submission. The QBD process is not the correct process for determining quality of products. If WOJV wants to vet products during the bid process, than utilize the Request for Substitution process established by TJPA and WOJV as outlined in the General Conditions specification section 00 04 40.			
P1-0118.1	Product/Manufacturer for Thermoplastic Water Tank Liners	Closed	07/31/2014	08/10/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: REFERENCE: RFI Response P1-0118, Specification Section 00 04 40 RFI Response P1-0118 states, "The Request for Substitution process established by TJPA and WOJV as outlined in the General Conditions specification section 00 04 40 is the process to be utilized for Bidder proposed substitutions to the Basis of Design." Specification Section 00 04 40 states, "Contractor will be provided a period of 10 days after the date of each Trade Package award for submission of data substantiating a request for a substitution with an "or equal" item." The specification section referenced in RFI Response P1-0118 indicates that substitutions are addressed post-bid. Per the meeting between TJPA, PCPA, Turner, and Webcor-Obayashi on 7/17/14, the response to RFI P1-0118 is to be revised to state that the QBD process is to be used for suggested alternate materials/manufacturers pre-bid.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Your understanding is not correct. TJPA will alter Specification section 00 40 40 to adjust the current process.

Co-Author:							
REQUEST: Reference: A1-8880, A1-2302, A1-7001 Per A1-8880, WJC8 and RJC1 are located between Stair 201 and the adjacent existing building. Per A1-2302 and A1-7001, there does not appear to be a seismic joint at this location. Please revise so that drawings match each other.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Expansion Joints have been deleted. See Attached Sketch SKA-3688.				
<hr/>							
P1-0130	Carboline Protective Coatings Primer	Closed	06/11/2014	06/21/2014	07/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST: Reference: 07 81 00 3.1.B, A1-8662, A1-8663 Per the attached letter, Skanska will furnish and install Carboline Protective Coatings Primer on all steel to receive Intumescent Fireproofing. Bidders will be directed to assume the steel will be received with this coating, and they will use compatible coatings, or perform all necessary surface prep to use a different system. Per 07 81 00 3.1 B fireproofing cannot begin prior to completion of roofing. This will not work with the construction schedule. Please confirm that FP-1 and RFLE do not exist, or provide spec and location (see A1-8662 & A1-8663)		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The construction schedule and sequence of construction is the responsibility of the CM/GC. FP-1 and RFLE-3 indicated in the fireproofing Schedule of Sheet A1-8662 are clearly indicated in the description column of the schedule. FP-1 is a fireproofing method covered in RFLE#3 document approved by SFFD/DBI . RFLE-3 is a method of calculation also covered in RFLE#3 document also approved by SFFD/DBI.

P1-0131	Fire Blankets Shown at Ceiling Locations	Closed	06/11/2014	06/21/2014	06/30/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference: A1-8890, 07 09 13 The contract documents show fire blankets within the ceiling space at several locations. Are these part of the rated seismic joint assemblies? The seismic joint assemblies note that the assembly must have a "fire barrier", but does not identify the barrier as a "fire blanket." If the "fire blanket" is the "fire barrier" identified in 07 09 13, please remove/revise the language on the drawings to match the specification. If this is an added material to be furnished and installed separately, please provide a spec., extent, and details for the fire blanket. This affects TG16.1 Framing/Drywall and/or TG07.8 Expansion Joints. Please provide the requested information so as not to impact the bidding schedule.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The Fire Blanket is part of the seismic joint assembly. The annotation has been revised to match the Specification. Refer To SKA-3692.		
P1-0132	Installation Requirements for Insulation	Closed	06/11/2014	06/21/2014	07/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference: 09 80 00 1.9 A requires that all materials requiring "wetness, moisture or dampness" be completed prior to installation of insulation. This would mean that all drywall finish, thin set tile, and any other "wet applied" finishes be installed prior to acoustic insulation/sealant being installed within the wall cavities, or penetrations. Please rewrite this requirement to follow the manufacturer's written recommendations.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is a means and methods requirement that the CM/GC shall manage as stated in Division 01. Specification 09 80 00 sets forth the industry standard requirements for installation of the insulation materials an systems. Specification language does not change.		
P1-0132.1	Language Revision for Material Installation per Specification Section 09 80 00	Closed	07/09/2014	07/19/2014	08/27/2014	Potentially	<input type="checkbox"/>

	Section 09 80 00 As stated in RFI Response P1-0132, "This is a means and methods requirement that the CM/GC shall manage as stated in Division 01. Specification 09 80 00 sets forth the industry standard requirements for installation of the insulation materials an systems. Specification language does not change." RFI Response 0132 requires that insulation not be installed unless no further installation of materials requiring wetness, moisture or dampness is contemplated. Drywall mud, thin set for tile, terrazzo, paint and other finish materials create wetness, moisture, and damp condition within the building. Please revise the language to mandate material specified within Specification Section 09 80 00 shall be installed per the manufactuer's written installation instructions.						be revised as recommended in this RFI. This revision will be included in ASI 127.
P1-0133	Relative Humidity Requirement	Closed	06/11/2014	06/21/2014	07/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Scott Shope		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Reference: 09 80 00 1.9 B requires that relative humidity in the area of work does not exceed 55% humidity for the duration of the project. The average relative humidity for San Francisco is above 55% for +80% of the year (and those days below 55% are intermixed between days above 55%). By this standard, we would need to scaffold, shrink wrap, rent air conditioners/dehumidifiers and run them for several years until substantial completion. Please rewrite this requirement to follow the manufacturer's written recommendations.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Specification Section 09 80 00 1.9 B shall be revised to state: "Ensure manufacturer's written installation requirements for ambient conditions are met."

From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
REFERENCE: RFI Response P1-0134			This information will be provided with the ASI that will be issued on the schedule agreed to with WOJV and TGPA. Design of the concrete platform cannot be completed without completing the redesign of the Superintendent's Station per the TJPA directed design change.				
As stated in RFI Response P1-0134, "The embeds for the Bus Deck Superintendent's Station shown on sheet A1-8181 are not required. Sheet A1-8181 has been omitted in TG08.10. The Bus Deck Superintendent's Station will be a pre-fabricated booth per VE mitigation meetings. Documentation for pre-fabricated booths to be issued in a future package."							
Per RFI Response P1-0134, detailing for the Superintendent's Station will be provided in a future package. The information related to the concrete platform is required to acquire pricing for topping slabs. Please provide the detailing for the Superintendent's Station Concrete Platform.

PROJECT MANAGEMENT - REQUEST AND ANSWERS LOG

30100 - Transbay Transit Center Project

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<p>Per the contract documents, WPM-3 is to be used at the roof park level below grade. Per 07 13 54, WPM-3 is Sika Sarnafil Waterproofing System PVC G476-20. Per the product data for Sarnafil PVC G476 (see attached), WPM-3 can be exposed for a maximum of 3 months. Based upon this limitation Webcor will be requiring the waterproofing subcontractor to protect the waterproofing until permanent overburden (foam fill, soil, rock, etc.) can be installed. This may lead to substantial added cost to the project. Please confirm that this is acceptable, or revise the contract documents to a product which can be exposed for an extended duration.</p>				<p>See Application specification section 07 13 54 / 3.3 that states "The waterproofing sequence in general shall be as follows: install the first ply of the membrane to serve as temporary waterproofing until the building is ready to receive the overburden at Park level. Following installation of Additional protection in areas where construction will occur above the membrane will be installed and removed by other contractors."</p> <p>The Contractor is responsible for means and methods of construction and scheduling the interaction of trades to complete the work. The contractor shall determine the most cost effective means of water management during construction to reduce project costs. The suggested construction phase water management process outlined in specification section 07 13 54 can be altered as desired by the Contractor to reduce costs and coordinate with the Contractor's means and methods. The completed waterproofing system, testing, etc. shall comply with 07 13 54 and the drawings in the Contract Documents (e.g. waterproofing detail 7/A1-8851).</p>		
P1-0136	Roofing Spec	Closed	06/11/2014	06/21/2014	07/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST:				The referenced specification section 07 13 54 / 1.8.A2 states "Be prepared to cover unfinished work with temporary covers in the event of an unexpected rainfall." The statement does not state that the entire area of the roof shall be covered every night. This is required to prevent damage to the incomplete ongoing waterproofing work, which might result from issues such as water entrapment within the system.			
reference: 07 13 54 1.8 A 2				Specification section 07 13 54 / 1.8 B will be revised in a future ASI to delete the requirement that "At the end of each day, leave the building in a completely watertight condition." WOJV has bid manual			
Per 07 13 54 1.8 A 2, the roofing subcontractor must be prepared to cover unfinished work with temporary covers in the event of an unexpected rainfall. Per 07 13 54 1.8 B, the roofing subcontractor must leave the building in a completely watertight condition at the end of each day, and make unfinished work watertight. Based upon these requirements, Webcor will be requiring the roofing subcontractor to protect the entire area of the roof until it is completely watertight. This may add substantial added costs to the project. Please confirm this is the desired requirements, or revise the contract documents.

instructions that appropriately describe the CM/GC requirements on this issue.							
P1-0137	Waterproofing Membrane Curing time	Closed	06/11/2014	06/21/2014	07/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REFERENCE: 07 13 00 3.5 A		The language has been revised. Refer to attached SKLA-306.					
Spec Section 07 13 00 3.5 A 1 requires the waterproofing membrane to cure a minimum of 7 days at 70 degrees Fahrenheit. In San Francisco, the average daily high temperature does not get up to 70 degrees for 8 months out of the year, and the average low temperature is below 70 degrees year round. As such, acclimatization (scaffold, tenting, and heaters) will be required to maintain the 70 degrees the entire duration of the W/P activity. This may add substantial added costs to the project. Please confirm this is the desired requirements, or revise the contract documents.							
P1-0138	Unfinished work watertight spec	Closed	06/11/2014	06/21/2014	07/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger

REQUEST:			SUGGESTION:		ANSWER:		
reference: 07 54 19 1.9 A 5					Accept Suggestion: <input type="checkbox"/>		
Spec Section 07 54 19 1.9 A 5 requires "at the end of each day, leave the building in a completely watertight condition. Make unfinished work watertight." This requirement will require the tenting of the entire building in order to make the building and unfinished work "watertight." This may add substantial added costs to the project. Please confirm this is the desired requirements, or revise the contract documents.					The following sentence; "...at the end of each day, leave the building in a completely watertight condition. Make unfinished work watertight." Will be deleted from Spec Section 07 54 19 1.9 A 5. You are correct, construction phase weather protection is a means and methods issue.		
					WOJV shall review this changed specification in relation to the Bid Manual and adjust the Bid Manual as required. The Bid Manual previously stated: "It shall be the responsibility of the Trade Subcontractor to take all measures to protect Work from inclement weather, including that determined by WOJV, until completion of the work and acceptance by the Owner." and "In the event that the building requires weather protection and rain water control, Trade Subcontractor shall furnish and install all weather protection as required for Work to continue unabated and will be liable for damage to other Work or costs for weather protection installation due to Trade Subcontractor's failure to timely or properly install weather protection." We also don't believe your text is intended to require each individual trade subcontractor to fully tent the building each day or even on a rainy day.

P1-0147	Concrete Curbs at CMU Walls	Closed	06/13/2014	06/23/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Scott Shope	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: 4/A1-0022				Not all CMU walls have concrete curbs. The CMU walls that have a concrete curb have annotation <i>CC</i> specified on their wall tag. These walls, with their wall tags, have been illustrated on the architectural zone plans.			
4/A1-0022 indicates that a "CC" accompanies the CMU wall symbol if a concrete curb is to be erected below the wall. 1/A-0025 indicates that typical CMU walls do not have curbs. 2/A-0025 indicates that if a CMU wall is on a sloped slab, a curb is typically required below the CMU wall. Enlarged floor plans in architectural plans do not typically show a concrete curb below CMU walls (i.e. no "CC" adj. to the symbol). Typical structural details (1 & 2/S1-9001) show concrete curbs at all CMU walls. Are all CMU walls supposed to receive concrete curbs or only the ones identified on architectural plans?				S1-9001 illustrates curbs for CMU walls, where they exist.

P1-0149.1	Widths for Below Grade/Train Box CMU Control Joints	Closed	07/03/2014	07/13/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:				
REFERENCE: RFI Response P1-0149, Details 3 & 4/A-0024, Details 7 & 10/S1-9000			ANSWER: Accept Suggestion: <input type="checkbox"/>				
As stated in RFI Response P1-0149, "This question is vague and cannot be answered. Joint widths vary along the E/W length of the building as well as vertically by level. Contractor to provide information on the joints in question by both gridlines (N/S & E/W) as well as building level (Platform, Lower Concourse etc.)"			Joints laid out in the architectural drawings reduce continuous wall lengths for the purpose of crack control and/or permit the seismic displacement of elements braced to the floor above relative to those elements that are permitted to slip relative the floor above.				
<ul style="list-style-type: none">- Per Detail 3/A-0024 the train box CMU control joints running in an east to west direction appears to be the width of a standard grout joint.- Per Detail 4/A-0024 the train box CMU control joints running in a north to south direction are larger than the width of a standard grout joint.- Details 3 & 4/A-0024 indicate that structural drawings are to be referenced for control joint information.- Per Details 7 & 10/S1-9000 standard below grade CMU wall control joints are 3/8" regardless of orientation.			For joints oriented in the north-south direction, control and seismic functions are satisfied at a joint width of 3/8". This is due to the small magnitude of below grade seismic building drift in the east-west direction.				
Please confirm that all below grade/train box CMU wall control joints are to be 3/8" wide as required by structural, rather than differing widths based upon orientation as indicated on the architectural drawings.			Joints oriented in the east-west direction for the purpose of providing seismic separation under north-south building drift shall be sized per General Note CD-6 of S-0005, requiring Operational Performance under GSL-2 Earthquake. The GSL-2 story drifts that control the joint widths are tabulated on S-0006. For partition walls at the Train Platform Level, the Lower Concourse drift demands apply. For partition walls at the Lower Concourse, the Ground Level drift demands apply. Drift demands are converted to displacements (joint sizes) by multiplying the percentage drift by the story height.				
P1-0149.2	CMU Wall Layout Requirements	Closed	08/14/2014	08/24/2014	09/05/2014	Potentially	<input type="checkbox"/>

REFERENCE: RFI Response P1-0149.1			ANSWER: Accept Suggestion: <input type="checkbox"/>				
RFI Response P1-0149.1 does not provide specific sizes and layout requirements for CMU walls.			Dimensioned setting out for all concrete and CMU partition walls is referenced from the Architectural Zone Plans, located on related details and identified as CJs e.g. A1-3007 GL 7, E.6.				
Please provide specific sizes and layout requirements for CMU walls as Trade Package TG07.4 CMU is not design-build.			On the Architectural Zone Plans and details, the CMU wall tags refer to the Masonry Partition Schedule on Architectural drawing A-0022, which stipulates the CMU wall thicknesses and performance criteria.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: RFI Response P1-0150, Specification Section 07 84 13 (IFC Drawings for Main Package dated 3/31/14)					Accept Suggestion: <input type="checkbox"/>		
As stated in RFI Response P1-0150, "For applications, exceeding listed 3 ½ inches joint width, engineering judgment from the manufacturer (in this case Hilti) is required."					Yes, an engineering judgment that the manufacturer has obtained approval for by the AHJ, for penetration fire stopping exceeding 3 1/2", will be accepted from any listed manufacturer in lieu of providing a tested assembly.		
Per RFI Response P1-150 an engineering judgement from Hilti will be accepted. There are several other specified manufacturers for penetration fireproofing, 07 84 13 1.7 C requires that penetration firestopping be UL/Intertek/FM Global tested assemblies, and tested by a qualified testing agency acceptable to the AHJ. Please confirm that an engineered judgment for penetration firestopping from any listed manufacturer will be acceptable in lieu of providing a tested assembly.							
P1-0151	HD for CMU Wall Types	Closed	06/13/2014	06/23/2014	06/24/2014	Potentially	<input type="checkbox"/>

REQUEST:			SUGGESTION:		ANSWER:		
Reference: 1/A1-3100					Accept Suggestion: <input type="checkbox"/>		
1/A1-3100 shows CMU wall types with the symbol "HD". 4/A-0022 does not define what this symbol indicates. A-0015 defines "HD" as "heavy duty" or "hot dipped", neither of which appears to apply. Please provide information on CMU marked as "HD".					Detail 4 on drawing A1-0022 has been updated to reflect that $\bar{z}HD\bar{z}$ stands for additional reinforcing. Drawing A1-0022 shall be issued with a future ASI and shall reflect this change.		
P1-0151.1	Information for HD Designated CMU walls	Closed	07/08/2014	07/18/2014	07/22/2014	Potentially	<input type="checkbox"/>

P1-0160	Structural Slab Detail	Closed	06/11/2014	06/21/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: reference: S1-2502, A1-2892, A1-9532 Per S1-2502 and A1-2892, the structural slab extends 1'-7" south past GL H to meet the bus bridge. Per A1-9532 the bus deck topping slab stops 3'-4" north of GL H. This will leave a 4'-11" area with no topping slab between the bus deck and bus bridge. Please revise the drawing to show the desired condition.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Topping extents revised per attached SKA-3723 based on sheet A1-9532. Refer also to details 2 & 3/A1-8378 previously issued, for extent of slab and bus bridge interface.			
P1-0161	Topping slab at bus deck	Closed	06/11/2014	06/21/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: reference: A1-6102 There does not appear to be a detail depicting the edge of topping slab and associated waterproofing where the bus deck meets the bus bridge. Per A1-6102 the connection between bus bridge is under study. Please provide the details for the connection between the bus bridge and bus deck. This will affect bid documents for TG07.6 Topping Slabs and TG13.2 Waterproofing.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> For topping slab at Bus Deck to Bus Ramp, see detail 2 & 3 on A1-8378.			
P1-0162	Expansion Material	Closed	06/11/2014	06/21/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST: attached: S-6113 Per the bus bridge plans S-6113, a 24" wide piece of expansion material is to be inserted between the bus bridge and bus deck. This does not appear to be a waterproof assembly, and may leak onto the building/people below. Please confirm this is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See detail 3 on A1-8378 for the waterproof joint assembly at the Bus Deck to Bus Ramp transition. Waterproofing details will typically be found in the architectural drawings and not on structural drawings.

P1-0165.1	Rail Requirements for the Path of Travel to the Superintendent Station	Closed	07/25/2014	08/04/2014	09/03/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Tram Nguyen	To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger		
Co-Author:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REQUEST:		REFERENCE: RFI Response P1-0165, Sheet A1-8168, Sheet A1-8169, CBC Section 1003.5, CBC Section 1010.19					
As stated in RFI Response P1-0165, "Ramp rails information can be found on A1-8168 and A1-8169. However, sheets A1-8168 and A1-8169 have been omitted in TG08.10. Bus Deck Superintendent's Station will be a pre-fabricated booth per VE mitigation meetings. Documentation for pre-fabricated booths to be issued in a future package."		Refer to attached sketches SKA-4044, SKA-4046 and SKA-4047 for updated layout of ramps with required rails.					
A1-8168 and A1-8169 show rails for the ramp west of the superintendent station, but omits rails at the 8.1% ramp/curb cut south of the superintendent station and across the drive aisle from it.							
- Per CBC Section 1003.5, slopes along the path of egress which exceed 5% must comply with CBC Section 1010.							
- Per CBC Section 1010.9 requires ramps with a rise greater than 6" to have handrails on both sides.							
- Per CBC Section 1003.5 contrasting finish surfaces in lieu of handrails are only acceptable where the difference in elevation is 6" or less (in this case the vertical travel is approx. 9").							
Please confirm that portions of the path of travel to the Superintendent Station which exceed 5%, and have a vertical travel greater than 6" do not require rails.

	issued in a future package."						
	RFI Response P1-0166 indicates that documentation for pre-fabricated booths will be issued in a future package. The work around the pre-fabricated booths is not included in the same bid package as the pre-fabricated booth. Please provide the information regarding structures supporting the pre-fabricated booths.						
P1-0169	Coating for Metal Surfaces	Closed	06/09/2014	06/19/2014	06/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: 05 15 21				Per specification section 09 97 16, part 1, 1.1, A.1; all AESS are to receive high performance coatings. Per specification section 05 10 00 part 2, 2.2, A and 2.2, C indicate all structural steel is to be either primed of galvanized; there is no exception for the cast steel items. Shop Primer is required as specified.			
Per 05 15 21 Steel Castings (see attached), steel castings (most notably the cast nodes) are to be furnished as bare metal. This was confirmed in the construction issues meeting held on 04/17/14 (see attached), with the indication that coating of the bare metal is to be included in TG16.5 Painting. 09 97 16 High Performance Coatings - Superstructure Package (see attached) identifies a coating system for exterior exposed factory-primed metal surfaces, and a coating system for galvanized steel, but not a coating system for exterior exposed unprimed/non-galvanized metal surfaces. Please provide the coating system for all unprimed/non-galvanized metal surfaces.				The specifications are intended to be read as a whole and as such, specification section 05 15 21 only speaks to the fabrication of steel castings, a sub-set of structural steel which is governed by section 05 10 00.			
Revised: IFC Set 09 97 15 2.5 B calls out for "Shop Primer" in the "Coating System for Exposed Unprimed and Non-Galvanized Steel Surfaces." Based on this information the painter (who in not under contract yet) would need to go to the steel erector's shop to prime the steel (which is currently in production) with the materials called out in 05 10 00 and 05 12 13. Based on the current schedule, the unprimed/non-galvanized steel will be erected before the painter is under contract. In addition, adding priming of these surfaces to the steel scope of work would negatively impact the delivery and erection schedule of steel. Please revise the spec to provide priming of unprimed and non-galvanized metal in the field,

P1-0169.1	Clarification for the Preparation of Cast Nodes	Closed	07/08/2014	07/18/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Tram Nguyen	To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger		
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REFERENCE: (All Attached)		WOJV, Turner, and TJPA shall address the questions related to scope of work in the current construction Contract.					
- RFI Response P1-0169							
- Specification Section 05 10 00 (IFC Drawings for Main Package dated 3/31/14)							
- Sheet S1-1023							
- Submittal TG0701-99C.1							
Per RFI Response P1-0169 (Attached), cast nodes are governed by Specification Section 05 10 00 (Attached), and shall be shop primed.							
- Per Specification Section 05 10 00 3.2 P 1 (See attached Specification Section 05 10 00), "Unless otherwise specified in Section 3.2.P.3, shop prime all structural steel..."							
- Per Specification Section 05 10 00 3.2 P 3 d (See attached Specification Section 05 10 00), "Surfaces requiring preheat are not to be primed until preheat has been performed."							
- Per structural drawings (Example Sheet S1-1023 attached) cast nodes are to be field welded to the adjacent tube columns.							
In order to weld the cast nodes to the adjacent tube columns, the cast node must be preheated as confirmed in the reviewed welding procedure from Submittal TG0701-99C.1 (Attached). Since surfaces to be preheated are not to be shop primed, base contract documents explicitly mandate that cast nodes are not to be primed until after welded in the field.							
Please confirm TJPA intends to add shop priming of cast

REQUEST: Reference: S1-6010 and S1-6020 Bearing support shown in detail 8/S1-6010 is not the same as that shown in detail 1 and 2/S1-6020. Please clarify bearing support to be used.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Detail 8/S1-6010 does not show a bearing support, the detail shows a cross section of the structural steel. The detail has been updated to add more dimension lines to clearly indicate that 8/S1-6010 does indeed match the details 1/S1-6020 and 2/S1/6020. This will be issued in a future Addendum. The bearing itself is described in great detail in the specification section on drawing S1-6020.

REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
REFERENCE: (IFC Drawings for Main Package dated 3/31/14) Specification Section 07 81 23 2.4 C Specification Section 09 97 15 Specification Section 07 81 23 2.4 C indicates that the top coat is to be an aliphatic urethane as specified in Specification Section 09 97 15. Specification Section 09 97 15 does not have a coating system for steel coated in intumescent fireproofing. Please provide the requested top coat and color.					Specification section 07 81 23 1.1 C.2 states that the finish coat is to comply with division 09 for the decorative top coat. Specification section 09 97 16 2.3, 2.4 and 2.5 provides the top/finish coat; this is the same coating system for steel elements coated in intumescent fireproofing. Please refer the enclosed sketches for colors.

REQUEST: Reference: 5/A1-8883 Per 5/A1-8883 2 ea. 2" dia. PVC pipes penetrate the train box wall for draining FJC2 at ground level. Per 5/A1-8883, concrete is to be poured tight to the PVC pipe, and no sealant/link seal/waterproofing is shown around the pipes within the wall. This may lead to the PVC pipe breaking at the wall if the concrete shifts, and a point for water intrusion at the train box wall. Please confirm this is the desired detail at this location.				The PVC pipes are provided with flexible couplers that are attached to flexible membrane and SS secondary gutters to allow both the gutter and PVC drains to move if the concrete shifts. Refer to annotations on details 4 and 5 of A1-8883 issued with the Main Package IFC dated March 31, 2014. These PVC drain pipes receive 2 plies WPM-1A spiral wrap on the outside face of the foundation and SJ concrete end wall to prevent water intrusion. Refer to annotations on details 4 and 5 of A1-8883 issued with the Main Package IFC dated March 31, 2014. WOJV shall review the details that interface with the Trainbox waterproofing with the WOJV waterproofing system subcontractor/designer (Best/Grace) and submit shop drawings for each waterproofing condition.

From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Detail 1 / A1-7844. Detail 1 shows a future W5 Wall Cladding (as part of Phase 2) which will be attached to a train platform partition (partition type 31 as part of Phase 1). Specification 09 22 19 requires that the metal framing of the partition be designed by the Trade Contractor. Is the trade contractor to include the loading of the future W-5 cladding in his design calculations for the metal framing? If so please provide the loading of the future W-5 cladding to be used in the design calculations.					Accept Suggestion: <input type="checkbox"/>		
					1. The trade contractor is responsible to include the loading of the future W-5 cladding in his design for the metal framing.		
					2. For loading requirements of the future W-5 cladding system to be used in the design calculations for metal framing, refer to specification section 08 44 39 under 2.3 Design Criteria.

REQUEST:			SUGGESTION:		ANSWER:		
Per 1/A1-8894 FJC3A is to be installed at the bus deck level guardrail, and to refer to specification. 07 09 15 indicates that FJC3A is specified in 07 09 13. 07 09 13 does not indicate the manufacturer, type, gutter, or integration into FJC3. There does not appear to be details showing extent of FJC3A, or tie-in to adjacent expansion joints. Please provide omitted specification and drawing information.					Accept Suggestion: <input type="checkbox"/>		
					See specification section 07 09 13 / 3.4 C & D: "Moisture Barrier: Manufacturer's standard modified as shown on drawings."		
P1-0206	Galv. Metal Plate at Fireproofed Beam	Closed	06/20/2014	06/30/2014	07/22/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: 3/A1-8894 and 3/A1-8897					Accept Suggestion: <input type="checkbox"/>		
Per 3/A1-8894 dated 03/31/14 and 3/A1-8897 dated 03/31/14, galv. metal plate is covering a fireproofed beam is to be furnished and installed at the edge of the bus deck and roof park levels. Structural does not appear to show these plates. Please provide size, location, attachment requirements, and fireproofing details for these plates.					Refer to attached sketch SKA-3860. Detail 4 has been added to clarify FJC3A seismic joint assembly and components.		
					Note: there is no galv. metal plate noted nor required for the seismic joint assembly at Roof Park Level (3/A1-8897).

P1-0206.1	Design Requirements for Galvanized Metal Plate per Detail 3/A1-8897	Closed	07/23/2014	08/02/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: REFERENCE: RFI Response P1-0206, Detail 3/A1-8897 (IFC Drawings for Main Package dated 3/31/14) Per RFI Response P1-0206, there is no galv. metal plate noted nor required for the seismic joint assembly at Roof Park Level (3/A1-8897). Per Detail 3/A1-8897 (see attached) there is a "galv. metal plate covering fireproofed structural beam" which is not detailed within the documents (it is unknown if it is required for a seismic joint assembly). Please provide the design requirements (size, extent, attachment, fireproofing, etc.) for the galvanized metal plate covering fireproofed structural beam depicted on Detail 3/A1-8897.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The response to previous RFI (P1-0206) is correct, there is no galv metal plate required at the fireproofed structural beams. Per VE Item #36, the GFRC system will be eliminated. Please see enclosed SKA-3818R1 and ASK-3963 with revised Roof Park and Bus Deck level fascia drawings, including the seismic joint details.

P1-0214	Request for FJC2 Joint Specification at Ground Level	Closed	06/25/2014	07/05/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST: REFERENCE: Drawing A1-8880, Specification 07 09 13 (IFC Drawings for Main Package dated 3/31/14) Per drawing A1-8880, there are 2 ea. FJC2 expansion joints. One of the FJC2 joints is located at the W-12 exterior glass system (GL 20), and one on the Ground Level adjacent to Beale Street (GL 35). FJC2 as specified in 07 09 13 appears to be for the W-12 system, and 07 09 15 does not appear to specify a seismic joint for FJC2. Please provide a specification for the FJC2 joint located at the Ground Level.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> The enclosed SKA-3735, SKA-3736 Drawings and Specification pages with 07 09 13 markup clarify seismic joint assemblies FJC1 and FJC2 accordingly. Revised construction documents will be submitted in forthcoming ASI.				
P1-0215	Panel Noise and Vibration	Closed	07/01/2014	07/11/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger					
Co-Author:							
REQUEST: Reference 2014/06/16 W-1 Re-issued for Bid 08 44 27 2.2N Noise and/or vibration due to wind are listed as an unacceptable conditions. There is the possibility that wind will create noise and/or vibration in properly installed panels because of factors such as (but not limited to) perforations and gaps between panels. If provisions remains in the specifications, they may result in additional cost in the bids and/or limit the bidding pool. Confirm that noise and/or vibration caused by wind within properly installed panels will be acceptable.		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> JV, TJPA, PMPC, and the design team discussed this extensively. The specification as written is the agreed upon Contract Document. Noise and/or vibration caused by wind are not acceptable and are assumed, until determined otherwise, to be an indication that the panels are not installed properly.

From: Webcor Construction LP Andrew Kitchen		To: Turner Construction Company Phil Militello		Answered By:			
Co-Author:							
REQUEST: Reference Specification Section 08 44 27 Section 2.2N (TG08.2 Issued for Rebid Documents) Please confirm that noise due to wind moving through the patterns cut out in the Aluminum Panels of the Exterior Awning and through the gaps between the panels Exterior Awing and noise due to wind moving above and below the entire system is not to be considered an unacceptable condition. The contractor is providing the pattern per the contract documents and they will have no control over any noise due to wind moving through the predetermined pattern, gaps between each panel and wind moving above and below the entire system. The contractor should only be responsible for noise due to vibration caused by poor workmanship and should not be responsible for any noise due to the inherent design of the W-1 Exterior Awning.		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
<hr/>							
P1-0216	Touch up Specification	Closed	07/01/2014	07/11/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Zachary Moore		To: Turner Construction Company Phil Militello		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: Reference 08 44 27 3.10 F.1.b Specification Section 08 44 27 calls for touchup so that repair is invisible from a distance of 2 ft. According to PDCA P1-04 TOUCH-UP PAINTING AND DAMAGE REPAIR (see attached), Section 2.3 states: "...In order to determine whether a surface has been "properly painted" it shall be examined without magnification at a distance of thirty-nine (39) inches or one (1) meter, or more, under finished lighting conditions and from a normal viewing position." Based on PDCA recommendations, anything less than 39" may result an unnecessary increase in cost to the bids. Additionally, the nearest normal viewing position of the final constructed awning will be several meters. Please confirm that the 2 ft. requirement is to remain.		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/> Confirmed, follow the Contract Documents.

P1-0217	Multiple Seismic Joint Assembly Manufacturers per Specification Section 07 09 13 Closed		07/02/2014	07/12/2014	07/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Transbay PMPC Ray Quesada				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Specification Section 07 09 13 2.2 A 1 (IFC Drawings for Main Package dated 3/31/14)					Accept Suggestion: <input type="checkbox"/>		
Per Specification Section 07 09 13 2.2 A 1, Construction Specialties, Inc. is the basis of design for the seismic joint assemblies. As such, the details associated with the seismic joints which were bid out to Shimmick and Skanska were based upon Construction Specialties, Inc. Specification 07 09 13 2.2 A goes on to list another 3 manufacturers which can be used. Since each manufacturer may require different block-outs, embeds, attachment to structure, etc., there could be some added unforeseen costs if a bidder uses a product which is not the basis of design.					Let the bidders know that Construction Specialties is the basis of design and that the bidder will need to cover any costs associated with using one of the other listed manufacturers.		
Would TJPA like us to direct the bidders to cover any costs associated with any changes required due to the use of a product which is not the basis of design, or would TJPA like to carry the risk/costs associated with this?							
P1-0218	Inconsistent Specification and Drawing References for Joint Sizes and Movement Closed		07/02/2014	07/12/2014	07/11/2014	Potentially	<input type="checkbox"/>

	REFERENCE: Sheet A1-8880 (IFC Drawings for Main Package dated 3/31/14) Per Sheet A1-8880, Seismic Joint Type FJC1 is located within the roof park landscape/paving. Is Seismic Joint Type FJC1 to be deferred with the rest of the roof park?						
P1-0220	Park Deferral Waterproofing	Closed	07/02/2014	07/02/2014	07/11/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Zachary Moore To: Turner Construction Company Phil Militello Co-Author:		Answered By: Adamson Associates, Inc. George Metzger				
	REQUEST: Reference: Addendum #11 Dated 05-16-14 A1-8404 detail 1 Due to the deferral of the roof park landscaping items that would have been covered, the waterproofing and drainage gutter assembly for the W-10 Skylight, be exposed to UV and weather for a prolonged period of time. Please provide any provisions necessary to mitigate this changed condition.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
			This RFI refers to a question previously answered in RFI P1-135. The components of detail 1/A1-8404 are not impacted by the issues on RFI P1-0135.				
P1-0221	Inconsistent Drawing and Specification Titles for Expansion/Seismic Joints	Closed	07/02/2014	07/02/2014	07/11/2014	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello Co-Author:		Answered By: Adamson Associates, Inc. George Metzger				
	REQUEST: REFERENCE: Sheet A1-8880 , Specification Section 07 09 13 (IFC Drawings for Main Package dated 3/31/14) Sheet A1-8880 is titled "Expansion Joint Schedule". Specification Section 07 09 13 is titled "Seismic Joint Assemblies". Please change one of the titles to match the other.	SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
			Sheet A1-8880 is titled "Expansion Joint Schedule", because it provides in a listing form graphical aspects of all expansion joints; it includes other expansion joints not found on Specification Section 07 09 13. Specification Section 07 09 13 is titled "Seismic Joint Assemblies" and puts forth the technical specification of seismic joint assemblies. The two documents do not provide the same information, thus titles are not the same.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Sheet A1-8880, Sheet A1-4303, Sheet A1-4403 (IFC Drawings for Main Package dated 3/31/14)					Accept Suggestion: <input type="checkbox"/>		
Per Sheet A1-8880, Joint Type CJC4 is within GWB ceilings at GL 10 on the Ground Level and the Second Level. Sheet A1-4303 at GL 10 on the Ground Level shows W-16A, but does not call out a seismic joint or details. Sheet A1-4403 at GL 10 on the Second Level does not call out a seismic joint or details. Please revise the drawings and schedule to match.					Please refer to following Sketches: SKA-3736.3, SKA-3820, SKA-3821 & SKA-3822 that clarify seismic joint cover CJC4 to be issued a subsequent ASI.		
P1-0226	Materials for Seismic Joint Assemblies per Specification Section 07 09 13 Closed		07/02/2014	07/12/2014	07/11/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Specification Section 07 09 13 2.5 Specification Section 07 09 13 2.6 Specification Section 07 09 13 2.7 Specification Section 07 09 15					Accept Suggestion: <input type="checkbox"/>		
Spec Section 07 09 13 2.5 indicates the materials and coatings to be used. Spec Section 07 09 13 2.6 indicates that the joint assembly design to be based upon the design shown. Spec Section 07 09 13 2.7, indicates that an engineer is to design the materials for use in the seismic joints. Are the subcontractors to follow Spec Section 07 09 13 2.5 as per Spec Section 07 09 13 2.6, or redesign the materials per Spec Section 07 09 13 2.7? This is similar to Spec Section 07 09 15.					Specification Section 07 09 13 / 2.5 and 07 09 13 / 2.6 are correct as stated. At the request of the CM/GC in different review meetings, the TJPA directed the Design Team to delete the requirement for a Corrosion Engineer in all the Glazing and Cladding specifications.		
					Specification Section 07 09 13 /2.7 is not incorrect as currently issued. However, to further reduce costs on the Project, Specification Section 07 09 13 / 2.7. will also be revised to deleted the requirement of a Corrosion Engineer and will state the following:		
					"Conduct a component-by-component analysis of potential corrosion resulting from galvanic action between materials, for components of the work of this section and provide report."		
					This revision will also be applied to specification Section 07 09 15. These two Specifications will be re-issued in subsequent ASI.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Sheet A1-9522 (Attached), Specification Section 03 30 03 (IFC Drawings for Main Package dated 3/31/14)					Accept Suggestion: <input type="checkbox"/>		
Per the notes on Sheet A1-9522, the concrete topping slab in the following locations are to be provided with the required thickness and as described by the structural engineer in Specification Section 03 30 03:					The notes on the drawings have been revised from "section 03 30 03" to read "section 03 30 02". Refer to the attached SKA-3750 which reflects updated Trainbox topping slab notes. This amendment is applicable to drawing sheets# A1-9520, A1-9521, and A1-9523 to A1-9537.		
<ul style="list-style-type: none">- Train Platform & Lower Concourse Level- Vehicle and Bicycle Ramp- Bus Deck Level Topping & Curbs- All Other Concrete Toppings							
No documentation is provided for Specification Section 03 30 03. Please provide the specifications for section 03 30 03.							
P1-0230.1	Details and Specifications for Concrete Sloping to Zero Thickness	Closed	07/15/2014	07/25/2014	07/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: RFI Response P1-0230					Accept Suggestion: <input type="checkbox"/>		
Per RFI Response P1-0230, topping slab concrete is to be as specified in Specification Section 03 30 02. Per Specification Section 03 30 02, all concrete mixes, excluding the concrete fill at basket columns, have a 3/4" aggregate.					For typical detail for concrete at the small ramps, refer to Structural detail 5/S1-5003.		
In several locations (Train Platform Level GL 2 - 4 and GL A - F for example) show the topping slabs sloping to zero thickness. This condition will not allow the use of aggregate or reinforcing as noted on the revised sheets in the response to RFI Response P1-0230.							
Please provide details and specifications for sloping of concrete to zero thickness.

P1-0230.2	Concrete Ramp Details for Structural Slabs Poured per Slab Plans	Closed	07/22/2014	08/01/2014	08/05/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
REFERENCE: RFI Response P1-0230.1, Detail 5/S1-5003 (IFC Drawings for Main Package dated 3/31/14)					The referenced structural detail calls for saw cut and roughening of the slab to ¼" amplitude. The architectural slab edge drawings are not intended to show areas of slab roughening.		
RFI Response P1-0230.1 references Detail 5/S1-5003 for the installation of small ramps. Per Detail 5/S1-5003, there is a minimum slab thickness of 2" at the ramp, to saw cut the concrete at the nose of the ramp, and to roughen the surface of the structural slab to receive the ramp.					The small ramps have been shown on the architectural zone plans and on the structural details since well before the Below Grade Package TG07 Issue for Construction. Execution of this a contractors means and methods item and the drawings do not need to be revised as requested in this RFI.		
Architectural slab edge plans do not show depressions within the structural slabs where these ramps exist (topping slab ramps or housekeeping pad/mechanical pad ramps). As such, a 2"x40" swath of concrete would need to be removed where concrete has been poured per the slab plans (note - mat slab rebar is 1.5" clr. from the t.o. slab, 1 way slab and composite deck rebar is 3/4" clr. from the t.o. slab).							
Please provide revised concrete ramp details where structural slabs have been poured per the slab plans.							
P1-0230.3	Rebar Depressions and Fixes at 2" Depressions	Closed	08/14/2014	08/24/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
REFERENCE: Detail 5/S1-5003 (IFC Drawings for Main Package dated 3/31/14)					It is not necessary to provide depressions in the slab for the small concrete ramps. As suggested in the RFI, a different material can be provide the taper of the small ramps.		
Detail 5/S1-5003 requires a minimum 2" thickness of concrete for the ramp. In order to maintain a minimum 2" thickness, a depression in the slab will need to be provided at the ramps. Depressions are shown on the slab edge plans.					Specification section 09 30 00 to be revised as follows:		
Train platform, lower concourse decks, and associated reinforcement are part of TG06, not TG07.2.					09 30 00 2.7.H Leveling Topping: One of the following or equal.		
Please revise the plans to show depressions and fixes for rebar at the 2" depressions, or provide a different material					1. Mapei "Planicrete 50" (basis of design)		
					2. Mapei "Mapecem"

REQUEST: Reference: L-0006 and L-0007 While sizing the maximum load for the rooftop cranes it was communicated by PWP and TT that the maximum tree size will be no greater than 25,000 lbs and that the roof is designed for a maximum of 26,000 lbs. Confirm that the structure will be able to accommodate the additional tree weight which will incur over the years as the trees grow.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> TT Response: The roof structure was designed for the tree weights given to us by PWP during the course of the design. It was noted that the tree weights are the "average" weight of the mature tree. For seismic design, the "average" tree weight was used, because the floor slab diaphragm will distribute the weight of all trees to the seismic force-resisting system. For gravity design of steel beams carrying the tree, a factor of safety of 2 is applied to the "average" weight to account for the situation when a specific tree outgrows the "average" weight. The tree weight for the seismic design and gravity design is tabulated in the contract document Detail 2/S-1013. PWP Response: The "average" size of tree materials was determined by species and available soil volume (growing medium).			
P1-0236	Details for Expansion Joint Covers in Concrete Barrier	Void	07/11/2014	07/21/2014	08/05/2014	Potentially	<input type="checkbox"/>

REQUEST:

reference: ASI 118, 119 and A1-7416 (SK-3524)
There are discrepancies between ASI 118 (Addendum #4) and ASI 119 for this sheet. ASI 118 and 119 are both dated 06/20/2014. Confirm that ASI 119 is meant to take precedence. It does not appear to be the most current version.

SUGGESTION:

ANSWER: Accept Suggestion: ☐

Per request of WOJV and PMPC, all VE items issued in ASI 0118 (MEP/TE/SE/VT Issued for Bid Addendum 4) which were not related to MEP package were provided in ASI 0119. ASI 0119 is a combination of "VE Round 2" and "MEP/TE/SE/VT Issued for Bid - Addendum #4". This sheet - A1-7416 (SKA-3524) is the same sheet in each package. This is noted on the revision narrative provided with ASI 0119.

Per specification section 01 10 40 / 1.6 C.2.d "RFIs shall not be used for the following: the TJPA will not reply and will reject the RFI: d. Questions on contract administration procedural matters, unless they required interpretation or clarification of the Contract Documents." This questions relates to a contract administration procedural matter that WOJV jointly determine and assisted in providing direction on how the documents were to be issued and labeled. WOJV has not coordinated knowledge of this matter between the internal parties. WOJV shall void this RFI and Turner shall reject the RFI.

REQUEST: Reference: ASI 118, 119 and A1-7420 (SKA-3528) There are discrepancies between ASI 118 (Addendum #4) and ASI 119 for this sheet. ASI 118 and 119 are both dated 06/20/2014. Confirm that ASI 119 is meant to take precedence. It does not appear to be the most current version.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per request of WOJV and PMPC, all VE items issued in ASI 0118 (MEP/TE/SE/VT Issued for Bid Addendum 4) which were not related to MEP package were provided in ASI 0119. ASI 0119 is a combination of "VE Round 2" and "MEP/TE/SE/VT Issued for Bid - Addendum #4". This sheet - A1-7420 (SKA-3528) is the same sheet in each package. This is noted on the revision narrative provided with ASI 0119. Per specification section 01 10 40 / 1.6 C.2.d "RFIs shall not be used for the following: the TJPAs will not reply and will reject the RFI: d. Questions on contract administration procedural matters, unless they required interpretation or clarification of the Contract Documents." This questions relates to a contract administration procedural matter that WOJV jointly determine and assisted in providing direction on how the documents were to be issued and labeled. WOJV has not coordinated knowledge of this matter between the internal parties. WOJV shall void this RFI and Turner shall reject the RFI.

REQUEST:			SUGGESTION:		ANSWER:		
Reference: 28 16 44/APA ASI 119					Accept Suggestion: <input type="checkbox"/>		
Provide sequence of operation for Bus Plaza Anti-Ram Barriers and their integration with the traffic control system, including but not limited to, types of output required (when does the traffic light change color, which traffic light changes color for each barrier, what stage of barrier operation aligns with each output) and extent of interaction with traffic lights. For example, do lights at Howard and Mission street change color depending on status of lights at the Bus Plaza Anti-Ram Barriers?					1. Control system to provide an output to the traffic control system in Section 34 41 13 to indicate barrier deployment.		
					2. The barrier control system will trigger a relay associated with the specific lane/barrier that the operator is controlling for an outbound bus.		
					3. The traffic lights controlling the flow of traffic on the public street is to begin their sequence to stop traffic (e.g. turn red).		
					4. After the traffic light has indicated vehicles on the public street are to stop, the light associated with the lane of the exiting bus shall change state to indicate to the bus operator that they can proceed.		
					5. After the bus clears the barrier, the barrier operator will trigger the system via the control to change the bus exit light to red.		
					6. Once the exit light is red, the barrier is to rise to the secure position and the traffic light associated with the vehicles traveling on the public roadway is to reset to indicate that vehicles can proceed.		
					7. Final sequence operations to be coordinated with the Owner's security concept of operations and with the traffic light control system contractor.		
P1-0277	Vehicle Barrier Timing	Closed	07/15/2014	07/25/2014	08/20/2014	Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REFERENCE: Sheet A1-2302, Sheet A1-6012 (IFC Drawings for Main Package dated 3/31/14)				Provide 4"x 4"x 3/8" continuous cast in HD galvanized steel angle to topping slab along slab edge step (approximately grid 5 and grid 6).			
Per Sheet A1-2302 and Sheet A1-6012, there is a 1-3/4" step in the loading dock topping slab, 1'-10" east of GL 5 between GL C and GL D.				Refer to sheet A1-3100 for slab elevations. The steps in the slab noted, along approximately grids 5 and 6, actually vary due to the slope in the Lower Loading Dock slab.			
This step is in the drive area of the loading dock, and may be a long term maintenance item (spalling concrete due to trucks and dumpsters rolling over the step).

From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author:

REQUEST:

REFERENCE: (IFC Drawings for Main Package dated 3/31/14)

Specification Section 01 80 50 1.1 B

Specification Section 01 80 50 1.2 A

Specification Section 07 81 00

Specification Section 07 81 23

Per Specification Section 01 80 50 1.1 B, "the requirements of this Section apply when to all non-structural components, unless otherwise noted."

Per Specification Section 01 80 50 1.2 A:

"Non-structural building components are components that are not part of the building structural system whether inside or outside the building enclosure, above and below grade. Nonstructural components of the Transbay Transit Center include, but not necessarily limited, to the following:

1. Ceilings, glazing, awnings, and similar components and assemblies.
2. Electrical: Power and lighting components and systems; substations; switchgear and switchboards; auxiliary engine-generator sets; transfer switches; motor control centers; motor generators; selector and controller panels; fire protection and alarm components and systems; and telephone and communication components and systems.
3. Mechanical: Heating, ventilating, and air-conditioning components and systems; plumbing components and systems; fire sprinkler components and systems.
4. Vertical Transportation: Mechanical, electrical and supporting elements for transport systems, including elevators and escalators. "

Specification Section 07 81 00 Sprayed Fire Resistive Material and Specification Section 07 81 23 Intumescent Fire Resistive Material do not include items specifically noted in the non-structural list, however, Specification Section 01 80 50 1.2 A explicitly states the list is not all inclusive. In addition, 07 81 00 and 07 81 23 do not specifically exclude the requirements associated with 01 80 50.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

The work of Specification Section 07 81 00 Sprayed Fire Resistive Material and Specification Section 07 81 23 Intumescent Fire Resistive Material do not have seismic requirements.

Specification Section 01 80 50 will be revised to list applicable Specification Sections and Specification Sections requiring seismic criteria will reference Section 01 80 50.

REQUEST: REFERENCE: (IFC Drawings for Main Package dated 3/31/14) Sheet A1-8690 Sheets A1-8692 through A1-8695 Sheet A1-8690 and Sheets A1-8692 through A1-8695 call out for AESS closure elements to be welded per structural, and finished per the AESS specification. However, the details for the AESS closure elements do not call out the thickness of the material. Please provide the thickness of the AESS closure element material.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The plate thickness is 3/8" thick, per drawings: 8/S1-4351, S1-4350, S1-4352 and S1-4353. Also, RFI T-1517 acknowledged 3/8" thick plate.				
P1-0296	Utilization of Sheet A1-8378 for Joint Type FJC7	Closed	07/23/2014	08/02/2014	08/20/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: REFERENCE: RFI Response P1-0224, Sheet A1-8378 (IFC Drawings for Main Package dated 3/31/14) Per RFI Response P1-0224, details for FJC7 are located on Sheet A1-8378 2 Formed Aluminum Panel System (W-9) Sheet Typical Details. The answer to RFI P1-224 was then voided. The plans do not provide a path to direct expansion joint bidders to this sheet (no detail references are given on the plan sheets, and FJC7 is not part of the W-9 system). Please confirm details on Sheet A1-8378 are to be used in relation to bidding, furnishing, and installing FJC7.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The work of seismic joint cover FJC7 is documented in Sheet A1-8378 and Specification Section 07 09 13 Seismic Joint Assemblies. Note that several other RFI's that have been responded to, covered this subject also.

REQUEST: REFERENCE: Sheets A1-9532 through A1-9534 (IFC Drawings for Main Package dated 3/31/14) Per Sheets A1-9532 through A1-9534, the topping slab is to receive a scratch coat. The scratch coat may have too high of an amplitude to receive traffic coating. In addition, the contract documents do not require a traffic coating at the drive aisle. Per the email from Mark O'Dell sent on 7/29/14, traffic coating will be added to the Bus Deck Level. Details and specifications have not been provided for the traffic coating at the Bus Deck Level. Please confirm that the topping slab is to receive a scratch coat and provide the traffic coating details and specifications per prior discussions.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Correction, the topping slab referenced is required to receive a scratch finish, not a scratch coat; this is confirmed. Specification section 07 18 14 Floor Coatings (FC-1, FC-2) is currently being updated to document the traffic coating to be added to the Bus Deck Level traffic/topping slab. This will be issued in an upcoming ASI.

P1-0366	Top of Step Elevation for Stair 601	Closed	08/14/2014	08/24/2014	08/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE:					Accept Suggestion: <input type="checkbox"/>		
Sheet L1-3606 (IFC Drawings for Main Package dated 3/31/14),					This RFI is incorrect. Drawings A1-8651 and A1-8652 (ASI 122 date 7/23/14) clearly show the top of step elevation above the Park Level elevation of 86'-9".		
Details 1 & 2/A1-8651 (ASI 122 dated 7/23/14)					See notes on 2/A1-8651 and 3/A1-8652, which refer to Landscape drawings for stair elevations. The Architectural and Landscape drawings are coordinated.		
Detail 3/A1-8652 (ASI 122 dated 7/23/14)							
Sheet L1-3606 shows a top of step elevation of 86.90 at Stair 601.							
Details 1 & 2/A1-8651 shows a top of step elevation of 86'-9" at Stair 601 then refers to Detail 3/A1-8652.							
Detail 3/A1-8652 also shows a top of step elevation of 86'-9".							
Please confirm the correct elevation and coordinate the plans and details to match.							
P1-0367	Deferral of Expansion Joint Covers per ASI 122	Closed	08/14/2014	08/24/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: ASI 122 - VE Round 3 dated 7/23/14					Accept Suggestion: <input type="checkbox"/>		
Per ASI 122 dated 7/23/14, the Roof Park expansion joints have not been deferred, but their covers have been deferred.					The decision to defer the grade level seismic joint covers, as noted on SKA-3706, SKA-3708 and SKA-3819 issued as part of ASI 122, is rescinded. Covers are to be provided as part of the complete seismic joint assembly. If the Roof Park is still being deferred at time of installation then an alternate pan infill material will be proposed at that time.		
Expansion joints and all associated components are sold as a unit. This will affect the warranty (depending if the park is built out) and result in added cost with little benefit.							
Please confirm TJPA wants W/O to contract out the entire roof top park expansion joint assembly at grid lines 10 and 20 except the cover.

REFERENCE: Detail 2/A1-7822 (IFC Drawings for Main Package dated 3/31/14)					Accept Suggestion: <input type="checkbox"/>		
Detail 2/A1-7822 calls out for WPM-2 at the Muni Bus Plaza. Typically WPM-1A is used at exterior Ground Level.					Waterproof membrane on Detail 2/A1-7822 has been corrected to WPM-1A, see attached sketch SKA-4001.		
Please confirm the WPM-2 as shown on Detail 2/A1-7822 is to be revised to WPM-1A. If not, please provide the extents of WPM-2 at Ground Level.							
P1-0373	Concrete Paving Specification Clarification	Closed	08/14/2014	08/24/2014	08/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Specification Section 07 19 25, Specification Section 07 19 23					Accept Suggestion: <input type="checkbox"/>		
Specification Section 07 19 25 and Specification Section 07 19 23 both indicate they are to be used for concrete paving.					1. Section 07 19 23 - Site Repellents issued by PWP (Landscape Architects) shall be used with Landscape Concrete sections such as 03 33 12 - Landscape Cast-in Place Concrete, 03 33 13 - Shaw Alley Art Installation Paving, and 03 45 00 - Site Precast Concrete Elements.		
Please clarify which specification section is to be used for concrete paving.					2. Section 07 19 25 - Water Repellent Coatings (WPM-9) issued by AAI, shall be used with Non-Landscape concrete sections.		
P1-0374	Details for Site Fluid-Applied Waterproofing (WPM-4)	Closed	08/14/2014	08/24/2014	09/03/2014	Potentially	<input type="checkbox"/>

P1-0376	Exterior Awning Noise Due to Wind	Closed	08/14/2014	08/14/2014	09/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Specification Section 08 44 27 (W-2 Reissued for Bid Set) Please confirm that noise due to wind moving through the patterns cut out in the Aluminum Panels of the Exterior Awning and through the gaps between the panels Exterior Awing and noise due to wind moving above and below the entire system is not to be considered an unacceptable condition. The contractor is providing the pattern per the contract documents and they will have no control over any noise due to wind moving through the predetermined pattern, gaps between each panel and wind moving above and below the entire system. The contractor should only be responsible for noise due to vibration caused by poor workmanship and should not be responsible for any noise due to the inherent design of the W-1 Exterior Awning.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Confirmed. Specification Section 08 44 27 paragraph 2.2 N will be revised to state: "Unacceptable Conditions: "Vibration harmonics, noise or vibrations created by loosening, weakening or failure of fasteners, attachments or other components".		
P1-0377	WPM-5 Crystalline Waterproofing at Escalator Pit per Detail 4/A1-7552	Closed	08/14/2014	08/14/2014	08/27/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: REFERENCE: Detail 4/A1-7552 (IFC Drawings for Main Package dated 3/31/14) Detail 4/A1-7552 shows WPM-5 crystalline waterproofing extending into a drain body within an escalator pit. Crystalline waterproofing is a trowelled on waterproofing which seals concrete, and is not a membrane which can be lapped into a drain body. Please revise the detail to show the extent of WPM-5 crystalline waterproofing to be used at the drain.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The detail has been revised so that the membrane does not lap onto the drain body. Sheet will be issued in ASI 127.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Detail 1/A1-9250, Detail 3/A1-9251, Detail 4/A1-9251 (ASI 118 dated 6/20/14)					Accept Suggestion: <input type="checkbox"/>		
Detail 1/A1-9250 of ASI 118 shows WPM-5 crystalline waterproofing being applied to the bottom of metal deck and the bent plate at the edge of deck.					For the updated WPM-5 waterproofing details at the Telecom Service Vaults, refer to SKA-4015.		
Details 3 & 4/A1-9251 of ASI 118 shows WPM-5 crystalline waterproofing going over a metal sleeve.							
Crystalline waterproofing is not compatible with metal.							
Please revise waterproofing detail where WPM-5 crystalline waterproofing is shown over metal deck, bent plate, and metal sleeve.							
P1-0381	W-2 Schedule of Unit Prices	Closed	08/20/2014	08/30/2014	09/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference 08 44 25 (ASI 120 and Div. 00/01 Specifications)					Accept Suggestion: <input type="checkbox"/>		
Specification Section 08 44 25 subsection 1.3 calls for a unit price for Temporary Retail Façade and Glass Retail Façade for 2, 3 and 4 bay modules. There is not a Schedule of unit prices specification for the W-2 system in the Div. 00/01 dated August 11, 2014. If a unit price is required for the Temporary Retail Façade it needs to be included in the Div. 00/01. Currently the only unit price specifications listed are 01 10 20/APA for TG03, 10 10 20/APB for TG04.5.1, 01 10 20/APC for TG04.3, 01 10 20/APD for TG04.4, 01 10 20/APE for TG04.1, 01 10 20/APF for TG04.2, 01 10 20/APG for TG04.6, 01 10 20/API for TG06.0, and 01 10 20/APJ for TG18.1. If unit pricing for Temporary and Glass Retail Façade is desired, provide unit price specification, otherwise revise specification to not include unit pricing language.					The unit price requirement for the temporary retail facade change to a glazed facade will be changed to an additive alternate, to be priced below the line. Please refer to attached marked up specification sections 01 10 30/APA and 08 44 25, and to attached sketches A1-8189 (SKA-3851-R2) and A1-8190 (SKA-3852-R2).

P1-0382	Glazing Schedule of Alternates	Closed	08/20/2014	08/30/2014	09/10/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference 01 10 30/APE (Div. 00/01 Specifications 08/11) The schedule of alternates for the design build glazing systems was not included in the August 11, 2014 issuance of the Div. 00/01 specifications. Any alternates that are desired for the TG08.10 Glass Curtain Wall (W-2, 3, 4, 6, and 8) need to be included in the Div. 00/01 specifications. Currently the only alternates that affect the TG08.10 package are alternate # 4 which deletes the Beale Street Lobby and #31 which changes the W-2 glass from low iron glass to standard clear. If any other alternates are desired, provide them in the 01 10 30/APE specification.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to attached markup of the revised Specification Section 01 10 30/APE: Delete paragraph E.1.19 Alternate No, 31: Change specified glass substrate for W-2 glass type from Low Iron glass to Standard clear Glass. Refer to the following Contract Documents: Specification Section: 08 80 03 Glass Types. Refer to attached markup of the revised Specification Section 01 10 30/APA: Delete paragraph A.1.3 Alternate No. 3: For W-4 Aluminum-Framed Curtain Wall System, provide an alternate to add reinforcement to vertical and horizontal mullions; add electrical pull string for future wiring; add any required prep for fastening the LED Art wall panels in the future; Details per sheet A1-8247 extent shown in sheets A1-8230 to A1-8232. Add paragraph A.1.4 Alternate No, 4: Change specified substrate for all W-2 and W-6 glass types from Low Iron Glass to Standard Clear Glass. Refer to Specification Section: 08 80 03 Glass Types.				
P1-0383	Ballistic Resistant Window in Room B1269	Closed	08/20/2014	08/30/2014	08/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference A1-9855 Detail 2 (IFC Main Set) Provide specification for the glass type for the ballistic resistant window, window frame and pass thru drawer required for the reception window in room B1269. In addition provide details of how the frame attaches to the pass thru drawer mounted on the bottom of the window.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> The specification for the glass type for the ballistic resistant window, window frame and pass thru drawer for the reception window in room B1269 have been provided in Specification Sections 10 99 00 Building Specialties and 10 99 00/APA Building Specialties SSI. Frame attaches to the pass thru drawer as stipulated in the manufacturer's documentation.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Specification Section 09 21 16 1.6 E 3, Specification Section 09 21 16 1.6 E 5 (IFC Drawings for Main Package dated 3/31/14)					Accept Suggestion: <input type="checkbox"/>		
Specification Section 09 21 16 1.6 E 3 requires the trade subcontractor to provide portable lighting for the review of mock-ups under various light conditions for defects and improperly finished joints, trim, and screw heads.					No portable lighting is required for the punchlist review prior to final acceptance by TJPA, unless the punchlist review is required prior to the time permanent building lighting is in place and operational.		
Specification Section 09 21 16 1.6 E 5 indicates that the mock-ups will be used as a standard for the gypsum board work with the same finish for the Project.							
No requirement is given elsewhere that portable lighting is required for providing various lighting conditions for inspection/punch prior to final acceptance by TJPA.							
Please confirm no lighting for inspection/punch prior to final acceptance is required beyond the ambient lighting found in the area under review.

P1-0409	Drill Holes for the Birdwire System	Closed	08/22/2014	09/01/2014	09/04/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello Answered By: Adamson Associates, Inc. George Metzger							
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REFERENCE: Specification Section 10 81 13 3.2 C 2 (IFC Drawings for Main Package dated 3/31/14)				Install system using mechanical fastening methods only, without the use of adhesives. Use aluminum or stainless steel clamps, brackets, clips and fasteners for installation as shown in the Contract Document details. Use stainless steel hose clamp with attached post when attaching to pipe or round structural sections where diameter allows (e.g. light poles). The mechanical fastening method shall not penetrate the substrate in a manner that creates water intrusion or voids the warranty of the substrate.			
Specification Section 10 81 13 3.2 C 2 indicates that the installer of the Birdwire System is to drill ¼" holes in the substrate for mounting.							
These holes may void the warranty of the substrate, and create a possible point of water intrusion.							
Please confirm this is acceptable, or revise specification to allow for installation with adhesive only.							
P1-0410	Painting of ACT-1 Ceiling for B1268	Closed	08/22/2014	09/01/2014	09/01/2014	Potentially	<input type="checkbox"/>

From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: REQUEST: Reference Note #8 C1-8001 - C1-8005 ASI 123 Note #8 on Civil drawing(s) 8001 - 8005 contains the following: "Contractor shall coordinate with PG&E via TJPA for service connection work prior to start of construction. Location of PG&E service point is undermined and subject to change." Please provide clarity for the Trade Group bidders on how TJPA would like them to provide pricing, for this unknown element with an undetermined location and/or duration of time necessary for coordination.							
SUGGESTION:							
ANSWER: Accept Suggestion: <input type="checkbox"/>							
P1-0416	Finish Details for Landscape Drawings	Closed	08/26/2014	08/26/2014	09/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: REQUEST: Reference A1-2870, S1-2310 and S1-3201 (IFC Main set) Architectural drawing A1-2870 directs the contractor to the Structural drawings for information regarding the concrete finish elevations; Structural drawings S1-2310 & S1-3201 provide elevation for top of concrete at the train box only; landscaping drawings do not provide any finish information ¿ (see highlighted section) as this is not included in the landscaping. Please provide information regarding the highlighted section on the attached drawing L1-2330 and/or drawing number wherein concrete sectional details can be found, including topping slab to concrete on grade. Provide details for elevations, expansion joints, contraction joints, landscaping if any, civil site work if any.							
SUGGESTION:							
ANSWER: Accept Suggestion: <input type="checkbox"/>							
The area referred to and highlighted in this RFI is Parcel F. There is no Landscape or Civil Site Work scope in this area, as the finishing of this area is future work not within the current scope of the Transbay Transit Center project. Note: A1-2870 does not direct the contractor to the Structural drawings for concrete finish elevations. S1-2310 has a few elevations, but that is a structural convention to illustrate a step in the slab. All elevations for the top of concrete Ground Floor level slab are derived from the Architectural slab edge drawings. S1-3201 is a section, not a plan and there are no elevations shown on this drawing.

REQUEST:			SUGGESTION:		ANSWER:	Accept Suggestion: <input type="checkbox"/>	
REFERENCE: Details 4-8/A1-9060 (IFC Drawings for Main Package dated 3/31/14)			For the restrooms, cement board is used as a substrate for the tile finish. The wall area between the top of the tile and the ceiling is painted gypsum board. The annotation on the Lower Concourse Restroom elevations and the wall assembly annotation on the Partition Schedule have been updated accordingly. Please refer to the attached SKA-4070 to SKA-4074.				
Details 4 - 8/A1-9060 indicate that the exposed wall space area above tile within the SFPD Restrooms are to be painted cement board.							
Painting of exposed cement board is not a typical application.							
Please confirm painted cement plaster board is desired where indicated in the contract documents, and provide finish/appearance required for the painted cement board.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Specification Section 09 24 00 1.1 C 2 (ASI 124 dated 8/18/14)					Accept Suggestion: <input type="checkbox"/>		
Per Specification Section 09 24 00 1.1 C 2 of ASI 124, the raceways, wiring, and pathways needed for concealed electrical systems i.e., lighting fixtures, exit lighting, power, way finding, automatic door power, along with low voltage wires (concealed or exposed as indicated in drawings are to be furnished by others, but installed by the Portland Cement Plaster Trade Package.					Paragraph 1.1 C.2 of Specification Section 09 24 00 issued on ASI-0127 is deleted, work is defined under TG10.4.		
TG10.4 - Electrical, Communications, Security, and Integrated Networks, is to furnish and install all electrical work unless specifically referenced in other trade packages (for example, some low voltage is in the Doors and Hardware Trade Package).							
Please remove installation of electrical out of the specification for Specification Section 09 24 00.							
P1-0425	Test Methods per Specification Section 09 24 00 1.7 G 2	Closed	08/28/2014	09/07/2014	09/11/2014	Potentially	<input type="checkbox"/>

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

Co-Author:**REQUEST:**

REFERENCE: Note PA-1/S-0008, Note PA-3/S-0008 (IFC Drawings for Main Package dated 3/31/14)

Note PA-1/S-0008 defines a powder actuated fastener as a post installed anchor.

Note PA-3/S-0008 states to use scanning equipment or other means to locate and avoid cutting or damaging reinforcing bars.

Based upon these requirements, scanning for rebar will be required prior to the installation of any powder actuated fasteners (metal framing top and bottom tracks, ceiling wires, etc.).

This could significantly increase the cost and duration of the work. Please confirm scanning or other methods for locating rebar is required prior to the installation of powder actuated fasteners.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

If powder actuated fasteners are long enough to cause damage to rebar, then scanning per PA-3 is required. If the powder actuated fasteners are short enough not being able to hit or damage rebar, then section PA-3 is not invoked hence scanning is not required.

P1-0428	Portland Cement Plaster Color	Closed	08/28/2014	09/07/2014	09/15/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Specification Section 09 24 00					Accept Suggestion: <input type="checkbox"/>		
Specification Section 09 24 00 2.7 B indicates that the cement plaster color is to be Gray. No other integral colors are noted.					Specification Section 09 24 00 paragraph 2.7 B has been revised. Please refer to attached markup of this section for revised plaster system and materials.		
If the cement plaster requires paint, the plaster will need to cure for an extended duration before paint is applied. This will impact the duration the scaffold is in place.					Issues related to curing times per specification are determined by the plaster system manufacturer's recommendations.		
Please note that TG16.1 Drywall/Framing is currently scoped to leave the scaffold in place if the cement plaster requires painting.					Please refer to paragraph 2.5 in the attached revised plaster Section. The color is integral to the pre-mixed exterior finish coat, which is applied over the plaster mesh over the brown coat. The basis of design specified is Parex "Image Smooth Finish" with a custom color - The color is BM 1548 classic gray to match TJPA's Representative sample.		
Please confirm that the gray cement plaster is to remain exposed and does not require paint.					The duration of the scaffold in place is a Means and Methods decision to be determined by the Contractor.		
P1-0429	Doors 01901A and 01920A per Sheet A1-9703	Closed	09/03/2014	09/13/2014	09/05/2014	Potentially	<input type="checkbox"/>

REQUEST: Reference A1-9603 (SKA-3428) ASI 119 (06/20/2014) and A1-9606 (SKA-3884) ASI 122 (07/23/2014) A1-9603 calls out floor finish ¿CT¿ in several locations. ¿CT¿ is not defined in the room finish schedule abbreviations, or the A1-9606 Materials Legend. Please provide a definition for ¿CT¿ on the finish schedule.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Drawing number A1-9603 is revised to call for SC instead of CT. Refer to sketch # SKA-4154 for updated information, copy attached.		
P1-0438	Environmental Requirements for Tile Carpeting	Closed	09/05/2014	09/15/2014	09/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Specification 09 68 13 IFC Main Set (03/31/2014) 09 68 13 1.7 E and 09 68 13 1.8 A dictate specific environmental requirements for installation of tile carpeting. These requirements may differ from the manufacturer¿s written installation requirements. Please confirm the specified environmental conditions are to be provided in lieu of the requirements established within manufacturer¿s written installation instructions, or revise specification to require environmental conditions to meet the manufacturer¿s written installation instructions.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Environmental conditions for Tile Carpeting are to be as per Manufacturer's written instructions.		
P1-0439	Automatic Smoke and Fire Curtains at Elevator Doors	Closed	09/08/2014	09/18/2014	09/18/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Specification Section 10 44 00 ASI 121 (07/18/2014) Specification 10 44 00 section 1.1 A states that automatic smoke and fire curtains are at all elevator doors. The architectural and electrical drawings do not indicate that			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. No, not all elevators require Smoke and Fire Curtains at all levels. Refer to SKA-4107 for Elevator Matrix (matrix will be included in referenced specification in next ASI issue). 2. See below for specific Elevator Detail correction:		

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>automatic smoke and fire curtains exist at all elevator doors. Please confirm if all elevator doors receive automatic smoke and fire curtains.</p> <p>If yes, please revise: 1) the architectural elevator jamb/head details and/or detail callouts and, 2) coordinate revisions with the electrical drawings.</p> <p>If no, please provide: 1) a matrix of the elevators that require automatic smoke and fire curtains and 2) revise architectural details and/or detail callouts. 3) coordinate revisions with the electrical drawings.</p> <p>Please note the following coordination conflicts currently exist between the architectural and electrical drawings and should be addressed in the answers above: -E1-2204 shows power for smoke curtains at elevators PE403 and PE404 but the architectural detail for the elevator does not show an automatic smoke and fire curtain at the door head/jamb. Coordinate and revise accordingly.</p> <p>-The electrical drawings show power for smoke and fire curtains for Lower Concourse Passenger Elevators 301,302, 502, 503, 704 and 705 but the architectural detail for the elevator does not show an automatic smoke and fire curtain at the door head/jamb. In addition the door head/jamb details are for service instead of passenger elevators. Coordinate and revise accordingly.</p> <p>-Electrical drawings show power for automatic smoke and fire curtains for PE202 on the ground level. Provide elevator door jamb detail for PE202 on the ground level that includes automatic smoke and fire curtain.</p> <p>-PE403, PE404, PE502, PE503, PE704 and PE705 all have details that show a smoke and fire curtain on the ground level. Electrical drawings do not have power for smoke and fire curtains at these locations on the ground level. Coordinate and revise accordingly.</p> <p>-PE403 and PE404 electrical drawings show power for automatic smoke and fire curtains on the second level however there is not a detail for the elevator jamb/head condition that shows the automatic smoke and fire curtain.</p>						
					a) E1-2204 shows power for Smoke curtains at Elevators PE403 & PE404 at Lower Concourse Level, refer details 1 & 3 in SKA-4110.		
					b) For smoke and fire curtains for Lower Concourse Elevators 301, 302, 502, 503, 704 & 705, refer details 1 & 3 in SKA-4110.		
					c) For smoke and fire curtains for PE202 at Ground level, refer detail 2 & 4 in SKA-4110.		
					d) Smoke and Fire curtains removed at PE403, PE404, PE502, PE503, PE704 & PE705 at Ground level, refer detail 2 & 4 in SKA-4108 and 3 in SKA-4109.		
					e) Refer to sheet A1-7832 - Addendum # 4 06/20/14, for smoke & fire curtains at PE403 & PE404 at second floor.		
					f) Reference on 3/A1-7204, revised to 4/A1-7832, refer to SKA-4111.		
					g) Refer to sheet A1-7840 - Addendum # 4 06/20/14, for smoke & fire curtains at PE302, PE303, PE502 & PE503 at Bus deck.

Reference Specification Section 09 66 23 1.5.C IFC Main Set (03/31/2014)					Accept Suggestion: <input type="checkbox"/>		
09 66 23 1.5.C calls out for LEED Credit MR 5, which requests information on the terrazzo's materials extraction, processing and location of manufacture. No specific aggregates have been specified for this scope of work. Please confirm there is no minimum amount of material for 09 66 23 which must be extracted, processed and manufactured within the straight-line total travel distance described in 09 66 23 1.5.C.					LEED requirements are a goal, which cannot be confirmed until the final colors have been approved by the Artist in collaboration with TJPA and the Awarded Subcontractor.

P1-0457	FI Requirements for Terrazzo	Closed	09/12/2014	09/22/2014	11/19/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference Specification Section 03 30 02, 09 66 22, 09 66 23 IFC Main Set (03/31/2014) 03 30 02 3.6.A.2 states to comply with dimensional tolerance limitations given by ACI 117 for Concrete Finishes, and 03 30 02 3.6.A.4.c states "FI numbers shall not apply to unshored slabs or shored slabs with camber." ACI 117 4.4.1 states that slabs on structural steel or precast concrete have no deviation from elevation requirement. However, 09 66 22 3.2.B states that the Terrazzo Trade Subcontractor must level the floor to a specific FI, and 09 66 23 3.3.F refers to 09 66 22 3.2.B for FI requirements for Epoxy Terrazzo Flooring. As such, the concrete filled metal pan deck and topping slabs have a FI requirement which conflicts with the allowable FI referenced in 09 66 22 and 09 66 23. In addition, the concrete substrate may continue to move after installation of terrazzo. Please provide direction on installation of terrazzo epoxy crack suppression and epoxy terrazzo flooring where their FI requirements conflict with the FI requirements of the concrete substrate.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Specification Section 09 66 22, 3.2 B: Reference to tolerances is to be removed from this section. Specification Section 09 66 22, 3.2 C to be revised as follows: Before installation of the moisture control system, engage a California licensed surveyor or civil engineer to make a survey of the floor to confirm the flatness SOF of 50 and elevations as indicated on drawings using a self propelled profilometer or a similar instrument that will give an accurate measurement downloadable to a computer in the form of a floor survey. Report any deviations from the floor flatness criteria or floor level to General Contractor for correction. Specification section 03 30 02, 3.6 G: Revise section to add 3. Finish surface of topping slab to SOF of 50. Elevation of topping slab to be as shown on drawings. To facilitate installation of reinforcing in topping slab at Grand Hall and to mitigate conflict with Hydronics Piping substitute #4 bar with WWR 6x6x4.5/4.5 on bolsters. WWR to be flat sheet.				
P1-0458	Overhead Coiling Doors and Grilles Interface Cabinet Location	Closed	09/12/2014	09/22/2014	09/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Specification 08 33 23 2.3.B and 08 33 16 Section 2.3.B IFC Main Set (03/31/2014) Specifications state ¿TJPA Representative prior to installation shall approve the exact style and finish of each cabinet.¿ Please provide the exact style and finish for the interface cabinet required for the overhead coiling doors and grills so that the bidders will know what to price.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Provide recessed NEMA 1, steel 6" x 6" x 4" (nominal) Interface Cabinet enclosure with Stainless Steel locking cover.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REFERENCE: (ASI 121 dated 7/18/14)		The structural engineer has confirmed that the topping slab assembly in rooms B1365 (Oversized Equipment Storage), B1387 (Maintenance Equipment Repair Shop), and 1390 (Maintenance Workshop), described on A1-9523 (Note# 1), is sufficient to receive the anticipated the loads of the equipment traffic.					
Sheet A1-2203							
Sheet A1-9523							
Sheet A1-2203 refers to Sheet A1-9523 for Slab Topping Details for rooms B1365 (Oversized Equipment Storage), B1387 (Maintenance Equipment Repair Shop), and B1390 (Maintenance Workshop).							
Sheet A1-9523 does not require traffic rated topping slabs for rooms B1365, B1387, or B1390. However, these rooms are indicated for the use of oversized equipment storage and maintenance.							
Please confirm rooms B1365 (Oversized Equipment Storage), B1387 (Maintenance Equipment Repair Shop), and B1390 (Maintenance Workshop) are not to receive traffic rated topping slabs.

P1-0481	Incorrect Reference in 32 15 10	Closed	09/23/2014	10/03/2014	10/02/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: REQUEST: Reference Specification Section 32 15 10 3.12.B.2 IFC Main Set (03/31/2014) Specification references Section 3.11.B.1. This is an incorrect reference. Please revise section 3.12.B.2 to reference the correct section.							
			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See attached SKLA-328.		
P1-0482	Geotextile Fabric Source	Closed	09/23/2014	10/03/2014	10/01/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: REQUEST: Reference Specification Section 32 11 24 2.1.A, 2.2.A IFC Main Set (03/31/2014) Specification says that 100% of materials are to be sourced regionally. The Geotextile Fabric manufacturer listed in this Specification is from Georgia, which would cause great difficulty in achieving this credit. Please revise the Specification so that the LEED credit is achievable with the given manufacturers.							
			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The manufacturers global headquarters is in Georgia. Contact manufacturer to confirm local fabrication plant.		
P1-0483	Recycled Content Requirements	Closed	09/23/2014	10/03/2014	10/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello Co-Author: REQUEST: Reference Specification Section 32 11 24 2.1.A IFC Main Set (03/31/2014) Recycled content submittal requirements are included in Part 1. Since there is no LEED MRc4 requirement listed in section 2.1, confirm that there are no recycled content requirements.							
			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> No minimum recycled content is required for the subject specification. Only a LEED data submittal is required.

contract documents is scheduled for issue in December 2014 that will show the Park back in the scope of the Project.

Answered By:Adamson Associates, Inc. George Metzger

ANSWER: **Accept Suggestion:** ☐

The revision in ASI 127 were corrections to the Legend only. There were no revisions to the plans.

ANSWER: **Accept Suggestion:** ☐

1. Confirmed, these are benches.

2. The benches shall be "Tecno RS Seating System" by Forms + Surfaces, or equal. Refer to attached "Transit Area Bench-131101 Rev.pdf" Cut Sheet for specific details. Locations and specifications shall be provided in ASI 0128.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference ASI 124 Drawings				a) Acoustical insulation is required at all corrugated ceiling panels to mee the criteria in Specification 09 51 23 2.4 Q. Acoustical insulation is required at horizontal, sloped or vertical soffits to meet said criteria.			
The following sheets show a new W-14 Metal Ceiling location, without deleting the old rigid insulation location: 2/A1-8501, 3/A1-8510, 1/A1-8511, 1/A1-8530, 4/A1-8530, 5/A1-8530, 9/A1-8530, 4/A1-8531, 3/A1-8532, 5/A1-8532, 7/A1-8532. Additionally, the following sheets do not show rigid insulation redrawn with the new redline markups: 2/A1-8501, 5/A1-8510, 1/A1-8511, 1/A1-8521. It seems that there was no intent to place rigid insulation above horizontal or diagonal soffit locations.				b) Per TJPA's direction, all of the Conformed IFC Documents with the revised construction documentation will be issued in the Conformed Set of December 2014.			
a) Please confirm there is no rigid insulation located above horizontal or diagonal soffits.							
b) Please revise these drawings so that the rigid insulation is properly located, and so that all old rigid insulation locations are deleted.

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE:					Accept Suggestion: <input type="checkbox"/>		
(ASI 127 dated 9/12/14) Sheet A1-2305, Detail 8/A1-7010					Please refer to Architectural Edge of slab drawing A1-2885 for location and structural sheet for S1-9001 for typical structural details for the concrete lid at stair 501A & 502A. The lid slab is Type S13 and this information will be added to the structural drawings in a future ASI.		
(ASI 123 dated 8/6/14) Detail 1/A1-7009							
(ASI 119 dated 6/18/14) Detail A/A1-7110							
(ASI 118 dated 6/20/14) Detail A/A1-3021							
(IFC Drawings for Main Package dated 3/31/14) Detail A/A1-7803, Detail E/A1-7803, Detail 2/A1-7830							
Sheet A1-2305 of ASI 127 shows Stair 501A and 502A at the Ground Level.							
- Stair 501A references Detail 8/A1-7010 and Detail A/A1-7110 for details. Detail A/A1-7110 depicts a concrete lid at Stair 501A.							
- Stair 502A references Detail 1/A1-7009 and Detail A/A1-3021 for details. Detail A/A1-3021 depicts a concrete lid at Stair 502A.							
- Details A & E/A1-7803 reference Detail 2/A1-7830. Detail 2/A1-7830 also depicts a concrete lid.							
Structural does not call for concrete lids at Stair 501A and 502A. Please identify and provide details for the structural slab required at Stair 501A and Stair 502A.

REQUEST:

REFERENCE: (ASI 127 dated 9/12/14)

Specification Section 10 14 16
Specification Section 10 14 19
Specification Section 10 14 26
Specification Section 10 14 33
Specification Section 10 14 36
Specification Section 10 14 63
Specification Section 10 14 66
Specification Section 10 14 73
Specification Section 10 14 83
Specification Section 10 18 00

The following Specification Sections require bidders to "employ workers that will be employed during the construction at the Project.":

- Specification Section 10 14 16 1.3 E 3 Cast and Etched Graphics
- Specification Section 10 14 19 1.3 E 3 Dimensional Lettering
- Specification Section 10 14 26 G 3 Pylon Signage
- Specification Section 10 14 33 1.3 F 3 Illuminated Panel Signage
- Specification Section 10 14 36 1.3 E 3 Non-Illuminated Panel Signage
- Specification Section 10 14 63 1.4 J 3 Electronic Panel Signage
- Specification Section 10 14 66 1.4 G 3 Floating Signage
- Specification Section 10 14 73 1.3 F 3 Glass Signage
- Specification Section 10 14 83 1.4 E 3 Interpretive Graphics
- Specification Section 10 18 00 1.4 H 3 Informational Kiosks

Subcontractors will not be able to guaranty employment of specific workers producing material. Please confirm it is acceptable that personnel may change throughout the project.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

· Specification Section 10 14 16 1.3 E 3 Cast and Etched Graphics: Delete in its entirety, sentence 10 14 16 1.3 E 3, ¿Employ supervisory personnel who will oversee sample construction. Employ workers that will be employed during the construction at the Project.¿ See attached.

· Specification Section 10 14 19 1.3 E 3 Dimensional Lettering: Delete in its entirety, sentence 10 14 19 1.3 E 3, ¿Employ supervisory personnel who will oversee sample construction. Employ workers that will be employed during the construction at the Project.¿ See attached.

· Specification Section 10 14 26 1.4 G 3 Pylon Signage: Delete in its entirety, sentence 10 14 26 1.4 G 3, ¿Employ supervisory personnel who will oversee sample construction. Employ workers that will be employed during the construction at the Project.¿ See attached.

· Specification Section 10 14 33 1.3 F 3 Illuminated Panel Signage: Delete in its entirety, sentence 10 14 33 1.3 F 3, ¿Employ supervisory personnel who will oversee sample construction. Employ workers that will be employed during the construction at the Project.¿ See attached.

· Specification Section 10 14 36 1.3 E 3 Non-Illuminated Panel Signage: Delete in its entirety, sentence 10 14 36 1.3 E 3, ¿Employ supervisory personnel who will oversee sample construction. Employ workers that will be employed during the construction at the Project.¿ See attached.

· Specification Section 10 14 63 1.4 J 3 Electronic Panel Signage: Delete in its entirety, sentence 10 14 63 1.4 J 3, ¿Employ supervisory personnel who will oversee sample construction. Employ workers that will be employed during the construction at the Project.¿ See attached.

· Specification Section 10 14 66 1.4 G 3 Floating Signage: Delete in its entirety, sentence 10 14 66 1.4

REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: (ASI 127 dated 9/12/14) Specification Section 10 14 33					Accept Suggestion: <input type="checkbox"/>		
Specification Section 10 14 33 2.2 D 2 Illuminated Panel Signage provide specifications for Sign Type RS4 Exterior Square Flag Tenant ID.					Tenants for the retail spaces have not yet been identified, consequently, final messages (logos) for Sign Type RS4 are not available. Because this sign type is internally illuminated and will require electrical power, the signs are to remain in the Phase 1 work and not deferred.), Sign Subcontractor to fabricate and install a ¿Blank¿ sign (sign meeting all criteria described in drawings and specifications but without tenant logo). Regarding Specification Section 10 14 33 2.2 D 2 h, Illuminated Panel Signage, delete in its entirety the sentence, ¿Required conduit and electrical wiring is to be concealed until such time as specific tenant is identified and the corresponding Sign Type RS4 is fabricated and installed.¿ See attached, including SKSG #2029.		
Per the Sign Message Schedule, all of the messages for Sign Type RS4 are shown as (TENANT LOGO TBD).							
Please provide the messages for Signage Type RS4, or confirm Sign Type RS4 is not to be provided as part of Phase 1 work.

Detail 2/SG1-6023 (IFC Drawings for Main Package dated 3/31/14)				The detailed configuration of the Transit Center is specific to all interior spaces and uses -- has not yet been finalized. Consequently, artwork for the final graphic for the static map is not yet available. Pricing can be based on the assumption that the final static map will be a large format digital print map of the Transit Facility, fabricated and installed as per the current drawings and specifications. There is no 3D Dimensional Lettering as a component of this sign type.			
Key Note 9 on Detail 2/SG1-6023 indicates that the final artwork for Sign KM1 Static Map and Digital Display is to be supplied by owner.							
Please provide the final artwork, information on amount of letters to be priced, or allowance amount to be used.

P1-0530	Pylon Signage Electrical Power Requirements per Specifications and Constructabi	Closed	10/10/2014	10/20/2014	10/21/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE:					Accept Suggestion: <input type="checkbox"/>		
Specification Section 10 14 26 (ASI 127 dated 9/12/14) Details 6 & 7/SG1-6001 (IFC Drawings for Main Package dated 3/31/14)					As per the RFI and Constructability Comments 7909, 7910, and 7911, Specification Section 10 14 26 3.1 B, Pylon Signage, has been modified as follows: Delete the sentence ¿Verify that items, including anchor inserts, and electrical power are sized and located to accommodate signs.¿ in its entirety and replace with the sentences, ¿Verify that anchor and anchor inserts are sized and located properly to accommodate installation of Pylon signage. Sign Subcontractor to design signs to conform to electrical circuiting power allotments existing in the current design and if necessary, include additional electrical circuits in pricing if additional power is determined to be required.¿ See attached.		
Specification Section 10 14 26 3.1 Pylon Signage directs that the signage subcontractor is to verify that electrical power is sized and located to accommodate signs. In addition, Details 6 & 7/SG1-6001 indicate that the signage contractor is to provide power requirements to the TJPA representative.							
Per Constructability Comments 7909, 7910, and 7911, the signage specification are to be revised to require the signage contractor to design the signs within the electrical circuiting power allotments in the current design, and include additional electrical circuits in their signage bid if additional power is determined to be required.							
Please revise Specification 10 14 26 as indicated in the response to Constructability Comments 7909, 7910, and 7911.							
P1-0531	Warranty Period Requirement per Specification Section 10 14 26 Pylon Signage	Closed	10/10/2014	10/20/2014	10/20/2014	Potentially	<input type="checkbox"/>

Detail 3/SG1-6003 (IFC Drawings for Main Package dated 3/31/14)			WSP Response:				
Per Key Note 9 on Detail 3/SG1-6003, Sign Type PD1 Bus Deck Dock Identification and Sign Type PD2 Muni Plaza Identification are to be provided with a GFIC duplex outlet.			15A convenience outlets will be added within signage pylons for the following sign types:				
			PS1				
			PS2				
			PS4				
			PS5				
			PS6				
			PD1				
			PD2				
Sheet E1-2306 and Sheet E1-2502 through Sheet E1-2507 do not show outlets or circuiting for outlets at these locations.			These convenience outlets will be connected to existing spare 20A circuit within nearby LP panel, no more than 8 outlets per circuit. Outlets are being provided by signage contractor. Refer to future ASI 0128 drawings for circuiting info.				
Please confirm no outlets are required at these locations, or provide circuiting information.			WRNS Response:				
			We have confirmed that outlets are required as indicated for Sign Types PD1 and PD2. See associated, revised Electrical Drawings for outlets and circuiting.

REQUEST:			ANSWER:				
Reference 13 34 24 (ASI 127)			Accept Suggestion: <input type="checkbox"/>				
The Contract Documents do not dimension the exterior window glazing for the Prefabricated Guard Booths. Please dimension the exterior window glazing before bid so that this package can be accurately priced.			Prefabricated booths are design-build elements. To realize the maximum design-build value, Design Team will rely on the booth manufacturer's standard fabrication modules.				
			Specification section 13 34 24, 2.3.H, shall be modified as follows:				
			2.3.H.				
			1. Maximize window size for all non-restroom spaces within manufacturer's standard module/panel size.				
			2. Window sill shall clear built-in work counter height, and be located between 2'-8" and 3'-0" above finished floor.				
			3. Window head height shall not exceed booth ceiling height.				
			4. Minimum window height shall not be less than 3'-6", and width of window is to suite manufacturer's building module.				
			5. Window framing system shall consist of continuous galvanized steel interior and exterior retainer along window perimeter used to secure window glazing.

REFERENCE: Detail 2/SG1-6190 (IFC Drawings for Main Package dated 3/31/14) Signage Plan Sheets (IFC Drawings for Main Package dated 3/31/14) Sign Message Schedule (ASI 127 dated 9/12/14) Signage Plan Sheets call out Sign Type CT1 at multiple locations. Detail 2/SG1-6190 calls for Sign Type CT1 Clipper Tag on Elevator. The Sign Message Schedule indicates that Message A for Sign Type CT1 is to be determined. This is not biddable with the current information. Please provide the verbiage for Sign Type CT1 at all locations shown on the Signage Plan Sheets, information on amount of letters to be priced, or allowance amount to be used.					The message for Sign Type CT1 is integrated with the ¿Clipper Tagging¿ device and is part of the vendor-supplied system to be bought-out separately by TJPA. The Sign Subcontractor would be responsible only for its installation and integration within the pylons and wall surfaces in which the devices are designated to be installed. See attached revised Signage Message Schedule.

P1-0568	Electrical Power Requirement for Sign Type BG1	Closed	10/16/2014	10/26/2014	10/22/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
REFERENCE:			Confirmed that electrical power is not required to supply sign Type BG1. Specification Section 10 14 73 3.1 B, Glass Signage, delete in its entirety the sentence, ¿Verify that items, including anchor inserts, and electrical power are sized and located to accommodate signs.¿ and replace with the sentence, ¿Verify that anchor and anchor inserts are sized and located properly to accommodate installation of Glass Signage.¿ See attached.				
Specification Section 10 14 73 (ASI 127 dated 9/12/14)							
Specification Section 10 14 73 1.3 E and Specification Section 10 14 73 3.1 B Glass Signage indicate that Sign Type BG1 Applied Message Band on Glass is powered. Specification Section 10 14 73 2.2 and Sheet SG1-6191 do not show electrical components associated with Sign Type BG1.							
In addition, the response to Constructability Comment 7927 states "The signage specifications will be revised to require the design-build signage contractor to design the signs within the electrical circuiting power allotments in the current design, and to include additional electrical circuits in their signage bid if additional power is determined to be required."							
Please confirm electrical power is not required to be supplied to Sign Type BG1 and delete the electrical references, or revise the contract documents to reflect the response to Constructability Comment 7927.

REQUEST:		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
REFERENCE: Specification Section 10 18 00 (ASI 127 dated 9/12/14)			Circuiting has been provided on the electrical drawings based on a preliminary estimate of power allocation for signage components. No electrical changes are proposed at this time. Per the signage drawings, signage contractor must confirm all power requirements on system submittals. In addition, the ticket machine power requirements need to be confirmed. When this info is provided, if additional power is required, wiring can be pulled in the existing conduits.				
The following Specification Sections indicate that the ticket and added value machines have separate power requirements from the associated kiosks:			UPDATE: Please see response to RFI PI-0530.				
10 18 00 2.2 F 1 n 10 18 00 2.2 F 1 o 10 18 00 2.2 F 2 n 10 18 00 2.2 F 2 o							
Electrical drawings do not show separate power for the ticket and added value machines.							
Please confirm no additional circuits are required for the ticket and added value machines, or revise the electrical documents to reflect the desired power and data requirements.

REQUEST:

REFERENCE: (IFC Drawings for Main Package dated 3/31/14)
Color/Font/Material/Symbol/Icons Report
Detail 4/SG1-6001

Per the Color/Font/Material/Symbol/Icons Report, Materials M8 and M13 require painting in some locations (Sign Types PS4 Rooftop Directional Pylon Sign with Exit Sign and RR4 Restroom Signage for example).

While colors are provided, no specification for painting of the signs has been provided (i.e. multiple manufacturers, mil thickness, prep requirements, etc.).

Please provide a specification (including light enhancing paint called out on Key Note 3C on Detail 4/SG1-6001) for signage to receive paint.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Paint, where indicated on Signage Drawings, has been addressed in the following specification revisions:

- Specifications Section 10 14 19 2.1 C, Dimensional Lettering Signage, add "C", "Paints and Coatings: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposures indicated."
- Specifications Section 10 14 19 2.6 C, Dimensional Lettering Signage, add "C", "Baked Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish."
- Specifications Section 10 14 19 2.7 A 7 b, Dimensional Lettering Signage, delete in its entirety, " : Spraylat Star-Brite White EF as manufactured by Spraylat Corporation (914-738-1600, http://www.spraylat.com) or equal.
- 1) Spraylat Star-Brite White EF as manufactured by Spraylat Corporation (914-738-1600, http://www.spraylat.com) or equal.
- 2) Matthews Paint 281 500SP High Reflective White 1.800.323.6593
- 3) Polar White as manufactured by Prismatic Powders 1.866.774.7628
- 4) Or equal . . . 1

and replace with the words, "manufacturer's standard white reflective paint."

- Specifications Section 10 14 19, Dimensional Lettering Signage, throughout the specifications section, remove the words "Construction Intent" and replace with the word, "Signage".

Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: (IFC Drawings for Main Package dated 3/31/14) Color/Font/Material/Symbol/Icons Report					Accept Suggestion: <input type="checkbox"/>		
The Sign Message Schedule calls out for Icons not identified on the Color/Font/Material/Symbol/Icons Report (PS6-G-05-022 calls for Icons ASU-1, ACT-2 and ARU-1 for example).					Icon layouts for Sign Types PS2, PS5, PS6 have been revised to accommodate a maximum of 7-8 icons, depending on the specific message. See SKSG #2037, attached. Icon layouts for Sign Type PS4 has been revised to accommodate a maximum of 8 icons. See SKSG #2038, attached.		
Please coordinate all of the icons called out on the Sign Message Schedule with the information provided on the Color/Font/Material/Symbol/Icons Report.					See the attached revised sign Message Schedule for sign Types PS1, PS2, PS4, PS5 and PS6. Additional pages of the Sign Message Schedule (reflecting no changes or revisions) have also been attached for reference.		
P1-0603	Clipper Tagging Devices for Sign Type PS6 Interior Directional Pylon with Clipper	Closed	10/21/2014	10/31/2014	10/29/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Tram Nguyen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
REFERENCE: Details 3 & 7/SG1-6001 (IFC Drawings for Main Package dated 3/31/14) Sign Message Schedule (ASI 127 dated 9/12/14)					Accept Suggestion: <input type="checkbox"/>		
Details 3 & 7/SG1-6001 call out for a Clipper Tagging Device on one side of the Sign Type PS6 Interior Directional Pylon with Clipper Tagging.					The sides (elevations) and quantities of Clipper Tagging Devices to be installed at each Sign Type PS2 pylon varies based on that PS2's specific location (e.g., a PS2 that is backed up against the wall and away from traffic flow may not receive any Clipper Tagging Device, while a PS2 located in the middle of Grand Hall may receive multiple devices). The side (elevation) of a particular PS2 that will need to accommodate this device or devices is indicated on the Sign Message Schedule.		
Per the Sign Message Schedule, some PS6 Pylons have 0 ea. (ex. PS6-G-03-020), 1 ea. (ex. PS6-G-05-022), or 2 ea. (ex. PS6-G-05-015).					Note: As stated in the previous response to P1-0557, the "Clipper Tagging" device and is part of the vendor-supplied system to be bought-out separately by TJPA. The Sign Subcontractor would be responsible only for its installation and integration within the pylons and wall surfaces in which the devices are designated to be installed.		
Please confirm the number of Clipper Tagging Devices to be furnished and installed with PS6 Pylons.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
REFERENCE: Detail 3/SG1-6021 (IFC Drawings for Main Package dated 3/31/14)				The rectangular space indicated on Detail 6/SG1-6201 and noted in Key Note 9 has not yet been finalized. Consequently, artwork for the final verbiage/graphic for the static graphic panel is not yet available from TJPA. Pricing can be based on the assumption that the final static graphic panel will be a large format digital print produced by Signage Subcontractor, fabricated and installed as per the current drawings and specifications.			
Key Note 9 on Detail 3/SG1-6021 indicate that the static graphic panels called out are to receive a surface applied digital print.							
No information has been provided on the surface applied digital print.							
Please confirm the referenced surface applied digital print is not included in the contract, or provide information on the surface applied digital print.

P1-0671	Detail at the Amphitheater/Great Lawn Stairs	Closed	11/04/2014	11/14/2014	11/24/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Andrew Kitchen To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference L1-2630, L1-8633, L1-8687, L1-9621, L1-9622, 04 43 00, 01 10 30/APE (IFC Main Set) Clarify if the amphitheater/great lawn stairs, between gridlines 3 and 4 are stone slab stairs as described in specification 04 43 00, or are wood deck as shown on L1-9621 and L1-9622. L1-2630 points to details that show stone (1/L1-8633, 1/L1-8687) and wood (L1-9622). The Note in details 2/L1-9621, 3/9621 and 1/L1-9622 refer to Alternate 33 which is for modification of stone paving. Sheet L1-9621 is referenced under Alternate 33 in specification 01 10 30/APE, but L1-9622 is not. Sheet L1-9621 and L1-9622 are labeled as wood deck and details refer to boards, not slabs and are using concrete masonry anchors. These details conflict with L1-8633 which shows the stairs as stone slab using stone stair anchor pins. L1-8687 also conflicts with L1-9621 and L1-9622. Overall there appear to be conflicting details for the amphitheater/great lawn stairs. Clarify which set of details are meant to be followed and delete any extraneous details. Correct 01 10 30/APE E.1.21 Alternate No. 33 reference drawings and specification sections.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Revisions to drawing and spec will be reflected in forthcoming 12/16/2014 ASI-0128.

	demolished during exaction for the pile cap.						
	SCCI believes that using drain rock or sand, instead of CLSM, to backfill above the structural concrete will ensure that the rebar cage is clean upon the backfills removal. Using this lighter material will also work to ensure that bearing pressure limits are not exceeded while the second barrette pile is installed.						
	Is it acceptable to use drain rock or sand instead of CLSM for this backfill?						
RFI T-0491	BSE - Extract Timber Piles at Footing Along Gridline 33.5	Closed	04/09/2013	04/19/2013	04/17/2013	Potentially	<input type="checkbox"/>
From:	Webcor Construction LP Robert Kjome	To:	Turner Construction Company Gary Krutsch	Answered By:	Adamson Associates, Inc. George Metzger		
Co-Author:	Balfour Beatty Infrastructure, Inc. Danny Walsh						
REQUEST:	Reference Specification: 02 41 19 Reference Drawings: GT-2103 & D-2213	SUGGESTION:		ANSWER:	Accept Suggestion: <input type="checkbox"/>		
	Based on conversation at the 4/3/13 weekly coordination meeting, BBII understands that the TJPA may consider lifting the ban on pile extraction previously issued in COM1347 (TCC letter dated 10-10-12) which directed all remaining piles to be removed by excavation and cutting.				This is not acceptable.		
	BBII requests an exemption to the direction issued in COM 1347 that will permit the timber piles beneath the existing footing on gridline 33.5 to be extracted per the contract documents. The piles beneath this footing should be considered for exemption since they fall outside of the Zone 4 J-line "critical areas", the thin strip orientation has a minimal area of influence on the J-Line wall, and the geotechnical drawings already allow non-ground deformation control pile removal along most of the footing (see sheet GT-2103 & D-2213 attached).						
	Please advise if this request is acceptable?

RFI T-1096	BGP - Area 4 Exterior Wall Verts in Contact With Waterproofing	Closed	01/09/2014	01/19/2014	01/14/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Michael Spillane To: Turner Construction Company Phil Militello			Answered By: Adamson Associates, Inc. George Metzger				

Co-Author: Shimmick Construction Company, Inc. Sylvia Hartanto

REQUEST:

In Area 4, between soldier piles #41 and #42, there are approximately 13ea wall vertical bars that are in contact with the waterproofing due to CDSM Encroachment. Soldier Piles #41 and #42 were surveyed and shown to not encroach more than 1/2". However, at the elevation of wall lift 1, it appears that the CDSM encroaches vertically into the foundation wall. Due to the wall verticals having little or no clearance to the waterproofing, the first list wall vertical bars cannot be coupled onto the dowels protruding from the top of the haunch. Per discussion with TT field representative, Gerdau proposes the following:

Option 1: Remove the waterproofing, chip the CDSM wall between soldier piles 41 and 42 to allow for clearance between the vertical bars and waterproofing. Vertical bars adjacent to soldier piles 41 and 42, up to 6 total, will be abandoned.

Option 2: The dowels above the haunch will be slightly bent away from the CDSM wall to allow for threading of the first lift wall vertical bars. Prior to bending the bar, the haunch concrete will have to be chipped out a minimum of 1.5 ft wide by 1ft deep to allow for hickey bar access. Once the first lift vertical bar is threaded onto the dowel, then the vertical bar will be transitioned back into vertical alignment with a slight bend over approximately 6ft. Note that this transition will require the wall horizontals to be bent and cross-ties will need to be shortened to follow the profile of the wall verticals.

Please confirm if proposed options are acceptable.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Option 2 is preferred with the following modifications and additions:

- 1.Depth of haunch concrete removal shall be 1'-3" minimum at the encroaching bars.
 - 2.Bars shall be bent such that the top of coupler is displaced 1" from the waterproofing.
 - 3.Displacement shall be made in a controlled fashion.
 - 4.Bars shall only be bent in one direction.
 - 5.Embedded horizontal wall reinforcing that might prevent the field bend from occurring at the bottom of the 1'-3" excavation shall be locally removed. Other reinforcing shall be protected in place.
 - 6.As proof of concept, work shall begin with the bars immediately in front of steel soldier piles. If displacement cannot be controlled for all bars at the soldier pile locations, Option 2 shall cease and Option 1 shall commence. No bars will be accepted that have displaced more than 2" without nondestructive testing; 1", however, is the target. Option 1 may continue to bars between steel soldier piles only after acceptance of work by the structural engineer.
 - 7.The integrity of the waterproofing behind the excavation shall be maintained. Acceptance of the waterproofing by the manufacturer's representative and waterproofing contractor at the completion of field bending is required prior to patching the haunch excavation.
- Option 1 is acceptable only if Option 2 does not produce acceptable results. Modification and additions to Option 1 are as follows:
- 1.The target cover for wall reinforcing bars is 2" minimum.
 - 2.The minimum acceptable concrete cover over a bar or coupler at the level of the haunch is 3/4". This may require that CDSM grout be removed at the level of the haunch. To facilitate a smooth grout transition, this may require that grout be removed below the level of the haunch and perhaps excavation of the haunch itself. This has implications for waterproofing.
 - 3.At locations where 3/4" cover is not provided to the coupler at steel soldier pile locations, the coupler shall be removed with due regard to protecting the adjacent installed waterproofing.
 - 4.Any bars abandoned shall be replaced with bars having proper clear cover. It is not required that these

REQUEST: Please clarify the sequence the contractor is being asked to provide for the AESS mockup. Is the contractor required to provide a mockup (and have A/E review/approve) in the field at grid line 11 (South) per A1-8660 prior to fabricating all AESS elements as indicated in 05 12 14?		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Specification section 05 12 14/1.6H states: "Mockups: Prior to fabricating AESS, construct mockups to demonstrate aesthetic effects as well as qualities of materials and execution." The purpose of the mock-up is to establish a standard of quality that will be provided in the other work. Fabrication of work prior to mockups approvals that may not meet the established standard of quality, presents a risk to the contractor. Submit a proposal to the TJPA Representative for when and how the contractor proposes to submit the mock-up and meet these goals within the Project Schedule.

From: Shimmick Construction Company, Inc. Chris Williams		To: Webcor Construction LP	Robert Kjome				
Co-Author:		Answered By:Webcor Construction LP Robert Kjome					
REQUEST: Reference Specification: 07 12 10 A two-ply self-adhered modified bitumen waterproofing system has been specified for this blind side application (Section 1.1 of Specifications). It is unusual for any modified bitumen system to be used in a blind side application (i.e., where the waterproofing is installed before the structure is constructed). Section 2.2 of the Specifications lists only one potential manufacturer, Laurenco Waterproofing Systems. The Laurenco system is a bitumen modified with chloroprene rubber and applied with a cold adhesive. The required waterproofing membrane properties listed in Section 2.4.B are identical to those published by Laurenco. We cannot find any other other modified bitumen manufactured with chloroprene on the market. Are you aware of any other systems?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> If Shimmick cannot find an equal system, proceed per the specified manufacturer.			

SHIMM000-0005	BGP - Waterproofing Wall System Layers	Closed	01/11/2013	01/21/2013	01/11/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Chris Williams		To: Webcor Construction LP	Robert Kjome				
Co-Author:		Answered By:Webcor Construction LP Robert Kjome					
REQUEST: Reference Specification: 07 12 10, 3.2-3.3 1. Section 3.2, D. requires the protection board horizontal construction joints to be shingled lapping the upper sheet over the lower sheet by 4 inches. What is the purpose of this shingle? Since the waterproofing membrane will not be adhered directly to the protection board and layers will be present between them (e.g. drainage composite w/filter fabric, insulation, felt), the shingle does not seem necessary. Please confirm. 2.Section 3.2, F. reads "seal top edge of filter fabric to membrane". There is a layer of 1/2" thick insulation between drainage composite and waterproofing membrane. Please clarify. 3. In addition to these items, there is also a concern about the number of layers used on this wall including the stability and durability prior to concrete placement. There is a large potential for problems such as creep of the		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> 1. Adhere to the manufacturers' specified details. 2. Please provide the manufacturer's shop drawings depicting the 1/2" thick insulation between drainage composite and waterproofing membrane. 3. We concur that asphalt saturated felt layers, drainage composite, filter fabric, and EPS insulation are required by the specifications as layers in the waterproofing. Please submit specific RFI's requesting clarification for dispcrepancies between the specifications and what is shown in the drawings. Furthermore, please address specific locations shown on the contract drawings that are in concern with the manufacturer's details.

penetration sleeve. Please advise.							
SHIMM000-0009	BGP - Geothermal Loop Soil Compaction	Closed	03/04/2013	03/14/2013	03/04/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Chris Williams		To: Webcor Construction LP	Robert Kjome	Answered By:Webcor Construction LP Robert Kjome			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
After observing existing subgrade compactions varying from 88%-95%, it appears that the existing conditions of the soil could be below the 95% compaction requirement. In the case of a geothermal loop being installed in areas with existing soils below 95%, can the geothermal loop be compacted to the localized compaction level in accordance with ASTM DI557? For example, if the first field has an existing condition of88% compaction, can the geothermal loop trenches be compacted to 88%? 95% compaction may not be possible with the existing soils and existing compaction in some areas.				See Response to RFI T-0387 and RFI T-0405.			
Please advise.							
SHIMM000-0010	BGP - Schedule Dates for GLS/GLR Manifold Construction	Closed	03/05/2013	03/15/2013	03/05/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Chris Williams		To: Webcor Construction LP	Robert Kjome	Answered By:Webcor Construction LP Robert Kjome			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Exhibit "I" of the TG06.1 bid package is a conceptual schedule. This schedule does not provide a date for the installation of the stainless steel geothermal manifold sleeve penetrations or manifolds themself. Please provide a date of installation for the sleeve penetrations and manifolds for each of the 15 fields.				Refer to 01 13 10 .1.2.C & F. Provide a revised schedule showing activities pertaining to the installation and testing of the geothermal sleeve penetrations and manifolds. Note that the installation of this work cannot delay follow on trades (i.e. superstructure concrete, superstructure steel). Coordinate with W/O as to the timing of the installation of these systems so as not to affect follow on trades.			
				Please coordinate off of the P6 schedule that W/O sends to SCCI weekly.

<p>sleeve prior to the mat slab pour for access purposes. However, in the submittal comments to SUB-TG0600-036, the Engineer clearly states that the "contract documents specify a field weld of the steel ring such that the pile can be cut and removed without the ring installed." Without access to weld the collar after the mat slab has been poured, it isn't possible to weld the assembly in the field. Additionally, if the collar is to be welded prior to the pile being cut, damage will most likely occur to the ring plate or sleeve during the cutting process as stated in the submittal comments. With the comments to submittal TG0600-036 and the response to RFI T -0411 clearly contradictive, please provide the necessary construction sequencing to avoid damage to the assembly in the field and enable a constructible design.</p>							
SHIMM000-0014	BGP - Geothermal Risers in Leaking CDSM Wall	Closed	03/18/2013	03/28/2013	03/18/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Chris Williams		To: Webcor Construction LP	Robert Kjome	Answered By:Webcor Construction LP Robert Kjome			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
With water leakage throughout the CDSM wall at many different locations, the likelihood of a geothermal loop riser being laid out in the location of a CDSM wall leak is high. In the event that the Geothermal Riser is located at the same location as a CDSM wall leak, what should S3H do? Should the riser be relocated to a portion of wall that isn't leaking? If the riser is to be embedded in the wall at the location of a leak, grouting the riser back into the wall will not be possible. Please advise.				Discussed in Geothermal RFI Meeting 3/06/2013. Refer to follow up RFI SCI-087.

Co-Author:							
REQUEST: Ref: Sketch - SCI-103		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Refer to response provided in RFI RFI T-0527.2				
Please reference attached sketch of the top of the foundation walls. At gridlines 1 thru 26, top of the foundation wall above the lower concourse level is in conflict with the shoring level A. The A level lookouts encroach into the top of the walls for approximately 8". For constructability of waterproofing, and reinforced foundation wall SCCI requires 12" minimum clearance above the top of the wall. Conditions described herein do not allow top of foundation wall to be constructed per Contract Plans. Please advise.

SHIMM000-0020	BGP - Waterproofing and CJ Layout Conflict	Closed	04/10/2013	04/20/2013	04/10/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Kirk Nielsen				
Co-Author:		Answered By:Webcor Construction LP Kirk Nielsen					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
<p>Please reference AI-2203 and SI-3201ofthe Contract Plans and the attached drawings. The current elevation at the bottom ofthe 2nd level bracing lookouts is at approximately -5.13, WEST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation is to be -5.42, WEST of Grid 9. Per the WPM-1 waterproofing system, the minimum overall tie-in dimension needed for the succeeding lift is approximately 1 '-11" (see attached waterproofing drawing). The current elevation at the bottom of the 2nd level bracing lookouts is at approximately -6.15, EAST of Grid 9 (see concourse slab drawing). The proposed top of concourse slab elevation CJ is to be -7.67, EAST of Grid 9. Per the WPM-1 waterproofing system, the minimum overall tie-in dimension needed for the succeeding lift is approximately 1'-11" (see attached waterproofing drawing). In both locations, the minimum required dimension (1 '-11") to tie-in to the next lift of waterproofing can not be reached with the current location of the 2nd level bracing lookouts and the proposed concourse slab elevations. SCCI is restricted in location for the CJ due to the absolute concourse slab location and elevation.</p> <p>Furthermore, a similar conflict exists in the 1st foundation wall lift and the 3rd level of bracing lookouts (see 1st wall lift drawing). With SCCI's current location of the CJ, there is virtually no room to allow for the waterproofing overlap to occur. SCCI fully understands its freedom to manipulate the location of the CJ's by lowering it approximately 2'. This will potentially change BBII's rebracing plans.</p> <p>Please advise.</p>				Consistent with RFI response #SHIMM000-0002 dated 11/27/12, revise the proposed locations of the CJ's to accommodate / coordinate with all of SCCI's work consistent with the sheet note on 1/S1-3201.			

SHIMM000-0021	BGP - Differential Movement in Waterproofing Layers	Closed	04/26/2013	05/06/2013	04/26/2013	Potentially	<input type="checkbox"/>

SHIMM000-0023	BGP - Carlisle Miradrain 9900 Drainage Composite	Closed	04/26/2013	05/06/2013	04/26/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Robert Kjome				
Co-Author:		Answered By:Webcor Construction LP Robert Kjome					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification: 07 12 10 2.5.C				Fully bonded Miradrain 9900 is available upon request of Carlisle. If Bestdoes not want to use Miradrain submit a request for substitution pursuant to specification section 011630 and 000440.			
This section calls for "Drainage Composite: Three dimensional plastic rolls bonded to a geotextile on one or both faces: Mirafi Miradrain 9900, or equal with a minimum compressive strength of30,000 psi." The waterproofing membrane manufacturer (Laurenco) states that the specified product "Miradrain 9900" no longer meets the performance requirements of the specifications since the woven filter fabric is no longer bonded at every dimple of the molded polystyrene core. Best Contracting has contacted the drainage composite manufacturer and they have confirmed that the woven filter fabric is bonded at every fourth dimple. Best Contracting has also performed a shop "mock up" using the aforementioned composite which resulted in complete separation and failure upon the installation of the waterproofing membrane. Please provide direction.							

SHIMM000-0024	BGP - Additional Fasteners for Protection Board Installation	Closed	05/02/2013	05/12/2013	05/02/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Kirk Nielsen				
Co-Author:		Answered By:Webcor Construction LP Kirk Nielsen					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Please reference Spec Section 07 12 10 - 3.2.D. Spec Section 07 12 10 - 3.2.D states the following: "Secure 1/4" protection board to flanges of soldier piles with powder driven fasteners and washers spaced 12 inches o.c. Butt vertical joints . Maximum joint width : 1/4"..."				The pile plane always had a tolerance as was the CDSM surface was never continuously supported.			
The manufacturer of membrane waterproofing system (Laurenco) has indicated that due to "out of plane" piles, and relaxation of CDSM substrate requirement, they are requiring intermediate fasteners to hold the 1/4" protection board tight to the CDSM wall. Please review and advise.				Consistent with John Laurence (Laurenco's) comments during the 4/30/13 waterproofing meeting the concern over the protection board deflecting can be mitigated by two methods:			
				1. Intermediate fasteners 2. Ensuring when placing concrete SCCI does not cause the protection board to excessively deflect.			
				This is a means and methods issue at the discretion and cost of the Trade Subcontractor.

Please reference attached letter published by Jon Feld, CTL Group, dated July 8, 2013. This letter contains further analysis of the "Perfomance-Based Temperature Differential Limit", also refered to as "Strength-Based Temperature Difference Limit", for Mat Slab mix # 1557204.				The conditional requirements set forth in RFI T-0585 by George Metzger appear to be satisfied. Procedural requirements are approved via submittal. Please revise and resubmit via submittal package TG0600-201.X (TG0600-201.2, item # 033020-011.1.)			
This additional analysis was prepared per RFI response T-0585, in which the reviewer found this PBTDL method to be acceptable based on satisfying four (4) conditions. See below:							
1. The attached analysis was specifically developed for mix #1557204							
2. SCCI confirms that all remaining mass concrete specification requirements shall still apply.							
3. Shimmick Construction will be providing field quality control and the required concrete maturity measurements through the "Concrete Maturity HardTrack System". Reference attached HardTrack system data and example concrete maturity data. This system has been procured by Shimmick Construction, and has been sucessfully tested on multiple mock-ups.							
4. It is confirmed that Shimmick Construction shall remain responsible for providing a mat foundation that meets requirements of the contract documents.							
Please confirm conditions have been satisfied. This analysis will be submitted as a supplement to the Mass Concrete Plan (TG0600-20 1.1)

	<p>mud slab elevation. Per the geothermal trenching and backfill specification 31 23 34, 1.1.A.1, the only slot excavation in CDSM/concrete is to be in the wall panels. The specification does not require slot excavation/demolition for the horizontal field loops. Per Plan sheet GT-5201, the buttress shafts are to be demolished to a maximum of 4' below subgrade elevation (bottom of mud slab). The geothermal pipe is to be installed at 15" below the bottom of mud slab elevation, well within the 4 ' below mud slab demolition elevation. Please confirm that the geothermal loops in zone 4 will be trenched in soil like the rest of the project and as detail din the geothermal trenching and backfill specification (31 23 34).</p>						<p>elevation 41'-5" or bottom of the mud slab. SCCI¿s interpretation on plan sheet GT-5201 as it relates to demolition is incorrect. The note "...shafts shall be maximum 4 feet below, maximum 2 feet above subgrade elevation" is in reference to the parameters set for the concrete (high strength) being placed in relation to the CLSM mix. These parameters are not set as demolition or excavation bench marks.</p> <p>SCCI to proceed with geothermal loops in Zone 4 as shown in the approved shop drawing TG0601-065 and conform to specification section 31 23 34. SCCI to remit request for backfill and excavation requirements per specification 31 23 34 at buttress locations.</p> <p>SCCI to consider the following when re-submitting: Does SCCI plan to demo the buttress shafts down to the required 15",re-fill the area and meeting compaction requirements? or Does SCCI intend to seek a design variance by slot excavating through the buttress' and seek back-fill requirements within the buttress from the design team?</p>

	<p>The latest Webcor's weekly update schedule received by SCCI (Data date 06.17.2013), shows that:</p> <p>- Bracing Removal- Level D" (BGSOX-1120) is the driving predecessor to "Wall Waterproofing} st lift" (BGSOX-4000)- in each area.</p> <p>- Bracing Removal- Level C" (BGSOX-4100) is the predecessor to "Wall Waterproofing- 2nd lift" (BGSOX-4110)- in each area</p> <p>- Bracing Removal- Level B" (BGSOX-6000) is the predecessor to "Wall Waterproofing- 3rd lift" (BGSOX-6010) in each area</p> <p>Based on the current schedule logic, the bracing will need to be modified to allow the removal of walers and struts in each area, separately and independently from each other. E.g: Any walers spanning two areas will need to be cut during removal of bracing so SCCI can proceed with the waterproofing install in that area, without having to wait for the adjacent area. This is applicable to Bracing Removal level B, C and D. As requested in RFI#233 response, please find attached bracings that SCCI assumes are going to be removed/ cut prior to SCCI's specific wall pour.</p> <p>Please confirm.</p>

SHIMM000-0264	REQUEST: Reference: Spec Section 05 50 10 While attaching the 3/4" diameter by 8" Nelson Studs to the 8" X 4" X 1/2" angle it was determined the studs were not fusing to the base metal (angle). To maintain the procurement schedule of this fabrication needed for the Zone 1 - Area 03 Mat Slab placement, our fabricator (Gerlinger Steel) used the fillet weld method performed under the attached Welding Procedure Specifications (WPS) to attach studs to the angle(s). The welding was witnessed by the dispatched (IR #001459) ISI Shop CWI. Attached for the readers informationm and use are the shop fabrication drawing, the employed WPS, and photographs of the finished fabrication. Is the alternate means of attaching the Nelson Studs to the angle, using the fillet weld method in lieu of the fusing method, acceptable?	SUGGESTION:	Closed	07/24/2013	08/03/2013	08/07/2013	Potentially <input type="checkbox"/>
	ANSWER: Reference: Spec Section 05 50 10 The angled stud in the interior of the angle requires a different type of ferrule (heel) to address the angled condition. The alternate means used to attach Nelson studs for angles in this RFI is acceptable provided that at least 2 studs per angle have been verified by bend test per specification section 03 20 00 2.2.C.2, which references AWS D1.1-2010 (Paragraph 7.8 for testing requirements).	ANSWER:					
SHIMM000-0264	REQUEST: Reference: Drawing S1-3001, Spec Section 03 30 20 A few potential conflicts exist between the typical shear wall vertical dowels and the 36" OD shoring Pipe Struts in Area 1. See attachment for locations of conflict. Based on Detail A shown in S1-3260, the typical shear wall verts will be lap spliced. Per the schedule in Detail 1-S1-3001, the #9 vertical shear wall reinforcement requires a 63" lap splice, which places the top of dowel at elevation -30'-5". The centerline of Level D diagonal bracing atop Area 1 is shown to be at EL -29'-0" and the bottom of the 36" OD pipe strut at level D is at EL -30'-6". The pipe strut will potentially encroach on the shear wall	SUGGESTION:	Closed	07/24/2013	08/03/2013	08/07/2013	Potentially <input type="checkbox"/>
	ANSWER: Reference: Drawing S1-3001, Spec Section 03 30 20 The contractor proposed lap splice length is acceptable only at locations where the conflict exists.	ANSWER:

SHIMM000-0267	BGP - Mat Slab Conduits	Closed	07/24/2013	08/03/2013	08/13/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Chris Williams		To: Webcor Construction LP	Answered By:Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST: Reference: A1-9204, E1-6001 The electrical conduit details on sheet A1-9204/Detail 1 and Detail 5 on E1-6001 regarding the electrical conduits on the columns are in conflict. Detail 1 on A1 -9204 indicates an embedded junction box in the long portions of the columns at Line D.8 above the Train Platform Level. Detail 5 on E1- 6001 indicates all conduits are to be stubbed up 12" at the face of the column. This Detail 5 shows all conduits (shown dashed) above the 12" stub up in the Mat Slab are to be installed in future phases outside of the TG06.0 contract. The columns are part of the TG06.0 scope. 1. Please clarify if these junction boxes and conduit are to be embedded in the columns or stubbed up through the slab at the face of each column at all four (4) locations.. 2. If the conduits and boxes are to be embedded in the columns please provide a revised embedded conduit detail indicating conduits as part of TG06 Below Grade Scope.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The embedded junction box details on A1-9204 applies only to the flat surfaces (north and south sides) of the columns along GL D.8 of Platform 2 (refer to note on details 1 & 2 on A1-9204) and shall have embedded boxes and conduits. Locate the conduit and boxes such that the device faceplates will be finished flush to the finished column cladding. The east and west sides of the columns indicated on the note shall have surface mounted junction boxes and conduits (refer to detail 1 on A1-9204). For all other columns in the BGP, the junction boxes and conduits are typically surface mounted (refer to detail 5 of E1-6001).

From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Jackson Tukuafu	Answered By:Webcor Construction LP Jackson Tukuafu			
Co-Author:							
REQUEST: Reference: Attached Drawings The highlighted areas on the attached re-shoring drawings show re-shoring struts against some of the oval shaped columns. In order to construct the concrete columns SCCI will need at least 30" of clearance between the column face and the struts. Please confirm that the reshoring struts will be moved enough to provide needed clearance.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Further review and coordination of specific struts that are in conflict or in close proximity to formwork is required. Please submit as-built of all locations that are in concern.			

SHIMM000-0269	BGP - 1st Street 48" Bridge Pile Asbuilts	Open	07/25/2013	08/04/2013	07/31/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Jackson Tukuafu	Answered By:Webcor Construction LP Jackson Tukuafu			
Co-Author:							
REQUEST: Reference: Drawing S1-3003 48" temporary bridge piles (00 1 through 010 in the drawing attached) under the 1st Street temporary bridge exceed the 48" diameter required per Detail 6 on Plan Sheet S 1-3003. The varying diameter of each temporary bridge pile is the result of the pile being a 48" CIDH concrete pile instead of a steel pile like the rest of the slab penetrations. As typical of a CIDH pile, the surface profile varies much greater than the 1 /2" gap tolerance required per Detail 6 on S 1-3003. Attached is an as built of the 48" piles with their varying diameters. In consequence the penetration sleeves will not fit the current conditions of the 48" piles. Please advise how to proceed.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> BBI's temporary bridge detail drawing SH-5101, depicts the CIDH pile diameter at 48". Our review of the the Caltrans specification on CIDH piles indicate no reference to tolerances; therefore, we cannot ascertain any diameter larger than 48". SCCI to proceed as shown on the BBI and contract drawings with the CIDH pile at 48" in diameter. Please note, SCCI has ten (10) sleeves fabricated and onsite. The remaining sleeves are in fabrication at this time.

REQUEST: See attached Gerdau's RFI#068, S1-3600, S1-3410 At the contractor's option, Gerdau is requesting to change the 135 degree hooks on the Moment Frame and the Sprandrel Beam sstirrups to 180 degree hooks. Please confirm this is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractors proposal to replace the 135 degree hooks with 180 degree hooks on the Lower Concourse Moment Frame Beam and Spandrel Beam Perimeter Stirrups is acceptable.			
SHIMM000-0284	REBAR - Configuration at Moment Beam	Closed	08/13/2013	08/23/2013	08/13/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP Jackson Tukuafu	Answered By:Webcor Construction LP Jackson Tukuafu				
Co-Author:							
REQUEST: See attached Gerdau's RFI #066 Withing all of the Moment Frame Beam Sections found in the structural drawings, the T9 ties are depicted alternating. Gerdau is proposing to install the T9 ties within the Moment Frame Beams with all the 90 degree hoods at the bottom rather than alternating. During the installation of the mock up, it was evident that the process of hooking the 135 degree hook around the bars at the bottom of the beam was problem due to the limited clearance (1.5") and the depth of the 135 hook (4.5"). By eliminating the alternating ends and only installing the 90 degree hook end down, it would resolve this situation. Please confirm that this configuration is acceptable withing the Moment Frame Beams.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Per meeting between TT, WOJV and SCCI on 08/08/2013, TT rejected the non-alternating configuration per code.

Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion:	<input type="checkbox"/>		
Reference drawings: S1-3001, S1-3206							
See attached photo of the form savers that are going to be used for the couplers for future construction as depicted on Detail 4 of S1-3206, and Detail 6 of S1-3001. SCCI believes that Detail 6 on S1-3001 is not applicable due to the following: 1. As shown on the attached photo, epoxy coated form savers have tin cap incorporated into coupler's body. This tin cap will protect the rebar until the future construction. 2. Whatever tar intended to be used with form savers is not compatible with the Grace waterproofing. 3. Detail 6 on S1-3001 is a detail for the slabs, where future walls are to be constructed.							
SCCI proposes to install the couplers for future construction as shown on Det. 4 S1-3206 with form savers set against the waterproofing membrane. Care shall be taken to ensure that waterproofing is not damaged.							
Is this acceptable?

<p>Some of the drainage lines and fixtures are designed to be constructed in close proximity of the concrete columns, similarly S1-3005 depicts typical mat shear reinforcement schedule and details. Some of these shear reinforcement bars will be interfering with the drainage lines and fixtures. SCCI suggest to displace these shear reinforcement bars where conflicts occur. Displacement would occur laterally, in 8" increments, governed by the grid of the mat slab main reinforcement bars.</p> <p>Please advise.</p>							
SHIMM000-0305	BGP - Haunch Reinforcement at Double Waler Condition	Closed	08/29/2013	09/08/2013	09/02/2013	Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. John Berggren		To: Webcor Construction LP	Jackson Tukuafu	Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Gerdau RFI No. 075 dated August 29th, 2013						The revised haunch reinforcement clear cover as described in the RFI per field coordination is confirmed.	
This RFI is to confirm the resolution as proposed in the field. At the double shoring waler condition, where the waler web is lower than that of a single waler, the tail of the #10@8" (10C262 on BM-3t) haunch reinforcement interferes with the web of the shoring waler. The condition was observed at Grid 2/ A and will likely repeat at other double waler locations. The resolution to the condition shall be to adjust the position, where required, so that the interfering tail clears the double waler web. As a result the 1-1/2" clear cover will deviate up to 4-112" of clear cover. The plan location of the tail shall remain as close as possible per the placement drawings. See the attached sketch for further details. The 1-1/2" clear spacing shall remain at locations unaffected by the reduced clearance of the double-waler. For pieces not yet fabricated and delivered, Gerdau has submitted in [Gerdau] RFI #074 {SCCI #303} a proposed solution to conform to the 1-1/2" clear cover.							
Is this confirming RFI accurate and acceptable?

Reference Drawing S1-3003 and Spec Section 03 20 00 See attached Gerdau Sketch SK-77, BM-3b, BM-3t							
Due to the location of select trestle and pin piles, the #9@16" (bottom mat) and #11@16" (top mat) added North-South layer reinforcement cannot be installed at the desired spacing. The proposed solution is to cut the added #9 or #11 bars, where interrupted by a pile, and add a hook of equal size or greater (#11 hook max) with a lap splice similar to the hooks used for the trestle and pin pile trim steel.							
Please confirm if this is acceptable.

REQUEST:		SUGGESTION:		ANSWER:	Accept Suggestion: <input type="checkbox"/>		
See attached Gerdau's RFI #078.							
Near Gridlines 3/C.3, there is a conflict between the partition wall pier dowels and the installed 6" plumbing pipe (8" with insulation). The wall pier currently overlaps with the plumbing pipe by approximately 6". Gerdau proposes to move the wall pier to the East, or West to allow the dowels to clear the pipe.							
Please provide the acceptable direction (East or West) to shift the wall pier.							
Please note that there are conduits stub up on the East side that would need to be moved, should the opening is shifted towards the East.

Number	Subject	Status	Date Created	Date Required	Date Answered	Cost Impact	Proceed
	<p>odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2.</p> <p>2. Detail 1 on Sheet S1-3501, which applies to sinks, can be relaxed in terms of additional bars. For an even number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars)/2. For an odd number of bars interrupted (typical bars and add bars) the number of bars added on either side of the opening can be (number of interrupted bars +1)/2. The minimum requirement of 2 bars on either side of the opening need not apply.</p> <p>3. The number of bars and maintenance of clear spacing will take precedence over 8" or 4" module spacing as to minimize the number of potential bar interruptions (and minimize resulting add bars). Any bar may be displaced to avoid conflict. The maximum center-to-center spacing of any two adjacent bars may be as large as 16". Clear spacing of 1 bar diameter shall be maintained between bars where bar relocation necessarily reduces spacing in the vicinity of relocation. Where bar relocation affects a lap splice, noncontact lap splices will be allowed up to 6" for #10 and #11 bars. This remedy shall apply in particular when seeking to avoid interruptions at small penetrations such as risers, vents, sinks and conduits.</p> <p>4. Clear spacing of 1db minimum shall be maintained in all mat reinforcing except for contact lap splices.</p> <p>5. Measures to reduce congestion at other locations such as catch basins, sump pits, elevator pits, shoring bracing and bridge piers will be considered on a case-by-case basis during field coordination with Thornton Tomasetti's field representative.</p>

The response to RFI 0782.1 stated that the walls in the attached CAD layout were not properly coordinated and included an AAI mark-up. Per 1/A1-9225 which was provided in the response to RFI T-0899, the walls between the mat slab and conccouse level are knee walls with a 4" lip. As shown and laid out, the knee wall lip will be 4 3/8" on three sides and 4 3/4" on the wall nearest to GL 19.9. This area will be included in the pour on 12/07/2013 and the form savers and conduits ha ve already been installed, therefore any layout changes will incur additional costs.							
Please confirm layout as shown is acceptable.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>		
The response to RFI 0781.1 stated that the walls in the attached CAD layout were not properly coordinated and included an AAI mark-up. The AAI mark-up shows the incorrect gridline location for Electrical Room B2640. In addition, due to the fact that the walls at this location are knee walls with a 4" lip per 1/A1-9225 that was provided to SCCI in RFI T-0899 response received on 11/15; the walls submitted in RFI T-0781.1 are indeed coordinated correctly per the sketch dimensions (AAI sketch is based on platform drawing, not mat slab drawing room which SCCI based the layout from). This area will be included in the pour on 11/23/13 and the form savers and conduits have already been installed; there any layout changes incur additional costs.				The latest layout and/or revisions to the aforementioned Electrical Room was provided in RFI T-0899 on 11/15/2013. Please submit the as-built layout as coordinated with RFI T-0899. Submit layout via submittal shop drawing package as directed in RFI T-0781.1 for review.				
Please confirm layout as shown is acceptable.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The response to RFI 0778.1 stated that the walls in the attached CAD layout were not properly coordinated and included an AAI mark-up. The AAI mark-up shows the incorrect gridline location for Electrical Room B2640. In addition, due to the fact that the walls at this location are knee walls with a 4" lip per 1/A1-9225 that was provided to SCCI in RFI T-0899 response received on 11/15; the walls submitted in RFI T-0778.1 are indeed coordinated correctly per the sketch dimensions (AAI sketch is based on platform drawing, not mat slab drawing room which SCCI based the layout from).				The layout provided in your RFI appears to be satisfactory; however, please submit the layout as coordinated with RFI T-0899. Submit layout via submittal shop drawing package as directed in RFI T-0778.1			
Please confirm layout as shown is acceptable.							
<hr/>							
SHIMM000-0338	Clarification of Vehicle/Bike Beam End Supports	Open	10/02/2013	10/12/2013		Potentially	<input type="checkbox"/>

Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Detail 1/S1-3301 requires the couplers for the adjacent column vertical bars be staggered with a vertical distance of 24" or more; however, due to the pattern and spacing of vertical bars for the type C31/D22 detailed on S1-3306, the condition cannot be met.							
Attached is a sketch of a proposed pattern for the vertical bars in the type C1/D22 columns, please confirm if it is acceptable.

From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Spencer Sayles	Answered By:			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
During field layout of CDSM encoachment in Area 6, the follwoing extend of encoachment has been moved:							
-For encoachment at SP696, we have moved the East extent to SP694, this is due to SP695 encroaching during the buried bar layout. This accounts for 4' additional wall length with 33-5/8" due to CDSM encroachment.							
- For encoachment at SP104, the West extent of encoachment was moved to SP102. The rebar option 1 for SK1 with #11 rebar @ 6" OC will be used from SK102 to the West Extent of WR2 at Gridline 11							
Please confirm that this deviation from RFI T-0627.1 response is acceptable.							
SHIMM000-0347	Area 4 Wall Vertical Reinforcement Spacing	Open	10/10/2013	10/20/2013		Potentially	<input type="checkbox"/>

SHIMM000-0362	Area 11 to 16 Mat Slab Layer 3 Lap Splice Relocation	Open	10/21/2013	10/31/2013		Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Ben Gordon		To: Webcor Construction LP	Spencer Sayles	Answered By:			
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Due to limited access between the waterproofing and access trestle, Gerdau proposes to shorten the mat slab typical layer three (North-South) 67'-0" bars at Areas 11 through 16. This requires the lap splice location to be moved from the center of column line, as specified on Note 1 of the Mat Top Bar Notes in S1-2052, to the location shown in the attached sketch.							
Please confirm if this is acceptable.							
SHIMM000-0363	Lower Concourse Construction Live Load Variance	Open	10/23/2013	11/02/2013		Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Scott Bunnell		To: Webcor Construction LP	Spencer Sayles	Answered By:			
Co-Author:							
REQUEST:		SUGGESTION:	ANSWER:	Accept Suggestion: <input type="checkbox"/>			
Please reference Specification Section 03 10 00 - 3.2.A.2 and the attached project spreadsheet. This spec section calls for a minimum construction live load of 50 psf without referencing or indicating before or after concrete is placed. According to D.H. Charles (shoring designer), falsework projects of this application typically approach the falsework design for 50 psf before concrete is placed and 20 psf afterwards, while always maintaining a minimum design load (dead + live) of at least 100 psf. See attached D.H.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
1. ASI #107 reissues A1-2222 to A1-2227 with changed note at the top right of page. Previously, CC= concrete curb were stated as "CC- Cone curb not in TG06". In ASI107, this note was revised to "Cone curb ref to A-00022 for cone curb schedule. Ref to structural dwgs for coupler details". Is it the intent to add the concrete curb scope into TG06 contract by the issuance of ASI 107?				Please prepare and submit a cost proposal for revisions: 1. Concrete Curbs (CC) and 2. Reinforced Concrete Walls (RCW) as released in ASI 107.			
2. On the same changed note, RCW Previously stated "Reinf conc wall not in TG06 ref to structural dwgs". In ASI 107, this note is changed to RCW : "Reinf cone wall ref to structural dwgs". Is the intent to add the RCW scope into TG06 contract thru the issuance of ASI 107?				Please itemize the aforementioned scope items as in your proposal for CR U-089 - ASI 107.			
SHIMM000-0377	ASI 107- Cone Curb and RCW- Concourse Level- Follow up to RFI SHIMM-00376	Open	11/14/2013	11/24/2013		Potentially	<input type="checkbox"/>
From: Shimmick Construction Company, Inc. Sylvia Hartanto To: Webcor Construction LP Spencer Sayles			Answered By:				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
SCCI is in receipt of response to RFI SHIM000-0376 in which WOJV requests SCCI to submit a cost proposal for revisions:1 Concrete curbs (CC) and 2. Reinforced Concrete Walls (RCW) as released in ASI 107. Please clarify the following: 1. SCCI to to price the construction of the concrete partitions (shown as 'ghost lines' in Architectural drawings) to the full height up to the ground level. This means that the construction of the concrete wall at concourse level cannot take place until level A bracing and Rebracing RA is taken out (after TG07.2 contractor build the ground level). 2. Since the RCW I concrete wall is now to be installed by TG06 contractor, dowels are to be installed (similar to platform rebar dowels in Area 3), instead offormsavers. Please confirm that this will not create inefficiency with TG06 or TG07 contractor. 3. 3.ASI 107 new notes on A1 -2222-A1-2231 state: "CC- Cone Curb- Refto A-0022 for concrete curb schedule- refer to struct dwgs for coupler details." Please provide the most recent copy of A-0022. SCCI has

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Please reference attached Details 7/AI-8881 (ASI #107) and 4/S1-301 0 (ASI #100). 1. Detail 7/A1-8881 calls for a "neoprene gasket compressed by bar and bolt typ". Please provide sizes for tabs and bolts. Also, provide welding instructions (if necessary). 2. The same detail shows pipe penetrations through the seismic joint at both levels. Plumbing drawings show a 4" "SAN/ AD" running parallel to the seismic joint. Please confirm this pipe penetrates the joint. If so, provide locations off of grid and pipe sleeve dimensions. Also, provide details on how to seal this penetration (watertight). 3. Detail4/S1-301 0 shows a 3/4" Dia Headed Stud at 12" oc with 6" embed. Is this to be one row as the drawing shows? 4. Detai14/S 1-3010 also calls for 4" diameter hole at 2'-0" oc. What is the purpose of these holes? If the clamping system is continuous, then what will support the rod at the hole locations? Please clarify.

Previous geothermal fields and risers had a "cat walk" behind the risers at grade. Additional pipe and 90s were added to bring the gauges up to grade to allow for pressure monitoring from this "catwalk." At fields 09-15 no cat walk exists, thus no location to access these gauges from. Please provide the location for the geothermal riser gauges for inspection from Field 09 through Field 15.

Per the RFI response, please find attached the revised layout for the Electrical Room B2221. This revised layout shows the dimensions off of the interior walls as requested.			The sketch included with this RFI is not acceptable for submission. Refer to the response to RFI T-0655.1 and T-0655.				
Please advise if it is acceptable.			- It is nearly illegible. - Comments from the previous revisions of this RFI instruct the contractor to coordinate with architectural wall dimensions. It looks like they have just removed any room dimensions previously included on the sketch. - This is not submitted on current contract document backgrounds as instructed in the last revision of the RFI. - Fire was indicated on the color key but no fire lines are included.				
			Please provide an acceptable sketch before this will be processed any further.

In the MEP meeting on 9/4/13, the response to RFI T-0693 was clarified. To confirm conversations with the WSP Electrical Design representative, the only conduits to be embedded in columns per the RFI T-0693 response are to be fire management conduits per the locations depicted in the response. All other conduits (power recepticals etc) are to be stubbed up on the face of the columns and are not to be embedded in the column.

1. Please confirm the embedded steel in the following details which is not connected to any TG07.1R steel is not in TG07.1R scope and will be supplied and installed by others: 4 & 5/S1-3002; 4 & 6/S1-3203; 2, 3, 6 & 7/S1-3205; 2/S1-3207; 3, 5 & 7/S1-3210; 4/S1-3281; 1/S1-3282; 1 & 10/S1-3411; 3 & 6/S1-3412; 6/S1-3502; 6/S1-3503; 2A/S1-3706; 4 & 7/S1-7604; 3 & 8/S1-7631; 5 & 9/S1-7660 and 6, 7 & 9/S1-9052.				1) Confirmed that embedded steel not connected to TG07.1R steel is not in TG07.1R scope. However, several details listed by Skanska appear to be connected to TG07.1R steel (3 & 6/S1-3412, 3 & 8/S1-7631, 8/S1-7602, 1/S1-3705, 9 & 11/S1-7600) and are included in Skanska's scope. Detail 2A/S1-3706 is an edge of metal deck support, and is included in Skanska's scope.				
2. Please confirm the embedded steel in 8/S1-7602 which is clearly indicated below the scope delineation line is not in TG07.1R scope and will be supplied and installed by others. Skanska will field weld the 3/8" plate to the embed steel as indicated on see SK1.				2) See response to item #1				
3. Please confirm the embedded plate and angle in detail 1/S1-3705 will be supplied and installed by TG06 and Skanska will field weld the double angle connection to the embedded plate as indicated on SK2.				3) See response to item #1				
4. Details 9 & 11/S1-7600 indicate the top and bottom connections for stair 202 & 403 between the Train Platform Level and the bottom of the Lower Concourse slab. As the scope delineation line clearly shows the embedded plates will be supplied and installed by TG06. Once these embeds are poured in place the HSS post cannot be installed as detailed. Please confirm these HSS post will be supplied and installed by TG06 after the platform slab has been poured and before the Lower Concourse slab. See SK3 for clarification.				4) See response to item #1

SKAN000-385.1	SSS - Embedded Plate - Scope Clarification	Closed	03/25/2014	04/04/2014	03/25/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Gregory Kemerer		To: Webcor Construction LP Jeff Galoyan	Answered By: Webcor Construction LP Gregory Kemerer				
Co-Author: Skanska USA Civil West California DisRyan Clayton							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
As per SK RFI 385 response, Skanska has the following comments on the details WO indicated are included in TG07.1R scope:				1) OK			
1) 3 & 6/S1-3412: As no clear scope delineation line is indicated on these two details and the embeds are attached to TG07.1R steel, Skanska will provide the embedded plates for others to install as detailed on 3 & 6/S1-3412 SK1.				2) Drawing S1-7102 has not been issued for construction by the design team. It is currently listed as issued for bid. The attached S1-7102 is provided for your reference only.			
2) 3 & 8/S1-7631: Drawing S1-7102 partial plan at Roof Park level has not been issued to date. Therefore framing steel and decking at top of steel elevation 86' 1-1/4" was not included in our bid. Please provide this drawing and allocate a CO number for this work.				3) Skanska to field weld 3/8" plate to embedded angle. Embedded angle to be provided and installed by others.			
3) 8/S1-7602: Although the embedded plate is clearly indicated below the scope delineation line, for erection purposes Skanska will supply the angle with welded connection plate for TG06 to install as per SK2.				4) OK			
4) 1/S1-3705: As no clear scope delineation line is indicated and the embedded plate is attached to TG07.1R steel, Skanska will provide the embedded plate and angle for others to install as detailed as per SK3.				5) Details 9 & 11/S1-7600 are not included in Skanska's scope. These embeds noted are to be provided and installed by others. W/O confirms that the train platform level referenced in detail 1/S1-7016 has not been poured yet.			
5) 9 & 11/S1-7600: In RFI SK 385 Skanska questioned the scope and erectability of the HHS posts as detailed in 9&11/S1-7600. The scope of the embedded angles was already confirmed by WO as not in TG07.1R scope in RFI T-1067 #6. As 11/S1-7600 occurs between GL1.4 & 2 at the train platform level which has already been poured WO should verify this embed has been installed by TG06 as detailed.				Skanska to include all embeds connecting to structural steel in their Erection Drawings, including embeds provided and installed by others. Please denote "by others" adjacent to embeds not provided by Skanska to facilitate coordination with other contractors. Shear plates and other attachments to embeds provided "by others" are to be provided by Skanska as field welded.

T- 0851	BGP - Lower Concourse Shoring/Reshoring Calculation for Construction Live Load		10/23/2013	11/02/2013	11/05/2013	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Jackson Tukuafu To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Shimmick Construction Company, Inc. Scott Bunnell							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Please refer to attached excerpt of Specification Section 03 10 00 - Concrete Formwork - Below Grade Package.			George Metzger 11/4/2013				
Per Article 3.2, Section A.2 of Spec Section 031000, the minimum construction live load design criteria for shoring and reshoring is 50 psf. The specification section is unclear whether the live load of 50psf is prior to or post concrete placement.			RESPONSE: Specification 03 10 00: Design of formwork is the responsibility of the contractor. See Section 1.3C for formwork design requirements that include conformance with SEI/ASCE-37 and ACI 347. See Section 3.2 for Shores and Reshores including conformance with ACI 347.2R.				
According to D.H. Charles (SCCI shoring designer), falsework projects of this application typically approach the falsework design for 50 psf before concrete is placed and 20 psf afterwards, while always maintaining a minimum design load (dead + live) of at least 100 psf. The attached list of D.H. Charles project used the this same design approach. Falsework calculations are to follow.			ACI 347.2R typically assumes that the Live Load is associated with the placement of fresh concrete and that the Live Load is removed upon the completion of placement. Depending on the contractors planned use of "working surfaces" and the particular shoring/reshoring scheme, the Live Load may be more or may be less than the 50psf minimum after placement operations.				
Is the D.H. Charles design criteria acceptable?			Unless measures are taken restrict construction access to specific areas, it is assumed that the entire Lower Concourse will be a working surface and that the contractor will assign an Operational Class per SEI/ASCE-37 Section 4.8.1. Justification for the assumed uniform load will form part of the required submittal.

T-0001	Article 6 Changes in Work - Clarification	Closed	10/11/2010	10/25/2010	11/03/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Joanne Filipas To: Turner Construction Company Daphne Faulkner			Answered By: Turner Construction Company Daphne Faulkner				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Spec Section 00 07 00, Article 6 - Clarifications and Changes in Work					Accept Suggestion: <input type="checkbox"/>		
Article 6 in the General Condition specification section 00 07 00 defines the procedure for changes in work. The procedures defined throughout Article 6 are conflicting. According to section 6.01.A, CM/GC shall promptly comply and proceed with changes issued by the TJPA in the form of a Change Order or Field Order. Section 6.02.B states that the TJPA will respond to RFI's with written Clarification deemed necessary and consistent with the Contract Documents or a Field Order requiring minor changes in work. Per section 6.01.A, the CM/GC is to proceed with the Field Order immediately. However, according to section 6.03.A, CM/GC shall submit a Change Order Request within 21 days of written directive. Please advise if the CM/GC is to proceed with changes promptly and prior to approval or if the CM/GC shall receive approval prior to proceeding with any changed Work.					00 07 00 - 6.01.A specifies that, "TJPA may..order additions, deletions, or revisions in the Work by Change Order or Field Order, CM/GC shall promptly comply with such orders and proceed with the Work,.."[emphasis added]. Under paragraph 6.02.B, TJPA may issue a Field Order in response to an RFI submitted by CM/GC. Under paragraph 6.03A, the CM/GC must submit a COR within 21 days if in the opinion of the CM/GC, the Field Order is considered to be a Change to the Contract.		
					Therefore, TJPA expects the CM/GC promptly to proceed with Work as may be clarified or directed through a Field Order, unless instructed otherwise. CM/GC has the recourse of submitting a COR when appropriate to do so, within the time limit stipulated. To avoid confusion, TJPA's Field Orders will clearly state whether the CM/GC is required to carry out the instruction promptly. Nevertheless, the CM/GC shall whenever possible incorporate a Field Order directive into the Work with minimal disruption to the planned sequence of activities.

Reference Sheet: C-0001 issued 11/04/10; 301 Mission Interim Screen Wall - General Notes

We are in the process of preparing submittals for this project. In doing so we would like to know what specification division format would be most appropriate for us to submit and track these project documents. Please provide us with the desired specification division format as soon as possible so that our submittals can be processed with the proper efficiency.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

All submittals for the 301 Mission Interim Screen Wall shall be submitted under the new CSI Division, "301 Mission Interim Screen Wall," that has been created and is available in Constructware under Transit Center Building (140). Within CSI Division "301 Mission Interim Screen Wall," there is a list of available "spec sections" that are equal to the drawing sheet number (and paragraph heading as applicable) that the submittal is called out on. If there are multiple "spec sections" on one sheet, the suffix ".X" has been added. For example, "S-0001.5 Concrete and Reinforcing" shall contain all submittals found on sheet S-0001 under the heading "Concrete and Reinforcing." If there is no suffix, the description of the spec is simply the title of the drawing.

T-0004**Transbay Project Signs****Closed****From:** Webcor Construction LP David Hungerford**To:** Turner Construction Company Daphne Faulkner**12/01/2010 12/15/2010 12/03/2010 Potentially** ☐**Answered By:** Transbay PMPC Alfred Lau**Co-Author:****REQUEST:**

Spec Section: 01 15 01

Webcor/Obayashi is initiating project sign procurement per Spec 01 15 01 and will require the artwork and locations for four 4x8 post mounted signs. What are required graphics/logo's for sign fabrication and where shall each sign be located.

SUGGESTION:**ANSWER:****Accept Suggestion:** ☐

Graphics for Project ID Signs specified per 01 15 01 will be issued to CMGC as soon as the names for mayor and SFCTA Board members are confirmed in early January, 2011. Information for locations will be issued prior to installation.

T-0009.1	301 Mission Wall Storage Location for Planter Boxes of 301 Mission Wall	Closed	12/17/2010	12/27/2010	12/29/2010	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By:Turner Construction Company Jack Adams				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
In Transworld's review of the existing planter box condition at the 301 Mission Screen Wall, Transworld's viewpoint after close inspection of the site is that the planter boxes were originally installed with the intent of being permanent fixtures. There are connection points for these planter boxes that appear to be initial anchor points for original placement of these fixtures and there is concern that these planter boxes were never intended to be reinstalled/relocated after the initial installation. With all do skill and care, Transworld intends to relocate these planter boxes with mininmal damage. As a point of advisement, since these boxes do not appear to be designed for relocation, Transworld is concerned that such action will render these boxes unuseful. Please confirm that the design is to relocate these boxes in lieu of replacing them with new ones.					Accept Suggestion: <input type="checkbox"/>		
			The intent is to salvage and store these boxes in lieu of replacing them with new ones. Per Contract Drawing C-2000 Contractor is to cut and cap all existing irrigation and electrical lines feeding planter boxes. Contractor can remove plants and dirt if needed to uncover and remove anchorage, then salvage precast planter boxes.

REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Ref IFC TOC dated 12/15/10 (attached)				1. 00 01 10 Rev 3 and 00 01 15 were released to W/O on 07JAN2011, rectifying issues cited in the RFI.			
We have received the revised Issued for Construction (IFC) drawings and specifications for the BSE package. The table of contents has check marks to indicate added specification sections. Specification section 02 41 19, Pile Removal is not noted with a check mark but a revised specification was issued. The excavation and backfillll (31 23 10) section was not re-issued, however, a check mark is next to it.				2. Since it is TJP/PMPC's opinion that the formatting of the revision box for the technical sections is adequate and appropriate as is. Change to match the abbreviated version of the Div. 00 and 01 sections should be formally requested by W/O such that Design Team and TJP/PMPC could fully review that and agreed to from a QA/QC point of view.			
Also, the revision logs at the end of each section need to be revised to show only the revision number and dates.							
Please advise and re-issue.

REQUEST: Reference Sheet GT-1112 and Specification Section 31 55 00 The response to RFI T-0017 showed a revised CDSM wall alignment at the SW corner of zone 1 and the addition of the structural shear walls on wall X1-1. The RFI response implied that BBII's cross-lot bracing needed to be re-designed so there are no conflicts with the concrete columns and shear walls. In order to minimize the cost and impacts as a result of this change, BBII suggests using rakers for the re-bracing in this corner. The cross lot bracing would be installed as specified for the initial excavation (ref stage 10 on GT-1112) similar to the layout shown on the attached sketch #1. Then for the re-bracing stage 12 and stage 15 rakers could be used in locations shown in attachment sketch #2. Would a design based on this concept be acceptable? If not, BBII is available and willing to brainstorm additional ideas.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The use of rakers as rebracing is acceptable provided the design criteria specified in the construction documents is satisfied. This includes, but is not limited to, the bracing stiffness requirements. The effective stiffness of the rakers will be affected by the stiffness of the permanent train box wall and mat slab and tiedowns. The response to this RFI must include input from Thornton Tomasetti regarding the impact on the permanent structural elements. As discussed at the Feb 9, 2011 TG03 BSE Subcontractor - Design Team Coordination Meeting, it may be possible to reduce the requirement for rebracing if the permanent trainbox shear walls can be built sequentially and their construction coordinated with the removal of struts. Arup suggests a meeting with Arup, the Contractor, and Thornton Tomasetti as this requires an understanding of the proposed construction sequence and an evaluation of the permanent structural elements. Thornton Tomasetti (TT) Response: We have review the response by Arup, and found this is consistent with our prior discussion with Arup. No further comment from TT is needed.

T-0029	301 Mission Screen Wall - Sub Surface Structure Conflict with New Wall Location	Closed	02/09/2011	02/19/2011	02/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Kevin Chiu			Answered By: URS Corporation David Fyfe				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Photograph attachments 1-8				To accommodate unforeseen location of existing structures, new concrete wall to be shifted south so that the south face of new concrete wall is flush with the exterior face of the existing 301 Mission street basement perimeter wall.			
In laying out the location of the new concrete wall, Transworld has determined that the new concrete wall will extend over existing sub-surface structures, which is not per the contract documents. Please reference attached photos.				Interfering regions of existing sub-surface structures (manhole rings and vault sides) at the base of new concrete wall shall be incorporated into new concrete wall. All surfaces of interfering concrete regions to be incorporated into new concrete wall shall be prepared as bonded construction joints. Verify functioning of manhole and vault lids/openings are not obstructed by new concrete.			
First, there are two manhole covers that are incorporated in concrete rings. These rings conflict with the location of the new wall and are included in photographed attachments. Due to the size of these concrete rings, a portion of the ring will be buried by the new wall. Second, the steel frame of the existing electrical vault doors is of similar condition as the manhole covers; this condition can also be seen in the photographed attachments.				Contractor to provide chalk line at updated south and north faces of new concrete wall for verification of updated location in field by TJPA representative prior to construction of new concrete wall.			
Please confirm that Transworld is to proceed with the plan location of the new concrete wall which will cover and bury a portin of these existing sub-surface structures.				See attached RFI coordination sketch.

T-0030	301 Mission Screen Wall - Detail required for concrete sleeve installation	Closed	02/09/2011	02/19/2011	02/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Kevin Chiu			Answered By: URS Corporation David Fyfe				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: Attached 1/C-5001 and photo					Accept Suggestion: <input type="checkbox"/>		
The existing condition of the manhole covers are not consistent with the contract documents. Detail 1/C - 5001 indicates that the existing manhole sits above an existing concrete slab, to which is to be drilled into with 1 inch embedment. However, please refer to the attached photograph in attachment 1 which shows the manhole cover is actually a part of a subsurface concrete ring assembly, and wrapped with waterproofing. Please provide a new detail and instructions for the installation of the required concrete sleeve and a detail for penetrating the existing waterproofing.					Per contract documents;		
					Remove manhole lid;		
					Retain existing concrete and steel collar/frame;		
					Dowel into existing concrete collar/frame (1" max) with #3 hoops @ 10" O.C.;		
					Prepare existing concrete surfaces to be incorporated into new sleeve as bonded construction joints;		
					Cast in place 6" thick concrete sleeve directly over manhole (concrete and steel collar/frame);		
					Provide Kadee SS 1/8" circular grate satin finish.		
T-0030.1	301 Mission Screen Wall - Concrete sleeve installation	Closed	02/24/2011	03/06/2011	03/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By: URS Corporation David Fyfe				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: RFI T-0030					Accept Suggestion: <input type="checkbox"/>		
The final measurement from the edge of the steel collar/frame at the existing manholes to the face of new wall is (+/-) 4-3/4", this dimension less form material (+/-) 3/4" to 1", results in the new cast in place concrete sleeve to be 4" thick at the point closest to the wall . Response to RFI T-0030 notes that the sleeve is to be 6" thick. Please clarify if the 4" thickness is acceptable.					4" minimum thickness acceptable only where new CIP concrete sleeve is in conflict with new interim screen wall. Remaining portions of new CIP concrete sleeve not in conflict with new interim screen wall shall be 6" thick per contract documents.		
					Contractor shall provide 3/8" expansion joint material between face of new interim screen wall and outside face of new CIP concrete sleeve.		
					See attached coordination sketch.		
T-0031	301 Mission Screen Wall - In-ground lighting	Closed	02/09/2011	02/19/2011	02/21/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Kevin Chiu			Answered By: URS Corporation David Fyfe

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

REQUEST:

Reference: Note 10 on C-2000

The new in-ground lighting as anticipated in plans and note 10 on page C - 2000 must be substituted because the contract design cannot be accommodated in the new construction. The contract design requires:

1) that the new lighting match the existing with the same model and size.

The issue here is that the existing light fixtures are larger than can be accommodated within the thickness of the new construction.

2) that the existing electrical lines servicing the existing lights be disconnected so that it is reconnected to the new lights.

The issue here is that the electrical lines for the existing light fixtures are embedded in the concrete curb that is to be removed. Upon removal of the existing concrete curb, there will be no existing electrical lines to reconnect for the new lighting power.

Please provide a new detail and instructions for the in-ground lighting.

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

Additional information is required to understand/interpret existing conditions and facilitate a response to this RFI.

Please provide all available information on existing conditions that pertain to this RFI, including but not limited to the following;

1. type, model, size and manufacturer of existing light fixtures;
2. type and size of existing electrical conduit/conductor;
3. sketch illustrating alignment of existing electrical conduit/conductor, including junction boxes, termination points and power source; and,
4. sketch illustrating thickness of existing/new construction where new lights are to be set/placed.

T-0031.1	301 Mission Wall - In-ground lighting	Closed	03/31/2011	04/10/2011	04/06/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		David Hungerford	To: Turner Construction Company Daphne Faulkner		Answered By: URS Corporation		David Fye
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference: Attached photos and sketch				We note that the Contractor has installed new electrical conduit and outlet boxes within the new concrete wall.			
Response to RFI T-0031 requested additional information.				To document the as-built conditions of all work and to verify conformance with all applicable codes and standards, Contractor shall submit drawing(s) illustrating full routing of all conduit(s), including alignment, conduit material type, couplings/fittings, outlet boxes, etc. Drawings shall detail the connection between existing electrical line and new electrical line and connection between new electrical line and new lights/fixtures.			
1. See the attached pictures for the information known about the lights that were removed.				Drawings shall be sufficiently detailed to document all electrical work is in conformance with all applicable codes and standards, and shall be sufficient for permitting and/or inspection of electrical work.			
2. The existing conduit is 3/4"				All conduit and/or boxes shall be set so as to provide minimum 1 1/2" clear from all rebar, anchor bolts or other embedded structural steel items. Outlet boxes located in new concrete wall shall be fully coordinated for direct connection with the new light(s)/fixture(s).			
3. Attached is a sketch and a photo showing the approximate location of the existing conduit.				It is our understanding that the existing 301 Mission driveway/roadway section (approximately 3 1/2" paver over 1 1/2" sand bed over 4 1/2" to 8 1/2" concrete topping slab) does not allow use of new lights/fixtures matching original lights/fixtures. It is recommended use of the Ligman Paragon square 186mm (50338-N-35) light/fixture, or approved equal, in lieu of the original light/fixture (Hydrel M9410). The new Ligman Paragon square light fixture (or equivalent fixture) shall be placed adjacent to new concrete wall and shall be mounted exposed above ground (not in ground) with the base of new light fixture located aligned to top of paver(s). See attached coordination sketch.			
There is one existing conduit on the south side of the wall protruding from the soil coming from the basement wall. The electrical conduit is approximately 6 feet east from the western transformer vault vent opening. Attached you can see the pictures of this conduit that is currently sticking out below the scaffolding planking.				Please confirm the use of Ligman Paragon square 186mm (50338-N-35) light(s)/fixture(s) can be fully coordinated with all work.			
4. Please advise the location and mounting details for the new lights.				See attached product data for Ligman Paragon square 186mm (50338-N-35) light/fixture.

T-0031.2	301 Mission Wall - Light Fixtures	Closed	06/29/2011	07/09/2011	07/13/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford			To: Turner Construction Company Daphne Faulkner			Answered By:URS Corporation David Fyfe	
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>		
Reference: Attached light specs			URS provided four lighting options to Webcor-Obayashi on April 22, 2011 to coordinate with 301 Mission management personnel. It is noted that the lighting attachment to this RFI (Allscape BL-81) is similar to one of the four lighting options provided by URS (Allscape BL-80).				
Per field conversations with 301 Mission staff, the light fixture proposed in response to RFI T-0031.1 is not acceptable. Webcor-Obayashi has coordinated with 301 Mission management personnel and the lighting attachment to this RFI has been requested by 301 Mission. Confirm that the attached light specs are to be installed at the stucco slot locations.			The Allscape BL-80 model (with 39 watt/240 volt, metal halide lamp and prismatic tempered glass lens) was selected by URS because it provides photometric qualities and operating electrical amperage comparable to the original lighting fixture (Hydrel M9410, 35 watts/277 volt, metal halide lamp).				
			It is noted that the lighting attachment to this RFI, Allscape BL-81 model (with 150 watt/277 volt, metal halide lamp and prismatic tempered glass lens) may provide photometric qualities and operating electrical amperage not similar to the original lighting fixture. It is also noted that the Allscape BL-81 model luminaire is 14.5" wide, which is greater than the 14" width stucco slot(s) specified in the contract documents.				
			Prior to order and/or installation of the lighting attachment to this RFI (Allscape BL-81, 150 watt/277 volt metal halide lamp) Contractor to confirm the following;				
			301 Mission building existing electrical circuit/feed that is to be used is sufficient to handle electrical load required by the Allscape BL-81, 150 watt/277 volt metal halide lamp(s); 14.5" width of the BL-81 luminaire(s) can fit within the stucco slot(s) constructed, note contract documents specify 14" wide stucco slot(s); and photometric qualities of 150 watt lamp (e.g. lighting intensity/brightness) is acceptable to/preferred by 301 Mission management personnel.

T-0034	301 Mission Screen Wall - Change of walkway from original logistics	Closed	02/14/2011	02/24/2011	02/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		David Hungerford	To: Turner Construction Company		Daphne Faulkner	Answered By:URS Corporation	David Fyfe
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
The conditions of the worksite have changed significantly from what Transworld originally bid and have changed the entire logistical plan for the execution of this contract work. The original logistics plan, as well as the contract documents, show a walkway along the South side of the original existing screen wall. Now, the entire walkway has been removed and nothing exists except an open pit. Please see all four pages of Exhibit A that is attached to this RFI. This change of condition affects Transworld's ability to execute the contract work. There is no longer available workspace to erect the structural steel and the South side finishes. This condition now requires a modification to our contract such that Transworld may use the parking/driveway on the North side of current barricaded area. The exact impact is not yet fully developed because there are ongoing discussions related to further demolition and removal of concrete structures that currently exist for our construction work. If the current and remaining working areas are further deteriorated by additional demolition, even greater challenges will arise. Transworld Construction requests reasonable accommodations for access to the worksite from the parking/driveway that is North of the currently erected temporary barricade wall.				301 Mission Street driveway shall remain open to building tenants/occupants for through traffic at all times.			
				Per 2/17/11 field meeting, if coordinated with and approved by 301 Mission Street property owner in advance, one lane of driveway may be temporarily used short term by contractor for deliveries.			
				Contractor shall prepare and submit a Logistics Plan to the TJPA Representative and 301 Mission Street property owner for review and approval prior to use of driveway. At a minimum Logistics plan shall include the following;			
				- scheduled dates and duration of driveway use; - traffic control plan/sketch (including extent of driveway to be used, proposed/required signs, barricades, flagmen, etc.); and, - extent of temporary barricade wall dismantling and restoration.			
				Contractor shall provide all necessary traffic control measures (signs, barricades, fencing, flagmen, etc.) during use of driveway as directed by the TJPA Representative and/or 301 Mission Street property owner.			
				Contractor shall restore temporary barricade wall at end of each day if dismantled.

T-0036	BSE - Bracing Load Discrepancy	Closed	02/16/2011	02/26/2011	02/18/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Company Daphne Faulkner		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Sheet GT-1110, Specification Section 31 55 00, and attached memo Please see the attached memo from BBII's bracing design engineer, PB&A. PB&A are finding more than a slight discrepancy between the bracing loads given in the tables of GT-1110 when compared to loads they calculated using the "design profile" earth pressured diagram as shown on the same sheet. As required by note 6 on GT-1110, BBII is continuing their design with the forces given in the tables, however BBII feels it is prudent to note the variances.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> See the attached reply. ----- Attached Response from ARUP - 02/18/2011 Kevin Clinch The internal bracing system shall be designed to satisfy the criteria specified in the contract documents including the strut loads given in the tables on GT-1110. Our review of the calculations included with the RFI was limited to that necessary to understand the Contractor's questions. The calculations have not been reviewed for conformance with the contract documents. A more complete review will be undertaken when the calculations are issued as a

T-0037	BSE - Request for Utility As-Builts From: Webcor Construction LP Co-Author: Balfour Beatty Infrastructure, Inc. REQUEST: Reference Sheets U-2021 to U-2023, U-4005 BBII is requesting as-built data for the phase 1 electrical ductbanks at First St. and Fremont St. BBII is particularly interested in receiving the coordinates, elevations, width and depths of the ductbank where they intersect the CDSM wall as shown on utility drawings U-2021 through U-2023 Additionally, BBII would like to receive more info on the phase 2 utilities shown in section X&Y on U-4005: - What material are these ducts and are they encased? - Can the spacing shown on U-4005 be shifted to accommodate bridge girder spacing?	Closed To: Turner Construction Company SUGGESTION:	02/17/2011	02/28/2011	03/01/2011	Potentially	<input type="checkbox"/>
		Nhi Tran	Answered By: AECOM Technical Service Eric Zagol				
		Ural Yal	ANSWER: Accept Suggestion: <input type="checkbox"/>				
			Phase I electrical ducts as shown on the AECOM Relocation of Utilities Project (RUP) Plans sheets U-2020, U-2021, U-2022 and U-2023 on First and Fremont streets have been constructed or will be constructed by PG&E. AECOM has requested as-built information from PG&E on what has been constructed to date and will provide upon receipt.				
			Sections X and Y on RUP sheet U-4005 shows utilities in the proposed final locations following construction of the Transit Center substructure and permanent utility corridors on First and Fremont streets. Not all utilities shown need to be incorporated and supported by the interim bridge structures on First and Fremont streets.				
			Only PG&E and Verizon Phase II utilities need to be incorporated and supported from the interim bridge structure. The remaining utilities i.e. AT&T, TCG and PG&E "NIP" (PG&E New Bushiness) indicated in section, will be constructed following construction of the Transit Center substructure and permanent utility corridors.				
			PG&E has proposed steel conduit for the ducts to be supported by the interim bridge structures. Verizon has proposed PVC conduits.				
			Proposed modifications to utility alignments (horizontal and vertical) and conduit configuration may be acceptable upon review and acceptance by AECOM and the private utility. AECOM suggests a coordination meeting between BBII, AECOM and the

T-0038	BSE - Shear Walls for Rebracing	Closed	02/17/2011	02/27/2011	02/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Reference response to RFI #T-0024, Sheet GT-1112, and attached drawing The response to RFI #T-0024 noted discussions that took place during the TG03 BSE Trade Subcontractor - Design Team Coordination Meeting, about utilizing the permanent shear wall as re-bracing during the train box build out. Attached is a sketch showing a staged wall construction and strut removal sequence that BBII believes would eliminate the need for re-bracing along the SW Wall. Is this sequence acceptable?			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti Response: The conditions depicted in Stage 12 & 13 of sketch GT-1112 for shearwalls to be used as re-brace elements will cause overstressing of the mat slab and excessive movement of the Trainbox wall, and therefore, is not acceptable. Note however, that once the Lower Concourse slab is constructed and develops the design strength, the upper portion of the shearwall above the Lower Concourse slab can be used as re-braces. See attached SKS-0101 that illustrates the load path of the shearwall. ARUP Response: The use of the permanent concrete shearwalls as bracing is acceptable provided the design criteria specified in the construction documents is satisfied. This includes, but is not limited to, the bracing stiffness requirements. The effective stiffness of the shear walls will be affected by the stiffness of the permanent train box wall and mat slab and tiedowns. The response to this RFI must include input from Thornton Tomasetti regarding the impact on the permanent structural elements.

T-0038.1	BSE - Shear Walls for Rebracing	Closed	11/06/2014	11/16/2014	11/17/2014	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Claude Titcher		To: Turner Construction Company Phil Militello		Answered By:Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI T-0038.				The response to RFI T-0038 stands. The purpose of conceptual sketch SKS-0101 is to illustrate acceptable and unacceptable reaction force couples. The sketch does not speak to the adequacy, detailing, or completeness of the load path for the excavation shoring, including the presence or absence of a corridor. The contractor is solely responsible for excavation shoring and protection of the structure in all temporary conditions. This includes all required calculations, detailing, and verification of completeness and adequacy of load path. Provided the contractor has fulfilled this obligation, the shearwalls may be used as rebracing, as was stated in RFI T-0038 response.			
The response to RFI T-0038 states that once the Lower Concourse has reached design strength the permanent shear walls can be utilized as re-braces. The response also contains a sketch detailing the load path of the shear wall, however the sketch details the Lower Concourse shear walls being poured up to the foundation wall. The design has evolved since and the contract drawings now show a corridor running along the southwest corridor creating a gap between the shear wall and foundation wall. Please clarify the design intent and confirm shear walls can be used as re-bracing per contract document.							

T-0039	301 Mission Screen Wall - Base Plate Dimensions	Closed	02/17/2011	02/27/2011	02/23/2011	Potentially	<input type="checkbox"/>

T-0042	301 Mission Screen Wall - Elevation of concrete wall	Closed	02/24/2011	03/06/2011	03/10/2011	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By:URS Corporation David Fyfe					
Co-Author:								
REQUEST:			SUGGESTION:		ANSWER:			Accept Suggestion: <input type="checkbox"/>
<p>Please clarify the following information regarding the field elevation of the new concrete wall. Detail A/S-4000 indicates that the concrete foundation wall height shall be +/- 2'- 2" to 2'- 8". Based on this reference the tallest part of the concrete wall will be the East point of the wall. The height of the wall will then decrease as the wall moves west towards Fremont St. (the west side). If we use a wall height of 2'- 8" at its tallest point (the east side), that would result in a wall height of 20.5 inches at Fremont Street (the west end). This is less than 2'-2" as indicated in the contract drawings; therefore please confirm that Transworld will be building a concrete wall height between 20.5 inches to 2'- 8". As a point of comparison, the original existing screen wall had this exact same dimension of 20.5 inches at the low and 2'- 8" at the high.</p>					<p>New concrete wall height of 20.5" above the existing embed plate on west end is not acceptable.</p> <p>Contract documents show the new concrete wall height varies from 2'-2" +/- to 2'-8" +/- . This is based on the driveway elevations shown on the existing plans provided by Millennium Partners, developer for 301 Mission Street, and allowing for a code required minimum 18" high concrete wall from top of paver/driving surface for vehicle safety. As noted on A/S-4000, "Top of (E) Vault Wall Elevation may Vary, Contractor to VIF, Adjust Concrete Wall Accordingly", please adjust top of concrete wall to be minimum 18" above top of paver/driving surface (approximately 2'-4" +/- to 3'-4" +/- in wall height).</p> <p>See attached coordination sketch.</p>

T-0043	301 Mission Screen Wall - Temporary Vault Plug at Utility Vault Opening	Closed	02/25/2011	03/07/2011	03/23/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By:URS Corporation David Fye				
Co-Author:							
REQUEST:			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>	
<p>Regarding the transformer vault plug as shown on page C-5000; Transworld has been asked to submit some proposals as to how a plug should be installed. The original existing ventilation for the vault was open to the air at the original planters. This original ventilation was completely open and secured only by a metal grate to prevent access, but not water or air. As located on page C-5000, Transworld construction proposes to install 2 x 4 backing studs attached to the left and right vertical walls of the existing opening. These 2 x 4 backing studs will be adhered with powder actuated nails. Spanning across the backing studs Transworld construction proposes to install two 2 x 4 crossmembers which will be nailed to the 2 x 4 backing studs. This assembly can be seen in the attached pictures pages 1 and 2.</p> <p>The assembly noted above is option 1. Option 2- Added additionall 2x4 crossmembers which would further restrict air flow to the (e) vault. Option 3- Nail on a plywood sheet that would enclose the entire vault vent opening. Option 4 - Nail on a plywood sheet and waterproof the plywood to prevent water intrusion as well.</p> <p>Note: Transworld Construction is concerned about restricting airflow into a vault that originally was designed to have this open vent. We are not familiar with any impact sealing this vent will have on the existing equipment.</p>						<p>Contractor shall provide the transformer vault plug based on the Option 4 solution with the following amendments;</p> <p>1. Provide 2x4 cross members at max. 12" o.c. spacing; 2. Face of all 2x4 members shall be flush with outside face of existing vault wall to facilitate extension of plywood sheet beyond ventilation opening (see number 5 below); 3. Plywood sheet shall be two layers of 5/8" for a total of 1.25" thick, laminate plywood layers with waterproof adhesives; 4. Secure plywood to 2x4 members with galvanized nails or screws at min. 6" spacing; 5. Extend plywood sheet min. 6" beyond edge of ventilation opening (all four sides); and, 6. Seal perimeter of plywood sheet and existing concrete vault wall with appropriate sealant to ensure weather tightness (all four sides).</p> <p>In addition, Contractor is required to ensure sufficient air flow is provided to existing underground vault/electrical equipment at all times. Existing ventilation openings (one per vault) shall not be plugged until new ventilated manhole covers per C-5000/C-5001 are installed. The new ventilated manhole covers must be protected from damage and/or soiling from concreting activities of the adjacent stem wall. The existing ventilation openings must be plugged prior to start of BSE activities to restrict entry of water and/or construction debris into the existing underground vault/transformer spaces.</p>

T-0045	301 Mission Screen Wall - Void Below Existing Embed	Closed	03/02/2011	03/12/2011	03/17/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford			To: Turner Construction Company Daphne Faulkner			Answered By: URS Corporation David Fyfe	
Co-Author:							
REQUEST: Reference: Attached pictures The new 301 Mission screen wall location is to be laid out over an existing embed plate. At that plate #8 rebars are to be epoxied per RFI T-0027. Currently in the field the embed has been cut where the dowels are to be installed and holes are being drilled to the required 30" depth. It has been discovered that there are voids below the exitsing embed plate of up to 1.5". See attached pictures for some locations where this condition occurs. Please advise if this void is to be filled.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> Voids below the existing embed plate shall be filled by use of grouting applied by use of low pressure grouting methods to deliver grout into void spaces. The result following grouting shall be that all voids are fully grouted. All grout materials shall be non-shrink grout. Pressure grouting shall be performed by qualified personnel who have experience in low pressure grouting steel plates. Contractor shall submit qualifications in the form of resumes identifying project experience utilizing low pressure grouting for personnel performing the work. The Contractor shall provide a submittal identifying the non-shrink grout mix proposed for use and a narrative providing a full description of the means and methods proposed to result in grout flow from input point to output point including methods to result in prevention of trapped air (air is to be displaced by grout flow). A narrative describing means and methods shall specifically include identification of proposed equipment and the proposed porting and venting to allow installation of non-shrink grout and displacement of trapped air. Where the embedded plate is not continuous (where the plate is not provided), the existing concrete surface shall be prepared meeting all requirements of a bonded construction joint. - David Fyfe 03/16/2011

Conversations in the weekly TG03 BSE Design Team Coordination meetings have re-raised the issue and BBI believes it requires additional consideration. The response in RFI #T-0018 said that rebar couplers in the wall verticals (in the next contract) would be used to eliminate the conflict. BBI believes that this seems to be impractical and not cost effective for over 3000 lf feet of wall and 4 levels of walers. Providing a standoff equal to the wall thickness would be an additional cost to the BSE contract, but BBI believes it would be minor compared to dealing with the cost to deal with the conflict later.				TJPA revises response to as follows:			
BBI is requesting to please re-evaluate and provide direction.				The W/O and BBI proposal to increase the spacing between the waler and CDSM wall is acceptable to TJPA since it meets the requirements in 31 55 00 1.5 DESIGN subsections I, J, K, L, and M. This design is for Contractor use. This proposal from the Contractor creates multiple benefits for W/O and BBI including The waler is out of the way of the rebar and this will help W/O with their coordination with the Train Box concrete work subcontractor. W/O benefits since more rebar can be installed with this increased spacing which saves time to the schedule and costs associated with the waterproofing and rebar installations. BB benefits because it appears that there is a decrease to the number of times that struts and walers must be moved. BB benefits in that strut length remains essentially the same when restrutting after Train Box wall sections are completed.			
Attached is a suggested detail as well as examples where it has been used before, for your consideration.				TJPA and the Program Management Team suggest that W/O and BB proceed with a 3' - 6" spacing or whatever dimension is necessary to insure that the walers are not within the Train Box Wall profile. If the walers position requires rework, the Contractor and SubContractor take full responsibility to meet design requirements with no change to contract cost. TJPA agrees to this suggestion from the Contractor to offset the waler from the CDSM wall to allow for the construction of the Train Box wall. TJPA requests that the Contractor proceed on this issue as a no-cost resolution to these RFIs. If W/O finds that this Internal Bracing for Shoring Wall design does have an additional cost to TJPA, the funds will come from the CM/GC Contingency Fund.

T-0054	Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal						
	REQUEST:	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
	Reference Sheet GT-1110, RFI #T-0018, and attached photos and drawings		TJPA and Program Management Team expect that the Contractor and Sub-Contractor meet the design requirements for the Design/Build of the Internal Bracing as specified in 31 55 00 INTERNAL BRACING FOR SHORING WALL and per the Contract Drawings. As subsection 1.8 M. states,				
	Previous RFI #T-0018 - BSE - Waler to CDSM Wall spacing addressed BBI's concern with only having 6" clear between the face of the CDSM Wall and the Waler. Conversations in the weekly TG03 BSE Design Team Coordination meetings have re-raised the issue and BBI believes it requires additional consideration. The response in RFI #T-0018 said that rebar couplers in the wall verticals (in the next contract) would be used to eliminate the conflict. BBI believes that this seems to be impractical and not cost effective for over 3000 lf feet of wall and 4 levels of walers. Providing a standoff equal to the wall thickness would be an additional cost to the BSE contract, but BBI believes it would be minor compared to dealing with the cost to deal with the conflict later.		"Walers are to be placed against the shoring wall on spacers to provide a minimum of 6 inches of clearance between the waler and the shoring wall. The 6 inch clearance is to provide a continuous path to allow the outboard curtain of reinforcement of the permanent wall to be routed through this space without requiring use of couplers or added lap splices at walers..."				
	BBI is requesting to please re-evaluate and provide direction.		The Submittal for Internal Bracing needs to address the concerns expressed by the reviewers including Arup in their response to RFI T-0053 which states:				
Attached is a suggested detail as well as examples where it has been used before, for your consideration.		"Provided the criteria shown in the Contact Documents is satisfied, the proposal is acceptable.					
			Additionally:				
			Provided this proposal is acceptable to the TJPA, the internal bracing design submittal shall include the details and calculations associated with this proposal.				
			The soldier piles shall be checked for the increased moment due to the eccentric strut reaction. This check shall be reported in the internal bracing submittal.				
			No increase in torsional loading on the soldier pile is permitted."

Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference CR T-006 The Change Request documents do not indicate who will have the maintenance responsibility for the AC walkway. BBII has the following questions: 1. Should BBII include pricing for maintenance? If this walkway is going to get placed on top of the 3" minus rubble, a fair amount of maintenance would be required. 2. When is this walkway scheduled to be constructed? And if maintenance is needed, when would it start? 3. Are the typical fence and K-rail shown in the section the same ones that are protecting the perimeter, or an additional row that creates a walkway that has both sides fenced, protecting the public from construction and vehicle traffic? BBII needs to have this information in order to provide accurate pricing for this Change Request T-006. Please advise.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> This is not an RFI. W/O has control of the site and is to coordinate maintenance duration with their subcontractor for pricing.

T-0061	BSE - Concerns About Pile To Mat Slab Connection	Closed	03/15/2011	03/25/2011	03/23/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Sheet S-3003 and attached detail BBII has concerns that the trestle pile to mat slab slip connection as shown in detail 2 on S-3003 will not work as intended. Based on BBII's understanding that this joint is intended to allow the mat slab to deflect upward and our limited knowledge of the permanent structure design, BBII has listed some concerns with this connection below: 1. BBII does not think the sleeve will be able to slide with the bolts and slotted holes completely encased in concrete. (see attached) 2. If the slab does deflect upwards and the lower section of pile is no longer in contact with the bearing plate, then the mat slab is carrying the entire load on the pile. 3. Any upward movements of the slab will affect the trestle supper structure framing. Differential upward deflections could cause damage depending on severity. BBII does wish to bear the risk of re-designing this joint due to the interaction with the permanent structure, however BBII has attached a suggestion that they feel would eliminate some of their concerns listed above. Please provide a revised detail or rebut BBII concerns if you still believe the detailed connection is the best suited for this application.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti response: Comments in response to BBII concerns: 1. Bolts/slotted holes could be isolated from the concrete via styrofoam blocks. 2. Anticipated slab movement upward is due to rise of groundwater pressure after the dewatering pumps are turned off - which is after structure is completed and trestle work is completed. Comments regarding proposed alternate detail: 1. Proposed detail does not address waterproofing at bottom of mat and allows water infiltration into the mat as currently presented. AAI Response: Alternate detail will not satisfy waterproofing requirements.

REQUEST:		SUGGESTION:		ANSWER:			
Reference Response to RFI#T-0073				Accept Suggestion: <input type="checkbox"/>			
During a meeting with the San Francisco DBI & DPW, it was expressed that BBII must use response spectra generated by ARUP in the design of the temporary bridges. It was also noted that if the bridges are going to be in place for over 5 years, the design must be for a permanent structure and the specified ground motion may not be suitable. Therefore, BBII requests response spectra for a ground motion with a 10% probability of exceedence in 50 years as specified, as well as for a ground motion with a 7.5% probability of exceedence in 75 years.				ARUP Response:			
				Attached are:			
				1. Arup Amec (2010) report Tables 3-3(bedrock), 3-7a (base of structure West end of box), 3-7b (base of structure East end of box), 3-9 (ratio vertical to horizontal spectral acceleration ratios) and Table 3-4 giving scale factors for near-fault effects. Note that these spectra exclude structural interaction effects and do not include the progressive softening effects that will occur progressively in the Old Bay Clay.			
				2. Output from LS Dyna dynamic analyses of the temporary (1 in 100 year return period) condition at 301 Mission, adjacent Fremont Street abutment, using the Kobe bedrock and far-field motions to generate the horizontal acceleration spectrum at the top of the shoring wall. This produces increased spectral accelerations at the fundamental period (understood to be 0.8s) of the Contractor's bridge structure.			
				Arup recommends that a meeting be held to review and discuss these after the Contractor's engineer has examined them.

REQUEST:			SUGGESTION:		ANSWER:		
Reference: RFI T-0027					Accept Suggestion: <input type="checkbox"/>		
Per field conversation, please confirm that it is acceptable to install/weld nelson studs at 9" on center at locations in front of the vault intrusions into the concrete stem wall, where the #8 size dowels are also spaced at 9" on center, per RFI T-0027. The Nelson Stud spacing will match dowel embedment locations. This spacing also facilitates the installation of rebar stirrups and provides two tie points, one being the dowel, and the other the nelson stud.					Industry standard practice is to use miscellaneous added tie rebar (e.g. #3 or #4 bar) to provide for requirements to tie reinforcement bars as required. This RFI is a request to change spacing of nelson stud bars from 12" o.c. to 9" o.c. (where #8 dowels are spaced at 9" o.c.) in lieu of use of added tie bars.		
This work is currently ongoing and immediate confirmation is requested. Please confirm this layout is acceptable.					We note this request is for convenience of the Contractor and on this basis take no exception to reducing the spacing of the nelson stud bars from 12" o.c. to 9" o.c. (where #8 dowels are spaced at 9" o.c.). Accordingly, no change in contract and/or extension in schedule will be provided to accommodate this Contractor request. All impacts including cost and schedule associated with reducing spacing of nelson stud bars shall be borne solely by the Contractor.		
					David Fyfe, 04/01/2011 ----- No CR will be issued for work associated with the change in nelson stud spacing from 12" o.c. to 9" o.c. (where #8 dowels are spaced at 9" o.c.).

REQUEST:			SUGGESTION:		ANSWER:		
We noticed that the Specification 32 12 17 at the bid has been revised to 32 12 18 in the IFC Document. 1. Please confirm that the content of the specification "STREET EXCAVATION AND RESTORATION" was unchanged between pre-bid and post-bid. 2. Please confirm that the Trade Subcontractor shall continue to use the Specification Number 32 12 18 and TJPA shall revise the Table of Contents and other specification sections referring to "32 12 17."					Accept Suggestion: <input type="checkbox"/>		
					1. Confirmed. Street Excavation and Restoration specification was issued as 32 12 17 in the IFB set, and issued as 32 12 18 to avoid duplication with the Pavement Restoration specification for the Utilities trade packages.		
					2. Confirmed. As stated above, 32 12 17 is for Pavement Restoration section for the Utilities trade packages, and is not applicable for TG03 Work.

REQUEST: Reference Sheet D-1072, D-1030, D-1046, and D-5103 and Spec Section 01 35 65 Please advise the following as discussed with BBII on 03-28-2011 have been completed per the Demolition Contract: - Bent 59-61 - Removal of columns, footings and timber piles as required to complete 4'x4' x13' excavation below grade complete and backfilled. (Refer to drawings D-1072, D-1030, D-1046).			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Demolition of both Bent 59 and 61 was completed per Demolition Contract Drawing D-1046 Rev.0 Dated 01/04/10 and Drawing CL-17456 Rev.1 dated 8/10/09. Bent footings were demolished to the minimum 3 feet below grade per drawing D-1046 and applicable notes. Locations of these Utility Pole Foundations were determined by SFMTA (MUNI) and BLHP (Street Lighting). The three (3) locations total for the new Utility Pole Foundations had the bent footings removed and were excavated to a depth of 13' (+/-). Wood piles were not "pulled." Pile removal consisted of removing the top of pile as required to install the pole foundations to depth.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Demo Contract Drawings		Demolition Contractor second 16 foot gate eliminated due to Fremont Shoring wall. Demolition contractor used alternate means and methods for truck traffic to-from parcel D Zone 4.					
Per note 5 on drawing D-1006 of the demolition contract, each discreet fenced area shall have a minimum of two 16ft gates at the conclusion of demolition work. Currently, zone 4 only has one gate in place. BBII requests an additional gate be provided on the Fremont St. side of zone 4. BBII is available to meet and coordinate an ideal location.		That said, Demolition contractor has offered gate credit which could be used to install a 16 wide gate either at SW corner near 181 Fremont St. or on the Beale St. fence line. However- Demolition contractor would not be responsible for curb cut, removal of parking meters or other ancillary scope if Beale St. gate is chosen - that would be the responsibility of BSE Contractor. BBII can use/modify and relocate barrier fence and gates as needed per your contract. A field coordination meeting after the Monday 4/11/11 Street Coordination meeting is recommended.

REQUEST: Reference attached photos and sketch While BBII were excavating the trial pile extraction area and exposing the timber piles on 04/04/2011, piles that were not surveyed by EBI were discovered on the eastern side of the TPE area close to pile 215053 and in the western side of the TPE area at 215055 as shown in the attached drawing. The pile next to 215055 was extracted due to its proximity to 215055. A total of 10 additional piles have now been discovered to date. Please advise on how to proceed.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> BBII should follow contract Spec 02-41-19 Pile Removal Para 1.4 and provide existing timber pile documentation. Each pile over contract quantity will be reimbursed as force account (unless parties can agree on a unit rate) in accord with CCO no. T-001 Rev 2 dated 4/8/11.

REQUEST: Reference attached photos BBII has encountered a drainage material along the 301 Mission wall while pretrenching. During pretrenching, this drainage material has been removed because it was not affixed to the structure. The wall does not have any exterior waterproofing system. Upon installation of the CDSM shoring system, the cementitious material will be against this wall. The existing wall is a 5' deep cantilevered beam on the backside of the existing garage shaft for 301 Mission. Does TJPA plan to install any waterproofing along this wall that can tolerate the installation of a CDSM shoring system? Please advise BBII of the TJPA's plan for waterproofing of this building.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Drainage material encountered is to be removed from the 301 Mission Wall as it was a temporary measure installed at the time of 301 Mission building construction. No waterproofing is required at this location. See attached email response from R. Rothenburger at PMPC. ----- 04/19/2011 - George Metzger TJPA to provide direction to GC.

T-0102	BSE - Confirm Project Coordinates	Closed	04/15/2011	04/25/2011	04/19/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Masashi Kojima To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Drawings U-0100 and GT-0100 BBII's surveyor, KCA Engineers, has noticed some slight variations in bearings between the Utility drawings and the BSE drawings. Please see the following of KCA's observations and confirm coordinates provided on drawing GT-0100. Drawings U-0100 has coordinates along the center lines of various streets. The result of those coordinates put a bearing on the center line of Mission Street and Minna Street at North 46° 18 ' 19.6" East and the center line of First Street at North 43° 41 ' 39.0" West. This results in those streets not being at right angles to each other. Drawings GT-0100 has coordinates on Column Line E. The result of those coordinates puts a bearing of North 46° 18' 09.7" East on the terminal Tills is 00° 00' 10" off from being parallel with Mission and Minna Streets. Is this correct or should Column Line E be parallel with Mission and Minna Streets? The numerical column lines are shown at right angles to Column Line E, which gives them a bearing of North 43° 41 ' 50.3" West. It was observed that Column Line 18 appeared to be in almost the same location as the center line of First Street, but First Street has a bearing of North 43° 41 ' 39.0" West which is 00° 00' 11" different than Column Line 18. Is it just a coincidence that the center line and column line are almost exactly in the same location or should something be adjusted to make the two lines identical? Please advise if the bearings of the terminal should remain or be changed.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The Building Grid and bearing has been established to best-fit the numerous constraints on the project. It is coincidental that the street control lines (note, these are not necessarily in the center of the Right-of-Way and should not be construed as Center Lines) are very close, but at slightly different bearings. The building elements are constructed based on the building grid, whereas the utilities and subsequent street level improvements will be constructed based on the street control lines. The Numerical Bearings of the North South Grid lines appear to be correct. A follow-up survey control meeting should take place to ensure the shoring wall layout is performed as intended.

T-0105	BSE - Train Box Beam Sizes	Closed	04/20/2011	05/02/2011	04/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran		To: Turner Construction Company Daphne Faulkner		Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference attached sketches and Sheet S1-3201				Thornton Tomasetti Reply:			
Drawing S1-3201 provides information on beam sizing in the permanent concrete structure. BBII was recently provided additional structure sections in response to T-0035.1, and a number of the beams appear to have changed in size. Beams at gridlines 18, 26, 34, & 35 should be 5' wide according to schedule A on drawing S1-3201. However, from the section provided at gridline A, these all appear to be sized at 7' wide. The sizes of these beams are critical in determining the final geometry and location of our temporary bridges. BBII acknowledges that the structural drawings are not to be scaled, so please advise if these beams are to be 60" wide as indicated in schedule A, or if they have increased in size to 84" wide.				The concrete beams at gridlines 18, 26, 34, & 35 at Ground Level have increased to 84" wide. The design is "in-progress".

T-0106	301 Mission Wall - Connection from Metal Stud to Tube Steel	Closed	04/20/2011	04/30/2011	04/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By: URS Corporation David Fyfe				
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:			
Reference: E & C/S-5000				Accept Suggestion: <input type="checkbox"/>			
Please see E & C/S-5000. Transworld has attempted in their shop to set #10 SMS through the structural tube steel, as per plan. The attempt was unsuccessful, therefore Transworld tried the use of a Hilti X-U fastener into the structural steel. Attached are Hilti spec sheets for the X-U Universal Knurled Shank Fastener as well as a photo showing the X-U fastener through the structural steel. Welding is another option for connection to the tube steel. Please advise how Transworld is to fasten the metal stud to the structural tube steel.				The proposed Hilti X-U fasteners are for interior use only and are not acceptable for use on the 301 Mission exterior screen wall. Welding will damage the structural steel paint and light gauge steel galvanized coating and is not an acceptable means of connection. To fasten metal stud to structural tube steel contractor may: 1) Use shot pins rated for exterior use (i.e. Hilti X-CR fastener - ESR 1663); or 2) Pre-drill holes and tap stainless steel machine screws.			
<hr/>							
T-0107	BSE - Visual Test in Lieu of Formally Testing for Verticality in CSL Tubes	Closed	04/20/2011	04/30/2011	04/22/2011	Potentially	<input type="checkbox"/>

REQUEST:		SUGGESTION:		ANSWER:			
Reference RFI#T-0057, Sheet GT-5202, Specification Section 31 63 29, and attached documents CPM Activity Impacted - Buttress Wall				Accept Suggestion: <input type="checkbox"/>			
Below are three cases (A, B, and C) in which formally testing for verticality on CSL tubes, BBII argues would prove to be highly unusual and counter-productive:				ARUP Response:			
A. Specification Section 31.63.29.I.3 states "The contractor shall perform a test to determine verticality of the steel tubes, or drilled holes, that are going to be used for the sonic tests." Balfour Beatty has been advised by a number of testing firms that verticality tests cannot be performed on steel access tubes as well as piles reinforced with steel. Magnetic interference from steel reinforcement and steel tubes will cause the instrument to not function properly. BBII has also been advised by Terracon (please see attached email from Dextra), a reputable CSL testing firm that there are currently no known cases in the US where verticality of CSL tubes in steel reinforced piles have been formally tested.				This is acceptable.			
B. Attached is a case study that details the investigation of

	<p>debonding that occurs when using PVC as CSL access tubes. The results of this study clearly show the use of steel tubes (BBII is proposing to use Sonitec tubes) should be preferred over PVC.</p> <p>C. After doing some research, the closest we came to find any mention of verticality in CSL tubes was this excerpt from EPA's website which states, "If the CSL access tubes are not installed in a near-vertical position and/or the distance between them varies significantly along the length of the shaft, errors in velocity calculations may occur." Judging by this approach to verticality in CSL tubes in most specs, BBII concludes that parallelism and symmetry between tubes are more important factors in ensuring accurate CSL test readings.</p> <p>In summary, BBII in lieu of formally testing the CSL tubes for verticality will perform a visual test making sure that the tubes are symmetrical (equally spaced) in a circle and parallel. This is the most important inspection to ensure accurate pulse readings.</p> <p>Please confirm that this is acceptable.</p>						
T-0108	BSE - Building Adjacent Zone 3 Clean From Dust and Debris Generated By Demoli Closed From: Webcor Construction LP Nhi Tran Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal REQUEST: Reference Specification Section 01 15 40 Please confirm that the demolition contractor has satisfied the requirement to clean all dust and debris generated by demolition contract to the satisfaction of the adjacent building owners, and BBII will only be responsible for cleaning dust and debris generated by BBII during its own operations, after the turnover of these are completed. REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Sheet GT-0100 and Specification Section 01 10 50		Response provided by PMPC.					
Drawing GT-0100 shows four control points. BBII's surveyor, KCA Engineers, have surveyed their locations and found the following: 1) Survey Control Point #101: This point has been damaged - the brass disk is missing, though the rivet remains in the concrete sidewalk. There are score lines in the concrete BBII assumes would intersect on the brass disk. 2) Project Benchmark Point #54: KCA was able to locate this point. Please confirm that it is acceptable to use the coordinates of this point for horizontal control, even though it is listed as a benchmark. 3) Survey Control Point #106: KCA was unable to locate this point. 4) Survey Control Point #105: KCA was able to locate this point.		RFI T-0112 is a Survey and Control issue. Webcor/Obayashi is responsible for coordination with their subcontractors and this RFI lies within their domain of responsibility. Please ask W/O to coordinate their Survey Subcontractor (Contract T05.1 Chaudhary & Associates) provide a response to their BSE Subcontractor (Contract TG03 - Balfour Beatty). 1) Regarding Control Point #101 by Martin M. Ron (Drawing GT-0100), TJPA is requesting a meeting with Martin M. Ron (DPW). In the meantime W/O surveyors should assume that the riven and cross marks constitute the mark on Drawing GT-0100 and to submit the results of their check survey against the other remaining points to see if the given coordinates match those given on Drawing GT-0100. W/O should consult with Chaudhary & Associates now under subcontract to W/O, as to how Chaudhary & Associates used this point and whether it was damaged then. TJPA will set up a meeting with Martin M. Ron, Chaudhary & Associates, W/O and TJPA representatives. 2) Regarding Project "Benchmark" Point #54, the coordinates of this point given on Drawing GT-0100 are given for use as line survey control as well as elevation. 3) Regarding Control Point #106 (Drawing GT-0100), W/O is to consult with DPW and Chaudhary & Associates as to their knowledge of the last time this point was located. This can be done by W/O alone or in the meeting the TJPA representative will set up. With the 3 remaining Control Points #101, #054, #105 (Drawing GT-0100), W/O should use the given position of Control Point#106. If this has already been done TJPA will re-establish this Control Point. 4) No action requires.					
With the current condition of the provided control points, KCA is not able to do a hard check on their survey work.		TJPA requests that the BBI and W/O surveyor submit their notes on what they have completed and verified to date.					
Please confirm that all the control points above may be used for the TG03 BSE Trade Package. Please reset the damaged or missing points for KCA's use.

REQUEST:		SUGGESTION:		ANSWER:			
Reference RFI#T-0112, Transmittal No. 140-01593, Sheet GT-0100, Specification Section 01 10 50, and attached document				Accept Suggestion: <input type="checkbox"/>			
Chaudhary's Transbay "Survey Grid Control Document" was transmitted to Ed Sum (TJPA) and Agnes Katanics (URS) on 5/18/11 (transmittal #140-01593, attached) following a meeting which took place on 5/17/11 with URS, F3, DPA and TJPA. In an effort to confirm the four survey control points shown on GT-0100, Chaudhary discovered that Point #101 and Point #106 were missing.				Adopting Chaudhary's survey grid control document is acceptable.			
Due to the missing points, W/O requests TJPA to either approve Chaudhary's Survey Grid Control Document included as part of transmittal #140-01593, or have the monuments missing from GT-0100 replaced.

T-0121	301 Mission Wall - Aluminum Panel Layout	Closed	04/27/2011	05/07/2011	05/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP David Hungerford To: Turner Construction Company Daphne Faulkner			Answered By: URS Corporation David Fyfe				
Co-Author:							
REQUEST: Reference: A-5000 Regarding the aluminum panels on the 301 Mission wall, bottom panel at each end of the wall will need to be trimmed. The standard panel is 2-11 1/2" tall, but the bottom panel measures out to be 2'-1"+/- on the west end and 2'-9"+/- on the east. Please confirm that this is acceptable. If not, please advise.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Per contract documents aluminum panels shall match original aluminum panels. Existing bottom aluminum panel(s), as shown in photos on sheet C-5010, have an approximate 1" gap between the bottom of panel and top of existing grade. Contractor shall place bottom aluminum panel(s) to provide an approximate 1" gap between bottom of panel and top of finished/existing grade. It is acceptable to provide bottom panel(s) that are less than 2' - 11-1/2" tall to provide an approximate 1" gap between bottom of panel(s) and top of finished/existing grade.

T-0122	BSE - Hazardous Material Removed From Zone 3 (Potential Contaminated Material Closed		04/29/2011	05/09/2011	05/02/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Turner Construction Company Jack Adams				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 00 03 35, 1.2 During Investigation of Zone 3, BBII discovered potential lead based material existing on site. The specific area of concern is the pedestals on Fremont Street. Please confirm that all contaminated material (specifically the referenced pedestals) as specified in the specification section 00 03 35, Article 1.2 has been removed and abated by the Demolition Contractor. BBII is scheduled to remove these pedestals next week and cannot proceed with this critical work until it is confirmed that the site is cleared of lead based materials as required by the Specifications. The TJPA's attention is directed to the following Section of the Specifications: SECTION 00 03 35 2 EXISTING CONDITIONS: HAZARDOUS MATERIALS "1.2 HAZARDOUS MATERIALS REPORTS A. The TJPA's environmental consultants have surveyed the facility for the presence of various hazardous materials. Materials investigated may include asbestos, lead, PCB ballasts, mercury containing lamps, contaminated soils, underground storage tanks, and other hazardous materials. The demolition contractor for the Demolition project (Evans Brothers Inc.) is responsible for removing and abating products containing asbestos, lead, or PCB ballast, and mercury-containing lamps."			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Hazardous material has been removed from site per the extent of demolition contract drawings for zones 3 - this does not include the "pedestals" in Zone 3. The building and above ground structures were demolished to the extent shown on Demolition contract drawings. Hazardous materials abatement scope was completed within the scope of demolition only. Refer to Demolition Drawings D-1050, D-1051 and D-1073 for representation of limits of structures (specifically the referenced pedestals) demolished and hazardous material abatement. BSE Contractor to handle remaining demolition and abatement in accord with BSE Spec 00-08-14 Health and Safety Criteria Para 1.2 and 1.3 Lead hazards, BSE Spec. 02-41-01 "Demolition" and BSE Spec. 01-13-50 "Hazardous Materials Procedures".

	<p>on Sheet S-0002, and A-6000 (see attached marked up sheets). Note 1 within the "WALL FINISH" section of the notes on page S-0002 says to use insulation separation tape between treated wood surfaces and steel framing. In note 2 on page S-0002, SASM is specfied as a different material, but on the details of page A-6000 SASM is shown to be used in the same areas as is described for the insulation tape. It is the interpretation of Transworld that the insulation tape is to be used at all locations referenced on sheet A-6000 as "SASM". Please clarify if these two different materials are to be applied in the same areas.</p>						<p>on the contract documents.</p> <p>These two materials (SASM and insulation tape) may overlap in certain locations where insulation tape is provided between treated wood and metal surfaces and where waterproofing is also required.</p>
T-0123.1	301 Mission Wall - SASM and Insulation Tape Materials	Closed	05/06/2011	05/16/2011	05/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		David Hungerford	To: Turner Construction Company		Daphne Faulkner	Answered By:URS Corporation	David Fyfe
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER:		Accept Suggestion: <input type="checkbox"/>	
Reference: RFI T-0123, A-6000, S-0002							
<p>The response provided to RFI T-0123 is in conflict with the contract documents. The response requires the contractor to create a waterproofing barrier for the entire length of the wall; however, the contract documents do not indicate a complete waterproofing barrier. References to SASM on page A-6000 instructs the application of SASM at all points where pressure-treated or moisture resistant wood comes in contact with metal. This application instruction, therefore, would not result in a waterproof barrier along the entire length of the wall. Please clarify if on the details "SASM" was intended to read "insulation tape", because the application locations of the SASM, as per A-6000, are called out and described to be at all locations of the insulation tape defined on S-0002.</p>						<p>This is not a new contract requirement. SASM is referred to on A-6000 in two different instances. It is referred to when there is treated wood blocking/elements. At these locations, the insulation tape shall be used. There is also SASM shown on the front and back face of the wall as shown on Detail D, A-6000. Contractor shall provide SASM as shown.</p>	
<p>In the alternative, is it the intention of the design team to apply additional waterproofing not shown on the contract documents?</p>

	verticality and alignment, as the augers in the secondary panels tend to follow the path of the outer columns of the primary panels. Based upon the beam and column layout shown in GT-2101-2013, the corners formed by Wall Segment A/33.5-35 & 35-1 and R2-1 & X1-1 do not receive the complete remixing obtained by the typical 100% outer column overlap. These corner details are atypical compared to industry standards, and will lead to permeability issues. Is it acceptable to move a small number of beams slightly closer together (~0.1') near those corners, such that the panel layout is shifted enough to have a 100% column overlap at the corners?						
T-0126	BSE - Confirmation of Utility Abandonment on Fremont St, East side of Phase 1 El Closed		05/02/2011	05/12/2011	05/12/2011	Potentially	<input type="checkbox"/>
	From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner		Answered By: Transbay PMPC		Douglas Jacobson		
	Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal						
	REQUEST:	SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/>				
	In order to drive sheet piles for the hammer head wall location along Fremont St and the North West Corner of Zone 4, BBII requests confirmation of the abandonment of all utilities east of the PG&E electrical duct bank. BBII also will need the As-Build drawing of the PG&E duct bank location.		Today, 5/11, BBI has sawcut AC and removed one lane-width and two laborers have exposed the utility lines in the street east of the PG&E duct bank. Verizon came and cut two of their 4" ducts. The remaining lines will be identified by the utility subcontractors in the next day or two. Please contact Jason Dunne (W/O) for the field conditions of abandoned utilities.				
	BBI needs this information to proceed on the extra unforeseen concrete wall in the hammer head area of the buttress wall.

From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: URS Corporation David Fyfe				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Sheets GT-2201, GT-5102 Sec. 10, and attached photos In the northwest corner of Zone 4, BBII has exposed 2 openings below the screen wall in the 301 Mission structure. The first opening is located approximately 6 feet east of gridline 27 and the second opening is located approximately 8 feet east of gridline 29. These openings are approximately 18" x 36" in size. (See attached pictures). These openings are not shown on construction documents. Please advise how to proceed. BBII requests an expedited response prior to the end of this week, as this matter is pertinent to backfill operation.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Plugging of existing ventilation shafts/openings below screen wall is specified in the 301 Mission Interim Screen Wall contract documents. Webcor-Obayashi to coordinate all work amongst tradegroup packages/subcontractors.		
T-0128	BSE - Old Existing Concrete Floor Along 301 Mission in Zone 4	Closed	05/05/2011	05/15/2011	05/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Transbay PMPC Douglas Jacobson				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 02 41 01 During pre-trenching, BBII found an existing concrete floor along the 301 Mission St garage wall. It is located between the 301 Mission building wall and the buttress area between Grid Line 29 and 30. BBII has exposed a 20ft-30ft section of this floor (approximately on Grid Line A between Grid Lines 29 and 30), and have demolished the slab within the pre-trench area that has been exposed. It appears to BBI that this unforeseen obstruction continues further into the buttress area. If this unforeseen obstruction continues further into the buttress area, it would have to be removed so the buttress construction can continue. Please advise on how to proceed.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The obstruction was removed by BBI. Remove pre-trench obstructions per contract requirements and Force Account agreement with TJPB.		
T-0129	BSE - Unforeseen Timber Pile in Pre-Trench Along 301 Mission in Zone 4	Closed	05/05/2011	05/15/2011	05/06/2011	Potentially	<input type="checkbox"/>

	which will reduce the of damaging the wall at 301 Mission. BBII is willing to meet with the Engineer to discuss and develop this method.				each of the 3 western-most timber piles at a date and time (Friday May 13, 2011 mentioned as the earliest) chosen by the Contractor. Mechanical methods to control and hold the vibratory pile puller away from the wall, as well as any method of pre-protection of the aluminum panel clad corner, are suggested. ----- 5/11/2011 Roger Rothenburger As discussed in the Wednesday May 11, 2011 BSE meeting, the Engineer (Arup) is seeking (response to RFI T-0129) "best endeavors" to use the casing on the three (3) timber piles furthest west. The remaining seven (7) or so piles to the east of these piles may be pulled directly withou using casing as long as there is replacement filling of the timber pile void as soon as it is pulled. TJPA is aware of the risk of exterior damage to the 301 Mission Parking Struture at the corner and sides, but weighs the potential for more serious structural damage in the basement around the PG&E vault to be greater risk than the exterior damage. The work is in accordance with the force account directive CRT-010 for removal of obstructions so the risk becomes part of the cost which TJPA is willing to bear for avoiding potential greater risk of basement structural damage. (1) At a date and time (Frday May 13, 2011 mentioned as the earliest) chose by the BSE Subcontractor, BBII, TJPA representatives including the Engineer (Arup), Architect (AAI) will observe the BBII "best efforts" to install casing and pull each of the 3 wesrtn most timber piles. Mechanical methods with the excavators or other equipment to control and hold the vibratory pile hammer away from the wall are suggested as well as any method the experienced work crews suggest. An attempt to protect the aluminum panel clad corner by any means is also advisable. (2) The material for filling the void left by the extracted timber pile needs to be filled by a material which can

T-0138.1	BSE - Unforeseen Timber Piles in Pre Trench Along 301 Mission St. in Zone 4 - Coi Closed From: Webcor Construction LP Co-Author: Balfour Beatty Infrastructure, Inc. REQUEST: Reference response to RFI#T-0129, RFI#T-0138, Specification Section 02 41 01 and attached documents The response to BBII RFI 094 [RFI#T-0129] regarding the unforeseen timber piles along 301 Mission Street, "Concrete to be placed in the remnant pile hole as rapidly as possible after pile removal of the adjacent pile." Concrete is not compatible with CDSM mixing. After clarification on the issue in RFI Response #T-0138, BBII proposed and furnished Central Concrete Sand Slurry Mix FOA100CX under the direction of the Engineer. The Engineer of Record's field engineer reviewed, approved and observed the installation of this mix in the pile voids along 301 Mission Street. The mix was recommended by ARUP Field Engineer prior to placement in the field, please confirm that this mix design meets the field engineer's requirements. Attachments: Mix as requested is being submitted for record.	Nhi Tran Ural Yal	To: Turner Construction Company Daphne Faulkner	05/20/2011	05/30/2011	05/23/2011	Potentially <input type="checkbox"/>
			ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: Mix FOA100CX is acceptable. Contractor shall verify that this mix is acceptable to the CDSM shoring wall installer.

Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 01 53 13 BBII proposes breaking up the bridge submittals to allow submittal fundamental structural drawings and calculations for the bridge, independent of accessories and specialized components necessary for a complete bridge package. Specifically, the first set of submittals would include Structural drawings and calculations for the bridge structure from the pavement and decking down - piers, cap beams, girders, abutments, and associated connections. Additionally, it will include standard edge railing/barriers. Follow on coordination submittals will include traffic coordination components, gates, hardware, locking mechanisms, fences, Muni OCS components, utility support details, surface grading and drainage. BBII believes that it will take some time to finalize a complete bridge package that satisfies all interested parties. Isolating the core bridge structure into it's own submittals will ensure that detailing and fabrication of the main components of the bridge will not be held up while working out the details. Please confirm this is acceptable			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The approval to split the temporary bridge submittal into two submissions is provided subject to the following conditions: 1. Items which are provided in the initial submission shall be designed for all loading to support all features which are deferred. This includes loading attributable to but not limited to the following: operable gates; vehicle barriers; required thickness of pavement for all purposes, added thickness of paving for pedestrian areas, curbs and provisions for slope inducement for handling of surface water; support for utilities; lighting poles/standards; OCS poles/wires; and any other items specifically required to meet city of SF requirements brought to the attention of the contractor team by review meetings with city staff. 2. Items deferred to the second submission shall be in full conformance with specifications requirements. 3. Any items for which a deviation from the specifications is sought shall be fully identified in the first submission.

REQUEST:			ANSWER:				
Reference Specification Section 02 41 00			Accept Suggestion: <input type="checkbox"/>				
BBII followed the method approved to remove a section of the unforeseen structure in RFI #74 & 74.1, and found a separate concrete footing bellow that. It is believed to be a footing that extends below the 177/181 Fremont St. building. The top of this footing is approximately 8 feet below the original grade, and it is approximately 3 feet wide, and 3 feet deep. BBII is concerned with the removal of this footing and the extensive rubble that was exposed below it. When a bucket of dirt was removed along the footing, a large amount of water gushed out, from below the 177/181 Fremont St. building, and through the large amount of stone rubble that was exposed. At this point the bottom of the footing was found, and the soil was quickly replaced. This footing is within the CDSM wall extents, and will have to be removed. Due to the fragile nature, and the age of the 177/181 Fremont St. building; please clearly describe and advise. Please See Attached Pictures.			ARUP Response: The RFI refers to RFIs 74 and 74.1. We understand these are BBI numbers; the corresponding RFI numbers in Constructware are 103 and 103.1. If the CDSM shoring wall is to be installed in the location shown, then the material which is in the way, including any rubble which will interfere with the soil mixing for the CDSM wall, will need to be removed. Based on field observations made earlier today, and recent email correspondence, we understand the concrete (unreinforced) basement wall immediately adjacent to 181 Fremont has been removed. Arup requests TJPA to provide direction to the Contractor regarding any additional demolition and/or excavation should it be necessary. ----- ----- Adamson Associates, Inc. Comment: CM (Turner) is to confirm that TJPA approves in writing the approach and work the Contractor proposes at this location as the Field Actives and Contractor actions may impact the adjacent property.

From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI#T-0103 and attached photo During BBII demolition of the unknown concrete structure along South side of Zone 4 adjacent 177/181 Fremont building (Refer to [RFI#T-0103] BBII RFI# 74), BBII discovered timber piles beneath the unknown concrete structure - see photos attached. The location timber piles are in conflict with the alignment of the CDSM wall. Please advise on the method of removal of the obstruction. Note: BBII has concerns regarding the stability of the adjacent 177/181 Fremont Building (old brick structure).			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: 1. We suggest that the timber piles be exposed no more than 3 at a time, and that they are removed and the remnant void is infilled immediately with a material that can be drilled by the shoring wall equipment of DND. A suitable material was proposed for the similar situation adjacent to the parking garage/low rise portion of 301 Mission. 2. If more timber piles are revealed along this part of the pre-trenching, then the process in 2 above should continue along the northern flank of 181 Fremont and for a distance of 20 ft east of the northeast corner of the building. 3. 181 Fremont building is equipped with crack width gauges, and Arup staff will take readings of the gauges before and after removal of the timber piles along this length of pre-trenching provided the building owner grants us access. 4. Inclinometers to monitor the effects of the installation of the shoring wall and the subsequent train box excavation will be installed in due course. 5. The Contractor shall take appropriate measures to retain the material under 181 Fremont and keep it from sloughing into the excavation. ----- ----- Adamson Associates, Inc. Comment: CM (Turner) is to confirm that TJPA approves in writing the approach and work the Contractor proposes at this location as the Field Activates and Contractor actions may impact the adjacent property.

ANSWER: ☐ **Accept Suggestion:**

The row of timber piles closest to 199 Fremont are only 6"-9" clear of the 36-inch theoretical CDSM wall thickness. TJPA in order to avoid the potential risk of these timber piles some of whom are canted and not straight pulled if any part of the pile is within 12" of the theoretical CDSM wall line. Since this work has previously been classified as an "unknown obstruction" paid on force account; if there is damage to the 199 Masonry wall that the cost of repair is considered part of the force account work. BBII is to exert efforts to avoid damage and use the method of pulling the piles that gives least amount of risk for damage to the masonry wall. This response is only for 199 Fremont. Discussions must be held when starting pile removal along 181 Fremont.

T-0149	BSE - Revised Contract Drawing GT-2201	Closed	05/24/2011	06/03/2011	05/26/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Sheet GT-2201, RFI#T-0088.2, and attached sketch SKGT-0002 BBII agreed with the TJPA's proposal in the response of RFI T-0088.2. Therefore, please issue the revised contract drawing of GT-2201. Also, please note that attached Sketch SKGT-0002 includes an error in the CDSM wall alignment at gridline J/34-35.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Based on the 5/26/2011 meeting between TJPA, PMPC, Turner and AAI, and as directed by TJPA a revised contract drawing of GT-2201 will not be issued at this time. However, the attached sketch has been revised to correctly show the CDSM shoring wall outline. See attached SKGT-0002-R1.				
T-0150	BSE - CDSM Top of Pile Elevations At Zone 4	Closed	05/25/2011	06/04/2011	05/31/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: Reference Sheet GT-5101 and attached sketch Please reference table 16/GT-5101. To facilitate construction on the streets and the Buttress area, at no additional cost to the owner BBII plans to install the CDSM piles on Fremont St., Beale St., and Zone 4 per the table below: # - (a) Location / Description; (b) Per 16/GT-5101 Top of Pile Elevation; (c) Proposed Top of Pile Elevation 1 - (a) Piles at Fremont St. and Beale St.; (b) EL 13.0 and EL 15.0; (c) Flush to street elevation 2 - (a) Piles in the Buttress Work Pad area along 301 Mission; (b) EL 14.0; (c) Approx. EL 14.0 w/c flush to Top of Pad 3 - (a) Along 301 Mission, piles between the Buttress Work Pad and Beale St.; (b) EL 13.0; (c) Approx. EL 15.0 w/c is 1' above grade 4 - (a) Piles along the 181 Fremont side of Zone 4; (b) EL 14.0; (c) Approx. EL 15.0 w/c is 1' above grade Please confirm.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The proposed top of pile elevations are acceptable provided the elevation at the bottom of the pile is not less than that shown in 16/GT-5101.

T-0151	BSE - Buttress Footprint Increase Due to Oversized Casing	Closed	05/26/2011	06/05/2011	05/31/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference attached sketch Becho will be utilizing a 2200mm OD temporary casing for the Buttress Pile Installation. Becho requests that the spacing between tangent piles remain at 4" minimum and the secant piles overlap remain 1'-6". This will approximately increase the Buttress footprint by approximately 4'-4" to the east and 1'-9" to the south. Please confirm this is acceptable.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: This is acceptable provided no portion of the overall buttress shifts north-south. In particular, the Contractor shall verify that row R, once shifted east as proposed, can be installed in the same northsouth location, given the corner projection of the 301 Mission low-rise. Contractor to verify that the existing timber piles within the larger footprint have been removed and that the equipment pad is enlarged as necessary.		
T-0152	BSE - Additional Timber Piles Adjacent 199 Fremont Building	Closed	05/26/2011	06/05/2011	06/07/2011	Potentially	<input type="checkbox"/>

T-0155	BSE - Primary Concrete Mix Tolerance	Closed	05/31/2011	06/10/2011	06/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Reference Specification Section 03 30 01, 1.5.F BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. During this meeting, Central Concrete expressed concern about variability in the Buttress Primary Concrete mix due to slight variations in material and batching. The Buttress Primary Concrete Mix is a very high performance mix and even small variations in the mix constituents can result in significant changes in strength. Please advise how much of a working tolerance is acceptable for the primary buttress concrete mix.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The strength of concrete which has been placed in the primary shafts will be considered satisfactory if both of the following requirements are met: 1. Every arithmetic average of any three consecutive strength tests (each test consisting of at least two 6 by 12 in. cylinders or at least three 4 by 8 in. cylinders made from the same sample of concrete) equals or exceeds 2,000 psi. 2. No individual strength test (average of two 6 by 12 in. cylinders or at least three 4 by 8 in. cylinders) falls below 1,800 psi.	
T-0156	BSE - Primary Concrete Mix 90-Day Compressive Strength	Closed	05/31/2011	06/10/2011	06/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger	
REQUEST: Reference Specification Section 03 30 01, 1.5.F Per Specification Section 03 30 01 - 1.5F Trial Batches: "The mixes shall be proportioned to develop a compressive strength of 2,000 psi at 28 days." Per the response to Question TG0300-0262, "The rate of strength gain can be reduced so that the design strength is reached after 28 days but less than 91 days". Please confirm that the Buttress Primary Shaft Concrete may take up to 90 days to achieve 2,000 psi.			SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The rate of strength gain can be reduced so that the design strength is reached after 28 days but less than 91 days, provided the Contractor submits test data demonstrating that the mix will reach 2,000 psi at or before 90 days. At a minimum, compressive strength tests of the mix shall be taken at 7, 14, 28, 56 and 90 days. Each test shall consist of a minimum three cast cylinders and a minimum three cores taken from trial batch cubes placed in accordance with submittal TG0300-385. At shafts C/2, C/4 and C/6 (refer to GT-2201), the mixes shall be proportioned to develop a compressive strength of 2,000 psi at 28 days. Contractor to submit proposed mixes and corresponding test results for approval prior to their use.

T-0156.1	BSE - 120 Day Acceptability of Buttress Primary Shaft Concrete	Closed	04/16/2012	04/26/2012	04/19/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			SUGGESTION:		ANSWER:		
Reference: 4/12/12 Central Letter					Accept Suggestion: <input type="checkbox"/>		
BBII requests that in the event that the Buttress Primary Mix test specimens do not meet the 2,000 psi specified strength of 2,000 psi at 90 days (reference Response to previous RFIs #T-0157.2, and #T-0156), additional cylinders are to be taken and tested at 120 days. During this cooler climate, initial temperature may be impeding overall strength at the required time. Although only a few specimens are suspect of low strengths, Central Concrete is confident that at 120 days, the specimens in question will reach the required strength. If this criteria can be accepted for all test specimens at 120 days, this can mitigate any future concerns of suspect low strength.					ARUP Response:		
					This is acceptable for shaft N-2. For future shafts, we will evaluate on a case by case basis. However, this will require the TJPA to take an additional cylinder at the sampling frequency required in the specifications so that, if the first cylinder tested at 90 days is less than 2,000 psi, there can be three samples tested at 120 days.		
					Christina Young : Per Turner, the additional cylinder sampling is to be performed by the Contractor's own testing agency.		
T-0157	BSE - Primary Concrete Mix 500 PSI At 7-Days	Closed	05/31/2011	06/10/2011	06/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 03 30 01, 2.2.E					Accept Suggestion: <input type="checkbox"/>		
BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. One of the concerns for the Buttress Primary Concrete is to provide a mix that is able to consistently achieve both 500 psi at 7 days and 2,000 psi at 28 days. The Buttress Primary Concrete Mix is a very high performance mix and even small variations in the mix constituents can result in significant changes in strength. Please advise if it acceptable to allow a working tolerance for the 500 psi requirement at 7 days.					ARUP Response:		
					The 7 day compressive strength of primary shaft concrete (Type "A" concrete in spec section 03 30 01) shall be 500 psi +/- 200 psi.

Reference Sheet D-2212, Specification Section 02 41 01, attached sketch and photo				06/06/2011 - Daphne Faulkner			
During Pre-trench, BBII found additional unforeseen timber piles within the pre-trench limits along gridline A, between gridlines 24 & 25.				Response provided by S. Rule of Turner.			
Per Contract Drawing D-2212 (attached), there should only be a single row of timber piles in conflict with the CDSM wall, although when the area was exposed there are three rows within the CDSM wall limits (see attached photo). These will have to be removed and will be considered extra work.				Please refer to note on Drawing D-2212 in the upper half between grids 23–26 which states,			
				"In areas where (N)CDSM wall conflicts with the existing pile caps and piles, remove (E) pile caps and/or piles prior to construction of (N) Transit Center Building CDSM perimeter shoring wall (see Note 3 and 6)."

REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 31 56 13, 3.13 and attached detail sketch					Accept Suggestion: <input type="checkbox"/>		
Is it acceptable to cut a 1.5" diameter hole, 16" from the bottom tip, in the web of the soldier beam pile beams? The purpose of the hole is to aid in securing the tail of the beam to the "dolly" that DND will use to raise the beams into a vertical position.					06/03/2011 - George Metzger		
					ARUP Response:		
					This is acceptable.		
T-0162	BSE - Buttress Concrete Test Cylinders	Closed	06/03/2011	06/13/2011	06/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran			To: Turner Construction Company Daphne Faulkner				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 03 30 01 and attached summary of test results					Accept Suggestion: <input type="checkbox"/>		
BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches (please refer to the attachment for a summary of the test results). The 28-day test results for the 4x8 test cylinders were on average 57% of the core 4" diameter core test results. The 28-day test results for the 6x12 test cylinders were on average 88% of the 4" diameter core test results. The test samples were extracted from the same concrete batches, at the same time and cured in the same manner. BBII believes the difference in compressive strength between the test results may be attributed to the sample size & the resultant heat of hydration which drives the concrete cure rate. BBII also believes that the concrete cores may be more indicative of the actual in-situ concrete strength than the concrete test cylinders.					ARUP Response:		
The Specification Section 03 30 01 - 1.5 F Trial Batches references "concrete cylinders", however it does not specify 4x8 or 6x12 test cylinders.					Arup believes that there is insufficient information available at this time for the Contractor to draw the conclusions stated in the RFI.		
During the course of the meeting, it was generally agreed upon that 6x12 test cylinders appeared to be a more representative and consistent measure of the Primary Buttress Concrete strength relative to the core samples.					Regarding the question posed in the RFI: Arup's understanding is that there should be little difference between 4x8 and 6x12 cylinders cast, cured and tested under identical conditions and, therefore, it is not essential to limit the TJPA's Testing Agency to one particular cylinder size.

	<p>BBII has confirmed through CTS that there should be no additional cost in sampling and testing a 4x8 cylinder relative to a 6x12 cylinder.</p> <p>Therefore, BBII proposes that the 6x12 test cylinders should be used as the basis of acceptance testing both for the Trial Batches and also for future Field Quality Control and Testing for the Primary Buttress Concrete; 4x8 test cylinders should only be used for informational purposes only. Please confirm.</p>

T-0164	BSE - Timber Piles Adjacent 177/181 Fremont Building South Zone 4	Closed	06/06/2011	06/16/2011	06/06/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Company Daphne Faulkner		Answered By: Webcor Construction LP Nhi Tran			
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI@T-0146.1 [BBI 0104] and attached photo				06/06/2011 - Roger Rothenburger			
Per [RFI #T-0146.1] RFI 104 Response, BBII inserted a metal sheet behind the timber piles required to be removed, in the location between 199 and 181 Fremont. The sheet is to hold back the soil in the alley. Due to the close proximity of the timber piles, the sheet location is too close to the timber piles required to be removed from the CDSM Wall Location. The sheet is too close for the pile extractor to attach to the tops of the pile. See Attached Photo.				The practice of removing the sheet pile was approved by TJPA in the "181 Fremont test" done on Friday June 3rd. The Contractor can remove the metal sheet and expose the piles as necessary with as steeply a sloped excavation that allows the vibrator pile puller to be attached. The work should be done in as reasonably a short duration as possible. All equipment, manpower, materials should be at hand when the metal sheet is pulled and the piles are exposed for extraction.			
Please Advise in detail.

T-0165	BSE - High pH Water Found In Zone 3 Pre-Trenching	Closed	06/07/2011	06/17/2011	06/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Turner Construction Company Daphne Faulkner				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 00 08 13, 1.9.C BBI found high pH water while digging an exploratory hole in the Fremont St. side of Zone 3. This was confirmed by Peter Cusack from Treadwell & Rollo. Specification Section 00.08.13.1.9.C states that "Should the existing wastewater be contaminated, or should it be uncontaminated but subsequently become contaminated as a result of conditions other than the Contractor's operations, a Change Order will be issued..". Please consider this as a Notice of Existing Contaminated Wastewater as defined by SS00.08.13.1.9.C. Please advise on how to proceed.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Pending approval by the TJPA, a CR will be issued for the chemicals to treat the water per specification section 00 08 13 (1.9.B).		
T-0166	BSE - Unknown Concrete Structure at 199 Fremont Zone 4 (Gridline 33-30)	Closed	06/07/2011	06/17/2011	06/22/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Transbay PMPC Roger Rothenburger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI#T-0144 (BBI RFI 0103), Specification Section 31 56 13, and attached Turner Field Condition Report 056 and photos BBII demolished the Unforeseen Concrete Structure along 199 Fremont St., and associated curb per RFI #103 [RFI#T-0144] response. During the process, due to the previous contractor's construction means, the curb inadvertently damaged the metal flashing, and possibly the waterproofing beside it. Along with the curb, the fence panel was built on top of the Unforeseen Concrete Structure, so when the structure was removed, the fence came down too. See attached pictures and Turner Field Condition Report (5/24/11) BBII requests immediate direction from the TJPA on this issue.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Instructions for this were orally transmitted in the field and complied with by the BSE Contractor. The fence between the buildings 199 Fremont and 181 Fremont has been reinstalled. Repair of the curb and flashing can wait until work in the area is complete or at a point that no further damage is possible. The Contract requires that the BSE Contractor repair damage to any building damaged during construction activity for the site and this Contract.

Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI #T-0144, RFI #T-0166 and Specification 31 56 13 Per the response to RFI#T-0166 (BBI RFI 103.1), please provide an acceptable repair procedure for the 199 Fremont building. Also, please confirm that the repair work will be included in CR T-010.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> No action is required by the contractor at this time. The specific damage to 199 Fremont Street has not been listed in the RFI. TJPA is aware of minor damage to the metal flashing along the curb at the bottom of 199 Fremont St and the removal of the unreinforced "curb" that ran along the base of the cinder block wall. As stated previously repairs to 199 Fremont will be made at a much later date. The damage that occurred to the flashing and unreinforced concrete curb resulted from using breaker on the unreinforced foundation wall and pulling the sections out and repairs will not be done until the project is further along in progress where no more likely damage will occur.

T-0169	BSE - Disposal of Drilling Spoils	Closed	06/09/2011	06/19/2011	07/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Company Daphne Faulkner		Answered By: Transbay PMPC		Roger Rothenburger	
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification Section 01 13 50							
BBII is concerned of the close proximity of the differently classified layers within the Buttress Area of Zone 4. The concern is during Drilling & Shaft Excavation, cross contamination of the material could potentially lead to Class 1 Material inadvertently going to a Class 2 Disposal site, or even a clean waist site. The class 1, the class 2, and the clean material layers are described below:							
Surface to GL-11 ft --- Land fill (clean material except for Equipment Pad Concrete)							
GL-11 ft to GL-13 ft --- Class II (based on Spec 01 13 50/APA)							
GL-13 ft to GL-16 ft --- Class I (based on Spec 01 13 50/APA)							
GL-16 ft to bottom ---Clean Material							
BBII is concerned that due to the process of excavating the soil out of the Buttress Shaft with large amount of water and the use of a clam shell digging attachment, that the soil layers have a high opportunity of mixing within the casing. Presumably the mixed the soil layers will make it difficult to distinguish between the class 1, the class 2, and the clean materials.							
BBII requests the engineer to provide a revised stratum classification that is better for the actual shaft excavation methods being used, that will prevent cross contamination.							
Please Advise.							
		Contract Specification 01 13 50 Part 1.1.C (General Summary - Sil Management) requies the Contractor to use the Treadwell and Rollo March 24, 2010 "Site Mitigation Plan, Transbay Tranit Center" and April 2009 "Environmental Site Characterization, Transbay Terminal" reports for managing existing soil disposal.					
		Only the March 24, 2010 Treadwell and Rollo report is a Contract Document in Appendix A of Section 01 13 50 and only data from April 2009 Treadwell and Rollo Report is included as Contract information even though both reports contain much of the same language. The April 2009 report is 600 pages and the March 2010 report is considerably shorter and condensed.					
		Section 01 13 50 requires the Contractor to submit a material handling plan for each type of excavation operation on the site and includes the buttress piles as well as CDSM overflow materials, pre-trench excavation material, bulk excavation material, etc.					
		Both the April 2009 and March 2010 Treadwell and Rollo report give the expected ground condition classifications as:					
		5~16 feet (below grade) fill material composed of loose to medium dense silty sand with varying amounts of brick, wood, tar, and glass fragments.					
		15~18 feet (below grade) fill material composed of medium dense to very dense sand with variable amutns of silt					
		18~55 feet (below grade) Bay Mud					
		Under Section 01 13 50 Part 1.5.G the Contractor is resonsible for develeoping a plan that reduces the amount of hazardous waste generated. This plan also includes (Part 1.4.C Submittals - Excavation Handling) methods, means, equipment, sequences that segreegates the material to reduce cost of hazardous material disposal.					
		Since the buttress pile area was excavated to remove piles and backfilled with a combination of existing clean material (fine sand with silt) and crused concrete debris and poured concrete (top 2 feet buttress pile

REQUEST: Reference Drawing Sheets GT-1303, D-5100, D-5101, D-5102, D-5103, response to Pre-Bid RFI #TG0300-014, and attached drawing Contract drawings GT-1303, D-5100, D-5101, D-5102, and D-5103 along with the response to Pre-Bid RFI #TG0300-014 describe the finish grades and subsequent quantities of crushed 3" minus concrete to be left on site for the BSE package. In summary, Zone 4 was to be left with a depression as shown on GT-1303 and Zone 1-3 were to be left no higher than existing ground elevations. Previous discussions between BBII, W/O, EBI and TJPA were made to accommodate BBII's early access into Zones 1-3 for pre-trenching. At the time of these discussions EBI indicated they were short approximately 7000 cy of balancing the site and that they would not be able to get that remaining 7000 cy until the existing ramps were demolished. As a result of the short term shortage and in exchange for access to zone 1-3 BBII agreed to: - Allow EBI to leave Zone 3 low of the Existing elevations - Allow EBI to set up Crusher in Zone 2 for ramp demolition - Allow EBI to leave the 7000 cy shortage in a stockpile in Zone 2, for our later use. BBII appreciated the partnering agreement however the current size of the stockpile is far greater than BBII ever expected. BBII surveyed the stockpile and the Zone 3 depression on 6/7/11 after they completed their export to zone 4 and BBII estimates the size of the concrete stockpile to be in excess of 11,000 cy (this does not include the asphalt stockpile that was created after the survey). Based on BBII's calculations (see attached topo) Zone 3 was left approximately 2000 cy short of existing grade and 5000 cy were taken from the stockpile to Zone 4. As a result BBII requests the current stockpile be removed in its entirety from the site, as it is in excess of the contractual amount to be removed by the BSE contract. However, If acceptable to TJPA, BBII would be interested in taking 2000 cy of the crushed concrete if it could be		SUGGESTION:	ANSWER: Accept Suggestion: <input type="checkbox"/> Intent of the demolition project is to retain processed construction demolition concrete onsite for use as buttress fill material and provide a working platform for construction of new terminal perimeter wall. Contract drawings state" Subsequent to placement of CDSM wall perimeter shoring remove all onsite crushed/processes demolition concrete backfill." REF: D-2200-2203 inclusive, and D-1001 Note 2. The amount of crushed concrete (and asphalt) is from the demolition contract is in accord with Demolition Contractor drawings and specs. REF: Demo Spec. 02-42-00.

T-0173	BSE - Enhanced Trial Batch Testing	Closed	06/13/2011	06/23/2011	06/15/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Company Daphne Faulkner		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 03 30 01, 2.2.E and attached mix designs BBII, Becho, Central Concrete, W/O, ARUP and Adamson Associates met on Tuesday 5/24/2011 to discuss the results of Buttress Primary Concrete Mix Trial Batches. Based upon the preliminary results of the 2nd Trial Batch, BBII proposes to submit the following three mixes for approval for use on the Buttress Primary Shaft Concrete: 1. Mix 1: 85AEC3B6 2. Mix 5: 86AEC3A6 3. Mix 7: 87AEC3A6 BBII believes that having additional mixes available for use as the Buttress Primary Concrete would be of great benefit to the Project. BBII proposes "enhanced testing" of these three mixes as well as three additional hybrids of each mix for a total of nine mixes (please see attached for mix designs). The intent of the enhanced testing is to further refine the information we currently have on all three of the above three mixes, as well develop additional mixes for future use as Primary Shaft Concrete. One of the concerns of 1st and 2nd Trial Batches was potentially accelerated curing due to the Styrofoam insulated boxes in which the trail batch "cubes" were cast. BBII proposes a 3rd trial batch using all of the same methodology of the approved trial batch method placing, the only exception being that the concrete will be cast into +/- 5'x5'x4' deep excavations in lieu of the Styrofoam insulated forms. Each mix would be placed in an individual excavation, lined with plastic to retain moisture. All other aspects of the proposed trial batch methodology would be as previously submitted & approved. The results of the "enhanced testing" would be evaluated and possibly submitted for approval as additional Buttress Primary Shaft Concrete Mixes. Please confirm that this is acceptable.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: This is acceptable.

T-0176	301 Mission Wall - Fill Pour Back and New Curbs	Closed	06/15/2011	06/25/2011	06/20/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		David Hungerford	To: Turner Construction Company		Daphne Faulkner	Answered By:URS Corporation	David Fyfe
Co-Author:							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Should the concrete mix design for the fill pour back and 9"x12" curbs along the north side of the 301 Mission wall be the same mix that is used for the new curb around the manhole? The mix design for curbs around the existing manhole was requested in RFI T-0175. Please advise.				Concrete mix design for new concrete curbs shall be as specified in RFI T-0175.			
				Finished concrete curbs shall match existing concrete curb finish.			
				Contractor to submit concrete mix design to TJPA Representative for review and acceptance prior to placing concrete.			
T-0177	BSE - Alternate Method Of Pile Removal Along 181 Fremont	Closed	06/15/2011	06/25/2011	06/16/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Daphne Faulkner	Answered By:Turner Construction Comp Jack Adams	
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference attached procedure, photos, and sketch				Confirmed - Method of pile removal is acceptable. CR T-010 is used to document work.			
During the extraction of unforeseen piles along 181 Fremont, two piles located inside the proposed CDSM wall broke and are now too deep to extract under using the current extraction method. During the attempted extraction of pile 151, the pile continued to break. The top of this pile is approximately 9' below the base of the foundation wall. Considering the length of the adjacent removed piles, there is approximately 6' left to be removed. Pile 105 is approximately 6' below the base of the foundation wall leaving approximately 12'-14' to be removed. Further excavation to expose these piles is not reasonable. BBII proposes to drill the remainder of each pile out. See below the proposed procedure as per committee meeting and consultation with Viking Drillers Inc. on 6-15-11. It was agreed that this work will be charged to CR T-010. Also attached are photos and a drawing indicating the location of both broken piles (105 and 151).							
Please provide direction.

T-0180	BSE - CDSM Wall Tolerance	Closed	06/22/2011	07/02/2011	06/22/2011	Potentially	<input type="checkbox"/>	
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company Daphne Faulkner		Answered By: Transbay PMPC			Roger Rothenburger
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal						
REQUEST:		SUGGESTION:		ANSWER:				Accept Suggestion: <input type="checkbox"/>
Reference Specification Section 31 56 13				TJPA did not request this RFI. TJPA stated that if the Contractor was concerned about meeting the tolerances for top horizontal position of the CDSM shoring wall that the Contractor should submit an RFI and TJPA would support such a request in order to avoid any encroachment of the CDSM shoring wall with the Transit Box concrete structure which would be difficult to remediate.				
As requested by the TJPA, DND submits this request to modify the horizontal tolerance for the CDSM shoring wall. The new goal is to set the wall 2" outside of the original planned centerline of shoring wall. This solution has been proposed by the TJPA in order to not encroach into the structure at the bottom of the train box.				TJPA has no objection in the horizontal setting of the CDSM shoring wall if the horizontal tolerance is 0" towards the TTC box structure and 4" away from the box structure. The verticality tolerances of 1/150 (CDSM wall) and 1/200 (steel beam) remain in place.				
DND respectfully requests the maximum soldier pile & CDSM wall tolerances be revised to 0 inches into the trainbox & up to 5 inches outside the trainbox.				The 4" top horizontal tolerance away from the wall will allow at 1/150 in 55 feet a near 0" clearance at the invert level with the CDSM wall and will allow at 1/200 the steel beam to be clear of the structural outline by 0.70".				
There will be no additional excavation and/or bracing costs associated with this increase in tolerance from BBI. However; there may be future additional cost impacts to the Structural Concrete & Waterproofing that are to be handled in future trade packages.				It is understood that there is no cost or time associated with this change for the BSE Contractor work and that TJPA accepts the additional overbreak concrete generated by this small adjustment in the top horizontal placement in exchange for a better chance of avoiding structural encroachment issues at the final invert level.				
Please confirm, if this is acceptable.				It is also understood that the use of the increased top horizontal tolerance is contingent on actual field physical property line clearances for the CDSM shoring wall.

T-0180.1	BSE - CDSM Wall Tolerance	Closed	06/24/2011	07/04/2011	07/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Daphne Faulkner	Answered By: Transbay PMPC	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal				Roger Rothenburger	
REQUEST:		SUGGESTION:		ANSWER:			
Reference Response to RFI#T-0180				Accept Suggestion: <input type="checkbox"/>			
Please delete the first sentence "TJPA did not request this RFI" of the response for RFI T-0180, because it is the wrong statement.				It depends on how "request" is defined. TJPA did "request" the RFI for expanded tolerances but only if the CDSM shoring wall subcontractor felt that they needed more tolerances and wished to have TJPA confirm that it would accept a larger set back (4") than allowed in the Specifications (2"). This is the same understanding held my Emilio Cruz.			
Emilio Cruz, PMPC, requested to submit this RFI at the Schedule Review Meeting on 6/14/2011 at W-O JV Office Conference Room, 183 Fremont St.				TJPA has allowed a 4" set back while maintaining the verticality specifications for the steel soldier piles (1/200) and the CDSM (1/150). The CDSM shoring wall subcontractor has initially selected a 2" setback for placing the steel soldier beams. At 1/200 for a depth of 55ft there could be as much as 1.3" of encroachment (1/200x55x12 - 2" = 1.33").			
				At the very least it would seem that a 3" setback would minimize further the possibility for encroachment since the 1/200 is still a difficult specification to achieve as TJPA understands it from the CDSM subcontractor.			
				Since encroachment can be very problematic with the concrete structural wall TJPA supports the larger setback to avoid difficult encroachment problems while maintaining the specifications on verticality. The issue of who requested what and when is immaterial. TJPA has accepted the potential for additional concrete from allowing a larger setback and the BSE Contractor has accepted any impact to the bracing system from a larger impact.

T-0181	BSE - CDSM Pile Tolerance Measurement Location	Closed	06/22/2011	07/02/2011	07/01/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:			ANSWER:				
Reference Specification Section 31 56 13			Accept Suggestion: <input type="checkbox"/>				
BBII's subcontractor DND would like to confirm the exact location of the soldier pile, where the pile tolerance is to be measured. Please find below DND's question:			ARUP Response:				
"It is our understanding that the tolerance of the soldier pile beams is to be measured at the plan top of pile elevation. Is this correct?"			We confirm that the tolerance refers specifically to the location of the CDSM wall and soldier pile centerlines.				
Please confirm that DND's interpretation of the pile tolerance measurement is correct.			Section 31 56 13 3.3 A. states: "The location of the CDSM wall centerline relative to that shown on the Drawings is 0" toward the excavation and 2" away from the excavation." This refers to the location at the ground surface ("original grade") at the start of drilling.				
			Section 31 56 13 3.13 B. 8. states: "Acceptable construction tolerance for the location of the soldier pile centerline relative to that shown on the Drawings is 0" toward the excavation and 3" maximum away from the excavation." This refers to the location at ground surface ("original grade") at the start of pile installation.				
			Please also refer to 31 56 13 3.4 A and 31 56 13 3.13 B 2 which stipulates respectively the vertical alignment of the CDSM wall and soldier piles.

REQUEST: Reference Sheet GT-5202, Specification Section 03 20 01, attached sketch, and approved Shop Drawings from Package TA2010-032001A05 Drawing 12/GT-5202 shows 5" clearance between the hoop OD and the inside diameter of a 7' +/- 2" shaft. Per discussions with Becho, at least 3" of clearance is needed between the rebar spacers and the ID of the casing to facilitate proper installation of the rebar cages inside the casing. BBII would like to propose 7 1/4" minimum clearance in lieu of the 5" clearance (shown on 12/GT-5202) between the hoops and the inside diameter of the hole. Changing the clearance from 5" to 7 1/4" would give Becho the 3" of clearance that they need between the spacers and casing ID. Note that the approved rebar shop drawings show 5" clearance to the hoops as per 12/GT-5202. BBII will submit for your records only revised shop drawings showing the proposed 7 1/4" minimum clearance.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: Changing the clearance from face of reinforcing steel to the soil face from 5" to 7 1/4" is acceptable.

T-0188	BSE - Timber Piles Minna Street	Closed	07/01/2011	07/11/2011	07/05/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Masashi Kojima	To: Turner Construction Company		Daphne Faulkner	Answered By: Turner Construction Company Jack Adams	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST: Reference D-2211 and D-5101. During the pre-trenching operation on Minna Street between Gridlines 9-17, BBII discovered unknown timber piles. The timber piles are not shown on the BSE drawings. See attached BSE drawing D-2211, D-5101. The attached pictures indicate timber piles to be approx 2ft from the centerline of the CDSM wall. These piles meet the general conditions set out in article 3.05A.2. The piles encountered were not outlined in the bid documents. Please confirm the removal of the "unforeseen" timber piles, tracking and paid under a Force account contract change order similarly as done for Zone 4 pre-trench obstructions.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Please refer to note on Drawing D-2212 which states, "In areas where (N)CDSM wall conflicts with the existing pile caps and piles, remove (E) pile caps and/or piles prior to construction of (N) Transit Center Building CDSM perimeter shoring wall (see Note 3 and 6)." Please refer to note on Drawing GT-5103 which states, "Width and Depth as required to remove obstacles" This includes all piles within the CDSM wall footprint. "Unforeseen Conditions" are covered in Section 00 07 00 (General Conditions) Article 3.05.A.2 and 3.05.A.3 (Unforeseen or Changed Conditions). Article 3.05.C states, C. Differing Site Conditions shall not include: 1. All that is indicated in or reasonably interpreted from the Contract Documents or Reference Documents; 2. All that could be seen on Site 3. Conditions that are materially similar or characteristically the same as those indicated or described in the Contract Documents or Reference Documents. Since Section 31 56 13 discusses both pre-trenching and the removal of timber piles and Bid Item #6 is for the removal of timber piles before the CDSM shoring wall is installed TJPA believes that this work was indicated and will provide payment for it under Bid Item #2, #4, #6, and #7. There will be no additional payment for the removal of timber piles for the CDSM wall.

REQUEST: Reference RFI#T-0188.2 and attached photos BBII has concerns for the integrity of the adjacent street and utilities, as a result of the pile extraction being performed on Minna Street in accordance with the response to RFI#T-0188.2. BBII has observed		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> Contractor's concern for the integrity of the adjacent street and utilities is as a result of the shoring method used - not the result of the pile extraction being performed on Minna Street in accordance with the response to RFI#T-0188.2.			

<u>Number</u>	<u>Subject</u>	<u>Status</u>	<u>Date Created</u>	<u>Date Required</u>	<u>Date Answered</u>	<u>Cost Impact</u>	<u>Proceed</u>
	<p>undermining and adjacent settlement during the extraction process (see attached photos).</p> <p>Please advise an acceptable method of pile extraction that will allow this work to continue</p>						<p>The observed undermining and adjacent settlement during the extraction process is to be restored to prevent damage to Utilities installed in Minna Street. The methods allowed in RFI T-0188.2 are to be followed by the Contractor.</p> <p>Section 31-56-13 Part 3.2.C (CDSM Wall - Pre-trenching) also references Section 32-12-17 (Street Excavation & Restoration) for pre-trenching "...within and or adjacent to the public right of way." In addition Section 31-56-13 Part 3.2.D requires the Contractor to "Comply with all regulatory requirements regarding trench shoring." Both Section the Street Excavation and Restoration Specification 32-12-17 and the regulatory requirements for trench shoring require a shoring system designed by a Professional Engineer and submitted to TJPA as well as the SFDPW. OSHA requires for all trenches deeper than 5 feet and not sloped according to OSHA standards be designed by a Professional Engineer.</p> <p>Given the above it is the Contractor's responsibility to select the means and methods and to design pre-trench shoring meeting the above requirements.</p> <p>TJPA observations of the Minna Street pre-trenching operations showed that the "trench shield" method of support where excavation below the trench shield required for both sinking the shield and exposing "obstructions" allowed the loose fill sand at the bottom of the excavation to slough into the excavation. This loss of ground led to settlement of the street and potential settlement of the adjacent water line and sewer.</p> <p>TJPA notes that the Contractor has commenced using near-flat sheet piles in combination with the trench shield bracing to achieve the depths required. However, no submittal of a design done by a professional engineer has been submitted to TJPA in accordance with the requirements from the Specifications stated above.</p> <p>An acceptable method of pile extraction includes a suitable trench shoring method and plan that meets</p>

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
BBII discovered an unforeseen tank structure during the pre-trenching operation along Gridline 35 between Gridline A-J that is not shown on the contract plans. The tank contains liquid substance; the odor from the excavation around the tank, it is assumed this is a fuel liquid. This tank needs to be removed to allow the continuation of the pre-trenching operation. Please advise as soon as possible.		TJPA environmental consultant has contacted Golden Gate Tank Removal Co and removal is being scheduled. The TJPA has not yet received the paperwork from the Golden Gate Tank Removal Co. to schedule the date. TJPA will discuss further with W/O - BBI regarding handling.

REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference RFI#T-0192 and attached photo		See attached test reports					
The unforeseen tank discovered during the pre-trench operation on Beale Street contains liquid. The liquid has spilled and is present in the surrounding soil, visible from the surface. The response to RFI#T-0192 does not address the soil surrounding the tank. BBII suspects this soil is contaminated with hydrocarbons in excess of the current approved Class 1 profile.		Report Completed By - Title - Date - Work Order - Number of Pages					
Please advise on the classification, limits and disposal methods for the contaminated soil surrounding the tank.		McC Campbell Analytical, Inc. - Analytical Report - July 20, 2011 - 1107352 - 8 McC Campbell Analytical, Inc. - Analytical Report - July 25, 2011 - 1107352 A - 8					
		----- ----- 07/15/2011 Roger Rothenburger					
		TJPA has had their environmental consultant,Treadwell & Rollo (Peter Cusack) arrange for the underground storage tank (UST) and its contents to be removed, test samples of the material, determine the extent of the contamination, and the proper disposal of the soil around the tank. The following response has been reviewed by Mr. Cusack.					
		1. Soils in the area of the UST were orginally classified as Class I from 0~6ft below grade and Class II from 6~22 feet below grade (Soils Management Plan figure 4 & 7.					
		2. Remove and stockpile contaminated soils in the immediate area of UST including 2 feet along the sides of the UST and 2 feet below the UST.					
		3. If soils beyond this area still have a strong gasoline or petroleum odor then remove those soils as well.					
		4. The samples taken by TJPA environmental consultant Peter Cusack on Thursday July 14, 2011 will be chemically tested for different contaminants.					
		5. The results of these tests will not be available for approximately 2 weeks (July 28, 2011).					
		6. Maintain the contaminated stockpiles covered until classification is complete and further directions are given by TJPA at that time.					
		7. Backfill the open trench/hole from which the contaminated material described above has been removed with clean suitable material as defined in the Specifications.

The Analytical Report for the sample taken from the soil around the Underground Storage Tank (UST) has been sent to BBII. The soil classification that has been determined was not listed in the response, nor the Analytical Report. Please advise on the classification of the soil.			Based on the attached analytical results, the soil excavated from the tank removal activities is considered Class II material and should be disposed of as Class II material using the established soil handling procedures.				
T-0193	BSE - CDSM Buttress Connector Wall	Closed	07/07/2011	07/17/2011	07/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran			To: Turner Construction Company Daphne Faulkner				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Specification Section 31 56 13			ARUP Response:				
DND is refining the CDSM Shoring Wall mix design based upon the initial results of the Zone 4 Test Section in order to meet the specified compressive strength and permeability. DND is currently planning on trying 2 new mixes / methods in the CDSM Buttress Connector Wall:			Arup will review the strength tests from the connector columns and make a determination of acceptable in-situ strength based on these.				
1) Single Phase (down and up with grout only) - 275 kg/m3 cement treatment, 220% water/cement, specific gravity ~1.4							
a. Based on Japanese experience							
2) Two Phase (down with water, up with grout) - 265 kg/m3 cement treatment, 70% water/cement, specific gravity ~1.7							
a. Based on US experience							
DND is currently proceeding with the installation of the CDSM Buttress Connector Wall. Per BBII's July 5, 2011 meeting with the Engineer, BBII believes that this approach is acceptable for the CDSM Connector Wall and the CDSM Buttress Connector Wall will not have to be re-mixed in the event that it does not achieve the specified compressive strength of 90 psi at 28 days and 120 psi at 90 days. Please confirm.

T-0194	BSE - Unforeseen Buried Obstructions at CDSM Connector Wall in Zone 4	Closed	07/12/2011	07/22/2011	07/19/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Daphne Faulkner			Answered By: Transbay PMPC Roger Rothenburger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 31 56 13, attached sketches, and photo During the installation of the CDSM Connector Wall at Zone 4, DND's drill rig hit unidentified buried obstructions at approx. 14' - 15' below the original grade (El. 0 ~ -1). Please see DND's attached sketch for further details. The exact location and composition of the obstructions are yet to be determined but BBII's preliminary findings indicate that they are timber piles that were neither shown on the original contract plans nor found during buttress area pile extraction. Find attached the as-built drawing that depicts the locations and the top elevations of the timber piles that BBII extracted at that location. Please note that the top elevations of the extracted piles range between 2.40 to 3.11 feet. BBII has just been informed by DND Construction that the other rows of the connector wall cannot be installed while these obstructions are being removed per the committee meeting on 07/11/2011, due to the proximity of the obstruction removal trench to the next two rows. The CDSM connector wall installation has currently ceased until further notice. BBII is currently seeking drill rigs capable of removing these obstructions also as discussed at the committee meeting. Please direct BBII on how to proceed.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> TJPA and its Representative agreed that the reasonable approach for removal of the obstructions as encountered was to mobilize an auger drill rig similar to the Viking drill rig used for the dewatering wells and removal of broken off piles along 181 Fremont street to drill out the area. A 36" diameter casing was used in this application. This meeting was held on Monday July 11, 2011 at approximately 12:30pm. The drill rig arrived on site mid Thursday morning July 14, 2011 (3 work days after the site meeting) and drilled until 7pm exploring the CDSM connector piles in the remaining rows. The material removed was some wood (volume less than a 5 gallon bucket - photos attached) and a number (approximately 15 pieces) of chunks of unreinforced concrete 3" to 10" in size. At this time without more evidence TJPA believes that this material was inadvertently left behind in the backfilling of the timber pile removal zone. BBI should prepare a formal claim as to why TJPA should pay for this work or delay. TJPA will give it fair consideration but needs to have this filed as a claim outside the RFI process. BBI did perform the work in accordance with specifications and site agreements made as to means and methods for the way forward. The drill rig requiring 3 work days to mobilize was at the choice of BBI to use their subcontractor Malcolm-DND.

T-0196	BSE - CDSM Shoring Wall Installation Sequence Zone 4 North of A-Line	Closed	07/20/2011	07/30/2011	07/26/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran		To: Turner Construction Company Daphne Faulkner		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Sheet GT-2201 and Specification Section 31 56 13 See Note 1 on Sheet GT-2201. DND is concerned that if the row of buttress connector columns (A/26.5 - A/30) immediately adjacent to the shoring wall is installed prior to the shoring wall, the shoring wall will not meet verticality and tolerance specifications due to a difference in strength of the soil on one side and the CDSM on the other side. BBII believes that it will be possible to install the buttress connector columns after the shoring wall without hitting the shoring wall beams. Is it acceptable to install the shoring wall prior to the immediately adjacent buttress connector columns?		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: This is acceptable. Contractor to exercise care to prevent the auger from hitting the soldier pile while achieving the column overlap shown on 9/GT-5101.

Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification Sections 31 09 13 and 01 35 65				The table reportedly from the FEIS/EIR included in the RFI appears to be in error. This shall be addressed by others.			
According to the Final FEIS/EIR, specified in the Specification 01 35 65 as the reference document, the Vibration Impact Criteria, which is the base criteria for the analysis, is shown in the table 5.21-8 (refer to BBI RFI for table).				The Action Trigger Level and Maximum Allowable peak particle velocities listed in Table 1 in specification section 31 09 13 are for separate, transient vibration events rather than continuous construction vibration. It is not known if the values shown in the FEIS/EIR table are intended for transient or continuous events.			
The vibration impact criteria used in the Final FEIS/EIR contradicts the Maximum Allowable Movement for the vibration (PPV) specified in Specification 31 09 13. In this specification section, the maximum allowable movement for vibration and the action trigger level is described in Table 1 (refer to BBI RFI for table).				The Action Trigger Level and Maximum Allowable peak particle velocities listed in Table 1 in specification section 31 09 13 apply to all structures around the site where vibration monitoring will occur. In drawing up these values we have taken into account the types of plant likely to be employed in construction and the very low probability that the natural frequency of the input vibrations will approach those of the surrounding buildings and utilities.			
Please clarify where within the project site the vibration impact criteria for fragile structures are applicable (according to Specification 01 35 65), and where the maximum allowable movement for vibration of 1 inch per second is applicable (according to Specification 31 09 13).				The RFI question regarding the identification of "fragile structures" shall be addressed by others. ----- URS - Response by Alana Callagy 8/11/2011			
				The table in the FEIS/EIR included in the RFI is in error. The table cites the FTA as the source of the potential impact thresholds for vibration. However, the table used in the FEIS/EIR appears to have reversed the FTA's threshold levels. The RFI should cite Table 12-3 (page 12-13) of the FTA's Noise and Vibration Manual (www.fta.dot.gov/documents/FTA_Noise_and_Vibration_Manual.pdf).			
				FTA Table 12-3 is for potential structural or architectural building damage, which is generally a function of Peak Particle Velocity (PPV), not a time-averaged level. These criteria should be applied to both transient and continuous construction events. Furthermore, the PPV value should be presented/evaluated as the vector sum of the PPV values in the three orthogonal coordinate directions

BBII recognizes and agrees Table 5.12-8 is in error, and BBII will refer to FTA Table 12-3 as the correct table. However, BBII believes the TJPA's response provides information that is in conflict with the specifications as well as between the two separate responses provided. BBII requests the following clarifications and confirmations:							
1. BBII has applied FTA Table 12-3 per [RFI #T-0197]

	<p>(BBI RFI 147) to the attached map. The attached map indicates PPV values for continuous construction events, based on the surrounding buildings. Please review and verify this interpretation. Please note that this table, as also indicated in ARUP's response, applies to "continuous construction events".</p> <p>2. As also stated in ARUP's response, BBII's interpretation of Section 31 09 13 is that the limits provided in this section apply to "transient construction events". Therefore, contrary to URS' response, the values provided in this section are applicable to transient construction events.</p> <p>In addition, BBII will apply Table 1 in Specification Section 31 09 13 for transient construction events to all structures around the site. Table 1 indicates the Action Trigger Level for vibration (PPV) is 1/2 inch per second and Maximum Allowable Movement for vibration (PPV) is 1 inch per second.</p> <p>Please confirm the vibration Peak Particle Velocity (PPV) values indicated above are acceptable for continuous and transient construction events.</p>

T-0199	BSE - Pile Extraction Method For Grid Line 35.2	Closed	08/01/2011	08/11/2011	08/15/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI#T-0188.2 After exposing piles at grid line 35.2 east of Beale Street, BBII intends on extracting these piles as per the method described in RFI#T-0188.2 (BBI 0139.2). This involves backfilling any voids with sand. Please confirm this method is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: Arup did not respond to RFI T-0188.2. As noted in our response to RFI T-0188.1, we recommend that the procedure for removing the piles east of Beale Street follow the procedure described in our response to RFI T-0146.4 with the exception that backfilling with sand is acceptable.

T-0200	BSE - Unforeseen Buried Obstructions - Zone 4 A Line (Gridline 27-34)	Closed	08/02/2011	08/12/2011	08/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jack Adams				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 31 56 13, attached photos, and sketch					Accept Suggestion: <input type="checkbox"/>		
On Saturday, July 30th 2011, DND's CDSM drill rig encountered unidentified buried obstructions during the installation of the CDSM Shoring wall panel identified by the pile numbers 285-286 at Zone 4 "A" line between Grid "27 & 28". The newly found obstructions are deeper than the previously excavated timber piles.					Per Contract Spec. 31-56-13 Shoring wall by CDSM Method Para 3.2 Pretrenching and removal of Obstructions, Contractor is to "remove any obstructions that might be encountered along the alignment of the walls. The depth and width of trench shall be that required to remove the obstructions from the path of the shoring wall."		
DND construction initially attempted to drill through the buried obstructions without success. The drill rig was subsequently moved to further east to drill the next available panel. Between 10:30 am and 3:30 pm, DND made eight drilling attempts along the "A" line between pile numbers # 285 and # 300. All eight drill attempts failed due to the similar obstructions encountered within the 13' - 17' depth range below grade. Consequently, the CDSM shoring wall installation along grid line "A" at Zone 4 had to be suspended. DND is able to provide a drill rig to drill out these obstructions and currently this rig is scheduled to arrive Tuesday morning, August 2, 2011.					This area was to be Pretrenched per Spec and should have been cleared. The Spec calls for fill the voids from pile removal with 300psi CLSM, However; the area in question had CLSM installed of between 1000psi and 1600psi which may be causing this condition.		
These obstructions constitute a differing site condition in accordance with Article 3.05 of Section 00 07 00 of the Specifications.					"Unforeseen Conditions" are covered in Section 00 07 00 (General Conditions) Article 3.05.A.2 and 3.05.A.3 (Unforeseen or Changed Conditions).		
Please provide confirmation and/or direction regarding the following:					Article 3.05.C states,		
- BBII is to proceed with drilling out these obstructions on 8/2/2011, so CDSM installation in this area can continue.					C. Differing Site Conditions shall not include:		
- These obstructions constitute a differing site condition.					1. All that is indicated in or reasonably interpreted from the Contract Documents or Reference Documents;		
					2. All that could be seen on Site		
					3. Conditions that are materially similar or characteristically the same as those indicated or described in the Contract Documents or Reference Documents.

	<p>Per response to RFI T-0151, the Buttress can expand to the east as long as it doesn't shift to the south. Per discussions with Arup in last week's TG03 BSE Design Team Coordination Meeting (7/27/2011), it is acceptable for the Buttress to shift to the south per the attached sketch. Please confirm.</p>						<p>The shift shown on the sketch is acceptable.</p>
T-0202	BSE - Pile Extraction Method For Grid Line 33.5	Closed	08/04/2011	08/14/2011	08/12/2011	Potentially	<input type="checkbox"/>
<p>From: Webcor Construction LP Nhi Tran</p> <p>To: Turner Construction Company Gary Krutsch</p> <p>Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal</p>		<p>Answered By:Turner Construction Company Jack Adams</p>					
<p>REQUEST:</p> <p>Reference RFI#T-0146.2</p> <p>After exposing 5 piles at gridline 33.5 west of Beale Street, BBII intends on extracting these piles as per the accepted method described in RFI # T-0146 2,</p> <p>"6. BBII will extract the wood piles with vibratory hammer, with the same stroking procedure without steel casing. BBII will perform dewatering enough to be able to connect the hammer to the pile.</p> <p>7. BBII will backfill the void with low strength material Central Concrete Mix FOA100CX (RFI #T-0138.1).</p> <p>8. BBII will backfill the piles.</p> <p>Answer:</p> <p>Per Brian Dykes, this work is authorized to proceed. Allowable work hours will be established after 199 Fremont pile extraction begins."</p> <p>This involves backfilling any voids with 1 sack sand. The attached drawing indicates the location and quantity of piles to be extracted. Please confirm that this method is acceptable.</p> <p>Also, please advise if any work hour restrictions apply.</p>		<p>SUGGESTION:</p>		<p>ANSWER: Accept Suggestion: <input type="checkbox"/></p> <p>Contractor may wish to consider placing the steel sheet prior to excavating to retain the material under Beale Street to keep it from sloughing into the excavation.</p> <p>Extract the wood piles with vibratory hammer, with the same stroking procedure without steel casing. BBII will perform dewatering enough to be able to connect the hammer to the pile.</p> <p>Option: Backfill the void with CLSM low strength material Central Concrete Mix FOA100CX (RFI #T-0138.1).</p> <p>Option: Back fill the pile voids using a tremie pipe of minimum length 20ft attached to the concrete bucket. The tremie shall be inserted as far into the pile hole as possible prior to pouring the concrete, and the concrete shall be placed using normal tremie techniques. BBII will make efforts to pour the material into the void as possible, but BBII is not responsible to eliminate void completely."(RFI 146.4)</p> <p>Recommends that the procedure for removing these piles follow the procedure described in Arup's response to RFI T-0146.4. Optional is to use method from RFI 188.2. Sand can used for back fillings instead of the low strength material described in RFI#T-0146.4.</p>

T-0203	BSE - Clearance From Verticals For CSL Tubes	Closed	08/04/2011	08/14/2011	08/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Sheet GT-5202, Specification Section 31 63 29, and attached photo In the Phase 1 DFOV Buttress Rebar QC Meeting at Harris-Salinas Rebar's yard in Livermore on 8/01/2011, ARUP suggested moving the adjacent vertical bars away from the CSL tubes to allow for approximately 4" of concrete cover along the entire length of the shaft. Please confirm.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The longitudinal bars on each side of each CLS tube shall be shifted so that the clear distance between a given bar and the CSL tube is 3" minimum, 4" maximum. The total number of bars which will be shifted is 8.		
T-0204	BSE - Tie Backs Along 535 Mission Street - Vacant Lot	Closed	08/04/2011	08/14/2011	08/10/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Jack Adams				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference GT-2102 & Detail 8 - GT-5103 BBII cannot locate the tie backs in the area of the vacant lot on Minna St. described in the Detail 8 on Contract Drawing GT-5103. The BBII crew went to a depth of 17 feet along the Pre-Trench and was unable to locate the tie backs. This was an additional foot more than the specified 15'-0" +/- 1'-0" depth. BBII believes the tie backs do not extend into the Pre-Trench limits and plans to move forward. Please advise if there is information to the contrary.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> BBII is to continue plans and specs (Ref: Dwg. Detail 8 GT-5103). Subsequent to this RFI BBII did locate and sever a tie back in Minna Street trench from the 535 Mission St. Project . BBII was directed to be cautious when installing sheetpile shoring to ensure the Tie Backs are cut back sufficiently to prevent interference with CDSM Drill/Wall installation. ----- ----- 2011-08-09 George Metzger ARUP Response: No additional information is available. Turner or PMPC to provide answer to this RFI.

REQUEST: Reference Sheet GT-1110 and Specification Section 31 55 00 Note 7 on sheet GT-1110 states that "Seismic Increment Loads shall be considered to be long term loading." Per conversation at the 8/03/11 TG03 Design Team Coordination meeting, BBII understands that this note applies only to the lower level struts at the 301 Mission buttress case. Please confirm.		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> We refer to Comments and Corrections provided by DBI to TJPA in a document dated July 27, 2011 at item G 23. With reference to Drawing GT-1110 we clarify that Note 7 applies strictly to the incremental strut loads in Table 7 (301 Mission buttress case shaking analysis) and consequently apply to calculations for the lowest level of struts and walings between Gridlines 26 and 30. The incremental strut loads given in Tables 5, 6 and 8 can be considered as transient, rather than long term, loads on the bracing system.			
T-0209	BSE - Abutment Bearing On CDSM Wall	Closed	08/11/2011	08/21/2011	08/19/2011	Potentially	<input type="checkbox"/>

T-0209.2	BSE - Abutment Bearing On CDSM Wall - Follow-Up	Closed	09/13/2011	09/23/2011	09/16/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI #T-0209.2, Specification Section 01 53 13, and attached sheets As requested by ARUP, please see the attached loads placed on each individual CDSM soldier beam beneath the proposed temporary bridge abutment. The loads include both the bracing self weight and the combined dead and live loads of the temporary bridges. BBII requests confirmation from the CDSM shoring wall EOR that these imposed loads do not exceed the assumed vertical loads used during original design analysis.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The results of the analysis reported in the table "SUMMARY OF LOADS ON CDSM SOLDIER PILES AT BRIDGE ABUTMENTS" indicates that, for a number of locations, the load per soldier pile is too great and that the pile spacing will need to decrease from 4'-0" o.c. to 2'-0" o.c. to reduce the load per pile. Subsequent analysis by the Contractor shall demonstrate the structural adequacy of the pile shape and the adequacy of the pile embedment.		
T-0209.3	BSE - Abutment Bearing On CDSM Wall - Follow-Up	Closed	09/13/2011	09/23/2011	09/28/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI #T-0209.2, Specification Section 01 53 13, and attached sheets As requested by ARUP, please see the attached loads placed on each individual CDSM soldier beam beneath the proposed temporary bridge abutment. The loads include both the bracing self weight and the combined dead and live loads of the temporary bridges. BBII requests confirmation from the CDSM shoring wall EOR that these imposed loads do not exceed the assumed vertical loads used during original design analysis.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: 1. The CDSM wall cannot accept the widely varying point loads as implied by the submitted tables of imposed loads from the cross-lot bridges. We recommend that a spreader beam arrangement is provided for each bridge abutment and is connected to the all the affected W21x201 soldier piles in the CDSM wall. A vertical spring constant of 1150 kips/inch can be used to calculate the pile reactions under such a spreader beam arrangement for the range of loads given. 2. The allowable loads from the bridge deck for the soldier piles on the basis of 1 above is 90 kips/pile at an excavation of 10 feet below grade and can be taken to fall linearly to 60 kips/pile at 60 ft elevation depth. 3. It follows from 2 above that the ability of the CDSM wall to carry the maximum load, the construction crane condition, will reduce as excavation proceeds. This may require disassembly of the construction crane

into smaller components in order to remove it from site at the later stages of excavation.							
4. The load pathway, from the bridge deck at the abutment into the ground, is in direct shear transfer across 2 interfaces: steel/soil mix and soil mix/in-situ ground. The shear transfer across the steel/soil mix interface cannot be estimated with accuracy, in the absence of an embedded soldier pile test in compression or tension. If the early excavations, down to 10 feet below grade at the bridge abutment, show that soil mix falls away easily from the face of the W21 steel soldier pile, the bond/interface shear is likely to be very low indeed and the allowable capacity of the soldier piles will need to be re-evaluated.

T-0223	BSE - Temporary Bridge Pedestrian Barrier Height	Closed	08/30/2011	09/09/2011	09/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By:URS Corporation David Fyfe				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Specification Section 01 53 13 and Submittal TG0300-201 response comments (attached)			Response to RFI No.T-0223 is provided herein and on attached sketch titled, "Sketch - RFI Nos.T-0223 and T-0228." This attached sketch is a mark-up of BBII's traffic plan figure, "Non-Working Hours, Temporary Bridge Traffic Plan" (submittal package TG0300-204, submittal item TZ1030-015313, page 3 of 6) because this is the latest presentation of the Contractor proposed product.				
DPW review of the temporary bridges includes comment #42 that calls for the pedestrian barrier to be designed as a combination railing with a minimum height of 4'-6" while the specifications only call for a 3'-6" barrier. Please advise if the minimum height must be increased to 4'-6".			This attached sketch shows an installation in conformance with current coordination comments completed between the Project and CCSF DPW and SFMTA. Where the handrail/guardrail system occurs separating pedestrian and vehicle traffic, required height equals 3'-6" measured from the top of pedestrian walking surface.				
			Note, these comments provided on this attached sketch pertain only to RFI Nos.T-0223 and T-0228, a full review and response of Traffic Plan Submittal Package TG0300-204 will be finalized and transmitted at a later date.				
T-0224	BSE - Temporary Bridge Deflection and Suspended Utilities	Closed	08/30/2011	09/09/2011	09/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By:AECOM Technical Service Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: SUGGESTION:			ANSWER: Accept Suggestion: <input type="checkbox"/>				
Reference Specification Section 01 53 13 and attached cut sheets			Please provide information on the predicted movement and hanger support system such that the condition can be assessed.				
Where utilities transition from direct bury to hanging under the temporary bridges, BBII believes there must be some allowance for deflection to prevent damage to the conduits during a seismic event. Attached are cut sheets for an expansion fitting and deflection fitting that BBII has seen used in combination at bridge transitions. Watertight flexible steel conduit may be an option as well.			Movement direction; lateral or longitudinal?				
Please confirm that all Phase 2 utilities to be suspended below the temporary bridges will include some means of handling bridge deflection.			How much movement is being predicted and at what location?				
			Are the steel conduits rigidly connected to the hanger supports? Please provide the hanger support design for review.

REQUEST: Reference RFI #T-0224, Specification Section 01 53 30, and attached e-mails The response to RFI T-0224 requested additional information about bridge movements. This information was provided by email to AECOM on 9/9/11. Follow on questions were answered on 9/15/11. Please see the attached email string. Please provide the make, model, location and quantity per conduit run for all the utilities supported by the bridge			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> In reference to the request in RFI T-0224, it has been confirmed that all Phase 2 utilities (Verizon and PG&E) to be suspended below the temporary bridges will include means of handling bridge deflection. Verizon has indicated the use of O-Z/GEDNEY expansion fittings for rigid steel conduit type EX, or equal. One fitting is proposed on each conduit located along the supported section staggered such that no two are aligned. This design element will be incorporated into construction documents being prepared by Verizon. PG&E has indicated the use of O-Z/GEDNEY Expansion fittings for rigid steel conduit type EX, or equal. One fitting is proposed on each conduit located along the supported section staggered such that no two are aligned. This design element will be incorporated into construction documents being prepared by PG&E.

Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI T-224, 224.1, CR T-017 and Specification Section 01 53 30 The response to RFI T-0224.1 The 4" EX model is not readily available (8 week lead time), however the very similar AX is. Please see the attached data sheets for each model and advise if this revised material is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Response from PG&E (attached) is as follows: The type AX expansion fitting for 4" steel conduits is an acceptable substitute for the type EX expansion fitting. Type BJ external bonding jumper will still be required.

T-0225.1	BSE - CDSM Alignment Conflict With Existing Utilities GL 1-J	Closed	08/31/2011	09/10/2011	09/09/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference RFI#T-0225					Accept Suggestion: <input type="checkbox"/>		
The response received for RFI #T-0225 does not provide the requested information.					Status is as follows, RUP ASI-015 has been created to address the relocation of utilities impacted by the change to the CDSM shoring wall resulting from BSE RFI-0017. ASI-015 was issued for pricing and implementation on 9/8/11.		
----- Question from RFI#T-0225							
Reference Sheet D-2231, Specification Section 31 56 13, and attached photo							
BBII laid out centerline of the CDSM on Gridline 1 and Gridline J. The centerline of the shoring indicates that the existing utilities PG&E/Water is in direct conflict with the location of the CDSM shoring wall. These utilities appear to be capped east of the centerline.							
Drawing D-2231 BSE contract states "Unless specified otherwise all utilities have been cut and capped outside the limits of the work by Transbay Transit Centre program relocation of utilities"... Please see photos attached.							
Please confirm the status on the relocation of these utilities.

T-0225.2	BSE - CDSM Alignment Conflict GL 1-J - PG&E Vault Utility Conflict on Natoma	Closed	09/12/2011	09/22/2011	09/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Kruttsch			Answered By: AECOM Technical Service Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI #T-0017, #T-0225.1, Sheet U-1110, and Specification Section 31 56 13 Please refer to RFI No. T-0017, which revised the southwest corner of the CDSM shoring wall alignment. Your attention is also directed to the utility drawing U-1110, which depicts the utilities to be abandoned and the ones to be protected in place with respect to the old CDSM wall alignment. According to U-1110, the PG&E vault on Natoma Street shall be protected in place. However, based on the field layout, the PG&E vault on Natoma St. is in conflict with the southwest corner of the CDSM wall alignment, which was revised per RFI No. T-0017. Based on BBII's field measurements, the clearance between the PG&E vault on Natoma St. and the centerline of the CDSM wall is 29", which is less than the 36" typical distance required by the contract plans as the minimum clearance between the demarcation lines and the CDSM wall alignment. BBII requests the PG&E vault on Natoma St. to be relocated to a safe distance outside the work limits of the revised CDSM wall alignment.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> Based on provided field information, the existing PG&E MH is located 11" clear of the CDSM shoring wall revised per response to RFI T-0017, please clarify what/where the conflict is. If safety is of concern while working in close proximity to a live PG&E MH, coordinate with PG&E through TJPA's Representative to de energize the existing MH prior to and during CDSM wall construction. Existing PG&E MH 1348 exists to provide power to 90 Natoma. 90 Natoma is owned by the TJPA and is currently vacant. The 36" demarcation line mentioned in the RFI is an arbitrary scope division line established between the RUP and BSE packages to differentiate abandon utility removal between the two packages.				
T-0225.3	BSE - CDSM Alignment Conflict GL 1-J - PG&E Vault Utility Conflict on Natoma	Closed	10/03/2011	10/13/2011	10/20/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Kevin Chiu				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference RFI #T-0225.2, Sheet D-2231 and ASI-015, Specification Section 31 56 13, and attached photos and sketch BBII in discussions with DND will be able to work adjacent to PG&E vault #1348, referenced in RFI #T-0225.2. BBII is currently considering removing the concrete over pour on the vault, de-energizing the power in the vault and installing CDSM Shoring Wall without relocating the vault.			SUGGESTION:				
			ANSWER: Accept Suggestion: <input type="checkbox"/> It is noted that prior to receiving the response to this RFI, the contractor installed CDSM panel #W0001 adjacent PG&E vault 1348 without chipping away the concrete over pour. A PG&E standby crew was present and observed the installation. It is understood that during this work the outside tooth of auger may have broken off during install of piles in this area. W/O to confirm there is no damage to Vault #1348 due to CDSM work

REQUEST: Reference Specification Section 03 30 01 and attached Rheomac product data Per the recommendations from both Becho and Central Concrete, BBII would like to propose the use of an Anti-Washout Admixture, Rheomac UW 540 in all submitted and approved Buttress Primary and Secondary Shaft Concrete. Please review and confirm that this is acceptable.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: This is acceptable.				
T-0228	BSE - 6-inch Sidewalk At Temporary Bridges	Closed	09/02/2011	09/12/2011	09/27/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran			To: Turner Construction Company Gary Krutsch				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal			Answered By: URS Corporation David Fyfe				
REQUEST: Reference Specification Section 01 53 13 and attached sketches During a temporary bridge traffic coordination meeting on 8/29/11, SFMTA suggested the use of a 6" elevated sidewalk curb in lieu of the crash rated pedestrian barrier. The crash rated barrier would be relocated to the outside edge of the temporary bridge. BBII believes this layout has numerous advantages and resolves some concerns as well: - SFMTA brought up the obvious concern of damage to side mirrors with tall barriers directly adjacent to the traveled lanes. To compensate for this, drivers will shy away from barriers in already tight lanes. Moving the barrier alleviates this problem on one side of the road. - A barrier between the sidewalk and traveled lanes has a blunt ends that pose a hazard (see sketch). Relocating the barrier eliminates this hazard. - The area formerly occupied by the pedestrian barrier (approx 14" in width) can be used as extra traveled width for vehicles (distributed per SFMTA's discretion) - An elevated sidewalk curb will make trestle crossings feel like a typical street crossing, especially for the visually impaired. As such, pedestrians will be more likely to treat the trestle intersection as a true signalized intersection.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Response to RFI No.T-0228 is provided herein and on attached sketch titled, "Sketch - RFI Nos.T-0223 and T-0228." This attached sketch is a mark-up of BBII's traffic plan figure "Non-Working Hours, Temporary Bridge Traffic Plan," (submittal package TG0300-204, submittal item TZ1030-015313, page 3 of 6) because this is the latest presentation of the Contractor proposed product. This attached sketch shows an installation in conformance with current coordination comments completed between the Project and CCSF DPW and SFMTA. As shown on attached Sketch - RFI Nos.T-0223 and T-0228, a handrail/guardrail providing separation of pedestrian and vehicle traffic is required. Note, these comments provided on the attached sketch pertain only to RFI Nos.T-0223 and T-0228, a full review and response of Traffic Plan Submittal Package TG0300-204 will be finalized and transmitted at a later date.

T-0229	BSE - Concrete Time of Discharge Requirement	Closed	09/06/2011	09/16/2011	09/08/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP		Nhi Tran	To: Turner Construction Company		Gary Krutsch	Answered By: Adamson Associates, Inc. George Metzger	
Co-Author: Balfour Beatty Infrastructure, Inc.		Ural Yal					
REQUEST:		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/>			
Reference Specification 03 30 01				ARUP Response: This is acceptable.			
Per SS 03 30 00, 3.3.D, "Discharge of concrete shall be completed within 1½ hours or before the drum has revolved 300 revolutions, whichever comes first, after the introduction of the mixing water to the cement and aggregates or the introduction of the cement to the aggregates."							
Per ACI 301 (Section 4.1.2.9), "Time of discharge - When it is desired to exceed the maximum time for discharge of concrete permitted by ASTM C 94C/ 94M, submit a request along with a description of the precautions to be taken."							
BBII is planning for discharging concrete with the following precautions: As concrete hydration can be controlled for a maximum of 10 hours, BBII suggests discharge of concrete shall not be restricted to 1½ hours. In order to sustain the requirements of Becho, BBII purposes to replace the 1½ hour time restriction to 3 hours with an 80° F maximum temperature requirement.							
Please confirm that this discharging plan is acceptable for Buttress Concrete per ACI 301.

	<p>observed at Buttress shaft C2, which was poured on Sunday 9/18/2011. The settlement led to the formation of a 13' deep unstable hole on the buttress working pad. After consulting with ARUP representative and W/O's field personnel, BBII/Becho Inc. decided to fill the newly formed hole with concrete to mitigate the settlement risk of the working pad. Additional concrete was poured into the 13' deep hole on Monday 9/19/2011.</p> <p>Please confirm that pouring additional concrete/CLSM will be considered as an acceptable method, if such settlements will occur during the future installation of the upcoming buttress shafts.</p>						
T-0235	BSE - Unforeseen Reinforced Concrete Slab at GL 7.5 J	Closed					
	From: Webcor Construction LP Nhi Tran	To: Turner Construction Company Gary Krutsch					
	Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal						
	REQUEST: Reference Sheet D-2210, Specification Section 31 56 13, attached photos and sketch While excavating a pre trench at gridline 7.5J close to Natoma Street, BBII uncovered an unforeseen reinforced concrete slab. This slab is 3ft thick, uncovered at grade and a section of it is in the direct line of the proposed CDSM wall. Indicated at this location in drawing D-2210 are grade beams and pile caps which BBII assumes will be encountered under this mat slab. However, this slab is not indicated on contract drawing D-2210. The concrete shown in contract survey sheet 5 appears to be a concrete driveway and it does not indicate the 3ft thick concrete slab that BBII are encountering. Measurements taken in the field also indicate a larger area than this. The attached photos and drawing indicate the scale of this obstruction. It is required to be removed. Please advise if this is acceptable.	SUGGESTION:					
			09/20/2011	09/30/2011	09/27/2011	Potentially	<input type="checkbox"/>
			Answered By: Transbay PMPC			Roger Rothenburger	
			ANSWER:	Accept Suggestion:	<input type="checkbox"/>		
			This slab is a Cal Trans slab and is located within TJPA property limits. The slab is not unknown and is shown in the set of Drawings listed in Section 00-03-31 Part 1.2.D.6 (Existing Condition: Buildings and Improvements - Drawings "Project Plans for Construction from Figh Streeet to Beale Street, 2000" (168 pages). Removal of the slab is acceptable.				
			----- 9/22/2011 - George Metzger				
			ARUP Response:				
			It is Arup's understanding that the slab encountered is a remnant of the Caltrans seismic retrofit work of the previous, now-demolished bus ramps. Therefor, removal of the portion of the slab within the shoring wall alignment is acceptable, but ownership of the property on which the slab is located should be confirmed by the PMPC / TJPA.

REQUEST: Reference Sheet D-2210 (attached), Specification Section 31 56 13, and attached photos While DND were drilling at panel 28 and 29 on grid line 1E at the locations of piles 839-843, an unknown section of concrete was encountered. The concrete was found at a depth of 9.5ft. The quantity of concrete is unknown at this point. The concrete is not indicated on contract drawing D-2210. It is in direct conflict with the CDSM shoring wall and must be removed. Shown below [attached] are photos of the debris removed from the excavation. Please advise on how to proceed.			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: Contract documents require obstacles that may interfere with installation of the CDSM wall to be removed by pre-trenching. The concrete shall be removed.		
T-0237	BSE - Bridge Welding Code	Closed	09/26/2011	10/06/2011	10/03/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Krutsch			Answered By: Turner Construction Company Kevin Chiu				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification 01 53 30 Temporary Bridge Specification 01 53 13 (1.6H) requires the welding qualifications for the bridges to be in accordance with AWS D1.5 "Bridge Welding Code", however BBII's design was based on AWS D1.1 "Structural Welding Code" as specified in General note 3.2-A4.2 of Sheet SH-0100. BBII and their designer felt AWS D1.1 is more applicable for the temporary bridge structure for the following reasons: - The members that make up BBII's temporary bridge consists of readily available standard grade mill rolled shapes, comprised of a variety of base metals (A36, A53, A572, A992, A500, and A252) which are joined by simple prequalified joints (fillets). D1.1 provides the flexibility to weld all of these base metals in any combination utilizing prequalified procedures, since they are all in the same base metal group. D1.5 only allows prequalified welding of A709 plate material only. - BBII's temporary bridge structure contains structural tubing (piers and rails), which D1.5 does not cover tubing			SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ISI Commentary: "We have been requested to provide a commentary/discussion regarding AWS D1.5-2002 Bridge Welding Code in reference to RFI #T-0237. The scope of our discussion is limited to an interpretation of D1.5 and not to the design/use of welded temporary steel bridges. The RFI's request by BBII is to accept WPSs/WQTRs to AWS D1.1 rather than to AWS D1.5. Base Materials: Although D1.5 specifies A709 as the approved steel, it also states that other steels may be approved by the Engineer [D1.5 Section 1.2.2]. Fillet Welding: The RFI states all welding to be fillet welds (mostly single pass). D1.5 state fillet welding may be performed, within given limitations, without performing WPS qualification tests [D1.5 Section 2.8.1]. Welder Qualifications: We note that the qualification requirements for both groove and fillet welds are

<div><div><div>Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal</div><div><div>REQUEST:</div><div>Reference Sheet GT-5101, Specification Section 31 56 13, attached photos and sketch</div><div>Please address the following information request from BBII's sub contractor DND:</div><div>"The new CDSM shoring wall crosses an existing CDSM wall at 2 locations. Following CR T-005B, both of these crossings are perpendicular to the existing CDSM wall, as shown in Note 1 on GT-5101. Note 1 shows the new wall making a jog to avoid hitting the beams of the existing CDSM wall. The detail shown on contract plan GT-5101 is constructible only if the existing CDSM wall was built exactly as shown, without any room for construction tolerances for both the new and existing wall. Instead of trying to install this section of the CDSM wall according to the detail shown on GT-5101, which would potentially cause damage to the CDSM equipment, DND proposes to remove the existing CDSM beams that are in conflict. The contract plan GT-5101 shows two CDSM panels to jog around the existing beam and one offset panel parallel to the new wall.</div><div>DND's proposed solution would eliminate the 2 panels in the jog but still maintain the additional offset panel parallel to the wall line. This additional offset panel would act as insurance so a seal is maintained through any deflection caused by the hard in-situ soil mix. This would present a potential cost savings to the project (due to 2 less panels being installed), providing the conflicting beams can be successfully removed.</div><div>DND has mobilized a drill rig with an auger to this area to pre-drill the wall prior to the removal of beams. This will substantially reduce the amount of vibration that will be required to remove the beams. DND proposes to utilize the same method at the other wall crossing near Natoma Street. Is this proposed method of removing the existing beams and soil mixing through the existing CDSM wall acceptable?"</div></div><div><div>SUGGESTION:</div><div>ANSWER:</div><div>Accept Suggestion: <input type="checkbox"/></div><div>ARUP Response:</div><div>This is acceptable provided there is no additional cost to the TJPA.</div></div></div></div>

T-0241	BSE - Brick Wall at GL 2, J Line In Conflict With The CDSM Wall	Closed	09/29/2011	10/09/2011	10/07/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Nhi Tran To: Turner Construction Company Gary Kruttsch			Answered By: Turner Construction Company Jack Adams				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference Specification Section 31 56 13 and attached meeting minutes and photos The brick wall remaining from the 580 Howard building, at grid line 2 J, is protruding into the CDSM wall limits, as noted in BBII's previous RFI #203 (The question was responded by TCCO at the job site meeting on 9/6/2011. Refer to the attached meeting minutes). While attempting to remove, BBII has discovered that the fence and patio pavement are founded on this remaining portion of brick wall. This condition does not allow for the removal of the wall without damage to the fence and patio. Please provide direction on how to proceed.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> 1. The 580 Howard courtyard fencing can be removed from the corner because it is owned by TJPA and located on TJPA property. 2. After removal of this corner section of fence, a section of temp fence and signage shall be placed on TJPA property. 3. During demolition of this corner section the temp fence and signage will likely have to move in towards the 580 Property as a safety precaution. 4. The demolition and backfill shall be expedited so that the courtyard can be restored (preferably same day). 5. The temp fence section and signage shall be moved back on to TJPA property until CDSM wall is complete. 6. The permanent fence will be reinstalled on TJPA property as soon as possible after CDSM wall installation at the corner. CR T-5B excluded this scope. These costs will be issued under forthcoming CR.				
T-0242	BSE - Becho's Request For Rock Classification Data	Closed	09/29/2011	10/09/2011	10/11/2011	Potentially	<input type="checkbox"/>

REQUEST: Reference Sheet GT-2201 and Specification Section 31 63 29 Please address the following information request from BBII's sub contractor Becho Inc.: "... for each of the shafts completed and under construction, Becho has excavated deeper than the elevations shown for boring logs. Becho is requesting soil samples, boring logs, torque requirements, skin friction values, and rock strengths be provided for these depths. (Currently 254 ft below elevation +14.00). The requested information is similar to what was provided up to the depths of 234 and 237.5 feet in the "Final Geotechnical Data Report" prepared by Arup dated February 2010, and "Prototype Test Program and Monitoring During Construction of Drilled Shafts" prepared by Arup dated May 2010. Becho requests this information for drilling beyond the depths specified in the Geotechnical Report."		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> ARUP Response: The elevation of the bedrock is highly variable as indicated by the contour plan in the Geotechnical Data Report. It is for this reason that the specifications include the requirement: "Excavation and drilling equipment: shall have adequate capacity, including power, torque, and down thrust to advance the temporary casing to the depths shown on the drawings, excavate a hole of both the maximum diameter and to a depth of 20 percent beyond the depths shown on the plans."			
T-0244.1	BSE - Becho Request for Buttress Field Logs	Closed	03/23/2012	04/02/2012	04/24/2012	Potentially	<input type="checkbox"/>
From: Balfour Beatty Infrastructure, Inc. Ural Yal		To: Turner Construction Company Gary Krutsch		Answered By: Adamson Associates, Inc. George Metzger			
Co-Author:							
REQUEST: BECHO formally requests to obtain the Daily Field Logs from every ARUP field engineer/geotech/geologist, TJPA representative involved with the Buttress Shaft work. More specifically, field notes/logs from engineers and TJPA representatives involved with the field data collection, sample collection and inspection process. Becho requests the Daily Field Logs for the following dates: - September 12th 2011 through October 20th 2011 - February 22nd 2012 through Today		SUGGESTION:		ANSWER: Accept Suggestion: <input type="checkbox"/> The TJPA Representative Daily Field Logs are attached to the Field Observation Reports that are posted to and available in Constructware.

T-0245	BSE - Ground Conduits detail for PG&E phase 2 works on First Street	Closed	10/05/2011	10/15/2011	10/12/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP Masashi Kojima To: Turner Construction Company Gary Krutsch			Answered By: AECOM Technical Services Eric Zagol				
Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST: Reference CR No. T-017 - BSE - First Street Phase 2 Utility Relocation For the installation of the PGE 6" and PGE 4" GRS conduit between the CDSM walls, is grounding of the PGE conduits required? If so, please provide grounding details/requirements.			SUGGESTION: ANSWER: Accept Suggestion: <input type="checkbox"/> Response from PG&E (attached) is as follows: Yes and at both ends of the conduits. As a suggestion, we would propose to tie into the bonding jumpers of the AX and EX expansion fittings with a bare copper solid stand #6 copper wire. The #6 wire can be either soldered or crimped to the bonding jumper. All the #6 ground wires would then be brought together and connected to a single bare #2/0 copper wire. The 2/0 copper ground wire would then be routed and cadwelded to the nearest I-beam that support the traffic bridge. If it is not possible to attached the #6 copper wire to the AX and EX grounding jumpers, we will require a separated bonding clamp that can be used in a wet or dry location. One grounding point is usually sufficient but I am asking for grounding at both ends of the steel conduits in case one ground is accidentally cut.

---------------	----------------	---------------	---------------------	----------------------	----------------------	--------------------	----------------

REQUEST:

Reference Specification Section 31 56 13

Please address the following information request from BBII's sub contractor DND:

"As of to date, the following three soldier piles have sunk below grade during their placement into the CDSM wall.

- Beam # 154 installed on 09.08.11
- Beam # 631, installed on 09.29.11
- Beam # 602, installed on 10.01.11

DND was unable to recover those piles and set them to their plan elevations without disturbing the adjacent beams that were already in place. To mitigate this issue, DND proposes to conduct the below course of remedial action:

1) Wait until mass excavation commences. Excavate with caution the locations, and determine the top elevation of the sunken beams.

2) Provide this information to the Engineer for evaluation.

3) Implement corrective action based on Engineer's evaluation. Possible corrective measures are:

- a. No action necessary. The strength of the CDSM material may be sufficient to support the unreinforced depth.
- b. Install lagging between the adjacent beams above the top of the sunken beam.
- c. Splice a beam on the top of the sunken beam and backfill with low strength concrete.

Please advise, if the proposed course of remedial action and/or any of the three possible corrective measures are acceptable."

SUGGESTION:

ANSWER:

Accept Suggestion: ☐

ARUP Response:

The proposed sequence is not acceptable. The Contractor shall submit a corrective action plan at least four weeks prior to the start of excavation for evaluation by the TJPA's Representative. The plan shall assume a range of depths to the top of the sunken beam and shall describe the impact on the walling and strutting plan. The plan shall be location-specific and shall include a drawing indicating the location of the sunken beam.

Co-Author: Balfour Beatty Infrastructure, Inc. Ural Yal							
REQUEST:			SUGGESTION:		ANSWER:		
Reference Specification Section 01 53 13					Accept Suggestion: <input type="checkbox"/>		
Attached is an as-built sketch of Verizon utilities potholed and located along First St. on 10/4/10. These utilities were originally scheduled to be relocated during phase two to allow for CDSM installation and subsequently temporary bridge construction. BBII has learned that in an effort to save time, the TJPA is considering leaving the utilities in their current locations and working around them. As shown on the attached section of the First St. temporary bridge, the Verizon utilities will be in direct conflict with the temporary bridge structure. Please confirm these utilities will be relocated as planned to allow for installation of the CDSM shoring wall and temporary bridge.					"Yes, they will be relocated. This RFI was related to the lateness of Verizon relocation and the idea of installing CDSM wall with Verizon still in place. Due to delays in starting PGE is now taking longer than Verizon so that PGE work governs duration and we no longer have to install last CDSM wall with Verizon in place to save time on bridge installation on First Street."		
					Solcom has a start date of 1.03.2012 and a finish date of 2.29.2012.

From: Webcor/Obayashi Joint Venture Nhi Tran			To: Turner Construction Company Gary Kruttsch				
Co-Author:			Answered By: Adamson Associates, Inc. George Metzger				
REQUEST:			SUGGESTION:				
RFI T-0251 original inquiry: During the 10/12/11 trestle submittal review meeting, statements were repeatedly made with regard to incrementally complete underground drawings in which to coordinate trestle pile locations. As of 10/13/11, W/O has not received any future package documents accompanied with the direction to coordinate with the TG03 documents. If such documents are available please make available the entire series to include, however not limited to, A, S, M, E, & P.			ANSWER: Accept Suggestion: <input type="checkbox"/> Thornton Tomasetti Reply: "See attached PDF files SKS-0130 through SKS-0137 for exclusion zones for trestle and pin pile locations, per requested additional TT review. W/O to review for constructability. Submit updated pile locations for review. Note: Penetrations through the Mat slab shall not intersect the hatched zones in the attached sketches. Note hatched zones at and near columns and at side walls. Any Lower Concourse level penetrations within 3'-0" on either side of primary column lines (e.g. 1.4, 2, ..., 35, V, W, X) will impact construction of primary concrete moment frame beam elements; coordinate with W/O. Block outs in moment frame beams shall not encroach into the hatched zones in the attached sketches. Coordinate interruptions of lower concourse slabs and secondary framing beam elements with W/O. 24" Diameter columns located 21'-3" west of GL 23 and 21'-3" east of GL 23 along GL D.8 and E.2, extending between mat level and lower concourse level. Verify construction sequence of Light Column at GL 23 in relation to cross lot bracing and re-bracing; coordinate with W/O.				
RFI T-0251.1 Clarification to RFI T-0251: The TG03 package was executed with limited documents in which to coordinate future packages with. Please provide all documents the TJPA requests BBII coordinate the TG03 package with and to.							
As it pertains to structural columns (round/pill/rectangle/ect.) please provide the minimum clear distance to trestle pile penetrations in the mat slab so BBII may coordinate.							
Should there remain any ambiguity in the inquiry above please indicate the nature of misunderstanding.

T-0251.2	BSE - Drawings To Coordinate Trestle Pile Locations - "No Pin Pile Zone" at Lower Level	Closed	11/04/2011	11/14/2011	11/14/2011	Potentially	<input type="checkbox"/>
From: Webcor Construction LP To: Turner Construction Company			Answered By: Adamson Associates, Inc. George Metzger				
Co-Author:							
REQUEST:			ANSWER:				
On 11/3/11 W/O was informed by PMPC during an Access Trestle Criteria Discussion meeting with URS and W/O that PMPC will request Thornton Tomasetti to provide "no pine pile zone" sketches for the Lower Concourse Level similar to the Sketches provided through RFI T- 251.1 response. Also, PMPC is requesting Thornton Tomasetti to provide criteria of concrete connection details around pin piles/trestle piles for the future Below Grade Concrete Package.			Accept Suggestion: <input type="checkbox"/>				
Please confirm.			TT Response:				
			The response to RFI T-0251.1 and the associated sketches included criteria for Lower Concourse. As stated in the response, BBII is to coordinate the Lower Concourse framing elements with Webcor. Although the block out at the lower concourse level is a means and methods issue, TT further clarifies the implication of the block out if it affects the primary moment frames along the column grids as noted below:				
			The primary moment frame girders at the Lower Concourse level are to act as a brace when the Second level braces are removed as shown in the GT drawings. If a complete moment frame girder is not poured due to conflict with the trestle piles, those bracing elements immediately adjacent to that girder will need to remain in place until the blocked-out beam is re-cast and reaches its design strength. Alternatively, BBII shall establish another method of				
SUGGESTION:							
			Penetrations that interrupt Mat reinforcement shall not be placed closer than 3xDia clear spacing between penetrations, with Dia = larger diameter of two adjacent penetrations. Penetrations are those causing interruptions of mat reinforcement in the structure in its final condition. Note especially conflict between pin pile 22 and trestle pile 107 (GL 9), trestle piles 18 and 103 (GL 10), and temporary bridge piers close to pin piles 13 and 14 (GL 34)."				
			Adamson Associates Note: "The additional A, S, and MEP documents you requested are currently in design progress and the information is not available at this time."
